38,383. (*Professor Huxley.*) Then there is, in fact, no evidence at all that there is any intention to modify the close season for Arklow?—No; Mr. Barry was here not long ago, and he said that it was not intended that we should lose the month of May.

38,384. Do you consider that it would be exceedingly injurious to you here if the close time were extended, and you were prevented from taking oysters in May?—Yes; if we are prevented from dredging in May, I think it would be exceedingly injurious to the town, and that it will upset us altogether.

38,385. Did you hear the evidence we have received from the fishermen?—Yes.

38,386. Is there anything you wish to add to it, or correct in it?—I think not. I agree with them in regard to the long trains and the depth of the nets. I should not like to see the fish beaten off the shore altogether, without the inhabitants of this place having a chance of getting their fair share of them.

38,387. Then you think the long and deep trains have done you injury?—I do.

38,388. There is no close time for herrings here?—No, we have no spawning ground here.

38,389. (*Mr. Lefevre.*) Are there any of the oysters which are dredged up in May sold for eating?—No.

38,390. Are they all sold for laying down?—Yes.

38,391. Then the condition of the oysters is not so much a matter of importance?—No, not when none of them are eaten.

38,392. How long are they laid down?—We lay them down in May, and then we sell them to the Liverpool and Beaumaris buyers, but they do not go away until September.

38,393. Is it the case that all the oysters dredged up here are sold for the purpose of being laid down in other places?—Yes, all for the purpose of being sent elsewhere.

38,394. Are all the oysters here affected with the green tint which Mr. Redmond mentioned to us?—Not so much now; not since they began to work the oysters. We have a market for them now, and we had not before. They were not liked at first, but now the buyers will sooner take them.

38,395. Do you size the oysters after you have got them?—No, we take them all, large and small.

38,396. And you sell them in the same way?—Yes, we sell them in a cargo to the Englishmen.

38,397. How are the oysters sent from here to the mouth of the Thames?—In smacks generally. They sent them off by railroad this year.

38,398. By way of Holyhead?—Yes.

38,399. And then by train?—Yes.

38,400. What is the length of the voyage from here to the mouth of the Thames?—About 600 miles.

38,401. What time will it occupy before they reach the end of the journey?—Twenty hours by land.

38,402. But by sea?—It is a very long passage.

38,403. What is the length of the voyage?—Four days, with a fair wind.

38,404. Do the oysters keep well up to that time?—In the winter time they do.

38,405. In May they will not keep as long, perhaps?—No.

38,406. Are there large beds at Beaumaris?—Yes, very fine beds.

38,407. Are any of the oysters bred there?—There are a few in the Lough, but not many.

38,408. Are there any beds there below low water, or are they all between low and high water?—The oysters are all laid down above the low-water mark. We do not leave them below low-water mark.

38,409. Is there any fresh water running on the beds there?—No, there is no fresh water at all.

38,410. Where are the beds you speak of near Dublin?—There is one at the Pigeon-house at Dublin. There is one at the Hill of Howth, and another at Clontarf.

38,411. Are they large beds?—They are pretty large.

38,412. Are there any fresh-water streams running into those beds?—There are a few small streams.

38,413. Do they fatten there?—Yes, very well. The fishermen are talking about doing away with the night dredging. The Jersey men dredge by night, and sometimes they do themselves, but they would like to have it done away with.

38,414. (*Professor Huxley.*) Why would they have it done away with?—Because they consider it fatiguing and a hardship. The Jersey men, when they are dredging, often injure the nets.

38,415. Are they dredging at the same time that you are drift-net fishing?—Yes, they were last winter and the winter before.

38,416. Did they get in your way?—Yes, and they injured a great deal of nets.

38,417. Was there much damage done in that way?—Yes.

38,418. (*Mr. Lefevre.*) Do the Jersey men bring their oysters in here?—They take them to Dublin and Beaumaris.

38,419. They do not bring them for sale here?—No, there is no market for them here.

38,420. (*Professor Huxley.*) Can you give us any notion of the number of men who are employed in fishing here?—I think there are about 600 fishermen.

38,421. On some parts of the coast of England there is what is called the Convention Act enforced, and one of the articles of that Act is, that it is forbidden to dredge for oysters between sunset and sunrise,—is that the kind of regulation you would like to have here?—It is. When I said that there were only 600 fishermen here, I meant the men in the dredging boats. There will be 800 or 900 men fishing altogether.

38,422. Do the same men who dredge fish in other days?—Yes; but there are a good many countrymen who come in to fish.

38,423. They come in for the herring-fishing?—Yes, from the town, and there are boys also.

38,424. Then the regular number of fishermen will not be more than 600 or 700, but the number will be increased in the summer time, by countrymen coming in?—Yes.

38,425. That will bring up the number to 800 or 900?—Yes.

38,426. (*Mr. Lefevre.*) How many men are there in a boat dredging?—Six or seven.

38,427. Are they all paid by shares?—Yes.

The witness withdrew.

L. Furlong

Lawrence Furlong called and examined.

38,428. (*Professor Huxley.*) Are you a boat owner and buyer here?—Yes.

38,429. Have you heard the evidence which has been given?—Yes.

38,430. Is there anything you would wish to add to it, or correct in it?—Nothing that I am aware of at present, only I quite agree with regard to the deep nets that belong to the boats which come here. A law ought to be made to prevent that. Our boats carry 30 nets, which are altogether 540 fathoms long and 8 fathoms deep. If the size of the nets was con-

ARKLOW.

L. Furlong.

22 Aug. 1864.

fined to that, I think the herrings would not be driven from the shore.

38,431. Then you agree with the previous witnesses upon that subject?—Yes; I think that every man ought to be alike, and that every one should have a fair chance. The men who come here fish for a company of merchants, who hire men to work by the week while they are on our shore. They hire these men for from 15 shillings to a pound a week, and where our men use 30 nets in our boats, they have 60 nets, and where we have them 8 fathoms in depth, they have them 12 fathoms deep. When the two sets of nets are fishing together, theirs go under our nets, and stop the fish from coming aloft; our boats drift on and get foul of them, so that neither of us can fish.

38,432. In fact, you agree with the previous witnesses in what they have stated?—I do.

38,433. Have you anything to add to what they have already mentioned?—All that I have to add is that I think it is a bad system. I think it is also improper for strangers to come and dredge the oysters here all day on the Sunday. It sets a very bad example to our people. They do not like to see it carried on at all. They respect the Sabbath themselves, and they keep at home on Sundays; but the people of whom I speak come here and dredge on the Sabbath. I also think it would be better if we could knock off the fishing at night. I think it is a great detriment to the oysters. I think it is quite enough to dredge for them from sunrise to sundown.

38,434. Do the strangers who come drifting for herrings fish on the Sunday?—They fish on Sunday night, but not on Saturday night.

38,435. Is there any other matter you would like to bring before us?—No; only I think we ought to know whether we are to have the month of May or not.

38,436. (*Mr. Lefevre.*) Has the price of oysters improved much of late years?—Yes; I have seen them here selling at 2*s.* 6*d.* a thousand, and now they have been selling at 7*s.*, 8*s.*, and 10*s.* a barrel this year.

38,437. When did that increase take place?—For the last three years.

38,438. Was it in consequence of the scarcity of young oysters in England?—I think they are scarce in England. Buyers come here both from England and France.

38,439. Has no scarcity been observed here?—No, none.

38,440. Does each boat dredge as many oysters as it did formerly?—Yes, and a great deal more.

38,441. Do you think that the increased dredging has improved the ground?—Yes, I think so.

The witness withdrew, and the inquiry was adjourned until the 23d of August, at Wexford.

Wexford, Wexford County, Thursday, 23d August 1864.

PRESENT:

Professor HUXLEY, F.R.S. (Chairman). | G. SHAW LEFEVRE, Esq., M.P.

JOHN MURPHY called and examined.

WEXFORD.

J. Murphy.

23 Aug. 1864.

38,442. How many years have you been engaged in the fishing here?—For 16 or 17 years.

38,443. What kinds of fishing have you practised?—Flat-fish and oysters and herrings.

38,444. How do you catch the flat-fish?—With a trawl.

38,445. You trawl then, and you have been a drift-net fisherman?—Yes.

38,446. And you dredge for oysters?—Yes.

38,447. Have you been engaged in these three modes of fishing all the time you have been a fisherman?—Yes.

38,448. Did trawling go on here before you began?—Yes; there was trawling here before I began.

38,449. There was trawling here in your father's time?—Yes.

38,450. You know the size of the trawl-boats in use when you began?—They were only small sized boats then.

38,451. Are they larger boats now?—Yes, they are a great deal bigger now.

38,452. What was the size of the trawl-boats when you began fishing?—They were about 14 or 15 tons.

38,453. Were they open boats?—Yes.

38,454–5. What is the size of the boats now?—From 20 to 25 tons; some of them are decked, and some of them are open.

38,456. What was the length of the beam of the trawl when you first began fishing?—From 18 to 22 and 24 feet.

38,457. What is the length now?—From 26 to 27 feet.

38,458. What was the number of boats that were engaged in trawling when you began?—I think about six or seven, or perhaps only four or five.

38,459. How many boats will there be trawling here in the course of the season now?—Perhaps now seven or eight sometimes; I mean boats belonging to our own port; sometimes there will be five, sometimes seven, and from that up to nine and ten.

38,460. They are boats belonging to Wexford?—Yes.

38,461. Besides the boats that belong to this place, are there any others which come to trawl from other places?—Yes, there are a great many from Dublin and Waterford.

38,462. Whereabouts do they trawl?—Inside the banks in the bay.

38,463. Not out at sea?—The Companies' boats trawl everywhere.

38,464. What Company is that?—Companies from Dublin and Waterford, but the Wexford boats only trawl in the bay.

38,465. How many sail of boats will there be here in the season?—I have seen 25 trawling in the bay in the spring of the year.

38,466. When you first knew the trawling was there the same number altogether?—No.

38,467. Have the Companies' boats come since?—Yes.

38,468. And the Waterford boats also?—Yes.

38,469. So that the number of boats has increased since you first knew the fishing?—Yes. The Waterford boats have knocked off now, but Dublin boats and boats from Baldoyle and Howth fish here.

38,470. What kind of fish do you get here?—Plaice, sole, gurnard, and turbot.

38,471. Are there plenty of soles?—Sometimes, but they have been getting very scarce for some time.

38,472–3. Has the supply of fish by the trawl fallen off?—Yes, it has.

38,474. Is the quantity very much less?—A good deal less.

38,475. Do you think that that is in consequence of the increased number of people trawling in the bay?—To be sure it is.

38,476. And of the greater length of the beam and so forth?—The big boats are continually trawling;

they are at it night and day, let it blow high or blow low they are always at it, but the Wexford boats only go trawling in fine weather; it is only in fine weather that they can go out.

38,477. I presume that the other boats are much larger and better boats?—Yes, they are great smacks of 40 and 50 tons.

38,478. They can work in all sorts of weather when you cannot?—Yes.

38,479. Do they work at night?—Yes.

38,480. The Wexford boats cannot do that?—No; there are very few nights when they go out.

38,481. The Wexford boats work more in shore?—Yes, but if there is any damage ever done in the bay it is the Companies' boats that do it.

38,482. When you have been trawling did you observe much small fish taken up in your trawl?—Very little indeed, because they would not stop in it.

38,483. Is the mesh so big that it would let them through?—Yes.

38,484. What is the size of the mesh that you use?—In some parts the net is four and a half inches.

38,485. Have you ever been trawling in any other vessels?—No; but I have seen their trawls in the bay.

38,486. What other vessels?—I have seen the trawls of the Companies' boats in the bay, and they have smaller meshes in them than we have.

38,487. Besides that, do you drift for herrings here?—Yes.

38,488. Are there many boats engaged in drifting for herrings from this place?—There are not many employed in that way now, but before I was fishing there used to be 20 or 30 at it. There were not many from this place, but there were a good many from other places.

38,489. How is it there are not so many boats now?—The herrings have failed here, and they did not think it worth while to follow them.

38,490–2. When did the herrings fail here?—For a good many years past.

38,493. What was the number of boats employed in drifting for herrings when you first began?—In Wexford there were 17 or 18 cots.

38,494. Cots?—Yes, small flat-bottomed cots.

38,495. And now have they almost given it up?—If the people had followed them they would not have been able to support themselves. When there was money to be earned there, many people did not think it worth while to follow them.

38,496. Is there any long-line fishing here?—There was not till a couple of years back. Some of the boats from Wexford followed them, but generally the boats from Howth and Baldoyle fished them.

38,497. Whereabouts?—On the oyster beds.

38,498. Is that a good place?—Yes.

38,499. What do they get?—Haddock and cod-fish, but there are none got now.

38,500. Are there no haddock got now?—No, not about this coast.

38,501. Was there when you first fished?—Yes.

38,502. But there is not much got now?—No.

38,503. None at all?—No.

38,504. Was there much whiting taken on this coast?—No.

38,505. Do they get hake?—Yes, after the herring-fishing.

38,506. Do they get it in their trawls then?—Yes.

38,507. And by hand-line fishing?—No, not off this place, only off Tuskar.

38,508. Do you ever get mackerel?—No, I never was catching mackerel.

38,509. Is there any seining along this shore?—No, none at all. No one here follows it except at at Kilmore. A good many Howth boats follow the mackerel-fishing round at Kinsale.

38,510. You have a good many boats at the oyster-fishing here?—Yes, but they are beginning to get scarce now.

38,511. Where do the oyster beds extend?—Abreast of the port here.

38,512. How many miles east and west?—About two or three miles.

38,513. And how many miles broad will the beds be?—About one mile. I do not think they are more.

38,514. How many boats were employed in dredging for oysters when you first began fishing?—There were about 17 or 18 when I began to dredge first.

38,515. Were they row-boats?—No, sail-boats; but they were only small boats.

38,516. What sized dredge did you use?—At that time we had a big dredge.

38,517. How wide was it at the mouth?—About five or six feet.

38,518. How many boats are there employed now in dredging?—There are 30 belonging to Wexford.

38,519. And do the boats come from other places?—Yes, from all parts.

38,520. How many will there be fishing here altogether, besides the Wexford boats?—There were a good many of the Arklow boats, but they have not dredged here for two or three years. The Jersey men have dredged here. I have seen seven or eight of them together.

38,521. And any English boats?—Yes.

38,522. Then how many sail will there be dredging altogether?—Sometimes 40 boats on our own oyster beds just opposite the bar.

38,523. When you first began fishing, was it a close time for oysters in the beginning of May?—We dredged in the month of May when I began first.

38,524. And June and July?—Yes.

38,525. Did any of the boats dredge all the year round?—Yes, when I first began.

38,526. Was there any scarcity of oysters in consequence?—Yes, I was dredging when I could only get 500 or 600 in a day.

38,527. How long ago is that?—Eight or nine or twelve years ago.

38,528. I see that the Commissioners of Fisheries made a byelaw on the 22d of April 1846, "permitting "during the month of May the dredging for oysters "from any of the public beds below the level of the "lowest water of spring tides, on that part of the "coast between Wicklow Head and Raven Point "north of Wexford Harbour, for the purpose of re-"plenishing and supplying artificial oyster beds or "lays, or other beds or lays, the exclusive property "of any person, but for no other purpose whatever,"—how was that permission granted, do you recollect?—I do not. That permission does not extend to the Wexford beds, but only to the beds north of the Raven Point.

38,529. When was it the permission to fish in May was withdrawn?—They have stopped the dredging in the month of May for four or five years.

38,530. Not more than that?—Yes, but they got leave to begin again, and then they stopped it again.

38,531. (*Mr. Lefevre.*) Do you fish in May now?—Yes, but not on our own oyster beds.

38,532. I am talking now of your own oyster beds?—No, we do not dredge any there.

38,533. (*Professor Huxley.*) None?—No.

38,534. When were you first prohibited from dredging in the month of May?—It has been done away with for seven or eight years.

38,535. Up to that time were you in the habit of dredging?—Yes.

38,536–7. What condition are your oysters in in May, or what condition were they in when you dredged there seven or eight years ago?—They were scarce.

38,538. Were they in good condition?—Yes.

38,539. Was there any reason then why you should not take them?—No.

38,540. Were they good to eat?—Every oyster that was caught was fit to be made use of.

WEXFORD.

J. Murphy.

23 Aug. 1864.

38,541. When do they begin to be out of order—in what month?—In the months of April or May. The month of May is the only month that they are out of order.

38,542. When you were dredging all the year round, in what month was it that the oysters began first to be unfit for food?—I always heard in the month of May.

38,543. Then why did you go on dredging all the year round, if they were not fit to take?—We used to dredge them for bedding.

38,544. Where did you lay them down on beds?—Over at Beaumaris.

38,545. Did you make much out of them?—Sometimes we used to get a good price and sometimes we could not; we took them away and laid them down.

38,546. Are you in favour of having a close time?—Yes.

38,547. You think it is an advantage?—Yes. If the month of May was stopped, I think it would serve the fish.

38,548. You think it is a good thing in regard to your own oysters that the dredging should be stopped in the month of May?—Yes.

38,549. But you think it would be very bad to stop them on other beds?—Yes; I think it would be a good thing to stop them in the mouth of the bay. At Ballyvaldon and in Wexford Bay they would be good for nothing.

38,550. Are the oysters falling off here in Wexford?—Yes.

38,551. Do you find that the trawlers interfere with you in drifting?—No; I have never seen the trawlers doing a great deal here, except the Cornish boats, which trawl on the oyster beds or anywhere.

38,552. Do they do a great deal of damage in that way?—Yes, they have killed the spawn, but the Wexford boats do not.

38,553. Do the trawlers get among you and foul your nets?—No.

38,554. You say that the Wexford trawlers have done you no harm at all?—No; they never went to any place where they could injure us.

38,555. Do you think that trawling does no harm by catching small fish?—I never saw any small fish come up in the trawl.

38,556. None at all?—Not in the Wexford boats.

38,557. Not a single one?—Sometimes there may be a little small plaice, but nothing else.

38,558. Did you ever see any considerable proportion of small plaice brought up?—No.

38,559. Did you ever see a hundred in the take of a trawl?—No.

38,560. You never saw as much as that?—No.

38,561. How many fish would you take in one haul of the trawl?—Not more than a little basket a quarter full sometimes; in the spring of the year we might get more.

38,562. Whenever you have trawled, whether in shallow or deep water, you have never seen many small fish?—No, I never did.

38,563. Have you ever heard any complaint against the Cornish boats for catching small fish in their trawl?—Yes, I have.

38,564. Do they get much?—They will not let us go on board of them to see.

38,565. Is there much complaint of it?—Yes.

38,566. And how do they contrive to catch small fish, when you do not?—Because their meshes are smaller.

38,567. (*Mr. Lefevre.*) Have you a trawl-boat of your own?—No.

38,568. But you have yourself been trawling?—Yes, I have taken another man's boat and trawled with it.

38,569. Where do the Wexford boats chiefly trawl?—Inside the banks from Blackwater Edge down to the Point of Greenore.

38,570. Do they also trawl inside the harbour a good deal?—Very little; they are only little boats that trawl there.

38,571. Not the trawlers you have been speaking of?—No.

38,572. Do the trawlers that come from a distance trawl over the same ground?—They trawl over the banks and the bay also.

38,573. Do they trawl much inside the banks?—Yes.

38,574. Do they come into the harbour?—No, they cannot get in.

38,575. Never?—Not unless there is a gale of wind; they would not have water.

38,576. Do they bring their fish to Wexford Harbour?—No; the Baldoyle men do, but the Dublin men do not.

38,577. How many men trawl here habitually in the harbour?—A few small boats.

38,578. With small nets?—Yes.

38,579. What is the size of the mesh?—Three and a half inches or four inches.

38,580. What makes you think the trawlers from a distance have smaller meshes than you have?—I have seen them.

38,581. Have you been on board of them?—Yes.

38,582. Have you seen them hauled up?—Yes, and and I have caught them in my hand and examined them on the deck.

38,583. What other oyster beds are there north of the bed you have been speaking of?—There is the Teetotal bed.

38,584. How long is that?—It is not very long,—about a couple of miles.

38,585. Are there a succession of beds up from here to the Arklow grounds?—Yes.

38,586. Do the Arklow boats come and dredge here?—They dredge at Ballyvaldon, but not here.

38,587. Do you think the oysters are falling off on the Ballyvaldon beds?—They are scarcer, but I have seen them scarcer than they are.

38,588. Are they scarcer than they are on your bed?—Yes.

38,589. Is there no trawling on that bed?—No.

38,590. But they dredge much longer than you do?—Yes.

38,591. Is the number of oysters brought into Wexford smaller than it was in former years?—Yes.

38,592. Are there many boats bringing them into Wexford besides your boats?—Yes; we have many of the Kentish boats and the Jersey men bringing them here now.

38,593. How long is it since they came off the coast?—Three or four years ago.

38,594. Then, is not the whole number of oysters sold on the coast larger than it was?—No.

38,595. Have your own boats increased in number?—Yes.

38,596. How is it with regard to the price; is it larger than it was?—They were dearer nine or ten years ago than they are now.

The witness withdrew.

J. Bell.

JOHN BELL called and examined.

38,597. (*Professor Huxley.*) Are you a boat owner?—Yes.

38,598. Have you yourself been a fisherman?—No, I am not a fisherman, but I have fished sometimes.

38,599. Are you concerned in the fisheries?—Yes, for the last 16 years, but I have fished in my time.

38,600. How many years have you known the fisheries here intimately?—About 40 years.

38,601. What do you think is the condition of the fisheries now as compared with what it was when you first recollect them; take, for example, to begin with, the oyster fishery, and go as far back as the year 1836; there is an official report as to the state

of the fisheries then ?—I can go back for 15 years, and give you candid evidence with regard to the state of the fisheries during that time; but I cannot go back so far as the year 1836. I have been in the trade now for 15 years.

38,602. That will be 1849?—Yes.

38,603. What was the condition of the oyster fisheries in 1849 ?—The oysters on the Wexford bed were very thin at that time; they were very little got.

38,604. How did that come about ?—The ground was more worked. It was worked all through the year, winter and summer.

38,605. By the Wexford boats ?—Yes.

38,606. Were there any strange boats as well ?—For eight or nine years we have had Jersey men dredging on our ground.

38,607. About 15 years ago ?—I do not think there were any 15 years ago.

38,608. That there were any but Wexford boats ?—There may have been a few Jersey men 15 years ago.

38,609. Do I understand you to say, that the bed at that time was fished all the year round ?—Yes.

38,610. Was there, at that time, no close time for oysters on the Wexford beds ?—I do not think there was any close time.

38,611. What became of the oysters that were fished during May, June, and July,—where were they sent ?—They were sold in Wexford Harbour and loaded upon vessels. The Wexford oysters were not sold for use.

38,612. During June and July they were not eaten here ?—No.

38,613. What became of them ?—They were sent to Beaumaris.

38,614. Were they laid down there ?—Yes.

38,615. And later in the season were the oysters eaten ?—Yes.

38,616. And sold for consumption ?—Yes, they were sold for consumption. They might be laid down in Beaumaris to-day, and taken up to-morrow and sold. They are allowed to do what they like with them in England, but they cannot do so in Ireland.

38,617. That is not exactly the case; oysters are not permitted to be taken in England in the months of May, June, July, and August ?—I do not know what is the case there. They are not allowed to be taken in Ireland.

38,618. Was there any regulation in respect to the oysters at that time; was there any restriction of any kind with regard to the size of the oysters that were to be taken ?—Not a bit.

38,619. Because here is a byelaw made by the Fishery Commissioners, which appears to have been passed somewhere about the year 1846, which states that "all persons engaged in fishing for and taking oysters off the Wexford coast south of Raven Point" —you are south of Raven Point ?—Yes.

38,620. "Shall cull such oysters as may be taken "or got, and shall not remove from any fishing "ground or oyster bed any oyster of less dimensions "than three inches at the greatest diameter thereof, "and shall immediately throw back into the sea all "oysters of less dimensions than aforesaid, as well as "all gravel and fragments of shells as shall be raised "or taken while engaged in such fishing; and no "person shall take from any oyster rock, strand, or "shore off the said Wexford coast, south of Raven "Point, any oyster of less dimensions than three "inches at the greatest diameter thereof; and any "person offending in any respect against this bye-"law, rule, or regulation, shall for each offence for-"feit and pay a sum of 2*l*." Was that rule not in operation at the time you speak of ?—No.

38,621. No one enforced it ?—No.

38,622. (*Mr. Lefevre.*) When was that regulation enforced ?—I think about three years ago only.

38,623–4. (*Professor Huxley.*) Then, up to the last three years, was there no regulation of any kind with respect to fishing on the Wexford Bank ?—No.

38,625. You took the oysters when you liked, and of what size you liked ?—Yes; there was a close season after the month of May.

38,626. You say after May; do you mean from the beginning or the end ?—From the beginning of May.

38,627–8. The 5th and 6th of Victoria was passed somewhere about 1842, was it not ?—Yes.

38,629. But, as I gather from you, many years later than that, as far as 1849, you were in the habit of fishing when you pleased here ?—Yes, there was no hindrance.

38,630. Then the Act was not enforced ?—No.

38,631. When was it that a close time was first enforced here ?—I do not think it was ever so strictly minded as within the last four or five years.

38,632. I think you said that the produce of the oyster beds was rather poor about 15 years ago ?—The Wexford beds were poor, but the Ballyvaldon beds had a great deal of oysters on them.

38,633. Did they get worse or better in subsequent years ?—They grew better.

38,634. Although there was no additional restriction placed upon them ?—There was a change to some extent.

38,635. In what way ?—The boats used to go to the Ballyvaldon grounds, and they remained there fishing upon those beds, while our own ground was allowed to rest.

38,636. So that, in reality, there was a change ?—Yes.

38,637. How many years were the beds allowed to rest in that way ?—They were not allowed to rest all the year round, but the boats would go away in March, and they would not go to the Wexford bed until later on in the season.

38,638. In consequence of that, did the oysters increase ?—Yes.

38,639. How are the oysters on that bed now ?—They appeared very thin when the fishery was given up last year. They were not able to get one-fourth of the complement they had got before.

38,640. Notwithstanding the regulations which were made four or five years ago ?—The regulations were made too late. The ground had been cut up when they were made.

38,641. Do you think that the time had passed by for doing any good ?—Yes, a good deal of it.

38,642. Is there much fishing upon the bed this year ?—Not at this season.

38,643. But during the season of the year ?—Yes, there was.

38,644. The herring-fishing, we are told, is no great matter here ?—It is not tried.

38,645. The boats do not go out ?—There are no boats to go out. It has only been within the last couple of years that we have begun, with a few boats, to fish herrings.

38,646. Was there no herring fishery here years ago ?—There used to be a winter fishing.

38,647. What time of the year was that in,—what month ?—From November up to Christmas.

38,648. Was there any fishing after Christmas ?—I remember the men left it off at Christmas, and there were plenty of fish there.

38,649. In what condition were the fish which were taken at that time ?—They were very good.

38,650. Were they full fish ?—Yes

38,651. With milt and roe or pea in them ?—Yes.

38,652. Did you ever get spent fish about that time, in December ?—I never saw any.

38,653. At any rate, they came quite full ?—Yes.

38,654. When did the herring-fishing cease to be pursued here ?—It has fallen off within the last 11 years. I think it is 11 years since we had a good season, and they have not been plentiful since.

38,655. Did the people give it up because they had other occupations to go to ?—The people still try it on all along the shore.

38,656. When did they begin the summer fishing here ?—In May or June.

WEXFORD.

J. Bell.

23 Aug. 1864.

38,657. What year was that; how long ago?—I was at it about 12 years ago, and then we knocked it off.

38,658. Was there any summer fishing in your younger days?—Yes.

38,659. And then it dropped off for a time?—Yes.

38,660. When did they resume it again?—I think this is about the fourth season since I began myself. I was the man who began it.

38,661. Is there a good summer fishing now?—Yes, very good.

38,662. How many boats will there be fishing from here?—In the summer time?

38,663. Yes.—Eight, I believe.

38,664. What is the length of the fleet of nets they use?—About an English mile.

38,665. How deep are they?—About 11 fathoms deep, I think, as near as possible.

38,666. Do not those boats fish off this coast—the Wexford boats?—They go as far as Courtown Bay. I have not tried off the Tuskar light, but I will next season.

38,667. Have you tried the fishing down below?—Yes, abreast of us. The want of a fleet prevented us before.

38,668. Have you not been doing so lately?—No.

38,669. Do you think the herrings are here?—Yes, in the month of May.

38,670. And in the winter time also?—Yes.

38,671. What time do you find the best for your summer fishing?—The 1st of May.

38,672. As early as that?—Yes.

38,673. And do you go on fishing through June?—Yes, until the 1st of September. I have one boat fishing that will fish up until near Christmas.

38,674. What sort of condition are the May fish in?—Very good.

38,675. Are they of good size?—Yes.

38,676. What sized mesh do you use in your nets,—how many rows to the yard?—Thirty-three.

38,677. And do you get many fish in that way?—Yes.

38,678. Fat fish, I suppose?—Yes.

38,679. What is your great market for them?—For the herrings?

38,680. Yes. Where do you send them to?—To Arklow. I go first to fish out of Arklow.

38,681. Do the Arklow people buy them?—Yes, and strange buyers come there to buy them also.

38,682. Do you go fishing off Arklow yourself?—No, I do not; but eleven years since I fished for herrings off Arklow.

38,683. Do many of your fishermen fish off Arklow?—Only within the last season or so. They have not fished there for a good many years, but all our boats have fished off there.

38,684. Did the Arklow people meddle with you?—No, the Arklow men never meddled with us.

38,685. Have you been long-line fishing?—No, I was never long-line fishing.

38,686–7. Have you ever been engaged in trawling?—Yes, I have a boat trawling.

38,688. How long have you been working your trawl boat here?—I have been working her here, on and off, for the last 15 years.

38,689. Where do you generally trawl?—In the south bay, and in the north bay, from the Blackwater Edge up to Varney Bay.

38,690. Do you trawl off here?—No.

38,691. What is the size of your boat?—About 20 tons.

38,692. Is it not decked?—No, it is half-decked.

38,693. What is the length of the beam?—Twenty-four or twenty-five feet.

38,694. What is the size of the mesh of the net?—I suppose there are portions of the net where the mesh will be about three inches, and there are other portions of it where it would only be about two inches. That is the bag of the net.

38,695. The bag of the net is smaller than the rest?—Yes.

38,696. Do you trawl during the day-time or during the night-time?—At this season of the year we trawl in the night-time.

38,697. Why is that? Is it better to trawl in the night-time?—It is better at night-time. We only catch little soles in the summer time, and very little of anything.

38,698. When you trawl during the day?—We get very little in the day, and very little either in the night.

38,699. When you first began fishing with the trawl-boats, did you get plenty of fish?—We got a good deal more soles than we get now. There were far more soles caught when I began trawling first.

38,700. How many vessels were there trawling besides your own 15 years ago?—I suppose there would be 11 then.

38,701. Is the number the same now?—There is about the same number trawling now, or, perhaps, somewhat less. I do not think there are 11 trawling now.

38,702. How many strangers have come into your bay to trawl since then?—I cannot tell how many, but they do come in, and sometimes there may be from 20 to 30.

38,703. Is that many more than were in the habit of coming formerly?—No, they came just the same, and sometimes more than they do now.

38,704. What would you consider to be a fair average take of fish in your trawl for a day's work?—We can only get very little fish now by trawling.

38,705. But you must get some, or you would not go on with it?—We have dropped it off altogether.

38,706. What would have been considered a fair average take of fish formerly, say 14 or 15 years ago?—Well, I suppose a boat would not have been out for more than three hours, as late as four or five years ago, without getting three or four tons of fish.

38,707. How many years is it since you had so great a supply of fish?—About five years ago.

38,708. Was there no falling off in the supply of fish up to about five years ago?—No, not in the plaice fishing.

38,709. When you were working with the trawl, did you find that you brought up any considerable proportion of small fish in the trawl among the large fish?—I do not know anything about the small fish that they may have taken up in the trawl; they were not brought to me.

38,710. You were not trawling yourself?—No. My boats were trawling, but I was not out with them myself.

38,711. Did the people who were working your boats throw the small fish overboard before they brought it to you?—I cannot tell that.

38,712. Have you ever been out trawling yourself?—Yes.

38,713. Can you say from your own observation whether it was customary to take any considerable proportion of small fish along with the large?—We did not meet those small fish you speak of.

38,714. Did you not get flounders and flat-fish a couple of inches long?—Yes, but we got very few of them.

38,715. Did you throw them overboard again?—Yes, they were of no use to us.

38,716. Did you not get a considerable quantity of those small fish sometimes?—No, not a great quantity.

38,717. Was it when you were trawling in the bay that you did not get a great quantity?—Yes.

38,718. What do you think is the reason that the take of fish has fallen off so suddenly with the trawlers?—Well, I think the Dublin trawlers coming here and laying upon the ground, and working with the 42 feet beam in such large numbers, and sweeping all over the bay, have been the cause of the scarcity. They have not given the fish any rest.

38,719. But I understood you to say you had 11 or 12 trawlers working here for 10 years?—But

they do not trawl in this season. They are after the oysters.

38,720. But still they were working for a considerable period, without causing any sensible diminution?—Yes, they were. A portion of the boats used to be engaged in trawling, and a portion of them were engaged in dredging.

38,721. When did the large heavy Dublin trawlers make their appearance off the bay here?—They have made their appearance here for a good many years now.

38,722. Was it ten years ago?—Yes, but there were not as many of them then as there are now.

38,723. Did the supply of fish fall off suddenly?—No. For eight years they have been falling off. Last year and the year before they were very poor.

38,724. Do these trawlers increase in number, and go on trawling in the bay?—Yes.

38,725. Then they must get fish?—I think they do, and they have worn the bay out.

38,726. (*Mr. Lefevre.*) Do they fish all the year round?—Not in the depth of winter. They are afraid to come then.

38,727. (*Professor Huxley.*) Was there ever any long-line fishing here?—Yes.

38,728. Where were the lines laid?—On different parts of our oyster beds, and down in the bay too.

38,729. Was there any considerable catch of fish?—Yes, great quantities of cod were caught.

38,730. Was there any considerable number of haddocks caught?—I have never seen many caught here.

38,731. Are the codfish falling off as well?—I cannot say. They were not followed up. There is no weather here to allow the fishermen to follow them up properly.

38,732. What do you think is the reason that the fish caught by the long-line have fallen off?—I think it is on account of the big trawlers, as I told you before. They give the fish no rest.

38,733. Do they come here to work in the bay itself?—Yes, right chock into the bay.

38,734. Do they prefer that to working outside?—They do not work outside.

38,735. Do they not work outside at all?—We seldom see them working outside at all.

38,736. Will you tell me what you call the bay? What are the limits of the bay?—From Blackwater Bank up to the shore.

38,737. Do the Dublin trawlers trawl outside that bank?—They do not. I never saw them trawling there.

38,738. Do they trawl altogether inside?—Yes, down upon the oyster beds, right down upon the Teetotal ground. I have frequently been watching them when they have been trawling there.

38,739. Do your people never trawl over the oyster beds themselves?—I cannot say, but I think they do.

38,740. Do they not take up the oysters in their trawls, when they trawl over those beds?—Sometimes they do.

38,741. Do the other trawlers take up oysters in their trawls when they are trawling there?—Yes, I think they do. Their nets are more powerful than ours, and they appear to go over the oyster ground more than ours do.

38,742. Is there any source of complaint among the fishermen here?—I do not know.

38,743. What do they complain of chiefly, if they have to complain?—I cannot say that they do complain.

38,744. Do they complain much of the trawling?—I do not hear them complain. They do not follow trawling much, only in the summer time.

38,745. It appears that in 1849 the Fishery Board passed a byelaw, "prohibiting trawling in all places "where there are boats engaged in herring or mac- "kerel drift-net fishing; and providing that trawl- "boats shall keep at a distance of at least three miles "from all boats fishing for herrings or mackerel with "drift-nets; and that, whenever herring or mackerel "boats shall commence drift-net fishing in any place "off or on the coast of Wexford, the trawl-boats "shall depart therefrom, and keep at least three "miles distant from the drift-net herring or mackerel "boats." Do you know how it was that byelaw came to be passed? Was there any public meeting here at that time?—I heard about it. It was said that the trawlers used to interfere with the winter fishing boats in the daytime.

38,746. Not the Wexford people?—Yes, the Wexford people themselves.

38,747. Did they interfere one with another?—Yes.

38,748. Do you recollect making any complaint about it yourself?—No; it was not in my time. I do not remember that law being passed. I was not in the fishing trade at that time, I think.

38,749. Are there any trammel nets or fixed nets set about the bay?—There used to be some.

38,750. Are there any now?—I cannot say.

38,751. (*Mr. Lefevre.*) Are you an oyster purchaser now?—I purchase when the season comes on.

38,752. How many purchasers of oysters are there here now?—Not more than four or five.

38,753. Do you think that the quantity of oysters brought into the town and sold is greater than it used to be?—It has not been as great for the last year or two.

38,754. But taking two or three years before that, and comparing them with what it was ten years ago, do you think the quantity of oysters brought into the town is greater than it was?—There are more brought in now, I think.

38,755. Can you give us any comparison as to the quantity?—Yes, three times and four times as much. The consumption is far more than it was; but there are more boats to catch them, and there are more strangers coming here to get them.

38,756. There are also more boats belonging to the place?—Yes.

38,757. Are the boats better boats than they were formerly?—Yes.

38,758. Do they carry more dredges?—Yes. Formerly we were in the habit of carrying only about one.

38,759. You carry more now?—Yes.

38,760. How many?—We carry now six, seven, and eight in each boat.

38,761. Then do you think that each of the boats dredges up more oysters than a boat did in former years?—Yes.

38,762. We have heard that the bank which they call the bank belonging to this place, lies south of Raven Point?—Yes.

38,763. What banks are there north of that?—There is the Teetotal ground, and the Ballyvaldon ground, and the Courtown ground, and the Arklow ground.

38,764. Do those beds lie in succession, one after another, with intervals between them?—I think so. There are oysters all along the coast.

38,765. Do any boats fish much upon those beds, except the Wexford men?—The Wexford men do not go further than the Ballyvaldon ground.

38,766. Do they dredge there in the month of May?—They are altogether on the Ballyvaldon ground then.

38,767. Do they take many oysters then?—Yes.

38,768. Are the oysters they take in good condition in the month of May?—They are spawning at that time.

38,769. Are they in a worse condition than the oysters taken on the Arklow ground at that time?—No, I think they are all alike.

38,770. They are all the same?—Yes.

38,771. Do you think the oysters taken at Arklow at that time are full of spawn?—Yes.

WEXFORD.

J. Bell.

23 Aug 1864.

38,772. Do you find that you get a worse price for the oysters taken in May than during the rest of the year ?—I do not think that we have done so latterly.

38,773. But in other years did you ?—Yes ; we would get a worse price for the fish, because there would be no one to buy them but one party, and he would give what he liked for them.

38,774. Where does he lay them down ?—In Wexford Harbour.

38,775. I want to know why the regulation permitting oysters to be taken in May, extends only to Raven Bank, and not to the Wexford bed ?—I do not know what was the reason that it was cut off at Raven Point.

38,776. Is there any reason why it should not extend to the Wexford bed ?—I do not know. I do not think there is any reason, but I think it would be very bad for the people if it did.

38,777. Do you think that it is a bad thing that oysters should be taken in May from the Ballyvaldon bed ?—I think if they are allowed to be taken in May there, there will be no oysters at all to be obtained in the course of another year or so.

38,778. Do you think it would be desirable that the oysters should not be allowed to be taken from that bed during the month of May ?—Yes, I do.

38,779. Would not a regulation to that effect take away a considerable amount of employment from the men here in the month of May ?—I do not think it would do them a ha'porth of harm.

38,780. How is that ?—Because there would be plenty of summer herrings here, if it were not for the trawlers.

38,781. Do you think that the dredging of oysters in May prevents the herrings from coming ?—I think that it is in consequence of the trawlers coming here and trawling over the ground, that the herrings are induced to shift outside the bank.

38,782. Do you think that the dredging of oysters on the Ballyvaldon Bank, in the month of May prevents the herrings from coming into the bay ?—Yes, I do.

38,783. Do you think that if the dredging for oysters was prohibited there at that time, the herrings would come in ?—Yes.

38,784. Do any Arklow boats bring oysters into Wexford for sale ?—Yes.

38,785. Do they come and dredge over your Wexford beds ?—Sometimes they do. They do whenever they please; they come whenever they think that it answers their purpose.

38,786. Have the last three years been bad spawning years for the oysters here ?—I do not think there has been much spawning for the last couple of years.

38,787. What is the depth of the water on the Wexford beds ?—I think there is about eight fathoms of water,

38,788. And what is the depth of water on the Ballyvaldon beds,—is it deeper there ?—No, I think it is much about the same.

38,789. I think you said that the regulation with regard to the culling of oysters was made three years ago ?—Yes, for the Wexford ground.

38,790. Has that regulation been observed by the boats here ?—Yes, I think it has.

38,791. Do they carry a measure for the oysters ?—Yes, they do.

38,792. Where do they cull them, in their boats ?—Yes.

38,793. Do they throw the small oysters overboard ?—Yes.

38,794. When the fishermen find a small oyster attached to a large one, do they break it off and throw it overboard ?—No.

38,795. Is there anybody appointed to see that they do not bring small oysters into the market ?—Yes.

38,796. Who discharges that duty ?—The police and the Revenue men.

38,797. If they see small oysters attached to the large ones, do they consider that comes within the prohibition ?—No.

38,798. They do not meddle with that ?—No.

38,799. Is an oyster that is two and a half inches across, a large or a small oyster for your beds ?—That would be a saleable oyster.

38,800. What is the largest size ?—There are some of them about five inches across.

38,801. Do you find that the buyers will give more for small oysters than for large ones ?—In general the small oysters, about three inches across, are thought more of than the large oysters.

38,802. When you sell oysters, do you cull them at all ?—The man who ships to the Liverpool market will do so.

38,803. Does he size them before he sends them away ?—Yes, he does.

38,804. Are there many oysters sold here for eating at once without their being, in the first instance, laid down upon beds ?—Yes, a great many.

38,805. Are the oysters here at all green in colour ?—No, we have no green oysters.

38,806. Do you think that the regulation with regard to culling the oysters has done any good as yet ?—I do not know ; I think it was established almost too late. When they began to be culled, it was found that they were all gone.

38,807. Was there any public meeting here before that regulation was made ?—Yes, there was.

38,808. Was there an application made by the fishermen here to the Fishery Board for the intervention of the Commissioners ?—Yes.

38,809. Why was that ?—Because there used to be tons of oysters brought up from the Wexford bed and thrown ashore, where they were left to die.

38,810. Of what size were those oysters ?—About two inches across.

38,811. Was there no sale for them ?—There was no sale for them at that time ; they were left to die.

38,812. Would not the purchasers from Beaumaris buy them as well as the others ?—There was a time of the year when they would purchase them to take to Beaumaris, but not in the winter time.

38,813. Would they not stand the voyage ?—They would not stand carrying.

38,814. What limit in regard to size do the Beaumaris men put upon the oysters ?—They like good sized oysters.

38,815. Did they say that they would not take them below a certain size ?—They are very fond of big oysters ; it is only for France or the London market that we want the small ones.

38,816. Would not the people from France and London buy the small oysters ?—Yes, they would.

38,817. Then how was it there was no market for them ?—I suppose there were plenty of oysters on these beds at that time.

38,818. But you say there was not a market for them at that time ?—No, there was not.

38,819. Would there be a market for them now ?—Yes, there would be a very good market for them if we had them now.

38,820. Do you think it has been any loss to the fishermen here their not being allowed to dredge up those small oysters ?—I do not think so.

38,821. Do you think that such a regulation ought to be extended to the Ballyvaldon beds ?—The Ballyvaldon three-inch oysters are considered large oysters. They are a deeper description of oyster than those which are got here, and a three-inch oyster, or even a two-inch oyster, is a good oyster there.

38,822. What do you mean by saying they are a "deeper description of oyster"?—They never grow as large as ours. A three-inch Wexford oyster is only a poor oyster.

38,823. A three-inch Ballyvaldon oyster is as good as a Wexford oyster of a larger description ?—Yes.

38,824. Then you think it is not desirable that this regulation should be extended to the Ballyvaldon ground ?—Yes.

38,825. (*Professor Huxley.*) Do you ever go dredging upon the Arklow beds?—No, we do not go down as far as Arklow.

38,826. The rule on the Arklow beds seems to be quite different from what it is here?—Yes.

38,827. They are allowed to fish the oysters during the close time?—Yes.

38,828. Have you noticed any difference at all in the thick and the thin oysters in the time of spawning? Have you ever heard anything of that sort mentioned?—No, I have not.

The witness withdrew.

William Coghlen called and examined.

38,829. (*Professor Huxley.*) You are the Collector of Customs here?—Yes.

38,830. Have you interested yourself in the fisheries of this place?—Yes, I have.

38,831. Have you been long acquainted with them?—I was born here, so that I have had a long personal knowledge, except for a short time when I was absent from the town, but that was only an interval of about seven years.

38,832. It appears from the statements which have been made to us, that not only has trawling been going on in this bay by the people belonging to the town itself, but a number of strange trawlers come here as well?—Yes, I have seen them.

38,833. So that there has been in one way or another a considerable increase in the amount of trawling within the last 20 years?—I think so, but for the last two years there has been rather a decrease. I think there are not as many strange trawlers coming here as there used to be.

38,834. To what cause do you ascribe that falling off?—I cannot say. Three years ago, a boat would come in here with two or three tons of plaice every day, and now I do not see them come with any such quantity.

38,835. Then has there been a sudden falling off in the quantity of fish taken?—Yes.

38,836. But the trawlers have not increased?—No. I have seen them sometimes with a small boat which they had as a tender, and that would not be sufficient to carry away the fish from the moorings, but it would have to go a second time.

38,837. How long ago is that?—About three years since.

38,838. In that case, it does not appear perfectly clear that the increase in the number of trawlers had much to do with the falling off in the take of fish?—I do not think it had, because, for the last three years, I think the number of strange trawlers has rather decreased than increased.

38,839. But you think that, within the last two or three years, there has been a sensible falling off in the take of fish?—Yes, that is my opinion.

38,840. Have you ever been trawling yourself?—No, I have never been trawling, but I have been oyster dredging.

38,841. Then you cannot say, from your own knowledge and experience, whether there is any considerable portion of small fish taken in the trawl?—No.

38,842. You say that you have been dredging for oysters?—Yes, I have just gone out for a day occasionally.

38,843. Will you turn your attention now in particular to the Wexford bed. Has the supply of oysters from that bed fallen off much during the last 10 years?—No; during the last 10 years it has increased considerably.

38,844. But it had fallen off?—Yes, it had fallen off. I myself recollect when a boat would go to the bed, and would, perhaps, not bring in more than 500 oysters, whereas I have seen them come in, within the last six years, with 70,000 oysters.

38,845. In one boat?—Yes; they calculated that they had that number in the boat.

38,846. How many years ago is it since the dearth of oysters you speak of obtained?—Twenty years ago there was a great dearth of oysters.

38,847. Was that just before the passing of the 5th and 6th Victoria?—I recollect when there was no such thing as care taken of the beds at all. The dredgers then might fish all the year round, if they chose. But of late years the bed has had much more care paid to it in the close season. I should say that the reason why the Fishery Commissioners prevented fishing on the Wexford bed, in the month of May, was that the bed was small, and if they continued to fish it during the month of May it would soon have been exhausted.

38,848. You are speaking now of the bed at the mouth of the harbour?—Yes.

38,849. The Commissioners did not prevent the fishing then; they did not make a law to prevent it?—No.

38,850. The prevention was the effect of the Act 5th and 6th Victoria?—Yes.

38,851. Has that Act been fairly enforced for the last 20 years?—I was out of Wexford during that time, for about 10 years. Within the last 15 years I believe it has been pretty well observed. There has been very little fishing on the bed during the close season, more especially within the last eight or nine years.

38,852. Then we find among the list of byelaws here one relating to the size of the oysters taken. How did that byelaw come to be passed? We understand that the Fishery Board only passes its byelaws after a representation has been made to it by the locality.—That byelaw was passed in consequence of the great destruction of the oysters. The boats at that time brought ashore indiscriminately whatever they took up in their dredges. They sold all the oysters they took to the buyers here, and then the buyers picked out the eatable oysters that were fit for the market, and left the refuse to perish. I think that in one season not less than 100 tons of oysters, or even more than that, were left at White's wall at the end of the quay, as being worthless, and the shells were placed upon the roads, to mend the roads with.

38,853. Was it not worth while to take them for laying down on the oyster parks?—I think they were so weak that they would not bear to be removed.

38,854. What time of the year was that?—It was in the month of September, during the open season.

38,855. Then that might be regarded as altogether wasteful fishing?—Yes.

38,856. They were taken of a size so small that they were no good?—Yes, and I think that, if that fishing had gone on, the bed ultimately would have been completely exhausted.

38,857. What was the average size of those very small oysters?—Some of them would not be more than an inch and a half or two inches across. Indeed, I think they took away anything beyond two inches, although, in my opinion, oysters under three inches taken on the Wexford bed are completely worthless.

38,858. Oysters under three inches here are of no value?—No.

38,859. Cannot an oyster three inches in diameter be safely transported and laid down elsewhere?—It may be transported and laid down, but for eating it is not worth anything.

38,860. Would not a prohibition against taking oysters less than three inches in diameter seriously affect the trade in oysters taken to be laid down on the English coast and elsewhere?—It might serve the beds there, but it would injure ultimately the beds here, because if you take oysters indiscriminately, the beds will become ultimately completely exhausted.

WEXFORD.

W. Coghlen.

23 Aug. 1864.

38,861. If oysters were not taken less than two inches, that would prevent indiscriminate fishing?—Yes.

38,862. But it would not prevent the removal of oysters at a time when they were unable to bear removal?—That is my opinion.

38,863. Do you think that would operate injuriously?—Perhaps those oysters which exceeded two inches in diameter might bear to be removed.

38,864. Do you think the working of this byelaw has been productive of much loss to the persons engaged in the fishery?—I think it has been productive of no loss to them at all.

38,865. Was there no great trade in small oysters that could be laid down elsewhere?—There was, but not at that time, for propagation. They were merely laid down for a short period. They were merely put down upon the Beaumaris beds, and left there for a short period. They were not sent away to France for propagation.

38,866. Has there been a demand here for oysters for France for propagation?—Yes, the demand was very great last season.

38,867. Of what size will they take the oysters for that purpose?—They prefer the medium size.

38,868. What do you call the medium size?—Three inches.

38,869. And I suppose they were glad to get them?—Yes, as a larger number can be got into the measure of small ones than large ones, and they sell them by number in France.

38,870. For laying down on the French beds, would they be glad to get them of two and a half inches in diameter?—I should say they would, if they were sufficiently strong to bear the voyage.

38,871. There appears to be no regulation of this kind on the Arklow beds?—No.

38,872. And they fish a month longer there?—Yes.

38,873. Is there any difference in the oysters here and those obtained from the Arklow beds to justify such a distinction being drawn?—Perhaps the Arklow beds are of much greater extent than those here, and they would not be exhausted so soon by being fished in the close season.

38,874. You have no doubt that enforcing the close time carefully has been of great benefit here?—Yes, and I think it would even be of benefit to enforce it in the month of September also, because the oysters then are not very good; they are very weak.

38,875. Are they good in May?—No, they are not.

38,876. In what water is the oyster bed here? What is the depth?—About eight fathoms.

38,877. That is more shallow water, I think, than the Arklow bed?—No, I believe it is deeper, and it is deeper than the Ballyvaldon bed too. I have never been on the Arklow bed, but I think ours is deeper than that.

38,878. Have you heard any complaints from the fishermen here against the trawlers for interfering with their drift nets?—No, none; but I have seen the trawlers here trawling over the oyster bed.

38,879. In that way would they carry away the oysters during the close time?—I should say that they would disturb the spawn.

38,880. From your knowledge of the fisheries here, is there any particular grievance the fishermen have to complain of that you are aware of?—I am not aware of any.

38,881. (*Mr. Lefevre.*) Is there any person appointed here to look after the oysters as they are brought in, and see that they are not under the size?—Yes.

38,882. Who?—The police.

38,883. Have they special instructions to do that?—Yes, they act under the Fishery Commissioners.

38,884. I suppose a considerable number of oysters are brought here that are taken from other beds?—Yes, from the Ballyvaldon and Arklow beds too.

38,885. Will most of those be under three inches?—Yes, but they would be easily known.

38,886. Is there such a distinction in the appearance of the oysters?—Yes, in the appearance of the shell.

38,887. Can you tell whether the boats are fishing on the prohibited beds or not in the month of May?—Yes, it can be seen from the Customs station down at Rosslare, which is at the entrance of the harbour, whether they are dredging on the Wexford bed.

38,888. Have there been any convictions under that byelaw?—Yes, there have been under the byelaw with regard to size, several convictions.

38,889. Have any complaints been made by the fishermen with regard to it?—No, none.

38,890. Do they generally agree in thinking that the regulation is a good one?—Some of them do, and some do not. Some of them would be glad to take every one of the oysters. They would be like the man who killed the goose which laid the golden eggs; but, generally speaking, I believe, they think the byelaw is for their own advantage.

The witness withdrew.

E. Cullen.

EDWARD CULLEN called and examined.

38,891. (*Professor Huxley.*) You are a fisherman here?—Yes.

38,892. You have been here for a great many years?—Yes, I have been engaged at the fishing for about 40 years.

38,893. Do you recollect any public meeting which took place here about the year 1848 or 1849?—Concerning trawling?

38,894. Yes?—We have been stopped from trawling in the herring-fishing time here.

38,895. How was it that that came about?—The north sand men and the St. Clear men applied to the Coastguard, and they stopped us at that time.

38,896. Did the Wexford men make any application against them?—No, they did not.

38,897. Some of your people were also trawling at that time?—Yes, but not when the herring-fishing took place. We all gave it up then. If the herrings were scarce, very likely we might go out with the boats to make a shilling out of the night's work.

38,898. Did you trawl at night?—Yes.

38,899. In that case, I suppose you would sometimes get foul of the herring-nets?—I do not know that any of our boats ever got foul of the herring-nets. They have been out at the time we were trawling, but we generally strove to keep off on account of the fine that would have been imposed upon us if we had injured the nets.

38,900. Do you think that somebody occasionally got foul of them?—I think so.

38,901. And that was the reason that regulation was made?—Yes.

38,902. Was there any public meeting held here about it?—I do not know that there was, but we were stopped by the Revenue men; that is all I recollect.

38,903. The law appears to be that you shall keep three miles outside of the herring-boats?—That is what we were told we were to do.

38,904. Have you always done that since?—Yes.

38,905. Has the enforcement of that regulation interfered very much with your trawling?—Not a great deal. There are times when we can work very well three miles away from them, in the north bay particularly.

38,906. Then you do not care much about the regulation; it does not seem to affect you very much?—It does not injure us very much. If we went among the herring men, the Revenue men would soon be after us, and they would make us give it up;

but the herring men themselves do injury occasionally. In a boat in which I have been before now, they have cut a net away from the stern of the boat.

38,907. Who have done that?—The herring fishermen.

38,908. Do you mean that they cut the trawl off?—Yes.

38,909. (*Mr. Lefevre.*) Did you, in consequence of that byelaw, leave off trawling any time during that year?—We left it off then on account of the fine.

38,910. Did you leave it off both by day and night?—Yes, we gave it up both by day and night when the herring men were there. They got herrings on the north and on the south sand, and we gave up trawling there.

38,911. Since the herrings have left that place, have you gone on trawling all the year round?—Yes, there is nothing to be got in any other way. Certainly the sand men in the season of the year do not object to it so much, but when it comes to Michaelmas and to Hallowtide they will object to us if a few herrings come.

38,912. Do you recollect any person being summoned for breaking the law?—I cannot recollect that.

38,913. Was the law generally observed then?—It was.

38,914. (*Professor Huxley.*) There was no herring-fishing carried on during the day-time?—No.

38,915. But you were kept from trawling during the day?—Yes.

38,916. Would it have been of any use to trawl there during the day?—Yes, we could have done very well at it that season, because there were plenty of soles and plaice at that time; the water was thick, and we could have got them then.

38,917. When you have been trawling in the bay, did you get any considerable quantity of small fish in your trawl?—In the spring time of the year, it is very little small fish that we take, but at another time there may be a few sand dabs, which are generally small, and of no value to bring home.

38,918. Would there be any considerable quantity of them?—No, very little; there may be a dozen or so in the bottom of the net.

38,919. Do you find more trawling outside or inside?—We never trawl outside of our bays.

38,920. Have you ever been trawling over the oyster bed?—Well, not altogether upon the oyster bed.

38,921. Suppose that you got on the oyster bed by accident, would you pick up any oysters with your nets?—Yes, if we did we should take up oysters.

38,922. Could anybody trawl over it without picking up oysters?—I do not think they could.

38,923. (*Mr. Lefevre.*) How far across are the oyster beds?—I think the oyster bed is nearly a mile and a half across, or about that.

38,924. Are there seasons when you find more fish in the bay than others?—Yes, in the spring time of the year, but we generally fall in with the plaice in the month of September.

38,925. Do you sometimes find that the fish leave the bay altogether in the month of May?—Yes, when the weather gets warm, and the water gets clearer, they will go out. I have been trawling in May, and have got one or two tons weight of fish, when they have gone quite away the next day, and I have never got any more till the latter end of the year, when they came in again, and we could get as much as we liked.

38,926. They went away altogether in one night?—Yes.

38,927. Do they come back again as suddenly?—Very often they do.

38,928. (*Professor Huxley.*) Are the oysters more plentiful now than they were seven years ago?—No, I do not think they are; they are a good deal scarcer than they were.

38,929. Are they scarcer than they were five years ago?—I do not think they are. I think they were scarcer then than they are now. They had begun to increase then.

38,930. When did they begin to increase?—It is about seven years ago since I first noticed their increase. At that time, I found on a shell as many as ten only the size of my nail. After that they grew, and there was nothing but oysters.

38,931. When did they begin to fall off after that?—They began to fall off by their continually killing them and taking them away.

38,932. But that has been stopped now?—Yes.

38,933. Do you think it is a good rule to oblige the dredgers to put back the small oysters?—I think it is a good rule, and I think it is a good rule to stop them in the month of May.

38,934. You think it is a good rule to oblige them to put back oysters that are not three inches across?—Yes, because they are of no value to any one.

38,935. May they not be sold for laying down in other places?—That might be done, but in the market they have no value.

28,936. If you were allowed to take oysters two and a half inches across, would you have any market for them; would the French buy them?—Yes.

38,937. Could they be transported; would they stand the voyage?—Yes.

38,938. Oysters of a less size than that would not carry very well?—No.

The witness withdrew.

HERBERT HOARE called and examined.

38,939. (*Professor Huxley.*) Are you a resident in Wexford?—I reside within five miles of Wexford, on the Slaney.

38,940. Have you long resided there?—About 18 or 20 years, but I have been occasionally in England.

38,941. Have you interested yourself in the fishing here?—Yes.

38,942. Do you wish to make any statement to us?—I may say, as a private impartial person, that it seems to be desirable to carry out, with regard to oysters, that which has been done with regard to salmon.

38,943. What is that?—The longer the close season is, and the greater the quantity of brood left, the larger the supply will be. The close time seems to be pointed out by nature, namely, at the time when the oysters are too small to be eatable. I think they are too small even in September, and an impartial person would say, that it would be better not to permit oyster fishing from about the middle of April until the end of September. That would recover the fecundity of the fish, and there would be an abundance of fish upon beds which have been exhausted by over-fishing.

38,944. Do you think that the oysters are not fit to be eaten in the month of May?—They are certainly not.

38,945. And not in the latter part of April?—I can hardly say that, but the longer the close season, the more would be left for brood. If they go on fishing them as they have been doing, the fecundity of the Wexford beds, in the end, will be all destroyed. The Wexford oysters are very much larger than those upon other beds, I think, because they are an older fish and have lived longer. The oyster shells here are very large, and, I believe, there was a considerable pearl fishery in Wexford once. I have lived in Jersey, where my brother had the command of a Queen's steamer engaged in protecting the beds which have been laid down close to Brittany and Normandy. The French exhausted their beds quicker, and were only able to get a small oyster, while the Jersey men got a bigger oyster, because they did not exhaust

WEXFORD.

H. Hoare.

23 Aug. 1864.

their beds. I recollect that the oysters there were very large, and excessively good, because they were not over-fished.

38,946. We are told that, up to within a few years past, men were in the habit of fishing the oysters all the year through?—Yes, but there were not the great takes then that there are now. For example, a large French lugger was here seven times last summer, and carried away an enormous quantity of fish.

38,947. The existence of a close time could not have affected that; a large number of boats might dredge the beds during the open season; however short you made the open time it would be possible to send a great number of vessels here, and even in some cases to send a steam dredge?—No doubt.

38,948. Your argument would go rather to a limitation of the number of boats?—I think if you limit the season you will have more to breed.

38,949. With regard to oysters, the number taken must depend greatly on the number of boats fishing in the open season?—Yes. I think it is a real hardship that foreigners, persons not belonging to this country, should come here and dredge, and carry away the young oysters for their own purposes. If they are taken away in the winter, we know that the young oysters die from the frost. They are killed and thrown away in the transit, and I think it is certainly hard that that should be permitted.

38,950. You are aware that that is a very difficult thing to regulate?—Yes.

38,951. For example, the Wexford fishermen think it very hard that other fishermen should come to fish for herring on their coast?—That is a fish that comes under a different category. The herrings come down from the northern sea and they are got at that period; they come down here to deposit their spawn in the shallows, and they are only driven off by a rough sea; the spawning time, therefore, is the time at which the herrings are taken, and we must take them when we can get them.

38,952. Would you advocate the general principle of the fish being the property of the persons on whose coast they lie?—The oyster is an inhabitant of the coast; the herring is a migratory fish.

38,953. Would you extend that principle to restricting the Wexford men from fishing on the Arklow beds. I ask the question in order to show the difficulty of regulating the matter?—I have lived in France for some time, and I know the great efforts which have been making in France with regard to oyster culture. Knowing what they are doing in the matter, it does seem very hard that French luggers should be allowed to come here and carry away all our spat and young for their own purposes.

38,954. How many miles from the shore are the oyster beds which are fished off Wexford?—Not more than two miles; I believe they are only two miles from the shore.

38,955. Are they not beyond the three mile limit?—I do not think they are.

38,956. It appears at first sight that the case you have mentioned is a great hardship, but there would be a great difficulty in making a rule on the subject that could not be turned round upon our own fishermen in other ways?—Yes.

38,957. If a law is made for one locality it must be made for all, and then it is probable that the Wexford fishermen would suffer as much as any body else?—Yes.

38,958. Is there any other suggestion that you wish to make to us?—I may say with regard to lobsters, that although there are good fishermen on the east coast, no close season is observed; the lobsters are taken a great deal too small. There is a very great amount of neglect with regard to them. I fancy from what I hear that there is a gross waste and improvidence.

38,959. Do you mean the taking them in the spawning time?—At all times at too small a size. I think there ought to be some minimum weight with regard to lobsters.

38,960. Are they taken so small as to be useless?—No, not useless, but they kill them instead of allowing them to grow up.

38,961. Have you anything to say with regard to trawling?—No, except in this way, I think a great deal might be done by increasing the capability of the shoal water on the sands to hold the spat of the oysters. We know that in France they have found out that, by putting down fascines and so on, so as to give something for the spawn to hold by, they have greatly increased the stock.

38,962. Do you think the sea bottom about here is fitted for oyster culture?—I think it is particularly so.

38,963. Are there large sheltered bays?—Yes, and there is that calmness of water which exactly suits the oyster. The spat must not be deposited too high nor too low; if it is too near the surface it perishes with frost and cold. In order that there may be a success in oyster culture, there must only be a certain depth of water.

38,964. You would not suggest that the Government should do that. If it is necessary, why do not the people who are locally interested in the matter do it? The Fishery Board has the power of giving them an interest in the fisheries, and they have already granted licences to people who are disposed to cultivate the oysters. It has been done in France by private enterprise?—Yes, and they have oyster parks, which are very useful and valuable. I have not seen any here.

38,965. Do you think the ground is such that it might be done with advantage?—Yes; there is an immense extent of sand bank upon which at present there is nothing to hold the oyster spat. If they were to lay down stones and rough things upon the ground, I think it would become a seed-bed.

38,966. Then might it not be worth while that some one interested in the matter should try the experiment? You would hardly recommend the Government to take the initiative?—That is a question that it is difficult to answer.

38,967. If it succeeded would it not pay any private speculator extremely well?—Not if the public had a right to fish there.

38,968. No, but the Fishery Board has the power of granting an exclusive right of property in the shape of licences to persons who lay down the beds?—I do not know how that would be at any distance from the shore.

38,969. (*Mr. Lefevre.*) Are those banks a continuation of the Wexford bank?—Yes. At Howlen's bed there is an immense mass of shoal water.

38,970. At some distance from the shore?—For two or three miles there are great flats quite away from the shore. They may be considered to be off the shore altogether.

38,971. Is there deep water betwen them and the shore?—Yes, they have channels between. Towards Courtown, on the northern shore of the county, there seem to be banks of the same sort.

38,972. Are there any beds here in the harbour, or along the coast, where the oysters are laid down for fattening?—I am not aware of any. I know that, in the case of a small river in the Bay of Tintern or Bannow Bay, they brought over oysters and formed a fishery, and they are oyster fishing now where there was none before.

38,973. You are not aware of any licence having been granted here under the byelaw?—No; and I imagine that, round Carnsore Point to Hook Head there are banks well fitted for oyster culture.

38,974. With regard to the French boats that fish off the coast here, do they bring their oysters here and sell them, or do they carry them away themselves?—I was speaking of a captain who came from Cherbourg. I think he came seven times to pur-

chase oysters, in order to carry them away for laying down on the coast of Brittany.

38,975. Did he purchase them from the fishermen who got them?—Yes.

38,976. Besides that, do French boats come and dredge here?—Yes.

38,977. Do those boats sell them here, or carry them away to France?—I am not aware.

38,978. I presume you would not object to that trade—to the trade of purchasing oysters here for the French beds?—I do not see how it could be prevented at all.

38,979. That appears to be important to the fishermen here?—No doubt the Frenchmen have as good a right to buy them as anybody else. You could hardly prevent that.

38,980. It would be a different matter if the French boats came and fished here, and never landed their oysters, but took them away from here to France?—I understand that the Jersey boats do come here, but they are our countrymen.

38,981. There would be no means of ascertaining, in that case, if the byelaw established here with regard to the size of the oysters is carried out or not?—Of course, the oysters taken away go away without inspection.

38,982. (*Professor Huxley.*) Have you yourself studied the oyster culture on the coast of France?—No, except when I have been bathing there. I have occasionally made inquiries, and I have been in communication with a gentleman in Paris and others who have been acquainted with M. Coste's method. He pointed out to me the difference between a four-year old oyster, a three-year old oyster, and a two-year old oyster, showing that the size of an oyster was a matter of age entirely.

38,983. I asked you the question because I have reason to believe that a great many of the artificial beds in France are laid down between tide marks?—Between high and low water?

38,984. Yes, and they make artificial embankments for keeping in the water. Is that a system which might be carried out here?—They have an economic way of catching fish on the coast of Brittany. A field is, as it were, laid down between high and low water with a heap of stones. Then there is a water-way to prevent the fish from going through as the tide recedes. There is a pool formed there, and you may see the women going in with nets to fish.

38,985. That is, for ordinary fish?—Yes; there are large oyster parks, about Granville especially.

38,986. All that is within reach of private enterprise?—I do not think any private person would venture to turn one of these large sand-banks, two or three miles out, into his own private property, unless he was sure to be able to keep other people off.

38,987. Do you think it necessary that banks should be taken as far off as that; are there not many places in-shore where artificial beds might be constructed?—No doubt there are, but there is a large extent of sand-bank which might be fructified, and which is capable of being converted into a good oyster fishery. It is nearly pure sand, and nothing better can be done with it than covering it over with stones.

38,988. (*Mr. Lefevre.*) What is the nature of the bottom of the bank here; is it rough ground?—It is rough ground; there are small stones and gravel.

The witness withdrew.

The Rev. Michael Vicary called and examined.

38,989. (*Professor Huxley.*) You have prepared a paper in reference to the fisheries here?—Yes.

38,990. Will you be good enough to read it?—It has reference to the Kilmore fishery, and is as follows:—"Kilmore, situated at the eastern terminus "of Ballyteige Bay, is a small harbour, formed by "a pier or mole recently erected, of which the west "wall only is finished. It, however, gives shelter to "about 40 cobles and boats, some of the latter being "20 tons. It requires much a breakwater to the "east, or an east wall, and would thus form a safe "anchorage for the fishing boats. About 100 men "and boys are employed in fishing for cod, bream, "ling, haddock, and conger. Flat-fish are not taken. "The fishing ground in both bays, Ballyteige to "the west, and Tacumshin to the east, abound in "lobsters and crabs. A well found boat will clear "40*l.* in the season. Generally speaking, with the "exception of the crustaceans just mentioned, the "fishery has declined at Kilmore. Some 40 years "back haddock of prime quality abounded, and cod "were much more abundant than at present. It is "difficult to assign a reason for this state of things, as "feeding and spawning grounds of a great extent, "adapted to all the exigencies of the various varieties "of fish, resorting to the locality, are to be met with. "I should say from personal observation, that sprats "arrive in as great quantity as usual, upon which "fish feed, and that nature in this respect, reproduces "itself from year to year. I am induced to think "that the constant fishing, whenever the weather "permits, of nine large trawlers from Dunmore and "other places destroys, during the breeding season, "large quantities of the spawn of the best varieties "of fish. This I have ascertained from those who "have seen the decks of the trawlers loaded with "spawn, and with quantities of small fish, destroyed "by the trawl beam. The remedy here suggests "itself,—to prevent, by legal enactment, trawling "during the months that spawn is deposited, or protecting the beds for a longer period, until the young "fish are able to take care of themselves. The Kil-"more men fish only with the line, and are very pri-"mitive in their habits. Mackerel, and occasionally "pilchards, visit the coast, from about the 1st of "August, in large quantities; but from the want of a "larger class of boats and superior nets, but a small "quantity is taken. With regard to the lobster and "crab-fishing, it would seem advisable to render im-"perative the returning to the sea the small lobsters, "which is now never done. The lobster at Kilmore "is a superior fish, both in size and flavour. The "crab is not so good, and I should say it would not "operate favourably to apply the same rule to the "young crabs, as they form, to a great extent, the "fishermen's bait for many other fish. Bait is much "wanting in the locality, a district or estuary over "which the sea flowed having been lately reclaimed. "The fishery, then, having declined in the locality, "the suggestions that I would make resolve them-"selves into these,—to endeavour to have the pier "finished, so as to protect and encourage a better "class of boat; to limit the period when the trawl-"ers should fish (they fish at a distance of three "miles from the land), and to order the return to the "water of small lobsters. I think that more oyster "beds are to be found on our coast, and, as the "spawn of those fish is thrown up on the shores of "Tacumshin and Ballyteige Bays, it would seem ad-"visable, for the purpose of developing what in fact "they are, mines of wealth, to hold out some en-"couragement for their discovery. I regret that "other occupations prevent my saying more on the sub-"ject, with which, from natural inclination and habit, "I am not unacquainted." With regard to the taking of spawn by the trawlers, I may say that I saw a man who stated that he had seen the decks covered to the extent of six inches, with the spawn of fish. There is no other reason which I can assign for the falling off of the haddock and cod fisheries, except the taking away of the spawn and the young fish. I think this is a magnificent locality for the feeding of fish.

WEXFORD.

Rev. M. Vicary.

23 Aug. 1864.

The two Saltee Islands lie in the centre of the bay, and the ground itself is a good rocky ground.

38,991. Has any representation been made to the Fishery Board by the inhabitants of the district, because that is the first authority to whom representions of this kind should go? The Fishery Board have the entire superintendence of the fisheries of Ireland. It is quite correct that we should have this evidence here, but the body which is charged with the superintendence of the fisheries is the Fishery Board. Has any statement been made to that Board?—I am not exactly aware whether any statement has been made to them or not.

38,992. Supposing the trawlers did all the mischief you speak of, would not the Fishery Board have power to interfere with them?—I am not aware that any recommendation has been made to them. Mr. Coghlen applied to me on the subject. I know a a good deal about it myself, and I know that the valuable fishery of Kilmore has declined.

38,993. If this mine of wealth is waiting for anybody who will take it, is that not a sufficient inducement; what other motive would you have more than that?—I think it ought to be a sufficient inducement, but I thought it as well to bring these matters before you.

38,994. With regard to this inducement to fish, is not the fact of being able to make a large profit out of the fisheries, if they are properly carried out, the best inducement which can be held out to people to follow it out?—No doubt of it.

38,995. So that, without any direct interference on the part of the Government, the fishery might be prosecuted, if it was a good one?—Yes.

38,996. Is there any other inducement you would hold out?—I think not. The fishermen of Kilmore are excellent honest men, but they know nothing of that magnificent net which is used on the coast of Cornwall. They are fishing now in the same way as their ancestors did 600 years ago.

38,997. Do you mean the pilchard net?—Yes.

38,998. Are there large shoals of pilchards here?—Yes, I have seen them; they come and go. Occasionally the pilchards and mackerel break upon the shore. The fishermen then make a mark and surround them with a small seine.

38,999. Do they work with hand-lines or long-lines?—Hand-lines. Long-lines are too much for them.

39,000. Are they too primitive for the long-lines?—Yes.

39,001. (*Mr. Lefevre.*) Do the trawlers not work within three miles of the coast?—Yes, I think there are limited banks; but there is generally dirty foul ground, and places abounding with fish, and I know for myself, that having fished with the long-line, and I remember catching four turbot on one line.

39,002. Then the trawlers, in your opinion, have not much interfered with the mine of wealth you speak of?—No; but I want to find a reason why the fish have declined. The fact is, that the fish were abundant, and now they have declined. I know that the spawn has been injured.

39,003. When you say spawn, do you mean what we generally understand by spawn, or the young of fish?—By spawn I mean the eggs of fish.

39,004. Are there any other fishing villages between this and Dunmore?—There is Kilmore, which is exactly opposite to the two Saltee Islands, which form a natural breakwater.

39,005. How many fishermen are there there?—From 100 to 140 at Kilmore.

39,006. Is there any other place?—There is a place called Feathard, lower down in the bay.

39,007. Are they fishermen throughout the year?—They fish only in the summer months, because the pier is not sufficiently protected in the winter months, but the rough fish are more to be met with in the winter than summer, and these wretched fishermen of Kilmore, with their lobster pots, are obliged, I believe, to send to Wexford for bait.

39,008. How many boats are there at Kilmore?—About 50 altogether.

39,009. Are they open boats?—Cobles, which are small boats; there are a few of the larger and better class.

39,010. They do not come round the point for oysters?—No, they never fish for oysters; but I am convinced there are oysters to be found there.

39,011. Are there oysters to be found south of the Point?—Yes; the men have told me that they have pulled up oysters on their hooks.

The witness withdrew.

W. Coghlen.

WILLIAM COGHLEN recalled and examined.

39,012. (*Mr. Lefevre.*) Are there oyster dredgers between this and Arklow?—Yes, four or five. All along the coast there are stray boats which are hauled up on the beach.

39,013. Is there any means of ascertaining the amount of oysters brought into the port here and sold?—No; you might, perhaps, obtain an average account.

39,014. There is no statistical account kept?—I did make a return to Mr. Barry.

39,015. Was that a comparison of a series of years?—No, only for the last year.

39,016. Can you give us a return for a few years?—No; last year was the principal year we exported. We had no export to France before that, except there may have been a small quantity sent away.

39,017. Do you know the number of fishermen here?—Following the oyster fishery?

39,018. No, I mean engaged in any kind of fishing?—There is a large number on the coast who follow the herring fishery.

39,019. Take the number that dredge for oysters, how many are there?—I should say there are very nearly 500.

39,020. Does that include the number who dredge on the Ballyvaldon bed?—One portion of the beds they dredge on was in fact only discovered last year, and if it had not been for that, I think the original beds would have been exhausted altogether. The fishermen here are under the impression that if the Ballyvaldon bed is fished during the month of May it will be exhausted.

39,021. Have there been other beds discovered here within the last few years?—No; they discovered another bed in a previous year in that locality.

The witness withdrew.

J. Howlin.

JAMES HOWLIN called and examined.

39,022. (*Professor Huxley.*) Have you been requested by the fishermen to attend here?—Yes, to bring forward one point only, namely, that they attribute the falling off upon the Ballyvaldon bed altogether to the month of May being allowed as an open month.

39,023. Do they wish it to be cut off, and a close season applied to it?—Yes; they wish the byelaw to be rescinded, so far as the Ballyvaldon bed and the Teetotal bed are concerned.

39,024. But for the discovery of the new bed which has just been alluded to, do they think that the old beds would have been exhausted altogether?—Yes.

39,025. Are there many men from the shore fishing immediately off the Ballyvaldon beds?—Not oyster-fishing; they are all small boats that go.

WEXFORD.

J. Howlin.

23 Aug. 1864.

39,026. The people go from here and Arklow ?—I think the Arklow men do dredge there, but it is on the Wexford coast and in the Wexford district.

39,027. Have the Arklow men expressed any wish of that kind ?—No; but the fishermen here have. The oysters are not in season in that month; they have been examined when they have been taken in the middle of May, and they have been found full of spawn. They bring forward in proof of their statement, that since the month of May has been made a close month at Wexford the oysters have increased, while those on the Ballyvaldon bed, which has been left open, have decreased.

39,028. (*Mr. Lefevre.*) Has the condition of the fishermen improved here ?—I think it has.

39,029. What has been the cause of that ?—There has been an immense trade in oysters here, and an improved class of boats.

39,030. A foreign trade springing up here for aying oysters down in France ?—Yes.

39,031. Is there any other matter which the fishermen wish to call our attention to ?—No, that is the only thing.

39,032. You have heard what they have stated to us ?—Yes, and that is the only point they were anxious that I should bring before you.

The witness withdrew.

T. Smith.

Thomas Smith called and examined.

39,033. (*Professor Huxley.*) I believe you wish to state to us that you have never seen trawlers working over the oyster bed ?—Not unless they were Dublin trawlers.

39,034. The Wexford trawlers would never do that ?—Not unless in the night-time, when they might have over-run the ground.

39,035. What is the reason that they keep off from there ?—Because they would tear their trawl and leave it altogether behind.

39,036. And that would be a disadvantage to them? —Yes, it would be of no advantage for them to go upon the bed, because the fish do not lie on that ground.

39,037. They never go there if they can help it ?—No.

39,038. Have you ever seen the heavier trawl-boats trawling over the oyster beds ?—Yes; they go there sometimes, and they are much stronger boats.

39,039. Does not the ground tear their trawl ?—No; and another thing, they have a preventer before the sweep rope, which brings it up before they can tear the trawl.

39,040. Have they other nets before their trawl ? Yes, some of them have.

39,041. Do not your trawls have anything of that sort ?—No, nothing of that kind.

39,042. Is there anything else you wish to say ?—No, nothing else.

39,043. (*Mr. Lefevre.*) I suppose that the Dublin trawlers do not know the ground as well as you do? —I do not think they do.

39,044. Do you not think it possible that they are as anxious as you not to go over the oyster ground ? —They may be, or they may be not. I do not think they would go over it to do it an injury any more than we should.

The witness withdrew, and the inquiry was adjourned until the 24th of August, at Dunmore.

Dunmore, Waterford, Wednesday, 24th August 1864.

Present:

Professor Huxley, F.R.S. (Chairman). | G. Shaw Lefevre, Esq., M.P.

DUNMORE.

S. Mitchell.

24 Aug. 1864.

Samuel Mitchell called and examined.

39,045. (*Professor Huxley.*) Have you resided here for many years ?—Yes, for 22 years.

39,046. You are a master pilot, I think ?—Yes.

39,047. Are you acquainted with the fishery and the fishermen ?—I am.

39,048. What are the modes of fishing practised here ?—Trawling and line-fishing of all kinds; there are also herring and mackerel-fishing and hake-fishing.

39,049. Is there any sprat-fishing ?—Yes, and what we call fishing for scad.

39,050. Mackerel scad ?—Yes.

39,051. Are there any crabs and lobsters taken here ?—There are a great many crabs and lobsters.

39,052. Is there any oyster-fishing ?—There are a few oyster beds above the river.

39,053. What is the number of boats employed in the fishing here ?—There are six large trawlers out of Dunmore at present.

39,054. What is the tonnage of those trawlers ?—From 30 to 46 and 50 tons.

39,055. Are they decked boats ?—Yes.

39,056. What is the number of the other boats here ?—There is a great number of small boats; there are over 45 hookers, besides open boats.

39,057. A list has been given by you to us stating that there are eight first-class boats; are they vessels that are employed in trawling or in hooking ?—In trawling. They are large boats.

39,058. Then there are 15 second-class boats ?—Yes.

39,059. Are they employed in hooking ?—They are employed in hooking and trawling.

39,060. Do any of the open boats trawl ?—Yes, plenty of them.

39,061. With small trawls ?—Yes.

39,062. Besides these first and second-class boats there appears to be a number of small boats ?—Yes, yawls and big boats of five, six, or seven tons.

39,063. Can you give us any opinion of the number ?—I cannot say exactly; there are a great many boats up at Passage which trawl.

39,064. Where do the boats which fish from off this harbour mainly come from ?—From Passage, Dunmore, and Tramore.

39,065. Are they the three principal places ?—Yes.

39,066. Since you have known the place has the number of boats much increased ?—Yes, the small boats have increased but the fish have gone away.

39,067. Have the trawlers increased in number ?—They have not.

39,068. Is there the same number now that there used to be ?—Yes, but there are not as many belonging to this place. There used to be three or four more but they have gone.

39,069. The total number working in the bay is as great ?—There are one or two laid up now which are not working.

39,070. Has the tonnage of the trawlers increased ? —Yes.

39,071. And the size of the boats ?—Yes.

39,072. Has the length of the beam become greater ? —Yes, every boat they build becomes larger and larger.

DUNMORE.

S. Mitchell.

24 Aug. 1864.

39,073. Was there trawling here when you first knew the place?—Yes.

39,074. Had it been going on here long before you knew it?—With small boats, but not with big boats.

39,075. Do you recollect when the big boats began?—I do.

39,076. In what year was it?—About 22 years ago.

39,077. That is when you first began fishing?—Yes.

39,078. Did you come from Brixham?—No, from Portland.

39,079. Was it Brixham men who came round first?—No, people belonging to my own place. There was also a Dublin boat that came down here; it got blown down from Dublin and was fishing here when we came. Then we had four boats here, and we caught so much fish on the bank outside that we were induced to stay. Messrs. Coxen and Penrose of Waterford then got boats.

39,080. (*Mr. Lefevre.*) Were there small trawlers before that?—There were plenty of hookers but no big boats.

39,081. (*Professor Huxley.*) There is a difference between a trawler and a hooker. Were these small hookers you speak of employed in trawling as well as in hooking?—Yes.

39,082. With small trawls?—Yes.

39,083. When you first came did the large trawlers work outside on the banks or inside?—About 15 miles outside.

39,084. Is it better for them to keep outside altogether?—Yes.

39,085. The small trawlers work in-shore?—Yes, in the season.

39,086. Then on the whole the tonnage and the number of the trawlers have increased?—Yes; when I first came here there was only one boat, but when we found the fish was plentiful out on the bank, from 15 to 20 and 30 miles out, the boats began to increase, and they have gone on increasing up to this day.

39,087. What is the total number now?—There are four fishing and two laid up.

39,088. What is the total number working on those anks from every place?—Outside?

39,089. Yes.—Only four.

39,090. Are there no strange boats?—One from Dublin.

39,091. I understood you to say that there were as many as 30 boats at times?—Yes, in the winter time when the fish come in, and away up to Dungarvan and the light-ship.

39,092. Occasionally are there as many as 30 boats fishing?—Yes.

39,093. That is not the case all the year round?—No.

39,094. When you first began trawling here was there an abundant supply of fish?—Yes, there was an immense catch of fish then.

39,095. Of what kinds?—Of all kinds except red mullet.

39,096. Were soles very abundant?—Yes.

39,097. Was there plenty of turbot?—Yes.

39,098. And of plaice?—Yes.

39,099. And of John Dories?—Yes, and of hake and haddock.

39,100. Were haddocks abundant?—Yes.

39,101. Were they fine haddock?—They were both large and small.

39,102. Was there whiting as well?—Yes, silver whiting.

39,103. Have you been acquainted with the trawl-fishing within the last few years?—I have not been acquainted with trawling within the last 11 years, but I have been in the harbour constantly.

39,104. How long did you yourself trawl?—Nine or 10 years.

39,105. At that time did the yield by the trawl boats fall off?—The fish got very slack.

39,106. Was it a gradual decrease?—Yes; constant working over the ground with so many boats we consider injured the spawn of the fish and the fish left us.

39,107. Did you ever see spawn brought up in the trawl?—Yes, plenty of it.

39,108. Do you mean spawn or the eggs of fish?—Small fish and spawn.

39,109. Real fish spawn?—Yes. In this harbour I have often seen the nets covered with it. Just when I came to this harbour it was full of fish of all kinds. I was fishing here for a long time, and the fish were very abundant. We got a power of fish in the harbour then, so that when the weather was rough we used to shoot on the Maid and found fish of all kinds in the greatest abundance.

39,110. About the question of spawn, do you know cuttle-fish spawn and squid spawn?—I have caught immense quantities of spawn like candles.

39,111. Like what is called dead men's fingers?—Yes.

39,112. That is not fish spawn at all?—No, but there is another kind of spawn like feathers.

39,113. Did you find any great quantity of that stuff outside?—Not so much, because we considered that the deep water washed it a good deal off when we had the net out.

39,114. There is no clear proof that this was fish spawn at all?—No, it is a different kind of thing altogether from those long-fingered things you speak of, which hang like candles.

39,115. That is not fish spawn at all?—I could not tell what it was.

39,116. Do you know what herring-spawn is?—No. Sometimes I see immense quantities of spawn sailing on the top of the water, but I cannot tell what spawn it is.

39,117. Are we to understand that you think that the supply of fish has fallen off from your knowledge of what goes on here and from seeing the fish brought into the harbour?—Yes.

39,118. Has the supply got by the trawlers diminished?—Yes.

39,119. What would be the average take 20 years ago when you began fishing—how much did you bring in on an average per day?—Sometimes as much as four or five tons.

39,120. Would not that be an out-of-the-way take?—No. If we worked the trawl for two or three hours we should have as much as we could take. We should have four or five horse-loads, both in Dungarvan, at the light-ship, and on the Maid. It was the same in all those places.

39,121. What amount of fish do they yield now?—It is a mere nothing now.

39,122. Would you get half a ton?—Perhaps 20 or 30 pairs of soles and an odd turbot.

39,123. Under those circumstances how do the trawlers afford to go on? The tonnage of the vessels has increased, the amount of capital put into them has also increased, and yet you say the yield of fish has fallen off so much. How under those circumstances do they afford to go on—are fish dearer?—They have been doing worse because there is no market for the fish here, there are so many boats trawling in the harbour.

39,124. Would not that make the matter worse for them?—It does.

39,125. Then how do they go on and pay their expenses?—They keep their boats up, but they don't get half the money they formerly got.

39,126. Where does the fish caught by the trawlers go to for the most part?—To Dublin.

39,127. Does much of it go to Waterford?—It goes from Waterford to Dublin in the train.

39,128. Is there not much sold in Waterford itself?—No, not much.

39,129. Does much of it go to Cork?—It don't go there, but to Bristol. It is carried across by steamboat.

39,130. But the most part of it goes to Dublin?—Yes, when the Dublin boats are here.

39,131. It is a little difficult to understand how if the fish have fallen off in that extraordinary manner, so that they only get 20 soles, they can afford to pay the expenses of keeping up the trawlers ?—They don't pay much. They are getting worse and worse every year. There was an abundance of fish off here since I can remember, both trawl-fish and mackerel and herrings.

39,132. How do the little trawlers get on in the bay ?—They have done very well; I have one myself.

39,133. Has not the fish fallen off with them ?—Not until lately.

39,134. Has the number of little trawlers increased since you began fishing ?—Yes.

39,135. Then the fishing has not fallen off with regard to the small trawlers ?—Every poor man now gets a small boat to hook a bit of fish in the harbour.

39,136. But I want to know as a fact whether the supply of fish taken by the small trawlers has fallen off or not, or whether it is the same as it used to be ?—It has fallen off; it has gone altogether. Last year I made 16*l.* by my little boat, but this year I could not make 2*l.*

39,137. Has that falling off been sudden ?—It has been falling off ever since the big trawlers trawled in the harbour.

39,138. Formerly they used to trawl outside ?—Yes.

39,139. Since what time have they began to trawl inside ?—Now for about 13 years.

39,140. Has any application been made to the Board of Fisheries on that subject ?—There was. There was a meeting held by the fishermen of the town. They considered that it did no good to trawl on the Maid bank.

39,141. That would be somewhere about the year 1852 I suppose. There is a byelaw prohibiting trawling by boats exceeding six tons measurement within lines drawn from Credan Head to Temple Church. This byelaw has two dates, namely 2d March 1852 and 12th September 1860. Was it passed in consequence of a public meeting here and after an inquiry ?—It was.

39,142. Do you recollect the circumstances of that meeting ?—Yes.

39,143. Was it held in 1852 or 1860 ?—In 1860.

39,144. What was the cause of it ?—The small boats considered that the big boats were destroying the place and preventing the shoals of fish from coming in.

39,145. Did they complain that the trawlers were coming inside the heads ?—Yes; they were trawling in the harbour when the hake and the herring were likely to come in in the fall of the year.

39,146. Did they make a representation to the Fishery Board on that subject ?—Yes.

39,147. Did you take a share in that representation ?—No, I did not.

39,148. Were you then working a large trawler ?—Yes.

39,149. What took place in consequence of the representation that you made—do you remember ?—I do not. I only know that they passed a byelaw that none of the heavy boats should come in.

39,150. Has that byelaw been enforced ?—Yes, I have never seen a big boat there since.

39,151. And yet the fishery has fallen off every year ?—Yes.

39,152. Then that regulation has not done much good ?—No.

39,153. How far should the large trawlers be kept out ?—They should not be allowed to come inside Hook Point and Swines Head.

39,154. Not inside the headlands at all ?—No; I would have no trawling there. There used to be abundance of fish until the big boats began to trawl.

39,155. Hook Point and Swines Point are the headlands here ?—Yes.

39,156. Credan Head and Temple Church are a long way inside the headlands of the harbour ?—Yes.

39,157. More than seven miles ?—No, about four miles.

39,158. Do you think that if the trawlers were kept altogether outside of the limits of the harbour that the fishing would recover itself ?—I have no doubt of it.

39,159. But the prohibition which exists does not seem to have had the smallest effect ?—No, the big boats inside the harbour destroy all the fish and clear the ground. They do not go further out than from the Hook down to Swines Head.

39,160. Were you ever interfered with when fishing ?—Yes.

39,161. In what way ?—I went trawling outside the harbour when my net was cut.

39,162. Where were you trawling ?—In the deep-sea fishery.

39,163. Outside the heads ?—Yes, in the Channel. It blew very strong upon that day. Some of the rest of the big boats shot on the Maid. I never shoot there before. I did not shoot in the harbour but I towed in when I could not get the fish on board.

39,164. Was there so much of it ?—Yes, of cod, ling, plaice, turbot, brill, large gurnards, and dories. I made 16*l.* by a two hours' haul. Then the hookermen said it was not right, and they cut my net. I think Mr. Barry came from Dublin about it.

39,165. What year was that ?—The year 1860.

39,166. That was when the byelaw was passed ?—Yes, they passed the byelaw to prevent us from going above Credan Head.

39,167. Did the meeting in 1860 refer to that ?—I think it was about that time, as far as I can recollect.

39,168. But what you tell us rather shows that there was a great deal of fish then ?—Yes, there was a power of fish then, but since these big trawlers have been coming in every year the fish have been getting less and less.

39,169. You were at that time outside the line from Credan Head to Temple Church ?—Yes.

39,170. You were outside the line drawn from Credan Head to Temple Church, but yet you were inside the headlands ?—Yes.

39,171. When you speak of the large trawlers trawling inside, do you mean to say that they have gone on trawling inside the harbour but outside the line from Credan Head to Temple Church ?—Yes.

39,172. They do not violate the byelaw ?—No.

39,173. Where did you haul your trawl up ?—Below Credan Head. Sometimes the tide is very strong, and when we begin to heave the trawl up the wind drives us in.

39,174. Do you think the practice of trawling inside the heads is very injurious to you ?—I do.

39,175. We have been told that of late there has been a steam trawler here, when did she come ?—She has not been here above two or three months, not more than that.

39,176. Where does she work ?—She is constantly trawling in the harbour between Hook Head and Credan Head.

39,177. Is that outside the line drawn from Credan Head to Temple Church ?—She trawls above that.

39,178. Why do not the authorities prevent her ? There is a byelaw to that effect ?—She is down at Credan Head, and she goes across towards Broomhill and trawls back again. If she trawls from Credan Head to Broomhill she is still inside the head. She is down there and she crosses to this coast and down again to Credan Bay, and away to the Black Rock. As long as she is outside of that line she is within the limits of the law. No doubt she acts within that.

39,179. What is the size of the trawl that she uses ?—I think it is about the same as ours.

39,180. Have you ever been on board of her ?—No.

39,181. But the size of the trawl is about the same ?—Yes.

39,182. What size is that; is it about 40 feet ?—I believe her beam is 42 feet.

38,183. Is there any evidence to show that she is doing any mischief to the fishery ?—There is; we all feel it.

39,184. What harm is she doing ?—We cannot catch any fish at all since she has been trawling. Although

DUNMORE.

S. Mitchell.

24 Aug. 1864.

she keeps outside the boundary line she drags all the fish away. She has leads as heavy again as other trawlers, and her gear is much heavier. The beam is twice as big and makes twice as much show in the water. The heavier gear we have in shoal water the more it frightens the fish and the less fish we see caught. The harbour was full of fish at the time. Although I have not been fishing myself, I have been looking at the fish as they entered the harbour, and I never saw more fish of all kinds come into the harbour.

39,185. When was that?—When the steamer commenced trawling.

39,186. In what month did she begin?—I cannot tell.

39,187. Cannot you guess? Was it about the spring of the year?—I think it was.

39,188. Before she came was there plenty of fish?—Yes.

39,189. Inside the boundary line from Credan Head to Temple Church?—Yes. I think she came in the month of June.

39,190. Has she only been trawling for three months?—Yes, that is all.

39,191. During that time the fish inside the boundary line have all fallen off?—Yes they have, and a great many gentlemen in Dunmore know it. I have seen shoals of mackerel come right down into the pier on Sunday when they could get rest and when the steamer was not trawling. I have also seen sprats plentiful, but now on Sunday mornings there is not one to be seen. There has not been one seen since she came down to trawl on the edge of the rough ground.

39,192. She does not work on the Sunday?—No, but when she came down on the Monday she did.

39,193. Did she drive the fish away?—I suppose that she frightens all the fish away. When such heavy and rough heads go down in the water they make such a noise and disturb the fish so much that away they go.

39,194. Do you think she disturbs the fish more than a sailing trawler would?—Yes, there is a great deal of difference between a steamer and a sailing vessel. A sailing vessel can only go as she has the wind; if there is a calm she cannot trawl at all; and there are three weeks or a month in the summer time when the harbour is full of fish and no trawler can trawl for want of wind; but when a steamer is trawling up and down, and backwards and forwards, and every way, she can trawl whenever she likes, and is constantly tearing up the beds.

39,195. Do you think that a steam trawler gives the fish no chance at all?—None, because her gear is so heavy that the noise she makes frightens away the fish.

39,196. There is a steamer which comes round from Duncannon and Passage to Waterford, does she frighten away the fish?—No she would not do that when she was only going on the top of the water.

39,197. But she makes a noise?—Yes, but she has nothing at the bottom of the water.

39,198. Then do you think it is the trawl at the bottom that does it?—Yes.

39,199. Does the steam trawler work faster than a sailing trawler?—Yes she does.

39,200. Is her gear so heavy that it will constantly pull?—Yes.

39,201. What rate does she go at?—Three miles an hour.

39,202. You do not trawl above two miles an hour?—We do up to two and a half. It depends upon what we are fishing for. If we are fishing for soles we would drop with the tide in the winter time, but this vessel going with her heavy gear tears up the ground like a plough. It tears up the ground, spawn, and everything else. It must necessarily tear it up.

39,203. Do the long-line fishermen shoot their lines where she works over?—Yes.

39,204. Does she carry away the long-lines?—They pull them up for fear of losing them.

39,205. Would she tear them away more than the other trawlers?—I think so, because her gear is so heavy at the bottom.

39,206. But does she do so as a matter of fact?—I do not know.

39,207. Have you heard any complaints?—Yes, I have seen the men pulling them up.

39,208. The men in the steamer?—Yes.

39,209. Pulling up the buoys?—No the spilliards.

39,210. Would not the steam trawler get out of the way of the buoys?—She would not get out of the way of the boats that were line-fishing for hake.

39,211. When does the herring-fishing take place; is there any herring-fishing in this bay?—We have had no herrings for the last few years in any quantity.

39,212. When you first began to fish was there not much?—There was. We caught them in a small seine I had at home, and we have hauled on shore from 12,000 to 13,000 herrings.

39,213. By seining?—Yes, before the big trawlers began to trawl on the Maid.

39,214. Was seining for herrings a common practice here?—Yes in cobles.

39,215. Was it a seine with a pocket or a circle net?—No, a circle net.

39,216. Not with a pocket?—No, it had no pocket.

39,217. Did you catch great quantities of herrings in that way?—I have caught 12,000, and at another time from 8,000 to 9,000 at one time.

39,218. Was that a common thing?—Yes it was. I was fishing in the deep sea at the time.

39,219. Did many persons fish in that way?—No.

39,220. Was there much drift-net fishing for herrings?—No.

39,221. Is there much now?—There is not much since the big boats came in.

39,222. How long is it since the herrings fell away?—Six or seven years.

39,223. Do many mackerel come in here?—There is a power of mackerel coming in here sometimes, but they don't come inside the Hook. They are little fish that are frightened.

39,224. Are they caught with the seine or the hook and line?—They catch them in the holes of the rocks with seines.

39,225. What time of the year were the herrings here?—About November.

39,226. As late as that?—Yes.

39,227. Was there no summer fishing?—No.

39,228. Then you do not have any herrings here in the summer?—No, but they have been within four miles of this place. Off Howth and down away off Helvick Head the sea has been alive with herrings.

39,229. In what condition were the herrings that were taken here in November?—They were fine fish.

39,230. Were they fat fish?—Yes.

39,231. Did you get spent fish?—Some would be spent and some full of pea.

39,232. In November?—Yes.

39,233. Have you a great number of sprats here?—Yes, at times.

39,234. Have they fallen off?—Yes.

39,235. How are they taken?—By seines and weirs above.

39,236. With bag nets?—Yes.

39,237. Have great quantities been taken in that way?—Yes, but not for a few years past.

39,238. I believe you used to get pilchards here?—Very few come into the harbour. There are sometimes immense quantities outside; I have seen them miles in length.

39,239. Did the fishermen take them?—No, they had no means of taking them.

39,240. They never tried for pilchards outside with herring-nets?—No.

30,241. Is there much crab and lobster-fishing here?—There was a great deal about 14 or 15 years ago.

We had a boat here from England ; she worked 100 pots and in one season she cleared 300*l.*

39,242. Has that fallen off ?—Yes.

39,243. What is the reason of that ; is it over-fishing ?—The fish fell off, they could not catch crabs and lobsters in plenty, and the markets got a little slack.

39,244. To what do you ascribe the falling off ?—I think it was because they went on catching the pea fish.

39,245. They were in great demand ?—Yes.

39,246. You got a better price for them?—We used to send them across to England.

39,247. But you got a better price for the berry fish ?—No, just the same as for the others. They were sold by the dozen. This is a great place for pea lobsters.

39,248. What time of the year do you find them ?—About this time.

39,249. How long do they remain in that state ?—All the winter.

39,250. Do you think it would be well to have a close-time for lobsters in which they could not be caught ?—Yes, in certain places. They will come about this pier to spawn, but every one has his pots and will shoot about the place to catch them.

39,251. Is there not a considerable crab fishery here ? — No, the crabs are generally very small ; smaller than those caught in the West of England fishing.

39,252. Are there any oysters here ?—A few about Credan Head.

39,253. Are there any here ?—I never saw any in the trawl, but I met with a great deal of scallops.

39,254. Are they fished ?—No we cannot make any thing of them here. There is an immense sight of fish caught with the long-lines on the Nymph bank.

39,255. On the Nymph bank ?—Yes, from the light ship to the west end of the bank.

39,256. Is it the principal fishery there now ?—The boats do not go there because there are more herrings now, but a Dublin boat went.

39,257. Was it Dublin boats that fished there ?—Yes.

39,258. Did they fish with the hand or with the long-line ?—With the long-line.

39,259. There was only one boat from Dublin ?—Yes.

39,260. What time of the year did she come ?—In the early part of the summer.

39,261. Did she make a regular practice of it ?—Yes.

39,262. In how many years has that been done ?—She has been here for the last 15 years.

39,263. Constantly coming here every year ?—Yes.

39,264. Was she the only vessel that ever came here ?—There may have been two or three.

39,265. Were there vessels fishing on the Nymph bank which took their fish to other parts ?—No.

39,266. But there was abundant employment for those who came there ?—Yes.

39,267. Do you fish inside the light-ship ?—No, we are not allowed to fish inside the light-ship.

39,268. But you have reason to think that the fish are at the Nymph bank ?—Yes, plenty of them.

39,269. Then why do not the people go out and fish them ?—If they had good boats and good gear they would do so.

39,270. You have a good harbour here—can you take in decked boats at all times of the tide ?—It is a nice harbour for 30 or 40 sail of boats.

39,271. If the fish are falling off so much in consequence of the trawling, would it not be worth while for some of the trawlers to go out there ; they are properly equipped for that, are they not ?—Yes.

39,272. Some of the 40-ton boats you speak of are very good boats, are they not ?—They are getting old now.

39,273. Were they built here ?—Three of them were built at Plymouth and two at Waterford.

39,274. There are plenty of boat builders in Waterford ?—Yes.

39,275. Then if there is so much fish on the Nymph bank, why not go there and catch them ?—No doubt if we persevered and went for it we should get plenty of fish there.

39,276. Do you know anything about the ground off the Saltee Islands ?—That is where we used to fish.

39,277. Is it good ground for fishing?—Yes, splendid ground.

39,278. Is it clear ground ?—Yes.

39,279. Is it worked by the trawlers ?—Yes.

39,280. Is the Nymph bank itself fit for trawling ?—What they call the Nymph bank is about 20 miles off Dunmore. There is very fine sand there but it is bad trawling ground. There are great quantities of fish on it if you go clear, but there are stones peeping up from the sand which when the net goes along cuts it in pieces like a knife. Anybody who is able to go along clear will get an immense sight of fish at certain times of the year, from November to May.

39,281. Is that the reason which makes it not worth while to trawl for fish there ?—The Dublin boats fish there. They made an immense sight of money last year.

39,282. Are they trawling or hooking ?—Trawling.

39,283. Were the boats you referred to just now trawlers ?—No, hookers.

39,284. In addition to them there are trawlers ?—Yes.

39,285. How many vessels are there fishing on the Nymph bank every night regularly ?—If the fish are doing well there are sometimes nearly 40 sail.

39,285. Has that been going on year after year ?—Yes, for 30 or 40 years the Dublin boats have come down every year regularly.

39,286. (*Mr. Lefevre.*) Do they bring their fish to Waterford ?—They used to run it from this place to Dublin, but that was before the railroad was made. Now it is more convenient to send the fish by train to Dublin, but if they get a fair wind and think they can catch the market they will run a boat in order to save expense. They generally go away here three in partners.

39,288. Then there is plenty of fish on the Nymph bank still, and it is easy to catch ?—Yes, anybody who has proper gear can catch it.

39,289. Were you not employed at one time in the service of one of the Companies ?—Yes.

39,290. That Company broke up, did it not ?—Yes.

39,291. What was the reason of that ?—The old gentleman who was the chief owner of the boats died and the other gentlemen did not want to be bothered with fishing ; they were too much engaged with other vessels. We did very well with the fish, but when the potato crop failed in Ireland we could not make so much out of the offal fish, and so they sold their boats.

39,292. (*Professor Huxley.*) Did it make a worse market after the potato crop failed ?—Yes, for offal fish such as hake and gurnard.

39,293. Do you say that there was absolutely less fish consumed during the time of the famine than before ?—Yes, because the people could not afford to buy it.

39,294. (*Mr. Lefevre.*) What number of fishermen are there now in Dunmore ?—I suppose there will be close upon 100 or more out in the yawls and fishing with lobster pots, including trawlers and hookers.

39,295. Are they fishing all the year round ?—No.

39,296. What are their times for fishing ?—They look after the land in the winter time, because they cannot fish then in the small boats.

39,297. In what part of the year are they engaged in fishing ?—They are fishing from March until November.

39,298. And they break off in the winter ?—Yes, they go to look for herrings and haddocks when November comes in.

39,299. How many men are there at Passage ?—I do not know because I am not often there, but there are a great number there who get their living by fishing.

DUNMORE.

S. Mitchell.

24 Aug. 1864.

39,300. Are they mostly small trawlers?—They have mostly small yawls.

39,301. Are they employed in hooking or trawling?—In hooking, in trawling, and in drifting.

39,302. What is the season for fishing in the harbour here?—Any time in the winter.

but not as much. I do not think they take up the ground as much.

39,303. Do the Dublin trawlers come inside the harbour to trawl?—Yes, they come on what we call the Maid for an odd trawl if they happen to be down then.

39,304. Are very few of them down trawling here in the summer?—Yes, there is one here at present.

39,305. You told us the season when the trawlers are trawling on the Nymph bank, are they also trawling on the ground here at the entrance of this harbour?—Yes, the big trawlers when they come, but there are no fish to be got in the harbour then.

39,306. What is the nature of the ground off the entrance of the harbour?—It is rough ground.

39,307. Then your trawlers must trawl inside the harbour or go to the Nymph bank too?—Yes, but they are not able to contend with the big trawlers in bad weather.

39,308. Is it because their boats are not as good?—Yes.

39,309. Has the number of Dublin trawlers trawling over that ground increased of late years?—Yes, and splendid fine vessels like cutters they have now.

39,310. Do they get as much fish as they did in former years?—They get twice as much with these vessels as they used to get with their old ones.

39,311. And it is only occasionally that they come inside the harbour?—Only in the season.

39,312. You would prohibit them from coming within the harbour?—Yes, within the Heads, because we consider that they destroy the fish. We consider that the fish come in from the light-ship,—plaice, hake, cod and ling, in the summer time when the sprats and mackerel make for the shore. Then, if they are caught and destroyed by these heavy boats, of course we can never get them back again.

39,313. What makes you think that the big trawlers do more damage than the small ones?—I think so because their gear is so heavy on the ground.

39,314. But it is the same mesh?—Yes, but the gear is very heavy. They have great heavy bridles and trawl warps. The bridles and trawl beams are of an enormous size in the water and are enough to frighten any fish.

39,315. Is it because they frighten the fish more than the small trawls and catch more small fish that you object to them?—They take up the ground and prevent the fish from spawning there. I have been catching in this harbour 15 or 20 little turbots not as big as a crown piece.

39,316. You have done that yourself?—Yes.

39,317. But the little trawls are quite as likely to catch small fish as the large trawls?—Yes, but they do not do as much harm. They may catch small fish, but they do not frighten other fish out of the harbour. I will just explain what I saw with my own eyes in the harbour about four weeks ago. We were lying at anchor on a Saturday and there was not an air of wind; the gurnards rose on the top of the water in abundance in the ebb tide. They were like shoals of pilchards. They rose in lots just like fish that were startled and frightened, as if something had been through them. They went right out of the harbour in an instant and we have not been able to catch them since. I have seen small boats come down from Waterford which have been loaded with bream and gurnards and now we cannot get enough for our families to eat.

39,318. Do you think it desirable to put a stop to trawling altogether within the headlands?—I would leave that to yourselves.

39,319. You do not think the small trawlers do any harm?—No, not as much as the large ones. They were trawling here years before I was born and there were more large hookers than there are now and they did not consider that the fish were destroyed or that the shoals of mackerel or sprats were broken as they came into the harbour.

39,320. Do you think that the small trawlers destroy the spawn of the fish?—Yes, I do. I think they will catch spawn as well as the large trawlers but not as much. I do not think they take up the ground as much.

39,321. You do not think that they have materially destroyed the fishing in the harbour?—They all do their share of that.

39,322. Has there been any application from the fishermen in the harbour to stop trawling altogether?—Not the small boats; but all are against the big boats. It is natural to suppose that every 10 fish the small boats catch will do as much harm as 10 caught by the big boats. And for my part I should not care if it was all done away with, but I will say that the small boats do not do the same amount of harm to the ground at the bottom as the big boats nor will they injure any mackerel, herring, or sprat, or hake, that come into the harbour.

39,323. Has the number of small trawlers increased?—It has.

39,324. By how many within the last 10 years?—There are five or six here at all events, and all the boats in Passage have little trawls for trawling.

39,325. Have they doubled in number?—Yes, when I first came here there were none of them at all.

39,326. I thought you said the trawlers were here before you came?—They were hookers. What I call small trawlers are little yawls. A man can take the trawl in his hands and lay it across the stern while the vessel is going out.

39,327. Do you think the byelaw prohibiting trawling with larger trawlers than boats of five tons within Credan Head and Temple Church has done any good?—I do not think it has, because when the big boats are trawling out here in the mouth of the harbour they do about the same amount of damage. They are trawling now where the fish would enter the harbour and if they frighten the shoals away of course they do injury.

39,328. Then do you think the prohibition ought to be extended?—It ought to go from Hook Head to Swines Head. That is the entrance to the harbour, and there is no clear ground inside of that where the trawlers ought to go.

39,329. I think you said there were four or five large hookers from this place?—Yes.

39,330. What ground do they fish over?—Their only place is on the Maid here.

39,331. Is that inside the harbour?—Yes.

39,332. They do not go outside at all?—No.

39,333. (*Professor Huxley.*) In your experience as a trawler have you found that the quantity of fish taken by the last trawler out of a number working over the same ground is as much or less than that taken by the first?—Not at all. I should like to be the first to work it, but I should not like to get over another man.

The witness withdrew.

T. Tobin.

THOMAS TOBIN called and examined.

39,334. (*Professor Huxley.*) Are you a fisherman here?—I am a fisherman at Passage.

39,335. How many years have you been fishing at Passage?—I have been fishing, and selling fish there for the last 50 years.

39,336. What kind of fishing have you practised?—Trawling, fishing for salmon, and fishing for all kinds of fish in general, with lines and everything else.

39,337. Were you present when the last witness was giving his evidence?—Most part of the time.

39,338. Do you agree with what he has stated?—Yes, pretty well.

39,339. Is there anything that occurs to you to add to or to remark upon in what he has stated?—All that I know about it is that in respect to one trawler going before another, it is very hard if I turn to the work and bring up a parcel of stones in the trawl. In that way it would be advantageous to the man who follows me because he will not get one at all.

39,340. Do you, as a matter of fact, say that the second and third trawlers will not get as much fish as the first?—No, nor a quarter.

39,341. Have you yourself been trawling?—Yes, I have a small boat of about 2½ tons.

39,342. A yawl?—Yes.

39,343. Have you followed another trawler over the same ground?—No, I would not attempt it.

39,344. Then how could you tell that that would be the result?—We get nothing if we are in each other's wake.

39,345. You think so?—We have proved it.

39,346. Have you ever been trawling outside?—Never.

39,347. Have you ever been trawling anywhere else?—No, only in this harbour.

39,348. Your trawler is only a small vessel?—Yes, a boat of two or three tons.

39,349. You keep quite inside the harbour?—Yes, inside altogether—up the river and down as far as Dunmore.

39,350. Do you get much fish in your trawl?—The chief part of the fish we get are soles and plaice.

39,351. Do you get many small fish in your trawl?—Yes, some small flukes.

39,352. Do you not get small turbot sometimes?—We have got small turbot; I have been getting small turbot the size of my hand.

39,353. You get the flukes very small sometimes, do you not?—Not very small, about the length of my hand. We do not heave any away; we make use of them.

39,354. Do you make use of everything you catch?—Yes, with the exception of small little things, little white belly flukes we call them. They are fresh-water little things.

39,355. But with regard to the other kinds of fish, such as soles and so forth, they are always large enough to sell?—Yes.

39,356. You never by any chance get small ones?—We may get small ones, but if they only weigh half a pound we sell them.

39,357. Is that the smallest you take?—Yes. Our nets are 2½ inches between knot and knot, and if we were to take a little sole and he could only put his head in the mesh he would go right through.

39,358. You have never been on board the large trawlers?—No.

39,359. Have you practised line-fishing here?—Yes, for hake and cod down here in the month of May.

39,360. Have you caught much haddock?—I never got much haddock.

39,361. Have the fishermen here ever got much haddock?—I recollect them having caught plenty when there were a dozen hookers belonging to Passage.

39,362. How long is that ago?—Forty years ago.

39,363. At that time were there plenty of haddocks caught?—Yes, and cod and ling also.

39,364. When did the supply of haddocks begin to fall off?—Our boats went away. They got old, and the poor people were not able to keep them up.

39,365. Then the supply of haddocks fell off because they were not fished, and not because there were not plenty of fish?—They were not fished. There have been no boats out of our place to look after them since.

39,366. If there were plenty of fish and the fishing was lucrative why was it not renewed?—The poor people owned the boats, and as they got old they were not able to replace them. They have no money to do it.

39,367. But other people do it?—Companies of gentlemen, who associate together, can do it, but it is very hard for a poor man to do so. They have no means of getting craft for catching fish. I believe that companies of gentlemen are now collecting steamboats and everything else and that they will destroy the poor fishermen altogether.

39,368. Do you think the effect of the establishment of these companies will be to destroy the poor?—The steamboat we have here is the greatest destructive that ever came to this harbour.

39,369. Does it belong to a company?—Companies have their large boats running inside Hook Head, and they are a destruction to the poor, because there are no sprats, herrings, or anything else that can come up to us, and our chief dependence is upon them from this time until after Christmas.

39,370. And do you think the trawling has stopped the supply of fish?—It has.

39,371. For how many years has the supply of herring been falling off?—For the last three or four years to my knowledge.

39,372. But trawling has gone on for the last 40 years?—Yes, but they knocked off the big boats trawling here until the steamer came, and that is worse than 50 trawlers, because a trawler has to go right up with the tide, while this thing is working backwards and forwards and right across, over this way and that way too.

39,373. The steam trawler does the business in a much more effectual way?—No man can get a fishing out of the harbour at all, it is impossible.

39,374. Do you think the same thing might result from the working of a great number of ordinary trawlers?—No, the working of 50 trawlers of 20 tons would not be half as bad as that vessel.

39,375. Does she ever trawl inside the line drawn from Credan Head to Temple Church?—Yes, when no one is looking after her, by night.

39,376. By night?—Yes; she trawls everywhere she can catch anything.

39,377. Does she work at night as well as by day?—Day and night are all the same to her, and she has caught salmon too.

39,378. Have you ever seen her trawling inside the line?—I could not swear that I have, but I have seen her from Passage above the line.

39,379. Would it not be rather difficult to make out from that point whether anybody was inside the line or not?—Yes, it is six miles off; but by my calculation she was inside the line.

39,380. You think so?—Yes. By night some of these people here drift for salmon. I have seen her up as far as the oyster bed between Credan Head and Temple Church.

39,381. She has been fishing for three months now?—Yes.

39,382. When did you begin to find the fishing fall off?—We generally fish for salmon until the last day of this month.

39,383. You are not fishing for sea fish?—Not till the last day of the month, and we get our trawling boats then put to rights. We have got a dozen yawls of two or three tons.

39,384. Then you cannot tell at present as a matter of fact whether the trawler of which you speak has done you any damage or not?—I know she has done damage because there have been an abundance of sprats at the mouth of the harbour, and this is the season for them to go up to us.

39,385. Have they not come?—No, and they came up to the deep water. With such winds as we have now we ought to have the sprats here. Formerly they went right up and we had them all the winter, now we cannot get any.

39,386. How far do the sprats come up?—I have seen them up as far as Waterford Bridge.

39,387. How far have they come up during the present year?—I have not been down as far as this for the last four months.

39,388. Then in fact you do not know whether they have come up or not?—I have not been down as far as this for the last four months.

DUNMORE.

T. Tobin.

24 Aug. 1864.

39,389. No further than Passage?—I have been further than Passage but not as far as Dunmore.

39,390. Then you are speaking now from mere hearsay?—There are others here who will speak of it.

39,391. Is there any kind of fishing practised at Passage which is different from that practised at Dunmore; is there any trammel-net-fishing there?—No, but there is bag-net fishing for sprats and drift-net fishing for herrings.

39,392. Is there much drifting for herrings going on at Passage now?—None at present.

39,393. How many years is it since it ceased?—Five, six, or seven years since there was any drift-net fishing.

39,394. Is that because there are no herrings?—Yes.

39,395. Are the people there in a condition to replace their nets and boats when they wear out?—No, they have no means by which they are enabled to get new ones. They have no means to get at them now.

39,396. So that they cannot tell then whether the herrings are there or not?—There may be an abundance but they have not a net to catch them, and they are not able to purchase any.

39,397. Up to five or six years ago there was an abundance?—Yes.

39,398. Did the fishermen catch many of them?—Many of them got from 1,400 to 1,600 and 1,800 in a boatload.

39,399. Do you get a ready market for your fish?—Yes.

39,400. Then you must have made a good bit of money out of them?—So we did.

39,401. Could you not out of that save enough to replace the boats and nets?—No, the famine was a great drawback to us. Flour was then 3*s.* 8*d.* a stone, and we could not support our families.

39,402. Did the fishermen get behindhand in the famine time?—Yes.

39,403. And they have not been able to make it up since?—No.

39,404. They have no spare money to invest in boats?—No, they have no spare money at all.

39,405. In former years did you contrive to keep your boats and gear in order out of the profits of your fishing?—Yes.

39,406. (*Mr. Lefevre.*) How many small trawlers are there at Passage?—There are 12 or 14 small trawlers at Passage.

39,407. How many used there to be 10 years ago?—Ten years ago I suppose there were about 20.

39,408. Then the number has been falling off?—Yes.

39,409. Do you recollect the time when there was no trawling at all at Passage?—No.

39,410. Has there been trawling there ever since you can recollect?—Yes; there was a bye-law made by the Commissioners at Dublin with regard to the trawling; we had some grievances to complain of against the big hookers coming upon the Maid; they were big trawlers of 30 and 40 tons.

39,411. That byelaw was made in consequence?—Yes.

39,412. Has it done you any good or not?—It has done us no harm; it did us a good deal of good until this steam machine came, and if she is to be left here we may as well all go to the poorhouse.

39,413. You still have the ground between the two points?—But she leaves nothing to come up to us.

39,414. Does she take the fish before they come up?—Yes, and she will not leave a vestige for us.

39,415. What is your season for trawling from Passage?—We generally trawl from the last of this month up to Christmas.

39,416. Do you not trawl in the spring of the year at all?—No, we follow the salmon fishery then.

39,417. Do you find that the soles leave the bay suddenly?—Not exactly suddenly.

39,418. Do you think they are in the bay all the year round?—They are; we can get as fine a sole up above Passage as can be made use of all the year round.

39,419. Then you do not believe that the fish leave the bay at different periods of the year?—No, they go up to spawn in the deep holes above Passage, the soles spawn there quite regularly.

39,420. Do you catch any turbot?—No, except we are below Duncannon; there are no turbot up there.

39,421. Do the hake and other fish pursue the sprats up into the shoal water here?—The hake will pursue them as far as they can go. We had them last year in abundance in our drift-nets; we used to get from 20 to 40 at a haul drifting for salmon; now the whole 42 or 43 boats drifting for salmon have not got a dozen hakes this year yet, and this is the very time when we ought to be getting them.

39,422. When the sprats get into shoal water do the hake and other fish follow them, or leave them and try to get back again into the deep sea?—No, they follow them as far as they can, and they all go back together.

39,423. Where do they go to?—To sea; it is not in upon the land that they will go.

39,424. Are there any means of catching the hake on their return to the sea?—There are no means except they catch them as they go out here.

39,425. In the trawls?—No, with lines, as they often do; I recollect 100 or 150 boats with lines being often engaged in fishing for them.

39,426. Do you think the lines would be sufficient to catch them if there were no trawls?—Yes.

39,427. Suppose the trawlers were not to come in, would the liners be able to catch them?—They would, because they would stop for some time between this and Passage; they would stop until they were "skeered" away by the trawlers.

39,428. Do not you think that the little trawlers would help to drive them away?—I daresay they might, they may be injurious as well, but their beams are only 14 feet long.

39,429. The hake is a deep-sea fish?—Yes.

39,430. It keeps well at the bottom?—Yes, at certain times; in the night time it keeps in the middle of the water.

39,431. Can you catch them with your long-lines down at the bottom as well as the trawlers can catch them?—Yes.

39,432. Is that because your long-lines are laid at the bottom?—Yes.

39,433. Then there is just as much chance for line-fishing as for trawl-fishing?—Yes.

39,434. Do you use the same boats for hooking as for trawling?—Yes.

39,435. What is the season for hooking?—We follow the salmon fishery from the 12th of January up to the last of August, and then we all turn to and get our lines and our hooks out to go fishing in the sea.

39,436. Then you trawl and hook at the same time of the year?—Yes, according as it is fine we come down with our lines.

39,437. Do you mean hand-lines or long-lines?—Hand-lines.

39,438. What fish do you catch with the hook-and-line here?—Cod, eel, and hake.

39,439. Have you found the cod falling off?—There are very few cod caught inside the harbour here, there was a place outside where we used to catch cod and ling in former years.

39,440. What distance was that?—Sometimes 10 or 15 miles.

39,441. Do you never do that now?—No.

39,442. Do you never go outside the harbour?—No.

39,443. Do you not catch as many hake as you used to do?—No; last year at this time of year we used to catch 20 or 30 a night in our salmon nets, and now although this is the very season we expect them, we cannot get any at all.

39,444. (*Professor Huxley.*) Have you a boat fit for sea-fishing?—I wish I was hired to go to Milford in her across the Channel.

39,445. Do you mean by that that you have a boat?—Yes, I have.

39,446. Is that the boat you spoke of with which you catch the hake?—Yes, and it is only of three tons; but I wish I was ordered to go to Milford, and could get a good price for it.

39,447. You have a boat in repair and with good gear?—Yes.

39,448. Is there anything that occurs to you to tell us besides what you have told us already?—No.

39,449. Is there anything the fishermen here have to complain of besides the trawling?—No; but as far as I understand they are fitting out another of these engines to trawl upon our oyster-beds.

39,450. What engines?—A steamer which is to take away all that we have had here for centuries, and our fathers before us.

39,451. Where is the oyster-bed?—Between Duncannon Fort and Credan Head.

39,452. Is there a good oyster-bed there?—Yes, as fine as ever was seen by the eyes of man.

39,453. Is it much fished?—A good deal.

39,454. How many boats go from here fishing for oysters?—We generally used to have 14, 16, and 18 of our little boats upon it.

39,455. From this part?—From Passage.

39,456. Has that been the custom of late years, up to within 10 or 12 years?—It has been the custom within my memory until within the last three years. They have now much fallen off, and I can tell you the reason of it.

39,457. Then tell us.—The reason is, that the very same man who has encouraged the steamboat here—his name is Stephens, and he comes from Duncannon—was the chief advocate for having the steamer here to torment the people. We put down his Scotch weir, and then he turned to and got two craft built for carrying stones to the Tuskar lighthouse, and he got five or six dredges made on purpose for each of these boats. He towed the boats over the oyster-beds, and where we used to get 300, 500, 700, and 800 and 900 oysters in a tide now we can never get half a hundred.

39,458. In the course of three years has he exhausted the bed?—Yes, we could not get 100 by fishing there now.

39,459. Then what is the object in fitting out a steam dredge, the people who do so will be disappointed if they go there?—It is to be ready I am told by the last of August.

39,460. But what is the use of it if the bed is exhausted?—I suppose they will find out more. He used to get 1,200 with his six dredges. We had only a little dredge and he beat us out of the field altogether.

39,461. It is the fact that the bed has been exhausted?—Yes.

39,462. Has this dredging been going on only in the proper season?—Not in the close season.

39,463. Only in the proper season?—Yes.

39,464. Is there anything else which you think is a grievance here; all we want is to hear exactly what you think we ought to hear?—I was told by a gentleman to tell you about another thing—we have no place of protection in the world at Passage, where there are 400 or 500 families depending in that little place upon the safety of their boats.

39,465. You have no harbour?—No place in the world to save our boats; our women have sometimes to get up in the night and help the men to haul them up if it comes on a gale of wind; the property belongs to the Marquis of Waterford. The Board of Works had the case represented to them and granted us 650*l.* through the intercession of our parson in Passage, and the Commissioners of Waterford granted us 150*l.*; but because the Marquis of Waterford had a Scotch weir he would not allow us to put a stone in towards making a harbour.

39,466. Who would not allow you?—The Marquis of Waterford.

39,467. Has the Marquis at present given any pledge that he will construct a harbour at that place?—I will tell you what he promised us. The Commissioners of Fisheries at Dublin wrote to Mr. Lawson and told Mr. Lawson that the Marquis of Waterford would not allow them to do anything there because he was intending to do it himself. Then they wrote to him for his plans, and he told them he would send to them at a future day, but that future day has never yet arrived.

39,468. Is what you mean to tell us this, that you could get the money advanced to build a harbour partly by your own efforts and partly by the Fishery Board, but that you are prevented from doing so by the opposition of your laadlord?—Yes.

39,469. Do we further understand that the Marquis of Waterford has promised to build a harbour himself?—He has promised to build it himself, and he said that he would send the plans to the Board of Fisheries at a future day.

39,470. If the Marquis of Waterford has made that promise of course he will carry it out?—He has so promised. He promised if I would get a memorial signed by 400 or 500 that it should be done. That was when he first obtained charge of the whole property, and he said it was to be done the next summer.

39,471. How long is it since that promise was made?—About five or six years.

39,472. A memorial has been presented to us here upon the subject?—Yes.

39,473. Does this memorial proceed from you and other fishermen at Passage?—It is from all the fishermen at Passage.

39,474. Does it represent your views?—Yes.

39,475. I will read the document, so that there shall be no mistake about it.

To the Royal Commissioners appointed to inquire into the Fishing in the Locality of Waterford Harbour.

Honorable Gentlemen,

We, the fishermen of Passage and vicinity, beg to state that we feel ourselves much aggrieved, and our families very much distressed, since the steam trawler commenced fishing in this harbour, inasmuch as during the salmon season (which is now ended) we have experienced a great falling off in the lower part of the river compared with other years during this month August, and cannot attribute it to any cause but the constant paddling and scraping during the whole week of this steam trawler.

In the small town of Passage there are over two hundred families who depend on the fishing chiefly for their support, and after the salmon season is over resort to the taking of other fish; but if this steam trawler is allowed to continue, all fish, particularly herrings, sprats, and such fish as come in large numbers, will be scared from our harbour, and this is the commencement of the proper season for them to arrive here.

Hake, that used to be in such abundance in this harbour at this season, have now deserted it, though they are to be found close by in Tramore Bay.

We are prepared to prove, gentlemen, from long experience, that trawling does destroy the spawn of all fish, and if such is the case what a large quantity of spawn must this steamer destroy with her powerful trawl, which seldom rests night or day, and we would beg that some means might be devised to put an effectual stop to such a wholesale destruction of fish, and to the very great distress of our large families, and we shall ever pray.

Passage of Waterford,
August 24, 1864.

Is it within your knowledge that this document represents the views of the fishermen here generally?—Yes.

39,476. This memorial is not signed at all?—No.

39,477. But we may take it that it represents the views of the fishermnn?—Yes.

39,478. Is there any other matter you wish to bring before us?—No.

39,479. (*Mr. Lefevre.*) Do the fishermen of Passage cultivate land at all?—No, with the exception of a very few of them.

39,480. (*Professor Huxley.*) Supposing the fishermen as they increase in number wish to get land, can they do so to build houses upon?—No.

DUNMORE.

T. Tobin.

24 Aug. 1864.

39,481. Is there any difficulty in the way?—Yes, they cannot get any land.

39,482. Is that the case at Dunmore also?—I do not know.

39,483. Have you any reason to believe that there are hake in Tramore bay at this time?—There was at one time, and I think that was the reason that the men belonging to Tramore used to come down to Passage for sprats for bait.

39,484. For the purpose of catching the hake?—Yes.

The witness withdrew.

P. Cox.

PEIRSE COX called and examined.

39,485. (*Professor Huxley.*) Are you an alderman of Waterford?—Yes.

39,486. Have you been engaged in fishing for many years?—Yes, for the last 40 years.

39,487. Are you a boat owner?—Yes.

39,488. What kind of boats do you principally own?—I have two large trawlers in Dunmore. They are boats of 60 tons.

39,489. And have you other trawlers besides else where?—Yes, some smaller ones; I have a small one of only 14 tons.

39,490. Have you heard the evidence which has been given before us?—I heard that of the last witness, but I did not hear the first.

39,491. Very distinct statements have been made to us as to the harm done by trawling within the headlands, and by the large trawlers; yours are large trawlers?—Yes.

39,492. We should be glad to hear anything you are able to say on the other side?—I think if the large trawlers were not allowed to fish inside the Hook Tower it would be a good plan.

39,493. Not within the mouth of the harbour at all?—No.

39,494. Do you think that would be of any serious detriment to the trawlers?—No, I think not. I always prefer my boats to go to the deep sea.

39,495. You as a boat owner do not wish them to fish there?—They do not go there generally. They find the ground very foul there, but they say the steamer has cleared the ground for them. They did not go before then.

39,496. Is it better to go in fine weather out to sea?—Yes.

39,497. But in winter time when it is bad weather is it not an advantage for the large trawlers to be allowed to fish inside the bays?—I think not, but I do not know.

39,498. You do not think it would interfere with you?—No, and if they interfere with the small boats I should prefer their keeping out in the deep sea. They are made for that purpose.

39,499. How many years have you been possessed of trawlers?—For about 20 I should think.

39,500. Have you gradually increased the number of trawlers in your possession?—Not much, I have a little. We bought two in the first instance for which we paid 1,100*l.*

39,501. Have you replaced them as they became worn out by vessels of a larger tonnage?—No, I have them still.

39,502. The same boats?—Yes.

39,503. Do you think from what you know of the trawling as it is going on now that more capital is being put into the business year by year in Waterford?—At present they do not pay. When first we commenced it they paid very well. We made 30 per cent. and did very well, but of late years they have not paid as well.

39,504. Have you any notion what the reason of that is?—They say it is the scarcity of fish. The boats go out and they say the fish are scarce.

39,505. Are there not as many fish brought in now as there used to be?—No, not at all.

39,506. Where do your boats trawl principally?—On the Nymph bank, I think, and off Dungarvan.

39,507. Is it your impression that the supply of fish has fallen off?—Yes.

39,508. (*Mr. Lefevre.*) Do they fish on that ground all the year round?—Yes.

39,509. They do not follow the Dublin trawlers up to the east coast?—No; we never go there, but the Dublin trawlers come down here.

39,510. (*Professor Huxley.*) Has the number of strange boats increased very much?—The Dublin trawlers have increased very much, I think.

39,511. For how many years did a good supply of fish keep up—how many years did it continue to be profitable to work your boats?—When I first commenced we did very well.

39,512. How long did it last?—About 10 years.

39,513. Was there any sudden increase in the number of boats?—Yes.

39,514. And then the fish fell off?—Yes, greatly.

39,515. Is there anything you wish to mention to us with regard to the condition of the fisheries?—No.

39,516. (*Mr. Lefevre.*) Do you find that the price of fish has increased of late?—Yes, it has in consequence of the English markets improving and there being more facilities for getting the fish to market.

39,517. Has it made up for the decrease in quantity?—There has been an increase in the price.

39,518. But has that increase in the price made up for the decrease in the quantity?—Not at all, nothing like it.

39,519. Is any portion of the fish sent off from Waterford?—A great deal of it by steamers; in fact, nearly all.

39,520. It is not sent by rail to Dublin?—There is not much of it that goes by rail except when the Dublin boats come here. We sell our fish in Waterford, and it is sent off by the persons who purchase it to England.

39,521. Have you observed any diminution in the number of Dublin trawlers off here?—No, there has rather been an increase, I think.

39,522. You have not found any falling off in the season?—They are more expert and are larger boats, and have better gear than our boats, and when they come here they take a great quantity of fish.

39,523. Do you find much difference in the take of fish according to the season?—I do not think the season makes much difference in the catch.

39,524. Do the Dublin boats make any difference?—I do not think so.

39,525. Do you think that the fish are less off the coast here?—Yes.

39,526. Is it your opinion that the decrease in the number of boats has arisen from the withdrawal of the privilege of piloting?—At that time there were a good many boats, hookers, which all ceased in consequence of the withdrawal of the privilege.

39,527. I presume the fishermen made money by piloting?—Yes, between piloting and fishing together.

39,528. Were the fish not sufficiently abundant to remunerate them for fishing alone?—They had permission to do both, and they did both. They fished and then they piloted.

39,529. But if the privilege of piloting upon being withdrawn put an end to the boats going out, it is to be presumed that the fishing alone did not pay them?—Yes.

39,530. How far did those boats go?—They were hookers of about 14 tons.

39,531. How far did they go?—Beyond Tramore and along Dungarvan along the coast; they were not fully decked, but were open boats.

39,532. They could not go out to the productive deep-sea grounds?—They went out as far as the Helvick Head and to Tuskar light.

39,533. They were pilot-boats which also practised fishing?—Yes; they were fishing-boats and occasionally they piloted.

39,534. Could they not make a good living by fishing after the pilotage privilege was withdrawn?—I think not, because the business fell off.

DUNMORE.
P. Cox.
24 Aug. 1864.

The witness withdrew.

WILLIAM HEARN called and examined.

W. Hearn.

39,535. (*Professor Huxley.*) Have you been trawling?—Yes, I have.

39,536. In the large vessels?—I have in smacks, such as those in Dunmore.

39,537. Have you ever been trawling in the large smacks when a number of vessels have been following one another?—No, I never was. We have trawled off the Nymph bank and Helvick Head.

39,538. Then you cannot tell whether the quantity of fish the last vessel will get is as much as that which will be got by the first one?—I don't think it would be.

39,539. How have you observed that?—I have been trawling off this harbour in a hooker of 16 tons belonging to my father when we have come close after one another, but in that case we should get nothing except by chance while those who were first might have a good deal of fish.

39,540. Was that with the small boats in the harbour?—Yes.

39,541. Not with large smacks?—No.

39,542. You found when you were following in the wake of another vessel that you got no fish?—No, we could not expect it.

39,543. How far would you be off the other vessel?—Perhaps one-fourth of a mile, or less.

39,544–5. I have asked you these questions because we have received directly contrary evidence elsewhere?—That is my experience.

39,546. With regard to hake being taken now in Waterford harbour, is it your opinion that they have fallen off?—We have been following the salmon fishery and there has not been a time during this month that we have not got an abundance of hake, ranging from seven dozen to eight dozen in the course of a night up to 10 and 20 dozen.

39,547. That used to happen formerly?—Yes, last year and the year before that and every year until the stream trawler came. I have only seen one or two this summer.

39,548. Have you been down in Tramore Bay?—Yes.

39,549. Are there any hake there?—I heard that there were plenty.

39,550. But you do not know that of your own knowledge?—No, only by hearsay.

39,551. Have you heard the evidence which has been given by the other witnesses?—Yes.

39,552. Do you agree with it?—Yes.

39,553. With regard to the hake, is it not rather early for the hake?—There are always good shoals of hake in the harvest time.

39,554. Do you agree with what the other witnesses have stated?—I do.

39,555. Is there anything else you wish to bring before us? Is there any complaint the fishermen have to make?—In regard to spawn, I have been in an old trawler and I have been taking spawn of different kinds out of my nets often.

39,556. What do you call spawn; what is it like?—Some of it had a red cast and some a white cast and some a yellowish cast.

39,557. Were they long things?—Some were the length of my arm.

39,558. Did it hang in bunches?—Yes, and sometimes you would see the fish alive in it.

39,559. Do you know squid spawn from fish spawn?—Yes.

39,560. What is squid spawn like?—It is a white thing, something like blubber, and it is quite soft.

39,561. Is that squid spawn?—Yes, I am sure it is.

39,562. What sort of shape is it?—It is a long thing with two ends; it is long and narrow and hanging in bunches altogether.

39,563. (*Mr. Lefevre.*) Have you taken that in the small trawl?—I was never up here in this river.

39,564. Where then did you take it?—Away outside the bay, off Tramore Bay.

39,565. Do you belong to Tramore?—No, to Passage.

39,566. (*Professor Huxley.*) Do you know the herring spawn when you see it?—Yes, I do.

39,567. What sort of stuff is it when it is down at the bottom?—It is much the same as you see it coming out of a herring. If you have gutted a herring with spawn in it you will have seen it. It is much the same as that.

39,568. Have you ever seen it taken up in the trawl?—Not to my knowledge.

39,569. Do you think that the herrings spawn anywhere about the bay?—I do not know. I think the herrings spawn on rocky ground.

39,570. What have you to say with regard to the small fish taken in the trawls; have you seen them taken to any great extent?—Yes.

39,571. In what sort of trawls?—The beam-trawls you have mentioned.

39,572. Has that been when they have been working inside the bay or in the outer part of it?—Outside. I have seen an abundance of small fish taken. Those craft which are fishing near take an abundance of small fish and spawn and heave them overboard.

39,573. Have you seen the trawl of the steam trawler taken up?—I have not seen it taken up myself, but the people belonging to my place have seen it taken up and have seen the men on board pitching the small fish and spawn over with their shovels.

39,574. Small fish and spawn?—Yes.

39,575. Have you been fishing with a small trawl higher up the bay?—No, I never fished with a small trawl.

39,576. Do the large trawlers take up a good deal of small fish?—Yes.

39,577. Then do they throw it overboard?—Yes they do.

39,578. Do you think the large trawlers do much harm when they are working inside the headlands?—I think there cannot be a greater injury to the poor people of this country.

39,579. When you were trawling in a large trawler did you care much about coming inside the headlands?—No, not in a decked boat. We generally kept outside.

39,580. When it was bad weather would you go inside?—No, we would not risk a trawl inside.

39,581. You had plenty of water here, had you not?—We never tried.

39,582. Then as a practical trawler are you able to say it would be no hardship to you to be shut out of the bay altogether?—I know if I had a decked vessel I would never come inside the harbour to look for fish and to destroy the ground for the small craft.

39,583. How long is it since you have been fishing in a large trawler?—It is 23 or 24 years ago now.

39,584. Then you cannot tell us much about the fishing in the large trawlers now?—No, I do not know much about them at the present time.

39,585. (*Mr. Lefevre.*) Did you fish over the Nymph bank at that time?—Yes.

DUNMORE

W. Hearn.

24 Aug. 1864.

39,586. Did you take up small fish then?—Yes, small fish, such as cod and ling and sole.

39,587. Did you take as large a proportion of small fish there as elsewhere?—Yes, we took a great proportion of all kinds of fish.

39,588. Did you get as many small fish as you did elsewhere?—We used to get small fish and large.

39,589. Had you at any time the privilege of piloting?—I was piloting ships to Ross.

39,590. Did you find that of much advantage?—I certainly did.

39,591. When was it stopped?—The Ross branch was stopped about 10 or 12 years ago.

39,592. Did you go on fishing whether you got any piloting or not?—Yes, it was while we were in the act of fishing that we fell in with the ships.

39,593. When you got no ships to pilot were you much worse off, or did you make a good living by trawling?—We could make a living by trawling.

39,594. Was trawling the chief thing or piloting?—The trawling when I was at it, but the piloting was the chief thing when I dropped the trawl.

39,595. What have you been doing since you left off trawling?—Fishing.

39,596. What have you been fishing for?—Salmon, sprats, herrings and hake, and various kinds of fish.

39,597. But not with a small trawl?—No. I never shot a small trawl in my life.

The witness withdrew.

W. Kelly.

WILLIAM KELLY called and examined.

39,598. (*Professor Huxley.*) Where do you belong to?—To Rinnashark.

39,599. Do you know anything about the fishing in Tramore Bay?—Yes.

39,600. Have you been fishing there lately?—Yes.

39,601. Are there any hake there now?—No, there are not.

39,602. Have there been none for the last week or 10 days?—No.

39,603. Have you never seen any there this season?—No, I never saw a worse season for hake.

39,604. Do you mean to say there are no hake there at all?—No, there are not. We cannot catch them.

39,605. You say there are none whatsoever there?—No.

39,606. (*Mr. Lefevre.*) How many fishing boats are there at Tramore?—There are five hookers.

39,607. Are there any small trawlers?—No smaller than yawls.

39,608. Are there no small trawlers?—No. The hookers can trawl. They have trawls of their own.

39,609. Have the trawlers caught any hake or not this year?—No.

39,610. Is there any herring-fishing there?—No; there is no herring-fishing there neither.

39,611. (*Professor Huxley.*) Were there formerly herring-nets there?—Yes, there were herring-nets there at one time, but not within my remembrance.

39,612. Did they catch plenty of herrings then?—do not know.

39,613. Have you ever heard anything said about it?—I have heard them say that they did.

39,614. How is it that they set no herring-nets now?—I do not know.

39,615. (*Mr. Lefevre.*) Do your boats only fish in the Bay of Tramore, or do they go outside?—They go outside with lines to the deep.

39,616. How far out?—Into about 28 or 30 fathoms of water.

39,617. Would that be about six miles out?—Yes, from six to 10 miles out.

39,618. And do they trawl only in the bay?—They trawl only in the bay.

39,619. (*Professor Huxley.*) Is there any complaint the fishermen of Tramore have to make?—Yes, they have a complaint to make.

39,620–1. What is it?—They do say that the trawlers are after picking up all the spawn outside and that they are killing all the small fish.

39,622. What else do they complain of?—That is all I hear them complain of, namely, that the large trawlers pick up all the spawn out in the deep, and that they destroy all the small fish.

39,623. (*Mr. Lefevre.*) They do not think that the small trawlers in the bay do any harm?—I know very well they do not.

39,624. (*Professor Huxley.*) Do they ever get small fish in the small trawls in the bay?—They do, and they heave them over again directly. The trawl is not down for more than half an hour, and the small fish they take up are not killed. The plaice ground is very short.

39,625. Do the big trawlers allow their trawls to remain out much longer?—Yes, sometimes for four, five, six, and eight hours.

39,626. Do the fish come up dead in their trawls?—Yes.

39,627. Is that why you think the small trawl does no harm and the big trawls do?—Yes.

39,628. Is there anything else you wish to tell us?—No.

The witness withdrew.

J. Whittle.

JOHN WHITTLE called and examined.

39,629. (*Mr. Lefevre.*) How long have you been a trawler?—I have been trawling for about 35 years.

39,630. And you are now captain of one of Mr. Cox's boats?—Yes.

39,631. Have you always trawled off this port here?—I have always been trawling.

39,632. And over the same ground?—Yes.

39,633. How far out do you trawl?—About 20 miles off the land, and 25 sometimes.

39,634. Is that over at the Nymph bank?—No; we do not go exactly to the Nymph bank.

39,635. Short of the Nymph bank?—We go into 35 fathoms of water.

39,636. Is that the bank you have trawled over ever since you can recollect?—Yes. We trawl in from 30 to 40 and 45 fathoms of water.

39,637. Have you found any falling off in the quantity of fish you have taken lately?—Yes.

39,638. As compared with ten years ago are you able to say what your take is now?—The fish were much more plentiful then.

39,639. Do you catch half as many fish now as you did then?—Not now.

39,640. Do you meet a great many more trawlers off there now?—Yes, we do.

39,641. More than you did ten years ago?—No, we do not, only in the winter time. We stop here for about a month or two.

39,642. Do you take a great number of small fish?—Yes, we do.

39,643. What are they?—There are hake, plaice, and haddock.

39,644. Then are they small fish, young fish?—Yes, about the length of my finger.

39,645. Do you take any small sole?—Yes.

39,646. Did they come up in the trawl dead or alive?—They came up alive.

39,647. Then do you throw them overboard again?—Yes, we throw them overboard, they are of no use to us.

39,648. What is the smallest sole you take ashore?—About five or six inches long.

39,649. Anything below that do you throw overboard?—Yes.

39,650. Do you think they are not the worse for it?—I cannot tell, I do not think they are.

DUNMOKE.

J. Whittle.

24 Aug. 1864.

39,651. When you throw them overboard are they still alive?—Yes, they are alive.

39,652. Have you trawled at all within the headlands of the bay?—Yes, I did.

39,653. How often do you do that?—I have not trawled there for two years.

39,654. Why have you given up trawling within the headlands?—It was not worth trawling with our boats. The men who keep outside are better off.

39,655. Did you find there was a falling off of fish inside the headlands?—No.

39,656. But you used to trawl inside?—Yes.

39,657. What made you give it up then?—We thought we were injuring the poor people here.

39,658. Then it was not because you found you got less fish?—No, I could catch as much as would pay me, but I thought I was injuring the poor people.

39,659. In what way?—By catching the fish and frightening them out.

39,660. Do you think the large trawlers frighten the fish more than the small ones?—Indeed they do. One large trawler is worse than 15 small trawlers.

39,661. In what way?—Their gear is so heavy and they make such a show upon the bottom.

39,662. Do they disturb the ground more?—Yes, they tear everything up.

39,663. How far off the headlands do you trawl now?—Somewhere about 20 or 25 miles.

39,664. Is there no ground between that and the headlands?—Not for trawling.

39,665. Is it rough ground?—Yes, spotty ground.

39,666. How many men have you in your crew?—Two men and a boy besides myself.

39,667. Do you share the result of the trawling?—Yes.

39,668. Do you find that you make less than you did 10 years ago?—I do make less now. The fish are scarcer in every place now.

39,669. You do not make as good a living as you did?—I can live well enough now.

39,670. Did you ever have the privilege of piloting?—I had some time ago; but I have not been piloting for two years now.

39,671. Why is that?—I did not meet a ship.

39,672. Did the fact that the pilotage was put a stop to make any difference in your earnings?—No.

39,673. Did you not consider it a valuable privilege?—No. Many a time when I was coming in, piloting, I would lose more than I gained.

39,674. Do you think the whole quantity of fish taken by the trawls off the banks you have been speaking of has been less than it used to be?—It is less now at any rate.

39,675. But there are considerably more trawlers in number than there used to be?—No, there are less here.

39,676. There are less here?—There are only four or five here now, but there were 12 and 14.

39,677. But are there many Dublin trawlers fishing off here?—There is only one.

39,678. But during the winter season they come down here?—Yes.

39,679. In greater numbers than formerly?—Yes, from 15 to 25 sometimes.

39,680. Do you think the whole quantity of fish taken during the season is greater than it used to be?—There are plenty of fish in the winter time.

The witness withdrew.

Captain Simon Newport called and examined.

Capt. S. Newport.

39,681. (*Professor Huxley.*) You wish to make a statement to us?—Yes, in consequence of my name having been alluded to, to some extent, by Mr. Cox, I felt desirous to corroborate some of his statements. I was a proprietor of trawlers with Mr. Cox several years ago. I also had a private trawler of my own.

39,682. What sort of a boat was it?—It was a small boat in which I fished personally, and therefore I became acquainted a good deal with the state of the fisheries on this coast. In former times I knew Waterford to be remarkably well supplied with fish. At times it was glutted with it, but of late years the supply began gradually to decrease. I was an old member of the former corporation of Waterford, and I moved for a committee of inquiry into the cause of the decrease in the supply of fish to the Waterford market. They granted the committee, which consisted of the Mayor and four others, of whom I was one, and we at that time took the evidence of the most experienced and oldest fishermen on the coast of Waterford, at Dunmore, Passage, Cheek Point, and other places. At that time there were about 35 well equipped hookers, which were half-decked boats, and were in the habit of trawling on the coast of Waterford.

39,683. Did they fish out of Waterford itself?—Yes, out of Waterford as far as the Nymph bank and Helvick Head.

39,684. From the port of Waterford?—Yes, all of them.

39,685. Were they hookers or trawl fishermen?—They were trawl-boats and hookers. They were general fishing boats.

39,686. The same boats fished with the hook-and-line?—As far as my knowledge goes, they were all well equipped fishing boats.

36,687. Were they equipped with trawls and lines?—Yes.

36,688. Were they trawling at one time of the year and lining during the other?—Yes, and I think it an opportune moment to put you in possession of a copy of the proceedings which took place before the committee which was appointed by the corporation.

39,689. (*Mr. Lefevre.*) In what year was that?—In 1839. There is a report attached to the evidence. I have taken great interest in the fisheries of Waterford because it was formerly to my knowledge a great nursery for young lads who were brought up to a seagoing life, and when we consider that England is in a great measure defended by her seaman, I think it a pity that anything should occur to ruin that nursery.

39,690. Was it within your knowledge that the men in the fisheries often took service in men-of-war?—Yes, and they were in the habit of piloting ships of war up the Irish channel to Belfast and other places.

39,691. Since that time has the fishing fallen off?—Yes, because they all agree that the privilege that they had at that time of going out many miles off the coast in search of ships and at the same time trawling, as is practised in America with great success, acted as a premium and encouragement to many of them. It rendered them capable of keeping up good boats which enabled them to go to a considerable distance from the coast of Waterford.

39,692. Is it your opinion that men who were engaged in fishing during part of their lives were as good pilots as men who give their whole time and attention to it?—They were perfectly; but unfortunately my relative, Sir John Newport, in 1816 brought in a bill to establish a Board of Harbour Commissioners which gave them the exclusive right of piloting vessels into the harbour of Waterford.

39,693. Did they set up a body who were nothing else than pilots?—Yes, who were nothing else but pilots, and they only pilot the coast within the Hook Tower. They seldom go beyond that, whereas the former fishing boats used to go 20 and 30 miles out.

39,694. Are the fishermen now not permitted to pilot boats?—I think not.

39,695. Not as far as the heads?—I think not.

The witness withdrew.

DUNMORE.

Samuel Mitchell recalled and examined.

S. Mitchell.
24 Aug. 1864.

39,696. (*Professor Huxley.*) You are a master pilot?—Yes.

39,697. What is the mode in which the pilotage is conducted now?—Any vessel can go down until it meets with a pilot, and then when it gets within the pilot's district the pilot takes charge of it.

39,698. What is the pilot's district?—From the Great Saltee Island to Newton Head.

39,699. They are at liberty to pilot down to that?—Yes, provided the captain will take them, but they are not compelled to take them. If the fishermen fall in with a ship in heavy weather the captain will generally give them a few pounds to induce them to bring him in.

39,700. How far is the line from the shore where the pilot's district extends?—From Newton Head to the Saltee Island.

The witness withdrew.

Capt. S. Newport.

Captain Simon Newport recalled and examined.

39,701. (*Professor Huxley.*) The privilege granted to the Waterford pilots only extends to the line of coast which has been defined?—Yes.

39,702. Has the refusal to allow fishermen to take ships up there operated injuriously to the fishing?—Yes.

39,703. Was the difference between what they gained by fishing and what they gained by piloting so great that it would be worth their while to lose their time in going up to Waterford?—They only sent one man in with the vessel. They would have an extra man on board in order to do that.

39,704. That would involve extra keep and wages?—Yes.

39,705. Was the assistance the fishermen derived from piloting in that way so very great that the fishing became unprofitable when that additional source of profit was taken away?—That is their evidence, and I believe it is correct.

39,706. This was done away with in 1816?—The Bill I think was in 1816. The investigation on the subject took place in 1839, and the present corporation thought it so important that they ordered the whole of the evidence to be printed.

39,707. Is it the fact that the number of fishermen and trawling vessels has somewhat increased within the last 20 years?—That may be from the Skerries, but not in Waterford. They have decreased so far as my knowledge goes.

39,708. The tonnage of the boats and their size and the general expense of them I think we have been told have increased?—I do not think they have.

39,709. Alderman Cox stated just now that within 10 years after he commenced trawling it was so profitable that it paid 30 per cent. upon the expenses?—I daresay it did.

39,710. Under those circumstances the fishermen would not require any piloting in addition?—That was with the large trawlers.

39,711. To what boats do you refer; are they the small boats which were in the habit of acting as pilots?—I mean hookers, half-decked boats.

39,712. They were vessels half decked?—Yes.

39,713. Could they keep the sea very well?—Right well.

39,714. Did they go far out to sea?—Yes, they went out for 35 miles.

39,715. And they were in the habit of keeping the sea for 35 miles out?—Yes, the same as the Kinsale hookers.

39,716. Has that class of boats died out?—Yes.

39,717. For how many years?—They have been gradually dying away from the year 1816.

39,718. In consequence of that has the supply of fish at Waterford fallen off?—Decidedly.

39,719. Has not Waterford been supplied by trawlers?—It has, but in very small quantities.

39,720. But during the time that, according to Alderman Cox's evidence, so much fish was taken and about 30 per cent. was paid upon the outlay, was not Waterford well supplied with fish?—It might be in comparison, but since 1816 it has been by no means so well supplied as it was previously.

39,721. Is that because the fish has been sent away to other markets?—No, it is because the boats have gradually fallen off.

39,722. In consequence of their having been deprived of the privilege of piloting?—Exactly.

39,723. This particular class of boats has fallen off?—Yes.

39,724. But it would make no difference to the Waterford market if the fish were brought in from other sources; it would make no difference how they got the fish if they did get it?—No.

39,725. Then do you think that Waterford got its fair share of the fish taken in the large takes mentioned by Alderman Cox?—It did previous to 1816.

39,726. Our evidence relates to what has taken place since 1816 and has no reference to a period as long ago as that, and it goes to prove that at one time there was an abundant supply of fish by the trawlers?—There always has been a supply of fish off the coast of Waterford, and there is still.

39,727. Did not the addition of a number of trawlers make up for the falling off in the number of hookers?—No, I think they all fell off. You will find that from the evidence here. They have all fallen off gradually since the privilege of piloting was taken away from them.

39,728. Your statement only relates to that class of boats?—Yes.

39,729. But it makes no difference to the supply if it is got by hookers or by trawlers?—Certainly not.

39,730. Then I do not comprehend how it is, if this abundance of fish were taken by the trawlers, that Waterford market should not be as well supplied with fish as it was at an earlier period by the hookers?—I cannot say anything about that.

39,731. Is there anything further you wish to say?—Nothing, except I wish to give you a copy of our report, and I think you will derive a good deal of information from it.

39,732. (*Mr. Lefevre.*) Do you recollect the inquiry that took place here in 1836?—No, it was in 1839.

39,733. There was an inquiry here in 1836 by the Commissioners of Fisheries?—I do not recollect that.

39,734. According to the evidence given before that inquiry it appears that at that time there were three hookers and 30 boats from 19 to 20 feet keel?—I believe there would be 35 boats at that time—in 1836.

39,735. What was the tonnage of those boats?—From about 15 to 25 tons.

39,736. Then there appears to have been a considerable extension from 1836 to 1839 if that was the case?—In 1839 the inquiry took place in order to show how it was that there had been a decrease of fish to the Waterford market.

39,737. But in 1836 according to the numbers given here there were only three hookers of from 14 to 18 tons?—In 1839 there were 29 vessels in all, and some additional vessels made the number up to 35.

The witness withdrew.

JAMES CULLEN called and examined.

DUNMORE.

J. Cullen.

24 Aug. 1864.

39,738. (*Professor Huxley.*) What place are you a native of?—Just here at Dunmore, or very handy to it.

39,739. Are you a fisherman here?—I am a fisherman.

39,740. Have you been fishing all your life?—Yes, since I was 18 years of age, and I am now about 56 or 57.

39,741. Have you heard the evidence that has been put before us?—Yes.

39,742. Do you agree with it?—I only heard very little of it.

39,743. What is there that you wish to mention to us particularly?—I will tell you. Before the present time when I was fishing I could manage to support my family out of my boat, when once I took my boat out and was engaged in the act of fishing. I can get plenty of evidence to show that at that time I could support my family during the summer.

39,744. What sort of a boat have you?—A large yawl.

39,745. How big is she?—She is a boat of four tons.

39,746. Is she undecked?—She is an open boat.

39,747. Where have you been in the habit of fishing?—Here in the harbour.

39,748. In the bay?—From the Maid up handy to Duncannon.

39,749. Not further?—No; I have perhaps been 10 miles off the Hook scalloping, but not line-fishing.

39,750. What kind of fishing do you practise besides line-fishing?—At that time I had a trawl.

39,751. How long is that ago?—Since I dropped trawling?

39,752. Yes.—It is about 16 years ago.

39,753. Have you not trawled since?—No.

39,754. What size was your trawl; how big was your beam?—18 feet I think.

39,755. And have you found the fishing falling off of late years?—Yes.

39,756. What has been the reason of that?—I will tell you to the best of my opinion: Since the time that those large trawling boats came here to trawl off this harbour, we have found the fish reducing all through, until we were obliged to drop our own trawling in the small boats. There were especially two hookers which belonged to Duncannon, and they swept the harbour all the way up to Duncannon, and even further too. At that time I could catch and I did catch 55 pair of soles in my little trawl from Credan Head to the first westward buoy on the Scarp.

39,757. They were hookers from Duncannon that interfered with you?—Yes.

39,758. Had they trawls on board?—Yes.

39,759. Then they were trawling?—They were not hooking.

39,760. Were they trawling inside a line drawn from Temple Church to Credan Head?—Yes, but I do not know whether that line was drawn at that time.

39,761. How long ago is that?—It is about the time I told you.

39,762. About 16 years ago?—Yes; and perhaps less too. I did not trawl in my boat 12 years ago.

39,763. Do you think trawling outside the heads does you any harm?—I do not say that. If they go into deep water I have nothing to say with regard to them.

39,764. Would you like to keep the heavy trawlers outside the heads altogether?—Yes. And besides that, I have been in the act of fishing since the time I have told you of. I remember being here on the 15th of July. I never slept a wink that night. Between 10 and 11 o'clock I took my supper, and I went into my boat at 2 o'clock. I went out then and I came to an anchor between the two lights in the centre of the bay—Dunmore Light and Hook Tower Light. Then when the day broke I could see this steamer we have here shooting her trawl. She was coming down from Credan Head and dragging down our shores here. When she came off the Black Knob the pilot boat was three-fourths of a mile to the southward, and we were at an anchor. He returned between the pilot-boat and our stern. When I saw him facing us and coming close to us, I waived to him; and the more I waived to him the more he closed upon me.

39,765. Would he not go outside the boundary?—No.

39,766. If what you state is true it is against the existing law, because the law here states that "no "boats exceeding five tons measurement shall trawl "within a line drawn from Credan Head to Temple "Church." You say that the steamer was working inside that line?—She was working inside that line.

39,767. A line drawn between Credan Head and Temple Church?—Yes; I have no wish to give any evidence with regard to that. What I wish to say is, that when I was working down between the two light-houses here in the mouth of the harbour I was frightened at his coming so close. I called out to him and told him that if he swept across us he would do us some damage. Nevertheless, he swept away round and he carried our anchor and our lines away.

39,768. That is a matter for the police. Your statement is, that the steam trawler has recently fouled you and carried away some of your gear?—Yes.

39,769. Have you anything else to say?—There was never anything that was likely to put an end to this harbour for fishing until this steamer was allowed to come in and trawl here. What she does is much more ruinous than anything a sailing vessel could do. I think we might as well burn our boats altogether as attempt to fish if she is allowed to remain here. She comes down here between daylight and sunrise in the morning and drags all over the ground the whole of the day.

39,770. What you want to tell us is that the steam trawler interferes with you very much, and that if she goes on fishing in the harbour you will be prevented from continuing your fishing?—Yes.

The witness withdrew.

JOHN ALOYSIUS BLAKE, Esq., M.P., called and examined.

J. A. Blake, Esq., M.P.

39,771. (*Professor Huxley.*) You are Member of Parliament for the city of Waterford?—Yes.

39,772. I think you wish to make some statement to us with regard to some of the evidence which has been brought before us to-day?—I am anxious to make an observation with regard to the remarks of Tobin, the fisherman, with respect to the inconvenience the fishermen labour under at Passage in consequence of having insufficient accommodation for bringing up their boats there. These fishermen for the most part are engaged in the capture of salmon. They are also engaged in sea fishing to some extent, and the place is so badly adapted for bringing up their boats, that these men suffer very great injury in consequence. The bottoms of the boats are frequently almost knocked out in bringing them up upon the beach, and sometimes when they come in at night it is necessary for the women to get out of their beds to assist in hauling the boats up. The Harbour Commissioners of Waterford were for a long time impressed with the necessity for something being done to afford these fishermen increased accommodation, and the Rev. Mr. Lawson, the Protestant pastor of Passage, sympathising very much with these men, petitioned the Board of Works to make some small advance in order that a jetty might be constructed there. The Board of Works said that if in the locality a fourth of the sum required was raised they (the Board of Works) would give the remainder. The Rev. Mr. Lawson then brought the case before the Harbour Board and they

DUNMORE.

J. A. Blake, Esq., M.P.

24 Aug. 1864.

gave 100*l.*, and Mr. Malcolmson proposed 100*l.* The cost of the work amounted to 500*l.* The Board of Works were unwilling that there should be any outlay of their money until the Marquis of Waterford had made over the place to them, so as to place it under their control. Lord Waterford for some time objected to do that, as he contemplates very extensive improvements in Passage, and he was afraid that this jetty might interfere with them. However, as the requirements of the fishermen were so very manifest, there were some contemplated legal proceedings on the part of the Board of Works to enable them to carry out the making of the jetty. So the Marquis of Waterford about two months since said that if he was permitted he would make the improvements himself, because the plans as projected by the Board of Works would interfere seriously with his plans. The Marquis of Waterford has, therefore, made a positive promise to carry out the improvements himself. The improvements have not yet been carried out, but I do not mean to imply that the Marquis does not intend to carry them out. If he does not, it will be an act of great injustice to the fishermen, and a breach of faith to myself and others, who have taken an active part in the matter. I was the medium through which the matter was brought before the Board of Works on two or three occasions. I entirely confided in Lord Waterford, and I have suspended my action; everybody has done the same and so the matter remains. I think his Lordship is bound within a reasonable time to carry out his promise. At present these poor fishermen suffer great hardship as their fishing operations cannot be carried out as satisfactorily as they otherwise would be. That is so far as Passage is concerned. In the course of this investigation you have expressed some surprise I think that at Dunmore there has not been a greater amount of fishing. That arises from the want of a fishing population, and the impossibility of getting sites for the building of small houses here which the fishermen could inhabit. Whatever chance there might be of obtaining sites for houses required by these humble men, the price required for the ground puts it wholly out of the question that they can obtain it. Some time ago, being quite sensible of the very profitable fishing operations which might be carried on off the coast of Dunmore, I got up a public meeting in Waterford, and made a statement to the meeting of the great opening there is here for a fishery. Following upon that meeting, I got an offer from one gentleman of 1,000*l.* He offered to take a share in a company to the extent of 1,000*l.*, provided I would take an active part in the management of it. Mr. Nathaniel Hyland said he would take shares to the extent of 500*l.* I found in the course of a few days that I could have got ample funds, together with the name of Mr. Malcolmson, who offered 1,000*l.* to begin with. Indeed I could have got much more money than would be required for establishing a fishing company, and such a company would have been established and carried into operation but for the cause I have mentioned. In the first place, crews could not be got here; they do not exist. Alderman Cox has given you evidence about his boats, and if he were to increase his fishing boats, and have three or four more of a smaller tonnage than those he has now he could not obtain crews for them. It is really a very great evil, and a great misfortune, and a great public loss that the fishermen cannot obtain from Lord Waterford sites for the building of houses which they could occupy. I then spoke to the Board of Works to know if they would give us a portion of the public ground here. They have reserved a portion near Lord Waterford's residence. I asked them for it for the purpose of erecting houses for the fishermen and curing houses. They said the contract they had entered into with a predecessor of Lord Waterford, his father I believe, was that if the land was not required for the purposes of the pier it should be handed back to him and that it should not be used for any other purpose. So that, in point of fact, at Dunmore at present no company could attempt operations. If fishing boats are brought here to work the fisheries, the men would have to be prepared to live altogether on board, and if they wanted a curing establishment they would not even get a site for that.

39,773. Would not the prosperity of the town of Dunmore be a matter of great advantage to the landlord of the soil?—I think his lordship has other views besides that of fishing, and that Dunmore will become an important place by-and-by for other purposes. There is an unwillingness to have houses here of such a description as would be required by the fishermen, and hence it is that any company experiences difficulty in regard to the fisheries here. I have endeavoured from time to time, to get up a company, and there is a new one in contemplation this moment at Passage, which is the only place where the fishermen could live; but it is impossible to obtain ground, so that the starting point must be Duncannon; that is miles up the harbour, and the consequence would be that the boats would have to go out six miles and come back every evening after they had finished their fishing operations.

39,774. Has any request been made to the Marquis of Waterford for land by a new company here?—I have not heard that any company has asked him.

39,775. No application has been made from a company?—Not that I have heard of.

39,776. (*Mr. Lefevre.*) Is there no other fishing village besides those you have named?—As you go round the head there are Crowbally, Portally and Ballymacaw.

39,777. Is it the case that other noblemen besides Lord Waterford have property there?—Yes, but not so conveniently situated.

39,778. Who has the right of the foreshore here?—The right of the foreshore suitable for boats coming in belongs wholly, I think, to the Marquis of Waterford.

39,779. Who built the harbour here; there is a very good harbour here at present?—Yes. I believe it was built by Government grant for postal purposes.

39,780. And not with any reference to fishing?—No, the boats put in here from Milford Haven, but the Milford steamers have been given up for some time.

39,781. Then has the Board of Works done anything at all for the fishing?—No.

39,782. Have any applications been made to them?—I am not aware that there have been. In point of fact the Board of Works could not well do anything here. There are ample facilites for fishing boats coming in if there was only proper accommodation afterwards.

39,783. Is there plenty of room for them?—Yes, that is the only thing you could ask the Board of Works to do. The great difficulty, however, is that the men cannot get habitations.

39,784. Is there room for more population than exits?—There is ample room and plenty of ground.

39,785. But not enough of houses?—No, most of them are for bathers and visitors who come here, and the rent would be too heavy for the fishermen.

39,786. Are the fishermen in this place so much engaged that they would not be induced to hire themselves to any company that came?—I think there are too few of them.

39,787. It has been represented to us that there are something like 100 engaged during only a portion of the year in fishing; could they not be induced to leave their other occupations and hire themselves to a company?—I think they might, but most of them have a home and a little piece of land which they farm during a portion of the year while they fish in the remaining portion of it.

39,788. Are others so well off already that they could not be induced to go?—They are not so well off but it is not their habit, and here the fishing will not succeed unless the boats can remain out for three or four days.

39,789. Would it be necessary to bring men from a distance to prosecute any fishery so extensive as you speak of?—If you have it on an extensive scale you must have strange fishermen. I must confess that as a beginning, if it were desired to carry out the fishing

in a satisfactory manner, it would be advisable in the first instance for a company establishing themselves here to have a portion of their crews Cornish fishermen. Those men are accustomed to a mode of fishing which is the only mode which would be successful here, but which is not practised here at present.

39,790. You think the fishery on this coast is capable of great extension ?—I am quite sure from the information I have been able to obtain from them that there is a great amount of fish to be caught off the Nymph bank.

39,791. (*Professor Huxley.*) The fishermen here complain that they are being ruined by the practice of trawling in the bay. If that is the case there ought to be a great quantity of disposable labour for those who choose to seek it ?—Yes.

39,792. If the men here are being ruined by trawling in the bay, they would be glad to take to any other occupation offered to them which would pay them as well as a company would ?—Yes.

39,793. Has it occurred to you to consider that difficulty ?—Which ?

39,794. If the men are being ruined by their present occupation, one does not see why they should not be ready to give their labour to a new company that would engage them ?—They ought, certainly, but there are very opposite opinions as to the ruin done by the trawling. In reference to it, not being a practical fisherman myself, I am unable to express any opinion. People here, however, will fully satisfy you that that mode of fishing is very destructive, and on the other hand the men engaged in it deny that. I think it would be desirable for you to have the evidence of Mr. Wallace, the captain of the steam-boat of which they complain. You might hear his evidence.

39,795. Is he not here ?—No. He has given us evidence of a very opposite character; he says that since he commenced fishing he has not taken up an ounce of spawn.

39,796. Is there any record of his evidence ?—No.

39,797. What prevents him from coming here ?—I don't know. I wrote to him that you were to be here.

39,798. We wish to hear all sides, and we are desirous of getting at the truth of the matter ?—I cannot say what keeps him away.

39,799–800. Is it within your recollection that a boat from another part of Ireland came here and fished and cured the fish, and that the Board of Works granted her the use of the pier and other facilities ?—Yes, they granted the use of the cellars of the pier.

39,801. For how many years was that the case ?—I heard of the boat coming here and getting that convenience ; but I also heard that the smell of the fish was objected to by the visitors, who said that they could not walk on the pier on account of it. I think the permission given by the Board of Works was subsequently withdrawn, on the ground that the cellars had become a nuisance.

39,802. Have the Board of Works power to grant the use of the pier to any persons who may demand it ?—They have it in their possession. The harbour-master at Dunmore is storekeeper to the Board of Works.

39,803. There is great difficulty, after all this evidence, in arriving at the true state of the case. On the one hand we are assured by the fishermen that they cannot get proper employment, and that they are on the verge of ruin, and on the other hand we learn that you cannot obtain a sufficient number of hands here to work a new company ?—If I were to bring a number of boats of 60 tons here, and these are the only description of boats that you can employ in the deep-sea fishery, and they can remain out for a week at a time and not come in at all during that time, we should want a large number of good able hands. A steam tender would take the fish on board from the fishing vessels and carry it off to England. I think if we had a dozen boats of that description the population here would not form efficient crews for that purpose.

39,804. They would not require more than seven or eight hands each ?—They would require about eight hands each.

39,805. So that as far as the number of the men goes, if the fishing has fallen off to the extent stated, there must be that amount of disposable labour here ?—Yes.

39,806. Would you not find them willing to follow that kind of fishing ?—No.

39,807. Is it the case that the fishermen here are for the most part employed in fishing only during a part of the year ?—Yes.

39,808. The rest of the time they are engaged on the shore ?—Yes.

39,809. So that they are not thorough seamen in fact ?—No. Mr. Good, from Dublin, comes here and makes a successful fishing. I asked him why he did not come and make a permanent settlement here, and he said he would be glad to come, but the fishermen would wish to bring down their wives and families. As they cannot get accommodation for them therefore they do not come.

39,810. (*Mr. Lefevre.*) Is it owing to that that the Dublin trawlers do not remain stationary here ?—Yes, they must live on board their ships when they come here.

39,811. Is this steam trawler which has been spoken of owned in Waterford ?—There is a good deal of dispute about that. It is stated that Mr. Stephens is part owner of her.

39,812. I mean is she owned in Waterford by a company ?—I think so.

39,813. Is it contemplated to put more of these steam-trawlers upon this coast ?—I have heard with great satisfaction that it has been contemplated to have a deep-sea fishing company here.

39,814. Of steamers ?—No; of sailing-boats. I have been trying to get up one for some time.

39,815. Is it contemplated to add to the number of steam-trawlers ?—No, I think not; but if such a company as I speak of were established, they would have a steam-tender with them.

39,816. (*Professor Huxley.*) The Commissioners of Fisheries have power, when they see reason, to suspend the permission to trawl, and to prohibit trawling within certain limits; has any action been taken before the Board of Works on that subject ?—I believe that strong representations have been made by the fishermen at Passage and Duncannon to Mr. Barry. He stated that if the steamer was fishing illegally the Coastguard were the parties to set the matter right.

39,817. Clearly, she is not fishing illegally at present ?—No; all that can be said of her is, that she herself is doing the work of half a dozen trawlers.

39,818. I am not expressing my opinion as to the propriety of suspending her from fishing here or otherwise, but it is quite clear that the fishermen have the power of applying to the Board of Works who again are competent to prohibit any kind of fishing which appears to them injurious ?—Yes.

39,819. Therefore they have power to take action in the matter when they choose; have they done so ?—I know that part of the duty of the Coastguard is to prevent illegal salmon-fishing, and also to prevent illegal sea-fishing. If these men, keenly opposed to this vessel as they are, had any idea that she was fishing illegally, no doubt steps would be taken to interfere with her.

39,820. We regret that we have not had the captain of the steam-trawler here; we should have been glad to hear the evidence he could give us upon the other side. At present we have only had *ex parte* statements given. Would it be practicable to obtain information from him ?—I think he would be able to give you very important information.

39,821. Then if he thought fit to memorialise us on the subject, we should be glad to receive his statement? —I will see that he has that information.

39,822. (*Mr. Lefevre.*) He would be able to tell us the quantity of fish he has taken ?—Yes.

The witness withdrew.

DUNMORE.

A. Stephens.

24 Aug. 1864.

ABRAHAM STEPHENS called and examined.

39,823. (*Professor Huxley.*) Are you a trawl owner?—Yes.

39,824. Have you been engaged in that occupation for many years?—Yes, for many years.

39,825. Have you increased the number of trawl-vessels in your possession?—I am at present engaged in a company who are purchasing large deep-sea trawlers.

39,826. From your experience do you consider that the yield of fish from that kind of fishing has kept pretty constant?—On this coast it has not. That is because it has been badly trawled. There are very few trawlers compared with what there are at Dublin.

39,827. But with regard to those who have worked on the coast, are you able to say that the supply of fish has remained pretty equal, or has it fallen off?—From my knowledge of the coast I think there is a mine of wealth untouched outside.

39,828. Do you consider that trawling is as profitable and that it yields as good a return as it did 20 years ago?—Formerly I had deep-sea trawlers, and I sold them because there was no market for the fish. Now there is a market for the fish on account of the daily communication we have with London.

39,829. There were plenty of fish to be caught at the time you sold your trawlers?—Yes; plenty.

39,830. But you gave them up on account of the want of a market?—There was another cause also.

39,831. What was that?—The want of men to work the vessels. When I commenced deep-sea trawling about 12 years ago I brought Englishmen over, but one after another they fell off. I supplied their places with Irishmen but I could not get them to work properly, and I was obliged to sell the boats.

39,832. Did you increase the tonnage of the vessels or the length of the beams?—My advice is, that the size should be increased. I have been at Hull within the last fortnight and I have seen what they are doing there.

39,833. Did you see large trawlers there?—Yes, I have purchased some from that place.

39,834. You think there is plenty of fish if the people would only look after them?—Yes, plenty.

39,835. There is no falling off?—I have had a small sized trawler working in the harbour for the last two years. The week previous to the steam trawler coming here she told me that there was no fish on the ground, whereas the moment the steam trawler came here she brought in some tons the very next day, showing that my men had no experience.

39,836. (*Mr. Lefevre.*) What fish were they?—Soles, turbot, plaice, and various other kinds of fish.

39,837. Were they got where your men said there were no fish?—Yes.

38,838. (*Professor Huxley.*) Are you acquainted with the mode in which the steam trawler works?—I am.

39,839. What is the tonnage of the vessel?—About 50 tons.

39,840. What steam power has she?—Thirty horse power.

39,841. What is the size of the trawl-beam?—From 40 to 42 feet.

39,842. That is not larger than is commonly used?—No, it is not larger than is used by a sailing trawler.

39,843. What is the weight of her head-irons?—They may be a hundredweight each.

39,844. Not more than that?—No.

39,845. What is the kind of net used?—Precisely the same net as that which is used in a sailing trawler.

39,846. Is the ground rope covered with lead?—No.

39,847. It is merely wound round?—Yes, with rounding.

39,848. It is the common beam-trawl in fact?—Yes, propelled by steam instead of by sails.

39,849. How many knots will she steam when she is trawling?—Not more than three miles an hour, I think—three or four.

39,850. The assertion made here is that the head-irons are excessively heavy, but if the heads of the beam are not more than what you mention you cannot trawl beyond a certain rate, because otherwise you would lift your trawl off the ground?—Yes.

39,851. Then though the vessel works with steam power, it is impossible for her to work at a greater rate than a sailing vessel does?—Yes.

39,852. If she did it would lift her trawl off the ground?—Yes.

39,853. Is the size of the mesh the same as in an ordinary beam trawler?—Yes, precisely the same. The trawl-beams were brought from Hull, and they were made by the men who make the sailing trawl-beams and nets.

39,854. Having this steam power they have no occasion to trouble themselves about the tide?—They do pull against the tide, but they do not catch much fish going against it.

39,855. Do they work backwards and forwards like a sailing trawler?—Yes.

39,856. (*Mr. Lefevre.*) What is the depth of water in the harbour?—From Credan Head but, I suppose it will be from 5 to 10 fathoms.

39,857. Is that the average depth on which she trawls?—Yes

39,858. (*Professor Huxley.*) Does she not trawl outside?—Yes, yesterday she was outside near the light-ship.

39,859. Has she been much outside?—It is only yesterday.

39,860. Is she not capable of working outside?—I think she is.

39,861. But you find it more satisfactory to work inside?—They can find sufficient fish inside.

39,862. What fish do they get?—Soles, turbot, and gurnards. There have been very few hake this year.

39,863. Any haddock?—No haddock.

39,864. Anything else—cod?—No cod.

39,865. Any dories?—Yes, plenty.

39,866. Has she at all times got an abundant supply of fish?—She has been able to supply the Waterford market.

39,867. Has she been trawling every day and night?—Yes.

39,868. Working over the comparatively limited space of ground between the line drawn from Credan Head to Temple Church and the headlands?—Yes.

39,869. Have you kept any account of the quantity of fish taken day by day?—That could be ascertained from the manager's report. Last week she caught more than 20*l.* worth in the week, and the catch has extended at times to 37*l.*

39,870. Can you furnish us with reports of the quantity caught in order that we may ascertain whether she has got the same quantity comparing one day with another?—For some time she was stopped by an accident.

39,871. Allowing for that, does she still get about the same quantity?—Not if there is a heavy sea on the ground.

39,872. But take one week with another?—I think for the last three weeks there have been gales of wind.

39,873 But apart from that?—I have no doubt that the manager can supply you with a return that will be able to show what you want.

39,874. (*Mr. Lefevre.*) Does she haul up her trawl by steam?—Yes.

39,875. How often does she haul it up?—Every four or five hours.

39,876. Does she take up any quantity of small fish?—A very small portion, and they are generally sold for some 2*s.* or 3*s.* every day.

39,877. It is not thrown overboard?—No, it is sold to the people connected with Dunmore.

39,878. How many men are there on board?—Four men and an engineer and fireman.

39,879. Is she a screw steamer?—No, a paddle steamer.

39,880. (*Professor Huxley.*) Then she is a trawler made after the fashion of the Hull trawlers, but fitted with steam propulsion?—Yes.

39,881. It is an application, as in many other kinds of business, of steam machinery to fishing?—Yes, she can trawl in calms when the sailing boats cannot go out.

39,882. We have had a great deal said to us about the evil she does. I presume from her answering so well that you do not agree with that?—No.

39,883. We have had strong statements made to us that she is tearing up the ground. You tell us that the fishing has been carried on for six weeks pretty much over the same area, and that she has caught plenty of fish every day?—She brought plenty of sole and turbot in this morning.

39,884. In all other branches of trade it is permissible for traders to use exactly what sort of machinery they please?—Yes; they employ steam if they like.

39,885. Would you think it a hardship if you were prohibited from using steam in connexion with the fishing?—I think it would be very wrong of the Government to interfere in the matter.

39,886. On that ground?—Yes, and the markets would feel it.

39,887. The consumers are very much benefited by steam-trawling?—Yes, very much.

39,888. On the other hand, it must follow that the fishermen who fish with imperfect apparatus must be excluded from the market by it in the course of time?—I don't think that. I think the small boat fishermen are getting a better price for their fish than they used to do.

39,889. Is there an increased taste for fish among the community?—I don't know that but when they bring their fish into the market the country people will give a better price, and will flock in for the fish. I was told the other day that they get double the price for the fish that they did formerly.

39,890. So that so far from doing harm you think it has done good?—I think that every fish that is taken out of the sea and reaches the country does good.

DUNMORE.

A. Stephens.

24 Aug. 1864.

39,891. To the fish consumer?—Yes. Some of the fishermen grumble about it, but we cannot help it.

39,892. Would you place the fishermen who use imperfect materials in the same category as the hand loom weavers who continued to follow that occupation after machinery was applied to the cotton manufacture?—I think I would.

39,893. You think there is no more ground for interfering in the one case than in the other?—No.

39,894. (*Mr. Lefevre.*) During the time the steam trawler has been working in the harbour have the other large trawlers been working in the harbour also?—Yes.

39,895. With the same size of beam and net?—Yes.

39,896. And the small trawlers also?—Yes, in great numbers.

39,897. We have been told that the season for the small trawlers has not begun yet?—There have been small trawlers connected with my place fishing all the summer.

39,898. Has their take diminished?—No, not at all. They have been doing very well in my neighbourhood.

39,899. Are the large trawlers doing very well?—I don't know much about them.

39,900. How are the men in the steam trawler paid, by share or by wages?—By wages.

39,901. What do they get?—I can't tell exactly. I think some of them get 18*s.* and others 12*s.* I have heard so, but I don't pay them. I may tell the Commission that we intend to fish the outer ground, and that we intend to use this steamer as a carrier from the outer ground to the market, but while we have been preparing for the outer ground we have been working her here.

39,902. You do not intend to employ the steam trawler on the outer ground?—We have a screw steamer which we will work on the outer ground.

The witness withdrew.

PATRICK WALTER called and examined.

P. Walter.

39,903. (*Professor Huxley.*) Are you a fisherman here?—Yes.

39,904. What is it that you can tell us with regard to the trawlers?—I have seen salmon taken by the steam trawl. I remember when the men came in Mr. Stephens asked them where they got the salmon and they said they got them in the trawl.

39,905. Have you ever seen the spawn of fish taken up in the trawl?—No, never.

39,906. Have you been on board the steam trawler when she was working?—No.

39,907. Then you have nothing to say about the spawn?—No.

The witness withdrew, and the inquiry was adjourned until the 25th August, at Dungarvan.

Dungarvan, Waterford, Thursday, 25th August 1864.

PRESENT:

Professor HUXLEY, F.R.S. (Chairman). | G. SHAW LEFEVRE, Esq., M.P.

Mr. Anderson appeared for the Dungarvan fishermen, and *Mr. Kelly* for the Ring fishermen.

DUNGARVAN.

J. Whelan

25 Aug. 1864.

JOHN WHELAN called and examined.

39,908. (*Mr. Anderson.*) You are harbour-master here?—I am.

39,909. How long have you known this harbour?—For the last 40 years.

39,910. Do you remember prior to the year 1836?—I do.

39,911. Can you state how many fishing-boats there were in Dungarvan at that time?—In the year 1843 there were 80 fishing-boats here.

39,912. How many men were there on board those fishing-boats?—From six to eight.

39,913. What was the average number of the fishermen's families?—Some of them were unmarried as well as married, but I think four would be a fair average, including the fishermen and their families.

39,914. Can you tell us how many fishing-boats there are at present in the harbour of Dungarvan?—Twenty-five.

39,915. How many men are there on board?—Five; some have six, and some only four.

39,916. What will be the average number of each family now?—Five will be a fair average. The young men have gone away and married, and many of the men have left, and the average number of each family is about five.

39,917. Do you remember the state of the fishing in 1843?—Yes.

DUNGARVAN.

J. Whelan.

25 Aug. 1864.

39,918. What was the quantity of fish taken then?—The quantity of fish taken then was immense. Some of the boats have taken as much as 1,000 hake. I have often seen as many as 40,000 or 50,000 hake on the quay from a night's catch.

39,919. That was in 1843?—Yes.

39,920. What is the average quantity they take now?—From about half a hundred to four score. The week before last they had only 50 for a whole night's take.

39,921. How do the Dungarvan men principally fish?—With the hand-line.

39,922. Formerly did they adopt any other mode?—Some of the Abbeyside boats had trawls, and a few of the Dungarvan boats had long-lines for catching haddock.

39,923. Do you think that the fishing has increased or decreased?—In the hand-line fishing it has decreased, but it seems that the trammels take a great deal of them.

39,924. Why do you consider that the quantity of fish taken by the hand-line is less than formerly?—I know that if the trammels were not there the hand-line men would take more hake. If the fish get entangled in the trammel net how can the hand-line men catch them when they are making towards them?

39,925. What is the objection to trammels?—That is the objection, that they set them every time it answers their convenience from four o'clock in the afternoon, and that they leave them there all night, and go home again to their houses.

39,926. Where is the fishing-ground; where does it lie?—At present it lies between Mine Head and Ballyvoyle Head, all over the bay, for a distance of four, five, or six miles.

39,927. From the land?—Yes.

39,928. What is the farthest they go out?—The men in fishing for ling and cod go from 10 to 15 miles. In former times, when they had good crews in their boats, they were in the habit of going to the Nymph bank.

39,929. How far is the Nymph bank?—About 35 miles.

39,930. How does the tide run outside?—It runs nearly east and west, and takes a direction east north-east and west south-west. It sweeps in the direction of our harbour to Ballyvoyle Head.

39,931. (*Professor Huxley.*) Will you describe the trammel-net?—I cannot tell you what the mesh is, but I should think it would be from four to five inches. The net is about three fathoms deep and from 30 to 40 fathoms in length.

39,932. Is it corked?—There are stays. There are stones fastened to the net, which keep it on the ground.

39,933. Is the net loaded at the bottom?—There is no lead upon it, but there are stones.

39,934. Is it anchored at one end?—I am not positive whether there is an anchor attached to them or not.

39,935. Where do they put these trammels?—In all parts of the bay where they think they can get fish.

39,936. As a matter of fact, how many trammels have they on board each boat?—In former times not more than 12 or 13, but now they have adopted larger boats of six or seven tons. The yawls take from 18 to 22 nets in each boat.

39,937. What is the average length of each net?—From 30 to 40 fathoms.

39,938. How many yawls are there belonging to them?—Between 40 and 50, but I do not see now more than 20 or 22 or 23. They may use them if they have had a heavy take of fish, but they are rather too small for their convenience.

39,939. What do you conceive to be the objection to the trammels?—Our fishermen say that they come when they are lying at anchor, and put those nets close alongside of them and surround them. They have to haul up their anchors, and go away and leave the ground to the trammel-men. When they get fish at night they say that the Ring men find out they have got fish, and come and take a position on the ground and set their nets upon it. It is said "Why do "not the Dungarvan men go outside of them?" What is the use of that? They will tell you that wherever they go and manage to get fish one night, these parties will come after them on the following day and set their nets there, so that they are obliged to take to another quarter.

39,940. In what depth of water can the trammel-nets be set?—In any depth of water, from 20 to 25 fathoms.

39,941. Can they set them in any part of the bay?—Yes, where they think they can get fish.

39,942–3. Is your present evidence to the effect that the trammel-nets interfere with the hand-line fishing, so that the hand-line fishing cannot go on where the trammel-nets are set?—Yes, it is their complaint to me, which I suppose they will prove by-and-by.

39,944. Are trammel-nets set within limits defined by the Fishery Commissioners?—I do not know.

39,945. With regard to the trammel-net, a fixed or moored net is prohibited within the space lying between a line passing due east and west to the northernmost point of Helvick Head and a line passing due east and west to the southernmost point of Ballinacourty Head?—They do not set them there; they would be useless there; it would be useless to set them inside Ballinacourty and Helvick heads.

39,946. (*Mr. Anderson.*) Have you ever seen the fish coming to market?—Yes, I have seen them coming to market.

39,947. Do you know if the fish taken in the trammels are as good as those taken by the hand-line?—No, they are not.

39,948. Is there any difference in the market price?—There is a penny more.

39,949. You see that every day?—Yes, but many of the country people cannot distinguish them. They cut off a piece of the tail, so that they may think they were killed by the hand-line, but every one who has had any experience in the subject will know a trammel-caught fish from one caught by the hook and line.

39,950. What is it that makes the difference?—The shaking and tearing of the fish. When he gets into the net he is continually striving to get out again until he kills himself, and in this way loses his scales.

39,951. Then the difference is in the quality?—Yes.

39,952. The trammel-fish is I apprehend perfectly fit to eat?—Of course; it is used by the poorer people, and when there is a scarcity of fish the better class buy it, but that is only when there is a want of other fish.

39,953. The poor principally buy the trammel fish?—Yes, and the more wealthy people at times.

3,9954. You were at one time engaged in the trade between this and England?—Yes.

39,955. Were you in the habit of taking hake across?—Yes, I used to buy hake from the Ring people at 13*s.* per six score, and also from our own people. I gave our people a pound, and I found that I was more a gainer by giving 20*s.* for the six score to the hand-line men than I was by giving 13*s.* or 14*s.* for the six score to the trammel men, because the weight was not in the trammel fish.

39,956. Could you distinguish between dried hake killed by the trammel and killed by the hand line?—Not very well when they were dried, but when they were fresh it was easy to tell, because they lose their scales.

39,957. Then how was it you got so much better a price?—On account of the weight. The fish caught in the trammels are of a smaller description, and those caught on the hand lines of a larger description.

39,958. There is another byelaw here with regard to the time of fishing with trammels?—Yes.

39,959. Do you know anything as to the time at which they should put the trammels out?—I was out the other evening, and they left about four o'clock,

and returned at six o'clock after setting them. That will be about six weeks ago.

39,960. Have you been at any time fishing there yourself?—No.

39,961. Then the statements you have made to us are not those of a practical fisherman, but are from hearsay?—Yes.

39,962. General report?—Yes, but I have seen them come in with them.

39,963. The statements you have made as to the quality of the fish are from your own observation?—Yes.

39,964. What evidence can you give us as to the trawling?—I have seen them come every day from February. They are constantly trawling on the fishing-ground which the hook-men occupy.

39,965. Do you know the ground on which the trawlers work?—Yes, I can see them working upon the ground.

39,966. Where do they trawl?—On our men's fishing-ground.

39,967. Where is that?—About a mile or two from Helvick, and nearly abreast of Stradbally. There are two trawlers belonging to Abbeyside.

39,968. Do they trawl at present?—They did. There were more once. The principal trawling is being done by the Ring people.

39,969. Do they trawl inside the harbour at all?—Yes, in the month of February when they want bait for their long-line fishing

39,970. Do you see them trawling inside the harbour?—Yes, in the month of February.

39,971. Trawling in the bay anywhere else?—Quite outside the rocks everywhere from Mine Head down to Stradbally. They keep upon that tract of ground from one to four miles off.

39,972. (*Mr. Kelly.*) Have you examined the trawls as they came in in the Ring boats?—No.

39,973. Have you ever fished with a trawl yourself?—No.

39,974. Are you a fisherman?—No.

39,975. I believe you acknowledge that the account you have given of what the people of Ring take and do is given from hearsay, and not from any practical knowledge?—Yes.

39,976. You say that you cannot detect any difference in the quality of the fish taken in the trammels and by the hook and line, when salted?—No.

39,977. You have never been out to see them fishing at all?—No.

39,978. (*Professor Huxley.*) In making your statement about the state of the fishery, a question was asked you about the tonnage and cost of the vessels; do you recollect what was the tonnage of the vessels in the earliest time of the fishery?—The tonnage of our largest boats was from 18 to 20 tons.

39,979. That was the case formerly?—Yes, when there was a bounty. They strove to get their boats registered as high as they could, but under the new mode of registry the boats would not be of more than 15 tons.

39,980. The tonnage of the boats has not increased?—No.

39,981. What would be the cost of one of your boats fitted up with one of your lines?—When they built them in 1839, 1840, and 1841 the cost of a good boat would be at that time about 160*l.* When they built them in former years previous to that, when timber was dear, a good boat would cost from 200*l.* to 250*l.*

39,982. As the number of boats has fallen off, and the cost has not increased, it follows that the amount of capital invested in the fishing at Dungarvan is less than it was?—I should say that it is fully one-third less. We had two-thirds more take of fish, and even ten times more take of fish in the year 1843 than we have in the present year.

39,983. You are doubtless well acquainted with the social condition of the Dungarvan people?—I think no man can be more so.

39,984. Do the fishermen here employ themselves in the fisheries altogether, or do they take to anything else?—When the fish were plentiful the young men who had come here in the month of September after a spring voyage to America, and who had been engaged in our coasting vessels, were in the habit of leaving those vessels at the time the fishing was worth following, and employing themselves as fishermen in the fishing vessels.

39,985. At the present time, and within the time over which your recollection extends, the Dungarvan men have either been seamen or fishermen?—Yes.

39,986. They are not engaged at certain periods of the year in cultivating the land?—No; if a fisherman has two or three children he endeavours to get the younger branches of them an education at the Christian Brothers' Schools. After having been for two or three years there they take them out with them to the hand-line fishing, and then they ship them in vessels as lads, and for strict honesty and everything of that description you can trust them thoroughly.

39,987. Do they go on board merchant vessels?—Yes, and they are now scattered in all parts of the world.

39,988. So that it follows from what you state that the fishing population has greatly diminished, and that the increase of population has been drafted off into the merchant service?—Yes.

39,989. I understand from your evidence that the fishing practised here by the Dungarvan men is almost exclusively hand-line fishing?—Yes.

39,990. Do they use the long-lines for fishing?—They did some years ago. In the winter time they used them for catching ling and cod, and in April and March for haddock. They would go a good distance from the land then, perhaps some 10 or 12 miles, and if it happened to be blowing hard they found it very difficult to work them. When they had good practical young men engaged in the fishing they were in the habit occasionally of taking an immense quantity of cod and ling. In the winter time two years ago we had large takes of cod.

39,991. By the help of long-lines?—Yes, and by the use of hand-lines too.

39,992. Have they practised much long-line fishing as well as hand-line fishing?—No.

39,993. The long-line fishing elsewhere has been found a profitable mode of catching fish?—Yes.

39,994. Why have they not taken to it here when they have been hard pressed?—The owners do not supply them with long-lines, and they are not used to the work. There is a certain amount of skill required for working the long-lines, so that it is not an easy matter to turn from one to the other.

39,995. The labour is greater is it not?—Yes.

39,996. Then is it your opinion that the men who have been fishing with hand-lines are mostly old men who could not turn to any other mode of fishing?—They are old men now; the young men have all gone away. I do not think you would find a dozen men here who are in a fit state to go on board a vessel to engage in the long-line fishing.

39,997. Have they any prejudices against the long-line fishing?—As far as two of a trade never agree, the Ring men have prejudices against the hand-line men, and the hand-line men have a prejudice against the trammels.

39,998. You are speaking now of long-line fishing?—Not the least; they are means for employing the people, and they have no objection to them, but the takes of fish that are sent to Kinsale and everywhere in this neighbourhood are caught by the hand-line.

39,999. If they had the long-lines would they have any objection to use them?—I do not think they would have any objection.

40,000. But the long-line fishing generally is so profitable a mode of fishing that there has not been found in other places any difficulty for enterprising men to obtain long-lines?—They could not work the long-lines here without a trawl to take bait for them;

DUNGARVAN.

J. Whelan.

25 Aug. 1864.

they are not in the habit of working a trawl, and that beats them.

40,001. What bait do they use principally?—Conger eels and plaice, and everything they can get in the nets.

40,002. Have they no mussel beds?—Yes, they have more than in any part of England.

40,003. Why do not they use them?—I do not know. They could load one of the schooners with what they could get under the arch of the bridge.

40,004. In every other part of the kingdom mussels are considered very good bait for the long-lines?—The Kinsale boats come here before Christmas, and often take away 20 tons of them; there is any amount of them to be got there.

40,005. But yet you say they are not used?—No, the fishermen here do not use them.

40,006. What is the condition of the Dungarvan men in the winter time?—The conditon of the principal part of them for the last two or three years has been such that they have been obliged to go to the poorhouse.

40,007. Does not that fact induce them to try some new modes of fishing, or adventure in other ways to get a living?—They scarcely go out of Dungarvan. Last winter the circumstances of the fishermen were so bad that down at the quay their boats were lying through the principal part of the winter. There were only four or five hookers that went out in the winter time and they had to go from 12 to 15 miles off, and then they had not the services of the young men to manage the boats and conduct the fishing; the young men had all gone away and the old men were not able to follow the fishing properly.

40,008. Did the famine which occurred here some years ago affect the Dungarvan men much?—It affected them a great deal, because before the famine year the price of fish was from $2\frac{1}{2}d.$ to $3d.$ and $3\frac{1}{2}d.$ each, and when the famine came I saw them selling on the quay for $1\frac{1}{2}d.$ each.

40,009. Has it had anything to do with impoverishing the men and preventing them from taking to new modes of fishing?—I know that it has had a very great deal to do with it, and that was one cause why the young men who were able to go and seek employment elsewhere left the place in order that they might help to support their parents and families with their earnings in some other way; some of them went as far as Cape Horn, and all over the world in merchant vessels solely with a desire to earn something to support their families. Then again, what the Dungarvan fishermen were able at one time to get $1l.$ and $2l.$ for a cwt. could be got from the Ring people for $12s.$ and $13s.$ when the take was large. In olden times one day's take would support themselves and families for a week; they salted the rest and had it as a reserve; they took it into Tipperary in the slack time and often got $30l.$ or $40l.$ for it, so that they were never short of money. When the famine came provisions were so high and so very dear that they were scarcely able to buy sufficient to support themselves and families, and then of course the young men were obliged to fly away to other employments; the old men remained and had to get assistance from the poorhouse as their boats were hauled up. The owners of the boats would not fit them out in cables and anchors and things of that description, and they were hauled up until they rotted away.

40,010. Are the boats mostly in the hands of people ashore, or have the fishermen part shares in them?—In 1839, when they took the temperance pledge, they had a little money, and there were gentlemen here who took them by the hand. The whole of them had a good character then. Perhaps they might have been fond of a little drop as they are at present; I do not dispute that. There were at that time six or seven or eight boats put on the stocks by private individuals. The fishermen themselves built them, and I believe in the course of a short time they paid for them.

40,011. The fishermen themselves?—Yes.

40,012. Was that generally the case?—Of course all our fathers were fishermen; they all had boats and built them themselves.

40,013. (*Mr. Kelly.*) Do you think the misery and poverty caused by the famine took out of the people their spirit of enterprise and the means whereby they could improve themselves?—I know that they had no food often, and when I used to be loading corn at the quay many who in former times had $20l.$ or $30l.$ in reserve would be lying on the deck of the vessel waiting until the cargoes went out, when they would put their hands down in the hold of the vessel in order to take a handful away. I have known them to sleep in their boats all night for want of a place to lie down in, and in the morning they would come down and get a few pence to buy bread with.

40,014. If the trammels and trawls were altogether suppressed and done away with, what is your opinion with regard to the hookers in Dungarvan; do you think that in the course of a single year you would have a single hooker left?—Yes, the young men would return again. The men who went away to earn a few pounds would come back; if the fish were to return to the harbour all the men would come again to fish as they used to do.

40,015. If you were embarked in the fishing business yourself, would you prefer using the long-lines in order to serve your own interest?—Yes, of course I would; there are no prejudices here against the long-lines.

40,016. Only that they have not been used, and the Dungarvan men do not choose to use them?—Certainly.

40,017. Can you say why that is?—There is more labour attached to them and greater risk in fishing them, and if they happened to lose them, which the Ring men did last winter in consequence of the Dublin trawlers taking them away from them, they would not find it easy to get money to replace them.

40,018. I believe the markets in Dublin are chiefly supplied with mackerel, plaice, and ling by the Ring men?—Of course they are.

40,019. I believe the hand-line men do not bring in any part of that commodity?—No, they do not.

40,020. And the supply introduced into the market by the Ring men I believe cheapens the market?—Yes, of course the more fish there is that comes in the cheaper it is.

40,021. (*Mr. Lefevre.*) Do you recollect the bounty being given up?—I do.

40,022. That was in the year 1830 I think?—Yes.

40,023. Was there a considerable depression of the fisheries after that?—The fisheries were not so much depressed. My father was fishing at the time of the bounty and so much means did he get that in four years he was able to put a vessel of 70 tons on the stocks. He took us away from the fishing trade, having five or six children, and he put us afterwards, in vessels of our own.

40,024. Did he do that out of his profits of fishing?—From the fishing and the bounty.

40,025. Immediately after the bounty was taken away was there a falling off in the number of boats?—They did not fall off until the famine came; they counted more until the famine year. The bounty was $4d.$ a cwt.

40,026. In 1843 was there a considerable impetus given to the fishing trade?—The fishing did not fall off at the time of the bounty, but at the time of the bounty there was more enterprise. The boats too were decked boats, and they sailed with them further out to sea. They went on the Nymph bank and everywhere they could, and they cured their fish and brought it home.

40,027. In 1843 I think you mentioned that a considerable number of boats were built here?—Yes, some five or six were on the stocks here in 1840, 1841, 1842 and 1843.

40,028. Was that due to increased temperance?—A great deal of it was due to their industry. They

saved money, and the people respected them and gave them any amount of credit they required.

40,029. Has the decrease in the fisheries been continuous from that time?—No, not up to the year 1843. That was the finest year of hooking we ever saw here.

40,030. But from that time has it been falling off?—We have not seen the same takes of fish since 1842 and 1843.

40,031. From the year 1843 has the number of boats been continually decreasing until now?—The old boats which they had down to 1846, which was the famine year, were allowed to go to ruin. The boats we now use are new boats. There are a few that were built in 1840, 1841, 1842, and 1843. Those are the boats that at present remain in the harbour.

40,032. Have any boats been built since that time?—Not one.

40,033. When did the trammel men begin to use their nets?—For the last 40 or 50 years.

40,034. Have they increased of late?—Yes, they have.

40,035. When did they first come here in considerable numbers?—They have been here in considerable numbers for some years, and they are here in considerable numbers every year now.

40,036. Can you give any date to show when they became comparatively numerous?—No I cannot.

40,037. Do you think the whole quantity of fish brought into the market now is less than it was 20 years ago?—Yes, it is not a tithe of it.

40,038. Taking into consideration the fish caught by the trammel-nets as well as by the hand-lines?—The trammel-nets catch a good deal of it now, and they salt it over at home for themselves. The year before last we improved. Last year we did not do a great deal. I kept an account of it. I was a broker then. That was before I was elected harbour-master. I used to clear out twice a year in September and Christmas. There were six or eight of the hookers going to Cork full loaded.

40,039. Are there any means of ascertaining the whole quantity of fish brought in and sold at Dungarvan?—It could be done.

40,040. Can you obtain the information by referring to your books?—No, but I could tell you the amount. I think last year we imported across the Channel into Cork very nearly 200 tons of fish—of dried hake, ling, cod, conger, and all descriptions of fish, but this year we did not do a great deal. The Ring people went to Cork twice last year. The year before last we imported nearly 600 tons of salt from Liverpool for the curing of the fish.

40,041. Is there any means of ascertaining the total quantity with accuracy?—There were about 200 or 300 tons of dried fish sent from here to all parts the year before last.

40,042. Besides that a good deal of fish is brought into Dungarvan and sent to the country?—Yes, the fish market is like a fair every day.

40,043. Is there any means of ascertaining the quantity?—You might take the average of 40 boats coming in and I should say 2,000 hake would be brought in on a fair average a day.

40,044. That is speaking of the hookers?—Yes, allowing half a hundred for each boat.

40,045. Can you speak of the quantity brought in by the fishermen who use the trammel-nets?—They come in with their yawls, and the quantity of fish is according to the take. They sometimes bring in 100, sometimes four score, and sometimes a quarter of a hundred. They bring in a great deal in baskets and cars to the market and send it away. On the average the jolters will take perhaps five or six cwt. a day if they can get it.

40,046. Comparing the last two or three years with two or three years about 1843, can you say if the whole quantity of fish now brought in is greater or less than it was then?—It is less now. Last year some of the fishermen who have been here as the owners of boats, and substantial people, and who could afford to salt the fish, and to keep 30*l.* or 40*l.* worth in salt had not more than a few hundreds in salt.

40,047. Can you tell us how much fish is caught by the Ring fishermen; is that within your knowledge or not?—No.

40,048. Is it possible that although not so much fish is brought into Dungarvan and sold in the market here, yet, taking into consideration the fish caught by the Ring people and sold there, the whole quantity of fish taken in the bay is larger now than it was 20 years ago?—No, there is not near half the quantity.

40,049. Not taking the catch of the hookers and of the trammel-men as well?—The trammel-nets take a great deal of it.

40,050. Have you made any inquiry with regard to the earnings of the fishermen here?—No, I have not.

The witness withdrew.

DENNIS COLLINS called and examined.

D. Collins.

40,051. (*Mr. Anderson.*) You are I believe a Dungarvan man?—Yes.

40,052. How long have you been a fisherman?—For 40 years.

40,053. What fishing have you been engaged in?—I never practised any other kind of fishing than trawling and hand-line fishing. I have two hand-lines.

40,054. How long were you trawling?—For 32 years; I was trawling in part of each year, with the exception of the last four years, during which I have trawled none.

40,055. How many men used there to be in the boat with you?—Six, and sometimes seven.

40,056. Were you the owner of the boat?—Yes.

40,057. How long have you had the boat?—23 years last June.

40,058. What did you pay for it?—142*l.*

40,059. Do you remember when you bought the boat; what were her earnings that year?—I kept a tot of her earnings the first year I went to sea. Between the 14th of June and the December following I earned 42*l.*

40,060. She paid 42*l.* in that year in the course of six months?—Yes.

40,061. In addition to the 42*l.* as the boat's share, were you entitled to anything else?—Yes, I was entitled to my own and my son's share.

40,062. What did each man get?—Half that.

40,063. That would be 21*l.*?—Yes.

40,064. How many men had you in the boat?—Six.

40,065. Did each earn about 21*l.*?—We all shared alike.

40,066. Was that by hand-line fishing?—It was altogether by fishing with lines.

40,067. Have you been fishing for the last year or two?—Yes, and last night also.

40,068. What have been your average earnings for the last six months?—The fishing is annually getting worse and worse, and I can get nothing by it now.

40,069. Are you able to support yourself?—Scarcely.

40,070. What is the boat's share?—Nothing. It would not buy gear and bait for me.

40,071. And what is the average quantity of hake that you take with your boat?—I was outside for three nights this week and I did not catch more than 85 hake.

40,072. Each night?—No, in the three nights. It was four score and five that I got.

40,073. Is that your own take?—No, the entire take between us all.

40,074. What did the other boats take?—Some less and a few of them more.

40,075. What is the greatest take that any Dungarvan boat has had for the last three months?—There

DUNGARVAN.

D. Collins.

25 Aug. 1864.

is not a boat during the last three months that has killed 300 hake in any week nor 200 either.

40,076. Not 200 in any week?—No, during the five nights of the week.

40,077. Are you out on the average five nights in the week?—Yes, if the weather permits.

40,078. Has the quantity of fish taken by the Dungarvan men since you got your boat first increased or diminished?—It has been every year getting worse.

40,079. What do you ascribe that decrease to?—It strikes me that we do not get a quarter of what we used to get.

40,080. What is the cause of that?—I do not know whether it is the will of God or the destruction by the trammels, but every man in the same trade in the south of Ireland will blame the trammels.

40,081. What do you consider to be the objection to trammels—where are they set, and what is your objection to them?—They set them east and west.

40,082. Where?—Outside in from 12 fathoms of water to 30 fathoms.

40,083. What is the objection to them, and how do they interfere with the line-fishing?—Provided they give us a fair berth, or plenty of room, we should never murmur much about it, but these men can leave their own homes any time they like and go on board a vessel and shove their trammel among my lines where they like, and the consequence is that I have to go away and get to a fresh berth.

40,084. How do they interfere with your fishing; what injury do they do to you?—Sure they prevent me from catching fish.

40,085. How is that?—Because it is not there for me to catch, and another thing I will tell you I do not think any good fish will resort to where they are.

40,086. Why not?—Because the sea is infested by them.

10,087. How?—There are the relics which they bring there, bones and heads, which are very destructive to the fishing.

40,088. Are they relics of the fish which have been taken?—Yes.

40,089. Are the fish they take better or worse in quality than those you take?—Our fish when they are fresh are much better than theirs. Sometimes they will leave the trammel-nets in the water and not bring them on shore. Often their fish are not saleable, and the jolters will not buy them because the fish are sold by the skin. The fishmongers will not have them.

40,090. How are they sold by the skin?—By the colour or by the scales.

40,091. Are they better or worse than the fish taken by the lines?—When they are preserved they are good enough, but they are not so productive in weight as our fish.

40,092. Are they exhausted?—They are, and I can give you the reason.

40,093. Why is it?—Because they are exhausted by pulling and dragging themselves in the holes.

40,094. While they are in the net?—Yes.

40,095. What time do you see the Ring men setting their trammels?—They come round to Helvick to set their trammels at 12 o'clock, and four o'clock, and one o'clock, and two o'clock.

40,096. At this season of the year, what is the general time that they set their trammels?—They set them in the evening at three or four o'clock.

40,097. How long do they leave them in the water?—Perhaps until the middle of next day.

40,098. What time do they generally take them up?—There may be a blustering wind, and then they may not take them up till midday, but it is about breakfast time that they generally get them.

40,099. What is the general time they take them up?—Sometimes at six o'clock in the morning, and from that up to seven, eight, and nine o'clock; that is the time they take them up.

40,100. How close to your fishing boats do they set their trammels?—I cannot be exact about it.

40,101. About what distance?—As far as my knowledge goes, the nearest will be about 80 or 90 yards.

40,102. Do they come within 80 or 90 yards of your boats?—Yes, but I cannot be exact with regard to the distance.

40,103. They put them within 100 yards of you?—That is my guess, but I cannot be positive; it may be more or less, over or under.

40,104. Have they proper buoys attached to their trammels?—They have a parcel of corks tied together.

40,105. Have they no regular buoys?—No, there are no signs on the water but a parcel of corks tied with a bit of line and made fast to the trammel.

40,106. Do you ever see any letter mark or number upon them?—No.

40,107. Do you see any buoys attached to the trammels?—I have seen buoys attached to them.

40,108. But, in a general way, have the Ring men got buoys attached to their trammels?—Yes, I have seen them.

40,109. Have you seen them without buoys?—They can have them without their being known to us.

40,110. Did you ever see any with letters painted on them?—No, I never did.

40,111. Is not this a copy of the byelaws which were passed in reference to Dungarvan Bay in 1849?—Yes.

FISHERIES.

Act 5 & 6 Vict. cap. 100.
„ 7 & 8 Vict. cap. 108.
„ 8 & 9 Vict. cap. 108.
„ 9 & 10 Vict. cap. 114, and
„ 11 & 12 Vict. cap. 92.

BYELAWS, RULES AND REGULATIONS.

Dungarvan Bay.

1st. The use of the trammel and every other fixed or moored net (except bag or the nets for the taking of salmon,) is hereby prohibited at any time or season in the entrance of Dungarvan Bay, within the limit formed as follows, namely, the space lying between a line passing due east and west through the northernmost point of Helvick Head in the barony of Denis-within-Drum, and a line passing due east and west through the southernmost point of Ballinacourty Head in the barony of Denis-without-Drum in the county of Waterford.

2nd. The setting of any such trammel or moored net athwart or within 200 yards of any boat, which at the time of setting such net shall be moored, and the crew thereof engaged in line-fishing, is hereby prohibited.

3rd. To every train of such trammel or moored net shall be attached at least one floating buoy or board, upon which shall be printed in clear, legible characters, not less than one inch in length, in white, upon a black ground, the letter of the district, and the name of the owner to which such net belongs.

4th. On or off the coast of Waterford, to the north and east of the line aforesaid passing through Ballinacourty Head as aforesaid, and on or off the coast of Waterford to the south and west of the line aforesaid, passing through Helvick Head as aforesaid, such trammel or moored nets may be set, and remain set, or in the water, from the hour of three of the clock in the afternoon of one day until the hour of nine of the clock in the forenoon of the following day during the months of January, March, October, November, and December in each year; and from five of the clock in the afternoon of one day to the hour of seven of the clock in the forenoon of the next following day, during the months of May, June, August and September in each year.

5th. Any person acting contrary to any of the foregoing byelaws, rules, and regulations, is hereby made subject and liable to a penalty not exceeding 5*l.*

HARRY D. JONES,
J. RADCLIFF,
THOS. A. LARCOM,
J. REDMOND BARRY,
WM. J. FFENNELL,
Commissioners.

Approved by the Lord Lieutenant in Council,
31st Oct. 1849.

Dated this 4th day of July 1849,
At the office of Public Works, Dublin.

40,112. (*Professor Huxley.*) The evidence you are now giving is to the effect of showing that bye-laws have been habitually infringed here ?—Yes.

40,113. (*Mr. Anderson.*) You say that you have often seen trammels set without having buoys attached to them ?—They might have them, but I never saw them. I never did see any. They might have them unknown to me, or they might be buried underneath me without having a buoy at all.

40,114. Have you ever had any dispute with the Ring men ?—No, I never did.

40,115. Have the trammels when they have been set down interfered at any time with your fishing ?—Yes, I had a proof of that. I never caught any fish near them; where a Dungarvan hooker will catch 400 hake here at night if none of these trammels are near him, the next night they will come almost on board of her, and the hooker might then almost as well attempt to fly as attempt to fish; he will come home the very next night without catching anything at all.

40,116. How close have you seen them set their trammels to you ?—I cannot be exact about it, but perhaps 100 yards, or twice the length of this court; but I cannot be very precise.

40,117. Is there any difficulty when the trammels are shot about you in the night or in the evening, and you find you are catching no fish? Where are you injured; have you any difficulty in keeping your ground in consequence of the trammels ?—That is one of the greatest injuries they do us. In former days and until lately we were very apt when we missed the fish to remove in the night. Sometimes we would remove five times in one night in order to find out a good place, but now no one can remove unless he goes outside altogether, because where we drop down a second time and anchor we might find ourselves among their nets, so that we are obliged to haul up entirely for that night.

40,118. If you get in a place where you are catching no fish, you must remain there all night ?—Yes, that is mostly the case.

40,119. Do you think the trammels prevent the fish from coming in towards the land ?—They are set across the harbour, and the reason why they do that is that that is the best place for them.

40,120. How far do the trammels extend in the water ?—All the way round from Helvick Head up to Ballyvoyle Head to the northward.

40,121. When do they shoot them ?—In the afternoon.

40,122. What space of water is covered with the trammels when they have set them; what length generally do they cover ?—I cannot be exact. There may be 48 or 50 of them, but I do not know the length of each trammel.

40,123. They set them, I suppose, where the fish are most plentiful ?—They would know to-day where the fishermen would have been catching fish last night, and they always go there.

40,124. (*Professor Huxley.*) Do you know anything about the sprats, and mackerel, and scad; do the trammels interfere in any way with their coming upon the shore ?—I do not know the reason of it because the trammels are buried and attached to the ground, and they cannot float very high and all the small fish might float over them.

40,125. But do you think that they prevent the small fish from coming in at all ?—Seemingly they do, but I do not know how it is.

40,126. Where do you catch mackerel principally now ?—In-shore, but we meet them in deep water first.

40,127. Do you often meet them outside or inside the trammels ?—At first outside, and now they are inside.

20,128. Do you think the trammels do any injury to the hook-fishing ?—Yes.

40,129. What injury do they do ?—All I can say is that now we are enabled to catch a far less amount of fish than we did in former times. Where we catch fish one night the trammel men go and shoot their trammels the next, and then we catch none. If they leave the place and give us a berth, then we can catch fish again.

40,130. As long as the trammels are there you catch none ?—No; we give up the game because we can do no good.

30,131. When the trammels are out, is there any appearance upon the water ?—There may be a single bit of a rope, and there will be a kind of light where the net is in, added to which there is the net fixed in the water and the corks above.

40,132. Has the luminous appearance you speak of from the trammels done any injury to the fish ?—I think it has; nothing more so.

40,133. (*Mr. Anderson.*) As a matter of fact, are all the Ring boats numbered and lettered as the Dungarvan boats are ?—They are not.

40,134. Have you any difficulty in identifying the owners of the boats or trammels at any time; have you had occasion to summon any of them ?—No, I never summoned any.

40,135. Have you ever seen them throw their jackets over the number of the boat ?—No; but I have heard that they have done it.

40,136. Do you know what sized meshes there are in the trammels ?—I do not know that.

40,137. Have you ever examined the trammels ?—No.

40,138. With regard to the trawling, where do they trawl ?—From Mine Head very nearly as far as Ballyvoyle Head.

40,139. What injury does trawling do to the fish ?—When I went trawling as a boy the old people told me that it was the spawn of the fish that we used to take up. It used to be knotted together in small little bunches along with the gravel. All of it used to be in lumps. The old people told me that that was spawn, and I told the youngsters the same who came with me afterwards, but I could not say if it was spawn or not; at any rate it looks very much like it.

40,140. Have you ever seen small fish taken up in the trawls—not spawn, but small fish ?—Very little of that except flat-fish.

40,141. Where do they trawl generally; do they ever trawl in Dungarvan Harbour ?—Yes, from Mine Head.

40,142. Do they trawl in the Broad Sound ?—Yes.

40,143. Do they take spawn there ?—No. Where I have seen the spawn taken is on the hard gravelly bottom where the rumble is, not on the soft ground.

40,144. The less the ground is trawled over the less spawn you take ?—Yes.

40,145. Do the Ring men trawl at all times of the year ?—No; they do not trawl about Christmas there. They begin about March outside the land, and trawl from that time until August or September, provided there is not much hake to be caught.

40,146. Then they will trawl most of the year ?—Yes, until December.

40,147. Have you ever known any lines injured by trawling or cables, or anything of that sort ?—No, not by these men's trawls.

40,148. By any other person's trawls ?—Yes, by the trawls of the Dublin smacks.

40,149. What sized boats are they ?—They are boats of 40 and 50 tons.

40,150–1. What injury have they done ?—They have taken up some of my lines.

40,152. What sized nets do the Ring men use; what is the size of the mesh ?—I believe $3\frac{1}{2}$ inches; it is 14 inches in the round.

40,153. What is the largest size of mesh in the trawl, and what is the smallest ?—This is the largest; it is smaller at the bottom.

40,154. What is the size of the mesh at the bottom ?—$3\frac{1}{2}$ inches.

40,155. That is the smallest mesh ?—Yes.

40,156. Then what size is the mesh at the top ?—They are not very particular about that at all; when

DUNGARVAN.

D. Collins.

25 Aug. 1864.

I worked with the trawlers my mesh used to be generally about the same all over.

40,157. Three and a half inches throughout?—Yes.

40,158. What is the difference between the trawl of a Dublin boat and of a Ring boat?—I do not know.

40,159. Do you know what sort of trawl they use?—No.

40,160. What sort of trawls do the Ring men use?—They use a trawl-net 3½ inches in the mesh and 20 fathoms on the rope. They have also two heads nearly a hundredweight each; there will be quite four stone on each besides warps.

40,161. Do they sweep along the ground?—Yes.

40,162. (*Mr. Kelly.*) You were a trawler yourself?—Yes.

40,163. For a long time?—Yes.

40,164. Did I understand you to say that you were 33 years trawling?—I was trawling 36 years ago.

40,165. How long did you continue at it?—In our town we used to begin in December and go on until the 1st of April; then we began again in June or July.

40,166. For how many years since 36 years ago did you trawl; have you the trawler still?—I had the trawler for 32 years; I sold her to the Ring men.

40,167. You parted with it to the Ring men?—Yes.

40,168. Did you consider that you were doing well with your trawl?—I was doing more good then than I am doing now.

40,169. Then I wonder why you parted with it?—I will tell you my motive. My boys left me; they said they could not be supported as they had been before, and they left me, and then I was not able to manage more than one. I kept one, and I sold the other.

40,170. Did you think the hooking the most profitable way of living?—I could not manage the two, and therefore I sold one. The one I sold I considered too delicate; she used to draw too much water.

40,171. Did you know what the law against the Ring men was in using their trammels out at sea; did you not hear what the law was, that they had no right to come near you or across you?—I did.

40,172. Did you ever summon the men whom you complain of as having so often violated the byelaws; did you ever complain to the authorities?—I will tell you my motive.

40,173. Did you ever do it?—No.

40,174. And did you know that they violated the law?—Yes, and that I could summon them.

40,175. But you never did it?—No.

40,176. Why not?—I did not wish to take them up at all for anything.

40,177. Did you not say that the trammels did not bring in any fish at all, but that they left nothing but the bones there?—That is not what I said at all. I said a part of them left bones there, but not the entire number.

40,178. Did you not say they left their bones there?—What would be the use of their shoving their nets out if they did not bring in anything?

40,179. Is it a fact that the trammels take more fish than you do by the hand-line?—Yes, that is the candid truth.

40,180. You say that the quality of the fish got in the trammel is bad compared with what is caught by the hand-line?—Yes.

40,181. Did you ever try a bit of it, or is it forbidden fruit?—I have eaten it, but I would sooner eat my own fish if I had it.

40,182. Can you say of your own knowledge of the coast here whether there has been as much fish in the harbour got here within the last two or three years as for some years past?—There has not been one-tenth part of what there was; if it was there we should catch it. We do our utmost to get part of it. We will always take it if we possibly can, and sometimes we do meet the fish, but not at all to any extent during the last two years.

40,183. Then is it your opinion that the fish are not there?—My opinion is that it is not there; that it has not come there for the last two years as compared with the quantity we used to catch in former years.

40,184. Have you any idea what quantity of fish the Ring men have been taking with the trammels during the last year or two?—No.

40,185. If they have been taking large quantities would that not change your opinion with regard to the fish not being in the harbour?—I think that is more than they could do. I do not think they catch more than half what they boast of.

40,186. Did you ever use the long line?—No.

40,187. Is not the long-line fishing a more profitable mode of fishing than the hand-line?—It is.

40,188. Could you not catch a great quantity by the use of the long-line?—Sometimes.

40,189. On every occasion could you not catch a much larger quantity by the long-line?—On some occasions I could not.

40,190. Why?—First and foremost these Ring men go to trawl on the broad sand for bait for the long-lines. If our men went to deep water with long-lines, it would be a very serious matter to them if they were carried away by trawlers. Each line will cost from about 40*l.* to 50*l.*, and it is not every poor hooker who can raise a sum like that. Secondly, if we had long-lines we could not do without we had a trawl as well to enable us to catch bait.

40,191. But when you had the trawl you never made use of it to assist you in making profitable use of the long-lines?—No, we never caught fish in it for bait; we always sold the fish we took in it.

40,192. Did you ever use mussels as bait?—Yes.

40,193. There is an immense quantity of mussels near the bridge?—Yes.

40,194. Did you ever take any part of them?—No; mussels are never put to any great use. We have generally caught small fish, and then used them for catching the big ones.

40,195. You do not put them to any great use even in the hand-line fishing?—No, we have no small hooks on the hand-line.

40,196. Did you ever use them?—Yes, we have used them to catch small fish.

40,197. Do you think that you would make more by using the trammel-net than by hand-line fishing within the proper legal boundaries?—There is a great deal of cost attending the use of trammels also. I think they are apt to rot. There are two or three men here who, if they had the craft the Ring men have, would make use of it, but they cannot get men to man the boats. Some of our boats have not been going to sea for want of men.

40,198. They would use them if they had help?—I think if I had men enough they would pay me better perhaps.

40,199. You never tried them?—No, I never saw any man who did from our port.

40,200. (*Professor Huxley.*) You think that a good deal of damage has been done by the trammel-fishing?—I am sure there has been.

40,201. Do you think that much harm has been done to the fishing by the trawlers?—They are bad on both sides.

40,202. Have the trawlers done as much harm to the fishing as the trammel-nets?—I think the trammel-nets have done most harm.

40,203. What makes you think that?—I will tell you the reason that makes me think it. The trawl is on the move. It is constantly moving over the ground, whereas a trammel net is moored and left there for good until such time as the shore men go out and take it in.

40,204. How does that do more harm than the other way?—It does, because it looks like a mountain in the night in the water.

40,205. Do not the trawl men work at night?—No, they come to an anchor like good fellows near us.

40,206. Do you think that the trammel-net frightens away the fish?—I am sure it does.

40,207. How is it then that so many are caught in trammel-nets?—Many a time I have been out fishing with my lines, and although I might catch a hake or

two many would be able to get away; but with regard to trammels, when they are down, the fish that gets among them is like a bird who has flown into a cage, he can make nothing of them, and he don't know where to find rest.

40,208. Do I understand you to say that the mischief is done by the trammels coming round you at night, or that it arises from frightening the fish or from catching it?—No, the fish are flying away from the flame.

40,209. Do the trammel men who have the trammels round about you catch any fish?—Yes, they have a moderate share like us.

40,210. Then the trammels do not frighten away the fish altogether?—No, they do not frighten them away altogether.

40,211. Apart from your objection to trammels as a mode of catching fish, I understand you to say that they do not give you room enough to fish in?—I would not speak a word against them if I had room enough.

40,212. If you had room enough to work you would not care about their destroying the fish or frightening them away?—No.

40,213. Can the trammels be set on any part of the shore?—No, there are fouls in some part of our bay.

40,214. Can you fish there?—No, I should lose my cable and anchor there.

40,215. So that the ground you want to fish upon is the same ground as that upon which the trammels are set?—Yes.

40,216. And the fact that the trammels are set there prevents you from fishing there?—Yes, I do not say that is their motive, but I believe that where they think they can do most good there they go.

40,217. Are you able to fish when the trammel nets are set?—Yes, we can fish.

40,218. Can you fish as well as if there were no trammel nets set?—No.

40,219. The reason being that you get foul of them?—Yes.

40,220. Do you say they take away your fish?—Yes, and whether they have done that or not, I blame them for it.

40,221. Did you say just now that no good fish are caught where the trammels are set?—Yes.

40,222. What did you mean by good fish?—I mean marketable fish.

40,223. Large fish?—The trammels catch large and small fish too.

40,224. Just the same size as the hookers?—Yes.

40,225. Then what do you mean by saying the fish are not good?—What I mean to say is, that they do not preserve so well unless they are big fish. They are not brought in fresh, and they are obliged to salt them.

40,226. The fish to begin with are as good as the others, but when they are caught in the trammels they do not cure as well?—No.

40,227. Is there any one here whose business it is to see that the byelaws of the Fishery Board are not broken?—I do not know.

40,228. Are there any persons belonging to the Coastguard here who look after the fisheries?—There are.

40,229 If the trammel nets are set at improper times, and are not properly buoyed or marked, would they summon the owners of the nets?—They would.

40,230. Have they done so?—I do not know.

40,231. Have you ever known of a case?—No; but if they wished they could; they can see them every night and every day.

40,232. (*Mr. Lefevre.*) Have you ever made any complaints to the Coastguard?—No.

40,233. (*Professor Huxley.*) From what you know of the fishermen themselves, are there many of them who make complaints, and have the people brought up for breaking the law?—There have been some.

40,234. Have there been persons summoned?—Yes.

40,235. And fined?—Yes.

40,236. Who was it that brought the accusation?—Tom Adams here.

40,237. One of the fishermen?—Yes, he is a fisherman, like myself.

40,238. If the fishermen find themselves injured they put the law in force?—Yes.

40,239. Did I understand you to say in the course of your evidence that all the small fish could float over the trammel-nets when they are set?—Yes, if they float aloft.

40,240. Then do they not interfere with sprats or small fish coming up the bay?—If they keep low then they are caught; but if they keep high on the top of the water they can float over.

40,241. Do the trammel-nets interfere with the sprats coming up the bay as usual?—I cannot say.

40,242. Have there been many sprats up of late years?—Not so many as there were before.

40,243. Have there been as many within the last two or three years?—No; there used to be more before.

40,244. What is that owing to?—We blame the trammels for all these things, but I do not know whether the trammels destroy the small fish.

40,245. Did you ever get any small fish in your trawl?—Only an odd one here and there.

40,246. When did you trawl?—From the 1st of April until August. We did most of the trawling in July.

40,247. And in that time did you get any considerable quantity of small fry?—Perhaps we might get a hundred during that time; small flat-fish.

40,248. You did get small flat-fish?—Yes.

40,249. Small turbot?—Yes.

40,250. Of what size?—About that breadth (*measuring*). Anything that could not get out through the holes.

40,251. Any small soles?—Yes.

40,252. Cut the quantity of small unmarketable fish was never very large?—No.

40,253. Did the small trawls ever do any harm to your lines?—No, no more than that they dispersed the fish from us. They dispersed and scattered the fish from one quarter to another.

40,254. Are you speaking now of long-lines or hand-lines?—I have been speaking about both.

40,255. And your answer now has reference to both. They would not hurt your hand-lines?—No, no more than they would drive the fish away from the boat.

40,256. Do you trawl in the same boat as you hook from?—Yes.

40,257. Did I understand you to say just now that the long-line fishing, if it were practised here, would depend on your being able to get fish for bait by the trawls?—The line-fishing would be of very little use if it was not for the trawls being able to get bait on the broad sand. If the Ring men did not have trawls they could not do any good with their long-lines.

40,258. Have you ever tried the mussels for bait?—Mussels would not do.

40,259. Would not mussels do for cod?—No, they would not catch many fish.

40,260. What is the best kind of fish for bait—small fish?—Yes; whiting are very good, and these Ring men opposite think a great deal of the conger eel.

40,261. Have you any objection to the trawling by the small boats over the bay here; do you think it does any harm?—I think the trammelling does a great deal more harm than trawling.

40,262. You do not think the trawlers do any harm?—They do. There are 12 or 13 trawling now from Abbeyside, and 30 on the Ring side. They go out trawling on Monday morning, and 16 or 17 of them will be going abreast east and west throughout the week from one headland to another; and I think the fish cannot keep in the bay.

40,263. Does that have a tendency to keep the fish out of the bay?—Yes.

DUNGARVAN.

D. Collins.

25 Aug. 1864.

40,264. Then, if you could have your way, would you put down trawling altogether?—I think the trammels and the trawls are both bad.

40,265. As they are injurious, would you like to have them stopped?—If they were stopped I think there would be twice as many fish killed by the hookers at any rate, or even four times as much.

40,266. (*Mr. Lefevre.*) Do you fish with the hook and line all the year round?—Yes, with the hook and line all the year round.

40,267. Mostly at night time?—Yes.

40,268. What is the greatest distance you go outside the bay?—We go outside sometimes 10 miles. Last night we were not more than one mile from the coast.

40,269. What is the distance that the trammels are set?—They are often outside of us.

40,270. Do they go as much as 10 miles from the shore?—No.

40,271. Do they go as much as seven miles?—Yes.

40,272. Then you go beyond the trammel-nets?—Yes, they set their trammels in from 12 to 13 fathoms of water.

40,273. In the winter season do you fish in the bay or outside?—Sometimes outside, and sometimes in the middle of the bay.

40,274. How many men have you in your boat?—I was fishing all the year, and I had but two men and a boy.

40,275. Since your sons have left you you have two men and a boy?—Yes, my boat would take nearly 30 tons.

40,276. When your sons were with you how many were you in the boat?—Sometimes six, and sometimes seven.

40,277. And now you are only four?—Yes.

40,278. Did you find any difficulty in getting men to go with you?—Yes, but sometimes they would rather go than be idle, and then they went.

40,279. Were they old men?—Yes.

40,280. No young men?—No, when we cannot muster the men we cannot go far.

The witness withdrew.

M. Christopher.

MICHAEL CHRISTOPHER called and examined.

40,281. (*Mr. Anderson.*) How long have you been fishing?—Thirty-eight years.

40,282. What sort of fishing have you been at?—The hand-lines.

40,283. Are you or were you the owner of a boat?—I was never the owner of a boat, but I was master of a boat.

40,284. Do you remember about 20 years ago whether there were more fish caught than now?—There was treble as much caught.

40,285. Do you remember about the year 1840?—Indeed I ought to remember it.

40,286. Do you remember how much you used to earn then?—Yes.

40,287. Were you master of a fishing boat then?—No.

40,288. You were only fishing then?—Yes.

40,289. How much did the boat earn at that time?—I kept an account for 11 months. The share of the owners came to 85*l.* 13*s.* for 11 months.

40,290. That was the share of the owners?—Yes.

40,291. One-fourth of the whole?—Yes.

40,292. How many men were there in the boat at that time?—Five men and myself and a boy.

40,293. What was the average sum you earned at that time?—The half of that, nearly 43*l.* There would be that sum for each man.

40,294. What was the average quantity of hake you took in a night then on the lines?—When we sailed with five men we took frequently from 1,500 to 2,000 hake.

40,295. What is the largest number you ever caught?—We have killed 300 a man.

40,296. That would be, including yourself, 1,800?—Yes, that was in my boy days.

40,297. What was the general quantity?—Nine and 10 score; from seven or eight score to a couple of hundred.

40,298. Each man?—Yes.

40,299. Have you been fishing lately?—Yes, ever since.

40,300. Of late years, say within the last 12 months, what is the average quantity you catch in the boat?—During the last 12 months I have not caught what would support a chicken.

40,301. How many fish have you caught on the average?—I have often gone to sea and come home with two or three hake.

40,302. Is that within the last 12 months?—Yes.

40,303. Have you gone on the usual fishing ground?—Yes.

40,304. Has this last year been a bad year for fishing?—Yes, the worst year I ever knew. I had to go into the union workhouse on account of it. I have had to do that for the last four years. I came out of the union on the 25th of February last, and I took a boat to find employment for myself and three young men. I had not been long engaged in the fishing before one of the trawlers came and swept away our anchor.

40,305. What trawlers were they?—I cannot tell whether they were Dublin trawlers or not.

40,306. They carried away your cable?—Yes, we had to let it go in order to preserve our lives.

40,307. How many men have you got in the boat now?—Four men and myself.

40,308. Are they young men or old?—All young men but one.

40,309. Were you out last night?—Yes.

40,310. What did you catch?—Only 18 hake.

40,311. Between five of you?—Yes.

40,312. Is the quantity of fish outside less or more than it used to be?—When I was master of a boat, about 22 years ago, I never went in the season of the year, from the 1st of May until about the 15th of August, that I could not get fish enough to support myself along the shore, but I never earn a shilling within three miles of Helvick Head now.

40,313. Are the fish falling off from the shore?—Yes, they cannot come in.

40,314. What is the cause of that?—The trammels.

40,315. Why do you think they prevent the fish from coming in?—They are like a wall in the water. If there were a wall in this court, and you were imprisoned here you would try to get over it. That is the way the fish do, but there are as many as four or five walls to get over. Frequently, I ought to tell you, that we find a hake caught here by the head and there by the tail. They run away as fast as they can to avoid being caught in the nets, and they get caught upon the hooks in that way.

40,316. How close to each other do they set the trammels?—They set them as close as they like.

40,317. Within a few feet?—Wherever they think they will get any fish. They will watch my motions, and if they find that I am catching fish they will come to where I have been fishing. I have often killed 500 hake in a night and then when these men have come there they all go away.

40,318. How is that?—They run away the same as you would if you wanted to get out of prison. The fish have as much sense as you have in their own way.

40,319. How close to your boats do they set the trammels?—If they see me haul in a hake they come as close as they dare to me.

40,320. How close have you ever seen the trammels set?—So close that I can speak to them and

ask them if the sea is not large enough for all of us that they will not give me space.

40,321. I believe if they see you catch fish they go down to the same spot with the trammels?—Yes. Last year I had to haul away three times and at last I was obliged to go away altogether.

40,322. Why did you do that?—Because it was no good to fish among them.

40,423. The trammels were there?—Yes. First one and then another came setting their trammels there.

40,424. As often as the trammels came where you were, you had to shift your ground?—Yes, and I had to go to places where I did not care about going, and where I was not inclined to go.

40,325. Have the Ring men their trammels properly buoyed and marked?—There are some of them that never had a mark.

40,326. If you wanted to summon them would you have a difficulty in identifying the trammels or not?—I did summon one. There are two brothers, Pat and Tom. I did not know the right man, so I summoned Pat; but they swore positively that their nets were beyond the limits. The person before whom the case came did not understand the law, but yet he cast me upon it.

40,327. He did not give you a conviction?—No.

40,328. Have you a difficulty, in consequence of the nets not being properly marked, in summoning the men?—There is no number upon them.

40,329. Nor any letter?—No; I have often taken one of them up when I have had to haul up abreast of them to get them clear out of my way, and I never saw a number or a letter or anything else upon them.

40,330. What time do they generally set down their nets?—When they like.

40,331. What time of the day?—Any time they like.

40,332. What time of the day, or what is the earliest time of the day you ever saw them set?—I have seen them set at one, two, three, and four o'clock.

40,333. Have you ever seen them set as early as one o'clock?—Yes, indeed I have. I have often seen them come out in the morning, haul their nets at seven and eight o'clock, turn to and take the fish out of them, and then set them down again.

40,334. What time do they generally take them up in the morning?—They come for them when they like.

40,335. What time in the morning have you seen them take up their trammels?—I have seen them every day in the year come out at six and seven and eight and nine and ten o'clock in the morning.

40,336. Have you seen them take them up as late as nine o'clock in the morning?—Yes; that is a regular practice, and they take the fish out of them and they turn to and set them again.

40,337. Are the Ring boats properly marked; have they letters or numbers on them?—Some of them have letters and numbers, but the buoys have neither.

40,338. Have they letters and numbers?—Yes; but if they have numbers they will take off their old coats and put them over the numbers so that we cannot see them.

40,339. Have they done that when they were going to set their trammels?—Yes, and when we were going to take their trammels.

40,340. When you go out and are anchored for fishing, do they set their nets close about you?—Yes.

40,341. Have you found any difficulty in shifting your place or moving down?—Yes, where can I go to? They set about me. I have often hauled up my cable and anchor four or five times in the course of a night, but wherever I go now, there I must stop. I do not know where to go.

40,342. When the trammels are set down about you, do you find you do not catch fish with your hand-lines?—No.

40,343. Do you catch fish with your hand-lines?—Yes, but what we catch are often caught by the tail and caught by the head when they are running away wild.

40,344. If the trammels are not there, do you catch more fish?—Yes; they fly about quite wild when they get clear of the nets.

40,345. And then you do not catch fish?—No, that is the reason. We only catch them in the way I have just mentioned to you.

40,346. Did you ever fish with long-lines?—I did.

40,347. How long ago?—Ever since I was born until the last five or six years. Long-lines are what I used to follow.

40,348. Long-lines or spilliards?—Yes, haddock-fishing. They were my chief support.

40,349. How many long-lines had you?—From 900 to 1,000 and from that to 1,100 and 1,200 hooks.

40,350. Where did you set them?—From three to twelve miles off.

40,351. What bait did you use?—Mussels and lugs.

40,352. What did you catch principally upon them?—Haddock and cod.

40,353. How long is it since you discontinued the use of the long-lines?—I have not been fishing with long-lines for the last five or six years.

40,354. Why did you give them up?—Because I could not get a haddock.

40,355. Is it because you did not catch fish on the long-lines that you ceased to use them?—Yes, and they were always my chief support.

40,356. Why is it, do you think, that you cannot catch as many fish on the long-lines as you did formerly?—Because the trawlers were destroying everything in the sea.

40,357-8. Do you consider that the trawling is injurious?—Yes, there is nothing more injurious to the fish that lie on the ground, such as haddock, cod, and ling.

40,359. What harm do the trawls do?—They injure me so far that I had to go into the union-house on account of the trawling. I blame nothing else for it.

40,360. Why do you think it is injurious?—They hoist away all the seed of the haddock, the cod, and ling.

40,361. (*Professor Huxley.*) The spawn?—Yes.

40,362. Have you been a trawler yourself?—No.

40,363. Have you seen the men take up the trawls?—I have not been on board.

40,364. Have you been near enough to see them?—Yes, and I have seen plently of small, little fish in the net, not the length of that (*measuring*).

40,365. Have you seen them take the small fish?—Yes, the length of my finger.

40,366. What sort of small fish were they?—They were small fish of every kind.

40,367. Were there small cod and haddock among them?—Yes, there were regular baskets and heaps of them.

40,368. Have you ever examined those small fish?—Yes, I have had them for bait.

40,369. Were they small haddock and small cod?—Yes.

40,370. Have you seen large quantities of them?—Yes, I have often had buckets of them.

40,371. Are there any haddocks caught at all now outside?—No, and this is not the time of the year for them. About 36 and 37 years ago we had plenty, but five or six years ago we had to go to the union in consequence of the trawlers. Since I can remember we have often had 500 haddocks and sold them at 1*s.* and 1*s.* 1*d.* a score. Now, if we could get a haddock, we could get 2*s.* 6*d.* or 3*s.* for it.

40,372. (*Mr. Kelly.*) Do you consider that the trammels are the things that frighten away all the fish from the sea or in this harbour?—I do positively.

DUNGARVAN.
M. Christopher.
25 Aug. 1864.

40,373. You say you have oftentimes seen the Ring men out violating the law?—Yes.

40,374. Did you ever summon them more than once?—Never.

40,375. Knowing that they were violating the law, you did not complain to the authorities?—Yes, I did.

40,376. But only once?—Only once.

40,377. And I suppose they were violating the law every day you went out?—Yes.

40,378. Yet you never thought of appealing to the authorities for redress except on one occasion?—It was of no good for me to do so.

40,379. Why was it of no good for you to do so?—Because they will swear black is white.

40,380. Your opinion is that it is the use of the trammel that frightens the fish away?—Yes, I will positively swear that.

40,381. Did I understand you rightly when you said they take up the fish in the morning and set the nets again at once?—Yes.

40,382. If the trammels frighten away the fish, do you think the trammel men would be fools enough to set them down again when they were not likely to get fish?—They might get 15 or 16 score or so.

40,383. In the very same place that they had been used before?—Perhaps not in the same place; they might haul the net up and go on to another place.

40,384. But it would be near to the place where the nets had been down before?—Yes, much in the same neighbourhood

40,385. And you have seen them in the habit of using the trammels in that way constantly?—Yes, as well as I see you now.

40,386. And they have been getting the same quantity of fish from time to time?—I do not know what quantity of fish they can get; they have more than me.

40,387. You followed the long-line fishing for a time?—The fishing I followed is what we call small spilliards, I call them long-lines. We use them for hadoock-fishing and cod.

40,388. Do you catch hake with the long-line?—No, except an odd one.

40,389. Would you not catch more with the long-line than with the hand-line?—We should if we had bait to kill them with.

40,390. And which you never thought proper to get?—We should have to go and give a shilling for it.

40,391. You complain of being unable to live in consequence of the falling off in the take of fish?—Yes, and also in consequence of the trawls and trawlers.

40,392. You gave up long-line fishing?—Yes, I gave it up; how could I do anything else?

40,393. Did you throw away the better means of obtaining a livelihood in order to use the hand-lines?—How could I do otherwise?

40,394. Did you catch a greater quantity by the spilliards than by the hand-lines?—I can catch a greater quantity by the hand-line now.

40,395. Do you remember the immense quantity you stated that you first caught?—Yes.

40,396. About a thousand?—I never said a thousand.

40,397. How many was the most?—From 15 to 16 score, or from that to 400 and 500.

40,398. Would you catch as many with the hand-line as with the long-line?—No, not at present.

40,399. Why?—Because I am not fit to go out with them with the long-line. A long-line is always stretched from this to Helvick Head; but I can work a hand-line with my two hands. I have hauled 300 fish in in one night as my share

40,400. Can you catch more fish with the hand-line than with the spilliards?—I have seen more fish caught by them than ever, even this very month; I saw from 1,100 to 1,200 taken by every boat, when 20 years ago there would not be 40 taken.

40,401. Was that by the hand-line?—Yes, by the hand-line; they were all hake.

40,402. That was this very month?—Yes; and last night we went out and only had 18.

40,403. Would you not be able to earn your bread if you made use of a trammel?—I think if the trammels are to go on, in the course of five years Dungarvan will not be Dungarvan, but Ring will be Ring.

40,404. Do you mean that the trammels will take all the fish or frighten them away?—They will not take them all, but they will frighten them away, and they will not come the same road again.

40,405. Are they taking large quantities of fish at present?—I do not know; but they are running away altogether. I often used to see shoals upon shoals of herrings, and now there are none to be seen.

40,406. What is that owing to?—To the use of the trammels.

40,407. Do not the herrings float on the surface of the water?—They go to the ground at night.

40,408. If the trammels are set, have the herrings no opportunity of floating over them?—They can float over them.

40,409. Then the trammels cannot prevent them from coming in? Can they float along the water even where the trammels are set?—They can float aloft on the surface of the water.

40,410. And do they not do so?—Some may, but they have not done it for the last 20 years to any extent.

40,411. But they could if they liked?—Yes.

40,412. You have not been able to fish regularly for the last five or six years?—No; I have only been able to follow hand-line fishing. If I had haddocks to kill as I used to have I could support my family, but I cannot get them now in consequence of the trammels and trawlers. I told you about nearly losing my life in February last.

40,413. By some Dublin boat?—I do not know if it was a Dublin boat or not.

40,414. You stated a short time ago that you could not get away from the trammels to any other fishing ground, but that they all get round you?—Yes, I have had to haul up three times in a day.

40,415. Could you not go where you felt inclined?—So I did, but they come round me again. One morning we went to sea, and we had plenty of fish to kill; the trammel men came out and anchored outside of me. I said, "There is no good in waiting here," and I hauled up my net and went to Abbeyside, and was killing a number of hake again when five or six of them came round, and I had to go away and try some other place. It was upon that case that I summoned the trammel-net men.

40,416. You think you would be better off if the trammels were put down altogether?—It would not only be better for me, but the whole of the fishermen would be better.

40,417. Is that your opinion?—It is really my opinion.

40,418. Can you give the reason why the trammels prevent the fish from coming in?—Have I not been giving an explanation before. It is just like there being a wall; they try to get over it, and when they have done that they find there are three or four others to get over. If you were in the same fix, by the time you got over the third wall you would run away like the devil.

40,419. Are there three trammels to be got over by the fish?—Yes, and 30 and 33 trammels sometimes.

40,420. If they are able to get away from these, are you able to catch them?—I am not able to catch them at all, except what I catch by the head and the tail when they are running away.

40,421. Are they the fish of such good quality which you bring in and say are so superior to the trammel-caught fish?—Yes, there is no doubt that they are.

40,422. Is it the fish that you catch by the head and tail that you consider so much better?—Yes; the fish in the trammels are strangled, but it is not so when they are caught by a hook and line.

40,423. Is there any difference between them?—Yes.

40,424. What is the difference?—When a fish is caught on our hooks he is killed in a few moments, but

when he is caught in the mesh of the trammel-net he struggles and heaves all the flesh off him until he is strangled.

40,425. Did you ever try or test the fish caught by the hand-line and the fish caught by the trammels after they have been seasoned and corned?—Yes.

40,426. Do you consider there is a difference?—Yes.

40,427. Did you hear the other men examined here to-day?—I did.

40,428. Did you hear Collins state there was no difference between them?—I consider there is a difference.

40,429. Even when they are corned?—Yes.

40,430. Do you know that the Ring men are in the habit of exporting large quantities of fish that are caught in the trammels?—I am told so. They are well looking to the eye, but are not so palatable.

40,431. Why are they not so good?—I suppose because they are caught in the way I have described.

40,432. The substance is not improved when it is corned, is it?—It is improved.

40,433. Then does that mend it when it is corned?—It is never as good as the hand-line fish.

40,434. (*Professor Huxley.*) Did I understand you to say just now that the haddock at one time was very abundant here, and that they have since disappeared?—They were plentiful once.

40,435. And since then they have gone?—Yes, they have gone away altogether.

40,436. About what year was it that the haddock went?—For the last few years I have not seen five haddocks.

40,437. Were they plentiful before that?—Yes; I have sold 30 score at a shilling a score.

40,438. Have the cod gone in the same way?—In the same way. But we had one year long ago when the long-lines took a great deal of fish; it was a bad winter.

40,439. What year was that?—Four or five years ago.

40,440. Did you get plenty of cod then?—Plenty of cod and ling, but for the last six years we have had no haddock at all.

40,441. Have the cod and ling fallen off greatly during the last year or two?—Yes, they have gone away altogether.

40,442. Did you say that you had to go elsewhere to get mussels?—Yes.

40,443. Where did you go to?—To Waterford.

40,444. Some of the previous witnesses told us there was an abundance of mussels in the bay?—Yes, there is now.

40,445. Then why did you go to Waterford for them?—They were not here then. We were more numerous here at that time; I have counted 20 boats from this place engaged in killing haddocks.

40,446. Were there so many of you fishing for haddocks formerly that you cleared out the mussel beds here?—Yes.

40,447. And you had to go to Waterford for them?—Yes.

40,448. Was the bait expensive that you got at Waterford?—I had to give a shilling for about twice my hat full.

40,449. That would make your long-line fishing expensive?—No, because there were plenty of haddock and cod.

40,450. Are the beds of mussels all restored here now?—Yes; they are more plentiful than they ever were.

40,451. Have you left them alone for two or three years?—Yes, and they have come from Kinsale for them.

40,452. If you were fishing with long-lines now, you would get bait cheap enough?—Yes, I should have nothing to do but go down and take a basket and I should get plenty of bait.

40,453. You said that the large trawlers caught a great quantity of small fish?—Yes.

40,454. Do the small trawlers that fish here in the bays also catch a large quantity of small fish?—I cannot say whether they catch small fish or not.

40,455. Have you ever seen the small trawlers at work?—I was never trawling in any of them.

40,456. Have you seen the large trawlers at work?—I have gone to them for water, and I have seen them heaving the small fish overboard by shovels full.

40,457. I want you to explain something you said just now; I understood you to say that the trammels are set one by another, as many as 20 or 30 of them?—Yes.

40,458. Do the trammel-net fishermen always set their nets like that?—Yes, and at top of one another.

40,459. What is the use of that?—To enable them to catch the fish.

40,460. Do you suppose that the 20th trammel-net will catch fish?—I cannot say anything about it, but one will be set here, another a little further on, perhaps without knowing where the other is set; that is the way it is done.

40,461. If they could not catch fish in the hindermost nets they would not set them there?—Very frequently they do not know where the other nets are. I am probably looking on all through, and I see where they are.

40,462. Have they no notion where the trammels are set?—They look out as well as they can, but if one comes out after another has gone away he does not know.

40,463. Are there no buoys on the trammel-nets?—Yes, there is a kind of buoy, but it is good for nothing.

40,464. Suppose you were to go out in the afternoon to set trammel-nets, would you not be able to see where others had been set by means of the buoys?—Yes.

40,465. Then they do know where the others are set?—If one man goes out after another he does not know then where the other man has set his nets.

43,466. If they can see the buoy they will know?—No, there is such a distance between them that they cannot see the buoy.

40,467. (*Mr. Lefevre.*) Are you getting much less hake this year than you did last?—A great deal less.

40,468. Last year what price did you get?—A great deal less—2½*d.* or 3*d.*

40,469. Do you get a larger price now?—Yes.

40,470. What price do you get now?—5*d.* and 6*d.*, and for hake nothing near as large as those we formerly got 2½*d.* and 3*d* for.

40,471. Last year you got 2½*d.* and 3*d.*?—Yes.

40,472. You say that 20 years ago you got larger numbers, what price did you get in then?—I came in one week for the whole of the week with large quantities; I should say that I came in with 400 a day every day in the week, and I sold them for 4*d.* a piece. I had 400 fish every day for five nights of the week.

40,473. Then the price has fallen off?—Yes, since that, until within the last couple of years.

40,474. Not only do you catch fewer hake, but you get less for them?—I think if I got a great deal of the hake I should get a good price for them.

40,475. In the year you spoke of when you caught so many hake, were the trammel-nets set in the bay?—Only three or four of them.

40,476. How many are there now?—26 or 27, and they are increasing every day; they are all coming from the mountain with them, people who never went to sea.

The witness withdrew.

DUNGARVAN.

T. Adams.

25 Aug. 1864.

THOMAS ADAMS called and examined.

40,477. (*Mr. Anderson.*) How many years have you been fishing?—Over 40.

40,478. Are you a master of a fishing boat?—I am.

40,479. Have you heard the evidence given by the other witnesses?—Yes.

40,480. Do you consider that the quantity of fish taken has diminished or increased?—It has diminished by a great deal.

40,481. Do you remember what it was 20 years ago?—Yes, I do, and 40 years ago too.

40,482. Has the quantity been increasing or diminishing?—Diminishing a great deal. I had the bounty 40 years ago.

40,483. Do you remember the year 1836?—I cannot say that I do exactly.

40,484. Are you fishing now?—Yes.

40,485. What quantity have you taken in the course of the last year?—I had 14 to day.

40,486. Were you out last night?—Yes.

40,487. How many had you in your boat?—Five.

40,488. And how many fish did you take last night?—Only 14.

40,489. On the average, how many have you been taking for the last week, or the last month?—Between four and five score a day.

40,490. When the fish were plentiful how many did you take?—There was one night when I left Dungarvan and went off to Varna Head between 12 and 1 o'clock, and between that and the morning we killed 1750 hake.

40,491. How many men had you on board of the boat at that time?—Six men and a boy.

40,492. How many years ago is that?—It is now 42 or 43 years ago.

40,493. Were there any trammels on the coast at that time?—I do not think there were.

40,494. Do you recollect when trammels began to be set on the coast?—I think I do.

40,495. How many years ago is it since they first began to use them?—I do not know.

40,496. Have they used them for 30 years?—I think so.

40,497. For more than that?—Yes, I think so.

40,498. When they began to use trammels at first, how many were set?—Only a few.

40,499. Has the fish been diminishing since they began to use the trammels?—There has been a good deal of it caught since they used the trammels.

40,500. But have they not increased the trammels?—Yes, they have trebled the quantity.

40,501. And, as they have increased them, has the quantity of fish taken by the hand-lines diminished?—There is no doubt of it.

40,502. Did you hear the evidence given by the other witnesses as to where they set their trammels?—Yes.

40,503. Do you agree in that evidence?—Yes.

40,504. Have you ever had any occasion to summon them for violating the law?—Yes, once only.

40,505. When was that?—I was in the court-house and I heard there was a law-suit to take place between the trammels and some of our fishermen.

40,506. Did you summon them?—Yes.

40,507. Why?—I heard Mr. Fitzgerald say that their nets were to be hauled at sunrise, and set at sunset. I went the next day to the quay, and landed my fish, and I heard the clock strike nine. I then went from the quay to fish again, and going outside of Helvick I saw some of the people hauling their trammels, and as I knew it was after 11 o'clock I naturally thought they were breaking the law.

40,508. Then did you summon them?—Yes, I did. I said to my men "Come on deck here; these people "ought to have their trammels taken out of the water "before now." My son was with me, and when I came close to the men I found out who they were, and summoned them.

40,509. Did you summon them?—Yes.

40,510. Were they convicted?—They told me they had the law on the side of themselves and Lord Stuart de Decies.

40,511. Did you get a conviction?—I did.

40,512. Have you seen them putting down their trammels without having proper buoys to them?—Yes, frequently. I never saw a buoy.

40,513. Have you ever seen numbers or letters?—No.

40,514. And how close to your boat have you seen them set their trammels?—So near that I could speak to them.

40,515. Within 50 or 100 yards?—Perhaps so.

40,516. What do you conceive to be the reason why you hand-line fishermen are not catching as much fish as you used to catch?—It is either the will of God, or it is the trammels.

40,517. Do you agree with what the other men said as to the trammels being injurious, and in the reasons which they gave for considering that they were injurious?—Yes, I am certain that what they said was correct.

40,518. Supposing that you were to commence using trammels here in Dungarvan would the tide answer so that you could go in and out?—Certainly not.

40,519. Would it often happen that you would not be able to go out at the proper time to set the trammels?—Yes.

40,520. You would have no water?—No.

40,521. Have you ever fished with the long-lines?—No, I have never fished with any line except the hand-line.

40,522. What time do the fishermen who use the long-lines generally fish with them?—Somewhere about the month of February.

40,523. Do they use them to catch the haddock?—They use small spilliards for that. There is a difference. There is a difference between the small spilliard and the long-lines.

40,524. What is the difference?—There are large hooks on the long-line, and small hooks on the spilliard lines.

40,525. What time of the year do they set them?—Somewhere about the month of March.

40,526. And do they use them all through the summer?—Yes, until the hake come in.

40,527. They do not set the spilliards when the hake come in?—No.

40,528. (*Mr. Kelly.*) Your opinion is that the trammels are the cause of the scarcity of the fish now?—Yes, it is either the will of God Almighty, or the trammels.

40,529. Has it not been the habit to set and use them every year for a great number of years?—Undoubtedly it has.

40,530. And you consider that that must be the means of scaring away the fish from the harbour?—I am certain of it.

40,531. And yet the trammels notwithstanding that are increasing in number every year?—Yes.

40,532. Because the fish come in in less quantities there is an encouragement to increase the number of trammels, I suppose?—I did not say that.

40,533. But it is a fact that they are increasing in number?—Yes, there is no doubt of it.

40,534. How do you think that the trammels, or the use of them, scare away the fish?—I can tell you that. I was catching plenty of fish in the fore part of the night, then there would come a calm, and we had to haul in the slack of our cable, and at that very moment, in consequence of the action of the cable in the water, the fish would go away as if they were flying away from a mountain.

40,535. How long ago is it since you had that experience?—Ever since my boy days.

40,536. Then that is the effect notwithstanding the trammels had been in constant use every day since?—Yes.

40,537. And they are getting a large quantity of fish ?—I believe they say they get more than they do.

40,538. Have you any doubt that they get a large quantity ?—I have no doubt they do.

40,539. Are you not jealous of their getting more than you do ?—Not the slightest; my fishing days are almost over.

40,540. You have no jealousy towards them ?—No.

40,541. Although you consider that they encroach upon the rights of the fishery ?—Yes.

40,542. That is your feeling ?—Yes.

40,543. But you have no unfriendly feeling towards them on that account ?—There is no unfriendly feeling towards them on the part of the Dungarvan men.

40 544. Can you give us any information with regard to the catch of haddock ?—I have never fished for them in my life.

40,545. As a fisherman, do you not consider that the use of the spilliards would be far more profitable to the fishermen than the hand-lines ?—I know they would if there were fish to be had, but there is no fish to be had.

40,546. But when there were fish to be had did the Dungarvan men resort to the use of the spilliards ?—Of course 600 hooks would catch more than hand-lines.

40,547. Why do you object to the use of the long-lines ?—Because there have been no haddocks here of late years.

40,548. Why have they discontinued the long-lines ?—Because there was nothing to be gained by them.

40,549. If there was nothing to be had by using long-lines why do they go out with the hand-line ?—Because the hand-line is of more benefit to them.

40,550. Of more benefit to them than the long-lines ?—Yes.

40,551. Do they catch more by the hand-lines than by the long-lines ?—Of course, if there were fish to be had, they would catch it with the long-lines. If I had a trawl I could get bait.

40,552. If you trawled would you not be able to get a larger quantity of fish ?—No.

40,553. Do you consider that the trawlers take larger fish than the hand-lines ?—No, I am certain they do not, and they are not able to do it.

40,554. They are not able to do so ?—No, they are not.

40,555. Do the Dungarvan fishermen, the hand-line fishermen, when they catch 18 or 20 hake, catch more than the trawlers do at the present moment ?—I do not know what they catch.

40,556. Have you never heard ?—No.

40,557. If you were to use the trammels do you not think it would be a better means of support to you ?—You might as well in that case build us a breakwater.

40,558. Would not the use of the trammel be better for you ?—No.

40,559. Are they not getting fish in the trammels ?—Yes.

40,560. A large quantity of fish ?—Yes ; they say so, but I think it is only a small quantity. They say that in the present season a trammel-net has been taking 1,200 and 1,500.

40,561. Have not the fishermen at Ring taken large quantities of hake in their trammels ?—Yes.

40,562. Have they not taken considerably more than the hand-line men ?—Of course they have.

40,563. Is it because you consider that they take more than you do that you come here to make out a case against them ?—Not by any means.

40,564. Do you consider that the Dungarvan fishermen are as well off as the Helvick men ?—Yes ; they are as well off as they are.

40,565. Are the Ring fishermen as well off as the Helvick men ?—No.

40,566. Are not the Helvick men as hardy, brave, and industrious men as are to be found in the neighbourhood ?—Yes, or in the whole world.

40,567. They are not afraid to go out to sea ?—No, they are not.

40,568. And they cultivate their land at home in addition ?—I do not contradict that.

40,569. Has it been the case that they lived in a more comfortable condition than men who are going into the poorhouse ?—I was never in the poorhouse.

40,570. Then if you resorted to the trammel-net you would not be worse off than they are ?—I think I shall soon have to go to the poorhouse if the trammel-nets are to be allowed.

40,571. Your object is to have the trammel-nets abolished altogether ?—Yes.

40,572. I suppose they get a large quantity of fish in those trammel-nets ?—If they go on with them, there will not be many fish left, and they will not get many.

40,573. But suppose they are getting a large quantity of fish now, that will not be the means of driving them to the poorhouse ?—No. If they did not injure the fish for me, I would not care if they had thousands and millions of pounds. It would make no difference to me how rich they were. In point of fact it would be all the better for I might be able to get something from a rich man, whereas I can get nothing from a poor one.

40,574. You have been fishing with hand-lines all your life ?—Generally speaking I have.

40,575. How long is it since the haddock has disappeared from the coast ?—For the last five or six years. I have not caught a haddock with the small hooks for five or six years.

40,576. Up to five or six years ago has there been a fair supply ?—Yes.

40,577. Of haddock, cod, and ling ?—Yes.

40,578. But what has been the cause of the falling off ?—I cannot tell you.

40,579. May not the other fish have disappeared from the same cause, whatever it may have been ?—Certainly they may.

40,580. Do you know how many trammel-boats there are in Ring ?—No, I do not. I never minded.

40,581. (*Professor Huxley.*) Do the hand-lines catch the same kind of fish as the long-lines ?—No. I never caught anything with the hand-lines but hake and cod and ling in the winter time.

40,582. What do you catch by your long-lines ?—I never had a long-line.

40,583. You never had long-lines yourself ?—No, it is with the hand-lines that we fish in the winter time.

40,584. At the time you were fishing with hand-lines was there any body fishing in your neighbourhood with long-lines ?—Yes, the Ring men.

40,585. What do they get ?—Cod, and ling, and haddock.

40,586. Then you were catching two different kinds of fish with your different kinds of lines ?—I used to catch haddocks as well as cod and ling in the same way.

40,587. They do not catch haddocks with the long-lines ?—No.

40,588. (*Mr. Lefevre.*) When does the season for cod begin ?—In January and February.

40,589. How long does it last ?—We only fish three months in the year for cod and ling.

40,590. Do you find that you have to go further for the cod than you have for the hake ?—Yes.

40,591. Do you go beyond the line of the trammel-nets ?—Yes, a long way beyond.

40,592. Have you observed a falling off in the cod-fish of late years ?—Yes, undoubtedly.

40,593. Has that only been within the last two or three years ?—No, they have been falling off for many years.

40,594. Is it because the weather in the winter time has been so bad that you have not been able to go out as often ?—It has partly been in consequence of the weather being bad.

40,595. Do you think that the codfish are still off the coast, but you are not able to catch them ?—Yes, but there are places where the codfish was plentiful which our boats do not go to now.

DUNGARVAN.

T. Adams.

25 Aug. 1864.

40,596. Do you attribute the falling off in the take of codfish to the trammel-nets?—No.

40,597. It is only the falling off in the hake you attribute to that?—Yes; when I was a boy we used to have boats coming in full of herrings and sprats. There were plenty of them then, but we cannot get a sprat in this place now.

40,598. You do not think the tramml-nets have frightened the codfish away, or the ling, or the conger?—No.

40,599. I think you said you received the bounty here years ago?—Yes.

40,600. In those days you went further off the land for cod?—Yes.

40,601. Did you go up to the Nymph bank?—Yes, 30 miles out.

40,602. It was worth your while to do that in order to receive the bounty?—Yes.

40,603. Is it not worth your while to go the same distance now?—We have not men to go now as they did then. All the young men have gone away.

40,604. And are the boats not as good as they were?—They are pretty good, but not as good as they were.

40,605. Are they as well found as they were?—They are pretty well found, but you have not the men to man them.

40,606. Do you think that if you had men to man them properly you could go out and catch as much codfish as you used to catch?—I have a strong imagination that the same fish are there as were there before.

The witness withdrew.

T. Dwan.

THOMAS DWAN called and examined.

40,607. (*Mr. Anderson.*) Have you heard the other witnesses give their evidence?—Yes.

40,608. Have you been fishing lately?—Yes, we were fishing last night.

40,609. What did you catch last night?—Eleven hake and about 100 mackerel.

40,610. What is the average quantity of fish you have been taking lately?—It has been very small indeed. The average is about as much as a score a night, or 30, or so on.

40,611. Is that the take of an entire boat, or the share of each man?—No, the entire boat.

40,612. How then have the trammels interfered with your fishing?—Last Thursday we got a little trifle of fish, about half a hundred weight to the boat, and we left the quay about half-past eleven the next night, and at the time we anchored there were five nets surrounding us. I had to leave there, and I went all the way to the eastern Star Head at Ballymahon, at the west side of Tramore bay, and I got foul of them nine miles further on.

40,613. Where did you leave them?—Five miles south east of Helvick Head, and then I went nine miles east north-east of Helvick, and I got foul of them again.

40,614. Did they interfere with your fishing?—I lost my night by it. I had four men in the boat, and it was the latter part of the night. I was trying to get my anchor out, but it was of no use.

40,615. You lost your night's fishing?—Yes.

40,616. How close do they put their nets to you?—That is according to whether they see me coming with any fish. They will put them at 12 to 15 and 18 yards from me.

40,617. As close as that?—Yes, quite handy if we are taking fish.

40,618. Have they done that recently?—Yes, as late as last night.

40,619. How near were they last night?—Last night there were three boats dredging and trawling close to me to the southward, and there was a trammel about 30 or 40 yards from my stern.

40,620. Last night?—Yes.

40,621. What injury do you consider the trammels do you, or do you consider that they do you no injury?—They do us great injury.

40,622. How?—They are set so close that when the fish get in them in a dark night they make such a light in the water that they scare away the fish. It is harder for us to catch fish when they are close to us than when they are far away from us for that reason.

40,623. Do you ever see any buoys or marks?—Only a few corks.

40,624. Have they any painted marks or letters?—No, only a few corks and a little line.

40,625. Can you identify the trammels if they are pretty close to you?—I cannot see them because they are at such a distance. It is impossible to see them when each net reaches near a mile.

40,626. And they have no buoy?—No, only a little cork, and there is another thing, I can ot shift in the night for them.

40,627. Why not?—Because I am sure to get foul of the nets, and then I am bothered so that I might just as well sell the boat and go elsewhere.

40,628. What is her tonnage?—14 or 15.

40,629. How many men have you on board?—Five men with myself.

40,630. Did you ever observe the time when they put down their trammels, and the time they take them up?—Generally on the average they set them about three o'clock in the day.

40,631. Have you seen them set them earlier than three o'clock?—I have, but not on the average. I have seen some set them earlier and some later, some not before six o'clock and some at two and three, and I have seen many of them taking the fish out of them and leave them in the water.

40,632. (*Mr. Kelly.*) When did you go to America?—Thirteen years ago.

40,633. How long did you remain there?—About eight years.

40,634. And have you been home here for the last five years?—Yes.

40,635. What was your occupation before you went to America?—I was fishing here.

40,636. Did you know that they were using the trammels before you went to America?—Yes, I had seen their trammels, but not a quarter as many as they have now.

40,637. How many were there at that time?—There were about 14 or 15 boats as near as I can guess.

40,638. But what are the numbers now?—I have counted 25 or 26 boats.

40,639. For the last five years have you been regularly fishing from this harbour?—Yes.

40,640. Have you found the trammel men going on and violating the law, as you say happened last night?—Yes, they do that every time I leave for the fishing, and I have the best of young men with me. Wherever I can go to catch a few fish I go, no matter what the distance is from the land. I go to fish where I like because the place is now taken up and blockaded.

40,641. How long has this happened to you; does it happen very often?—It has happened very much this last season; in the last six months it has occurred 12 or 14 times.

40,642. Did you ever summon them for this alleged breach of the law?—I do not because I have seen other parties do so, and it is very little justice they have got. Under these circumstances it is of no use for me to summon them.

40,643. I believe you know what the law is?—Of course I do.

40,644. Do you know how the trammels act upon the fish?—All I can tell you about it at this moment is that before I went to America to go fishing I would rather have had one-quarter of a boat here than the

DUNGARVAN.

T. Dwan.

25 Aug. 1864.

whole of one now, and it is all through the trammels and trawlers.

40,645. Do you use the hand-lines or the long-lines?—I use both.

40,646. Do you find it profitable?—I find the long-line most profitable if I have persons in the boat who are able to manage it, but if I buy a train of lines for them perhaps the trawlers will take them away, and then I am at a total loss, and I cannot afford it.

40,647. Then it is the apprehension that something might happen that has prevented you following long-line fishing?—Yes.

40,648. Do you consider that you would do better by the use of long-lines?—Yes.

40,649. Would that enable you to go further out to sea?—Yes.

40,650. Have you a long-line at all?—Not now.

40,651. How long is it since you discontinued the use of the long line?—I always fished with the long lines before I went to America.

40,652. Since then you have had no long-lines?—No, and I have had no means of getting them. I should not object to try my part of them, but the others who fish with me would not be able to pay for their share, and I cannot afford to be at the whole expense.

40,653. Have you fished all sorts of fish for the last five years?—Yes.

40,654. (*Professor Huxley.*) Cod?—Yes.

40,655. And ling and haddock?—Yes.

40,656. Have you got any haddock?—Yes, but only small takes.

40,657. When did you get haddock?—I got haddock last winter.

40,658. How much?—I often had a scattering few, perhaps three, or four, or five.

40,659. Do you ever go out to the deep sea with the hand-line?—I have often been as far as the Nymph bank with the hand-line.

40,660. Did you go there this last winter?—No, but I have been 25 miles off.

40,661. And did you not get the haddock then?—Only a trifle.

40,662. In your opinion has there been a greater scarcity of haddocks during the last five years than there was before?—Yes, there has been a greater scarcity, and I think the reason is the damage done by some 12 or 14 trawlers which there are belonging to Ring. They scratch along the ground, and then inside the shore, so that you cannot get a chance of fishing if you do your best.

40,663. The trammels do not act in that way?—No, but they are the worst of all. If there happen to be two or three score of hake taken in our boats they will surround the place in a day.

40,664. Which do you consider the more mischievous, the trammels or the trawl?—The trammels, because day and night they are stationed there, and they do great injury to the fish. We cannot get any bait in consequence of the trammels being right across the whole harbour.

40,665. If the men have been getting large quantities of fish for the last four or five years by the use of the trammel would you consider that there is a scarcity of fish?—I do not consider that they have caught large quantities, and I do not think they catch as many now as they did years ago. The quantity of fish caught is lessening every night.

40,666. Are there not as many caught in the trammels?—No; there are more nets, and the fish are getting scarcer every year.

40,667. That is your opinion?—Yes.

40,668. Up to the present time have they not been getting a large supply?—I do not know, but I believe they are very scarce with them as they are with everybody else. Their nets take up the small fish too; they take the small and the large; they take everything.

40,669. (*Mr. Lefevre.*) What time do you go out in the evening with your hookers?—Generally we anchor in the evening, about three or four o'clock.

40,670. Not later than that?—No, not later. We generally stop the land. We might catch a few fish for bait, and then we anchor about that time.

40,671. Do you generally anchor before the trammel nets are set?—Generally before, and then if we have to bring the fish to the quay we do not know where to go to, because we might heave out and anchor among the nets.

40,672. Do you know that the trammel-nets are prohibited from being set except in certain months of the year until five o'clock?—Yes.

40,673. Do they observe that rule?—No.

40,674. Do you recollect an inquiry that was held here in 1849?—I do, but if I summon them I get no justice.

40,675. Were you present at that inquiry?—Yes.

40,676. You know there was a line drawn by the Commissioners?—Yes.

40,677. And within that line the trammel-nets are not allowed to be set?—No.

40,678. Notwithstanding that byelaw they still set their trammel nets beyond that time?—Yes.

40,679. Then they break through the law?—Yes. I never saw a trammel-net set inside of Helvick.

40,680. Then you do not think that that regulation is of any use to the hookers?—It is of no use because they break through it.

40,681. They do not observe it?—No.

40,682. Do the hookers ever fish within the line?—Yes they do; they fish everywhere where they think they can catch fish.

The witness withdrew.

J. Murray.

John Murray called and examined.

40,683. (*Professor Huxley.*) You wish to make a statement to us?—Yes; if you have any questions to put to me with regard to trawling I should be glad to answer them.

40,684. What have you to say about it?—I consider it very destructive to the fisheries.

40,685. Why?—In the first place it takes away the seed and destroys the small fish before they come to maturity.

40,686. Have you seen the trawlers at work?—Yes, I have been heaving the small fish overboard myself.

40,687. Have you seen them taking anything else besides spawn?—Yes. I have seen small fish, but I could not tell what they were, they were so small.

40,688. What size were they?—Small as shrimps. They were so small that I could not tell whether any one of them was hake except by the feel of it.

40,689. Do you consider that trawling is injurious to the fishing?—Yes, of course it must be injurious when they are taking the young away altogether and heaving them overboard dead after they have taken them. There could be nothing more destructive than that.

40,690. Where is it that you have seen these small fish?—I have seen them taken at Brixham, where I served my time in the English Channel.

40,691. But where on this coast?—I have seen them thrown overboard at Dunmore.

40,692. By the small trawlers?—I never saw the small trawlers at work.

40,693. Have you seen the large trawlers here?—No, but I have at Dunmore.

40,694. Where do they trawl?—Three miles to the south of this at Helvick Head and right down until they come east of this place.

40,695. Is that the place where you saw them take the spawn?—I have seen the spawn attached to the nets at Dungarvan, and I have seen the same thing also in the English Channel.

DUNGARVAN.

J. Murray.

25 Aug. 1864.

40,696. Are you a fisherman now?—I was a trawler and a fisherman.

40,697. How long have you been engaged in fishing?—I have not been fishing for the last five years.

40,698. You are now engaged in the coasting trade?—Yes.

40,699. Then you do not know what has been going on with respect to the fishery during the last five years?—Not here, but still I know the nature of the fishing.

The witness withdrew.

(*Professor Huxley.*) We have now before us the whole of the Dungarvan case. With regard to the evidence which has been adduced, it appears to be directed mainly to the establishment of three positions. I do not say whether they are established or not, but I wish to know whether we have clearly understood the tenor of the evidence. The first position is that trammels interfere with and obstruct the line fishermen; the second, that trammel-fishing is a destructive and wasteful mode of fishing and that it scares away the fish; and the third is that trammels have been used illegally. That, if I am not mistaken, is the general tenor of the evidence.

(*Mr. Anderson.*) Yes.

(*Professor Huxley.*) Evidence has been laid before us to show that there has been a breach of the bye-laws. Will you place before us the byelaws which you conceive to have been broken through?

(*Mr. Anderson.*) The byelaws of the 4th of July 1849 issued by the Commissioners of Fisheries in pursuance of the Act of Parliament. The byelaws which have been violated are the second, which says "The "setting of any such trammel or moored net athwart "or within 200 yards of any boat which at the time "of the setting of such net shall be moored across "thereto engaged in line-fishing is hereby prohibited;" the third, which says "To every train of such trammel "or moored nets shall be attached at least one float-"ing buoy with a board upon which shall be printed "in clear and legible characters, not less than one "inch in length, in white upon a black ground the "letter of the district and the name of the owner to "which such net belongs;" the fourth, which says, "On and off the coast of Waterford to the north-east "of the line aforesaid passing through Ballinacourty "Head as aforesaid and on and off the coast of Water-"ford south-west of the line aforesaid, passing through "Helvick Head, such trammel or moored nets may be "set and remain set or in the water there from the "hour of three o'clock in the afternoon one day until "the hour of nine o'clock of the following day during "the months of January, March, October, November, "and December each year; and from the hour of "five o'clock in the afternoon of one day to the hour "of seven o'clock in the forenoon of the next following "day during the months of May, June, August, and "September in each year." The first byelaw fixes the limits within which trammels should not be set, and the evidence which I have brought before you shows that not only that but all the three others have been violated.

The following witnesses were then examined on behalf of the Ring fishermen.

P. Whelan.

PATRICK WHELAN called and examined.

40,701. (*Mr. Kelly.*) You are a Ring fisherman?—Yes.

40,702. You attend here in the interests of the Ring men?—Yes.

40,703. Have you a boat of your own?—I have.

40,704. How long have you been a fisherman?—For the last 30 years.

40,705. How have you been in the habit of fishing?—I have been trawling, fishing with long-lines, with trammels, with herring-nets and with seine-nets.

40,706. You turn yourself to everything?—Yes, in order that I may get a living.

40,707. How long have you been using trammels?—I have had a trammel in use for the last 30 years. I think a trammel was the first net I owned at Helvick.

40,708. Were you ever summoned or prosecuted with regard to that trammel?—No, I always took care of myself and kept as far away from the law as I could. I have never been prosecuted.

40,709. Have you been taking a large quantity of fish with the trammels?—Yes, I have been now for the last 15 years.

40,710. Is there a greater quantity of fish taken now than there was 15 years ago?—No, but there is a greater quantity now than there was 22 years ago.

40,711. What kind of fish?—Hake.

40,712. Have you been catching a large number of fish during the season?—Last week we had a very good take of fish.

40,713. What quantity did you catch?—I got in my own hand 200 hakes in my nets.

40,714. In one night?—For all the week.

40,715. Before that what quantity were you in the habit of taking?—Sometimes we may have got half-a-score in the night, sometimes we may not have got so much and sometimes more.

40,716. Whereabouts have you been in the habit of placing your trammels?—From Mine Head to Ballyvoyle Head.

40,717. Do you generally place them about the same place?—Yes.

40,718. From year to year upon the same fishing ground?—Yes.

40,719. Do you find that after taking a quantity of fish in the trammels in one night there is any use in going to the same place next night?—If we take a good quantity of fish one night we expect that the fish will be there again the next night.

40,720. Have you ever set your trammels in the same place night after night?—I have kept on the same spot till Saturday night and I have had more fish on the Saturday than I had on the Monday morning previous.

40,721. Although you have been using trammels in the same place all the week?—Yes, I have been using them on the same spot all the week.

40,722. Do you find that the fish have been in greater abundance and more plentiful for the last year or two, or that during the last year there has been a less quantity coming in?—I have hookers, yawls, and trammels also. I have no complaint to make with regard to the yield of the trammels, but I have a great complaint to make with regard to the hooker which has not been giving me much help. Four years ago I had as much fish as I had at any time.

40,723. Would you have as much fish now as you have had if you got a good supply from the hooker?—Yes.

40,724. What do you fish with on board the hooker?—Hand-lines.

40,725. Then you do not catch as large a quantity with the hand-line as you did formerly?—Not now.

40,726. But you catch as good a quantity with the trammels?—Yes; last season we had a better season with the trammels.

40,727. Do you catch any cod or ling?—We have long lines for those fish. We begin to fish for them at Christmas.

40,728. You go out in the proper season to catch cod and ling?—Yes, from Christmas to the latter end of March. During the last three years I have got more cod and ling than I got during the three years before.

40,729. What do you do with the fish you catch ?—We always sell our fish. When they are salted, dried, and cleaned we take them to Cork.

40,730. Do you sell large quantities of fish in the season ?—We often go to Cork to sell them.

40,731. How much do you make by the sale of your fish in the season ?—There was one time I had 35*l.* worth of hake with me.

40,732. When was that ?—Two years ago, in the year 1863.

40,733. How many trammel-boats are there over at Ring ?—20 trammel-boats.

40,734. How many trawlers have you ?—14.

40,735. What is the size of the trawlers ?—Five inches to the mesh at first, and it goes down to three and a half at the bottom.

40,736. But what is the size of the boats ?—From 10 to 12 tons.

40,737. I believe it costs a good deal to keep up the trammels ?—By the time the season is fairly over it will cost us a good deal to keep them up.

40,738. Do you find that by using trammels you ever frighten away the fish ?—We have now been using the trammels for the last 35 years, and if the use of them frightened away the fish it is a wonder that they have not gone away from us before this.

40,739. Do you find that there is as good a quantity now as there was 20 years ago ?—Yes, more.

40,740. I am told that 35 years ago there was no regulation in regard to the mode in which the fishing was to be conducted ?—We were obliged often to go out with our trammels. When we expected a good night we went out and began to fish, but if we saw a sail coming down upon us we were obliged to haul up for fear of being run down. We had an understanding between curselves and the Dungarvan men, and we fished fairly and got more fish in these times than we were getting before.

40,741. You were prevented from fishing before ?—Yes.

40,742. You were afraid of fishing ?—Yes.

40,743. Are you in the habit of fishing near the hand-line fishermen—the Dungarvan men ; do you often use your trammels near them ?—We go as near them as we consider proper. We always give them a fair berth, and we would not think of going closer.

40,744. What do you mean by that ?—As long as we give them a fair berth there is no doubt that they will get fish.

40,745. Have you fished with a hand-line yourself in a hooker near any person with a trammel ?—Yes.

40,746. How have you got on when you have been using the hand-line near the trammels ?—There was one night that we got from 700 to 800 fish.

40,747. How were they caught; with the hooker and hand-lines ?—Yes.

40,748. In one night ?—Yes.

40,749. When was that ?—About four years ago ; in the year 1860.

40,750. What part of the harbour was that in ?—South from Helvick.

40,751. Off towards Youghal ?—No, south.

40,752. What had they in the trammel-nets ?—I cannot tell what they had.

40,753. Were you near the trammels when you got that quantity ?—We took the trawls up and cleared away the lines and let them down again, and as fast as we could haul them up we could catch fish.

40,754. Then you used the trawl too ?—Yes.

40,755. What kind of fish do you catch in the trawl ?—Soles and flukes we generally catch in the trawl.

40,756. Do you catch mackerel ?—Not at all.

40,757. What is the size of the meshes of the trawl-net ?—From $4\frac{1}{2}$ to $4\frac{3}{4}$ inches.

40,758. Do you know how the trammels were placed in the water ?—Yes.

40,759. Are they any prevention to the herrings and small fish coming into the bay ?—I saw as many in the bay yesterday morning as I have seen for the last three years; but if they prevented the fish coming into the harbour there would have been none.

40,760. I believe the herrings float towards the surface of the water in the night ?—Every fish floats upon the surface of the water.

40,761. Where do you generally use the trawl ?—From Mine Head to Ballyvoyle Head.

40,762. Do you send your fish into Dungarvan market ?—When we have a large take we should perhaps be too late for the regular market. In that case we salt them and send the fish to market in that way.

40,763. Are any of the persons who have trammels in the habit of sending their fish to Dungarvan market ?—They may send a little.

40,764. What do you do with the fish you get in the trawls ?—It has been sold at Dungarvan.

40,765. How far do you generally go off to set your nets ?—I cannot tell that properly, but our men say that it is about three miles from Helvick.

40,766. Is that outside the line?—Yes, from Helvick to Ballinacourt straight out towards Ardmore Head.

40,767. Do you go three miles out beyond Helvick Head ?—Yes.

40,768. Straight out ?—Yes, more or less.

40,769. What is the greatest depth of water in which you generally set your trammels ?—From five to 25 fathoms, but we seldom set them in five. They are generally set in from 14 to 15 fathoms, up to 20, and we seldom go out with them as far as 25 fathoms.

40,770. Has the take of fish by the trammels been greater or less for the last year or two ?—We have had more fish this year than we had last year.

40,771. By the use of the trammels ?—Yes, by the use of the trammels we have been able to get a good deal more fish at this time of the year than we did at the same time last year.

40,772. (*Mr. Anderson.*) Do you remember trammels when you were a boy ?—I remember them 30 years ago.

40,773. How many were there when you were a boy at Ring ?—I had three trammels in my own hand when I was a boy.

40,774. In the whole of Ring how many were there ; were there a dozen?—There were 15 or 16 boats here 30 years ago with trammels.

40,775. How many trammels had they ?—From 14 to 18.

40,776. Each ?—Yes, those who used them.

40,777. How many have they got now ?—From 16 or 17 up to 22.

40,778. Are the trammels now as large as they were then ?—They are larger.

40,779. Are they double the length ?—They may be about half as large again.

40,780. There were 15 boats in Helvick 30 years ago ?—Yes.

40,781. What fish did they take ?—It was very little they could take at that time. The Dungarvan boats prevented them putting their nets out.

40,782. How many fish were you in the habit of catching in the trammels 30 years ago ?—I remember 25 years ago my father and myself were fishing with trammels and hand lines and all we had in the house at Christmas was 300 hake.

40,783. Are you taking more in your trammels now than you were then ?—Yes.

40,784. Were there not more caught with the hand-lines then than there have been since ?—We got more with the hand-lines three years ago than we ever got before.

40,785. How many did you ever have on your lines 20 years ago ?—600 or 700.

40,786. And how many do you catch now ?—From 200 to 300.

40,787. In one night how much would you take in your hooker 20 or 30 years ago ?—In one night we might not catch 100 and then another night we might catch 200 or 300.

40,788. What is the best night's fishing you ever had 20 years ago ?—I never saw more than 400.

DUNGARVAN.

P. Whelan.

25 Aug. 1864.

40,789. Taken with the hand-line ?—Yes.

40,790. After that did the quantity increase ?—Four years ago I saw 1,200 fish in my own boat in one day and night's fishing.

40,791. So that the quantity of fish taken by the hand-line has increased ?—Yes.

40,792. Then did you find the trammels do you any harm ?—No, I think we can make a good fishing by them.

40,793. The trammels do not do you any harm ?—No.

40,794. Do you catch the greater quantity of fish on the lines or in the trammels ?—We go to fish in a hooker when we cannot get any fish in the trammel. I have seen the hookers take a great quantity of fish in a night when they have not been able to get any in the trammels.

40,795. You spoke of a night when the hooker got 700 or 800 ?—Yes, and one night we may get 700 or 800 in the trammels and the hooker may get none.

40,796. Three years ago you had 35*l.* worth of fish in Cork ?—Yes.

40,797. Was that a good year ?—Yes, but we have had better years than that.

40,798. When ?—Three years before that.

40,799. What are you catching this year—is it not as good a year ?—I am not blaming it.

40,800. What fish have you been catching this year ?—I have caught 900 hake with the trammels.

40,801. How much do you expect to get for your fish this season ?—We get 36*s.* or 37*s.* per 100.

40,802. For the entire quantity of fish you have got ?—No, for 100.

40,803. How many hundred have you ? — Nine hundred.

40,804. You are only expecting to get 36*s.* per 100 for them ?—Yes, there are two men, Welsh and Halls, who have a larger lot this year than I have.

40,805. They have a larger lot this year than general ?—Yes.

40,806. How are all the other men; has this been a good or a bad year for them ?—They have a larger quantity of fish this year than they had last.

40,807. But you have not ?—I have as much as I had this time last year.

40,808. Then this is as good a year as last ?—Yes.

40,809. What is the average quantity of fish taken now in each trammel ?—Sometimes you get more than at other times. Some nights you may only get five, six, or seven, but another night you may have a score in a trammel.

40,810. I believe the trammels are set down in rows one outside the other ?—Yes.

40,811. Do all the trammels catch pretty nearly the same; do the trammels nearest the shore catch as many as those that are further out ? — Sometimes more.

40,812. How do you account for that ?—You may go outside to fish and be the worse for it.

40,812*a*. But supposing the trammels are set will those nearest the shore catch as many as those outside ?—Many times they get more.

40,813. How do you account for the inside trammels having more fish to catch than the outside ones ?—Perhaps it might be the other way to-morrow. For instance, the fish may be inside of the trammels one night and outside of them the next; then perhaps the middle ones would get most.

40,814. Was last year a good year for cod and ling? —For six or seven years we have had very good years for cod and ling.

40,815. Where do you generally fish for them ?—We go to the extreme end of the land off Youghal. We fish 15 miles from the land.

40,816. How far out do you set your trammels ?—Four or five miles sometimes and at other times not more than half a mile.

40,817. From four or five miles to half a mile ?—Yes, we can come as close as half a mile where it is rocky.

40,818. Is five miles the furthest you go out ?—Yes.

40,819. Do the fish come in ?—Yes, and the cod and ling come in also.

40,820. Do you not find cod and ling outside the limits within which you set your trammels ?—I can get cod and ling where I set my trammels.

40,821. With long-lines ?—Yes.

40,822. Is it with the long-line you catch cod and ling ?—Yes.

40,823. Do you not set the long-lines outside the place where you set the trammels ?—No, inside sometimes.

40,824. Where do you set them ?—Two miles from Helvick.

40,825. How many long-lines have you ever set inside where you set your trammels ?—We do not fish with long-lines at the same time we do with trammels.

40,826. Do you ever go fishing for herrings ?—Yes.

40,827. At what time of the year do you fish for them ?—From September to Christmas.

40,828. Last year did you catch many herrings ?—No, we had very few last year. The weather was bad and we durst not use the seine-nets.

40,829. Do you catch them with drift-nets ?—No.

40,830. Last year was not a good year for herrings? —No.

40,831. Was the year before ?—It was better than last year.

40,832. Do as many herrings come in here as did formerly ?—No, they do not.

40,833. Do as many mackerel come in as did some years ago ?—Yes.

40,834. Do as many scads and mackerel come in as did some time ago ?—Yes; sometimes I go fishing for them, but the men don't like to work with me if they can work their trammels. They take their shot at their trammel and then they will come and have their shot with me.

40,835. (*Professor Huxley.*) Do they think that is a more uncertain mode of fishing than the trammel-fishing ?—It is too hard work.

40,836. (*Mr. Anderson.*) The herrings have not been so numerous for the last few years ?—We have had no good nights for three years.

40,837. For several years past has not the fishing always been bad ?—We are getting a good share of them. Last year we did not get much for them; they complained about that.

40,838. Towards Ardmore have they not been catching more herrings than in this neighbourhood ? —I think not.

40,839. Do they catch sprats here ?—Yes.

40,840. Have the sprats been in this harbour lately ? —Yes.

40,841. Was last year a good one for sprats ?—Yes, and this year too if they followed them. If the Ardmore men were to come here they would get as many as they get there. They go shares in a seine; 14 of them share in one. I have one of my own. They can go fishing every day if they like with their seine.

40,842. (*Professor Huxley.*) Do the people of Ring fish in the same way that they do ?—Yes.

40,843. What fishing do you practise in the beginning of the year ?—The long-line fishing.

40,844. How long does the long-line fishing continue ?—Until the latter end of March.

40,845. What do you do after the long-line fishing ? —We have the hooker then and follow it up to April.

40,846. Is it the hand-line fishing you follow then ? —No, getting seaweed is better. It pays me better than going trawling. I go out with the hooker to get seaweed.

40,847. You think that cutting seaweed gives you a better living than going trawling ?—It has done better for me this last year.

40,848. But if you were fishing you would trawl at that time ?—Yes, I have been trawling at that time until the latter end of August.

40,849. What do you do when you leave off trawling in the latter end of August?—We go off then until the latter end of May when the hake come in. I keep the hooker until I hear the fish comes in.

40,850. What time do you generally begin to set your trammels?—In the latter end of May.

40,851. How many months do you continue to set them?—From that until Christmas.

40,852. Is there mackerel-fishing occasionally?—No, we do not go to the mackerel-fishing. They catch them with their seines.

40,853. Are they seines that you drag along the shore and haul on the shore?—Yes.

40,854. Are there many such seines in Ring?—Yes.

40,855. How many are there?—Six or seven.

40,856. Do you ever fish for sprats at Ring?—Yes.

40,857. What time of the year do you fish for sprats?—From this time until Christmas.

40,858. What sort of mesh do you use in sprat-nets?—About half an inch mesh.

40,859. So that you get fish all the year round?—Yes.

40,860. Have you any land?—I have.

40,861. Do you work on it yourself?—Yes, I have three acres.

40,862. How do you find time if you are fishing for all those months to work upon your land?—I get labourers to work upon it for me.

40,863–6. You pay labourers?—Yes.

40,867. Then you do not work at it yourself?—No, my time is taken up in fishing.

40,868. You look upon yourself as a regular fisherman?—Yes.

40,869. That is your business all the year round?—Yes.

40,870–80. What kind of a trawl do you use?—It is 5 inches in the mesh at the mouth of it and from $3\frac{1}{2}$ to 4 inches at the bag end of the net at the bottom.

40,881. Is it a beam-trawl?—No, a pole-trawl.

40,882. What will a pole-trawl cost?—We make them ourselves.

40,883. What does one of them cost you?—We can get the material for about 10*s.*

40,884. And you throw your own labour in?—Yes.

40,885. What will a trawl-boat cost?—A new boat will cost over 100*l.*

40,886. Did I understand you to say that within your recollection the number of trawl-boats and nets had regularly increased in Ring?—Yes, there are more now than there were 15 years ago.

40,887. And are they of the same size as they were 15 years ago?—No, they are better boats than they were 20 years ago.

40,888. Do they cost more than they did?—I believe that the biggest yawl-boat we had nine years ago would be the smallest now. We are getting better and better boats every year.

40,889. Has more money been put into the boats and nets year by year?—Yes.

40,890–9. What sort of net is there in your trammels?—The size of the mesh is about $4\frac{3}{4}$ inches.

40,900. Do you give that measurement now from knot to knot?—No, the mesh entirely.

40,901. Drawn out?—Yes.

40,902. What will it be from knot to knot?—Something over 2 inches. Here is one (*handing up a piece of net*).

40,903. It is about $2\frac{1}{4}$ inches from knot to knot?—Yes.

40,904. Is the whole of the net of the same sized mesh?—Yes, all the nets are made of one size.

40,905. How deep is the net?—Four yards.

40,906. And how long?—Forty fathoms.

40,907. Is there a head line that runs along the top of the net or a back rope?—No, we have no rope at the bottom of it.

40,908. Have you a rope at the top?—Yes, but none at the bottom.

40,909. Do you put corks on the rope at the top?—Yes, we load the bottom with stones and that brings the nets down.

40,910–20. You wish to set the nets so that they may hang perpendicularly in the sea?—Yes.

40,921. And the fish mesh themselves?—Yes.

40,922. What is the smallest sized fish that can mesh itself in your trammel?—We always get hake.

40,923. And what is the smallest sized fish you catch?—Sprats are the smallest size.

40,924 I am speaking now altogether of the trammel-nets; what is the smallest sized hake you get?—The smallest will be about three feet.

40,925. Will any fish smaller than that get through the mesh?—Yes, a fish two feet would go through the mesh.

40,926. Do you, as a matter of practice, never get fish less than two feet long in the trammel?—No, we do not.

40,927. You do not get many at any rate?—No.

40,928. What other fish besides hake do you catch in the trammel-net?—I catch gurnards and sometimes whiting and bream.

40,929. Are they large whiting that you catch?—They are tethered by the twine.

40,930-8. They get entangled in the twine?—Yes.

40,939. Do you ever catch any considerabe quantity?—No.

40,940. One now and then gets entangled?—Yes.

40,941. What will a trammel cost?—Over a pound.

40,942. Have you a buoy at each end of the trammel?—Yes.

40,943. After you have set your trammel do you let it remain in the sea and come ashore again?—Yes.

40,944. What is the buoy made of you have at each end; is it a sheep's skin?—No, cork.

40,945. A large cork?—Four or five or six corks together.

40,946. How large will it be, is it as big as a man's head?—Yes, and bigger.

40,947. Do you paint them?—No.

40,948. Are there any numbers on them?—Sometimes we put numbers on them, but not always.

40,949. How much does a regularly fitted trammel cost you?—It costs me over a pound a trammel.

40,950. What will it cost to keep up year by year?—I have three trammels going out every night, and I may wear out nine every year; I shall wear out the three trammels three times a year.

40,951. Then your trammels cost you 9*l.* or 10*l.* a year?—Yes.

40,952. Has the number in use greatly increased since you recollect the fishing?—Yes, there are more now.

40,953. How many more are there now?—First they were not as big as they are now, and there was not as much of them in a boat as there is now. I think, take them altogether, they will be double the size.

40,954. Is there twice as much money put into the trammel-nets as there was formerly?—I think so.

40,955. Have the fishermen of Ring any means of getting money except by fishing; do they make money on the land or live by it?—They could not live by the land.

40,956. Have they any means of making money except the fishing?—No.

40,957. Then all the money invested to make these trawls and trammels has had to come out of the fishing you have followed?—Yes.

40,958. How do you set your trammels?—We set them from eastward to westward, as the tide runs.

40,959. In setting your trammels do you ever care, supposing the tide is making, to set them down the harbour so as to catch the first of the tide?—No, I should not like to catch the first of the tide at all.

40,960. Do you keep your trammel out of the tide altogether?—Yes, I always set it to the tide.

40,961. Does it swing with the tide?—No, but if I put it across the tide I am not sure the fish would not be disturbed.

40,962. Do you put it the same way as the tide is going?—Yes, on the run of the tide.

DUNGARVAN.

P. Whelan.

25 Aug 1864.

40,963. Do you care when you are setting your trammels whether you are near the mouth of the harbour or further out?—I must keep off it because it is rocky there at the mouth.

40,964. I mean the whole of the bay?—I go from Ballyvoyle Head to Mine Head.

40,965. Suppose there were a lot of trammels set over a mile in distance, would you sooner be out at sea or more in-shore?—We do not think that the fish we are after come into the harbour at all.

40,966. I am speaking now of outside the harbour, in the bay?—We sometimes find the fishing in the bay better than at Mine Head, and sometimes it is better at Mine Head.

40,967. What distance would you like to be from another trammel?—I should like anotherman have his trammel about 20 yards from me.

40,968. Not more than 20 yards?—No.

40,969. Supposing your trammels are set in this way (*describing*), do you not care to have more than 20 yards in that direction?—No.

40,970. When another man's trammel is not more distant from you than that, does his trammel interfere with you?—It does no harm to me if he keeps that distance from me.

40,971. Do you all set your trammel-nets nearly about the same time?—Yes.

40,972. How far do you go?—It is usually two or three miles that we go.

40,973. Do you stretch over a line of two or three miles?—Yes.

40,974. But how far will each be distant from the other?—I set my trammel here and you come from the head of it, and another man will come outside, and another man will come outside that; there will be four trammels set in that way.

40,975. You do not care how you are placed with regard to one another?—No.

40,976. In former years did the men who worked the trammels at Ring have any reason to complain of the hookers interfering with them?—We did not complain of the hookers.

40,977. Did you not complain of their coming among your nets and fouling you?—Yes, we did.

40,978. Was that a common complaint?—Yes.

40,979. Did the trammel men ever complain of the hookers dragging over them, or going over their trammels and doing them damage?—Often and often, and they have brought them up to Dungarvan and cut them to pieces.

40,980. When was that commonly the case?—About 15 years ago.

40,981. Did the trammel men at that time make any complaint upon the subject?—No; sooner than be brought into the court-house they would get other trammels. I had my trammel carried away to Dungarvan, and I came for it, but they would not let me have it.

40,982. You would sooner give up your trammel than run the risk of any litigation about it?—Yes.

40,983. Was there any inquiry about 15 years ago in consequence of the complaints of the hookers and trammel men with regard to the proceedings of one another?—Yes.

40,984. Was there any regulation made then which was satisfactory to the trammel men?—There was a regulation made then.

40,985. Did the trammel men like the regulations that were made then, or did they feel that they were interfered with by them?—They were satisfied when they got liberty and leave to catch fish by law, before then they had no law at all.

40,986. Then the trammel men are satisfied with the regulations now existing?—Yes, they were.

40,987. Are they now?—No, they want other laws now; they could not take them up and set them in the evening.

40,988. (*Mr. Lefevre.*) Was it a disadvantage to the trammel men that they were not allowed to set their nets before night time?—It was; but if we could not have our nets set before sunset we think that it would be of very little value to us to set them afterwards; then we also want another hour in the morning before the fish go down to the bottom.

40,989. Did the passing of that law enable you to go out further to sea than you did before?—Yes, and enabled us to take more fish.

40,990. You want it now to be extended for another hour?—Yes.

40,991. (*Professor Huxley.*) We have it stated to us that the trammel men are in the habit of setting their trammels in such a way as to surround the hookers and prevent them from fishing; do they occupy the ground of the hookers at night?—The trammels have been working 55 years, and they have been complaining every year since of them. I have heard my father say that they were complaining in his time, and they are complaining now every day.

40,992. They complain at this particular time that the trammel men set their nets around them, that when the hookers are seen to be fishing and getting fish the trammel men come and set their nets round them; is that the practice of your Ring men?—The law compels me to give the line men 200 yards, but if I were to give them 400 they would not be satisfied.

40,993. Would it be disadvantageous to you if a regulation were made obliging you to give the line fishermen 400 yards?—If I were to give him 400 yards he would want another hundred still.

40,994. If that regulation were carried out it would be possible for a hooker to come and fish opposite Ring, or for half a dozen hookers at different intervals to come and fish opposite Ring; and supposing they did so is it against the law for you to set your trammel-nets within 200 yards of them?—It is.

40,995. Might the law then prevent you from using your own trammel-nets off your own coast?—I would not care to go within 200 yards of them.

40,996. But the state of the law is such?—Yes.

40,997. That if the hookers were fishing off Ring you would not be permitted to set your nets within 200 yards of any of them?—I would not set my nets within that distance.

40,998. Because you would not bring yourself into a court of law?—Yes.

40,999. But any other man might in the present state of the law bring you up for using your trammel-net within 200 yards of them?—They would bring me to law if I went nearer than 200 yards.

41,000. Do you find that that regulation prevents you from using your trammel-nets where you wish to use them?—Yes, I cannot use them where I should like.

41,001. (*Mr. Lefevre.*) Do you find as a rule that the hookers are already anchored when you go out with the trammel-nets?—Sometimes they will be; they will often be set before me, and perhaps I may have my trammels set occasionally before them. I cannot wait till they come out; if they be out before me I give them as much room as I can.

41,002. Where do the Ring men principally sell their fish?—Generally in Cork.

41,003. Is most of it sent to Cork?—Yes, we send up the cod, ling, and hake, and get plenty of money for them.

41,004. How are the fish carried to Cork?—In open boats.

41,005. Are they the boats ordinarily employed in fishing at other times of the year?—Yes.

41,006. Has the number of those boats engaged in carrying fish to Cork increased of late years?—If I have fish to go up I get other men to join with me, and perhaps I and four of us will work the boat up.

41,007. Has the number of boats which have gone up to Cork of late years been greater than it used to be?—Yes, there are more now than there were ten years ago.

41,008. Have you sent considerable quantities of fish to Cork for the last 10 years?—Yes, I was throwing the fish away before I managed to get at that work, and did not know how to sell it then. I was selling it for little or nothing. At last they told me how to send

it to Cork, and now I do not sell at all in Dungarvan market, but I keep it together until I have enough to send off to Cork.

41,009. Do you mean to tell us that for the last 10 years the market in Cork has been so much better than the market at Dungarvan that you have sent all your fish there?—Yes, we can get a better price there for it.

41,010. And in consequence you have not sent your fish to Dungarvan as you formerly were in the habit of doing, but have sent it to Cork?—Yes.

14,011. Do you send any hake fresh to Dublin?—No.

41,012. What do you say is the price of fish now compared with what it was 30 years ago?—We sold it fresh in Dublin at that time, and got for it from 12*s.* to 15*s.* and 18*s.* a score at that time.

41,013. What are you getting now?—We get from 22*s.* to 24*s.* and 25*s.* a score for ling and cod.

41014. Then the price has improved?—Yes, and we are keeping the Scotch people out of the Cork market with their ling. We supply that market now ourselves.

41,015. How long does it take you to set your trammel-nets?—It will take me an hour before I have them set.

41,016. How many men do you have in your boat with you?—Six men.

41,017. And how do you pay them; do you share the profits?—They will give me one out of six fish for the boat's share.

The witness withdrew.

EDWARD WHELAN called and examined.

41,018. (*Mr. Kelly.*) Did you hear what Patrick Whelan said?—Yes.

41,019. How long have you been living at Ring?—Forty-seven years.

41,020. How long have you been fishing?—For the last 30 years.

41,021. Did you hear the account that Patrick Whelan gave?—Yes.

41,022. Was it right?—It was.

41,023. As far as you know?—Yes; I think that the trammels have been working better in my time. The Dungarvan men say that they show in the water and that they frighten away the fish so that they cannot get them, but that is not the case. I can assure them that where they have as many as 30 hookers, all of them engaged in putting out their cables, they show three times the amount of fire in the water that we do.

41,024. The hookers, by moving their cables, cause more disturbance in the water and show more light than the trammels do?—Yes.

41,025. How do they cause light?—The water gets red. There is another thing I can prove, and that is that I have seen these Dungarvan men fishing with their lines in the daytime when there is not a line allowed to be down on board the hookers. If we do not have our nets set in the evening by sunset we may as well stop on shore, for the fish get to the bottom, and we get none in the morning.

41,026. Do you know whether the Ring men have been in the habit of going to sea in indifferent or bad weather when the Dungarvan men will not go out?—Yes, I am very sure of that.

41,027. Is it the fact?—Yes, and the Dungarvan men know that it is. They tell us that they would sooner go to the poorhouse than struggle as we do; but they will go out on a good evening, while we go out in all weather.

41,028. Have you been in the habit of using the trammel-nets in the same place for any continuous number of days?—Yes.

41,029. In the same place?—Yes.

41,030. Do you find whether you catch less fish at the end of the week than at the beginning of it?—We get the greatest quantity sometimes on the Saturday morning. If I had to leave a net out I would leave it out on the same spot for a week. I have had so many fish sometimes I could not get them to the shore. I remember upon one occasion leaving this town at eight o'clock; I went round to Helvick and went to sea the same night about twelve o'clock. There were three or four hookers fishing with their lines, and one of them had about 200 hake. At two o'clock or three o'clock that night I anchored, and where I anchored I took 1,200 hake. I was much more successful than the Dungarvan hookers.

41,031. Did you catch them with the hand-lines?—Yes.

41,032. And you caught more than the Dungarvan men?—Yes, I remained there afterwards till the next night, expecting the same fish, but I only caught 20 or 30 hake

41,033. That was with the line?—Yes

41,034. Are you not in the habit of going with the trammel?—Yes.

41,035. Do you find that the trammel frightens away the fish?—I can prove that neither the trammel nor anything else frightens away the fish. I have had trammels out, and have caught a good many fish outside one day; then I may have had them nearer the inside next night, and I have caught fish night after night in that way until they have come close into the shore. The hake have been gradually drawn in as it were, but they will not come in unless it is by the will of God. That is all I have to say about the fishing.

41,036. Have you caught much fish this season?—Yes.

41,037. By the trammels?—Yes.

41,038. About what quantity?—I had 10 score in my boat yesterday,—the crew and myself.

41,009. Have you any land?—Yes.

41,040. Do you till it?—Yes.

41,041. Do you till it yourself?—Yes.

41,042. How do you spend the rest of your time in the year?—When I am not fishing I am idle, walking up and down the roads, but we have different kinds of fish here all the year round.

41,043. Are you not able to go out now in bad weather when the Dungarvan men are coming in?—We go out, but it is difficult to stand out in bad weather.

41,044. But do you stand out?—Yes, both with our long-lines and our small nets, which we put from the shore. We use the long-lines in the winter.

41,045. (*Mr. Anderson.*) Your evidence is that the more you catch with the trammels the more fish you find to catch?—Yes.

41,046. And the more you catch with the lines the less there is to be caught afterwards?—I do not say that.

41,047. You caught a lot one night, and none the next?—Yes, often.

The witness withdrew.

JOHN KEANE called and examined.

41,048. (*Mr. Kelly.*) You live at Ring Over?—Yes.

41,049. Are you acquainted with the fisheries there?—Yes.

41,050. You have been acquainted with them for a long time, I believe?—Yes, for about 60 years.

41,051. Do you know anything about the use of the trammels and of the trawls there?—Yes, right well.

41,052. Have you been in the habit of using them yourself?—I used the trammels for about 30 years, and the hand-lines and a trawl besides.

DUNGARVAN.

J. Keane.

25 Aug. 1864.

41,053. Did you find that the fish were increasing or lessening by the use of the trammels?—I have found the fish increasing for the last 30 years. There are more now than there were 60 years ago, with all the hookers and trammels together. In the year 1860 the hookers and trammels could have as many fish as they liked.

41,054. You had plenty of fish then?—Yes.

41,055. All the trammels and hookers had plenty of fish then?—Yes, and the trammels did not run away with the hooks, but they used to fish and the hookers used to fish alongside of them. The Dungarvan people know that very well. They have given a wrong account as to there being a wall here and a wall there to prevent the fish from reaching them. The trammels are only about nine feet in the water. They are about eight feet or nine feet high in the water, and there will be 40 yards perhaps between one and the other, and you will see the fish playing all over the nets. Hake will be caught by the hooks within two and three fathoms of the bottom.

41,056. Do you consider that the use of the trammels has lessened the quantity of fish here or frightened them away?—On the contrary, I swear that the quantity is daily increasing. That is what it is doing now, and it has been increasing for the last 30 years, and the heavier the draught we carry the heavier boats we have had to carry it, and notwithstanding all that the quantity of fish has increased greatly.

41,057. You do not mean to say that the more there are killed the more are alive?—There are a great deal killed, and there are a great deal alive too, and there are a great deal to be taken out of the sea yet I hope.

41,058. Do you find that there is as large a quantity of fish now in the sea as there has been for some years past?—Yes, there is generally, except in a slack season.

41,059. Are you quite sure that the trammel does not frighten the fish away?—I am fully sure that it does not.

41,060. Have you often used the trammel in the same place for more than one day?—I have used it constantly on one spot near the cliff, within 60 yards of the cliff on the same spot.

41,061. How long ago is that?—About 30 years ago I first used it, and I have been fishing on the same part for a whole week, and the last day I have got as many fish as on the first, and I have got fish also upon my hand-lines riding out from the trammels. The trammels themselves were anchored.

The witness withdrew.

H. A. Fitzgerald.

HENRY ANTHONY FITZGERALD called and examined.

41,062. (*Mr. Kelly.*) You reside in the nighbourhood of Ring?—Yes, near Dungarvan, close to the principal fishing ground.

41,063. You are acquainted with the fishermen in that locality?—Yes, well.

41,064. About how many trammel-boats are there?—There are about 20 boats with trammels, with six men in each, but the families of each may average seven; that is about the lowest. Each man uses about nine dozen of hemp in the season. The hemp costs 4*d.* a pound for spinning. No woman spins more than one pound of hemp per day. This is spun by all the poor women throughout the country. It gives employment to women seven miles away from Helvick. The fishermen pay 4*s.* for the making of each trammel net. There are 18 trammel-nets in each boat, and the hemp costs about 10*s.* a dozen. Each man uses nine trammels in the course of a season, so that it costs him 4*l.* 10*s.* for nets alone, or rather for the hemp for the nets. Taking it at 120 men, the total will be 540*l.* worth of hemp used in one year, and that of course must benefit the growers and importers of hemp. In addition to that there is the cost of spinning the hemp, which may be taken at 4*d.* a pound. The total sum paid in that way will be about 270*l*; that is for the spinning and making of the nets. On the whole I calculate that about 1,080*l* is paid by the Ring men for their gear alone; that is for their corks, nets, hemp, and everything necessary in the construction of the trammels.

41,065. Is that per year?—Yes, 1,080*l.* per year. At the present moment they say there is a decrease in the quantity of fish. Now at the present moment there is a man in this neighbourhood who has between 2,700 and 2,800 dried fish in his possession, taken this season. I think that is as much as any man has ever had before within my recollection. I may mention that to the best of my belief the reason of the falling away of the fisheries in Dungarvan is that the Dungarvan men fish merely with the hand-line; they fish with nothing else.

41,066. Are we to understand and to take it for granted that there has been a falling off in the supply of fish in Dungarvan?—Yes, decidedly, but it has not been a falling off of the fish; it has arisen entirely from the Dungarvan men using the hand-line alone. At Kinsale in 1842 they had only 15 hookers. Now they have 45 well equipped and fine sailing boats. The reason of the increase there was that when they saw the hand-line was not doing well they only took to it at a certain season of the year, and went after the herrings at another portion of the year. The long-liners go to the Nymph bank, and they are a prosperous set of fishermen there, instead of falling away like the Dungarvan men. The Dungarvan men will tell you that they have not been brought up to trawling or long-line fishing; it is too severe for them. I know an instance in which a boat was placed at their disposal for long-line fishing, and in a short time the man in whose charge it was placed had to dispose of his gear to the Ring men owing to the want of men to work the line. The Helvick men are always at some sort of fishing; sometimes lobster-fishing, sometimes one fishing, sometimes another. I have known most independent men there come here and sell seaweed at 2*s.* and 3*s.* a boatload. They would be sooner getting that for a day's work than be idle. In the year 1842 there were in Dungarvan 80 line-boats, and now there are only 25. Ten years ago the Ring men had about 10 hookers of an inferior class, but now they have 14 of a much better class. The only way in which the trammel men interfere with the Dungarvan men is in cheapening the price of fish. Certainly, to the best of my belief I can state that if the fish at Dungarvan were all supplied by the Dungarvan men, instead of seeing hake sold at from 1½*d.* to 3*d.* we should see them up to 2*s.* or 3*s.* a head. It has been stated that the cod and ling and haddock have decreased in consequence of the use of trammel-nets. Now that cannot possibly be, because they are not set at the same season of the year. There is never a trammel set after Christmas, and there are no long-line fish taken until after Christmas. Again, these fish are taken at a distance much further out than the trammels are ever set. The cod and ling fishery is greatly on the increase at Ballymahon. Last year I saw a hooker come in after one shot of his long-lines with the boat sunk down to the gunwale by the weight of fish taken. They had all been taken in one haul. The fishermen are in a much more prosperous state this year than they have been for a length of time. They are increasing rapidly in prosperity, and they are increasing their boats and gear. They have better boats of every description, and I attribute the great takes of fish to their superior way of taking it, and not to any increase in the fish themselves.

41,067. With regard to the use of the trammels—from your own observation do you consider that the trammels scare away the fish?—A fish is the hardest thing in the world to scare away. I myself have frequently in fishing lost a big hook with a heavy fish, and the next man has caught the fish two minutes after

I lost it with the same hook in his jaw. It has been said that the fish sticking in the trammels frightens away other fish, whereas in my opinion it only tends to attract more. Where you have one fish meshed in a net you will have scores attracted to the spot rather than being frightened away. With regard to the injury done by the trawlers and the injury done to the spawn, I think that is rather a question for the naturalist than for the fisherman. It is very doubtful to me whether the fish spawn on clean ground at all. It is very doubtful to me whether what the fishermen say is spawn is really spawn. I have seen it myself and I should be sorry to say whether it was spawn or not. The trammels cannot possibly injure or destroy spawn or young fish as they are merely a fence of nets standing upright in the water. The meshes being large, small fish can freely go through them. The only small fish that can mesh themselves in the trammels are gurnards, and that is owing to the formation of the fish themselves.

41,068. Their large pectoral fins?—Yes. I have frequently seen the Ring trammel men going to set their trammels when the Dungarvan men have run under their foresail. If there were no trammels, no doubt the line men would be able to get a larger price for their fish.

41,069. Have you ever had reason to know whether the supply of fish in the sea has increased or decreased?—I cannot tell you that, but I can prove that more fish are now taken by the Ring men than in former years. 4,000*l.* worth of fish has been sold every year for the last three or four years.

41,070. And sent to the Cork market?—Yes. The trawlers and line fishermen sell their fish in Dungarvan. A man named Halley, who was the man I mentioned to you just now, has 2,700 hake salted in his possession. With regard to trammels, trammels do not prevent herrings coming in as the nets are at the bottom of the water and are not permitted in the harbour, whereas the herrings and sprats move over the surface. The time for catching herrings, as proved in Dublin, is from May or June till December. Here they are not looked after or taken till they come actually into the channel of the river between the Cunnigar Point and Ballinacourty about November or October. They are then full of spawn, and it is questionable whether they ought to be taken then at all. Herrings should be caught in the deep sea, but we have no boat or gear suited for taking them there; and hence we wait till they come in probably to spawn. If there were no trammels the line fishermen would have larger prices when the supply was limited, but with small takes and low prices the line men suffer but the public are benefited. Ring men have often fished with their boat moored over their nets and succeeded as well as those anchored at a distance. If the nets are left in the water two or three nights, owing to stress of weather, almost all the fish caught the first night is destroyed by other fish preying on them; a proof that they are not very formidable. If the net owners shoot their net too close to a boat at anchor, the law provides a remedy and such boat may be punished. Ring men are hard working in all weathers. They have improved their boats within the last 10 years and can shoot their nets in almost all weathers. The take of fish continues good; though some years may be inferior the next may be better; last year was not a good one, nor this year up to the present, but it may still turn out a good one. The quantities of hake taken here are very large. They are mostly saved and sold in the Cork and London markets after Christmas. The price of the dried fish has improved of late years. The haddock have entirely disappeared. This, however, cannot be attributed to our net men or trawlers, as haddock were generally taken a long way out to sea with cod and ling. Why they have left is only a matter of conjecture; some say steamers, and others, the trawlers and such like have been the cause. The Dungarvan men will probably attribute it to the trawlers. If Dungarvan men improved their boats and gear with the times and carried in addition to hand-lines, spilliards, drift-nets, &c., so as to be prepared for every contingency, we should then have no complaints, for when one mode failed they could try another as is the case in Kinsale. With regard to the injury done by trawlers in destroying the spawn we have watched the salmon. They plough a long trench in gravel, deposit the spawn, and then cover up. If any escape it is instantly devoured by other fish. Now if other fish select dirty ground, gravel, rocks, and seaweed for depositing the spawn, no trawler can approach or injure it. If the nets occasionally take up some spawn, may not that have been uncovered, and washed out from its berth by the force of the tide and thus exposed to be a prey for other fish? There are 14 boats trawling with four men in each boat. The general time for trawling is from the 17th of March to the 1st of August. When cod and ling fishing commences the boats trawl in Broad Sound for bait for the long-lines. The dabs caught in Broad Sound are the best bait for cod and ling, and to the best of the belief of the fishermen the trawlers take up no spawn in trawling in Broad Sound.

41,071. (*Mr. Anderson.*) You are rather friendly to the Ring men I believe?—I am just as friendly to the Dungarvan men. I am friendly to every man who is industrious.

41,072. But you like the Ring men a little better?—Not a bit; it is all the same to me.

41,073. You say that cod and ling have increased?—Yes.

41,074. They are taken outside where the trammels are set?—Yes.

41,075. Do you believe that if there were a lot of nets down where they are taken the line men would be able to get as much as they do?—I believe it would be an impossibility to set the trammel nets there.

41,076. But suppose it was done?—If you give me an if I hardly know how to answer you; no man would be fool enough to set nets there.

41,077. But if it were possible would you have as many fish?—I do not think cod and ling would mesh in the net as the hake does. They are a larger fish and the mesh would have to be much larger for it.

41,078. As a matter of fact, do not the line men take a much smaller quantity of fish than they did formerly?—I believe they have done so last year and this year up to this time, but the year before I was fishing in a small boat occasionly, and I never took more than I did then.

41,079. Do you know that the Dungarvan men for years past have not taken as many as they did?—They have not the men now to take them in the first place.

41,080. But when the boats are out do they not take less in each boat than they used to take?—I believe that is the case.

41,081. Has the quantity taken by the trammel men increased or diminished?—I should say up to last year it has increased. Last year was an average year and there is a very fair promise this year.

41,082. You mentioned Halley as having the largest quantity. What is the average quantity taken by the other men?—I believe it has been the same average up to this time as in other years.

41,083. What is the average?—That all depends; some fish with two trammels and some with more. Halley has a boat to himself; he has the boat's share, and he has seven or eight trammels fishing for him.

41,084. What is the average quantity taken in each trammel?—Some days there may be 50 hake in a trammel and some days not five.

41,085. What is about the average?—I can hardly strike an average. 50 or 60 is the most I ever saw and I have seen the trammels brought in without fish at all.

41,086. Is the quantity less this year than last?—I do not think it has been up to this time.

41,087. Are they catching as many fish this year as they did last?—I think so.

DUNGARVAN.

H. A. Fitzgerald.

25 Aug. 1864.

41,088. How many seasons back do you remember the fishing?—For many years.

41,089. Is the quantity taken in the trammels as much as it was 10 or 20 years ago?—The year before last was the best year I ever remember.

41,090. Have they caught as much in the trammels on an average?—Yes, there is an increased quantity, but the trammels themselves are getting larger. I remember when they were only 20 fathoms long, and now they are 40 fathoms long.

41,091. And there are a greater number of them?—Yes.

41,092. The greater quantity of trammels have taken a greater quantity of fish?—Yes, of course.

41,093. Do you know whether the fish that are taken in the trammels are as good as when they are taken by the hand-line?— Decidedly not for fresh eating.

41,094. Are they wasted?—No; some of them are right good, but they are somewhat mashed up, and the scales are rubbed off them. They are not as good when fresh as the hake killed by the line, but when they are salted I never saw the least difference.

41,095. Are they smaller fish than those taken by the line?—No, they are about the same. They will catch a hake on the line quite as small as they will catch one on the trammel.

41,096. Will the line men catch as many fish when the trammels are about as when they are not?—That all depends upon how the trammels are set; if they are above they will, if they are below they will not.

41,097. If the trammels are set within 500 or 100 yards of the boats engaged in the line-fishing, will that interfere with the line-fishing?—It does in this way; it does not frighten the fish, but it kills the fish that would otherwise come to the hook.

41,098. Has it no effect in frightening them?—Not the least effect.

41,099. Does it not turn them back or make them go on one side?—I do not think so.

41,100. But what do the hake do if they see a number of other fish caught?—I think it causes them to put their own heads in the mesh. As to the fire which they speak of as being seen in the water it is a great doubt to me whether the fish see it at all; it is a phosphoric fire, and will be seen as much from the cables of the hookers as from the trammels, but I have a great doubt whether the fish see it at all. I think that the water appears just in the same condition to the fish at all times.

41,101. (*Professor Huxley.*) You mentioned the case of Kinsale Bay just now?—Yes.

41,102. Does the comparison strictly hold; is there any trammel-net fishing going on there?—I think there is at Courtmacsherry, at the mouth of the harbour.

41,103. Did you hear Patrick Whelan's statements?—Yes, I did.

41,104. Do you agree with them?—Yes.

41,105. There is no important matter in which you disagree?—No.

41,106. On the whole you consider his statements to be fair?—Yes.

41,107. Especially as to the increase of gear and the money invested in the fisheries?—Yes, he is quite right upon those questions.

41,108. You stated that the only way in which the trammel nets interfered with the liners was by over supplying the market, but in addition to that I presume you would admit that the trammel-nets catch a great many fish which the liners might otherwise catch?—Yes.

41,109. So that when trammels ure used in the immediate vicinity of liners they do abstract a quantity of the fish which the liners would otherwise catch?—If the fish remain at the bottom they do; if the fish rise to the top of the water and take the hook the trammels have no offect upon them.

41,110. If there were no trammels there would not the hake be caught; would they escape altogether?—Decidedly. The hake may be as thick under you as they possibly could be, and yet not one of them would take the hook.

41,111. And under these circumstances the hake could not be caught by the line although they are caught by the trammels?—No.

41,112. Then in that case it is not a disadvantage to the hookers to have these fish caught?—No; the only way in which in fishing the trammel could interfere with the hookers is, that if the hake feel inclined to bite and make for the hook, and the trammel is between them and the hook, they mesh in the net and are not caught on the lines. I should like to refer to the observations made by some of the Dungarvan fishermen that they had brought some of the Ring fishermen before a bench of magistrates and did not get justice; I deny that entirely. Their case was gone into fully, and wherever it was proved that the Ring men had infringed any of the byelaws they were punished, and severely punished too, as the records of the court-house will show.

41,113. (*Mr. Lefevre.*) Have there been any convictions?—Yes.

41,114. Is it within your observation that the byelaws are generally attended to?—No, decidedly not. I am sorry to say that the Ring men do infringe the byelaws, but when it has been proved that they have done so the magistrates have punished them, and it always lies in the power of the Dungarvan men to punish them wherever they are found infringing the byelaws.

41,115. (*Professor Huxley.*) Apart from the catching of fish that the liners might otherwise catch, are you of opinion that the setting of the trammels does not interfere with the working of the line-boats?—It is not clear that the liners can work over or under them without carrying them away. If a line man goes out at night he cannot see the trammels and he anchors upon them, it is then a hardship upon both parties. He loses his night's fishing, and the trammel is torn to pieces with his anchor.

41,116. But if the trammel be set during the daytime would not the situation of the trammels interfere with the working of the lines; is it practicable for the lines to work over or under the trammels?—There is plenty of room for both if they kept out of the way of each other. There is a byelaw upon that point which ought to be insisted upon, and the Ring men ought to be made to keep 200 yards from every hooker.

41,117. I want to ask you a question about the operation of that byelaw; if it be rigidly enforced might it not be possible for half a dozen or a dozen liners to take possession of any fishing ground they choose? Suppose they made their way down before sunset, and began fishing over ground stretching for a couple of miles, any law that would prevent any trammels from coming within 200 yards of them would give them the absolute occupation of the ground, would it not?—Yes, of that ground, but not if they, the trammel fishermen, have plenty of room to keep away from the hookers.

41,118. You do not think that is a hardship then?—Not to the trammel men, certainly not.

41,119. But are not the hake in the habit of going together in bodies?—Yes, but it is all chance who gets them.

41,120. Are the shoals of hake so local that they might by careful attention on the part of the liners be monopolised in the way I have mentioned?—No, certainly not. It would be no hardship upon the Ring men to be obliged to obey that regulation.

41,121. Is it any hardship on the Ring men to obey the further law?—There is no hardship about their having the trammels up. At one season of the year,—the herring season—the Ring men not only fish with trammels for hake during the season, but during the night they fish also for herrings; you will see them take their trammels on board and go out and shoot their nets. The women and children at Helvick have the herring-nets hauled up on the little quay there; they are ready to be put on board the boats. The men

come in after fishing all night, get rid of their herrings, and then go off again with the trammels. I think, however, it would be a hardship to keep them to a particular hour of the morning and then punish them if the trammels are not up.

41,122. But if they were not up would it not be impossible for the line men to fish at all?—The line men haul up at the same time and go to Dungarvan. They fish every night, and in the morning haul up and go to Dungarvan with the tide.

41,123. Are they off the ground earlier so as to allow the limitation of time to be somewhat extended?—Yes, in the daytime they kill nothing. Perhaps an odd time, after a storm or something of that kind, they may kill a hake in the daytime, but that is an exception.

41,124. You are of opinion that trammel-fishing is not a wasteful mode of catching fish?—Decidedly not, except that owing to a stress of weather the fish are sometimes caught in the nets and are not taken out until they are altogether destroyed, as the boats are not able to get at them. But, as a proof that the fish are not frightened by dead fish in the nets, I may say these trammels will sometimes lie out for three or four nights owing to stress of weather, and when the fishermen go to them they will find live fish mixed up with the dead ones in the nets.

41,125. Do you agree in the statement made by Patrick Whelan that fish below a certain size could not be taken in the trammels?—Yes, except gurnard.

41,126. And not whiting?—Whiting may be taken by the teeth, but they are an unimportant branch of fishing here. They are mostly used for bait when they are caught.

41,127. With respect to the trawling, does the working of the trawls interfere with the liners?—They do not work at the same time. The liners fish at night and the trawlers in the daytime.

41,128. Do the trawlers injure the fish except by taking them largely?—I think not.

41,129. What is the average size of the mesh in the trawls?—I have not measured them lately. When I did I think it was about three inches at the bottom and from that to four and a half and five inches in the wings.

41,130. That is on the diagonal, pulled out?—Yes.

41,131. Some we measured this morning were from two and a quarter running down to one and a half?—That is decidedly too small.

41,132. Is that smaller than the ordinary run?—Yes.

41,133. I speak of two and a half inches from knot to knot, not pulling out the mesh?—The only thing would be that a net of that sort would catch small fish that were not saleable, but if the size you mean was only two and a quarter from knot to knot, without pulling out the mesh, perhaps it would not be too small.

41,134. Then this net was not too small?—No.

41,135. Have you ever worked with the trawl yourself?—Yes.

41,136. The trawl used here is of a different description from that used by the heavy smacks?—Yes.

41,137. It is a pole-trawl?—Yes; a rope goes along with the trawl with iron things attached to it like hammers. The other description of trawl is a beam-trawl, which has a kind of scraper. There is a trawl here called the otter-trawl.

41,138. (*Mr. Lefevre.*) Do the Dublin trawlers trawl off this coast at all?—Yes.

41,139. What distance do they come in?—Within three or four miles, and they do an immense amount of damage.

41,140. In what way?—They take away the long-lines; and then again it is the spawning season of the year when they come here, and, although I cannot say whether they destroy the spawn or not, still, if they do not destroy the spawn, they destroy the spawning fish.

41,141. You think then that the larger class of trawlers do damage but not the smaller class?—Not if they trawl at a particular season of the year, but at the season of the year when they do trawl they do damage.

41,142. What is the season?—All during the winter, which is the spawning season for the fish.

41,143. For what fish?—I have heard it said by the fishermen that down at Dunmore they have seen basket-loads of small haddock thrown out by the trawlers when they come in there.

41,144. That is small fish, not spawn?—Yes, but the spawning fish will be there too. There will be the mother and the young.

41,145. What fish spawn then?—Haddock, cod, and ling, I think, are spawning then.

41,146. Have you yourself observed the fish taken by the trawl?—Not by that trawl.

41,147. I mean by any of the larger trawls?—Not by any of the larger trawls. I can only speak from hearsay.

41,148. How long ago is it since Ring became an important fishing village?—Since the famine year.

41,149. To what do you attribute the increase in the prosperity of the fishermen at Ring, and the decrease in the prosperity of the fishermen at Dungarvan?—I attribute it to the Ring fishermen being a hardier and more daring set of men in the first place, and to the Dungarvan men getting encouragement in 1847 and not availing themselves of it.

41,150. Have they any facilities of position?—They have very good landlords, who give them a house and a plot of ground.

41,151. Is their village better situated?—It is nearer the sea than Dungarvan.

41,152. Have they a harbour?—Only a small one.

41,153. Are there any other small villages inside the bay like Ring?—Yes, Ring, Helvick, and Ballymagowrie.

41,154. Are they inside the bay?—Yes, and near each other.

41,155. Is there anything more until you get to Ardmore?—No.

41,156. What sized place is that?—It is a nice little village not as big as Dunmore.

41,157. Are there any trawlers from there?—Eleven.

41,158. Have they trawl-nets?—Yes, but they do not go outside their own bay. They are only small yawls, about 16 or 17 feet long.

41,159. Do the other trawlers trawl in the bay at night at all?—No.

41,160. Are there any oyster beds here?—Just here immediately at Dungarvan there are.

41,161. Are there as many oysters as there used to be?—I do not think there ever were many there, but I believe there are about the same quantity now. I believe there has been an Act obtained by two gentlemen for laying down oysters here.

41,162. Is that within the last two or three years?—Only this year, within the last few months I believe.

41,163. Do you know at what season of the year the hake spawn?—You will see them spawning from September.

41,164. Do you think they come into the bay for the purpose of spawning?—I think they come into the bay in chase of other fish.

41,165. Do they run in close?—Yes, they run in so far at times that I have seen them killed with the seine-net from the rocks; I have seen hake killed within 20 fathoms of the rocks.

41,166. Where are the Ring fish principally consumed?—I think they go to Cork, and some of them go to the London market.

41,167. To be consumed by the poor?—I believe so.

41,168. Is it possible to get anything like a reasonable notion of the quantity of fish taken into Ring in the course of a year?—I think on the average there is 10,000*l.* worth of every sort of fish killed by the Ring men.

DUNGARVAN.

H. A. Fitzgerald.

25 Aug. 1864.

41,169. Are you of opinion that the putting down of trawling and trammel fishing would put an end to that supply of fish?—If that were done it would destroy between 700 and 800 people, and bring them to the poorhouse; they have no other earthly means of living.

41,170. But if the trawling and trammel net fishing were put down, could the supply of fish now obtained from those sources be obtained from line-fishing?—Certainly not.

41,171. Will you give us your reasons for coming to that conclusion?—At one time the line-fishing was carried on at Dungarvan by as many as 80 boats; they supplied the Dungarvan market and the inland market, but now the supply is so great that not only does it go to Dungarvan for consumption here, but it goes to Cork; whereas the 80 boats were only able to supply Dungarvan and the neighbourhood with fish, the 25 boats now at Ring are able to supply a great deal more.

41,172. Do you wish to see any restriction put upon the larger trawlers?—I think they ought to be restricted to certain seasons of the year, except in the Broad Sound.

41,173. You would not place the same restriction on the small trawlers?—Yes, upon every sort of trawler. They ought not to be allowed to trawl from the 1st of September until the 1st of April.

41,174. On the ground that at that time they destroy the young fish?—Yes, and spawn. It would, however, be a hardship to stop trawling in the Sound during the cod and line season, as they depend upon it for a supply of bait.

41,175. Then you would put a stop to the larger class of trawlers, but not to the smaller class?—I would put a stop to all except in the Broad Sound.

41,176. (*Professor Huxley.*) Is there any further statement you wish to make to us?—No.

41,177. Does the occupation of small portions of land in any way diminish the industry of the Ring fishermen?—Not at all, it adds to it; but these men will not themselves stop the fishing in order to till the land.

The witness withdrew, and the inquiry was adjourned until the 26th of August at Kinsale.

Kinsale, Cork, Friday, 26th August 1864.

PRESENT:

Professor HUXLEY, F.R.S. (Chairman). | G. SHAW LEFEVRE, Esq., M.P.

KINSALE.

R. Lander.

26 Aug. 1864.

ROBERT LANDER called and examined,

41,178. (*Professor Huxley.*) Are you a resident in Kinsale?—Yes.

41,179. What is your occupation?—I own some vessels here, and I have property. I have been living on the quay, and I have taken up the fishing business for the last nine years, more as a matter of amusement than anything else.

41,180. Have you interested yourself in the fishermen, and in their modes of living?—Yes, for the last nine years.

41,181. Can you tell us what kinds of fishing are practised here?—Mackerel-fishing from the end of February and March until the middle of July, which is the only remunerative fishing we have. They are now engaged at the hake-fishing, but they would not be able to exist out of that.

41,182. What time do they begin hake-fishing?—After the mackerel leave; they are, however, so low in price that of itself the hake-fishing would not remunerate them.

41,183. Then from July until what month do they fish for hake?—Until about the month before Christmas, some of them continue it up to Christmas.

41,184. Is there no herring-fishing here?— It commences at that time.

41,185. At Christmas?—Yes.

41,186. And goes on until when?—Until February, or until the mackerel come in, when they take the herring nets ashore.

41,187. Do they follow any long-line fishing here?—Yes, about a month before Christmas they get mussels for bait. The only remunerative fish they have taken in that way has been the haddock, and the mussels they have been obliged to get from Kenmare.

41,188. Up to what time does that fishing last, from November until when?—Some of the boats continue at it until the mackerel time; if the weather is suitable or the tide they continue it until about that time. If the sea is boisterous and there is bad weather they may not get two nights in a month to fish for herrings.

41,189. Is there any oyster-fishing here?—There is some little oyster-fishing, but I do not know much about it.

41,190. Is there any lobster-fishing?—Very little; the boats go to the eastward to Ballycottin, and to the westward to Glandore.

41,191. How many fishing boats are there in this port?—I am not quite certain.

41,192. What is the ordinary tonnage of the boats?—They are now about 25 tons, from 25 to 30 tons.

41,193. And are they decked boats or half-decked?—They are open boats.

41,194. Altogether open?—Yes; there are four seats for the men to work the lines, and they are all open for the nets.

41,195. Is there any hand-line fishing here?—The hake-fishing is all hand-line fishing.

41,196. Is there any trammel-net-fishing here?—Yes; not in this harbour but to the westward, and our men complain much about it.

41,197. Is it carried on in the bay?—Yes, between the Old Head and the Seven Heads.

41,198. Is there any seining?—Yes.

41,199. Are the mackerel caught by seining or by drift-nets?—By drift-nets.

41,200. Do they seine for sprats?—Yes, when they come in they have large circle-nets which they shoot round them and take great quantities.

41,201. Are pilchards ever seen here?—Yes, but they do not come in, they are seen by the men at sea.

41,202. Do they not fish for them?—No.

41,203. You have known the fisheries here for some considerable time?—Yes, within the last nine years I have had three boats.

41,204. You have owned boats besides?—Yes.

41,205. Can you tell us if within your recollection the number of boats has increased, speaking generally?—As to the number there are a much better class now than there were formerly.

41,206. But has the number increased?—I think it is about the same.

41,207. But the class of boats is much better?—Yes, much superior.

41,208. Do the boats cost more money?—A great deal more.

41,209. Have you any reason to believe that the supply of fish here of different kinds is falling off?—With regard to the hake this year I believe the fishermen never recollect a worse season.

41,210. But taking one year with another has there been any falling off?—I should say the hake are falling off decidedly, and the seine-fish are decidedly falling

off. The mackerel have increased, but that is in consequence of the new system of fishing. One boat now will have as many nets as the whole fleet had formerly. They merely had them formerly for the purpose of getting bait, but now they have long strings of nets extending a mile and a half in length.

41,211. Then the gear of the mackerel boats has increased considerably?—Yes.

41,212. And it has increased in value also?—Yes.

41,213. They are not fished for with seine-nets?—No, unless they come close in-shore, when the fishermen catch them with what we call "school" seines.

41,214. They are not caught with the hook-and-line?—Not in any quantity. They never think of it. Sometimes an individual may go hake-fishing and throw a line out and get a dozen or two in that way.

41,215. Is the mackerel-fishing the most remunerative kind of fishing?—Yes; the only thing we have to pay us here is the mackerel-fishing.

41,216. Are the men engaged in fishing all the year round?—Yes.

41,217. Have they no other occupation than fishing?—No.

41,218. Have they no land to cultivate?—None.

41,219. Are they frugal and saving in their habits and in the habit of saving money?—No; they are very improvident, and very few of them own boats at all. Formerly they did, but they do not seem to have any ambition to own boats at all now.

41,220. Then who have put money into the boats?—Mr. Dawson, myself, and others.

41,221. People on shore?—Yes.

41,222. Very few of the boats are owned by the men?—Yes; there are only two owned by them, and they are very inferior.

41,223. Formerly the fishermen did own boats?—Yes.

41,224. When was that?—Twenty years ago.

41,225. Before the famine?—Yes.

41,226. Was the habit of owning boats by the fishermen diminishing before the famine, or did the famine have any effect?—It was diminishing then.

41,227. Did the famine hasten the crisis?—I think not.

41,228. What was the reason?—Our men are a hardy race of men, but they are most improvident, and they have no wish to get shares or to become owners of the boats. When I first commenced I wished them to take a part, but they only laughed at the notion. They did not care for it; they would rather take wages.

41,229. (*Mr. Lefevre.*) Did the young men continue fishing?—Yes, but some have gone away occasionally.

41,230. (*Professor Huxley.*) Do you think the hake-fishing has fallen off?—Yes, very much.

41,231. What becomes of the hake which are brought in here?—They generally find their way to Cork market. There are other parties who take them in a small way, such as jolters.

41,232. They are sold fresh?—Yes.

41,233. Not cured?—They do cure them when there is a quantity towards the end of the season, when they cannot get a price for them, but none have been saved this year.

41,234. They are caught by the hand-lines?—Yes.

41,235. Is the trammel-net-fishing also directed to catching hake?—Yes, but there are no trammels here.

41,236. You have no trammel-nets?—There is not a trammel-net except to the westward. There are some at Courtmacsherry.

41,237. Do you think the trammel-fishing has had any effect on the take of hake by line?—Our men complain of it, and I have no doubt that it would have some effect. A large wall of nets in the water will scare the fish off, no doubt. There was a law made that all the trammel-nets only should be used at a certain time, but they do not stick to that. They were not to set them until sunset, and they were required to haul them by sunrise; there is a law to that effect.

41,238. (*Mr. Lefevre.*) Have there been any convictions?—Sometimes our fellows if they get near a trammel will take it on board, and there is a law about it, but they seldom go to law upon the matter. If we could adopt some other fishing than hake-fishing at the time the mackerel come in-shore, I think it would be much better for us.

41,239. (*Professor Huxley.*) Are you practically acquainted with the trammel-net-fishing?—Not at all.

41,240. But you know the result of it?—I have heard the fishermen complain of it.

41,241. Have they complained as to the number of fish caught?—I have seen them going into Courtmacsherry with a great number of fish when our boats have had nothing.

41,242. Do you think they catch what the other men would catch?—Yes.

41,243. Then it is the same to the consumer in the long run?—Yes, the hake will sell in the market just the same although inferior.

41,244. (*Mr. Lefevre.*) Do they bring it into Kinsale?—No; they salt them themselves and cure them. They are mostly farmers who use them. In fact there are no fishermen at all who have these trammels, but countrymen living on the coast.

41,245. (*Professor Huxley.*) The herring fishery you say takes place from Christmas until February?—Yes, until the mackerel come here.

41,246. Do you use the same boats for the herring as for the mackerel-fishing?—Yes.

41,247. But different nets?—Yes, different nets.

41,248. Do they use the inch mesh?—Yes, for herring, but a larger size for mackerel.

41,249. Are the herrings brought in fresh here?—They go to Dublin generally.

41,250. Do none of them go to Cork?—Yes, some of them, but the larger number goes to Dublin.

41,251. Is there a large number of men employed in the herring fishery?—Last year there has been, but they have not kept up the nets.

41,252. Are many of the nets owned by fishermen?—None at all.

41,253. They are merely used by the fishermen?—Yes.

41,254. That is an unusual circumstance, is it not?—Yes, but it is so here.

41,255. Have you paid any attention to the condition of the herring at the time it is caught here, from Christmas to February? Is it a fat fish or a full fish?—At Christmas they are in a bad state.

41,256. Are they full of milt and roe?—No.

41,257. Are they shotten fish?—Up to about the month of November they are very good, and after that they begin to get worse.

41,258. Are there many long-lines employed here?—Most of the boats have long-lines.

41,259. The fishermen are the owners of the long-lines, I suppose?—No, they do not own anything except it may be the hand-lines.

41,260. They do not own the long-lines?—No, the owners find all except the hake-lines.

41,261. Have you observed that the supply of hake has remained the same for years past?—Last year it was better than usual, but heretofore it has certainly been on the decrease.

41,262. Up to last year it was on the decrease?—Yes.

41,263. (*Mr. Lefevre.*) Are there any trammel-nets owned in Kinsale?—No, I believe not.

41,264. Are there any other small villages in the bay in which they have trammel-nets?—They may have a trammel in the Lower Cove.

41,265. Is it quite within recent years that that mode of fishing has been practised here?—No, it has been practised for a long time.

41,266. Has there been any increase?—They have more trammels in the westward than they had, about Courtmacsherry.

41,267. What distance do they fish out?—Between headland and headland.

KINSALE.

R. Lander.

26 Aug. 1864.

41,268. What distance do the boats go with the long-lines?—They go according to the season. Sometimes they go to the westward off the Nymph bank, and sometimes coastwise on.

41,269. Has there been any application by the trammel-net fishermen for a modification of the law?—There have been complaints of the fishing with the trammels.

41,270. Is there any trawling from this bay?—Very little. A few come from Cork, but there are none belonging to the harbour here.

41,271. Within what distance do the Cork boats come?—I have seen them trawling in the harbour.

41,272. What sized boats are they?—From 10 to 15 tons.

41,273. Are there any of the large-class boats fishing here?—No.

41,274. You have never seen them here?—Never. I believe there was one belonging to a buyer here which came down and went into Crookhaven, and said it would not do; the ground was not clean enough for a trawler.

41,275. Is the ground outside the harbour mostly rocky?—There are patches of clean ground for trawling.

41,276. But not to a considerable extent?—No.

41,277. Inside the harbour is it clean ground?—Yes.

41,278. Have you heard of any complaints against the small trawlers for interfering with the other fishermen in the bay?—No, I have not, because it is seldom practised here.

41,279. Is there any export of fish from Kinsale?—Do you mean of salt fish?

41,280. Yes.—Yes, it goes to Cork and elsewhere according to the winds.

41,281. Do any of the fishermen send off the fish by rail?—Yes.

41,282. Where to?—Dublin, Cork, and all parts. The mackerel are sent to London, Limerick, Birmingham, and various places.

41,283. Are they sent away fresh?—Yes, iced.

41,284. Do the Isle of Man boats come to fish here?—Yes.

41,285. Do they land their fish here?—Yes, and buyers come. They have a steamer from Cork here, and they use the rail also.

41,286. How many boats have been here this last season?—About 28.

41,287. What is the season?—The end of February, and they remain until the end of May, until their own herring-fishing commences.

41,288. Do any Cornish boats come here?—On one occasion there was one or two here.

41,289. Do you know what number of boats from this port are engaged in the mackerel fishing at that time?—All that can muster the netting—about 32.

41,290. Do they use the same nets that they use for the herring?—No, they use a different mesh. It is a larger mesh for the mackerel.

41,291. What is the mesh for the mackerel?—Three inches, or three and an eighth, but the Manx men use cotton.

41,292. That is the mesh pulled out?—Yes.

The witness withdrew.

J. Hayes.

JOHN HAYES called and examined.

41,293. (*Professor Huxley.*) Do you belong to Kinsale?—I belong to Scilly, a little village off here.

41,294. Are you a fisherman?—Yes, I am.

41,295. How many years have you been fishing?—About 40.

41,296. What kinds of fishing have you practised?—Mackerel-fishing and long-line fishing.

41,297. And hand line fishing?—Yes.

41,298. Herring-fishing?—Yes, until the herrings failed.

41,299. Have you ever been trawling?—Never, only for a few days along with a gentleman.

41,300. Have you ever used a trammel-net?—Yes.

41,301. Where did you use a trammel-net?—I have not used one these seven years.

41,302. What was the mesh of the trammel-net?—Four and a half inches.

41,303. That is two and a quarter from knot to knot?—Yes.

41,304. How long was the net?—About 200 fathoms.

41,305. And how deep?—About five yards.

41,306. Was it made in the ordinary fashion with corks above and a weight below?—Yes.

41,307. And anchored at one end?—At both ends.

41,308. How do you set it, with the tide?—If the current runs strong we set it with the tide.

41,309. What time did you set it?—About the 1st of October.

41,310. Did you set the trammel because you could not catch hake with the lines?—Yes.

41,311. Did you succeed with the trammel?—No.

41,312. Then you got them neither way?—No, neither way.

41,313. Is that the only occasion upon which you tried trammel-net-fishing?—I left the hooker in that season and was in a small boat. I always followed a hooker with the exception of that season. When I dropped the trammel-fishing I took to the trawl for Mr. Dawson.

41,314. You found the trammel did not answer?—Yes, so I returned to the hooker back again.

41,315. Do you find the supply of hake has continued the same one year with another?—No. For the last seven or eight years there has not been the same quantity that there was formerly.

41,316. In the bay here?—Yes, from the Old Head to the east of Cork Head.

41,317. What do you think is the reason of that?—The firing of the garrison. There is not a pound of fish to be found in consequence.

41,318. When does that artillery practice take place?—This year it commenced on the 1st of May.

41,319. How long does it last?—It has lasted up to the present time.

41,320. Does it go on all the year round?—About six months.

41,321. How many times a week?—Every day except Saturday, I think.

41,322. Do you think that frightens the fish away?—Yes.

41,323. You get mackerel, do you not?—We don't fish for mackerel where they fire the guns, except about the 1st of June. We fish for mackerel about 50 miles from the land; then we haul in in June, and we can often hear the reports of the guns 9 or 10 miles from land where we shoot our nets.

41,324. Have the codfish fallen off?—I have often caught a great lot of cod, but I can see none nowadays. I have caught 9 or 10 score a day, and I cannot get 9 or 10 single ones now.

41,325. Did you get plenty of haddock when they were not firing?—I have been taking 700 in a day.

41,326. On the long-lines?—Yes.

41,327. When did that supply of haddock begin to fall off?—I have not got any for 14 years.

41,328. How many years has the firing lasted?—About seven or eight years.

41,329. Then it is quite clear the haddock were not driven away by the firing?—There has never been a haddock caught in the harbour, or any other fish that swims the sea. Haddock is a deep-sea fish, and we never caught a haddock in the harbour.

41,330. Where were you in the habit of catching them?—Eight or nine miles from land, in January or February.

41,331. Within the last 14 years you have not been able to catch them there?—Not in the same quantity as we were in the habit of catching them formerly.

41,332. Have they fallen off very much?—Yes, we should think it a good day if we got 60.

41,333. What is the reason of that?—I cannot say.

41,334. Is there much trawling about here?—A good deal. There is a great deal on the coast of Ireland altogether. This is like a half-way house for them.

41,335. How far off in the sea?—About four miles out.

41,336. Do they trawl over the haddock ground?—No, they are not accustomed to do that.

41,337. Have they never trawled there?—No.

41,338. Do any of the large trawlers come down there?—No, I never saw any, except the boats belonging to Cork Harbour.

41,339. You are clear that the supply of haddock has been falling off for the last 14 years?—They have not been as plentiful as they were.

41,340. Was there a good fishing for haddock last year?—They might get 40 or 50, and so on.

41,341. But nothing like what they were in the habit of getting formerly?—No; years ago they could get hundreds.

41,342. Have you any notion what has been the cause of the falling off of the haddock?—No, unless it has been the report of the guns.

41,343. Are they not a long way out to be frightened by the guns?—We hear the report of the guns. We hear it as plain with a northerly wind as if we were in the harbour.

41,344. But the haddock is a deep-sea fish?—Yes.

41,345. In how many fathoms of water do you find them in abundance?—In about 55 fathoms of water. It is in the month of May that we catch them there; in January we catch them in 30 fathoms.

41,346. Do you think the haddocks when they are 30 fathoms down can hear the firing of guns seven or eight miles off?—I do not say so with regard to the haddock, but the herring can.

41,347. Has the herring-fishing fallen off?—There are none at all to be got, or at any rate very few.

41,348. Was there ever a great herring-fishing here?—There was not a better place in the world than this was about 15 or 16 years ago.

41,349. Did you have great shoals then?—I have seen 18 maze of herrings in a net and about 40 maze in the rest.

41,350. What time of the year was that?—The 1st of February.

41,351. Has the time for catching herrings here been in the early spring, from January to February, or the mid-winter?—I have seen them caught here in August. I have caught them here in the harbour 14 or 15 years ago, in the harbour and up in the Bandon River.

41,352. But the ordinary fishing has been from Christmas to February?—All the year round we fish.

41,353. When you got herrings in January and February what condition were they in?—They were in good order in January and February, but in March they spend themselves. You will see them as good in February as in the month of January.

41,354. Full fish?—Yes, as full as in January. We have to get the bucket and bucket the spawn overboard.

41,355. In March they are spent?—Yes. In the middle of March they drop their pea.

41,356. Do you ever see herrings in May or June?—Yes.

41,357. Are they small?—No, they are of great size. I have been catching them in June the breadth of my three fingers, as broad as mackerel.

41,358. Were they spent?—No, they were in first-rate order. I have been taking three quarters of a hundred of them in the mackerel nets, 40 or 50 miles from the land.

41,359. I suppose they had not much roe in them; they were fat fish?—They had no roe in them but they were lined with fat.

41,360. That was their condition in June?—Yes.

41,361. In July and August what condition are they in?—They come to gather the pea then and lose the fat.

41,362. Then they lose the fat about July?—About the latter end of July.

41,363. The beginning of August they are in roe again?—Yes.

41,364. In September are they spent?—They begin to spend then.

41,365. In the latter end of September and October in what condition are they?—They have roe in every month except three.

41,366. What months are those?—March, April, and May.

41,367. But you get a good many spent fish in September?—Yes, according to the light and dark. With the light they will spend themselves, and then with the dark they are full again.

41,368. What do you mean by that?—As the moon increases they become full.

41,369. Then about the time of the new moon are they spent?—They land their spawn in the new moon, and when the dark comes on again they will be full again.

41,370. You have noticed that?—Yes.

41,371. You get most spent fish in March?—Yes, at that time of the year they are all spent.

41,372. All spent together?—Yes, in March and April.

41,373. Then in September you get a considerable portion of spent fish?—You see them in September.

41,374. There is very little trawling about here?—There is no trawling at all from our port, only from Cork harbour.

41,375. Is there much sprat-fishing here?—There was formerly, but not now.

41,376. What is the cause of that?—We think it is owing to the firing from the garrison. They formerly came in, in great abundance.

41,377. And when the report of the firing is heard does it send them back?—Yes.

41,378. In what month of the year did you get sprats?—From the 1st of June until the 1st of December. We used to get them here during those six months.

41,379. During the whole six months?—Yes.

41,380. What kind of net did you catch them with?—We had a different mesh on their account.

41,381. Had you a half-inch mesh?—No; it used to be $3\frac{1}{2}$ towards the end, and in the middle it went quite small.

41,382. Did it go down as low as half an inch?—Yes, and less than that.

41,383. Was the catching of sprats a source of great profit to the fishermen?—Yes.

41,384. For how many years has it fallen off?—There have been none these eight or nine years as compared with what there was formerly.

41,385. Is there anything you have to complain of here except the firing?—No.

41,386. (*Mr. Lefevre.*) What time of year do you begin the hake-fishing?—I do not begin hake-fishing here until the latter end of June, but others begin it on the 1st of May. We continue mackerel-fishing as long as we can catch them.

41,387. But as soon as the mackerel falls off you begin hake-fishing?—Yes.

41,388. Do you use the long-line or the hand-line?—All hand-lines.

41,389. Did you never try the long-line?—No, I never fished with the long-lines for them, although we might get a few of them by that means.

41,390. At what distance did you fish?—Sometimes at eight or 10 miles.

41,391. What distance do you call the harbour here?—It extends from the Head of Kinsale to Hangman Point.

41,392. Is that beyond Oyster Haven?—No, it is just inside Bullman Rock.

KINSALE.

J. Hayes.

26 Aug. 1864.

41,393. Have you observed any increase in the number of trammels of late years?—I have seen a great quantity when the fish have fallen in.

41,394. How many are owned by the Ballymakeene people?—I cannot say, but there are a great quantity.

41,395. How many boats are there fishing?—I have often seen 20 or 30, and perhaps 40. There are few farmers who can purchase them who do not have them.

41,396. How many were there 20 years ago?—I do not know exactly, but there were a great many of them.

41,397. Have they increased of late?—I do not think so; they have fallen back.

41,398. Are they catching as many hake as they used to do?—In Courtmacsherry Bay?

41,399. Yes.—No, not one to a thousand. If the fish were there they would shoot their nets, but 20 years ago they used to have hake in millions there; we could not go fishing with our hand-lines for them. We used to go after them in from six to 40 fathoms of water.

41,400. During the last few years have you not observed them?—No, there are no fish there now. They would not allow us to anchor anywhere convenient to their trammels.

41,401. When did they set their nets?—I have seen them all day and all night there.

41,402. Always out?—Yes, whenever they pleased, except when they drew them ashore and took the fish out of them. As soon as they cleared the fish out they set them in again.

41,403. Do you know that the law prohibits the setting of trammel-nets between sunrise and sunset?—Yes, but they break the law.

41,404. Did you ever summon any of them for doing so?—No, but we took their nets one time and brought them in, and they made a promise that they never would do the like again; but as soon as they got their nets they shot them again.

41,405. What price are you getting for the hake now?—I had a score and a quarter, and I got 10*s.* for them to day.

41,406. What would you get last year?—The average price was 5*s.* and 6*s.* a score.

41,407. Twenty years ago what did you get?—Very much the same.

41,408. You do not think the price has increased?—No. If the fish were as plentiful as they were 20 years ago they would be as cheap as ever they were. The scarcity of the fish makes them dear.

The witness withdrew.

D. Leary.

DANIEL LEARY called and examined.

41,409. (*Professor Huxley.*) How many years have you been fishing?—About 20 years.

41,410. Have you practised all kinds of fishing that are practised here?—Yes.

41,411. Mackerel-fishing and hake-fishing?—Yes, and herring-fishing.

41,412. And long-line fishing?—Yes.

41,413. Have you ever been a trawler?—No.

41,414. Have you set trammels?—No.

41,415. Did you hear what the last witness stated?—Yes.

41,416. Do you agree with what he said?—Yes.

41,417. Is there anything you have to add to that?—No, there is not.

41,418. Do you agree with what he said with regard to the damage done by the firing of the garrison?—Yes; about two years ago I was going out of the harbour with the wind S.S.W. There is a rock outside, and in order to get away from the firing our boat took the rock and was very nearly being damaged, and we were near being lost.

41,419. Is that because you were steering to get out of the way of the firing?—Yes.

41,420. Do you agree with the previous witness as to the falling off of the haddock, in comparison with what you recollect 20 years ago?—Yes.

41,421. Was there much more haddock then?—Yes.

41,422. What is the reason of its falling off so much?—I cannot say.

41,423. Have you fished for it often within the last 10 years?—I have fished for it for these 20 years.

41,424. And have you always found it falling off?—They are not as plentiful as they were.

41,425. Are the hake falling off?—They have been doing so for a few years back.

41,426. The quantity of mackerel is much about the same?—Yes. The great injury done to us is by the firing. Many times we cannot get properly into the harbour in consequence of the firing. We have to get up our anchor and remove out of the way.

41,427. Are the guns loaded with shot?—Yes, we have to get out of the way of the shot.

41,428. Then it is not merely the noise you complain of but the actual practice at a mark?—We see the light fish on the top of the water, and when they begin firing the fish go down, and they are off out of the harbour again.

41,429. Do the guns in practising at marks ever prevent you going to the ground where the fish are?—Yes.

41,430. Did you ever actually see the fish driven out of the harbour by firing?—Yes, sometimes I have.

41,431. Can you tell us any particular occasion? What time was it that you saw the fish driven out?—From sunrise until 12 o'clock in the day.

41,432. At what time of the year?—About September.

41,433. What fish was it that you saw driven out of the bay?—Sprats and herrings.

41,434. You saw a shoal of fish and then they began to fire, and the fish fairly left the harbour?—Yes.

41,435. Can you tell us if it is the custom here for the fishermen to own their own boats? Do many of them own fishing boats?—There are a few.

41,436. Do they own the nets?—Yes.

41,437. The herring-nets?—Yes. There are only two or three boats, perhaps six altogether, besides what Mr. Dawson has got in the port.

41,438. Are we to understend that it is the ordinary practice for the fishermen to own the mackerel-nets themselves?—No, not out of this port.

41,439. Do they own the long-lines?—No, they do not.

41,440. In other places they own the long-lines and nets themselves. Is the fishing not good enough to enable them to own their own gear?—There is plenty of fishing, but with the means they have got they cannot do as well as they do in other parts. In other parts they do not give them the nets until they get the price of them and can clear them.

41,441. Do the trawlers do you any harm here?—There is but very little trawling here.

41,442. Have you any complaints to make of the trammel-fishing?—They do us great injury. Many a time there are plenty of hake to be caught, when they come out and shoot round them and we are forced to take up our anchor and go away.

41,443. Does your gear get entangled?—Yes, our lines get fast.

41,444. Do you think it is impossible to practise your line-fishing where trammel-net-fishing is carried on?—Yes.

41,445. (*Mr. Lefevre.*) What distance do you think you ought to be from the trammel-nets?—We should not be less than half a mile from them.

41,446-7. Would not 200 yards be sufficient?—No, because the cant of the tide would take us foul of their nets.

41,448. You anchor your boats when you are fishing with hand-lines?—Yes.

KINSALE.

C. Farley.

26 Aug. 1864.

41,449. And they anchor their nets?—Yes, but when we swing with the tide we get foul of their nets.

41,450. You think half a mile would be necessary?—Yes.

41,451. Are you aware of the law prohibiting the trammel men from setting their nets before sunset?—Generally they practise having them out two or three hours before sunset, and they leave them out all night and all the next day.

41,452. When do they draw them up?—Generally when they get some fish. If they get a great quantity they draw them in and take the fish out and set them again.

41,453. If they have no take of fish do they leave them out?—Yes. When they try them and there are no fish in them they drop the anchor and let the nets out again. If there is any quantity of fish they take it ashore, clear it, and then set the nets again.

41,454. Is there any harbour at Ballymakeene?—Yes, there is a kind of bay.

41,455. What kind of boats have they there?—I do not know.

41,456. Are there any turbot or sole taken by the Kinsale men?—They take turbot.

41,457. How?—By the long-lines.

41,458. In the bay or outside?—At the Old Head.

41,459. Do you find any diminution in the supply?—No, there is not.

41,460. Do you catch as many as you used to catch?—Some days they take half-a-dozen, some days only two, and many days none. On other days they may get half a score.

41,461. Do you take congers here?—Yes.

41,462. With the long-line?—Yes, and with the hand-line too.

41,463. Do you find any diminution in the conger?—The conger is a very scarce fish. It is not as plentiful as any other fish.

41,464. Is it not as plentiful as it was a few years ago?—I do not think it is.

41,465. What do you attribute that to?—To the people here from the westward. They have yawls and they set their spilliards for them every night and take a great quantity. I believe it is by setting their spilliards every night that they make the conger scarce.

41,466. Are there more boats fishing for them than there were?—Yes.

41,467. (*Professor Huxley.*) Is there any oyster-dredging here?—No, there is not.

41,468. Is there any lobster-fishing?—Yes.

41,469. Is there much of it?—They have been very scarce for the last three or four years back.

41,470. Have they been over-fished? Have there been too many of them caught?—They catch five or six dozen or eight or nine during a week.

41,471. Are the pots set about the heads outside?—Yes.

41,472. How many of them?—From 40 to 50.

41,473. (*Mr. Lefevre.*) What bait do you use for the hake?—Sprats and herring.

41,474. Do you ever use mussel?—No. Mussels are used to catch cod and haddock.

The witness withdrew.

CORNELIUS FARLEY called and examined.

C Farley.

41,475. (*Professor Huxley.*) Are you a fisherman here?—Yes.

41,476. And you are master of a fishing-smack?—Yes.

41,477. You wish to state something with regard to what it is that does the harm to the fisheries here?—Yes; they trawl here up and down the harbour when they cannot get fish in the open, and they scatter the sprats as well as the firing of the guns.

41,478. Do you agree with the other witnesses as to the effect of firing the guns?—Yes; what makes the fish become scarce is the guns firing and the trawling. All the fish follow the sprat and the herring, and if the sprat and the herring are not coming in the other fish will not be found there.

41,479. You say that the guns and the trawlers frighten the sprats and herring out of the harbour, and that the other fish go away after them?—Yes.

41,480. Are the trawlers you speak of Cork trawlers?—Yes.

41,481. What size are they?—They are from 15 to 16 and 18 tons.

41,482. Are they open boats?—Yes.

41,483. Do they often come here?—When the weather is bad and they cannot go to the westward they come here.

41,484. How many times in a month may you see them?—It is quite common to see them here. They are here sometimes all the month when the weather is bad and they cannot go to the westward.

41,485. What kind of damage do they do you?—They take all the turbot off the ground.

41,486. Are there many soles in the harbour?—Yes.

41,487. Do they catch them?—Yes.

41,488. You cannot catch the soles with a hook-and-line?—No.

41,489. If the trawlers did not come here then those soles would not be caught at all?—They would not be caught unless they were taken by the seines; they would catch them.

41,490. Can you catch soles with the seines to a great extent?—No, they only catch a few.

41,491. But not those in deep water?—No, not out of the harbour. They do not catch them outside, but some of them follow the bait in. All kinds of fish will follow the sprat and herring.

41,492. Do you think that the trawlers frighten away the sprats?—No.

41,493. How is it then that the trawlers affect your fishing, is it by catching fish you would otherwise catch?—They scrape the harbour and take the hake away.

41,494. Is that at the time you are catching hake with the hook-and-line?—Yes.

41,495. Your complaint is that they take your fish?—Yes, they take away the turbot and the hake too when they are there.

41,496. Do they catch any quantity of small unsaleable fish?—Yes, some cod.

41,497. Do they sell them?—Yes.

41,498. Do they catch any quantity of fish too small to be sold?—No.

41,499. (*Mr. Lefevre.*) What number of the trawlers you speak of have you seen in the bay?—Seven or eight of them sometimes; they do not all come together.

41,500. Are there any of the larger class of trawlers from Cork, those of 40 and 50 tons?—There are some up to 20 tons.

41,501. But none larger than that?—No.

41,502. Do you know what number of seines there are in the bay?—I suppose there are 14 or 15 seine boats, if not more.

41,503. Do they take any small fish?—Not any quantity of any consequence, only the sprats and the herrings.

41,504. Do they never catch any small soles?—No, they do not catch any small soles.

41,505. Do they take any small herrings?—Yes, but they use them for bait.

41,506. What is the smallest size they take?—They take small sized herrings about the length of my hand.

41,507. You find them of great use for bait?—Yes, it is by them that we live altogether. We should not be able to go to sea at all but for getting them for bait. They make very good bait for us. Sometimes they cannot get here in the bad weather and they

KINSALE.

D. Leary.

26 Aug. 1864.

go up the river, and if we did not get them there we should be very short.

41,508. (*Professor Huxley.*) What kind of trawl is it which is used by the hook men here?—The beam-trawl.

41,509. Not the otter-trawl?—No.

41,510. Do you agree with the previous witnesses that the guns of the fort are practising with ball over the ground which you would otherwise be fishing?—Yes.

41,511. And you cannot go on the ground where the fish are on account of the cannon shot coming there?—No, we have to knock off because we say the sprat goes down the river.

The witness withdrew.

G. Dawson.

GEORGE DAWSON called and examined.

41,512. (*Professor Huxley.*) Are you a boat owner here?—Yes.

41,513. Have you ever been a practical fisherman yourself?—No, not a practical fisherman, but I have been fishing for amusement with the fishermen.

41,514. You are interested in the fishing here?—Well, I feel an interest in it.

41,515. Have you heard the evidence which has been laid before us?—Yes.

41,516. Do you agree with it generally?—Yes, generally speaking.

41,517. Are there any matters you desire to add, or anything you wish to correct that you think erroneous?—They have said a good deal about the ball firing but I think the shells are worse. They fire shells as well as ball. I was struck by a portion of a shell about three months ago although I was out of sight of the battery altogether, and out of sight of their target. A portion of the shell sent the water into the boat although Money Point was between me and them. I went in there for shelter and supposed I was perfectly secure.

41,518. Do they lay down a target on ground which is habitually fished over by the fishermen?—Yes; the seines are shot in that direction, and the hookers fish at anchor where the balls will reach.

41,519. Have representations been made to the authorities?—We have represented it.

41,520. Is there no other ground over which they can practise?—There is no other ground; they must have the whole length of the harbour to fire over.

41,521. Could they not fire out to sea?—They do fire out to sea, but of course over the fishing ground. Their target is sometimes outside the harbour and a ball will carry much further. It will hop half a dozen times and go a great deal further.

41,522. Do they put up a danger flag?—They hoist a flag and keep it up while they are firing.

41,523. Can it be readily seen from the target?—If the wind is from you you cannot see it, but if it crosses the flagstaff you will see it at once.

41,524. How far off will the target be?—Sometimes a mile from the port.

41,525. Is the flag a large one?—It is a good-sized one, but a flag will sometimes be in such a position that if it blows towards you you cannot see it.

41,526. Is it your opinion that there should be some other kind of signal?—The signal is good enough; they know the time of day that the firing commences.

41,527. What time of day does it go on?—At different hours.

41,528. Is there no fixed time for practice?—They fix a time but they do not fire at certain hours every day. Sometimes they fire three or four times a day.

41,529. What answer has been made to the representations which have been made to the authorities?—A person from the port came to me to say they would not fire while the hookers were passing up and down. They have occasionally stopped firing on that account.

41,530. Is that the ground on which the drift-net fishing takes place?—There is no drift-net fishing by day and they do not fire at night.

41,531. Is there mackerel-fishing by night?—Yes; all the drift-net fishing is carried on by night. The hooker men are sometimes interrupted.

41,532. But it does not interfere with the seine-fishing because that takes place in-shore?—It takes place over the ground on which they fire.

41,533. Is the water so shallow that the seine-fishing can take place there?—The target is at the harbour's mouth and sometimes in the harbour where the seines would be hauled.

41,534. Is it a floating target?—Yes, but they cannot shoot round it.

41,535. In what depth of water is the target anchored?—In from five to eight fathoms of water.

41,536. Not more than that?—I may be a fathom or two astray, but it does not exceed 10 fathoms. You may say from five to 10 fathoms of water.

considerable?—Yes.

41,537–8. Do you think that the artillery practice interferes seriously with the interests of the fishing here?—Yes, it has had the effect of keeping persons outside and inside also. The boats have been delayed outside with fish and have lost the train.

41,539. Have they been afraid to come across the line of firing?—Yes, there are few of us here ball-proof.

41,540. Does the firing go right across the mouth of the harbour at times?—Not across the mouth of the harbour but fore and aft of it.

41,541. Is the line of firing in such a direction as to make it hazardous for boats to come in?—If they have a leading wind they can do so with safety, but if they have to beat about they cannot do it, inasmuch as they have to cross the target in a zigzag way many times.

41,542. Is there not a good look-out kept at the fort; will they fire across when a vessel is anywhere within the line of fire?—They will. They will fire shell when they think fit to do so, and they will strike an object which they cannot see, not knowing where the fragments of the shell will scatter. I was where I considered myself perfectly safe and yet pieces of the shell came close to me.

41,543. You were beyond the point?—Yes.

41,544. Do you agree with the evidence as to the damage done in that way by firing, that the firing drives the fish off the coast; is there any basis for that notion?—I can hardly say it would drive the fish off the coast; it may drive them out of the harbour and keep them out.

41,545. Do you think there is good evidence that the fish have been driven out of the harbour?—I have always felt that it injured the fishing in that way.

41,546. Have you ever observed a case where a shoal of fish came into the harbour and left it after the firing commenced?—I have never had an opportunity of making such an observation.

41,547. We have been told that haddocks used to be very abundant off this coast and that for years past they have been falling off, so that now the fishermen take nothing in comparison with what they were in the habit of taking?—That is the fact.

41,548. That is your experience?—Yes.

41,549. Have you any suggestion to make with regard to that falling off?—I should say that to some extent it has been occasioned by the number of small boats which in the summer time fish all along the coast and destroy the haddock when small and worthless.

41,550. What kind of boats are they?—They fish with spilliards. They use a small long-line, and they take haddocks of six to nine and 10 inches long; they also take large haddocks when they are useless.

41,551. Are there many boats practising that kind of fishing along the shore?—There are some.

41,552. How many are there between here and Cork?—There are very few; the principal portion are from the westward. There are not many spilliard

boats between this and Cork. I believe that some went latterly to the fishing westward.

41,553. What villages are they which you refer to westward from this?—Courtmacsherry, Glandore, and Clonakilty. All the headlands along there are full of spilliard boats.

41,554. Do those boats supply a good deal of fish to the people of those villages?—Yes.

41,555. Does the fishing furnish a good supply of fish to the country inland?—They get some conger and cod and haddock which are useful in-shore, but I think they destroy a good deal of the small, middle-sized fry, and that they reduce the supply when it would be valuable.

41,556. Do you think the fish they get in that way form any considerable article of the food of the people inland?—I do not know that they form a very considerable article of food, at the same time they are a source of revenue for the support of the persons who catch them.

41,557. (*Mr. Lefevre.*) Is there any trammel-net-fishing from the villages you have mentioned westward of this?—Yes, it is all trammel-fishing that is carried on from this harbour westward. There are very few trammels belonging to this harbour; there are very few here, they belong to the bay outside, to Bulman's bay and westward as far as you can go.

41,558. (*Professor Huxley.*) Do you think that trawling has had any injurious effect upon the haddocks?—No, I do not think it has, inasmuch as they do not trawl much over the haddock ground.

41,559. And there is not much trawling in-shore along the coast?—Very little except what is carried on by the Cork boats.

41,560. Is it a very rugged ground?—Yes.

41,561. And westward there cannot be much trawling near the shore?—I think not.

41,562. There has not been any great amount of trawling there?—No, not between this and Bantry. Bantry is the principal trawling ground in our neighbourhood.

41,563. Were haddocks formerly caught largely on a bank some distance out at sea?—They were not confined to the harbour but were taken generally.

41,564. Outside the heads?—From three to five and 10 leagues off.

41,565. How long is it since they began to fall off?—Perhaps 12 or 15 years. I recollect getting one day for a third part of the haddocks caught by a boat of mine which had been out four or five times 15 or 20 leagues from the land, and with such gear as you would not think would catch any haddock, 500 fish for my share.

41,566. (*Mr. Lefevre.*) What was the size of the boat?—Twenty-two or 23 tons.

41,567. What was the size of the boats you refer to as being used in the villages westward?—From four to six tons. They are all row boats of about 22 and from that to 25 and 26 feet keel.

41,568. Are there any hookers of a larger description?—There are very few fishing to the westward of this at all.

41,569. Until you get to Bantry?—There are very few there.

41,570. Are there any large-sized trawlers?—There are large-sized trawlers in Bantry Bay.

41,571. But until you get there?—No, there are no large ones until you get there, and they do not belong to Bantry but are sent there by other persons.

41,572. Trammels are used all along the coast you say?—Yes.

41,573. Has that been so for many years?—Yes.

41,574. You have always fished with the trammel-net?—Yes; if hake make their appearance in any quantity there is no lack of trammels.

41,575. Has there been a falling off of hake all along the coast?—For the last three or four years there has been a great falling off. I never knew them so plentiful as they were from four to eight years ago.

41,576. Four years ago?—I date the commencement of the failure four years ago, but in the previous four I never knew as many as there were.

41,577. Can you attribute the falling off to any cause?—I cannot say what the cause has been. We have not had so many sprats and herrings during the last four years as we had previously.

41,578. Then you think the hake follow the sprat and herrings?—Yes, and all small fish.

41,579. Do you know anything of the supply of fish to Kinsale market; has the whole amount of fish brought to market fallen off?—It has materially. I was asked for information previous to the establishment of the railway here, and I collected it; but we do not get one fourth of the fish now.

41,580. Has it been four years falling off?—Yes.

41,581. But previous to that time the supply was abundant?—Yes.

41,582. Can you supply us with any details as to the quantity?—I cannot.

41,583. With regard to price has there been any increase?—The price has varied with the take.

41,584. But has it increased as compared with what it was 20 years ago?—I should say that the price is about the same, provided that the quantity was kept up.

41,585. Is there any difference between Kinsale and other parts of the west coast which you have been referring to?—They have sprats east and west of us; when we could not procure any here we have had to go east and west for them.

41,586. And herrings also?—I cannot say. There was an immense take of sprats in Youghal, but very few herrings.

41,587. Has this been a good season for mackerel?—This has been a very fair season for mackerel, there has been a good supply.

41,588. Do the boats from here go any distance after mackerel?—Yes, they do.

41,589. Do they ever go to the Cornish coast?—No, they go probably midway; that is only when there is a scarcity here.

41,590. As the season advances do you find the fish nearer the coast?—Yes, we have to go further to the southward for them in the latter part of the winter and the spring.

41,591. And as the year advances they come nearer the shore?—Yes, but this year we have had some of the boats moving further off. They have met them in greater quantities than near here; at the same time there has been a fair supply near it.

41,592. What is the condition of the fishermen as compared with former years?—I do not think it has improved. I have known them when they were more comfortable.

41,593. Is it only within the last four years that you have observed a falling off?—I can go as far as 44 years back, and say there has been a falling off in them since then. They were more comfortable and better clad than they are now.

41,594. Was there a greater number of them then than now?—I think the number was about the same; there were more boats, but they had not as large crews. The number of men would be about the same.

41,595. Has there never been any attempt to fish with trawl-boats from this port?—I have known some few small boats owned by the fishermen which did use a trawl; but they have used it very little since I knew them, and I have had a knowledge of them for the last 40 years.

41,596. (*Professor Huxley.*) Was there ever any considerable oyster-fishing here?—Yes, I can recollect when it was much better.

41,597. It is very poor now?—Yes, it is poor and the size of the oysters is greatly reduced. There used to be as fine an oyster as could possibly be got anywhere.

41,598. How long ago is that?—I should say about 45 years ago I can recollect them, and from that to 40 years ago. I served my time alongside the hotel here and the heaps of oyster shells there were then would

KINSALE.

G. Dawson.

26 Aug. 1864.

surprise you. In size I should say they were full six inches in diameter.

41,599. How many boats were employed at that time in dredging?—I cannot say.

41,600. Were there more employed then than there are now?—Yes.

41,601. How many are employed now in dredging?—Not more than four or five. I think there are about four, not more.

41,602. When did the oyster-fishing begin to fall off?—It has been falling off ever since I can recollect.

41,603. What was the cause of that?—I think they scraped the seed off the banks.

41,604. Did they dredge at all times of the year?—No.

41,605. Have they always observed the close-time here?—I do not know that they observed it very strictly; they dredged for oysters as long as they found it profitable to do so.

41,606. Is it not the case that at one time there was a Local Act or regulation passed to suspend oyster-fishing here?—I was not aware of that. I never knew anything like a summons issued against anyone, of the law put in force.

41,607. You never recollect the law being put in force?—No.

41,608. But there was an Act?—There might be, but I never knew it enforced.

41,609. You would have been likely to have known if it had been enforced?—I should have heard of it I think. They commenced the oyster-fishing when they could not fish outside, in the winter time.

41,610. (*Mr. Lefevre.*) I see that a licence has been granted to a gentleman to establish an oyster bed at Oyster Haven?—Yes, to Mr. Cramer.

41,611. Do you know anything about it?—No.

41,612. Is there any ground here that is particularly fit in your opinion for the laying down of oysters?—I believe there are suitable grounds.

41,613. But you do not know of any case except that in which an application has been made for a licence?—I believe one was made but it came to nothing; there was no bed established.

The witness withdrew.

D. Donovan.

DANIEL DONOVAN called and examined.

41,614. (*Professor Huxley.*) Are you a fisherman here?—Yes, for the last 35 years I have been seine fishing.

41,615. You never practised any other kind of fishing?—No.

41,616. What sort of seine do you use here?—It has a mesh which varies from two inches to half an inch.

41,617. What is the length of your seine?—It is about 60 fathoms long.

41,618. Do you use the same sort of seine for mackerel-fishing as for sprat-fishing?—No, a different one.

41,619. What is the smallest mesh in the sprat seine?—Half an inch.

41,620. What is the smallest mesh in a mackerel seine?—Two inches.

41,621. Do you make your seine with a pocket?—No, only a bunt.

41,622. How do you work the mackerel seine, with two boats?—No, we haul it in with a boat.

41,623. One boat?—Yes.

41,624. You pay it out and haul it in?—Yes.

41,625. How long do you say it is?—From 60 to 100 fathoms long.

41,626. In that case you cannot work your seine more than 600 feet from the shore?—No.

41,627–8. So that if they are practising at a mark a mile out you have not the smallest chance of catching it in the seine?—No.

41,629. Are both ends of the seine made fast with warps?—Yes.

41,630. Then is the fixed end of the seine made fast with a warp as well as the other?—Yes.

41,631. How long will the warp be at the fixed end?—Both are alike.

41,632–5. What is the length of each warp?—Each warp is about 80 fathoms long.

41,636. Do you ever find the target in your way when you are shooting the seine?—Yes, we must keep clear of it; we are obliged to drop fishing altogether when they are firing.

41,637. And besides that the fragments of shell fly about you?—Yes, and frighten the fish away from us.

41,638. Is that when you are seining for mackerel?—No, for sprats.

41,639. Are there any sprat seines as large as that?—They are about 60 fathoms long.

41,640. Where do you seine for mackerel?—We have school seines for mackerel. We do not go on the headlands at all but we stop in the harbour.

41,641. Are they made in the same way as the sprat seines, except that they have a larger mesh?—Yes, in the same way, but they are deeper and larger.

41,642. Do you follow the seining all the year round?—No, only from June till Christmas.

41,643. What do you do the rest of the year?—I work on the land.

41,644. You do not go to the herring-fishing?—No.

41,645. Do you get the same quantity of fish now that you got formerly?—Not half nor a quarter of it. We were fishing one day before the ball firing commenced and we caught half a boatload of fish in one haul, and just as we were laying down our nets a second time they began to fire and we did not get another sprat.

41,646. The fish all went away?—Yes, the report of the firing frightened them away.

41,647. Do you recollect when that took place?—About two years ago, but it is mostly every year that that takes place.

41,648. Had you a considerable shoal of sprats half enclosed in your net?—Yes.

41,649. And as soon as the firing began they all vanished?—Yes, they all went away, the report of the guns did it.

The witness withdrew.

M. Kelly.

MICHAEL KELLY called and examined.

41,650. (*Professor Huxley.*) You have heard the statement which has just been made by the last witnesses?—Yes.

41,651. You were present at the time?—Yes.

41,652. Were you working the seine along with him?—Yes.

41,653. And you say that you had enclosed a good many sprats in your seine?—Yes.

41,654. Before the firing began?—Yes.

41,655. Then the firing began?—Yes.

41,656. And the fish went away?—There was not one to be got.

41,657. All the fish vanished?—Yes.

41,658. You saw it?—Yes; they would frighten the devil away, those guns would.

41,659. (*Mr. Lefevre.*) How many of you were there working the seine?—Nine men in a boat.

41,660. Do you work the seine every day?—Yes, every day during the season.

41,661. Do you ever work it further out in the bay?—We go further out, below the target.

41,662. Do you ever go outside the bay altogether with the seine?—No, we do not go outside the bay, only to the harbour mouth.

41,663. There are seines used in the bay?—Not our seines; they are long school-seines, but we never go out there.

41,664. Can you give us any cause for that?—It is the gun firing I am sure.

41,665. The gun firing does not extend far out in the bay?—But the report of it does.

41,666. Do you know anything of the Courtmacsherry fishing?—No; we always used to have plenty of fish every year until the guns began to fire.

41,667. (*Professor Huxley.*) To whom do you sell your sprats principally?—We sell them in the market here.

41,668. Is there any great demand for them for bait?—To be sure there is. The fishermen would die if it were not for them. There are 400 people depending on them.

41,669. Are there as many as 400 people dependent on you for bait?—Yes, the whole town depends upon us.

41,670. All the long-line fishermen?—Yes.

41,671. And the hand-line fishermen?—Yes, and all the hook men.

41,672. How many men are there engaged in seining during the season?—There are about 100 men and families depending on the seines.

41,673. With regard to price, have you found that the price of fish has increased?—If the fish were there we should get a price for them.

41,674. What did you get the last season; has the price improved of late years?—The price has been very much alike. The farmers would come to the town and buy the fish of us, but they have fallen off. When they hear there are no fish here they do not come.

41,675. Then the only market you have is for bait?—Yes, and we only get 4*d.* or 6*d.* some days.

The witness withdrew.

Mr. James Redmond Barry called and examined.

41,676. (*Professor Huxley.*) You can give us some information, Mr. Barry, about a Local Act which was passed relative to the oyster-fishing here?—Yes.

41,677-8. Will you tell us what you have to say upon the matter?—In the year 1844 on the 2d January a letter was written to me by one of the most respectable inhabitants, and I believe the last sovereign before the Reform Bill of the town of Kinsale. He was an intelligent gentleman bred up to the law, and well acquainted with the general circumstances of Kinsale. This is his letter:—

My dear Sir,

By the Kinsale Local Act, 49 George III. cap. 74 section 27, a power was given by the Sovereign and grand jury of the corporation from time to time to make bye-laws for regulating and properly conducting the seine and other fisheries, and the dredging for oysters within the harbour, and by section 42 such byelaws were not to operate until they were approved of by the next going judge of assize at Cork. On the 17th July 1809 a byelaw was made, and subsequently was confirmed, prohibiting the dredging for oysters within the harbour from the 1st of January 1810 until the 1st of January 1813. The effect of this prohibition was the complete renovation of the then existing beds and a consequent good supply for some years after. They are now, however, almost destroyed, and of course oysters have become very scarce. But very few are taken, and they are of the excellent quality which you remember them. You would confer much benefit upon us, and render a service to the boatmen themselves, if you could have the fisheries so regulated as to allow the oysters to increase. I apprehend this Local Act is virtually, though not expressly, repealed, inasmuch as the authorities thereby authorized and enabled to enforce its enactments have now ceased to exist.

Believe me to remain, &c.

W. Newman.

That letter was addressed to myself, and upon receiving it I suggested the propriety of making an application for the exercise of the power of our board for establishing what we are in the habit of calling a jubilee, to prevent the capture of oysters for three years. If that were done means might be adopted for restoring the fishery by means of the oyster spat or brood and the suspension of dredging; but that never was called for and never was carried out. I look upon it, however, as an interesting proof given upon respectable authority of the beneficial effect which had resulted from such a suspension of fishing even for a short time in a previous year.

41,679. (*Mr. Lefevre.*) Do you know anything of the Oyster Haven bed?—There is scarcely any bed.

41,680. Was it a failure?—It has been a failure, I am sorry to say. You are speaking of Mr. Cramer's bed, are you not?

41,681. Yes. There was an attempt made to lay down a bed, but it proved a complete failure. He got a licence and he incurred some expense, but he has been quite unsuccessful. I believe the place is not favourably circumstanced for the purpose for which it was required.

41,682. Were there any applications made from Kinsale for a licence to plant oyster beds?—Yes, and they were refused, on the ground of there being a public right.

41,683. (*Professor Huxley.*) That of course would not extend to the power of the board to enact a jubilee?—No, it would not restrain them.

41,684. Because the 91st section of the 5th & 6th Victoria gives them power over all sorts of fisheries, whether public or private?—Yes, but there are special Acts of Parliament, the 8th and 9th and the 13th and 14th Victoria, which have reference to oysters, and which enables the Commissioners to establish a jubilee for a time not exceeding three years in any place where they shall judge expedient, after a public meeting, and I know of no place more desirable than Kinsale.

41,685. I suppose the ground is small?—Yes.

41,686. And it can easily be fished out?—Yes.

41,687. By the 20th article of the 8th and 9th Victoria, it is within the power of the Fishery Board to lay down almost any regulation they like in regard to the fishing of oyster beds?—Their powers are very extensive, but they cannot interfere either with public rights or with private rights.

41,688. Not with public rights?—No, where there is a beneficial oyster fishery, and I confess I was of opinion they were over fastidious in refraining from permitting some individuals who claimed licences to have them in Kinsale Harbour, because I looked upon Kinsale at the time as an utterly exhausted ground. I thought if the individuals who sought the licence were permitted to plant oysters in particular localities the effect would be to spread the oysters over the whole of Kinsale Harbour.

41,689-90. Is there not power given under the 20th section of the 8th & 9th Victoria, chapter 108 which says, "And be it enacted that it shall and may be lawful for the said Commissioners from time to time to make and ordain in the manner and with and under the powers and regulations in the said first-recited Act mentioned, such bye-laws, rules and regulations as to them the said Commissioners shall seem expedient to prevent the destruction or removal from the natural beds of small unsizeable oysters, and to fix by any such bye-laws, rules or regulations the size or dimensions of the smallest oysters which may be removed from such beds, and to appoint such means to be adopted in the dredging and culling of the oysters on the fishing grounds as will secure the return to the sea of all oysters of less dimensions than those to be so fixed, and during any part of the close time, or in places where in pursuance of said second-recited Act dredging for oysters shall be prohibited for a certain period, to prohibit, if they shall so think fit, that any boat shall have on board a dredge or other implements for the taking of oysters, and to make such other rules

KINSALE.

Mr. J. R. Barry.

26 Aug. 1864.

" and regulations as to them shall seem fit for the in-
" crease, improvement and protection of the oyster
" fisheries."

Does that not give a power over any public bed?—Clearly, but a restraining power is not a power to transfer property.

41,691. But having in view this particular case of Kinsale Harbour, it appears to me to be in the power of the Commissioners, according to this particular clause of the Act, to make any regulation which may appear expedient to them to restrict undue fishing; is not that so?—Yes, it is. There is a special section either in that Act or the 13th & 14th Victoria, permitting them to make an absolute jubilee and to interdict the taking of oysters altogether.

41,692. But the point put to us just now by Mr. Dawson was, that it was of no use enacting the jubilee because when the jubilee was over the public were apt to come and fish the oyster beds and carry away the oysters, and that the beds would be just as badly off as if there had been no jubilee at all; whereas it appears to me to be competent for the Fishery Board to enforce a jubilee, and after that time to make such regulations for the fishing of the bed as would prevent a destructive fishing?—You are quite right with regard to what Mr. Dawson means. The privilege of taking oysters from a public bed would enable persons fishing completely to exhaust the bed, and they probably would do so. That is what is feared here. My own opinion is that a regulation might be made to protect the beds after they have been improved.

41,693. Suppose, for example, that all oysters less than $2\frac{1}{2}$ inches in diameter were regularly returned to the sea, the oyster bed would not become exhausted?—Quite true.

41,694. And in a harbour you ought to be able to carry out regulations of that kind?—Yes.

41,695. If the powers given to the board were judiciously carried out it seems to me the people of Kinsale ought to have the thing in their own hands?—I quite agree with you, and yet Mr. Dawson and others think that in Kinsale, if anything is done except on the ground of creating private rights, the people will exhaust the beds notwithstanding any regulations that might be made.

The witness withdrew.

J. Leonard.

JOHN LEONARD called and examined.

41,696. (*Mr. Lefevre.*) Can you give us any information as to the state of the oyster bed in the harbour here?—It is the lobster men who dredge for oysters after the lobster season is over; they have no other way of getting a livelihood except by dredging, and they told me last year that the oysters they were dredging were of a better description and more in quantity than they had had for many years previously.

41,697. What number of men are there dredging for oysters?—I think there are six or eight boats.

41,698. Had they been continually dredging for oysters in previous years?—Yes, I believe so; they commence in October and end in the middle of November, they do not find it pay for the labour after that. I had two lobster boats myself last year and they went dredging for oysters; I have four this year and they go dredging for oysters after the lobster season is over.

41,699. In your opinion do you think it desirable to grant a jubilee for the oyster beds?—I think it is.

41,700. (*Professor Huxley.*) If a strict regulation were made and carried out for culling the oysters, and returning all those below a certain size to the sea, do you think that in that way the oyster bed might be preserved?—I think so.

41,701. And the oyster bed being situate in the harbour could be thoroughly supervised?—Yes, perfectly so.

41,702. (*Mr. Lefevre.*) What is the extent of it?—About 100 yards in one part of it, and higher up it would be something about the same; there are two or three spots where they can get oysters.

41,703. Do the beds extend all over the harbour?—No.

41,704. What is the length of them?—Taking the entire length, it would be about 300 yards in different places.

41,705. But from 50 to 100 yards in width?—Yes, that is the existing bed, but the whole harbour was almost an oyster bed at one time.

41,706. What would be the effect on the lobster men of granting a jubilee for three years?—They would very likely be out of employment for that time; they would have nothing to do in any other way; if you were to allow them to dredge the large ones and throw the small ones over, I think you would gain all the advantage you require.

41,707. You think that would have the effect without granting a jubilee?—I think so if there was a proper supervision.

41,708. At present there is no regulation as to the size of the oysters that may be taken?—No, there have been several times complaints made by the lobster men, who depend for a livelihood upon the fishing, that the Coastguard at the different stations fish for lobsters.

1,709. Is that not permitted?—I think not.

41,710. Do they fish for their own consumption?—They tell me they sell them.

41,711. (*Professor Huxley.*) That is a matter for the Coastguard authorities. If a grievance of that kind exists it should be laid before them?—Yes.

41,712. (*Mr. Lefevre.*) Are there any mussels here?—Yes; those who dredge for oysters dredge for mussels for bait for the long-lines. The mussels they get along the harbour and upon the river, and they bait the long-lines with them. The long-lines have about 1600 hooks on each of them.

41,713. Is the supply sufficient for the long-line-fishing here?—It has not been latterly, but there are only four spilliard boats of a large class here.

The witness withdrew, and the inquiry was adjourned until the 29th of August, at Kenmare.

Kenmare, Kerry, Monday, 29th August 1864.

PRESENT:

Professor HUXLEY, F.R.S. (Chairman). | G. SHAW LEFEVRE, Esq., M.P.

KENMARE.

W. Goodwin.

29 Aug. 1864.

WILLIAM GOODWIN called and examined.

41,714. (*Professor Huxley.*) Where do you reside?—Within two miles of Kenmare, at a place called Reen.

41,715. What modes of fishing have you practised?—I followed trawling for a season, as a seaman and not as a fisherman. I was simply in a fishing craft.

41,716. Besides that have you been a trammel-net fisher?—I have been engaged in seine-fishing and in herring-fishing.

41,717. What is the mode of fishing you practise now most particularly?—I do not fish now, I have knocked it off; I found that it would not pay. We could not fish with the craft we had. Herring-nets

are principally what I have, and I had to drop them because I could get nothing to do with them.

41,718. Has the fishing yielded you pretty much the same since you have known it, or has it fallen off of late years?—It has fallen off.

41,719. What kinds of fish did you take generally?—The deep-sea fishing was altogether outside of the river.

41,720. By the river I suppose you mean the whole of the bay here?—Yes, inside the headlands we call the shoal-water fishing.

41,721. What fish do you catch in this inland fishing?—Plenty of flat-fish, soles and sometimes sprats and herrings.

41,722. What do you catch with your trammels?—Flat-fish, principally soles, and a few, though only a few, large white fish; they are mostly all ground-fish we get.

41,723. Do you get any hake with them?—No, very few. They use a different kind of trammel for them only 10 meshes deep, while the big ones are 40 meshes deep.

41,724. What is the size of the mesh?—6½ and from that to 7 inches; the widest will be 7 inches.

41,725. From knot to knot?—Yes.

41,726. Not when it is pulled out?—Yes, when it is pulled out.

41,727. What is the square of the mesh?—3½ inches.

41,728. How long will the trammel be?—From 80 to 90 fathoms; some may be more and some less.

41,729. Have they corks on the top?—Yes.

41,730. Are they leaded at the foot?—Yes, there is a small portion of lead at the bottom to keep them on the ground.

41,731. How do you set them?—They are principally set when the tide runs. They are sometimes put lengthwise on the tide, but principally across the tide. Here is a net (*producing one*). The mesh is 3½ inches.

41,732. Is that the mesh throughout?—Yes.

41,733. There are no smaller?—No.

41,734. The corks float at the top?—Yes.

47,735. What water can the net be set in?—It can be set in 10 fathoms. We never set it deeper than that, but it can be set in from 10 fathoms down to two.

41,736. What do you catch in them principally?—Flat-fish.

41,737. Soles?—Yes, and an odd turbot at times.

41,738. How do they mesh themselves; a sole will get through a mesh of that size, will it not?—They twist and roll themselves in it.

41,739. Then the net is hanging very loose in order to enable them to twist themselves in it?—Yes, the net cannot be but very loose. The tide takes it on and off occasionally.

41,740. Are the fish which you catch commonly of that kind which is not to be caught by the hook and line?—They are often taken with the hook-and-line, but not in shoal water. They are taken with spilliard lines.

41,741. Do you take soles with spilliard lines?—Yes.

41,742. Do you take large soles with them?—Yes, soles of all sizes.

41,743. What bait do they take?—Their general bait is lug or sea worms, which the fishermen take upon the coast.

41,744. Is that a productive mode of fishing; do you get many fish by it?—Yes, many poor people get a livelihood from it. Many of them have had to desert the place and go to the workhouse in consequence of using those nets.

41,745. Are the people who use them mostly fishermen; do they cultivate land as well?—They have no ground, unless they may take a bit in the early part of the season to grow a few potatoes. In that case they must pay for the ground with the produce of their little nets.

41,746. Then do they live altogether by fishing?—Yes.

41,747. They are in the habit of setting their nets out here from the shore as far as 10 fathoms of water?—Yes, and from that up to two fathoms.

41,748. Will they be out in the middle of the channel, as far as Rossmore Island?—They don't fish as far as that. The Seal Rock is as far as ever we see them fish.

41,749. How far down the river do they use that kind of net?—They use them as far down as Fuross, and occasionally up to Corrig. It is principally inside of that rock that they fish.

41,750. Inside of the Drimbulge rock?—Yes.

41,751. All above that is less than 10 fathoms of water?—Yes, it varies from 10 fathoms to two.

41,752. So that trammels can be set all over the water?—Yes.

41,753. When the trammels are set it is impossible for anybody else to fish there; the line men cannot fish there?—Yes, they can.

41,754. Between the trammels?—Yes, it is not injurious to the line-fishers to have trammels set at all.

41,755. Do not their lines get entangled among the trammels?—No, there are only very few of them. They seldom put them out where the line-boats go at all.

41,756. Can trawlers go where the trammels are set?—They do trawl, but it does great injury to the craft.

41,757. Then trawling cannot properly go on where trammel-nets are set?—No, they cannot go on with trawling without injuring the craft in a great measure.

41,758. Was there ever much trawling practised in that part of the river?—Much more than there is at present. I am not out when trawling is going on, but I have seen as many as eight of them in this narrow river.

41,759. Have you been trawling yourself?—Yes.

41,760. What sized boats are used in trawling?—From five to 10 and 12 tons.

41,761. Are they open boats?—Yes.

41,762. What kind of rig have they; are they cutter rigged?—Yes, the boats we generally have here are what we call hooker rigged.

41,763. What kind of trawl is it they use, is it a pole-trawl or a beam-trawl?—A beam-trawl.

41,764. What is the size of the beam?—That is according to the length of the boat. Some are 17 and some 20 feet.

41,765. What is the usual size of the mesh?—From 3 to 3½ inches I think, but it is less than that in the cod of the net.

41,766. That is about 1½ in. from knot to knot?—Yes, it is 1½ in. from knot to knot. The net is from 3 to 3½ inches measured when the net is pulled out.

41,767. Is the mesh smaller in the pocket of the trawl?—Yes.

41,768. You have been fishing with a trawl?—Yes, with a pocket, in the Kenmare River.

41,769. Did you notice whether any small fish were caught in the trawl?—No, it was not the season of the year to get anything but flat-fish.

41,770. Was any large proportion of small unsizeable fish taken in the trawl?—Yes, a good many.

41,771. How much would there be thrown away as not saleable out of the whole?—I don't know that I can be exact about that.

41,772. Would one half be thrown away?—No, not one half.

41,773. A third?—Yes, perhaps a third. There was some portion that was not fit for the market.

41,774. (*Mr. Lefevre.*) What were those fish?—Small flat-fish.

41,775. Flukes or soles?—Plaice, dabs, and other small fish, and small soles.

41,776. (*Professor Huxley.*) Were there any small turbot amongst them?—No; I never saw small turbot taken up.

KENMARE.

W. Goodwin.

29 Aug. 1864.

41,777. Did you ever see any spawn taken up?—It was not the season for it. It was in June, July, and August that I fished. That is a different season from the season when the spawn of the fish is deposited.

41,778. Have you any reason to think that the spawn of fish is deposited up in the Kenmare River as high as the trammels are set?—I think it has been.

41,779. Have you ever seen it?—I have seen it in roots and weeds and pieces of the branches of trees that might be taken up from the bottom. I have frequently seen that.

41,780. How did you know it was the spawn of fish; what kind of looking stuff was it?—It was like jelly. I have frequently seen spawn lying in the bottom of the boat after the herrings have been taken.

41,781. Was this stuff you speak of like that?—Yes, it was, something similar to it

41,782. Then you are in the habit of practising herring-fishing as well?—Yes.

41,783. Do the herrings come up as high as Drimbulge Rock?—Yes, it is a nursery for all kinds of fish. The hookers cannot be fishing at this time of the year without getting lots of small fish.

41,784. Do the herrings come up in great quantities?—They did so formerly but not lately.

41,785. How long is it since there has been a great take of herrings here?—Ten or 12 years. They were then in great quantities in Bow stream and we got some seines for them.

41,786. You were speaking just now of catching sprats, do they come up here in great quantities?—Yes, they used to do, but of late very little has been taken since I came here. The people have the craft on shore and don't use them. Many of the fishermen have them, but they have not been able to use them for the last 10 or 15 years.

41,787. Is that because the sprats have not come up?—If they have come they have not been allowed to stop here.

41,788. What is the reason?—I think it is in consequence of trawling being carried on to such an extent that the fish cannot stop. We like to breathe fresh air ourselves, and the fish like to have clean water.

41,789. Do you think the trawlers disturb the bottom so much that the fish cannot remain in it?—Yes, I do.

41,790. What time do the sprats come up?—In August, September, October, November, and even December.

41,791. Does much trawling go on then?—Yes.

41,792. Is the water salt up in the higher part of the Kenmare River?—That is according to the freshes that run down. If there are great falls of rain the water will be more fresh. It is salt, and if there are no falls of rain it will be quite salt.

41,793. Have there been unusual quantities of fresh water?—There were last year and the year before. This year we have found it as salt as we ever had it. It has mostly been salt in every part of the river.

41,794. Do you think that any other kind of fish have fallen off except sprats—have soles fallen off?—I am certain they must have fallen off, although Colonel Holden has taken great quantities in the nets he has for his own use. I never saw so many taken.

41,795. Is that the case with the trammel fisheries generally?—Yes; they would take a great many, but they cannot use their craft. Some of them have given their boats up altogether.

41,796. I do not quite understand you; you say that great quantities have been taken, but the people are not able to use their trammels?—No, they have not been able to use them.

41,797. How is that?—On account of the trawlers.

41,798. They have been prevented by trawling?—Yes.

41,799. There have been persons prevented using the trammel-nets by trawling?—Yes.

41,800. (*Mr. Lefevre.*) Have the trammels been given up?—They have partly been given up.

41,801. (*Professor Huxley.*) Was there not some regulation made by the Fishery Board some time ago on that subject?—I don't know whether there was or not.

41,802. Was there an inquiry held here?—Yes, a short time ago.

41,803. Was anything done?—Nothing more than usual.

41,804. Was there a complaint made to the Fishery Board that the trawlers interfered so much with the trammel men that they could not fish?—It was stated, but not by me.

41,805. But it was stated by other persons?—Yes.

41,806. Is that the general complaint of the trammel fishermen?—Yes.

41,807. That they are prevented from fishing by the trawlers?—I think in their evidence that that will appear.

41,808. Has the hook-and-line fishing fallen off? In the first place let me ask what sort of hook-and-line fishing is practised here; is it long-line fishing or hand-line fishing?—Hand-line fishing.

41,809. Do you fish towards the mouth of the bay—where do you go to fish with the hand-line?—We fish off here.

41,810.—Up above Drimbulge Rock?—Yes, they have only weak boats and the crews here are not strong.

41,811. What kind of fish do they get here?—Bream, hake, and cod and ling sometimes.

41,812. Is there much codfish?—No.

41,813. Do not the people go further down to fish?—No, they cannot. Their little boats are not suitable for that. The poor men have only small boats, and they are not able to go out to fish. They are not furnished with sails or anything of that sort, and they can do very little off here.

41,814. Do they set long-lines as well as hand-lines?—I believe there is only one who has spilliard lines.

41,815. Where does he set them?—About the Dinish Rock.

41,816. Do the trawlers interfere with the lines at all?—I don't think they do, because they are out of the way of them.

41,817. They are on the hard ground?—Yes.

41,818. Where the trawlers cannot work?—Yes.

41,819. Do the trawlers interfere with the hand-line fishermen?—I cannot say.

41,820. What is your opinion?—They will injure the fishermen if they come across them.

41,821. Do the trawlers interfere with the hand-line men?—I once had to haul up because they trawled under the stern of my boat. I had to do that one time.

41,822. Then the trawlers interfere very little indeed both with the trammel-net fishing and the hand-line fishing?—They must interfere to some extent. When they trawl upon the same ground they must trawl upon them.

41,823. Do you think that they have simply occupied the ground or diminished the supply of fish?—They occupy the ground, and I think they scatter the fish; that is my opinion.

41,824. Does not the line-fishing go on throughout the length of the river further down than Drimbulge Rock?—No; but I think the bay is well furnished with fish if the fishermen went out.

41,825. Then nobody goes down from Kenmare to fish down this great length of river?—Not one, except a trawler or two.

41,826. Do the trawlers work down inside of this ground?—They work from Rohancorrig to Dawros Chapel.

41,827. That is not above 45 miles from Kenmare?—That is all.

41,828. Is all the ground outside of that absolutely unfished?—Yes.

41,829. It is not fished all the way from there to the headlands?—No.

41,830. Neither by line-fishing, trawling, or any other kind of fishing that is carried on there?—No, except by people from the shore who come out.

41,831. Do they set trammels along the shore?—Yes, hake-trammels.

41,832. Are there many hake-trammels set down there?—Yes.

41,833. That is the principal fishing which goes on there?—Yes, trammel-net fishing for hake is the only fishing practised there. I am sure if the fishing were supported there as it is on the west coast of Ireland they would knock a good livelihood out of it. If they could only get good boats, craft and lines, they would then be able to stand out to sea and work their long-line spilliards.

41,834. You think there is a good fishing if they had enterprize enough to work it?—Yes.

41,835. Is there much sea there?—At times there is a good sea, but when they have good spirited crews they are men prepared to encounter a heavy sea.

41,836. They want good boats?—Yes, boats that would not come in from the Saturday till the Monday.

41,837. Is there a good market for fish at Kenmare; could you sell any quantity you could get?—They sell as many fresh as they can, and what is not sold they salt and store up.

41,838. If there was plenty of fish could they sell all they catch?—They could sell a great deal more than they do now. I never saw a day in Kenmare market on which they could not sell more than they do.

41,839. (*Mr. Lefevre.*) How many trawlers are there fishing on the ground you speak of?—Not more than four at present.

41,840. Are there not more than that in the season for trawling?—I believe there are.

41,841. Do they not fish on the same ground you have been speaking of?—Yes, I have seen boats from Blackwater and Westport trawling there, and there may have been others which I did not see.

41,842. Do you think the trawlers prevent the herring and sprats from coming up the bay?—I cannot say.

41,843. Do you think the trammel-nets frighten the herring and sprats?—The hake-trammels do, but they are only set here very seldom. There may be a glut of fish when they will be set for a fortnight or three weeks.

41,844. Do the trammel-nets set for hake prevent them from coming?—We were always of opinion that they did injury to them in shoal water, but I cannot say positively; we never had any certainty with regard to it.

41,845. What time of the day do you set your trammel-nets?—The hake-trammels when I have seen them have been set between four and six o'clock in the evening, and they haul them up according to the weather. Perhaps if the weather is bad they will not haul them until next day.

41,846. When are the trammel-nets set for flat-fish?—Generally in the evening. They have been taken by the Coastguard.

41,847. For fishing in the daytime?—Yes.

41,848. How long ago is that?—It was in the first of the season. I think it was in June.

41,849. Do you think it is disadvantageous to the fishing to prevent them setting their nets in the daytime?—I think that would be better than to have them out at night.

41,850. Do the trawlers fish much in the night-time?—Sometimes they do, particularly if there is a moonlight night.

41,851. But not habitually?—No.

41,852. How many of these trammel-nets were there set this last season?—There would be something like 20 of them.

41,853. How many are owned in Kenmare?—I cannot tell.

41,854. Have some gone out of use?—Yes, some have left the country altogether.

41,855. In consequence of the trawlers?—Yes, and other things. If they lose their nets they lose their fishing altogether, and they are never able to get their craft together again. Small as they are they are not able to muster others. They are only a poor class of people, and they cannot buy a net if they lose the one they have already.

41,856. What is the cost of a net of that sort?—About 1*l.* or 25*s.*

41,857. Are the nets owned by the fishermen themselves?—Yes.

41,858. Are there any mussel-beds in the bay?—Yes.

41,859. Where are they?—About three miles from Kenmare. I believe they are mostly about the north side of the river.

41,860. Are there many men employed in collecting the mussels?—Not many.

41,861. Do they export any great quantity?—Yes; when the Kinsale fishermen come here they take them for bait.

41,862. Do you use them for bait for the long-line fishing or the hand-line fishing?—For the hand-line fishing and for tusk and cod.

41,863. Are the beds as plentifully stocked as they were?—I don't know that they have diminished very much; the fish are always spawning, and consequently the beds are kept up.

41,864. Are there any oysters-beds here?—Yes.

41,865. Where do they lie?—Mostly from Dinish Island up the river.

41,866. Quite high up the river?—Yes.

41,867. How many boats are there employed dredging the beds?—I believe there are seven from this place, but there are more from other places; perhaps there will be as many more.

41,868. Do they observe a close-time?—Yes.

41,869. Have the beds increased or diminished since they observed a close-time?—I don't think there has been any diminution; I rather think they have increased. The oyster fishermen have done a great deal better this season than formerly.

41,870. Has the number of boats fishing increased?—Not at present.

41,871. Are there about the same?—Yes, but there was more deep-sea fishing when I came here 20 years ago; I don't know the reason why it fell off, but it is getting up again now.

41,872. Do you catch in your trammel-nets any small flat-fish?—No.

41,873. What is the smallest fish you catch?—The smallest flat-fish we catch are never less than five inches on the square.

41,874. Five inches across?—Yes.

41,875. Was that fluke and plaice?—Plaice. They would not be taken if it were not for the fish getting across the net; fish of that size are very rarely taken.

41,876. What is generally the smallest?—The smallest sized fish we catch are generally from 6 to 8 or 10 inches.

41,877. Ten inches across?—Yes.

41,878. Do the trawlers catch more small fish than you do?—Yes.

41,879. Of all sorts?—Yes, anything they come across when fishing.

41,880. I suppose in the night-time, even on a moonlight night, the trawlers cannot see your buoys?—No, they cannot. The distance is about 90 fathoms, and they are small buoys.

41,881. How many have you?—Two.

41,882. One at each end?—Yes.

41,883. They are so far apart that the trawlers cannot see them?—Yes, they are at a distance of 80 or 90 fathoms apart, and the trawlers cannot see them in the night-time.

41,884. Would it not be possible to have larger buoys?—Yes, but if the injury is done what is a poor man to do; how is he to get redress?

The witness withdrew.

KENMARE.

D. Teahan.

29 Aug. 1864.

DANIEL TEAHAN called and examined.

41,885. (*Professor Huxley.*) Are you a trawler here?—Yes.

41,886. How many years have you been trawling from this place?—About 16 or 17.

41,887. What sized vessel do you use for trawling?—The boat in which I trawl at present is I think 8¼ tons.

41,888. It is an open boat, I suppose?—Yes.

41,889. Has it any half-deck forward?—It is about one-third or a quarter decked forward, not entirely from the mast, but about a foot from the mast.

41,890. What kind of trawl do you use, a pole-trawl or a beam-trawl?—A beam-trawl.

41,891. How long is the beam?—About 24 feet.

41,892. And what is the size of the mesh in your trawl?—About 5 inches.

41,893. That is the back,—the upper part of it?—We have them all made of one-sized mesh in this river.

41,894. Is not the pouch of the trawl smaller?—No.

41,895. Then the size of the mesh is 2½ inches from knot to knot?—Yes.

41,896. Do you have the rope of the trawl loaded?—Yes, the foot-rope.

41,897. What is the weight of the head-irons of the trawl?—About 18 or 20 pounds.

41,898. Not more than that?—No.

41,899. What is the ground over which you fish when trawling?—From Roancorrig to Dawros River, that is where we make the greatest hand of the fishing; at other times we go down as far as Dinish Point.

41,900. The length of the ground you trawl over, then, is about two miles?—Yes.

41,901. And the width about half a mile?—I cannot say, it will be thereabouts.

41,902. And there do not seem to be more than four or five or six fathoms of water on it?—The depth of water varies from two and a half to seven fathoms.

41,903. It is nine down at the outermost end of it, and from that down to two?—Yes.

41,904. Have you been trawling over that ground for a number of years?—Yes.

41,905. For how many years?—Sixteen or 17 years.

41,906. Do you trawl all the year round?—No.

41,907. How many months of the year?—It commences on the 1st of July and we fish up to the 20th of January, or so on.

41,908. Why do you not fish all the year round?—The fish are spawning in February and March, and we do not think they quite recover until June or July.

41,909. What leads you to believe that the fish are spawning there in February and March?—That is the time when we find the pea coming full in them—about the 20th of February.

41,910. What kind of fish are you referring to now?—Plaice.

41,911. Do you find plaice full of roe in January?—Yes.

41,912. And in February?—Yes; I have fished for them in February and found them in a poor state.

41,913. Were they shotten?—They were quite thin and soft, and I believe they were after spawning.

41,914. Have you any reason to think that those fish spawn on this ground at that time?—It was not upon this ground that I got them.

41,915. Have you reason to believe that the fish spawn upon the trawling ground?—No, I do not think so.

41,916. Then what makes you leave off trawling then?—The fish go in-shore to spawn.

41,917. If you were to take the fish would you obtain any price for them in the market?—No, I think not.

41,918. Then is not that the reason why you leave off fishing them?—No, it is not.

41,919. What is the reason?—They would not pay for the wear and tear of the nets.

41,920. You mean that you would not get price enough for them?—No, we should not.

41,921. You do not trawl over this ground for more than six or seven months in the year?—No.

41,922. Do you trawl every day in the year?—No, we cannot trawl every day.

41,923. Why not?—If we have too much wind or if we have none at all we cannot trawl.

41,924. Do you occasionally get too heavy a sea up here?—Yes, we frequently get a very heavy sea and very heavy squalls of wind.

41,925. How many days in the week do you trawl, on the average?—Some weeks we trawl every day.

41,926. Do you think that you trawl three days a week on the average?—Yes, about that time.

41,927. Do you work at night as well as in the daytime?—Yes, upon a moonlight night.

41,928. But not upon a dark night?—No, because the place is full of foul ground, and we cannot go over it on a dark night or even when there is a fog or a mist.

41,929. How many sail will there be fishing in addition to your own boats?—Sometimes six or seven and at other times there may be none but myself.

41,930. Taking one day with another will there usually be three boats working over the same ground?—No, I do not think so.

41,931. Will there not be as many as that?—No; some days there may be three or four or five, and I recollect having seen six or seven.

41,932. You think there will not be more than three fishing there, taking one day with another?—I do not think there will be.

41,933. What would you consider to be a tolerably good catch of fish; how much for a day's work?—Something like a dozen score of fish.

41,934. Of plaice?—Yes, of plaice and soles.

41,935. Do you get anything besides plaice and soles?—Yes; cod, hake, turbot, ling, and john dorey.

41,936. Do you get them in great numbers?—No, very rarely.

41,937. Do you ever get skate?—Yes.

41,938. On the average two or three boats have been fishing there two or three times a week for the last 15 years?—Yes, that will be so, speaking roughly.

41,939. You say that you have been fishing there for about 16 years?—Yes, 16 or 17 years.

41,940. Has the number of boats engaged in fishing there increased since you began?—I do not think there has been any increase in the number of boats.

41,941. Are there about the same number now?—Yes; there are about the same number of boats on the river, but I do not think they have stuck to the trawling.

41,942. Do you think there has been pretty much the same number of boats during that time?—Yes.

41,943. Taking one year with another, have they got as much fish as they did formerly?—No; they do not take as much as they did when I began fishing. For the first five years I began they took a great deal more. I remember when there were six or seven trawlers fishing upon the river. They stuck to the ground, and cleaned it for the fishing. There was a great deal of broken seaweed and stuff upon the ground, and when that was the case we would not take the fish. Our foot-rope will not lie upon the ground among it.

41,944. Is it because the fish are not there, or that you cannot take them, that you do not get them?—I cannot say.

41,945. Do you think that the more trawling goes on within reasonable limits the more fish you get?—Yes.

41,946. Because you keep the ground clear?—Yes; the more they trawl over the ground the more the fish will lie upon it.

41,947. Do you ever get many small fish in the trawl?—No.

41,948. You do not catch many unsaleable fish?—We catch some, and the reason we take them is that they are among some of the broken weed. They get among the broad leaves of the weed. We find such

things as small plaice and sand dabs. I do not think I ever saw many small plaice among the fish, but we get what we call small dabs.

41,949. Is there no other ground fit for trawling but that small spot ?—It is very foul elsewhere.

41,950. Is it rocky ground ?—Yes.

41,951. Are there no good trawling patches further down the river ?—I never saw any.

41,952. Has anybody ever been to try ?—I never tried any myself.

41,953. This patch of ground, of which there is not more than a square mile, altogether, has yielded to a couple of boats a fair living for the last 16 or 17 years ?—Yes.

41,954. Taking one year with another ?—Yes, and a very fair living, too.

41,955. How many men do you have in each boat ?—Two or three, and some have four.

41,956. Supposing there was no trawling going here, would the line fishermen be able to catch the soles which you catch now ?—I do not know. I am not expert at line fishing.

41,957. Did you ever see them take any soles with the line ?—I think they get plaice, but I do not know whether they get soles.

41,958. Is there a good market for the fish you catch in Kenmare ?—Yes.

41,959. When the weather is too bad for you to fish do the line men fish ?—No, I do not think they do; on the contrary, I think we fish when the line fishermen cannot go out. Perhaps they might fish if they increased the size of their boats, but it would be difficult then for them to come out and go in.

41,960. What sort of a supply of fish do you get to the market as compared with the line fishermen ?—We supply a greater quantity than they do.

41,961. Do you supply very much more ?—Yes; three or four times as much, I should say.

41,962. And that is the case now ?—Yes. There has not been much of a price this year, and we have not trawled much; but the time is now coming on, I think, when we may fish. The winds have been very light all through this year.

41,963. (*Mr. Lefevre.*) Have the trammel-nets for soles been used ever since you have been fishing for soles ?—Yes.

41,964. And as many as ever ?—Yes.

41,965. Do you often get your trawl entangled in the trammel-nets ?—Yes; I have carried them away on some occasions when I did not know that I had them. The buoy which they put over the trawl is no buoy at all—it is only a bit of a grass lath stuck over a stick.

41,966. A little stick rising from the centre of two crossed sticks ?—Yes.

41,967. What distance can you see it ?—If there was not much of a ripple on the water I should see it for very nearly a quarter of a mile.

41,968. Not further than that ?—No.

41,969. Do you find that these nets are set at all in the daytime ?—Yes.

41,970. Then they do not observe the regulation with regard to setting them at night ?—They did not until the Coastguard seized them.

41,971. The Coastguard interfered with them last year ?—Yes.

41,972. Previous to that time they set them in the daytime ?—Yes, at all hours of the day.

41,973. If they are set in the night time do you find it easy to observe the buoys in the water when you are trawling ?—If they were not very close to me I could not tell them; but if they were kegs lower down the river I might see them.

41,974. If they used larger buoys do you think you could keep clear of them ?—Yes; kegs are used all up the river, but here the buoys are different.

41,975. Do you ever come across the trammel-nets which are used for catching hake ?—Yes; sometimes I have done so.

41,976. On the ground you speak of ?—Yes.

41,977. Do they use larger buoys than the trammel-nets used for catching soles ?—Yes.

41,978. Notwithstanding that you have dragged them away sometimes ?—It is against our conscience to drag them away, because it is an injury to ourselves as well as to them; but frequently they are standing right across the passage of our trawl. We avoid them if we possibly can, but sometimes a wind will catch us from the shore and drift us upon their nets. It is of no good to us to get among them and come foul of them, because we take no fish then and only cause ourselves a delay.

41,979. Do you always look out for them ?—Yes.

41,980. With regard to the price of fish, do you get as good a price for your fish as you were in the habit of getting 16 or 17 years ago ?—It is three times as good.

41,981. Then your fishing is more successful than it used to be ?—Yes; and there are not as many people following that occupation now compared with the number which followed it years ago.

41,982. Why is that ?—I think it has proceeded from the failure of the potatoe crop.

41,983. What do you do in the rest of the year when you are not trawling ?—I go about and turn my hand to anything I can earn a shilling or a pound by.

41,984. Do you use your boat for long-lines ?—No; there are no long-lines used up this part of the river.

41,985. Are there any hookers at all now from Kenmare ?—Yes.

41,986. How many ?—I believe there are three or four.

41,987. Do they fish over the same ground as that upon which you trawl ?—Yes, they do.

41,988. Do they go further out ?—They do not, but these four are not used in the fishing at present; they may be before the season is over.

41,989. (*Professor Huxley.*) Have the trammel men no ground to fish on except the ground you trawl over ?—Yes.

41,990 Do they set their trammels close in-shore where you cannot trawl ?—Yes.

41,991. If they kept out of the trawling ground you occupy would they have ample space to fish in ?—Yes.

41,992. It would seem from the map that they would have as much area as you have to trawl over ?—Yes, but we must keep clear from the shore.

41,993. Are there any good marks by which you could make sure of keeping to the middle ground, supposing you were limited to a particular space ?—I do not know of any. We could have marks at each end of the trawling ground very easily.

41,994. Supposing you were limited to a ground bounded on the north by a line drawn from Rohancorrig to Dunkerro, and on the south by a line drawn from Brennan to Dinish Island—would that suit you ?—Yes.

41,995. If you were limited to that and not allowed to go within any of those lines would that be ground enough for you to trawl over ?—Yes.

41,996. You would not wish to be anywhere else ?—No, we would not desire to be anywhere else.

41,997. Is there anything else you would wish to suggest ?—No.

41,998. (*Mr. Lefevre.*) Do any trawlers come from a distance to fish in this bay ?—Very seldom.

41,999. Do they come from Cork ?—I do not think so. I saw a boat there once when I was fishing.

42,000. Do you never see the large trawlers fishing further out in the bay ?—There are one or two that come out in the week and then go away again.

42,001. Are they as small a class of trawlers as your own ?—Yes.

The witness withdrew.

KENMARE.

W. Goodwin.

29 Aug. 1864.

WILLIAM GOODWIN re-called and examined.

42,002. (*Professor Huxley.*) Supposing a line were drawn from Rohancorrig to Dunkerro on the north, and another from Brennan Island to Dinish Island on the south, and if you as trammel men were forbidden from fishing in the said channel between those lines, would it be a hardship?—I could not fish there.

42,003. Is the ground to the north and south of those two lines too rough?—There are very few fish that frequent them in-shore there. It would be useless for a poor man to try to get a living by his nets there.

42,004. Then you want to fish on the very ground that the trawlers wish to fish upon?—Yes, and we might as well give over fishing altogether as give it up.

The witness withdrew.

D. Casey.

DANIEL CASEY called and examined.

42,005. (*Professor Huxley.*) How long have you been fishing here?—Off and on ever since I was able to fish.

42,006. What kind of fishing?—Line fishing.

42,007. But have you been trawling as well?—Yes, I was trawling too for a short time.

42,008. Have you ever worked with the trammel-nets?—Yes, I have a trammel-net which I used for two years. It is one of the small-fluke trammels.

42,009. Did you hear what was stated by Goodwin about trammel-net fishing?—Yes.

42,010. Do you agree with what he said—do you think it was right?—I cannot say whether it was or not, but I think these small nets have nothing but the shallow ground from Rohan Island to fish upon—they cannot trawl anywhere else.

42,011. Do you think, then, that the ground upon which the trammel men wish to set their nets must be the same as that upon which the trawlers want to trawl?—Yes.

42,012. They both want to work over the same ground?—Yes, and they trawl more over that ground than any other ground.

42,013. Is there any complaint you have to make with regard to the fishing here?—Yes, I have a complaint to make.

42,014. What is it?—I do not think it is fair for us poor people to go out in the evening to set our nets and in the morning to take them in again when these trawlers are allowed to go over them and take the nets away.

42,015. The trawlers work over the ground and carry away the lines?—Yes, they will carry the lines out of a man's hand if he is fishing in some of the small yawls.

42,016. Does that often happen?—I only heard of one man to whom it occurred.

42,017. Did you ever work with the long-lines?—No.

42,018. Do you work with hand-lines?—Yes, off and on.

42,019. Have you ever had your lines carried away by the trawlers?—My net has been carried away, but not my hand-lines.

42,020. Your trammel-net?—Yes.

42,021. Is there anything else you wish to state to us?—Yes.

42,022. What is it?—I wish to say that it is of no use for us poor people to have nets there if they are allowed to trawl there both by day and night. They do great injury to the hookers as well.

42,023. Do you mean to say that neither trammel-net fishing nor hooking can go on as long as the trawlers are at work?—I mean to say that they are trawling every day in the year; when the hookers are idle they are at work.

42,024. Then in your opinion the trawling is putting a stop to all the other kinds of fishing?—When the bag of the trawl is full of muck and dirt and other things everything it comes across it injures, even the oysters.

42,025. Do you think that it damages the supply of fish?—Yes, I think it destroys everything it comes across.

42,026. What you say is that trawling is destroying the fishing?—Yes; since the trawlers came here we have got no fish.

42,027. But the trawlers get plenty of fish?—Yes.

42,028. They get them year after year?—Sometimes they do.

42,029. They seem to find it answer very well?—I do not know that.

42,030. They cannot drive the fish away, then, if they contrive to catch them?—I suppose the fish try to shun them as well as they can.

The witness withdrew.

T. Husbands.

THOMAS HUSBANDS called and examined.

42,031. (*Professor Huxley.*) Were you a fisherman here for many years?—Yes, I fished for more than 20.

42,032. What kind of fishing did you practise?—Flat-fish and net and line-fishing.

42,033. With trammels?—Yes.

42,034. Did you use the trawl at all?—Never but one evening. I never made more than one scrape with the trawl.

42,035. Do you think the fishing is falling off in the river?—Indeed it is.

42,036. Do you speak now of trammel-fishing and line-fishing?—Yes.

42,037. What do you think is the reason of it?—When we first got these trammels in the river 30 or 40 years ago anywhere they were put out a man could live well by the fish he took. There was no trawling then, but since the trawling commenced the fish have fallen away; even the sprats and herrings and the pilchards and all kinds of fish are falling away.

42,038. But the trawlers contrive to make a very good thing of it?—They are not taking anything in comparison with what they were taking then.

42,039. Still they contrive to get fish enough to pay them?—I cannot say that.

42,040. Did you not hear that stated just now?—Yes.

42,041. It would appear from that that they do not drive the fish away?—A trawl must frighten the fish.

42,042. But the question is whether it does or not; have you any good evidence that it does?—The trawlers perhaps do not drive the fish away, because the trawl takes everything that comes across it.

42,043. What other harm does trawling do besides frightening the fish?—I believe that it destroys the spawn.

42,044. What spawn do you mean; the young fish?—Flat-fish and other spawn.

42,045. Do you mean young fish or the pea?—I mean young fish and eggs as well.

42,046. Do you think that the fish spawn in the centre of this river?—I will not say that, but they may spawn on both sides of the river and in the centre equally.

42,047. Have you ever seen a trawl when it was hauled up?—No; I never had occasion to trouble myself much with trawling except once.

42,048. And what did you get then?—About a dozen flat-fish.

42,049. Then what you say is from report; you have no knowledge of the matter yourself?—No, but every man here blames trawling for the falling off

KENMARE.

T. Husbands.

29 Aug. 1864.

of the fishing, because there were plenty of fish before trawling commenced in the river; then we had whiting and all other kinds of fish that can be hooke after. We had plenty of hake too.

42,050. (*Mr. Lefevre.*) When were trammel-nets first introduced here?—About 30 years ago.

42,051. Was it immediately after the bounties were given up?—I do not know that, but it was 30 years ago.

42,052. When was trawling introduced here?—About 30 years. I recollect the first trawl being put down in Kenmare River. I towed the yacht which put out the first trawl.

42,053. When was it the trawlers first began to trawl over the ground we are talking about?—It will be 20 years ago at least. There are eight or nine of them that go trawling there now. They go out at the night time too, and upon very dark nights as well as moonlight nights.

42,054. When did you observe the diminution in the fish begin; how long ago?—It has been diminishing for the last nine or 10 years; it has been falling off all that time. With regard to sprats and herrings and pilchards, they were about here in considerable quantities 20 years ago, but there is nothing of any consequence to be got now.

42,055. Do you know anything about the pollack or bream-fishing here?—No, very little. A few pollacks are taken here, but I only fish with a hand-line.

42,056. You are quite sure that the trammel-nets do not frighten away the fish?—No, they do not.

42,057. They have not kept the shoals of sprats and herrings out of the bay?—No, because they are laid on the bottom and the fish come in on the surface.

42,058. Do the trammels that are set for the hake do it?—I will say nothing about that because I never had one myself.

42,059. There are a great number of them set in the bay?—No, unless upon the Marquis of Lansdowne's property. They are not set on this side.

42,060. Have you formed any opinion whether the trammels which are set for hake frighten away the fish?—No, nothing that is stationary will frighten away the fish unless the weed is scraped up.

42,061. Do you think it is only the trawls that frighten the fish?—Since they began to trawl the fish have decreased.

42,062. And you attribute the falling off in sprats and everything to that?—Yes.

The witness withdrew.

THOMAS SPILLANE called and examined.

T. Spillane.

42,063. (*Professor Huxley.*) Have you been all your life engaged in fishing?—Yes, all my life, as far as 30 years at any rate.

42,064. What kind of fishing?—All sorts of fishing, unless it is hake-fishing.

42,065. Have you practised trammel-net fishing?—Yes, fluke trammel-net fishing.

42,066. Do you think that the supply of fish is remaining about the same, or that it is falling off?—I know very well it is.

42,067. Is what? is it falling off?—Yes, we have got no fish in this river for the last 15 or 20 years.

42,068. No fish at all?—Nothing to signify. We have had nothing in comparison with what we got formerly.

42,069. What is the principal fish you got 20 years ago?—Sprats, herrings, and flat-fish.

42,070. Soles as well as plaice?—Both soles and plaice.

42,071. Did you get soles with the line?—No, I never took one with the line.

42,072. How did you get them?—With the trammel-nets.

42,073. What is the reason of the falling off?—I do not know. Of course we only blame the trawlers for it.

42,074. How do you think they do you a mischief?—By destroying the spawn. They are the only persons who do us an injury. The fish come into the river into water which runs from 2½ fathoms to 6 fathoms deep and that is no trawling ground at all. No trawls ought to be used in such shallow water.

42,075. We are told that the trawlers do not work in the spawning season; that they do not work from January until July?—But they do, and their net is able to take any kind of spawn that it comes across.

42,076. When you use the word spawn do you mean the eggs of fish or small fish?—The eggs of fish.

42,077. Do the trawlers work between January and July?—On or about Christmas the fish come into this part to deposit their spawn, and when the ground is trawled over during that time they cannot help but destroy the spawn.

42,078. We only know what we are told; the trawlers tell us they do not work after the beginning of January?—Yes, they do; they work every day in the year that it answers them to work.

42,079. You tell us they do?—Yes, I tell you just the reverse of what they have told you.

42,080. They do work during those months?—Yes, every day they have a mind to work they work.

42,081. Have you seen them working in the months of February and March?—Yes, at all times, except for a short time in the spring.

42,082. I ask you particularly whether you have seen them working in those two months?—Not in March and April.

42,083. Do they do it in January and February?—They do.

42,084. Have you seen them yourself trawling in February?—Yes, I often have. I am on the sea every day in the year, and I have a good opportunity of seeing them. They cannot go anywhere down the river without my seeing them.

42,085. You think it is from January to July that the fish are spawning on the beds?—Yes.

42,086. Do you find the fish full at that time?—Yes, and dropping the pea.

42,087. What fish do you refer to?—Herrings.

42,088. But the trawlers do not catch herrings?—No, they do not.

42,089. But you think they destroy the spawn of the fish there?—They destroy the eggs when they have been deposited.

42,090. Do you think that the soles and plaice deposit their spawn in the winter time?—Yes, on the very ground they work over between Horse Island and Dinish Island.

42,091. But the soles are not full until a later period?—After Christmas and from then up to the 1st of January; about that time.

42,092. Do the herrings come in to deposit their spawn in the middle channel or above Perch Rock?—Yes, they do.

42,093. What makes you think they deposit their spawn there?—I often see a little of it.

42,094. Do you see the herrings there in great quantities at that time?—No; but I see the eggs tied to little bits of wood at that time.

42,095. How do you know they are the eggs of herrings?—I have seen the pea dropping out of the herrings when I have taken them.

42,096. And this is very like it?—Yes.

42,097. Are there no herrings found up there at that time?—No; they are not frequent in the river at any time now.

42,098. Then if the herrings do not come there, how is it that the eggs are found?—They have not been found of late, but they were formerly.

42,099. How many years ago?—From 15 to 20 years ago.

KENMARE.

T. Spillane.

29 Aug. 1864

42,100. Do you think the trawlers have carried off all the herring spawn, so that no more herrings come?—They will clear everything they come across. They have a large beam and a heavy foot-rope, and they will take the lead-line that a man sails with, or an anchor, and everything they come across.

42,101. Is not the spawn small enough to get through the mesh?—No, when it is dirty like manure. They will also take oysters. I have sold more than 2*l.* or 3*l.* worth of oysters for them in the Cork market with my own.

42,102. Then this trawling has been going on for the last 20 years?—Yes, and more.

42,103. If they have been doing so much mischief every year to the spawn of the fish, how is it that the fish have not come to an end altogether?—The fish are rapidly coming to an end. Nobody cares about fishing now, because it is not worth their while.

42,104. But the trawlers go on catching fish enough?—It is paying them because we have drawn back from the fishing and they are getting a good price for the fish they sell. If we were fishing now as we did some years ago they would not get the price they are getting now. It is the increased price that is paying them. They are not getting one-tenth part of the fish they got formerly, but they are getting a very good price for it.

42,105. Do you mean to say that the trawlers get a better market because the hookers do not compete with them?—Yes, we drew back and they are now getting a good price for their fish, although they are not selling one-fifth of that which they formerly took. The reason of that is that the fish are not there for them to catch.

42,106. Then according to your account the trawlers are destroying the fish in the river?—That is my opinion.

42,107. Then do you think that trawling ought to be put down altogether?—I think this is not a fit place for trawling. It is only a little river and the water is very shallow. If they want to follow trawling they ought to trawl away off the headlands.

42,108. But if there was no trawling going on you could not catch the soles which they catch now, could you?—I could catch them with the trammel-nets.

42,109. But could you supply the market with as large a quantity of soles as is now supplied if there was no trawling?—Yes, I could supply the market with soles and plaice, and I should have in addition an immense lot of sprats and herrings.

42,110. Do you think the trawlers have driven the sprats out of the river?—I cannot blame anything else for it, because they have not frequented the river ever since trawling took place. I have a share in three seines of the value of 50*l.* and I have got nothing by them for the last 20 years.

42,111. What is there about trawling that drives the sprats away; are the sprats frightened?—Going through a shoal of them with the trawl drives them away; they are driven from one place to another.

42,112. (*Mr. Lefevre.*) How long is it since you had a good season for herrings?—It is 18 or 19 years since.

42,113. How far up the bay were they in the habit of coming?—Within half a mile of the town, up to the pier head.

42,114. Did you use the drift-net?—No, we anchored four nets. We had an anchor and chain rope to them tied fore and aft.

42,115. Your herring-nets were anchored?—Yes, we could never fish in the river without anchoring; there is far too rapid a current.

42,116. How long is it since you had a take of sprats?—I have not seen any since that time.

42,117. About the same time as the herrings?—Yes, I think there was a little in this year, but it was too late and we did not think it worth while to go after them. They did not come in until after November, and that is all the sprats I saw to my recollection.

42,118. Previous to that were you accustomed to have a good take of herrings and sprats?—Yes, mostly every second year. If we did not have them one year we had them another. They followed after each other with two years between. We took them so largely that we were enabled to live by that fishing.

42,119. Have you not used your seine-nets since then?—No, they are quite worn out and rotten.

42,120. What have you done since that?—I have lived by oysters and the help I get from the little nets, and now the Coastguard prevents us from setting them here by day. We always were in the habit of setting them before, both day and night.

42,121. Have the Coastguard prevented you from making a livelihood by the trammel-nets?—Yes, we could not get liberty to put them out day and night.

42,122. Have you any trammel-nets of your own?—I have four.

42,123. Did you not set them this year?—No.

42,124. Is that in consequence of any regulation prohibiting you from setting them in the daytime?—Yes.

42,125. Why cannot you set them at night?—They are too dangerous and bothersome, and it would not be worth while to set them. Besides we could not kill the fish in the night time with them; the water burns and the fish see the net.

42,126. You do not catch as many fish in the night time as you do in the day?—No, not nearly half the quantity.

42,127. (*Professor Huxley.*) Are the matters you have mentioned the principal complaints the line fishermen have to make here?—Yes, they are. I may state another thing about hooking. They often take away my anchors and my hand-lines for fishing in the bay. Mr. German has taken them away and brought them down to Barnycorrig.

42,128. Do the trawlers working over the ground trawl up your anchors?—Yes.

42,129. Have you ever had your lines carried away?—They took away my anchors. I asked them to haul up two or three times, and they did not notice me. They were going on before a breeze of wind.

42,130. (*Mr. Lefevre.*) Do you think that trawling ought to be put a stop to altogether?—I think this is not a fit place for trawling to be carried on.

The witness withdrew.

MARY DOWNING called and examined.

M. Downing.

42,131. (*Professor Huxley.*) How long have you been a fish dealer here?—Nineteen years.

42,132. Have you been buying fish all that time?—Yes.

42,133. Have you bought all sorts of fish?—Yes, every sort that comes in my way.

42,134. Who do you buy most from, the line fishermen or the trawlers?—I buy a deal from both of them. I buy a good many from the line fishermen and I always buy from the trawlers as well.

42,135. Do you buy much from the trammel fishermen?—Of late years I have not bought half as much from them as I used to buy.

42,136. When you began business 19 years ago did they supply you with more fish than they do now?—There was a great deal of trawled fish then. There was a great deal of soles and they had a good deal larger price then for the fish got by the set nets.

42,137. What kind of fish did you get from the trawlers?—Sole and turbot and beautiful plaice. When a fisherman named Mahoney fished in this river I bought more from him than I have ever bought since

42,138. Was he a line fisherman?—No, a trawler; he was the first who ever trawled in this river.

42,139. You bought a good deal from him?—More than I have ever bought since from anybody.

KENMARE.

M. Downing.

29 Aug. 1864.

42,140. Do you often buy soles from the line fishermen?—Not from the line fishermen but from the set-nets.

42,141. From the trammel-net fishermen?—Yes.

42,142. Do they supply you with plenty of soles?—None of them can supply me with plenty of soles. Sometimes I will be a month and get none and at other times I may get 30 pair from the nets. But they never supply me with as much as the trawlers.

42,143. When the people are trawling do you get plenty of soles?—Yes, in the proper season, but not at this time of year.

42,144. What do you think is the proper season?—In the winter.

42,145. What time of the year are you in the habit of getting fish from the trawlers?—When the rough weather sets in.

42,146. Do you buy from them after Christmas?—About Christmas we get most of the trawled fish.

42,147. In February and March do you get many?—Not in March.

42,148. Do you get any in February?—Yes, but think I am mistaken. I do not think I get any in February.

42,149. Then in what months do you get fish from the trawlers; do you get it in February, March and April?—No.

42,150. Are they not working then?—No.

42,151. Do they work up to Christmas and beyond it?—Yes, until a fortnight after Christmas; but down to this time after that they do not kill any fish.

42,152. Has the quantity of fish you have got from the trawlers during the last 19 years increased on the whole or remained the same?—It has been more on the decrease than on the increase, I think.

42,153. It has fallen off?—There is not half as much fish as was formerly caught either by nets or by trawlers.

42,154. The supply from the trawlers has fallen off?—Yes, as compared with what it was some years ago.

42,155. Do you pay a higher price for fish now than you did in former years?—Yes, a great deal higher price; I have paid 3*s.* and 3*s.* 6*d.* a score for the little fish. There have been no large fish to be got.

42,156. You pay a higher price and do not get as many fish?—Yes, if the fish were plentiful I should not pay as high a price. I should only in that case pay from 2*s.* to 2*s.* 6*d.* the score.

42,157. What kind of fish are you speaking of now?—Plaice and sole.

42,158. If they were plentiful you would only pay 2*s.* a score for them?—Yes, we pay more when the fish are scarce. There may not be many soles sometimes and we give the price according to the supply.

42,159. You are quite sure that you have bought less fish and that you have paid more money for them?—Yes.

42,160. Do you get less fish from the trammel fishermen?—Yes.

42,161. And do you pay more for it?—Yes.

42,162. And do you get less fish from the line fishermen?—Yes.

42,163. And pay more for it?—Yes.

42,164. Then you get less fish from everybody?—Yes.

42,165. And you pay more for it?—Yes.

42,166. Do you get any lobsters here?—Not out of this bay, but we get them from near Sneem.

42,167. What is the cause of the falling off of the fish?—I cannot tell. I believe it is that the fish are not upon the ground at all.

42,168. If trawling were put a stop to would that mend the matter for you?—I do not know; I cannot tell.

42,169. Would it increase the supply of fish?—I cannot tell you that because I do not know.

42,170. (*Mr. Lefevre.*) When did you first observe the falling off?—The fish have not been as plentiful as they were formerly at all.

42,171. Has the decrease been gradual; has there been a falling off every year?—It has been falling off, by degrees. The fish I could buy last year for 3*d.* a pair I have had to pay 3½*d.* and 4*d.* a pair for this year. A shilling I pay for a pair of soles. If I could buy as many fish as I did at one time from the trawlers I should not have to pay as much.

42,172. How long is it since you bought herrings in any quantity?—We buy herrings from Sneem, but the herrings are not caught here. It was seldom however in years past that they were not taken.

42,173. They are still caught in the bay but not as high up?—They do not come here at all.

42,174. Is the market supplied with herring?—Yes, they are taken in the west and come here.

42,175. Is that the case every year?—Yes, both herrings and mackerel.

42,176. You do not think the supply of them has fallen off?—They have been a little dull for a couple of years.

42,177. But generally has the supply been as good as it was formerly?—They have taken them this year.

42,178. But do not they come as high up the bay as they did formerly?—No, but I do not know what the cause of that is; perhaps the salt water is not salt enough and strong enough.

42,179. What is the price you pay for herrings?—3*s.* 6*d.* a hundred, but they would not be as dear as that if I took a horse and car and went for them.

42,180. Has that generally been the price of herrings every year?—They are cheaper than that when they are taken, but if they bring them to this town they charge a higher price.

The witness withdrew.

T. Trench.

Townsend Trench called and examined.

42,181. (*Professor Huxley.*) You are well acquainted with the fishery here?—I have known it for some years.

42,182. Have you heard the evidence which we have had brought before us to-day?—Yes.

42,183. Is there anything you wish to add or correct in what has been stated, from your own knowledge or opinion?—Yes, with regard to the differences which exist between the trawlers and the trammel fishers. The differences which exist between them and the whole subject was put forward, I think, in a petition presented by the trammel fishers some time ago. They complained that the Coastguard seized their nets when they found them set during the daytime. The chief hardship in the trammel fishery seems to be that they are prevented from fishing during the daytime. If a particular locality were allotted to the trawlers, and the trammel fishers were allowed to fish everywhere else except in that locality, and at all times, it seems to me that all parties would be satisfied.

42,184. The great difficulty appears to be that the productive ground for both trawlers and trammel-net fishers is the same?—I do not believe that to be the case. I do not believe that the trammel ground is at all confined to the trawl ground. In fact I am quite sure it is not.

42,185. Is it not the fact that the trawling ground is that which is most productive to the trammel men?—I think that might be; but the difference is this, that is the only spot on which the trawlers can fish, whereas there is other ground nearly equally as productive all over the bay which might easily be fished by the trammel-net fishermen.

42,186. It would be no great practical hardship for the trammel men to be excluded from that place?—

KENMARE. I think it would be a just division of the ground. If the trawlers are excluded from that they will be annihilated. That would not be the case with regard to the trammel men, because there is plenty of other ground upon which they can fish.

T. Trench.

Aug. 1864.

42,187. (*Mr. Lefevre.*) Their complaint is that they are practically excluded from that ground through fear of losing their trammels?—What prevents the trammels from being put out now is this: as the law stands they cannot have their trammels set during the daytime, and if they put them down in the night-time and neglect taking them up in the morning they are seized by the Coastguard. It is not a geographical difficulty but one of time.

42,188. (*Professor Huxley.*) There is no different geographical locality where the trawling might be practised?—No.

42,189. We put the question clearly and definitvely to the witnesses. I presume you mean by trawling ground the ground I defined?—Yes.

42,190. The replies of the witnesses were very definite indeed, namely, that it would not be worth their while to set the trammels if they were excluded from that ground?—With great respect for that witness, I may say from the sworn evidence heard before Mr. Barry some time ago, and my knowledge of trammels having been taken up by the Coastguard in other places, it is impossible that that can be true. The Coastguard will tell you that they have themselves seized the trammels in other places, which quite contradicts the statement made by the witness.

42,191. The witness did not say the trammel-fishing was impossible, but that it would not be profitable anywhere else?—Perhaps it might not be.

42,192. If the trammel-net-fishing goes on as it does now, and they are set on the trawling ground at the peril of the trammel-net fishers, they taking their chance like other people, would there be any difficulty in the matter?—I think there would. It would be making a law which would lead to fights and broken heads.

42,193. That would be a police difficulty?—Yes, it would no doubt lead to difficulties of that nature.

42,194. Then there occurs to you no other plan than a geographical limitation of the kind which has been mentioned?—No.

42,195. And in spite of what has been said, from your own knowledge of the facts you are inclined to think there would be no particular hardship in that?—I do not think there would be, because I think that all parties are entitled to a fair division of the spoil.

42,196. You heard of the falling off of the fish since the trawlers came here, what is your opinion on that subject?—I do not offer any opinion upon that. I am not able to account for the diminution which has taken place in the quantity of fish.

42,197. Do the trawlers supply the market here?—Yes, the trammel-fish is for the home consumption of those who catch them, but the trawl-fish comes into the market. When the trawlers are not trawling we never get any fish.

42,198. Can you give us any reason why the line fishermen do not fish outside the district which has been defined to us?—They do fish, and there is evidence in this court-house to show that they do. There is evidence, I believe, which will show that one man caught 90 bream in a single night outside that ground.

42,199. I presume there must be favourable places for fishing all along this bay?—Yes.

42,200. Then how is it that unlike other places there are no long-lines set here?—They are set to a certain degree, but the population is not altogether a fishing population. All along this bay there are small farmers living on the arable land at the foot of the mountains, and these small farmers have some spare time which they devote to fishing. They get a sufficient quantity of fish to supply themselves, but it would not be worth their while to neglect their farms entirely for the sake of the fish.

42,201. Then in reality the greater part of the bay is unfished?—I think it is unfished by trammels since the Coastguard took the matter up so warmly. Formerly they took no notice of the matter and the law was trampled underfoot, but now the ground is unfished to a certain extent with regard to trammels; but it is fished with long-lines.

42,202. There ought to be a large supply of fish got by the long-line on this vast area from the heads up to Perch Island?—Yes.

42,203. But there appears not to be any?—Nothing extensive.

42,204. Does that arise from the want of enterprize on the part of the people or the want of capital to enable them to set up boats? Can you give us any reason for it?—I cannot; I think it is because they are chiefly occupied upon their farms, and because there is none of the population entirely dependent on the fishing.

42,205. If there were a fishing population one would expect that finding the fish fall off in this small area they would take to fishing outside?—Yes.

42,206. But if they are occupied in other ways it would not be worth their while?—No.

42,207. And of course the interest of the trawlers in that case becomes somewhat greater than that of the other class of fishermen?—Yes, certainly.

42,208. (*Mr. Lefevre.*) Have there been any differences between the trammel fishermen and the trawlers?—Nothing material, because the trawlers were the stronger party, and it was not worth the while of the trammel-net fishermen to have any controversy.

42,209. Do you anticipate the same difficulties in the event of the trammel-net fishermen being allowed to fish throughout the day?—If they are allowed to fish on the trawling ground—or rather I would put it in this point of view, if there is to be a change in the law it might be amended so as to do justice to both parties.

42,210. Then do you anticipate difficulties?—I do, of course.

42,211. Are there any other fishing villages in the bay near to Sneem?—There is not a great deal of fishing there; the village of Sneem is too far inland. The chief fishing villages are Reen, Ardea, and Colorus.

42,212. Are they fishermen all the year round, or chiefly of the class you have referred to?—Chiefly of the class I spoke of; but they are more dependent on fishing at Reen than anywhere else.

42,213. Is there any herring-fishing now?—No.

42,214. Do not the herrings come within the bay at all?—No.

42,215. From what place is the market here supplied with herrings?—We hardly ever get any. We have not caught herrings here I think for five years.

42,216. Has there been the same application on the part of the hake-trammel men to be permitted to set their nets in the daytime?—I believe the petition chiefly emanated from the small-trammel men.

42,217. Has the same desire been expressed by the hake-fishermen?—I do not know whether it has or not.

42,218. Is the law observed by them with regard to fishing during the daytime?—The law on the subject of trammel-fishing was disregarded until within the last six months, and then the Coastguard commenced to do their duty.

42,219. Do you know how far they extended the carrying out of that duty?—I believe they seized trammels as far down as Colorus.

42,220. The hake-trammels as well?—Yes, if they found them there in the daytime.

The witness withdrew.

RICHARD JOHN MAHONEY called and examined.

KENMARE.

R. J. Mahoney.

29 Aug. 1864.

42,221. (*Professor Huxley.*) Are you a resident here?—Yes, I reside within five miles.

42,222. Have you interested yourself in the fishing for years past?—With regard to this special question, I was the originator of the memorial which was sent up.

42,223. Do you wish to make some statement to us with regard to it?—What I wish to say is, that the question has completely altered from what it was originally. It has eventuated in an attack upon the trawlers which was not contemplated when the petition was sent up.

42,224. What was the original intention of the petition?—It was to relieve the trammel men from excessive disabilities operating upon them at that time in consequence of the enforcement of the Act which had been passed long before, but which had remained in abeyance to a certain extent.

42,225. The Act 5th and 6th of Victoria?—Yes. From some cause, in consequence of some report that went from here to head-quarters, directions came down to enforce the Act strictly, which led to a very great loss of property to those poor people. Their nets were seized.

42,226. What measures did they take in consequence?—Nothing was done until this memorial was got up.

42,227. What was the purport of the memorial?—It applied for permission to those men to fish during the hours forbidden by the Act. They were not allowed to fish, I think, during the entire day.

42,228. Not from sunrise until sunset?—No, and in the summer that came very badly upon them.

42,229. What was the result of the memorial?—An investigation took place here the other day before Mr. Barry.

42,230. What occurred then?—Then the original character of the memorial was completely lost sight of. The evidence on the part of these men showed a spirit of hostility to the trawlers and an anxiety to do away with trawling altogether.

42,231. In fact in seeking for liberty for themselves they endeavoured to restrict the liberty of other people?—Exactly. In fact there seems to be a question between the two which involves the very existence of the trawlers.

42,232. You heard the limits proposed for trawling; a line drawn from Rohancorrig to Dunkerro on the north, and from Brennen to Dinish Island on the south?—Yes.

42,233. Are you of opinion that if the trammel-net men were allowed to set their trammels only outside those lines, that is to the north and south of them respectively, they would still find abundant room for their nets?—They would certainly find nothing like the fish they would find on the ground cut off from them—that is the best ground.

42,234. Then would they be greatly injured by being confined within those limits?—They could nto take anything like what they would take upon the ground cut off.

42,235. Then practically it would be a considerable hardship upon them?—Yes.

42,236. Would they prefer taking the risk of having their trammels occasionally carried away by being allowed to set them on the trawling ground?—They have the option of that now.

42,237. Looking at the matter from the trammel-men's point of view, what would be the fairest measure to adopt?—That is a question which it is very difficult to answer. I should make the same proposition as that which has been made by Mr. Trench. That was the object of the petition that was sent up to the Board of Fisheries, namely, to give them full licence to fish during the day everywhere except within those limits.

42,238. Was that the object of the memorial?—Yes.

42,239. Have you a copy of that memorial?—know that that was exactly the purport of it.

42,240. To be allowed to fish during the daytime?—Yes.

42,241. Everywhere except upon the authorized trawling ground?—Yes.

42,242. So that at that time the trammel men did not seem to think it a hardship to be excluded from that ground?—I suppose they were glad to get what they could.

42,243. (*Mr. Lefevre.*) Did they contemplate at that time being excluded altogether from that ground?—Yes, that has been understood. The object was simply to relieve them from a present difficulty, which is not a geographical difficulty at all.

42,244. (*Professor Huxley.*) In their memorial did they state they would be altogether ruined and it would not be worth their while to set their nets, if they were excluded from fishing upon the trawling ground?—No, because a great number of them were fishing at that time outside the limits of the trawling ground.

42,245. They were fishing at that very time outside the trawling ground?—Yes. The occasion of the memorial was as I have stated. Some nets were seized for fishing at an illegal time, and it appeared to be quite a hardship.

42,246. And at that time they would have been quite satisfied if the prayer of their memorial had been granted?—Yes.

42,247. And the prayer of that memorial was to allow them to set their trammels outside the lines which have been referred to?—I cannot say that, because the present position they have taken shows that they were not satisfied with it.

42,248. Is it not that having been successful so far they thought they might go a little further?—Perhaps that may be so. I think they wish to open the question again.

42,249. Do you think they desire to open the whole question?—Yes.

42,250. It appears to be impossible for the two modes of fishing to go on together on the same ground?—Yes. The ground upon which each should fish should be defined.

42,251. But one of the trammel-net fishermen said that if the trawling ground were cut off from them it would be so great a hardship and so oppressive that they might as well give up fishing altogether?—Yes, I heard that stated.

42,252. Practically they have the power of fishing where they like now, except that they have no right to set their nets during the daytime?—Yes.

42,253. So that if they had the right to set them in the daytime, they would be in reality much better off than they are now?—Yes.

42,254. (*Mr. Lefevre.*) Is it a fact that they do not set their nets over the trawling ground at present?—I think they do sometimes, because I passed one the other day, but there are only very few who do.

42,255. They will not run the risk of having them carried away?—No.

42,256. (*Professor Huxley.*) Is there anything else you wish to state?—With regard to there having been any diminution of fish in consequence of trawling, I do not think that is the case. I remember trawling in my father's yacht 30 years ago, and though I cannot speak definitely as to the number of fish taken, I remember that we did not then take more than I am in the habit of taking now in a trawl. I have only just begun the year and I have taken a score and a half at one haul.

42,257. What fish?—Plaice and sole. There have been about four or five brace of sole in a haul, and there was not more than that at the time I was trawling with my father's yacht. My impression is that the fishing is pretty much about the same as it was then; and with regard to the sprats, I have seen them in great quantities of late years. I have seen them in such shoals three or four years ago, that we could take them out by buckets-full.

42,258. One witness told us that he considered they had not been in the bay in any quantity for the last 20

KENMARE.
R. J. Mahoney.
29 Aug. 1864.

years?—That is not so. I have taken them up myself. They were driven in by another fish they call the scad.

42,259. That is the horse-mackerel?—Yes. And with regard to line-fishing, I have seen some of them out with their lines 14 miles to the westward from this town.

42,260. With what kind of lines?—Hand-lines. There is not a spilliard in the bay.

42,261–2. There is no long-line fishing?—Not within 25 miles of the town. I think there is further out west, but out there the men live more exclusively by fishing. They are far more dependent on it than they are here, and the fish come in in great shoals.

The witness withdrew.

Col. H. Holden.

COLONEL HENRY HOLDEN called and examined.

42,263. (*Professor Huxley.*) Have you been resident here for any length of time, Colonel Holden?—I have been here about four years.

42,264. Have you occupied your attention with the fisheries?—Yes, a great deal, and I consider that over this disputed ground the trammel men and the trawlers will never agree. If the trawl men are allowed to trawl there the trammel-net men would not be able to set their nets, and that is the best part of the ground. I have tried it as far as Blackwater Bridge and as far as Collorus. I have tried every part of the river with flat-fish nets, and I have the only long-line on the river.

42,265. And you are of opinion that that is the best ground for the fishing?—Yes.

42,266. You heard the trawling area defined by a line to the north and the south—what is your opinion as to trammel-net fishing being confined to the space outside those lines?—The fish they would get outside are of a bad quality; they are what are termed river flukes.

42,267. They are not soles?—There are some soles, but nothing like the number that are to be found on the trawling area.

42,268. Would the fish outside those lines be so little profitable that it would not be worth while to set the nets there?—It would not be worth while to send them to the market. The ground for the trammel-nets is very limited. It is all inside the islands of Dunkerro.

42,269. Why is that?—It is rocky ground, and there are no fish except skate, which are to be found in great numbers. The ground is dirty and rocky.

42,270. We understand at present that the condition of things is, that the trammel-nets are not set on the trawling ground to any great extent?—Not unless they run some risk. I always ask the question if there are any trawlers out, and then if I set them I run the risk of having them taken away.

42,271. Do many of the fishermen do the same as you do?—I do not think they could afford to lose a net.

42,272. So that practically there is very little net fishing on that ground?—Yes. There is an old man who runs the risk very often.

42,273. Is there a good deal of fish taken by the trammel-nets now?—I believe I am the only one taking any great quantity. I have a number of nets, and I employ a boat entirely for that purpose. I have a book in which I have kept an account of the number of fish caught for the last three years.

42,274. Is it your opinion that the fishing outside these lines could not be profitable to the trammel-net fishermen?—I do not think it could be unless they got a great number of small fish.

42,275. Can you suggest any mode of getting out of the difficulty? It seems that two fishermen who pursue modes of fishing which are incompatible with each other want to fish over the same ground?—Yes.

42,276. Then how will you get over that difficulty?—I do not know, unless you were to divide the river across from north to south instead of dividing the ground up the centre. You could then allow the trawlers to take one-half, and the trammel-net men the other.

42,277. But the whole of the ground is not a square mile in area?—No, it is very small; but it is a matter of perfect indifference to me. The persons whom it will most affect are the Reen men, who are the poorest description of fishermen in Kerry, and who get their living entirely by fishing.

42,278. By trammel-net fishing?—By trammel-net fishing and by the hand-line. I do not think the fact of the Coastguard taking their nets makes any difference in their putting them down in the daytime. I think it is very wrong; but if they wish to put them down they do not care for the Coastguard at all, but they sink their nets.

42,279. Do you think the practice of setting their trammels by daytime is a bad practice?—Yes; I think they ought to be taken up at a certain hour. To have a net down for 24 hours is, in my opinion, very wrong.

42,280. Why is it, then, that the fishermen desire so much to have the trammels down in the daytime?—With one or two exceptions they do not keep them down. It is having to draw them so early in the morning and put them in so late at night that causes the difficulty.

42,281. If they had from six o'clock until six o'clock would they not mind?—No, I think not.

42,282. It is getting them up at sunrise that they object to?—Yes. If they keep them in very long in the daytime it rots their nets, and the fish caught in them are very often eaten by the larger fish.

42,283. Then do you think that the night is a better time for setting the nets?—I think it would be quite enough to set them at six o'clock in the evening and leave them until six or seven o'clock in the morning—that would be quite long enough for the nets to be in the water.

42,284. Suppose the trawlers had the 12 hours in the day, from six o'oclock in the morning until six o'clock in the evening, and the trammel-net men had from six in the evening until six the next morning, how would that arrangement work?—That would work very well for the men, but I cannot say how it would interfere with the fishing.

42,285. I speak purely of it as a police question?—I do not think there would be any disagreement of that kind if you were to let the trammel men take their chance. If they were prohibited from setting their nets in the daytime that would alter the case; but if they were allowed to set them and run the risk, there would be no quarrel.

42,286. If they are allowed to set their nets over the trawling-ground at the same time that the trawling people are trawling, would there not be constant collisions,—constant quarrels and breaches of the peace?—I do not think they would set their trammels there in the daytime.

42,287. Between six o'clock in the morning and six o'clock at night?—No, not generally.

42,288. Then you think that practically there would be no hardship if they were excluded from setting their nets from six o'clock in the morning until six o'clock at night?—I think it would be better if you gave them six o'clock in the evening to set the nets and seven o'clock in the morning to draw them.

42,289. If they are anxious to avoid breaches of the peace and other inconvenience, they, the trawlers and the trammel-net men, cannot be actually working at the same time on the same ground?—No.

42,290. If they are they will come into collision and a bad feeling will arise?—Yes; it is quite impossible to put down a string of nets when trawling is going on. I think it was stated by one of the witnesses that the trammel-nets might be put east and west instead of north and south in the run of the channel, but they trawl across the channel very often.

42,291. It appears to be necessary either to adopt some geographical restriction, or some exclusion, according to time ?—Yes.

42,292. If a geographical restriction is adopted, one party or the other must be excluded from the only ground which is available ?—Yes.

42,293. Then comes the question whether a restriction as to time can be adopted, and whether it would be a hardship to the trammel-net men to be confined to six o'clock in the evening for setting their nets and six o'clock in the morning for drawing them, and to the trawlers to be confined to working only from six o'clock in the morning until six o'clock in the evening? —I think that would be better than any geographical arrangement.

42,294. (*Mr. Lefevre.*) Did I understand from you that the only effect of the seizures made by the Coastguard has been to induce the trammel men to set their nets without buoys ?—I know that has been done in one or two cases; the law of the case has nothing to do with it, they have nothing to do but to set the nets without buoys and the Coastguard may be for three weeks trying to find them without success.

42,295. Do you think that has been done on the trawling ground, namely, that nets have been set in the daytime in that way ?—I do not know whether it has been done on the trawling ground, because two or three trawls might take them up, or the lines might take a string of nets up. So far as the line-fishing is concerned, I can say that has fallen off wonderfully during the last four years; I used to go out night after night and catch nothing.

42,296. What do you attribute that decrease to ?—I cannot say.

42,297. Has the trawling remained as before ?—Yes; as to long-line-fishing it is utterly useless to try it, and I have put it by.

42,298. You cannot give any reason for the decrease? —No, the whiting are very scarce also.

42,299. Do you think the hand-line fishermen have found the same decrease ?—There is a general complaint near me that the hand-line-fishing is very bad.

42,300. Is that the case all along the bay ?—I can only answer for two villages near where I live, namely, Templetown and Reen.

42,301. Are they near the trawling ground ?—Yes, opposite to it.

42,302. Do the men fish near the trawling ground ? —Yes, just off it.

42,303. On the trawling ground or beyond it ?—On the trawling ground, in every part of it, they principally fish on the trawling ground; the very centre of the channel is the best place for the hand-lines.

The witness withdrew.

DANIEL MACARTHY called and examined. *D. Macarthy.*

42,304. (*Professor Huxley.*) You wish to say something about the hake trammel-fishing I believe ?—Yes.

42,305. What is it ?—The people who have hake trammels might as well drop them if trawling is to be continued in the channel at night; if they are allowed from seven in the evening until seven o'clock in the morning to set their nets the trammel men would do very well provided the trawls were stopped during that time, but if the trawls are out at night we shall only find the nets torn to pieces in the morning.

42,306. Those are the large trammels you are speaking of ?—Yes.

42,307. Where are they set ?—On the trawling-ground, from the very place where they commence trawling up to the spot where they end it.

42,308. You are not speaking of the small trammels? —No.

42,309. But the hake-trammels ?—Yes.

42,310. Then beside the trawling and the small trammel-net fishing, there is hake trammel-net-fishing going on also ?—Yes.

42,311. And the trawlers carry away the nets by night ?—Yes.

42,312. Do the hake men set their nets at night ? —Yes.

42,313. Do the trawlers often work at night ?—Yes, on moonlight nights.

42,314. Do they not carry away the trammels ?— Yes.

42,315. Is that the matter of complaint you wish to bring before us ?—Yes.

42,316. (*Mr. Lefevre.*) What sized buoy do you use? —A keg.

42,317. Could you not use a larger sized buoy ?— Yes, but what would be the use of it. They cover the trawling ground and they could not avoid our nets.

42,318. Do you catch many hake on the trawling ground further south in the bay ?—Yes.

42,319. Do you think it is the best ground ?—Yes, when the hake come in it is the best killing ground.

42,320. Are the trammel-nets all over the bay ?— Yes.

42,321. Are they not as productive as those on the trawling ground ?—There are some very good places on the coast, but they would be inconvenient for us to go to.

42,322. How is the ground on the other side ?—It is mixed up with rocks, and if the trammels get upon them they are torn; a storm or anything of that sort would do that.

42,323. But the bottom of the trammel-net used for hake does not touch the ground, does it ?—The bottom is from a foot to 8 and 10 inches from the ground.

42,324. Must you set the nets on the smooth ground? —Yes.

42,325. Will they not do on the rocks ?—No; if a storm comes on they would be cut away.

42,326. Do you mean if the rocks are high up from the ground ?—Yes.

42,327. Are all the nets along the coast set upon a smooth bottom ?—In some cases they are, but further to the west there are rocks, and they often get the nets torn there.

The witness withdrew.

EDWARD MILTON called and examined. *E. Milton.*

42,328. (*Professor Huxley.*) Are you in the Coastguard service here ?—Yes; I am chief boatman.

42,329. Are you acquainted with the seizures which have been made during the last four or five years ?— I am acquainted with those which have been made during the last two years.

42,330. Did you receive orders to look sharp after the trammel nets ?—Yes.

42,331. Was that without any previous warning given to the trammel-net fishermen ?—I cannot say what warning they had before I came up, but I warned them myself. I warned a man before I seized his net. I saw him haul up a trammel-net at 12 o'clock in the day and I told him I would take it from him.

42,332. How many did you seize altogether ?—I only took three.

42,333. How many were seized altogether ?—We took eight in Blackwater and the cutter took 12 last year.

42,334. Then there have been some 20 nets seized ? —Yes.

42,335. Were they seized for being down in the daytime ?—Yes.

42,336. What hour of the day ?—From half-past two to three o'clock or half-past three. Sometimes they kept them down all day. They hauled in the nets and then set them again.

KENMARE.

E. Milton.

29 Aug. 1864.

42,337. Have any of the nets been seized early in the morning?—Never, not earlier than 12 o'clock in the day.

42,338. Then it has not been a case of mere negligence in which the fishermen have left the nets in the water for an hour or so?—No, I am never particular to an hour or two.

42,339. Has one net been seized earlier than 12 o'clock in the daytime?—No, and not as early as that.

42,340. In what parts of the bay have you seized those nets?—I seized Colonel Holden's at the east end of Dunkerro Island, and the nets of Sullivan were seized at the north end, inside the trawling ground.

42,341. Were those nets on the trawling ground or beyond it?—To the north of it.

42,342. Outside of it?—Yes.

43,343. Have you seized any on the trawling ground?—No, never.

42,344. Have you noticed it to be a customary thing for the nets to be set outside the trawling ground north and south of it?—I have seen them set late in the evening and I have seen the trawling ground left open, the trammel-nets being set on each side of it at the east end of Dunkellin Island.

42,345. Do the nets catch fish as well there?—They tell me so, but the nets I took up had nothing in them.

42,346. (*Mr. Lefevre.*) Had they been down all night?—Some had, but Colonel Holden's had been just set.

42,347. Were they set for hake or for flat-fish?—For flat-fish. The cutter took some that were set for hake.

42,348. Where were they taken?—Off the east end of Rossmore Island and the others were seized in Collorus Bay.

42,349. That is a long way below the trawling ground?—Just below Dromore Castle.

42,350. Is the regulation not observed throughout the bay with regard to setting the trammel-nets?—Yes, since I came here.

The witness withdrew.

W. Berry.

WILLLIAM BERRY called and examined.

42,351. (*Professor Huxley.*) Do you belong to this place?—Yes, I belong to Kenmare.

42,352. Have you been engaged in trawling here?—Yes.

42,353. How long have you been occupied in trawling?—It is now 20 years since I came here, and I have been mostly engaged in fishing.

42,354. Did you hear what the witness Teahan stated about trawling?—Yes.

42,355. Is there anything you wish to remark upon?—Yes; there are a few things, I think, that would relieve a great deal of difficulty. In the first instance, the small trammel-nets have but very little buoys upon them, just cross sticks and a bit of wood set up. No man can see them if he is many yards distant from them. A trawl-boat is right upon them before they can be seen.

42,356. Suppose the buoys were larger could you avoid the nets?—We could avoid them if they were not set across the river. If they leave 20 fathoms between each we could avoid them very well. One man stated that there are no hake-trammels on the north side, but there are some thousands of fathoms of hake-trammels from Sneem to Kenmare.

42,357. There are some thousands of fathoms of trammels from Sneem to Kenmare?—Yes, I am sure of it. I lived in a place called Tarley and there is hardly a family there without a hake-trammel, and some of them have three or four.

42,358. Are you speaking now of the large trammels?—Yes. I simply state this because one man in his evidence said there were no hake-trammels on the north side, whereas I say there are some thousands of fathoms of hake-trammels there.

42,359. I think you misunderstood the answer. The question was if the small trammels were used on the north side of the trawling ground, and the answer was that it would not be worth while to set them if they had not liberty to use them on the trawling ground?—I see.

42,360. You tell us the trammels are used on the north side of the trawling ground?—Yes.

42,361. Small trammels as well as large?—Yes, often.

42,362. Are they used in great numbers?—Yes.

42,363. Do they appear to take a great supply of fish?—I often saw them set down there in preference to setting them in the centre.

42,364. Do you think the middle of the bay would be more advantageous for setting them?—I entirely agree that that is likely to be the best place, but at the same time it does not follow that there are no fish on the north and south sides. Sometimes through accident when we have been trawling on a dark night we have got too near the shore, and we have got plenty of fish on those occasions, although we ran the risk of losing our gear. I have found fish as plentiful on either side of the trawling ground as in the centre. There is not one bit of difference.

42,365. Well, what is your next point?—If there is a limit to be fixed relative to trawling, we who are trawling will be satisfied with anything in reason. We want to live in a fair honest way by our labour, as we have lived now for a good many years chiefly dependent on that. I never did a day's labour with the spade in my life. I am a pensioner and I am an independent man with my trawl, and therefore it behoves me to look to the trawling. If there was a limit made as Colonel Holden has proposed across the river, I think we could do with that either.

42,366. That is supposing the trawling ground was cut into two parts?—Yes, provided it was not so limited as to give us too little room to work in. If a point was drawn from Claywick to the west of Dunkerro Island, and across to the opposite point towards Dinish Island, leaving us the mouth of the bay at Dinish Island clear to go in with our hookers, we should be fully satisfied with that.

42,367. You would like to have the ground west of that?—Yes, but we would give them the north and south sides of it; we are asking almost nothing.

42,368. Would you be satisfied with that? The whole trawling ground is not much more than a mile and a quarter long?—I should be fully satisfied, and I think that every man who knows me will say that I am stating that which is quite reasonable. There is no man who has any conscience at all but would say that we should be badly off with less than that in which to work our boats.

42,369. Would that give you enough ground in length to work your trawl?—We should only be able to work it very badly, but I would sooner do that than have constant quarrelling.

42,370. How long does it take you to haul up your trawl?—Half an hour.

42,371. This would not give you much more than a mile, and will you not drift more than that in half an hour?—Yes, sometimes; by the time we have hauled up we should sometimes be down on the trammels; we should have nothing to spare from the time we commenced hauling.

42,372. You would have to haul every three quarters of an hour?—Yes.

42,373. How often do you trawl now?—We take about seven scrapes in the day; that is as much as we are able to take.

42,374. You work eight or nine hours?—We work from six until six.

42,375. That is 12 hours?—Yes, we haul according to the wind. If we have no wind we should be longer hauling.

KENMARE.

W. Berry.

29 Aug. 1864.

42,376. With the limit you were fixing just now you would not give yourself much more than a mile and a half to trawl over, and you would drift that?—I would sooner do that than be in a war with those chaps every second day.

42,377. But would it not amount to a prohibition? Would it be worth your while to haul up your trawl in that time?—I say it scarcely would be worth our while, but I would rather have that than go on as we have been doing. If we catch hold of their nets we lose our day. They impede us just as much as we do them.

42,378. (*Mr. Lefevre.*) Do I understand that when you go to the eastward of that line you come across the trammel-nets now? I mean a line drawn from the east of Dinish Island. Do you find now that when you go to the eastward of that line you come across the trammel-nets?—We come across them in all parts.

42,379. But more there than in any other part?—As much there as in any other.

42,380. Not more?—No.

42,381. (*Professor Huxley.*) Have you any other point you wish to bring forward?—Nothing more than that I should like every man to speak the truth. I heard one man say that he had fished with a hand-line boat at Skelling, but that cannot be done.

42,382. What is the size of your boat?—About 11 tons.

42,383. Have you ever fished further out in the bay than this trawling ground we have been speaking about?—Never in trawling.

42,384. Is there no other ground fit for trawling?—I do not think there is. There has been none yet found out where we could trawl with safety.

42,385. The soundings on the chart give the same bottom in the bay as over that trawling ground?—Our light boats would not be able to haul a trawl in deep water.

42,386. What is the deepest water you trawl in?—From eight and nine to 12 fathoms. We cannot go beyond that. We find that deep enough.

42,387. Then the greater part of the bay is too deep for you?—It is. It would give us a great deal of trouble to haul up in it.

42,388. Do you find that you catch less fish than you formerly did?—Much less. I believe it is so all over the world.

42,389. Is that of all kinds of fish?—Yes. Of all kinds there is a decrease.

42,390. But the increased price you get has made up for that?—It has not made it adequate to what it was before, because I have often made 20 score in a night's fishing.

43,391. What is it now?—I have hardly fished now for some time. The fish got so scarce that I left off.

42,392. What was your best catch last season?—I have taken 13 score in a day and night.

42,393. How would it be if you were prohibited from trawling in the night-time?—It would be a great disadvantage. Upon many moonlight nights we take a good deal of fish; but, in point of fact, if the ground were limited, we could not work at all in the night-time.

42,394. Then it would be about the same if you were restricted from fishing in the night time as it would be to be restricted from fishing on the ground you have been speaking of?—I believe if every one was well-minded every man could live as he always did, and they could keep out of each other's way.

42,395. Why should the trammel men be prevented from setting their nets in the daytime?—With regard to the trammel-net men I know nothing of them.

42,396. Have you any objection to that?—I have no objection to let a poor man get a living as he can, but they have more than they can do to fish day and night.

42,397. You have no objection to the trammel-nets being set in the daytime?—No. Mr. Trench suggested one thing which if it were kept in view would enable us all to live very well. We should have no objection for them to set their nets with the stream.

42,398. You stated that a great number of trammel-nets are set on the coast further down the bay?—Yes. Between Tarley and Sneem, all along to the Blackwater, there is an immense number of trammels; but there are more trammels down at Rossmore than at any other part.

42,399. Have they increased of late years?—Yes.

42,400. Does every farmer along the coast have a net?—There are very few who do not have them. Most of them who are convenient to the shore have a net.

The witness withdrew.

T. Croly.

Timothy Croly called and examined.

42,401. (*Professor Huxley.*) What do you wish to tell us?—I have a trammel of my own at Dinish Island by which I used to make sometimes 10*l.* in a night, and now I cannot set it. When the hake come in I cannot go out with it.

42,402. Why not?—On account of the trawlers, and the ground they want for trawling is the only ground for hake-fishing in the season.

42,403. On account of the trawlers working over that ground you cannot catch any hake?—No; and they take my anchors, and they take my fish away from me. I have seen them take up their trawls full of mud and dirt. They scrape all the bay up.

42,404. Have you anything else to tell us?—No; but if they were done away with more poor people would be able to get plenty of fish.

42,405. Would you like the trawling to be put down from Michaelmas to December?—Yes, that is the only time for the hake-fishing.

42,406. (*Mr. Lefevre.*) Are there as many hake on the ground as they used to be?—I cannot say. When they pull our nets about all they do is to laugh and joke at us. I was once dragged a mile and a half by a trawler.

42,407. Did you know the boat that dragged you a mile and a half?—Yes, and I went to Mr. Trench about it.

42,408. Was anything done in the matter?—Yes; but all he offered me was 5*s.*, and I would not take it from him.

The witness withdrew, and the inquiry was adjourned until the 30th of August, at Bantry.

Bantry, Cork, Tuesday, 30th August 1864.

PRESENT:

Professor HUXLEY, F.R.S. (Chairman). | G. SHAW LEFEVRE, Esq., M.P.

BANTRY.

D. Leary.

30 Aug. 1864.

DANIEL LEARY called and examined.

42,409. (*Professor Huxley.*) Are you a resident here in Bantry?—No, I reside at Whiddy Island.

42,410. Are you a fisherman here?—Yes.

42,411. Do you do anything else besides fish?—I carry on farming and fishing at intervals.

42,412. How many months in the year do you fish?—We generally fish from July all through the year up as far as March.

42,413. You do not fish in April, May, and June?—No, only very little. There is very little fish to be had then and we fish very seldom.

42,414. You fish when you are not employed in farming?—Yes.

42,415. What do you fish with,—trammel-nets?—Trammel-nets and herring-nets.

42,416. With drift-nets?—Yes.

42,417. And besides, do you fish with the hook and line at all?—Sometimes, but very seldom.

42,418. Do you use spilliards?—No, I have no spilliards.

42,419. With hand-lines?—Yes.

42,420. Are there many trammel-nets employed in Whiddy Island?—Yes, a great number of them.

42,421. What will be the number do you suppose?—I cannot tell that because I do not know the number of boats.

42,422. Can you not give us a notion. Are there 100?—There are eight nets or from six to eight generally in each boat.

42,423. How many boats are there do you think, at a guess?—I do not know whether there are 30 boats in the fishery there or not, perhaps there may be between 30 and 40.

42,424. What size are your trammel-nets, how long are they?—They are 40 fathoms each on the rope and every boat carries from six to eight of them.

42,425. What depth of water do you set them in?—We set them sometimes in 18 fathoms of water and sometimes in 20 fathoms.

42,426. You set them in water as deep as that?—Yes, down as low as 14 fathoms.

42,427. Is 20 fathoms the outside depth you set them in?—It is the greatest depth I set them in because I live pretty far in the bay.

42,428. Do other fishermen set them deeper than that?—Yes, those who live in the outside parts do.

42,429. What is the greatest depth of water any of the fishermen set them in?—24 or 25 fathoms.

42,430. What is the size of the mesh of the trammel-net from knot to knot?—It ranges from about $4\frac{3}{4}$ to 5 inches.

42,431. Is that from knot to knot or pulled out?—Pulled out they run from $4\frac{3}{4}$ to 5 inches.

42,432. Then that will be between 2 and 3 inches from knot to knot?—Yes.

42,433. What do you catch in those nets?—Hake and many other kind of fish which come in our way.

42,434. Are hake the principal fish you set them for?—Yes.

42,435. Do you catch soles?—Very seldom, unless we get an odd one.

42,436. What other kind of fish do you catch?—Bream and scad and pollack.

42,437. Is the principal fish you catch hake?—Yes.

42,438. That is what you set them for mostly?—Yes, without a doubt.

42,439. How many years have you been fishing with a trammel-net?—I have been fishing with a trammel-net ever since I was a boy of about 14 or 16 years of age.

42,440. That will be about 40 years ago?—Yes, I have been 40 years at the business, I have no doubt.

42,441. Do you catch as much fish now as you were in the habit of catching when you began?—No, I do not.

42,442. Is that the case with the other trammel-net fishermen as well as yourself?—Yes, it is the case with most of them, I think.

42,443. Has the falling off been very great; do you think that you catch half as much now as you were in the habit of catching then?—No, nor anything like half.

42,444. What do you think is the reason of that?—I do not exactly know I am sure.

42,445. Has the number of trammel-nets very much increased since you were a boy?—No, I think there were more when I was a young man than there are now.

42,446. You do not catch as many with them now as you did then?—No; at the time the loan fund was given out and they used to give a bounty upon our fish there was a greater number of nets and boats out fishing than there are now.

42,447. Do you think the reason why you do not get as many fish now as you did at the time of which you speak is that the fish are not there?—If the fish were there I suppose we should not be able to avoid catching them.

42,448. Are there many trammel-nets used all down the shores of the bay?—Yes.

42,449. All the way down the bay to the sea?—Yes.

42,450. On the north or on the south shore?—Yes.

42,451. On both shores do you mean?—Yes.

42,452. Is it at all the case that the men employed in the fishing or a proportion of them work on the land as agricultural labourers?—Yes, they work on the ground, they have bits of land and they take an acre of ground.

42,453. Are there any people who live altogether by trammel-net fishing and do nothing else?—They live by trammel-net fishing and by herring-net fishing and by line-fishing at times, and they have a bit of a garden for themselves which they attend to in another part of the season.

42,454. Do you get herrings here in abundance?—There have not been many herrings here for some years past. The herrings have not resorted to this bay for a long time as they did formerly.

42,455. How many years is it since there were plenty of them here?—I do not recollect how many years it is now since we got them in the season out in the bay.

42,456. Are you able to say whether it is 20 or 30 years ago?—Perhaps it may be about 30 years since they began to forsake the place.

42,457. Are there many drift-nets now in the possession of the people about Bantry?—Yes.

42,458. Then have they not been able to use them much of late years?—They use them when they can get fish.

42,459. But there has not been fish for them to catch?—Not this last season and there was not much last year.

42,460. How was it the season before that?—I believe they got some the season before.

42,461. Did they get them in any quantity?—They took a reasonable quantity at times.

42,462. Can you give us any information about the hand-line fishing; is it as good as it used to be?—No, it is not one-tenth part as good as it used to be. In this little harbour there were a good many hookers,

when I was a little boy, and all of them were employed in the hand-line fishing.

42,463. Are they not employed in hand-line fishing now ?—No, they are all going out of it.

42,464. Is that because they cannot get fish ?—Yes.

42,465. What kind of fish did they formerly catch, cod ?—Cod, ling, hake, and various kinds of fish.

42,466. Did they get haddock as well ?—Yes, they used to take a good deal of haddock off Bear Island.

42,467. Are there any caught now ?—There is a boat that goes to that kind of fishing now.

42,468. You say that you got plenty of fish by trammel-net fishing 20 or 30 years ago ?—Yes, and a good deal was got in that way three years ago.

42,469. At the time there was a good fishing here did you set your nets where you liked day and night ?—Yes.

42,470. Has there been any regulation against that?—I have heard that for a great many years the law has been against the setting of the trammel-nets day and night.

42,471. When do you commonly set your trammel-nets; at what time of the day ?—Mostly in the evening.

42,472. After sunset ?—Sometimes we set them before sunset.

42,473. Some years ago was there any regulation enforced here which prevented you from putting down your trammel-nets before sunset ?—Yes.

42,474. When was that ?—I do not clearly recollect how many years ago it is but I know that there was such a regulation made.

42,475. When you were a young man fishing with trammel-nets did you set your nets at what time you liked ?—No, I dare not do that.

42,476. Why not ?—Because the Inspectors of Fisheries were here watching us with their boats, and we dare not set them at such periods of time when they were on the watch.

42,477. Was it the law, that you should not set them in the daytime ?—Yes, it was.

42,478. Has that always been the law here ?—I believe there is a law of that description.

42,479. Then that has always been the case ?—Yes.

42,480. Ever since you can recollect ?—Yes, ever since I can recollect; ever since the Board of Fisheries began. They made a law, I believe, that trammels should not be shot before sunset.

42,481. Was there also a regulation that they should not be in the water after sunrise ?—That was the law too, but they could not be hauled before sunrise sometimes as I told the Commissioners of Fisheries. The draft was sometimes so heavy that they could not be hauled at so early an hour.

42,482. Then that regulation could not always be carried out ?—No, it could not.

42,483. Do you know of any instance in which a trammel-net has been seized, because the people using it have been guilty of a breach of that regulation ?—Yes.

42,484. Have many seizures been made ?—Yes, there have been a few made.

42,485. When you say that a trammel-net cannot be hauled before sunrise how is that; can they not find the nets ?—The strings are too long and the time is too short to enable us to haul them from daylight to sunrise. Sometimes the fish in them cannot be packed at all during that time, but Mr. Barry said that if we were in the act of hauling them at sunrise that would do pretty well and they would not be seized.

42,486. Have any trammel-nets been seized on account of their being hauled in after sunrise ?—I do not know whether they were ever caught in that way or whether the boats have taken them for hauling in after sunrise.

42,487. Have you ever had your trammel-net carried away by trawlers ?—Yes.

42,488. Does that commonly happen?—It does often happen.

42,489. Do the trammel-net fishermen complain much of that here ?—They have complained of it very much.

42,490. Was that why Mr. Barry came down here to hold an inquiry ?—I believe that it was partly the reason.

42,491. Were the trawlers in the habit of trawling at night as well as during the day ?—No, not in general.

42,492. But did they do it sometimes ?—It is only seldom they do it. They have done it, and I believe they have done harm at night.

42,493. If they only trawl during the day they would not interfere with you ?—Yes, they would interfere with us when the trammel-nets are shot out before them in the daytime. They would tear them away.

42,494. But if you have no right to shoot your trammel-nets during the day they would have no business to be there ?—But there would be some days when we could not go out to haul them in. Their boats would be able to go to windward and go close down before the wind when our boats would not live.

42,495. Is what you mean to say this, that the weather is so bad at times that with the best will in the world you cannot get out to haul them in ?—Yes.

42,496. And then the trawlers work over them in the daytime ?—Yes.

42,497. Are there any buoys made fast to your trammel-nets ?—Yes.

42,498. How big are they ?—They will be from about 2½ to 3 feet long.

42,499. What are they made of ?—They are made of timber.

42,500. Are they made of large pieces of timber ?—Yes, about 2½ or 3 feet square; they are crossed on each other by another piece of timber.

42,501. Do they stand up in the water ?—Yes, they rest on the water with a staff of timber out of the centre and a big lump of rag tied upon the top of it.

42,502. What height will they be ?—From 2½ to 3 feet.

42,503. Can you always see those buoys ?—Yes.

42,504. You make them that they may be easily seen, so that you may find the nets yourselves ?—We make them so that they may be seen as easily as possible.

42,505. Is it not to the interest of the trawler to get out of the way of the trammel-nets himself if he can do so; if he gets foul of them does that not damage his own nets ?—I am told that they injure themselves if they come foul of the trammel-nets. When they tear the trammel-nets and take them away, they stop the fish from going into their own nets as well.

42,506. Is it any hardship to you to be obliged to take up your trammel-nets during the day; would you like to set them during the day ?—I would at times, and at other times I would as soon bring them away.

42,507. Does it depend on the weather ?—Yes, if the weather is bad I would rather bring them away.

42,508. Is the ground in the greater part of the bay here smooth ground ?—Smooth ground ?

42,509. Yes, smooth ground, suitable for trawling over ?—Yes, with the exception of a few ledges. Do you mean the outer part of the bay ?

42,510. I speak of where you want to shoot your trammel-nets ?—It is all smooth there, except a few ledges of rock under the water.

42,511. Then you want to fish on the same ground the trawlers fish upon ?—Yes.

42,512. What is good ground for you is good ground for them ?—Yes, it is.

42,513. Would you find it any hardship in the short summer nights to be obliged to keep off that ground from sunrise until sunset ?—We do not take the trammel-nets out in the summer time at all.

BANTRY.

D. Leary.

30 Aug. 1864.

42,514. Is that because you are working on the land?—Yes, now.

42,515. Or is it because there are no fish there?—There are no fish to be got in the summer time.

42,516. You say that you have not been doing much in the way of line-fishing?—Very little. I have only been trying it at intervals for fancy's sake.

42,517. Do you think that trawling has had anything to do with the falling off in the supply of fish? I cannot say that I do, but I have heard persons say that trawling is injurious to the fisheries, and that it destroys the spawn.

42,518. Have you ever seen spawn taken up in the trawl?—No, I have never seen it, because I was never on board one of them to see them work.

42,519. When did the trawlers begin to work in the bay?—Only a few years ago. I think Mr. Curtayne was the first.

42,520. How many years is it since they first began to work?—It is now about seven or eight years ago.

42,521. Then was there no trawling before that time?—There was one resident of the place trawling then, I think. Mr. Tisdale used to trawl here for fancy's sake, but not as a general thing.

42,522. Was there no trawling here before that time for the market?—No, I think not.

42,523. There has been no considerable trawling here altogether within the last eight or nine years?—No.

42,524. But you tell us that the fishing has been falling off for the last 20 years?—Yes.

42,525. Then did the fishing begin to fall off before the trawling was practised here at all?—The herring-fishing has been falling off for many years, and the trammel-net fishing has been bad for the last 20 years.

42,526. Has the herring-fishing fallen off altogether?—Yes, very much so.

42,527. (*Mr. Lefevre.*) When was your last good season for the hake?—I can hardly tell you that, I am not a man that comes out always for the fishing. There are some who have nothing else to do, and are not so much in the land business as I am. They follow up the fishing more regularly, but I believe that about five or six years ago we had a good season.

42,528. Is it only since then that it has begun to fall off?—It has begun to fall off very much since then.

42,529. Do you recollect the time when the bounty was given here for fish?—Yes, I do.

42,530. Was it given for fish taken in the trammel-nets?—It was.

42,531. Was there any great decrease of trammel-nets about the time the bounty was given up?—Yes.

42,532. Has it gone on decreasing from that time?—It has not increased up to this time.

42,533. Has there been a decrease of late years in the number of trammel-nets?—Yes; but I believe there is not as great a number of people round this bay as there was then. We have not such a population at all.

42,534. Did the decrease take place about the time of the famine?—It did, and in the fishing generally. As soon as the Board of Fisheries was broken up the men broke off from the fishing.

42,535. What do you do with your fish?—We sell it here in Bantry.

42,536. Do you get a better price for your fish now than you did years ago?—We get a better price now than we did at the time of the famine.

42,537. But comparing it with the time before the famine, do you get a better price now than you did then?—I do not think that we get as good a price now as we did in the time before the famine. I can recollect the time when 100 hake would sell for 2*l.* 10*s.* or 2*l.* 15*s.*

42,538. What has the same number of hake been fetching this last season?—34*s.* or 35*s.*

42,539. Do you know where the hake spawn?—I declare that I cannot exactly tell where the hake spawn, but I have heard the people here say that they go along the mouth of the bay in the winter time and spawn there.

42,540. When you take the hake at the beginning of the season are they full fish or not?—No, not in the beginning of the season. There may be one with pea in it, but they are not ready to spawn then.

42,541. When do you observe them full of spawn?—Later in the season; the spawn then fills up.

42,542. Do you think they leave the coast before they spawn, or do they spawn off the coast?—I do not think that they spawn here in the bay. It is my opinion that they generally spawn in the mouth of the bay, but I have heard people say that they spawn in the bay.

42,543. Is there any sprat-fishing here; do any shoals of sprats come in here?—But very few of them have come in of late years. I believe that great quantities of them came in in former days.

42,544. Have any of the men in Whiddy Island got a seine for catching sprats?—No, there is not a seine in Whiddy Island.

42,545. Do they seine for any kind of fish?—No, there are no seines there at all. There are only trammel-nets and herring-nets.

42,546. Have not some of them got seines for flat-fish?—They have small seines for flukes.

42,547. (*Professor Huxley.*) Is there anything you trammel-net fishermen have to complain of here; have you any complaint to make?—We complain when our nets are torn by the trawlers; that is, we should complain if it was of any use to do so.

42,548. Is there anything else that interferes with you?—No, there is nothing else, I think.

42,549. (*Mr. Lefevre.*) Have you yourself ever lost any trammel-nets?—Yes.

42,550. How long ago?—About three years ago.

42,551. Did you lose them in the daytime or at night?—Some of them were carried away by a storm, and some of them were carried away in the middle of the day.

42,552. Were any of them carried away by the trawlers?—Yes, some were carried away in the middle of the night by the trawlers, and also in the middle of the day. One of the trawlers came up and got into the middle of my nets, and tore them.

42,553. I suppose you would not shoot your trammels in the daytime if you saw the trawlers trawling off the coast?—I should not be fond of doing so; but the Coastguard are authorized to take up trammels which are there in the daytime, and the cutter was here last season and took up some trammels; I believe they were fined.

42,554. Do you think that generally along your bay the men who have trammel-nets observe the regulation with regard to not shooting their trammels in the daytime?—Some of them do, and some of them do not.

42,555. Do the Whiddy Island men observe it?—Some of them do, and some of them do not.

The witness withdrew.

W. Tisdale.

William Tisdale called and examined.

42,556. (*Professor Huxley.*) Are you interested in the fishing here, Mr. Tisdale?—I am.

42,557. How many years have you been occupied here?—Off and on about 17 or 18 years.

42,558. What kinds of fishing have you practised?—Principally trawling and salmon-fishing.

42,559. How many years have you had a trawler here?—When I first commenced I had a small boat of my own, and I trawled principally for amusement. I was constantly at it however.

42,560. How many years have you had it?—About 12 years ago I got it.

42,561. At that time were there any other trawlers here?—No, except Mr. Fail's boat at the time of the famine; there was his boat here for some time.

42,562. Did he fish here for many years?—He fished here for about three years, and he trawled all down Bantry Bay, from the mouth of the bay to Glengariff.

42,563. Has there been no systematic trawling within the last 10 or 12 years?—No, except by small hookers of 12 or 13 tons; they were trawling here nine or 10 years ago.

42,564. Is that boat of yours a beam-trawler or a pole-trawler?—It is only a small pleasure-trawler, a small beam-trawler.

42,565. How long is it since the large trawlers came here?—I think about four or five years ago; there has been an occasional trawler coming into the bay for some years, but there have not been trawling boats belonging to the bay.

42,566. Up to within the last four or five years there has been no trawling on a large scale here?—No.

42,567. When you began, 12 or 13 years ago, did you get plenty of fish?—Yes, I got an immense quantity.

42,568. Have you gone on trawling since?—Not steadily, but I have from time to time.

42,569. Are you able to get as much fish now?—Yes, we can; we have larger and finer boats and they go further out.

42,570. Are you able to get as much fish in the places in which you used to fish?—No, I think if we tried there we should hardly be able to get any.

42,571. Do you think that the quantity of fish in the bay has fallen off?—Yes I do.

42,572. Does that hold good with regard to all kinds of fish?—Not with regard to all trawl-fish, we can get as much out in the open sea; sometimes with a boat of ten tons we can take two tons of fish at one scrape.

42,573. In what part of the bay?—Close to Whiddy.

42,574. Is the whole of Bantry Bay fit for trawling?—No, three-fourths of it is soft mud and the rest is composed of ridges and odd rocks here and there.

42,575. Is the soft mud fit for trawling over?—It is not as good as a hard ground.

42,576. You do not mean rocky ground?—No, hard sand.

42,577. Is there much hard sand in Bantry Bay?—No, except close to the shore where we cannot trawl.

42,578. In that case there is very little good trawling ground in Bantry Bay?—Yes, two-thirds of the ground in the bay is good for trawling, but it is close in-shore and the trawlers cannot go there.

42,579. You said there was muddy ground?—Yes, we fish upon that.

42,580. You do fish upon the muddy ground?—Yes, but it is not as good as the hard ground.

42,581. Do you think the quantity of fish in the bay has fallen off?—What kind of fish do you mean?

42,582. I mean trawl-fish more particularly?—I think there are as many soles far out in the bay as ever there were, but in the bay it is hardly worth trawling.

42,583. Are you of opinion that the ground has been over-fished by the trawlers?—I do not think it has.

42,584. Then to what do you ascribe the falling off of the fish?—I cannot say why the trawl-fish have left the bay. There are limits within which we are prevented from trawling now, but where we did trawl formerly.

42,585. What are those limits?—From Crowdy Point, to Carrigskye Rock, and from thence to Reenavanny Point on the north shore of Whiddy Island.

42,586. Whereabouts is that?—Up towards Glengariff.

42,587. Is that the little arm of the bay from Carrig up to Glengariff?—Yes, down to Carrigskye Rock.

42,588. (*Mr. Lefevre.*) When was that regulation made?—Mr. Barry made it here some six years ago.

42,589. (*Professor Huxley.*) What was the reason that regulation was made?—It was made on account of the complaints of the seine owners that trawling interfered with the spawning ground. A commission was sent here on account of those complaints, and there was then a limit fixed.

42,590. What limit was struck out?—That was one of them.

42,591. Are there any other limits in Bantry Bay?—Yes, from the southern point of Whiddy to a place we call the Bull.

42,592. That shuts out Whiddy Harbour altogether?—Yes, but they cannot trawl in any case; the ground is rough.

42,593. Is all the east of the harbour open?—No part of the harbour is open.

42,594. Is all the coast of the bay open?—Yes.

42,595. Is it true that all kinds of trawl-fish have fallen off?—I do not think in this bay that the trawl-fish have fallen off in a proper sense except inside the bay. When the weather allowed us we got as many fish last year as ever we did, but of course in bad weather we cannot expect to take the same quantity.

42,596. When you have been trawling, have you taken a considerable quantity of small fish in your trawl?—We always take more or less small fish, but I do not think we ever take much small fish that is not saleable.

42,597. I am speaking of unsaleable fish?—We never take any large quantity of unsaleable fish, but of course we take some.

42,598. What do you suppose would be the proportion of unsaleable fish taken in a haul?—Sometimes I have taken from 70 to 80 pair of soles in a day and five or six score of plaice all of which would be good marketable fish. The small fish which would be thrown over would be about a score or so out of the lot.

42,599. Have you ever in working the trawl yourself seen spawn, in the sense of the eggs of fish, taken up in the trawl?—I never saw it to my knowledge and before those limits were marked out there was a good deal of trawling carried on on the very ground on which they say the fish spawn.

42,600. You never saw spawn taken up in the trawl?—I can safely say that I never did, and I know what herring spawn is very well.

42,601. You are no doubt aware that there are many things called spawn by the fishermen which are not spawn at all?—Yes, I have seen large quantities of spawn in the boats when the herrings have been taken late in the season. The herrings in point of fact have discharged it in the boats.

42,602. We understood from a previous witness that the herrings have forsaken the bay for some years, is that the case?—Yes, I think they have done so.

42,603. How many years it it since there was any considerable shoal seen in the bay?—It is within my recollection that there were 12 seines in the harbour all getting a great quantity of fish, but now there are only two seines in the place. They have most of them been given up because they could not get fish.

42,604. Was it the practice here to catch the herring with seines?—Yes, with seines and with drift-nets. Those were the only ways in which they caught herrings here.

42,605. Do they work the seines as circle-nets, or do they haul them a-shore?—They worked them as circle-nets.

42,606. When was the circle-net fishing practised here?—It has been practised on a small scale up to the present day.

42,607. That is whenever the herrings come in?—Yes.

42,608. Have you ever had occasion to observe the condition of the fish which have been taken in that way?—All the fish which I have seen taken in that way appeared to be fine fish.

BANTRY.

W. Tisdale.

30 Aug. 1864.

42,609. They were good marketable fish?—Yes, there are very fine mackerel here to-day.

42,610. But I am speaking now with regard to herrings, were they good saleable fish?—Yes.

42,611. Are there many mackerel taken here?—Not generally; they do not generally come down as far as this in large quantities.

42,612. Have you ever paid attention to the hake and line-fishing?—I have not paid attention to it myself, but I have seen it carried on by other people.

42,613. Is the produce of the hake-fishing as good as it was?—No, not by any means.

42,614. Has it all fallen off?—Yes.

42,615. Is the line-fishing mostly hand-line-fishing?—Yes, and it has fallen off for different reasons. In the first place the fish are not there, and in the second place if they were the people are not there to catch them.

42,616. Are there not as many persons employed in the fishing as there were at one time?—Not by any means.

42,617. And you say that the fish are not there?—They are not there at all in the same quantity.

42,618. What do you consider to be the reason of that?—I declare I cannot tell you the reason; I can only give you my belief.

42,619. And what is that?—My own firm belief is that the herrings and sprats would be more plentiful down in the shallow water if it were not for the hake trammel-nets which are set across the bay and stop the shoals from coming up. We all know that the hake feed upon the herrings and sprats, and when the herrings and sprats do not come up they are not followed by the hake.

42,620. If that was the case, would not the herrings and sprats come up all the more because they would be safe?—I do not think so. They stop out in the open water. I have known the bay full of herrings and sprats when none of them would come up to the harbour.

42,621. Do you think it is the case that there are plenty of herrings and sprats, but that they do not come up?—Yes, I have seen the bay swarming with them.

42,622. Do not the people go down after them?—They have no means of fishing in the open water.

42,623. Cannot the drift-nets go out?—They are fished from open boats which are not fit to go out.

42,624. Are there plenty of these fish out in the mouth of the bay?—Yes, and if some of the Isle of Man boats were fishing here they would get a large quantity.

42,625. What induced the large trawlers to come here first?—I believe they came here because they heard the character of the bay and that there was a very large quantity of trawl-fish in the bay.

42,626. Have those who came here been doing well?—They have taken great quantities of fish, but they are far from the market.

42,627. Where is the nearest place they can take them to to reach the market?—Brandon Bay, and then they send it on to Dublin.

42,628. Does it go on by cart?—Yes. It costs three-farthings a pound to send it on to Dublin.

42,629. Is there no market at Cork?—It is very fluctuating; it would not do to send any quantity of fish there.

42,630. Then in that way is there practically a limit to the number of trawlers that come here?—When there is a number of trawlers here they join together and hire a car. It costs just the same money to send away one hundredweight of fish in a car as it does to send away ten hundredweight.

42,631. Are there any restrictions upon the trawling which you think are in any way injurious?—No, the ground we are prevented from fishing in we do not care about.

42,632. At present you are free to trawl anywhere else you like in Bantry Bay?—Yes.

42,633. Is the trawling ground only a limited area?—It is too confined for large boats, but it does very well for boats fishing for amusement.

42,634. (*Mr. Lefevre.*) Is there any means of ascertaining the quantity of trawl-fish brought in here?—Not exactly, but I can give you a fair idea.

42,635. It is now five or six years since trawling began on any considerable scale here?—Six years ago there was no trawling going on here, but for the last four years it has been steady work.

42,636. Can the quantity which has been brought in here by the trawlers since then be arrived at?—I have known one boat which I had the management of bring in more than 700 pair of soles in one week.

42,637. How many trawlers are there in the bay?—There are five belonging to the bay and there were four strange boats last year, three from Galway and one from some other place.

42,638. Were they all of a large class?—Yes, the Galway boats are first-class boats.

42,639. Were they of 30 tons and upwards?—Yes, they were of 40 or 50 tons.

42,640. Are there any trawl-boats owned in Bantry now?—Yes, there are five boats.

42,641. Of what size are they?—From 20 to 40 tons.

42,642. Those which come from Galway are larger?—Yes, they are large first-class boats. Mr. Sweeny sends out first-class boats now.

42,643. What is an average take per day by the Bantry trawlers?—No trawler would think he had had a good day unless he got from 40 to 50 pair.

42,644. Besides other fish?—Yes.

42,645. Do they rely mainly on the soles for profit?—Yes, they are the principal profit.

42,646. What other fish are there?—There are a few turbot and brill, and a fair share of hake.

42,647. Do you agree with the witnesses who have already given evidence that the hake have fallen off?—Yes.

42,648. Have the trammel-nets fallen off in number?—I think they have within my recollection. I believe they were more numerous formerly.

42,649. How long is it since you had a good herring season here?—Three years ago there was a great quantity taken here.

42,650. And you attribute the failure of the last three years to the great number of trammel-nets that are set?—Yes.

42,651. The trammel-nets have been used in great numbers for some years past?—Yes.

42,652. You do not find in former years that they prevented the fish from coming up?—In former years they were more plentiful certainly. I believe there is a natural falling off in the fish.

42,653. The regulations made by the Fishery Board were made before the larger class of trawlers came into the bay?—Yes.

42,654. At that time were there any small trawlers fishing in the bay?—Yes, there were a few little small things here.

42,655. How many of them were there?—I had one trawler which I used to work for amusement, Mr. Pyne had two, and there was another gentleman who had two.

42,656. Have they been discontinued?—Yes.

42,657. Did the enforcement of the regulations prevent them from being worked to a profit?—No; they got out of repair, and the big trawlers came in.

42,658. Have you observed any improvement since those regulations were established?—No, I have not.

42,659. But they do not much affect the fishing of the larger class of trawlers?—No; we trawl outside in the open part of the bay where the other fishing is not much carried on.

42,660. Then in your opinion the regulations are powerless for good or for evil?—I do not think that they affect any person much.

42,661. (*Professor Huxley.*) Are there any oyster beds here?—Yes, there are a great many oysters; they are spread entirely over the harbour.

42,662. Is there any large bed ?—Yes.

42,663. Are they worked ?—No; I do not think they are preserved, or that there is a profit to be made from them.

42,664. Is that because there is no market for oysters ?—There is a good market, but I do not think they are sent to the market.

42,665. Does anybody take the trouble to dredge them ?—I do not think there are any oysters dredged for. It is on the natural bed they are got. Some people have bought them at a small price to put them on other beds.

42,666. Oysters have been taken to transfer them to other places ?—Yes.

42,667. Where have they taken them ?—To Cork. Mr. Pyne had an oyster bed there, and Lord Bantry has one at Glengariff. There are two up at Bearhaven Harbour.

42,668. Are you aware that the privilege offered by the Fishery Board has been taken advantage of, namely, that of letting particular portions of ground to persons for converting into oyster beds ?—No, with the exception of Mr. Pyne.

42,669. Has that oyster bed been stocked ?—Only by the natural stock; we put no oysters there.

42,670. There is really no trade in oysters here ?—No.

42,671. (*Mr. Lefevre.*) Is there any seine-fishing from Bear Island ?—There is only a similar class of seines to those they have here.

42,672. Are they drawn up on the shore ?—I cannot say.

42,673. Are there any trawlers at Bear Island ?—No.

42,674. At what period of time do the trawlers from a distance trawl in this bay ?—We do not send out our boats until the 1st of December; the fish do not come upon the ground until then, and from that up to January, February and March we have the best season.

42,675. Do you lay up your trawlers after that ?—Generally, when the weather gets hot, and we cannot send the fish to the market on account of the distance.

42,676. Would you trawl all the year round if you had a better market ?—Yes.

42,677. Are there fish to be found here all the year round ?—Not in the same quantity; they usually leave the bay about the middle of May, but we should find it worth our while to fish if we had a constant market.

42,678. Do the Galway trawlers fish all through the year ?—No, they go away in the middle of April.

42,679. Do your trawlers go round to Dunmanus Bay ?—No; that bay has not been trawled to my knowledge.

42,680. (*Professor Huxley.*) Is there any lobster-fishing here ?—Yes; Captain Chambers between this and Glengariff has carried it on.

42,681. Are there many fish ?—Yes, a great many; he has boats employed.

42,682. How many boats ?—Seven or eight row boats, and a small sailing boat of about 30 tons which attends upon the others.

42,683. What is the market for the lobsters ?—I do not know where he sends them. He has tanks in which he collects them, and he sends them away in large numbers.

42,684. (*Mr. Lefevre.*) Is there any reason why the trammel-net fishermen should not be allowed to set their trammels in the daytime ?—There is a substantial reason.

42,685. What is it ?—Trawling and trammel-net fishing never can go on together.

42,686. If the trammel-net fishermen were allowed to set their nets, would the trawlers have to desert the ground ?—They could not trawl if the trammel-nets were set.

42,687. But the ground is very wide ?—You cannot divide the bay. The only way would be to have a different season for each. The best thing would be to give the trammel-net men their season when they might fish during the whole day and night, and then to give the trawlers theirs. The season that suits trawling would not suit the trammels, and the season that suits the trammels would not do for trawling.

46,688. What season would you give to the trammel-net fishermen ?—From the 1st of June to the 1st of December; that would not take away one month in which they care about fishing.

46,689. That would give them a great part of the season when they do not fish at present ?—No, it is the time they do fish.

42,690. Do you think that the regulation with regard to setting their trammels in the daytime is observed ?—Not strictly; it is observed by some, and it has been observed more strictly since the cutter has been placed here to watch them.

42,691. How long has the cutter been here?—Since last year.

42,692. You were speaking about the bay being divided, has it ever been proposed that the bay should be divided between the trawlers and the trammel-net fishermen ?—Do you mean with regard to the limits within which each should be practised ?

42,693. Yes ?—I think the portion of the bay from Sheelane across the bay is not worth much to the trawlers, and up to League Point on the south side.

42,694. Was a proposition of that kind made on behalf of the trawlers ?—I made a proposition of that kind to Mr. Barry from the Fishery Board at one time. I proposed that he should give the trawlers their season and the trammel-net fishermen theirs.

42,695. But with regard to the division of the bay between the two, was any observation made to that effect ?—Two-thirds of the fishing in Bantry Bay are carried on inside that line.

42,696. Is there not a considerable amount of trammel-net fishing in Bear Island, and on that coast ?—I have hardly ever met a trammel west of the river.

42,697. Would the trawlers be content if this portion of the bay were taken away from them ?—You would take away the most valuable part to us. We require very powerful boats to fish in the open part of the bay, and if you take the other portion away it would amount to doing away with trawling altogether.

42,698. Do your trawlers often carry away the trammel-nets ?—Yes, in the daytime they cannot avoid it. It is impossible for a large 60-ton boat, even when they see a trammel buoy, to avoid it; they can only see it when they get within 100 yards of it.

42,699. Do the trawlers fish at night ?—They have a right to do so, but they do not use it; they cannot fish in Bantry Bay at night.

42,700. Do they come back into Bantry Harbour every night ?—Yes, in order to send their fish away, and to be in time for the train at Bandon.

The witness withdrew.

DANIEL LEARY recalled and examined.

D. Leary.

42,701. (*Mr. Lefevre.*) You have something to say in reference to what the last witness has stated ?—Yes. I wish to ask how, if a limit is to be drawn such as has been suggested, the men living up at the top of the bay are to come down. I think it would be the best way to appoint a certain season for each craft, and to give every one a fair chance.

42,702. You think that that would be a better plan than dividing the bay into two portions ?—Yes.

42,703. Are there a considerable number of trammel-net fishermen westward of the line which has been pointed out by the last witness ?—There are a number of them on all sides of the bay, south and north.

BANTRY.

D. Leary.

30 Aug. 1864

42,704. Are there as many westward of that line as eastward of it?—Yes. Mr. Tisdale says that the trammel fishers are a great impediment to the shoals of herrings and sprats coming in here. I do not know how that can be; the trammel-net is a stationary net sunk in from 18 to 20 fathoms of water; it is only two or three feet high in the water, and it is sunk down on the bottom.

42,705. What depth is it below the surface of the water?—It only rises about three feet from the bottom of the sea, whereas these shoals of fish when they are making for the land come light upon the water, and under those circumstances I do not know how a trammel-net can be any impediment to them.

42,706-7. Then you do not agree with the statement which has been made by Mr. Tisdale?—No.

42,708. I do not say whether that opinion is right or not, but Mr. Tisdale appeared to say, not that the trammel-nets frightened the fish, but that they caught the hake, which consequently left off driving up the other fish; do you think that is the case or not?—Why was it not the case in former years? There were more trammels in former years than there are now, and yet we caught more herrings in one season at that time than we can catch now in four seasons. We also killed more hake and sprats than we do now.

42,709. (*Mr. Lefevre.*) Do you find that when you have had a good herring season you have also had a good hake season?—It has generally been the case, because the herrings generally bring the hake after them.

42,710. Is it also the case with regard to the sprats?—Yes.

The witness withdrew.

D. Morton.

DANIEL MORTON called and examined.

42,711. (*Professor Huxley.*) Are you employed in the fishing here, Mr. Morton?—Yes.

42,712. Are you engaged in trawling?—Yes.

42,713. You have heard the evidence which was given by Mr. Tisdale?—Yes.

42,714. Do you agree with it?—Partly. I did not hear the whole of it, but I agree with the great part of what I heard.

42,715. Is there anything you wish to tell us which he did not remark upon, and which you think it is necessary we should know?—I think a little more of the bay might be given to the trammel-net men. The trawlers might go further down the bay without injury to them. In my opinion the further we go down the bay the more fish we get, and I think that the boats which are now fishing the bay are too large to work in the upper part of it. If you were to draw a line from Shot Head across to White Horse Point, I think that would do.

42,716. That would cut the bay in half?—Yes; I would propose that all the trawlers should work into Lawrence Cove, instead of coming here at all.

42,717. You would keep the trawlers outside of the line?—Yes.

42,718. And the trammel men would come here?—Yes; and I would keep a carrier to go with the fish every night.

42,719. Have you any objection to the arrangement proposed by the trammel-net men, namely, to allow the bay to be open for trammel-fishing in one part of the year, and for trawl-fishing in the other part?—I suggested that to the Reverend Mr. Shea two years ago, and I named it also to Mr. Barry, from the Fishery Board.

42,720. Do you think it is a good plan?—Yes; and I would give them seven months of the year. There are only five months in which I would care to fish.

42,721. Would you give them from June?—I would give them from the beginning of May.

42,722. But they do not want to go in May?—The month of May is of no use to us for trawling, and it would be better for each that we should have different months to carry on our work. At present neither can get a living, when both are in dread of each other. It is impossible for a trammel man to haul his trammels before we are out, and it is impossible for us not to get foul of the trammels if they are out in the bay. We are no sooner clear of one trammel than we are foul of another, and it only causes ill-feeling on both sides.

42,723. Then do you think that arrangement would answer very well?—I am certain it would. I have taken the opinion of the majority of the fishermen on the subject, and they all agree in saying that they would be very much satisfied if I could get a law to that effect passed.

42,724. Are you interested in the trammel-fishing at all?—No, only as far as I have a regard for the poor fishermen who are engaged in it. Most of the trammel men I know are at the slate quarries now. The fishermen on the north shore chiefly depend upon trammels.

42,725. Do you agree with Mr. Tisdale as to the effect of the trammel-nets in preventing the hake from driving the sprats up the bay?—Yes, it is just like a policeman chasing a mob. The hake are the enemy, and if you stop them from coming up the bay the shoals of fish will stop too.

42,726. How do you meet the argument of Mr. Leary, that an abundance of herrings came up in former years?—I do not believe that there was anything like the quantity of trammel-nets in former years that there is now, and they were in the habit of fishing then in shoal water, in 6 or 7 fathoms of water. They had only about three fathoms over their nets. They have been known to fish inside of Whiddy Island, which ought not to be allowed at all.

42,727. What harm do they do when fishing near the surface?—The more they fish near the surface the more chance they have of taking the shoals of fish which are chasing other fish up. If you allow them to fish in shallow water you will soon see the effect it will have on the fishing.

42,728. Are the trammels at the mouth of the harbour so set?—There are not one to 10 there, taking a line from the White Horse; they are generally above it. The majority of the trammels are on the north shore from the White Horse up to Whiddy.

42,729. It has been stated to us positively that the trammel-nets are more numerous than formerly; you have stated that a great many of the trammel-net men have gone to the slate quarries?—Yes, that has been within the last two years; we have not had the slate quarries working to any extent until then.

42,730. Then you do not agree with the previous witnesses that 20 years ago there were more trammel-nets than there are now?—No; I came here in 1848. I have fished on and off ever since. I have been constantly in this bay for the last 12 years. I think that the chief reason that the herring fishery has gone to the bad is on account of their having lifted the coral sand out of the herring beds, where the fish are known to spawn.

42,731. Where was that?—At Trakall and the back of Whiddy Island. Trakall is on the top of White Horse Bay. All round the upper part of the bay is a spawning ground, and I think they ought not to be allowed to be interfered with by the sand-boats.

42,732. What do you mean by the sand-boats?—I mean the boats which are constantly dredging up sand.

42,733. What do they get the sand for?—For manure. It produces a great deal of money in this bay, and it is a question whether it is better to stop the fisheries or the sand-lifting.

42,734. The sand you say is used for manure?—Yes.

42,735. Is it a kind of lime sand?—Yes.

42,736. Coralline sand?—Yes.

42,737. Is that a considerable trade here?—Yes, there are more sand-boats than fishing-boats.

42,738. Do they work with dredges?—Yes.

42,739. How many sail are there employed in that way?—There are upwards of 40 sail in Bantry now.

42,740. Always working over that ground?—Yes, in the summer time.

42,741–2. How far do they work?—I cannot say, but I know they visit Trakall more frequently than any other place. In former years there were hundreds and thousands of herrings taken, but they are not taken now. Of course, if you were to prevent the boats from lifting this sand that would put a stop to a practice which is the means of producing a great amount of money in this place. It is alleged that trawling is the great ghost that is frightening all the fish away, but I do not believe that.

42,743. With regard to these sand-boats, are there many of them worked on the south shore?—Yes.

42,744. And also along the north shore?—Yes, about an equal number.

42,745. How can they work if the trammel-nets are set?—They do not go there; they go into the little nooks where the fish have always been in the habit of spawning.

42,746. They do not work over the trammel-nets?—No, they could not do it.

42,747. What depth of water do they work in?—From eight and nine fathoms up to 25 fathoms, but they generally work in from eight to 10 fathoms of water.

42,748. How many years have they been working here?—Longer than I can recollect.

42,749. Have they been working here for the last 20 years?—There were sand-boats here before I knew Bantry. I believe that the origin of that trade is due to some Frenchmen who came into the country and set the boats working.

42,750. Has it been going on for the last 100 years?—May be it has.

42,751. Has the number of boats engaged in that trade very much increased of late?—Yes, and it is likely to increase more if the railway comes, because the traffic in sand will be very large.

42,752. Is there any evidence that it does harm to the fishing?—I have heard a report from the herring fishermen and from the fishermen generally of this locality that the herring-fishing has been destroyed since the sand-boats came.

42,753. Has any spawn been seen in the sand-boats?—I believe so.

42,754. I suppose this sand-lifting was going on at the time that plenty of herrings were got years ago?—Yes, it was, but these places were not frequented for sand-lifting as they are now.

42,755. But still the practice was going on?—Yes, in the bay.

42,756. And yet there were plenty of fish here?—Yes.

42,757. Is there anything else you would like to remark upon in refererce to trawling?—No. If the trawlers are to have a certain time for trawling, and the trammel men a certain time for setting their trammel-nets, I should like each class to be allowed to fish day and night, because they could not injure any other fisheries, and one night's fishing when it can be obtained is generally worth two or three days' fishing. Let the trammel men fish day and night during their seven months, and allow the trawler to do the best he can during the five months that would be left for him.

42,758. Do you think that that would meet the views of both parties?—I think if there was a general meeting called of the fishermen on this coast the majority would vote for it.

42,759. Was that proposition not brought before the notice of the Fishery Board?—I mentioned it to Mr. Barry, to the Reverend Mr. Shea, and others.

42,760. Had they any reasons for not carrying it out?—Mr. Barry said we should call a meeting, and then petition the Fishery Board to pass a byelaw to that effect.

42,761. Has such a meeting been called here?—No, no meeting has been called as yet.

42,762. Why is that; is there nobody here who takes sufficient interest in the question?—I did not make it my business to ascertain whether they were sufficiently interested in the question or not.

42,763. (*Mr. Lefevre.*) Are you the owner of a trawl-boat?—Yes, I own more than one; I may say that I have two.

42,764. How many men do you employ in each?—Four men in each.

42,765. What do these men do in the other part of the year when they are not trawling?—I send them away coasting or trading in butter.

42,766. How many months of the year do you fish now?—It is not worth while to fish more than five months in the year.

42,767. Is that mostly on account of the difficulty of sending your fish to the market?—We are no doubt too far away from the market, and we have not a sufficient number of boats working here to make it worth our while to put in ice, and go to the expense which would be necessary in order to conduct the business properly. It is only done in a pettyfogging way here. Instead of having ice-houses, and sending the fish to Birmingham and London, and having large trawlers, we make use of a market like Cork, where we get a low price, and where the price comes down to 2*d.* a pound. In point of fact, it is hardly worth while sending them there.

42,768. If you had a railway here do you think it would be better?—Yes, I think we should do well with large boats here then, and we should do better if we went further outside to Roaring Water Bay and Cape Clear down to Dursey. I think we should do better then. We should only have to shift further out, and give the men the bay for trammel-net fishing. We have a strong current running outside the headlands, and in the summer time it would be of little or no consequence to fish in the bay. There is little or no wind; the bay is covered by the mountains. Sometimes we have a gale of wind, and next day none, and the boats are in the harbour three or four days a week.

42,769. Is that in the summer time?—Yes, and generally in the winter. We make only three or four days fishing, and if the boats did not get a good quantity of fish it would not pay them.

42,770. Do your boats fish at night?—Not to my knowledge, nor is it by my wish or sanction that they do. I have heard that one or two boats have tried it upon two or three moonlight nights, but it is against the supposed byelaw, although it was never ratified by the Lord Lieutenant. There is an impression among the fishermen that they must not fish at night, but I believe the law to that effect was never sanctioned.

42,771. You would allow trawling outside a particular line for five months in the year, and give the trammel men the other seven months of the year for working their trammel-nets?—Yes; we must go somewhere, but I do not think it worth our while to fish here at all in the summer time, considering the distance we are from the market, the heat of the weather, and the want of conveyance.

42,772. But would it not be worth while to fish here all the year round if the markets were better in consequence of the railway being brought here?—If we had a fleet of boats, and could command a steam carrier, then I think the boats would have no business to come here at all.

42,773. With ice?—Yes, we should take out ice, and come in every night to meet the train. The boats do not get in till 12 o'clock at night now, and it is 12 o'clock before they get out again, when all the best of the day is gone.

42,774. How do you pay your men, by shares?—They have half the fish.

42,775. Are they natives of Bantry?—Yes, all the men are natives of Bantry. We have one stranger here, who happened to come in a vessel as a pilot

BANTRY.

D. Morton.

30 Aug. 1864.

from Wales, where she belonged to, and who was induced to stop here.

42,776. Have you had any Cornish or Dublin or Galway boats here?—We had one here to see whether any improvement had been made in the fishing, and he is coming here in his own boat next winter. There are many boats coming from Wales.

42,777. Are there no small boats under 10 tons in the bay?—No.

42,778. Do you recollect the time when there was any considerable line-fishing in the bay?—I recollect when Mr. Bell's company were here from Peterhead. They carried on a smoking business here, and they caught cod, haddock, and whiting.

42,779. When was that?—Twelve or 14 years ago.

42,780. Has it quite come to an end now?—I believe the fish are there still, but the men have emigrated, and there are only two or three good line-fishermen left, and they do not think it worth their while to go out. They get so little for the fish that when they get it it does not pay them.

42,781. Is that still the same question of the want of a market?—Yes.

42,782. Are there no cod brought into Bantry?—No.

42,783. Are there plenty off the bay?—There are plenty off Bear Island.

42,784. What class of vessels is there at Bear Island?—Large yawls and small hookers.

42,785. Are they vessels under 10 tons?—Yes; there used to be first-class hookers belonging to that place but they have gone away to Jersey. They were large 20 and 30 ton boats. I believe that at one time they could number from 12 to 15 fine hookers there.

42,786. Do they send their fish to Cork or do they merely fish for the local demand?—They split and cure it.

42,787. And sell it in the neighbourhood?—Yes.

42,788. Do you know how many there are now?—No, they are reduced to a mere fraction of what they used to be but there is no doubt that there are plenty of fish here if we had the boats and the men.

The witness withdrew.

W. Tisdale.

WILLIAM TISDALE recalled and examined.

42,789. (*Professor Huxley.*) You wish to make an addition to your evidence?—Yes; I wish to say that if the trawling was confined by limits I think the limits Mr. Morton has laid down would be to too extensive, It would hardly be necessary to require the boats at all times of the year to work outside the limits he has named. The trammel-nets do not go there and it would be a pity to have the ground idle without its being fished upon in some way. If we do no tinterfere with any other kind of fishing I do not see why we should not be allowed to fish there.

42,790. (*Mr. Lefevre.*) Do you think the greater number of trammel-nets are inside of Shot Head?—I do not think there are any outside at all now.

42,791. Is there good trawling ground outside altogether?—This is the first year we ever had any experience of it. Some of the Galway boats went far out and I have found that the further we went out the better the fishing was; but it requires powerful boats and very expensive gear to enable them to keep at sea.

42,792. Could you not do so; in the North sea powerful boats keep at sea for weeks together?—We could if we had capital enough to establish the boats. If there were vessels of that class here I have no doubt that there would be a great deal of money made by them.

42,793. Do you consider that it is a good trawling ground?—As far as our boats tried it last year they did very well.

42,794. Do the Galway boats bring their fish in every day the same as you do?—Yes, they join in sending them away in cars.

The witness withdrew.

T. Curtayne.

THOMAS CURTAYNE called and examined.

42,795. (*Professor Huxley.*) You are not engaged either in trawling or trammel-net fishing here?—No.

42,796. But you have some seines I believe?—Yes.

42,797. Is there much seine-fishing carried on here?—Not lately, there has been a great falling off in the herrings and sprats.

42,798. In former times were there herrings to be caught here by seines?—Yes, in large quantities.

42,799. What is the length of the seines you use?—From 100 to 120 fathoms.

42,800. What is the size of the mesh?—Some of them are from half an inch to $2\frac{1}{2}$ inches.

42,801. Is the half-inch net used principally for sprats?—Yes.

42,802. Is it a seine without a pocket?—The meshes increase in size; the bunt is small.

42,803. Did you use the same net for herrings as for sprats?—Yes.

42,804. Is it a seine without a pocket; is there any cod in it?—No.

42,805. Only a bunt?—Yes.

42,806. Is it deeper at that part?—No, it all goes up to the same length, about 10 or 12 fathoms deep.

42,807. Are these seines drawn on the shore or are they worked as circle-nets?—They are drawn on shore sometimes and sometimes they are worked as circle-nets.

42,808. How many years is it since you had any considerable take of herrings in that way?—About five years since.

42,809. Was there a large shoal of herrings in then?—It was not a very large shoal but there was a considerable quantity of herrings taken.

42,810. What sort of condition are the herrings in that are taken in that way?—They are in very fine condition.

42,811. Are they at all damaged by the mode in which they are taken?—No, not in the slightest degree.

42,812. Are you aware that that mode of fishing has been prohibited in parts of Great Britain?—I was not aware of it.

42,813. It has been prohibited on the ground that the fish are damaged and injured by the mode in which they are caught; is that the case here?—No it is not.

42,814. Are the herrings caught in that way used fresh or are they cured?—They are cured.

42,815. Will they fetch as good a price as herrings caught by the drift-nets?—I think they will.

42,816. Do you catch herrings with the drift-net here?—Yes.

42,817. Has there been any large catch of late years?—Not of late years.

42,818. Are you ever able to catch herrings with the seine-nets when they would not be caught with the drift-nets?—Yes, a small sized herring.

42,819. How large are they?—Smaller than pilchards.

42,820. What time of the year are the herrings full here; what time have they pea in them?—From September up to December.

42,821. Was that your great fishing time here?—Yes.

42,822. Was there any summer fishing?—Yes.

42,823. What time of the year was it carried on?—In July.

42,824. And August?—In rare instances in June.

42,825. Do you get fish in August and September?—Yes.

42,826. In what condition are the fish then?—In very good condition.

BANTRY.

T. Curtayne.

30 Aug. 1864.

42,827. Are they full fish at that time?—No.

42,828. Have you never seen full herrings here except in October and November?—Yes, from September.

42,829. All through October?—Yes.

42,830. Have you ever had them full in February?—I do not recollect taking them full in February here.

42,831. We understand that the herrings have fallen off very much here?—Yes.

42,832. What do you consider to be the cause of that?—I cannot speak from experience but only from what I hear. They complain of the trawling. They say that there are a great number of boats trawling in the bay, and that they cut up the shoals of fish and send them away. That is the statement made by the fishermen who work the nets.

42,833. Do you ever get pilchards at the other end of the bay?—I believe that about three or four years since a lot of pilchards came in here.

42,834. But it is not a common thing?—Formerly they came in in large quantities but lately they have not.

42,835. Is the same thing also true of the sprats; did they come in in large quantities?—Yes.

42,836. How far up the bay did the pilchards come?—Just near to Whiddy on the south shore and they came inside the harbour.

42,837. (*Mr. Lefevre.*) How long do you recollect the seine-fishing?—I have been engaged at it for about 14 years.

42,838. Do the seine-nets belong to capitalists or to the fishermen?—They belong to capitalists and the men work them; they get as their share the fourth of the fish.

42,839. Do the herrings that are cured here fetch as good a price as the Scotch herrings?—No.

42,840. Is there any considerable importation of Scotch herrings here?—Not here, but I believe they sometimes get them in Cork.

42,841. What is the difference in price between them?—Good Scotch herrings will average from 5*s.* to 6*s.* and 7*s.* per 100 here.

42,842. And what price will your herrings get?—From 2*s.* to 4*s.* per 100 but it depends upon the scarcity of the fish.

42,843. Was it upon your application that the regulations prohibiting trawling in certain destricts were made?—Yes, I wrote to Mr. Barry.

42,844. When was that?—I think it is now about four or five years since.

42,845. Have you found that they have been of any use to the seine fishery?—Of course I do think it has been of great advantage to the seine-fishing.

42,846. But it has not produced any good results with regard to increasing the quantity of herrings?—No, but they still trawl in the bay, and as long as they trawl in the bay I think the herring-fishing will continue to fall off.

42,847. Do you think the limits have not been drawn far enough out?—No, I think from the light-house down across to White Horse Bay should be the limit. There should be no trawling inside of that.

The witness withdrew.

JAMES WHALEY called and examined. *J. Whaley.*

42,848. (*Professor Huxley.*) Are you a line fisherman?—Yes.

42,849. What mode of line fishing do you practice?—Hand-line fishing.

42,850. How long have you been a hand-line fisherman?—I have now been for more than 20 years at it.

42,851. What kind of fish have you been in the habit of catching with the hand-lines?—I have caught haddock with spilliards. I have been catching haddock and cod and bream with the hand-line.

42,852. Do you catch as much fish now as you were in the habit of catching formerly?—I have not caught as much fish lately and with regard to the hake they have failed us entirely.

42,853. Where do you fish chiefly?—We fish outside for bream but for hake we were formerly in the habit of fishing in 40 fathoms of water.

42,854. Do you ever go outside the bay altogether?—Yes, outside Bearhaven at the entrance of the bay.

42,855. You say that the catch of fish has fallen off?—Yes.

42,856. Did you ever catch haddocks here?—Yes.

42,857. When?—Not for the last 15 years. During that time we have not often taken haddock. We used the spilliards and when the blight came on many of the hookers were not able to keep them out.

42,858. Do you suppose there are no haddock now off the coast?—Nobody works for them from this shore. I do not know whether the Bearhaven people do.

42,859. Do you think all the line-fishing has fallen off?—Yes.

42,860. What do you think is the reason of it?—I cannot say, but it has fallen off, with the exception of whiting from December down till after Christmas. They come in-shore at Whiddy Island and there are a great number of boats after them then.

42,861. What is the reason of the falling off of the line-fishing?—I cannot assign a reason except that many complain of different "crops" being put in the water.

42,862. Different "crops"?—Yes, there are first of all the trawlers and then the trammel-nets. There were hake here for three or four nights this year and they were dispersed out of the bay by the trammel-nets. A great many of the fishermen say that it is on account of the trammel-nets that they left the bay.

42,863. Do you think the trawlers do you any harm?—Not at this time of the year; in the months of April and May they injure us when the fish are making for the land.

42,864. Do you think they frighten the fish away?—Yes, I believe they do. If a stone is thrown into the water sometimes it will frighten them and send them away.

42,865. Is there any other complaint you have to make on behalf of the line fishermen?—We were getting a good deal of hake about four years ago outside here off Whiddy Island; there was not a craft that interfered with us for nine weeks, and we were getting large quantities of fish. I killed 30 score of hake one evening, but last year as soon as they showed themselves the trammel-nets were put down and we had to come home again penniless.

42,866. Did the trammel men catch them and you not?—Yes; they shot on each side of us in six fathoms of water.

42,867. (*Mr. Lefevre.*) But they were fishing with trammel-nets in the good season you speak of?—No; they did not put a trammel down in the water during those nine weeks we were fishing.

42,868. How was that?—Because the Act of Parliament would not allow them to use them within the limits.

42,869. How long ago is that?—Four years ago.

The witness withdrew.

MAURICE HENNEGAN called and examined. *M. Hennegan.*

42,870. (*Professor Huxley.*) Are you a seine owner Mr. Hennegan?—Yes.

42,871. Did you hear the evidence which has been given by Mr. Curtayne?—Yes.

42,872. Do you agree with it?—Yes.

42,873. Is there anything you wish to add to what Mr. Curtayne has stated?—No, except that I believe the limits which have been laid down are insufficient.

BANTRY.

M. Hennegan.

30 Aug. 1864.

42,874. Do you think there ought to be a larger area from which the trawlers and the trammel-nets should be excluded ?—Yes, but I believe the trawlers do more injury than the trammel-nets. The trawlers pass through the shoals, break them up, and scatter the fish in every direction.

42,875. (*Mr. Lefevre.*) Are the trammel-nets prohibited within that district ?—Not that I am aware of.

42,876. Only the trawlers ?—Yes.

42,877. How can you work the seine-nets where the trammel-nets are used ?—They are never set there.

42,878. Are they in deeper water ?—Yes.

42,879. Then the trammel-nets do not interfere with you ?—Not much.

42,880. Did you not say that the trammel-nets did you harm ?—No.

42,881. You do not attribute the falling off of the herrings in this bay to the frightening of the fish by the trammel-nets ?—No, I think not. I think the fish when they are coming in would always pass over the trammel-nets.

42,882. But are not the fish frightened by the light in the water ?—I do not know that they are.

42,883. It has been asserted by some of the fishermen ; do you think it is not the case ?—I do not think it is. The trammels stand on the bottom of the water at the height of about two and a half or three fathoms, but there will be 20 fathoms of water above them, there is therefore plenty of room to enable the fish to pass over the trammels.

42,884. Then you do not think that the trammel-nets prevent the hake from driving the herrings in ?—I do not think they do.

42,885. Do you think the falling off is solely due to trawling ?—I think that trawling is more injurious than anything else.

42,886. (*Professor Huxley.*) Does trawling in the whole length of the bay interfere much with the fishing ?—At the entrance of the bay I do not think it will interfere much with the fishing, but when there are fish in the bay and they are trawling there it does interfere.

42,887. Would you object to any trawling in the bay ?—Yes ; except at the point of the lighthouse. I do not think that it frightens them as much after they come in as when they are resting previous to spawning.

42,888. We heard of the herrings being caught before they are full ; for example, in July and August they are not full fish ?—There are very few taken then. It is only an exception to take them at that time.

42,889. In what months is the greatest quantity taken ?—In September and October.

42,890. Do you ever find them full then ?—No, not until about December.

42,891. Then they cannot be spawning then if they are not full ?—But they rest in the bay before they spawn.

42,892. And you are of opinion that the trawling drives them out again ?—Yes.

42,893. You had a considerable haul of herrings here four or five years ago ?—Yes.

42,894. Yet trawling was going on then ?—Not to any great extent.

42,895. Were you taking large quantities of herrings for a long time before that ?—They were always taken more or less.

42,896. Have the herrings forsaken the bay since trawling has been practised ?—I do not say that, but I think it must interfere with them.

42,897. (*Mr. Lefevre.*) How long do you recollect the seining here ?—For 10 or 12 years.

42,898. Were there not before trawling commenced here great variations in the seasons ?—Yes.

42,899. Do you think that a line ought to be drawn from the lighthouse, and that all trawling ought to be prohibited within it ?—Yes.

42,900. Do you think that the line drawn by the Commissioners has been of no use ?—It has been of no use whatever.

42,901. You would as soon have nothing as that ?—I would very nearly as soon have nothing. I think it would be better for the trawlers themselves if they were further out.

42,902. You would have no restriction with regard to the trammel-nets ?—They do not interfere much with the seine-fishing.

42,903. How many men are employed here in seine-fishing in a good season ?—Up to the year before last I had 45 men.

42,904. Do you give them any head money ?—They get a bounty varying from 8*l.* to 15*s.*

42,905. Did you give it last season ?—I always give

42,906. In the prospect of the fish coming up the bay ?—Yes.

42,907. You have not neglected doing it because there has been a bad season ?—No ; but I have only worked one seine. I have had two lying idle.

42,908. How many were there working altogether ?—I believe there have been 64 families depending upon them.

42,909. Do you know whether any seine-nets are used at Bear Island ?—There are a few used, convenient to the island.

42,910. Would they be satisfied with the limit you have drawn ?—I should think they would ; they work inside the Island, and not outside.

The witness withdrew.

D. Morton.

DANIEL MORTON recalled and examined.

42,911. (*Professor Huxley.*) You wish to make some statement and comment upon the evidence which has been brought before us ?—Yes.

42,912. What is it ; do the trawlers not fish at the time the herrings are here ?—Never. I do not fish in the summer at all.

42,913. But we are informed that the herrings are here in September, October, and November ?—We do not fish in those months ; we fish from the 1st of December to the 1st of April, and they fish for the herrings from the 1st of July until the end of November, and sometimes not later than the beginning of November.

42,914. Then at the time that the herrings usually come here, namely, in September and October, you are not trawling ?—No ; and we do not propose to trawl in those months.

42,915. You are not doing so now ?—Certainly not.

42,916. (*Mr. Lefevre.*) Are the Galway boats coming here now ?—Yes.

42,917. Is that not for the purpose of trawling ?—Yes ; they come here for the winter fishery.

42,918. Do they begin trawling before you do ?—Yes, I suppose they will begin. They cannot fish at home. In the summer time they prefer Galway because the market there is better than our market, and they get three times the quantity.

42,919. Have they in previous years come round as early as the beginning of September ?—No, I never heard anything about the importance of the fisheries of Bantry Bay until we got up a few boats of our own. Other boats have since come here, and having done pretty well I suppose there will be a great deal more of them coming, but that is a thing we cannot prevent.

The witness withdrew.

BANTRY.

R. Sullivan.

30 Aug. 1864.

ROBERT SULLIVAN called and examined.

42,920. (*Professor Huxley.*) Have you practised seine-fishing here?—Yes, for the last 60 years.

42,921. Are you able to say if there was at any time a good seine-fishing here?—Yes, it was very good at one time.

42,922. When did it begin to fall off?—It has been falling off now for some years past.

42,923. For how many years has it been falling off?—For six or eight years.

42,924. Are you speaking now of seining for herrings?—Yes.

42,925. Was it because the shoals of herrings did not come into the bay?—I cannot say.

42,926. Have you been fishing with drift-nets at all?—No.

42,927. Always with the seines?—Yes.

42,928. What is the reason the sein-fishing does not answer now?—Because we believe the quantity there was formerly does not come in now on account of the injury done to the fishing by the trammel-nets and the trawling in the bay.

42,929. What harm do the trammel-nets do you?—They shoot them in 20 fathoms of water, and in six fathoms of water also, and even in four fathoms of water.

42,930. The meshes of the trammels are very large are they not?—Yes.

42,931. Are they not too large to catch a herring?—Yes.

42,932. Then cannot the herrings get through?—No, they cannot; if they are swimming in clear water they will withdraw altogether.

42,933. Do you think the trammels frighten the fish away?—I am certain they do when they are set in shallow water like that.

42,934. You think they frighten away the fish?—I am sure they do in shallow water.

42,935. Do you think the trammels do mischief all the way round the bay?—I do not think they do one-tenth part as much mischief in deep water as they do in shallow water.

42,936. They do more harm in shallow water?—Yes.

42,037. Do they do any harm at all in deep water; in 20 fathoms of water for instance?—Indeed I should not say that.

42,938. What mischief do the trawlers do?—The injury they do is this; when the fish are coming in they heave their trawls into the shoals and trawl in 40 fathoms of water. They were also trawling last year in four fathoms of water, and we have no redress for it at all.

42,939. Does that frighten the fish away?—Why would it not frighten them away?

42,940. Do you think that it does frighten them away?—Yes, I am certain that it does.

42,941. (*Mr. Lefevre.*) Do you think the sand-lifting does any harm to the seiners?—No, I do not think it does us any harm. I know the place where they take the sand; it was a great place for spawning once, but there is no spawning there now.

42,942. Do you think that the falling off of the fish has been occasioned by it?—I think it has had something to do with it, but we should not be able to get on in Bantry without the sand.

The witness withdrew, and the inquiry was adjourned until the 1st of September at Dingle.

Dingle, Kerry, Thursday, 1st September 1864.

PRESENT:

Professor HUXLEY, F.R.S. (Chairman). | G. SHAW LEFEVRE, Esq., M.P.

DINGLE.

O. Moriarty.

1 Sept. 1864.

OWEN MORIARTY called and examined.

42,943. (*Professor Huxley.*) Are you a fisherman?—Yes.

42,944. For how many years have you been employed in that avocation?—I have been fishing ever since I was 14 or 15 years of age.

42,945. Is that for the last 30 or 40 years?—Not so long as 40 years,—about 35.

42,946. Have you always followed fishing?—Yes, until of late, but I follow it occasionally still.

42,947. What kind of fishing have you practised?—The first time I practised line-fishing, spilliard-fishing, and herring-fishing.

42,948. And after that what fishing did you practise?—After that I practised trawling. I was trawling for awhile.

42,949. When you began fishing, 30 years ago, how many fishing-boats were there here?—There were about 20 spritsail boats belonging to Dingle itself, besides those outside the country. There were fishing-boats after the herrings, and occaionally fishing in the summer belonging to the farmers.

42,950. How many regular fishing-boats were there belonging to people who did nothing else than fish?—Twenty would be about the number.

42,951. What sized boats would they be?—Some were from six to eight tons.

42,952. What would a boat of that description cost?—They varied in price. Some would cost 40*l.*, others 30*l.*, some 24*l.*, and some 20*l.*, according to the times.

42,953. Were they fitted with spilliards and with herring nets?—Line-fishing and herring-fishing were the principal modes of fishing carried on here.

42,954. With the hand line or with the spilliards?—Hand-line and herring-fishing were the principal fishings; but at times they had a short spilliard.

42,955. What was the length of the fleet of herring-nets which you carried at the time you speak of?—At that time six nets were the most we carried. Some would only carry five, and some four.

42,956. What would be the cost of those six nets?—They would cost about 2*l.* apiece—from 30*s.* to 2*l.*

42,957. Then none of your boats would cost more than 50*l.* for rigging, fittings, and nets, and all?—I should say from that up to about 55*l.*, which would be the outside. I am now speaking of the dearest boats.

42,958. So that the whole money invested in the boats would not be more than 1,000*l.*?—I think that would be the outside of it.

42,959. Was there no trawling carried on here then?—No.

42,960. Was there no trammel-net fishing?—Not when I was a boy. There were the signs and traces of them, but nothing more. They were in their infancy then, but they have become more general since.

42,961. Were not the trammel-nets used in this bay at that time?—There were one or two in the bay.

42,962. But were there only a few set?—When I was a boy there were only very few, but they became much more general afterwards.

42,963. When?—From about the year 1830 down.

42,964. At that time what were the fish that were principally caught by the hook-and-line?—Hake, I think, was the principal fish, and pollack.

42,965. Did you get any cod?—Yes.

42,966. Was there much of it?—Not a great deal, but when they used spilliard-lines they would get cod, and occasionally they would get a few of them with the hand-lines by using herring bait in the winter.

DINGLE.

O. Moriarty.

1 Sept. 1864.

42,967. Did you get many haddock?—In some years we got a good deal of haddock with the spilliards.

42,968. And some years did you not?—In other years they would be in great abundance, and in some years they would not.

42,969. In some years did they fall off altogether?—Yes, there were very little then.

42,970. Did you yourself fish with a spilliard-line?—I did for a long time.

42,971. Did you ever get soles with it?—We have caught soles in the summer time when we baited the spilliard-lines with worms and set them out at night. We have perhaps got a dozen or 15.

42,972. Were they large soles?—No, they were only middle-sized soles.

42,973. Were you able to make sure of catching soles in that way?—No; it was only sometimes that we did it, generally in the months of June and July.

42,974. What was the greatest number you got in that way, or at one fishing?—To the best of my belief we never got 20 pair.

42,975. Then would you have thought 200 or 300 soles a large quantity to be caught upon the spilliard-lines?—I never heard of such a quantity as that being caught.

42,976. Did you ever hear of such a quantity being taken in one fishing?—I could not swear to it.

42,977. But if you did would you reckon it a very rare thing?—Yes, most decidedly.

42,978. Then what changes have taken place in the fishing? At that time there was no trawling at all, was there?—No.

42,979. Were there no pole-trawls used in the bay?—No.

42,980. Was there any seining?—Yes.

42,981. What kind of seines were used?—Tucking seines.

42,982. With a bunt?—Yes.

42,983. Of what size were they?—They varied a great deal. Some of them would be about 120 fathoms, and from that they would go down as low as 40 or 50 fathoms.

42,984. Is that in length?—Yes.

42,985. What was the size of the mesh?—It was about the size of the herring-mesh, but a bit less in the bunt.

42,986. What description of fish were caught in those seines?—Scad, mackerel, and herrings.

42,987. You caught herrings in them?—Yes.

42,988. Was that when they came close in-shore?—Yes.

42,989. Did you use the seines as a circle net?—Yes.

42,990. Then you did not haul them on shore?—No; we had two boats. One boat would be made fast and the other would go round in a ring.

42,991. Was that the mode in which they were commonly worked?—Yes.

42,992. Were you in the habit of getting many fish in that way?—We had very large takes sometimes.

42,993. Then was it a very productive mode of fishing?—Yes.

42,994. Did you ever hear any complaints against it for frightening away the fish?—The herring-net men,—the drift-net men—complained of it.

42,995. Did they look upon it as an unfair mode of fishing?—Yes, especially when they were used in the daytime.

42,996. Did they say that it broke the shoals of fish?—They often said, when we were taking those fish in the daytime, and were making a great noise in order to get the fish into the net, that it frightened the fish away from the shore.

42,997. (*Mr. Lefevre.*) Are those nets still used in this bay?—Yes.

42,998. (*Professor Huxley.*) Did you get plenty of herrings in the bay at that time?—Yes, in the season.

42,999. And sometimes they were away?—Some years we got very few, but in other years we had a great quantity of them.

43,000. When you were working the circle-nets for herrings did you get many small herrings along with the large ones?—I was never at the working of the nets myself. They were the country boats that worked them. There were none worked out of Dingle.

43,001. There were none worked out of Dingle?—There was not a seine at all worked out of Dingle.

43,002. Then am I to understand that when the herrings came in-shore the countrymen you speak of went out with their seines after them?—Yes.

43,003. Was there much mackerel caught in that way?—Yes.

43,004. And much scad?—There were more of scad caught than of any other fish.

43,005. That was the state of the fishing when you were a youngster?—Yes.

43,006. How did it become altered as you became older?—I have seen no alteration except with regard to trawling.

43,007. When you were young you say there were no trammel-nets?—No.

43,008. When did the trammel-nets begin to be abundant?—They have been using them more largely ever since the year 1830.

43,009. What were they used for principally?—For catching hake.

43,010. Were they used by the Dingle men?—No.

43,011. Were they set at all times and seasons?—No. When the hake set in they would use them.

43,012. What time did the hake season commence?—It commences in July or August.

43,013. How long would the trammels be set?—They will use them up to the month of December if the weather holds good.

43,014. Do they set trammel-nets all over the bay?—No, not all over the bay.

43,015. Then in what depth of water do they set them in?—I suppose they set them in about 14 fathoms of water.

43,016. Did you ever go as far as 20 fathoms?—No.

43,017. What is the depth of water in the middle of the bay opposite Dingle?—The deepest water across the bay will be about 24 or 25 fathoms. It will be somewhere about that.

43,018. Then the trammels were never set right across the bay?—No, but they come very near it. They come on this side of Bull's Head.

43,019. When the trammels were first set did the hand-line men complain that the trammels interfered with them?—Yes, and they often brought them in, and there was very bad work about it.

43,020. Was there much disputing?—Yes, a great deal at times.

43,021. How was it settled?—I believe that Mr. Barry and the rest of the commissioners in Dublin made some law, but I do not know whether it was ever carried out.

43,022. There was some regulation made?—Yes.

43,023. What was it?—I do not know exactly, but I heard of it.

43,024. What was it?—They were not to use the trammel-nets before sunset, and they were to have them taken up out of the water before sunrise.

43,025. Do you think that that law was obeyed or not? Was attention paid to it?—There was not much attention paid to it. I have seen the trammel-net men putting out their nets both before and after the time.

43,026. Were the trammel-nets ever seized by the Custom House officers or the Coastguard?—Yes, once.

43,027. You say these trammel-nets were worked by the farmers?—Yes.

43,028. They were not worked by the regular fishermen here?—No, never.

43,029. Is there any oyster-fishing in these bays here?—No.

43,030. There has been no oyster-dredging at all?—No. There may be an odd one taken up, but only a few.

43,031. When did trawling first begin?—I think it was in the year 1848. It was first commenced by a company, I think, at the end of 1848.

43,032. Then the trawling was not set going here by the fishermen themselves?—No.

43,033. But by a company?—Yes.

43,034. Did they bring a vessel round here?—They brought two of them, a large one and a small one.

43,035. What was the tonnage of those vessels?—One was between 60 and 70 tons and the other between 12 and 14 tons.

43,036. What was the length of the beams of the trawls?—Between 42 and 44 feet was the longest beam; the other would only have a beam about 24 feet long.

43,037. You say that those vessels began to work in 1848 or 1849?—The first one that came here was the Hesperus, one of Mr. Good's boats. She was the first. She came here to explore the ground.

43,038. Was that in 1849?—No, it was in 1848.

43,039. Did those vessels meet with a good deal of success?—Yes, they did.

43,040. Did they find that there was good trawling ground existing largely over the bay?—They found that there was good trawling ground, but it was very limited in extent.

43,041. Is there much rough ground in the bay?—Yes.

43,042. When those vessels began to work first was there much complaint made of them?—The people were prejudiced against them at that time.

43,043. You were hooking at that time?—Yes, I was.

43,044. Did you like them much yourself?—No, I was at one time very prejudiced against them.

43,045. What did you think were the objections against them?—From what I had heard I thought they would destroy the fishing in any bay they came into. I believed they would take all the fish out of the bay.

43,046. In point of fact you thought they would sweep the fish away and take away your business?—Before ever I knew what they were and before I had seen one that was my impression.

43,047–8. Was there any statement made with regard to the trawlers taking the spawn of fish upon the bottom of the bay?—There were different statements made.

43,049. Was there much outcry against them on the ground that they took up the spawn?—It came out at the first meeting that was held about them that the fishermen complained of their taking up spawn and destroying it.

43,050. Did you complain that they did?—I cannot say whether they did or not.

43,051. But when you were a line fisherman did you believe that they took up spawn?—I could not believe it, because I had no reason to believe it. I might fancy so, or I might not.

43,052. (*Mr. Lefevre.*) Did you give evidence in 1852 when there was an inquiry held here?—Yes.

43,053. (*Professor Huxley.*) On which side did you give your evidence then?—I was on the trawling side. I thought it would be best for my own conscience to tell the truth.

43,054. What we want to ascertain is, what was the feeling of the hook-and-line fishermen when the trawling was first introduced?—The feeling of the hooking people was, that they did not wish to have any trawlers amongst them, for more reasons than one.

43,055. Was it one of the reasons that the trawlers, in trawling over the ground, would destroy the spawn?—One was, that they would take all the fish away. Another was, that their fish would go into the market in large quantities and reduce the price of the hook-and-line fish. They had such reasons as that against the trawling.

43,056. There was a very strong feeling about that for some years?—There was.

43,057. In 1852 the Fishery Board took some notice of the question?—Yes.

43,058. And there was a meeting held here at that time?—I was not at that meeting.

43,059. (*Mr. Lefevre.*) Were you at the meeting when the byelaw was made prohibiting the trawling?—Yes, I was at the meeting, then, but I was not at the last meeting which was in 1862.

43,060. Which side did you take then?—The trawl side.

43,061. (*Professor Huxley.*) In 1852 was there a meeting held here at which the line fishermen appeared?—Yes.

43,062. Was that meeting held in consequence of an application from them to the Board of Works?—Yes, there was a byelaw made prohibiting trawling from Bull's Head.

43,063. How much of the bay did that exclude from the operation of trawling?—It prevented them from trawling over more trawling ground inside than the ground they can trawl upon outside.

43,064. It cut off fully one half of the trawling ground?—Yes, it cut off more than half.

43,065. And that byelaw was made in consequence of the representations of the hookers and liners?—It was passed in consequence of the representations of the Anascaul fishermen.

43,066. Are they hook-and-line fishermen?—Yes, and they fish with the spilliard lines.

43,067. Are they trammel-net fishermen as well?—I think they are at times.

43,068. The trawling went on nevertheless outside the limit?—Yes.

43,069. Was that limit kept, or did the trawlers occasionally run inside?—I think it was well kept, except upon a few occasions.

43,070. Did the trawlers find that they could get plenty of fish on the outside?—Yes, at times.

43,071. Was it any considerable interruption or detriment to their business when they were not allowed to go inside the boundary line?—Yes, it was a great deal.

43,072. Was the ground inside particularly favourable for that mode of fishing?—Yes.

43,073. Have you any reason to suppose that there was any large quantity of fish not taken because the trawlers were not allowed to fish there?—Yes.

43,074. What kind of fish?—Soles and turbots.

43,075. Are they fish which are not commonly taken by the spilliards?—The spilliards take very few of them. The Anascaul men make the greatest practice of getting them, but our men do not take many.

43,076. How many trawlers were there in 1852 at the time the byelaw was passed?—I think there were six or seven at that time.

43,077. (*Mr. Lefevre.*) Then they had increased from 1848 or 1849 when they first began?—Yes, there were only two then.

43,078. And they increased to six or seven in 1852?—Yes.

43,079. (*Professor Huxley*). Is that boundary line observed now?—It is not.

43,080. When was the byelaw repealed?—I think it was repealed in 1862—in January 1862.

43,081. Then the byelaw was in force for 10 years and was then repealed?—Yes.

43,082. Was it repealed in consequence of another meeting having been held?—Yes.

43,083. At that meeting were both line-men and the trawlers represented?—Yes.

43,084. Then it may be supposed that the Fishery Board attached more weight to the representations of the trawlers than to those of the line-fishermen?—Yes, I was not there, but I suppose so.

43,085. And since that time has trawling gone on all over the bay?—Yes.

43,086. You say that the number of trawlers increased between the years 1848 and 1852 until there were six or seven in 1852?—Yes; in my judgment there were six or seven in 1852.

43,087. To whom did the trawlers belong in 1852? Were they all the property of the company you spoke of?—Some were and some were not.

DINGLE.

O. Moriarty.

1 Sept. 1864.

43,088. To whom did those belong that were not the property of the company?—Mr. Kavanagh had one and part of another.

43,089. Were the owners natives of Dingle?—Yes.

43,090. Then the inhabitants of Dingle had observed that trawling was profitable and had themselves found it worth while to invest their money in it?—Decidedly.

43,091. Are you aware whether any of the fishermen had shares in the trawlers?—I had a share in one.

43,092. At that time?—I myself was one of the first who bought a trawler.

43,093. When was that? Was it in 1852?—No, it was in 1849.

43,094. The first year after the trawling began?—Yes.

43,095. Did you approve of the trawling?—Yes.

43,096. Did you think it an advantageous and beneficial mode of fishing?—Yes.

43,097. And in consequence of that did you buy a trawler yourself?—I went in company with three others. We went to Galway and bought a trawler and fitted it up and fished with it.

43,098. Did you continue to do that for a number of years?—I did, but I got employed by the company for some years, and I sold my share in the trawler to the other partners.

43,099. Did you find in fact that you could not carry on both employments?—Yes, as I had no other hands to put in the boat.

43,100. Then you did not part with your interest in the trawler because you found that trawling would not answer?—No.

43,101. Were your partners willing to give you a fair price for your share?—Yes, and I have bought another boat for them since.

43,102. Did the enactment of the byelaw in 1852 operate so injuriously upon the trawling that it ceased to be profitable, or did it still remain profitable?—It did remain profitable, but not so much so as if the byelaw had not been enforced. We sustained a great loss by the enforcement of the byelaw.

43,103. Did the number of trawlers increase?—Yes.

43,104. What is the total number of trawlers here now?—I believe that 12 is the largest number we have had fishing.

43,105. Does the company exist now?—No.

43,106. When did it cease to exist?—I believe it ceased to exist in 1853.

43,107. Then are the trawlers which are at work now the property of private individuals?—Yes.

43,108. And partly of persons living on shore who have invested money in them?—Yes; there are some of the owners who do not fish, and there are some who have their own fish.

43,109. Are the majority of the fishermen fishing in their own boats?—No.

43,110. Then I suppose that the larger number of the owners of the boats are persons on shore who have put money into them?—Yes.

43,111-2. Are you aware of many cases where the men who were originally employed as fishermen and trawlers have by degrees become owners?—Yes, there are some in court now.

43,113. From your experience is it a likely occurrence that a temperate, industrious man may from the profits of trawling save up enough money to enable him to become the owner of a boat himself?—Yes; if he does not become the owner of a boat he may at least become a part owner.

43,114. You have practised both modes of fishing, the line-fishing and the trawl-fishing?—Yes.

43,115. From the fact of your having given up line-fishing and taken to trawl-fishing it would appear that you think trawl-fishing to be the more profitable mode of the two?—I will not say that. There are seasons for both. We give up trawling in June here.

43,116. What is your trawling season?—From October up to June.

43,117. Then what do you do from June until October?—We go hand-line fishing and herring-fishing.

43,118. (*Mr. Lefevre.*) In the same boats?—Some of them do, but they are generally hookers, open boats, which they use with the herring-net. In some of the decked boats they do not use herring-nets but hand-lines.

43,119. Do you leave off trawling in June because there are no more fish to be caught, or because the herring-fishing and long-line-fishing are more profitable?—There are two reasons. The first is, that the fish would not reach the market in good order in that warm season of the year, and the second is that we believe the herring-fishing to be more beneficial.

43,120. What do you catch with the hand-line?—Hake principally.

43,121. Do they come in in great abundance?—Yes, in July and August they are very plentiful outside the bay.

43,122. Do the herrings come in plentifully?—They did this year. In the month of May there were more than I can ever recollect.

43,123. Was not that earlier than usual?—Yes.

43,124. How many boats were herring-fishing this year?—Taking country boats and boats from other places I counted as many as 30 yawls, hookers and other boats.

43,125. Are the herring boats as large as they used to be?—No; the spritsail boats were the largest class formerly, but they follow the herring-fishing now with canoes and a smaller class of boats.

43,126. Did not the old sprit-boats answer?—It seems that the men prefer the other boats. The larger class of boats were very laborious, and took too many hands to work them.

43,127. How many men did it take to work one of the sprit boats?—Six and seven, seven generally.

43,128. Can a smaller crew work the other boats?—They have about four men in the trawlers, and at the herring-fishing or the line-fishing they have five or six.

43,129. What is the size of the 10 or 12 trawl-boats you are speaking of now?—They vary very much in size. They are from 40 tons down to 14.

43,130. They are not decked boats for the most part?—Some of them are.

43,131. The larger ones?—Yes, the larger boats are decked boats.

43,132. What will be the size of the beam of the largest boat?—About 42 feet.

43,133. What is the size of the beam of the smallest?—About 30 feet.

43,134. What do these boats cost? Take the largest size.—Mr. Jervis had a large boat here, and it was a good boat too; he said that he gave 190*l.* for her.

43,135. What will a small boat cost?—I bought a small boat of from 14 to 16 tons, and I gave 75*l.* for her without any sort of gear.

43,136. Those boats are used also in the herring-fishing?—The open boats are, but the decked boats are not.

43,137. Is the length of a fleet of herring nets used now greater than what it was in former years?—The open boats carry a larger and deeper train than they were in the habit of carrying formerly in the sprit-boats.

43,138. Then they cost more?—Yes.

43,139. So that what with trawlers and hooking boats and so forth, there must be a larger amount of money invested in the fisheries here than there was when you first began?—Yes, and the expense of one boat is more than the expense of a dozen formerly.

43,140. We reckoned roughly that there may have been 1,000*l.* invested in the fisheries when you began?—Yes.

43,141. Do you know how much is invested now?—That was not yearly.

43,142. No; I mean altogether in the plant?—The expense of a trawler is an annual expense; they have to renew their gear every year.

43,143. But with regard to the prime cost, taking the trawlers, the long-line fishing boats, and the drift boats which exist at the present moment, what would it take to set them up?—Half of the trawlers here now would buy the fleet of boats that there was here 30 years ago. I mean what belonged to this part.

43,144. Then we should not be very far wrong in assuming that there is three times as much money invested here now in the boats as there was 30 years ago?—I think you would not be far out if you include the gear there is and everything. Taking everything into calculation that would be about it.

43,145. In what condition were the herrings you caught this year?—They were in very good condition.

43,146. They were fat fish, I suppose?—Yes, they were fat fish.

43,147. Did you get a ready market for them?—Some we sold fresh and we cured others.

43,148. Would they cure?—Yes.

43,149. They were not too fat?—No; we got them in fresh and they were well handled.

43,150. What time do you get the herrings here full of spawn?—Taking the general run I should say the month of September.

43,151. Do you get any winter herrings here in February?—They formerly did so, but not of late.

43,152. Do you recollect when they were caught here?—I do; I have caught a good deal of them myself.

43,153. What condition were the herrings in then?—They were full but very greenish.

43,154. But they were full fish?—Yes.

43,155. What time were they shotten?—In the month of March.

43,156. On the whole I gather from your evidence that there is not much to complain of in the fisheries here?—No.

43,157. The Dingle men are doing pretty well?—Yes.

43,158. Of their own free will they seem to have taken to trawling to a considerable extent?—Yes. Those who can afford it have a boat or part of a boat, but there are a good many fishermen who cannot afford it.

43,159. What do you reckon to be the average catch of a trawl per day? What will be a fair average catch of fish?—That is more than I could undertake to say; I can tell you the highest and the lowest.

43,160. What do you call the highest?—A boat may catch 100 or 120 pair of soles in a day, in addition to a great lot of plaice, hake, and cod-fish and a few other fish, besides ray and some useless sort of fish. On other days when there are calms or bad weather they take less. In calm weather they may not have a fish at all, and sometimes the wind is too strong for the boats and they come in empty.

43,161. It is said that you, the trawlers, get up a great deal of small fish in your nets, what do you say about that?—I am not regularly in the habit of trawling now.

43,162. But you used to be in the habit of trawling formerly?—Yes.

43,163. When you were trawling did you get a large proportion of small fish?—We might take up a handful of small fish, but there would be very little that was not serviceable or fit for eating.

43,164. Did you ever have occasion to shovel it off the trawler because there was so much of it?—When I was on board we had no shovel on board at all. I have two boats now and they have not a shovel on board to shovel it out.

43,165. Then you think it incorrect to say that one-half of the fish taken was small and unsaleable?—One half of the fish?

43,166. Yes.—I think it very incorrect to say that a twentieth or a thirtieth part of it would be small and unsaleable. There is a much less proportion than that.

43,167. Do you sometimes take small soles and small turbot?—I have seen some small soles occasionally, somewhere about the length of my hand.

43,168. But not a large proportion of them?—No; I think I can give you an instance of that to satisfy you. I am in the habit of seeing my own fish and other people's packed into baskets for the Dublin market, and for six months I have not seen 20 pairs of soles which were not fit to send to the market.

43,169. Then it is said you take a great deal of spawn up, what do you say to that?—I have never seen anything in the trawls that I could call spawn.

43,170. Are you aware that the fishermen call almost everything wet or soft that comes up from the sea spawn?—There was a report some years ago that Ventry Strand was full of spawn, but it turned out to be only cuttle spawn washed in by the sea.

43,171. Do you often get cuttle spawn in your trawl?—I never saw it in the trawl. I have not seen anything in the trawl that I could call spawn, but if I saw it perhaps I might not know it.

43,172. You know what herring spawn is like?—Nothing more than that I often saw the pea of the herring spilt in the boat.

43,173. Did you ever take up anything like that in your trawl?—I never did.

43,174. You were a herring fisherman as well as a trawler?—Yes.

43,175. So that it is your interest to catch as many fish as you can?—Yes.

43,176. Have you ever had reason to believe that the trawlers working among them have broken the eye of a shoal of herrings?—I do not know, but this year when the trawling was carried on in the month of May I have heard the fishermen say it was beating down the herrings, yet a week and a fortnight after they came down into the harbour and we got them, although trawling was then going on.

43,177. Trawling was going on at that time?—Yes.

43,178. Then in that case trawling could not well have frightened the fish?—I cannot say that it did. I only speak of it as an instance for you to judge of youselves.

43,179. In this particular year while the trawlers were working you heard of the herrings being far down the bay?—Yes.

43,180. Then they must have come up?—Yes.

43,181. And trawling was going on all the time?—Yes.

43,182. Then they must have gone through the trawlers?—Yes.

43,183. Do you sell your fish on the beach here?—Yes, and I sometimes cure it.

43,184. Does it go by Tralee?—Yes, the Tralee fish jolters generally take it. They have a contract with the trawlers here to take up the fish.

43,185. Is it sent fresh to the Dublin market?—Yes, such fish as turbot, soles, and dories.

43,186. Prior to the trawlers coming here was there any fish sent fresh to the market?—Not to Dublin, but there was to Tralee, Killarney, and some parts of Cork.

43,187. But none to Dublin?—No.

43,188. Was there any quantity of soles sent to Killarney and Tralee then?—There was not a considerable quantity. There were none except by the spillard men, who took a few.

43,189. Has the supply greatly increased since then?—The supply of such fish has increased.

43,190. The other fish they cured and sold in the country round, I suppose?—Yes.

43,191. What number of canoe-men are there now fishing from this harbour?—There are six crews I believe.

43,192. How many men are there in a crew?—There are four in each.

43,193. Do they fish with the long-line or with the hand-line?—They fish with both occasionally.

43,194. What do they fish for principally?—For hake with the hand-line, and for haddock, cod, and gurnard with the spillard-line.

43,195. Are there no sprit-boats from Dingle now?—Yes, there are four.

DINGLE.

O. Moriarty.

1 Sept. 1864.

43,196. How many men are there in them?—Six or seven in each.

43,197. Has the whole number of fishermen increased within the last 30 years?—I do not think the fishermen have increased.

43,198. They have not increased in number?—I do not think they have.

43,199. Do they make more earnings than they did?—I know the trawlers make more earnings than the sprit-boats did.

43,200. Do the canoe-men make more money than the men employed in the sprit-boats formerly did?—Yes, I think so, because they go to canoes in preference to sprit-boats.

43,201. Then although the number of fishermen has not increased you think their condition has materially improved?—I think the people engaged in trawling have improved their condition, and that they are making a better living than the spilliard men.

43,202. Is there any trammel-net fishing from this harbour?—No.

43,203. Where do the trammel-net men fish from?—From the Short Strand and Minard and Anascaul.

43,204. Has that mode of fishing diminished of late years?—I think it has diminished more than increased.

43,205. Since when?—I am not in the habit of going out at that season and I cannot tell you, but I know that from Bull's Head down to this harbour they have decreased.

43,206. Is there more trammel-fishing up the bay than down the bay?—It is all up the bay. There is no trammel-fishing from this to the west.

43,207. Then when you are fishing within the line drawn by the byelaw prohibiting the trawling, you come more across the trammel-fishing than when you are fishing above that line?—Yes.

43,208. What is the extent of ground fit for trawling upon within that line?—There is a large tract of ground fit for trawling there.

43,209. Can you tell us how much?—I could only guess it, but there is a man here who can tell better than I can.

43,210. When your boats are fishing on that ground do you often come across the trammel-nets?—I cannot tell you, not being out so very often.

43,211. Do your boats fish at night?—Very seldom.

43,212. Is it only on moonlight nights that they fish?—They would sooner be out on moonlight nights, because their nets would not be then in danger from working over the rough ground in the dark.

43,213. Do you prefer trawling at night or in the daytime?—In the daytime.

43,214. Even in the case of a moonlight night?—Yes, at any time. If there were a calm day and they could not fish and they got a little breeze turning up at night they would perhaps remain out.

43,215. Would it be a serious interference with the trawlers here to prohibit trawling in the night-time?—I suppose it would be, although they make very little use of trawling in the night-time; but still if they had a calm day, and especially in fine weather, followed by a breeze towards the evening, they would strive to be out at night, so that they might make a haul. I find that they are always inclined to come in after a day's fishing, if they have made a day's work or part of a day's work. They like to be in in order that they may send off their fish to the market.

43,216 Then I may take it that as a rule they do not fish much in the night-time?—Not much.

43,217. Yet do they fish for a sufficient number of nights to make the fishing a matter of importance?—I cannot say. They do not fish a great number of nights.

43,218. Can you tell me what the extent of ground outside the line of prohibition is?—There is more ground outside the line than they can trawl inside, because it is spotty. There is a great deal of rough ground and a deal that is very dangerous, where they would tear their nets if they trawled over it, so that they must keep within limits.

43,219. What depth of water is there on the trawling ground principally?—It varies as you come in the bay.

43,220. From what?—From seven feet off the south-west of Ventry to seven fathoms. As you come in you get into more shallow water.

43,221. Do the larger trawlers fish more outside than inside that line?—They have only fished inside the line since 1852, and that too only for a couple of months—in November and December.

43,222. Was it a greater disadvantage to the smaller class of trawlers than to the larger ones?—I suppose it was a loss to them all, because when the fish were fairly in the bay there was fish enough for all. The only difference was that the larger boats would take a larger quantity than the smaller ones.

43,223. Have you seen the trawlers fishing inside that line?—Yes.

43,224. Have you observed more smaller fish taken then than when they have been fishing outside?—Yes, the fish are small.

43,225. In what seasons do they take fish within that line?—In November and December, and then in the months of May and June again. When the season for the fish falls in February, March, and April they fish outside.

43,226. The smaller fish are taken inside the line of prohibition?—Yes.

43,227. Is there a larger amount taken then?—The fish are smaller generally; the large soles are outside.

43,228. Have you also observed whether the proportion of small fish, about the size of your hand, is larger when you are fishing within the limits than when you are fishing outside; do you understand me?—No, I do not.

43,229. You told us just now that a certain number of small fish are taken in the trawl-net?—What I said was that I did not recollect 20 pairs of soles left out of the hampers and not sent to the market.

43,230. Do you observe that the proportion of small fish is increased when they fish inside the line of prohibition as compared with what it is when they fish outside?—I think they are small inside in the general run, but small fish will be got outside too.

43,231. Have there been many complaints by the trammel-net fishermen since the time of prohibition was observed?—Yes, they have always been complaining.

43,232. Was that regulation about fishing within the line observed by the trawlers?—It was except on a very few occasions.

43,233. Were any of them ever summoned for a breach of it?—No. I believe the boats were carried off once or twice by order of the Commissioners.

43,234. Have any trammel-nets been carried away within the line?—I am not able to say; I never heard of any being taken away.

43,235. I think you told us that the trawling seasons lasted for about seven months of the year?—Yes.

43,236. Would it be a great disadvantage to the trawlers if they were confined to five months in the year?—Yes.

43,237. Would that take considerably from their profits in the course of a year?—Yes, it would, and they would not have the means of keeping their boats in order.

43,238. Do your trawlers fish outside of the line drawn from the headlands of the bay?—No, nor within miles of it; the water is very deep outside there and very rough.

43,239. Have you ever tried the ground as far off as that?—No, not to my knowledge.

43,240. Then you do not know what the nature of the bottom is?—Yes, I was out there sounding it at one time.

43,241. Is there any ground fit for trawling there?—There is a great deal of ground, but the water is very deep.

43,242. What depth is it?—Some 40 or 45 fathoms deep.

43,243. Are you aware that the trawlers on the east coast of England fish in water as deep as that?—I do not know anything about them, but they have not gear as heavy as we have.

43,244. Do any of the Dublin trawlers come here?—Yes.

43,245. How many of them come here?—There were four from Ringsend at one time, and three wherries that belonged to Skerries.

43,246. What time was that when they were here?—The Skerries boats came at Christmas and the others in February.

43,247. Did they fish where you fish?—No, we went outside where they fish. Our boats go fishing further out than ever they do.

43,248. (*Professor Huxley.*) You were saying that the herring-nets and the trawlers fish at the same time of the year here?—I do; I mean the latter end of the trawling.

43,249. Does not the herring-fishing take place at night chiefly?—They always work the drift-nets at night.

43,250. Then the trawlers have no chance of interfering with the herring men if they fish by day?—Yes, the trawlers sometimes trawl in the night, but we do not fish as far as where they trawl when we are fishing for herrings.

43,251. Do you not go as far with the drift-nets?—No, our drift-nets are generally from eight to nine score, some of the hookers have them 11 score, but it would not answer generally; we have only five and six pieces 20 fathoms each.

43,252. Have you had any complaint made against you when you were trawling for carrying away the spilliards or long-lines?—Not when I was trawling, but I have heard a few complaints made against other people, although I always found that the trawlers paid for any damage they did.

43,253. Have the spilliard-lines buoys attached to them?—Yes.

43,254. What are they?—Some use a blown skin and others have corks.

43,255. Are they big enough to be seen from any distance?—The skins that are blown out can be seen for some distance.

43,256. If a trawler sees them can he get out of the way of them?—When a trawler man sees a buoy, if he knows the direction in which the spilliard-lines are he can get out of the way of them, but sometimes he thinks he is getting out of the way when really he is not.

43,257. (*Mr. Lefevre.*) If there were some limitation placed upon the trawlers, would it be more advantageous that it should be a limitation as to time or as to place?—My opinion honestly is that if there is a limitation of trawling it might as well be prohibited altogether. This bay has so much rough ground in it that if we were to be limited we might as well give it up altogether. At the same time, if there was to be any limitation at all, I would sooner have a limitation as to time than in regard to place.

43,258. But you did work a considerable time at a profit when a line of limitation was drawn?—Yes.

43,259. Would you prefer, then, that if there is to be a limitation it should be a limitation of time or of place?—I would sooner have a limitation of time; say the summer time, when the herring-fishing is going on.

43,260–1. (*Professor Huxley.*) What time would you think best?—The summer time would be the best time to knock off, if trawling be as injurious as some people say it is. I do not know whether it is or whether it is not.

43,262. In what months do you think it might not be practised?—I should say when the hake and the herring begin to fall in and the boats are fishing for them.

43,263. That would be in October and November?—We should knock off in June and not commence again until the 1st of November; that is my view of the matter.

43,264. Has the doing away of that line of prohibition been of advantage to the trawlers in this place?—Yes, it has been of very great advantage to them.

43,265. Have they made a good season?—Yes.

43,266. They have made money by it?—Yes.

43,267. Have they made more than usual?—Nearly as much again, or very near it.

43,268. Did you observe whether the quantity of fish was falling off previous to the prohibition being removed?—Previous to the line being removed?

43,269. Yes, previous to the line of prohibition being removed had you observed any falling off in the take of the trawlers?—Yes, there was.

43,270. Do you think that each boat was taking less than it was before?—Each boat was taking less fish, because when I first commenced there was only one or two boats, but now there are a dozen. There are more fish taken away altogether, but each boat then took more than each boat takes now.

43,271. In 1852 there were six or seven boats fishing?—Yes.

43,272. In 1862 there were something like 11?—Yes.

43,273. Do you think that the whole amount of fish taken by those boats was less than the whole amount of fish taken by the six or seven boats in 1852?—No; there were more fish taken, but there were more boats there.

43,274. (*Mr. Lefevre.*) Do you think that the trammel men observe the regulation in regard to not setting their nets in the daytime?—They do not, and there are people here who can prove it. I can prove it myself.

43,275. What time have you observed them setting their nets?—Sometimes an hour before sunset, and they have been taking them in an hour after sunrise. Sometimes they leave them, however, for a day or two, but that might be owing to the weather.

43,276. Would it be a disadvantage to the trawlers if the trammel-net men were allowed to set their nets in the daytime?—Yes, it would.

43,277. In what way?—The trammel-men and the trawlers would have a regular row. The trawlers would not be able to keep clear of the nets.

43,278. They would come foul of the nets?—Yes, they could not avoid it.

43,279. Do they carry away the nets now?—I never heard of it.

43,280. You told us that the trammel-net men set their nets in the daytime?—But there might not be a trawler at all in that season.

43,281. But I suppose the trawlers observe them setting their nets at all seasons?—Yes.

43,282. What time of the year do the trammel men set their nets?—From August up to the latter end of December, if the weather keeps fine. If the weather breaks early in the season they cannot put them out.

43,283. Has the take of hake fallen off?—It has increased in some places and decreased in others.

43,284. In this bay has it fallen off?—I think it has; but outside, where the hookers fish, they have taken more fish than they ever took before there was a trawler.

43,285. Have the haddocks fallen off also?—They have.

43,286. Since when? Can you give the date of the falling off of the haddock?—I cannot, although there was one year, I think it was the year 1848, when we had a great take of haddocks. In 1848 and 1849 there was a considerable quantity of haddock taken in all parts of the bay, and especially outside. Since then we have had good takes of haddock, but not such good takes as there were then.

43,287. When was the last good take you had?—Three years ago.

43,288. Do you take the haddock with the trawl?—Very few; they take them mostly with the spilliards.

DINGLE.

O. Moriarty.

1 Sept. 1864.

43,289. Do you take mackerel in the drift-nets?—There are very few mackerel taken at all. They have no mackerel nets.

43,290. Have you any reason to believe that shoals of mackerel come into the bay here?—Yes, because they have been seen.

43,291. You do not use your decked boats for drift-net-fishing?—No.

43,292. What is the reason of that?—You would require to have a large train of nets to keep the boat steady.

43,293. Is there no other reason?—The fishermen cannot afford to be at the expense.

43,294. Is there any other reason; would the boats be able to carry on that mode of fishing?—I know of no other reason to prevent them.

43,295. (*Professor Huxley.*) You were saying just now that the trawlers took more fish when they first began here than they do now?—Yes, they did; they took a great deal more.

43,296. Was that the case in regard to vessels of corresponding tonnage; for example, was there a vessel here of 60 tons when you first began?—Yes.

43,297. Is there any vessel of that size fishing now?—Not quite so large.

43,298. Suppose there was a vessel of that size with a similar sized beam, would she catch as much fish as then?—No.

43,299. So that taking boats of a corresponding tonnage they would not catch as much fish now as they did then?—No; we have boats equal in size now that do not take as much; but at the commencement of the trawling there were only two boats, then there were four, and then there were six. They have been gradually increasing.

43,300. The total quantity of fish taken is greater, but the quantity by each boat is not so large?—No.

43,301. Do the trawlers fish in any other bays around here?—Very seldom. The company's boats were formerly in the habit of fishing in Ballinskellig Bay.

43,302. But your boats do not now?—No.

43,303. What time do the cod and haddock spawn?—In my opinion they spawn in the month of March.

43,304. What time do the flat-fish spawn?—In March and April.

43,305. Then all these fish would spawn about the same time?—Yes.

43,306. Did you ever know of a trawl cutting or damaging a trammel-net?—I never saw it, but I have heard that on some occasions they have got foul of one another.

43,307-8. Do you think that the quantity of fish taken altogether has dimnished since the trawlers came into the bay—is it less now than before the trawlers began to work?—I recollect the time when there was three times the number of boats around this bay that there is now. They decreased at the time of the famine and starvation. Before that there was a whole lot of boats round Dingle Bay in every creek and harbour. I have counted in former times as many as seven score boats fishing for herring, and now we cannot count a score of boats. Seeing that there was so large a number of boats fishing then as compared with what are fishing now, it is not likely that the small number now fishing can take as many fish as the larger number did previous to the famine.

43,309. Do you think that the working by trawlers in the bay is injurious to the breed of flat fish, turbot and soles—I do not know; I cannot answer whether it is or not. I cannot take upon myself to say whether trawling injures the brood of fish or not; but this I can say, that the quantity of fish taken by the trawlers is a great deal, and of course it is so much taken out of the sea.

43,310. Do you think that the trawling when the herrings were being taken did any harm to the take of herrings?—I do not believe it did, because the herrings have come in even when the trawlers were trawling.

43,311. Did Mr. Hussey prevent the trawling in Ventry Bay at the time the herring-fishing was being carried on?—I think Mr. Hussey tried to do so, but I have told the skipper of my boat not to go trawling anywhere where there were herrings and hake in the bay, but to take to his lines, and then he would have no complaint.

43,312. You did that for two reasons, first because you thought it would be better for your own men to go hake and herring fishing?—Yes.

43,313. And secondly that there should be no ground of complaint?—Yes.

43,314. Quite apart from those reasons, do you think that the trawling in the bay would have been injurious to the herrings by dispersing the shoals?—I stated before that I had no reason to believe so.

43,315. Do you think that the take of cod and haddock by the hand-line and the spilliards has fallen off since trawling commenced?—Some years before trawling was commenced here there was a less quantity of fish, far less than has been taken since trawling commenced.

43,316. (*Mr. Lefevre.*) You spoke of there being a considerable number of small boats in the bay years ago?—Yes.

43,317. Were they all open boats?—They were all sprit-boats,—open boats.

43,318. Did they fish all the year round?—No; they belonged to the farmers round the different harbours in the bay, and they fished the herrings occasionally in the harvest time.

43,319. To what do you attribute the great falling off in the number?—To the famine in 1847 and 1848. The farmers themselves fell off. A great many died, and many emigrated to America.

43,320. Are you aware what was the reason which induced the company which was established here to throw up trawling in Dingle Bay and to leave it?—As far as it is right for me to say, I can satisfy you that it was not from any want of fish, but it was entirely from other circumstances which I am not in a position to enter into. It would not be right for me to state in this court what the reason was, but I do not believe it was from any want of fish.

41,321. Do you think there is room in the bay for any considerable number of trawlers more than there are at present?—There is ground outside the rough ground.

42,322. Ground that has not been fished over?—Yes, but it is very limited.

The witness withdrew.

J. O'Flaherty.

JOHN O'FLAHERTY called and examined.

43,323. (*Professor Huxley.*) Are you a fisherman here?—I was a trawler here for some time.

43,324. How long is it since you were occupied in that way?—When the Royal Irish Fisheries commenced here.

43,325. Were you employed in the Royal Irish Fisheries?—Yes, in Dingle.

43,326. Did you come from Dublin?—No, I belong to this place.

43,327. When the vessels came round were you employed in them?—I was employed as a pilot to see what were the best places for experimenting upon along this coast.

43,328. In what year was that?—About 1848.

43,329. For how many years were you in the employment of the Royal Irish Fisheries Company?—I cannot recollect, but I think it will be about two years. I was then employed as a pilot in Her Majesty's service, but I had to give that up, and afterwards I went into the employment of the company again.

43,330. Were you in their service when they ceased to work?—Yes, I was.

43,331. At what time of the year was it they ceased to work; was it during the trawling season?—It was.

43,332. What year was that?—It was the year 1848 when they commenced.

43,333. But what year was it when they left off?—I was not exactly in their employ when they left off. They went on working for 12 months after.

43,334. In the last year you were employed in trawling for them did you get a good supply of fish?—Yes, but we were fishing in Galway Bay then.

43,335. Then can you not say anything in regard to what the supply of fish here was?—Yes, it was not from any want of fish that they left here.

43,336. You yourself were not fishing here the year before the company ceased to work?—No.

43,337. During the time you fished for the company was the supply of fish well kept up?—Yes.

43,338. Did you see any falling off?—No.

43,339. Did you hear the evidence of the last witness?—I did.

43,340. Do you agree with it?—I do in some points, but every man has his own opinion.

43,341. Will you tell us any point on which you disagree with him?—I think the fish have been increasing for the last two years. I own part of a little boat myself, and for the last two years I think more fish have been taken by that boat than were taken in the two years before that.

43,342. What kind of fish?—Sole, brill, and turbot.

43,343. Is your boat one of the same size as those which were employed ten years ago?—It is of less tonnage. My boat is only of 25 tons.

43,344. Do you catch fully as much or more now than was caught by a similar boat ten years ago?—There have been more fish caught in the last two years then were caught before.

43,345. But going back to the time when trawling commenced, do you get as much fish in proportion as you did then?—No; but the reason of that is that there were not near as many boats fishing then as there are now.

43,346. Do you think that a boat of a given tonnage does not get quite as much fish now as a boat of the same tonnage would when you first commenced fishing?—No.

43,347. And the reason of that is the increased number of boats fishing?—Yes.

43,348. Is there any other point which occurs to you which you would wish to mention?—I should like to say a word with regard to the ground that was prohibited here. It was a great deal more in extent than they ever allowed for trawling.

43,349. But that limitation is not in existence now?—They have a scrape now on that prohibited place of from 10 to 12 miles in length, while upon the other ground there is not half that distance.

43,350–2. Do you agree with the previous witness as to trawling at night?—Yes, in order to get it to the Dublin market. I was along with one of the gentlemen who came down here from the Commissioners of Fisheries, and I took him over the spot where the Anascaul men say the fish spawn. I shot the trawl there and we got 21 pair of soles and nothing else, after an hour and a half's trawling.

43,353. Was the gentleman to whom you refer Mr. Holdsworth, our secretary?—Yes; we got the fish from the identical spot where they say the fish spawn. We took up the trawl after it had been down for an hour and 20 minutes. We held it up and there was no spawn in it, but there were 21 pairs of soles.

43,354. When was that?—I think it was the latter end of May. There were herrings and lobsters and soles coming in, and plenty for all the boats to fish. There had not been a trawl shot there for a long time before that and none since.

43,355. You are part owner of a trawler yourself?—I am part owner of a little boat, but I am employed by the Ballast Board of Dublin.

43,356. You are not living altogether by fishing?—No.

43,357. Do you agree with the last witness as to the want of good trawling ground outside the headlands?—When I was going in one of the company's boats we fished outside the headlands, but we could not make anything of it because the water was too deep.

43,357*a*. What depth of water was there?—There were about 60 fathoms of water. We get into deep water at once when we get clear of the heads. We were seven hours fishing and we did not get a hundredweight of fish.

43,358. Had you plenty of warp out?—Yes. The skipper was an experienced man, and he said that the water was too deep, and that there was no use in fishing there. In addition to that the ground is quite open to the Western Ocean, and there is no shelter for anything. It is a different bay from any other in Ireland. This is one of the bays where there is no shelter upon either side.

43,358*a*. Do you think the fish set into the bay at different seasons and then go out again?—I do.

43,359. Is that the case with soles particularly?—Yes, they generally come all about the same time.

43,359*a*. Are you aware if any considerable quantity of soles can be caught by the spilliards?—Not that I have ever seen.

43,360. Do you know anything about the market for the supply of fish here?—Yes.

43,360*a*. Have you ever seen the market supplied regularly with fish by the spilliards?—No.

43,361. What is the principal fish they send in?—Haddock, cod, gurnard, and whiting.

43,361*a*. But not soles?—No, I have not seen 20 pair of soles sent in by them.

43,362. Are you employed in the herring-fishing?—Yes.

43,362*a*. What is your opinion about the herring-fishing; do you think that trawling frightens away the herrings?—No, and in proof of that I may say that I have this year seen trawlers fishing when the herring boats have been catching plenty of herrings at the same time.

43,363. In what month?—About the month of May.

43,363*a*. Where was the place they were fishing?—Off Ventry Harbour, about three miles from this.

43,364. It was in May that the herrings were here?—Yes. They were sent from here to Dublin market, and they thought it very strange.

43,364*a*. You say that on that occasion you saw the trawlers working among the shoal of herrings?—Yes.

43,365. How did you know the herrings were there?—We could see them very plainly.

43,365*a*. Did you see the gannets at work upon them?—Yes, we could see the boats shooting their nets and the trawlers trawling away.

43,366. Did the herring-fishing go on in Ventry Bay itself?—Yes.

43,366*a*. And the trawlers were working there?—Yes, a little outside Ventry Bay.

43,367. You give that as a proof that the trawlers do not injure the shoals?—Yes. They do not injure the shoals to my knowledge.

43,368. Were the herrings being caught in the seines then?—No, there are no seines out of Dingle now.

43,369. Then they were being caught with the drift-nets?—Yes.

43,370. Then with respect to catching small fish in the trawl, what should you say is the ordinary proportion of small and unsaleable fish which is taken in a trawl?—I have never seen any unsaleable fish worth speaking of taken by the trawl.

43,371. Have you ever on any occasion seen the spawn of fish in a trawl?—No, never; and I was the first here who did shoot a trawl in one of these boats.

43,372. (*Mr. Lefevre.*) Can you tell us anything about the extent of ground fit for trawling in this bay?—I can give you an idea.

DINGLE.

J. O'Flaherty.

1 Sept. 1864.

43,373. Let us take first the ground outside what used to be the line of prohibition; what is the extent of ground there?—About four miles; there may be a little more in one place.

43,374. Four miles in length by how much in breadth?—Some of it will not be more than a quarter of a mile in breadth, and they could not go over it unless they had certain winds. There may be other places where the ground is from two to three miles in width.

43,375. Is that the only ground outside the line of prohibition?—There is another place to the westward of it, but it not so large in extent.

43,376. How much is it in length?—Two miles or a little more, and about two miles in breadth, but they cannot trawl there well because the place is very foul. We have been sounding and going over the place at different times, and we find that most of the bay is foul except those two spots, unless it is within the prohibited ground.

43,377. Are those the two spots the trawlers were trawling upon up to last year?—Yes.

43,378. Have you observed any falling off in the take of fish there?—There was a little falling off, and we thought that might arise from the number of boats that were fishing.

43,379. Did you think that the number of boats was too large?—Yes. They increased from 4 to 10 and 12, and the place being so small and so constantly trawled over it was hardly to be expected that the fish would remain as numerous as they were formerly.

43,380. Was it in consequence of that that an application was made by the trawlers to do away with the line of prohibition?—It was.

43,381. What extent of ground is there within the line of prohibition fit for trawling?—There is a piece of ground of from 10 to 12 miles in length.

43,382. And of what breadth?—Fully five miles.

43,383. Then the extent of ground prohibited was much larger than that upon which the trawling was allowed?—Yes, a great deal.

43,384. Do you think that the increase of fish caught within the last two years has been due to fishing within the line?—It has.

43,385. That has mainly been the cause?—Yes.

43,386. For how long during the season were your fishing boats fishing?—Two months or a little more.

43,387. Two months out of the seven?—Yes.

43,388. And five months outside the line?—If the fish fall off they go round to the other ground. They fish in the other place about the latter end of February.

43,389. Outside the line of prohibition?—Yes, they fish higher up first. There are strong easterly winds and westerly gales, and they cannot fish then. They cannot trawl down the bay. If it had not been for this place being open during the last two years there would have been a great many of the fishermen in the workhouse before this.

43,390. Do the trammel-fishermen fish over the same ground as you do?—I do not know much of the trammel-fishing, but there are trammels on the same ground.

43,391. Have you not come across their nets at all?—No, I never did.

43,392. Do they set their nets in the daytime?—I have seen them setting them a little before sunset.

43,393–4. Only a short time before?—Yes; I live about an English mile from the town and I cannot see the boats that shoot further up the bay.

43,395. Do you pay your men by shares?—Yes, by shares; the men in the trawl-boats are all paid by shares.

43,396. Can you tell us anything about the lobsters?—Yes.

43,397. Is there any considerable lobster fishery here?—There is.

43,398. Along the north side of the bay?—Along both sides of the bay.

43,399. Has the take of lobsters fallen off?—I believe they are falling off inside the bay but I cannot say how it is outside. I have not tried this year, but I was at them last year.

43,400. How long has the lobster-fishing been carried on?—There was a little carried on all through when the Royal Irish Company was here, but there was not a very great deal done until within the last two or three years.

43,401. How many men are employed in it?—They are fishing for themselves for the most part and there are a good deal of them. Everywhere round the bay there are very fine lobsters.

43,402. Do you take the lobster when it is full of pea?—I suppose they do.

43,403. Do they observe any regulation with regard to the size of the lobster they take?—No.

43,404. They take small and large?—Yes.

43,405. What is the smallest they take?—Perhaps a little larger than my hand.

43,406. Do they not take them smaller, or do they not find them smaller?—They may do so, but I have not seen them.

43,407. Do they take as many as they did?—There has been a great quantity of lobsters taken this year, but there were more taken last year than this; there were more boats and more men employed.

43,408. There have not been as many men this year?—Not as many as there were last year.

The witness withdrew

M. Stack.

MAURICE STACK called and examined.

43,409. (*Professor Huxley.*) Are you a native of Anascaul?—I am.

43,410. Are you a fisherman there?—Yes, I am.

43,411. How long have you been engaged in fishing?—For the last 15 years.

43,412. Has it been your occupation all your life?—I first followed the occupation of buying fish from the fishermen, and then I fell into the fishing. I found it more profitable to fish than to sell the fish.

43,413. You were first a fish buyer?—Yes.

43,414. And afterwards you took to fishing yourself?—Yes.

43,415. Has that been your occupation for the last 15 years?—Yes.

43,416. What mode of fishing do you practise at Anascaul?—Spilliard-fishing, herring-net fishing, trammel-net fishing, and hand-line fishing.

43,417. Are there any trawlers at Anascaul?—Yes.

43,418. Is there any harbour in Anascaul?—Yes.

43,419. For boats of what size?—It is not capable of accommodating boats of any great size. It is a very bad harbour.

43,420. What are the largest boats that can go into the harbour; of what tonnage?—About 25 tons.

43,421. What kind of boats are they principally that go there?—We principally work with canoes.

43,422. What do you call a canoe?—A canoe is made of timber and covered all over with tarred calico.

43,423. How long are those canoes?—There are many of them 18 feet long, and some of them 20 feet.

43,424. Are they such as a couple of men may carry?—Four men carry them.

43,425. Does the crew consist of four men?—Yes, we have three in a crew when fishing for herrings.

43,426. How many of these boats are there at Anascaul?—There are 11.

43,427. That will make between 40 and 50 men altogether?—Yes.

43,428. Are there other boats besides?—There are one or two others. There were about 20 boats until the time the fishing got bad.

43,429. How long ago is that?—About 30 years ago.

43,430. Were they large boats ?—There were large boats, lug boats, and sail boats.

43,431. When did they cease to be there; when were they broken up ?—I suppose they were broken up when the bad weather came.

43,432. It is not worth while for the people to take care of them ?—No.

43,433. Is that on account of the falling off of the fisheries ?—It is.

43,434. Were there any canoes at the time the large boats you speak of were here ?—Only one or two.

43,435. The canoes have taken the place of the other boats ?—Yes.

43,436-7. Is it because they cost less ?—Yes, they cost less. People were not able to keep up the other boats.

43,438. The people became too poor to keep up the old style of boats and so took to the canoes ?—Yes.

43,439. If they had been able to make as much by fishing as they did formerly would they have kept to the old boats ?—Not half of them.

43,140. Why not ?—The trawlers put them down; they took all the fish away.

43,141. If plenty of fish had remained to be caught would they have kept the old style of boats ?—I do not know that because the canoes are very easy to work.

43,442. Are the canoes as convenient as the old style of boats ?—We prefer them.

43,443. Do you prefer them yourself ?—Yes, I do.

43,444. So then if you had not been poor you would have preferred the canoes as being more handy ?—Yes.

43,445. There are about 50 or 60 fishermen at Anascaul ?—Yes, and 200 all round the coast.

43,446. Are there any trammels ?—Yes.

43,447. Has each fisherman got a trammel ?—They have a pair of them.

43,448. Has each fisherman a hand-line ?—Yes, a pair of them.

43,449. And a spilliard ?—Yes.

43,450. They belong to the fishermen ?—Yes, they have got them of their own.

43,451. What time is the fishing season for the Anascaul men ?—From the month of May, and they follow it up to this day.

43,452. Up to September ?—Yes.

43,453. What do they do when they leave off fishing in September ?—They fish with their trammels.

43,454. How long does that last ?—Up to Christmas.

43,455. After Christmas what do they do ?—They go on fishing with their spilliards on fine days outside; they do not often get good weather, however.

43,456. Do the Anascaul men do anything but fish?—No, except they cultivate a handful of potatoes for themselves.

43,457. Has each man his own bit of land ?—Each has a bit of land, but it is not his own.

43,458. It is ground they have to pay for ?—Yes.

43,459. Do they depend on the fishing chiefly for their livelihood ?—Yes, chiefly on the fishing; they have nothing else to live by except the fishing.

43,460. Was the fishing pretty good when you knew it first 15 years ago ?—It was first-rate.

43,461. Did you catch plenty of hake ?—Yes.

43,462. Cod ?—Yes.

43,463. Haddock ?—Yes, and soles and plaice and turbot.

43,464. How did you catch soles ?—With the spilliards and by using lug-worms.

43,465. You bait with the lug ?—Yes.

43,466. Did you catch many soles in that way ?—I have done so; I have seen 120 pair of soles in one basket; I have seen from that down to 80, and 30, and 20 pair.

43,467. Caught by the spilliards ?—Yes.

43,468. In one night ?—Yes.

43,469. Was it a common thing to take as many soles as that on the spilliards ?—Yes.

43,470. What depth of water did you set your spilliards in ?—From seven to 11 fathoms.

43,471. How many hooks would there be on each spilliard ?—About 700; there might be 750 on some and 600 and 550 on others.

43,472. What are the lines you have the hooks made fast to ?—We have the hooks made fast to a snood.

43,473-5. What is the size of the hook ?—Number 11.

43,476. At the time you speak of what did you catch in your trammel-nets ?—Hake.

43,477. Were they only set in the hake season ?—Yes.

43,478. In what depth of water did you set you trammels ?—In from seven to eight fathoms of water

43,479. Not deeper than that ?—No.

43,480. How far out from the shore of the bay di you set your trammels ?—That would be according to whether the fish were high up or low down; if they were high up we should put them near the shore and next to the foreground.

43,481. I see from the chart that just past Anascaul there are seven fathoms of water right across the bay?—Yes.

43,482. Then you could set your trammels the whole way across ?—Yes, when we find fish there.

43,483. You told us just now that the supply of fish has fallen off very much of late ?—Yes.

43,484. When did you first notice that the fish had fallen off ?—The trawlers took them down; before they came we had them very plentiful.

43,485. Do you mean in the year 1848 or 1849 ?—I do not know which year; it was the first year we had to contend with them; we had a great haul before then.

43,486. You began to fish about 15 years ago ?—Yes.

43,487. That would be about the year 1849 ?—Yes.

43,488. That was about the first year that trawling was introduced ?—Yes, somewhere thereabouts.

43,489. You had not been fishing before that ?—No.

43,490. But at the particular time you began there was an abundance of fish of all kinds ?—Yes.

43,491. When did you first notice that the fish were falling off ?—When the trawlers came down.

43,492. How many years had you been fishing before the fish began to fall off ?—It was two or three years afterwards.

43,493. You got an abundance of fish for two or three years ?—Yes.

43,494. And then they began to fall off ?—Yes.

43,495. Did the quantity of fish in the bay fall off ?—Yes.

43,496. What kind of fish particularly ?—We were getting sole, plaice, turbot, and brill; everything has fallen off except haddock and hake; we can get them plentifully at the proper time of fishing.

43,497. You were taking all these fish in plenty until the trawlers came down ?—Yes.

43,498-9. Then it is since then, about the year 1852 or 1853, that the supply of fish has fallen off ?—Every year except the three years I tell you of. We had a decent supply of fish last May twelvemonths, two spilliards took 38 pairs of fish; I sent them to the Dublin market and they made 3*l.* 8*s.*; there were 38 pair of fish in one night. I shot the spilliards the second night, but the trawlers had found it out from the jolters, and they came down and then we could get no more. I had a good many pairs in my canoe before they came. We were joining several of us; we went to the trawlers in the night-time, they were all outside of me and we asked them to keep away from the spilliards that night; the reply they made us was, "Why "do not you buy a lanthorn and put it over your spil-"liards for buoys ?"

43,500. You asked them to keep away from your spilliards ?—Yes, and they told us to buy lanthorns and put them on the buoys. I had three spilliards out and I had only 12 fish upon them.

43,501. Did the trawlers carry away the fish ?—Yes.

DINGLE.

M. Stack.

1 Sept. 1864.

43,502. Did they trawl over the lines?—Yes, and trawled away the fish.

43,503. In 1863 was there plenty of fish to be caught?—Yes, there was plenty, but we have not been able to catch plenty for the last four or five years since they have come down among us; before the law was broken so as to enable them to come down we were getting a good fishing, but since they have been allowed to come down we have been getting nothing.

43,504. Were you one of those who petitioned for the byelaw that was made in 1852?—I was.

43,505. Was it upon the ground of the falling off of the fish?—Yes.

43,506. Did you find that the byelaw did you any good?—Yes.

43,507. Did you get as good fishing afterwards?—Yes.

43,508. Were there plenty of soles to be had?—Yes.

43,509. And plenty of hake?—Yes, and of turbot.

43,510. And plenty of herrings?—Yes.

43,511. In fact there were plenty of all sorts of fish?—Yes.

43,512. As much as you got before the time the byelaw was passed?—It was not as large as it was the first time, but it was much better than it was when the trawlers were allowed to work there.

43,513. After the byelaw was passed did you get pretty nearly as much as you did before the trawlers came at all?—Yes.

43,514. How long was it after the byelaw was passed that you noticed the improvement in the fish; was it the next season or the season after?—The season after.

43,515. Within the year you found that all the fish had come back?—Yes.

43,516. And there remained a steady supply?—Yes.

43,517. Until the byelaw was repealed again?—Yes.

43,518. And then did they all vanish?—Yes.

43,519. Then it does not seem that trawling outside the limit does you any harm?—No. All I want is that they should stop away from me. That is what I should like best.

43,520. You are quite clear that the trawling outside the boundary line did no harm?—Yes.

43,521. It did not frighten the herrings away?—I am not sure of that. They were outside the boundary, but they did not frighten them inside.

43,522. The fish had to come from outside the boundary to get inside?—Yes.

43,523. Then they must have passed the trawlers?—Yes.

43,524. Then it is quite clear they had not frightened them away?—I do not know that.

43,525. You told us you got plenty of herrings above the boundary?—Yes.

43,526. It is quite clear that they could not have the overland?—It is on the other side we get them.

43,527. They must have come up through the outer water—they must have come up some part of the boundary?—Yes.

43,528. They must have come up through the water where the trawlers were working?—Yes, indeed they did.

43,529 Did you find there was as good a supply of haddock after the byelaw was passed as before?—Yes, there has been a good supply of haddock.

43,530. And now, since the byelaw was repealed, it has all fallen off again?—Yes.

43,531. Have the trawlers ever carried away your lines?—They have not carried away lines from me, but they have from another man here.

43,532. You never had your lines carried away?—No, I never had mine taken.

43,533. Have you ever had your trammel-nets carried away?—No, they have not taken any away from me: but they have from another man who is here.

43,534. Do you think that the trawlers destroy much spawn?—Of course I suppose they do.

43,535. Have you ever seen the trawl-net taken up?—No, but there is another man who has.

43,536. You have not seen it yourself?—No.

43,537. Do they destroy much unsizeable fish?—Yes, of course they will.

43,538. But you do not know that of your own knowledge?—No, I do not indeed.

43,539. Do you get as good a price for your fish as you did before the trawlers were working?—I do.

43,540. Does your fish sell as well as the trawled fish?—Yes, I suppose it does.

43,541. You get as much money for it?—I do, according to the market in Dublin.

43,542. Is there no difference made in the market between trawled fish and hooked fish?—Indeed I do not think there is. We all join in Anascaul and send to the market.

43,543. You do not know whether your hooked fish sells for a better price than the trawled fish?—I am not sure.

43,544. Do you get as good a price for your fish as you did when you first began catching fish?—I do.

43,545. Is it much better or about the same?—About the same.

43,546. (*Mr. Lefevre.*) Where do you sell your fish?—In Dublin.

43,547. Does it go by way of Tralee?—Yes, by mail car.

43,548. Do you send it off every day?—Yes.

43,549. Do you buy from other men?—No, we all join together, put it in a basket, and send it to Dublin. The jolters send them in.

43,550. Do you only send away the soles?—Yes, and turbot.

43,551. Do you send off a basket every day from Anascaul?—Yes.

43,552. What is the size of the basket?—Not very large. It is very little now, only about 20 pair.

43,553. Two years ago, before the byelaw was done away with, did you send more than one basket a day?—Yes, two, three, and four then.

43,554. Then the supply has fallen off since then?—Yes.

43,555 Do you think that the reason is that the trawlers catch the fish that you formerly caught?—Of course it is.

43,556. Then that is the harm the trawlers do you, namely, that they catch the fish you would otherwise catch?—Yes.

43,557. Do they do you any other harm?—They do me harm of every sort.

43,558. In what way?—They do me harm in taking the hake fish first, and then the haddock and cod and plaice and turbot.

43,559. But we have heard that the trawlers fish only for two months of the season within the line?—The first day they went down there last May twelvemonths there were five or six of them there, and they took up large takes.

43,560. Did they fish on for about two months?—As long as they could get fish and a breeze they fished there.

43,561. In what months do you catch most soles?—In the month of May.

43,562. Only in the month of May?—Yes, from the month of May up to this time.

43,563. Do you catch as much in other months as in the month of May?—Yes.

43,564-5. You observe no difference?—There was a great difference in this month and the month before. I am obliged to give up my fishing and go to the foul ground, where the trawlers cannot go. It is there that I put my spilliards now, where they cannot trawl. During the two years that the trawlers have come down here it is there I have been making my harvest.

43,565. Do you ever set your spilliards on the rough ground?—Some of them go on the rough ground.

43,567. Do you get any soles there?—No.

DINGLE.

M. Stack.

1 Sept. 1864.

43,568. Do you get haddocks there?—We may get haddocks, but there is not a sole or a flat-fish to be got.

43,569. (*Professor Huxley.*) Is there any other statement you would like to make to us in addition to what you have already stated?—I have fishermen here to prove that they have carried away our spilliards.

43,570. Is there anything you wish to state yourself?—I have nothing more to say than that the fish have been reduced by trawling, that I have had to give up my own ground and go to where the foul ground is. I have had to go to Bull's Head and Minard. I have had to leave where there is good ground and to go where it is foul ground. It is there I have had to make my season for the last two years.

43,571. Was the reason that you were afraid of their trawling over you?—No, there was no fish.

43,572. Did they fish there day after day?—Yes.

43,573. Then there must have been fish to be had there?—Yes, but it would have been of no use for me to set spilliards there when I had fished it down to three single soles.

43,574. Then the trawlers did not clear away the fish, but after the trawlers had been there the fish would not take the spilliards?—I could not catch any.

43,575. But there must have been fish there or the trawlers would not have gone on fishing there day after day?—They would get the fish and not me.

43,576. Do you mean that after the ground had been trawled over the fish would not take the spilliard bait?—I fished it six times before I left and could get none. I was obliged then to go to the foul ground to fish. As long as the trawlers continued to work over the ground I could get no fish.

43,577. And yet the trawlers think it worth while to come and fish there?—No, they did not come there They fished it up one week after another, but if they thought they could get fish there they would fish it as long as the fish were there.

43,578. After a trawler had fished over the ground did he not come there again?—No.

43,579. For how long?—From the month of May until November; that is the time we are fishing with the trammels.

43,580. Did once working over the ground clean it so effectually of fish that there were no more fish to be had for months?—I am sure of it. I put my spilliard there for a month after they went away and I could only get one or two soles.

43,581. Are there any soles there now?—No, I fished it last week and I only got three or four soles.

The witness withdrew.

JOHN O'FLAHERTY recalled and examined.

J. O'Flaherty.

43,582. (*Professor Huxley.*) I believe you told us that you were fishing in this very place this year?—Yes, on the very identical spot the witness has been speaking of.

43,583–4. When was that?—In the latter end of May.

43,585. What did you catch?—Twenty-one pair of soles.

The witness withdrew.

MAURICE STACK recalled and examined.

M. Stack.

43,586–90. (*Professor Huxley.*) Was that in the month of May of this year that you put your spilliards out on the ground of which we have been speaking?—Yes, I put them down and got no fish at all. I had to give it over.

43,591. (*To the witness O'Flaherty.*) You on the other hand tell us that by trawling over the same ground in the month of May you caught soles?—Yes, in a very short time we got 21 pair of soles.

43,592. (*Mr. Lefevre to the witness Stack.*) Where did you go to when you could not find soles there?—To the other side.

43,593. Did you find fish there?—Yes, I had a fine take of fish there.

43,594. Is that the ground the trawlers do not go to?—They dare not go there.

43,595. Why?—The foul ground is outside and the good ground inside.

43,596. Is it only a narrow strip of good ground?—Yes.

43,597. Have you not caught fish on the same ground that the trawlers have been fishing over?—No, not a bit.

43,598. Never?—No, never, and I have fished often down on the same spot.

43,599. You have never fished habitually on the ground the trawlers have been fishing over?—No.

43,600. (*Professor Huxley.*) Did I understand you to say just now that when you fish over ground outside the line the trawlers fish you do not get soles?—No, we do not.

43,601. But the trawlers do?—I do not know. I have had to go to some other ground.

43,602. Is there anything else you would like to say?—I have no more to say.

43,603. Have we now heard the principal part of what the Anascaul men have to complain of?—There is a man who would be a better witness than me; he can tell about the trawlers carrying away the spilliards and frightening the herrings.

The witness withdrew.

THOMAS KENNEDY called and examined.

T. Kennedy.

43,604. (*Professor Huxley.*) Are you a native of Anascaul?—Yes.

43,605. Have you been fishing there for many years?—Yes, for 20 years.

43,606. What kind of fishing have you practised?—Spilliard-fishing, hand-line fishing, trammel-net fishing, and herring-fishing.

43,607. Did you hear what the last witness stated?—Yes.

43,608. Do you agree with what he said?—Not in some parts.

43,609. Will you mention any particular in which you do not quite agree with him?—I do not agree with him with regard to the decrease of fish since the trawl-fishing began; the fish have decreased a great deal.

43,610. The fishing has fallen off a great deal since trawling began?—Yes, it has been falling off every day.

43,611. Do you mean since the prohibition was withdrawn?—Yes, and before that too; it has been falling off every year.

43,612. Then do you not agree with him that the fishing became much better after the byelaw was passed?—It did not. The reason the byelaw was passed was that they were taking away our trammels and our nets. There was a dispute with us one day and we went on board of one of the trawlers and we got up their bags in consequence of their taking away our nets.

43,613. And then the byelaw was passed?—Yes.

43,614. Did that do any good to the fishing?—It did to the herring-fishing.

43,615. But to the sole-fishing and to the other kinds of fishing?—No, the soles were not as plentiful as they were before, or near it.

43,616. But did the soles become more plentiful than they had been?—Not much.

DINGLE.

T. Kennedy.

1 Sept. 1864.

43,617. Did you get much haddock?—We must go to the southward of the shore to take haddock.

43,618. Did you get plenty of hake after the byelaw was passed?—Yes, we got plenty, but the trawlers injure all fish.

43,619. What you object to is the trawlers working over the same ground that you do?—Yes, I think the decrease in the fish is owing to that.

43,620. When the trawlers were working outside the boundary did they do you any harm?—Yes, they did.

43,621. What kind of harm did they do you?—In May when we take soles they prevent the fish from running down to us. I am quite sure that they do not let one-third of it run down.

43,622. They catch the fish that are coming down?—Yes, going down the bay.

43,623. In fact they catch the fish you would otherwise catch?—Yes.

43,624. But when they fish outside the boundary line do they then destroy the fishing in other ways?—I am sure of it.

43,625. How so?—After our spilliards had been taken away in the night we drew up their bags. There were two men and a boy on board of the boat. We hauled up the bag and emptied it out on the deck. There were lots of small turbot and spawn. I should say there would be four or five hundredweight of spawn. There was so much of it that one of the men had to get a shovel and throw it overboard.

43,626. What kind of looking stuff was it?—It was in large lumps.

43,627. Was it pretty solid?—Yes.

43,628. Did you see any fish in the spawn; would it come to life at all?—I do not think it would.

43,629. How did you know that it was fish spawn?—I knew it was fish spawn because it was much the same as I had seen before. It was in small grains, flaxy, and in large lumps. I know it was some kind of fish.

43,630. Do you know squid spawn when you see it?—I do not know.

43,631. Would you know it from fish spawn if you were to see it?—I might judge whether it was if I saw it.

43,632. You do not know at present?—No.

43,633. Do you think that the destruction done by the trawlers outside the boundary line has damaged your fishing inside?—I know that it has.

43,634. The last witness told us that he has got plenty of fish?—Not in that place; he had to go to the other side of the shore.

43,635-7. Has the fishing been affected more on one side than on the other?—Yes, because they all trawl on one side.

43,638. Do you think the trawlers keep the herrings out?—Yes, and I will give you an instance. In the year 1850 we were fishing with four or five canoes and we took from 1,000 to 3,000 herrings in a canoe. On the following day six or seven trawl boats went down the place and we did not take a herring.

43,639. Does it not sometimes happen that, if you go to the same place on a second night after a good fishing, you get no fish, without the trawlers being about?—Yes; but, if it does happen, it also happens that I get it somewhere else in the course of the week.

43,640. Herring-fishing is very uncertain. It may happen or not?—I know it is.

43,641. We have been told that they have been catching herrings in Ventry Bay while the trawling has been going on there?—Yes; I have been catching herrings there, but I could not tell whether the trawlers were there or not. We were told that the trawling was entirely off.

43,642. But we have had contrary evidence—we were told that the trawlers were working there?—I could not say that. I saw a vessel outside, but I did not know what she was doing.

43,643. Have you ever had your herring-nets fouled by a trawler?—No; but I have had my trammel-nets fouled; and, although I asked him to stop for five minutes, and told him I would take them out of the way, he would not do so.

43,644. That was before the byelaw passed?—Yes.

43,645. Has the fishing become worse since the byelaw has been repealed?—Yes, it has been getting worse every day.

43,646. For all kinds of fishing?—Yes, herring-fishing, hake-fishing, and all kinds of fishing. It has been getting worse every day.

43,647. Do you agree that soles can be caught in great numbers on the spilliards?—In the year 1851 I myself got 20 pair on one spilliard.

43,648. What sized soles were they?—They were sent to the Dublin market.

43,649. What size were they; were they fair soles?—Yes; there were some very large, and during the season I got from 60 to 100 pairs every night.

43,650. (*Mr. Lefevre.*) Have the hake fallen off?—We are catching no hake.

43,651. Did you take any last season?—Very little.

43,652. When was the last year you had a good season?—We have not had a good season for five or six years.

43,653. Do you also attribute that to the trawling?—I know that trawling has had a great deal to do with it.

43,654. In what way?—The trawlers have frightened the fish.

43,655. Have you ever fished outside the line of prohibition with a spilliard?—Yes; but I have not thought it worth while to put out a spilliard at all this year—it would not pay half my expenses.

43,656. But before the prohibition was repealed did you fish with spilliards?—Yes.

43,657. On the same ground that the trawlers go upon?—No, they cannot get at that ground.

43,658. Why is that?—It is a narrow spot running along the bank.

43,659. Did you not try that this year?—No, but the other canoes did, and they got nothing on it.

43,660. How was that, the trawlers had not been there, had they?—No; they could not fish there.

43,661. You say you lost your trammel-nets on one occasion from trawling; what time of the year was that?—It was in the year 1850. I believe a Dublin boat took them away.

43,662. Did you take the name of the boat?—No, I could not do so.

43,663. What time was it?—Before sunrise.

43,664. Was it dark?—No; we were taking them up before sunrise at the time.

43,665. How far from the shore were they?—They were about one and a half Irish miles from the shore.

43,666. What was the depth of water?—From seven to nine fathoms.

43,667. What is the deepest water you fish in with the trammels?—Nineteen or twenty fathoms.

43,668. Have you ever set them outside the line of prohibition?—I have.

43,669. Was it there that you lost them?—No, that was inside.

43,670. Then the trawler was inside the line of prohibition?—A few days afterwards there was a dispute, and we entered a trawler and took his nets and let the boat go adrift ashore. A line was struck out in consequence.

43,671. Is there anything else you would like to add to the statements you have made?—No, only that I am sure the trawling is a great destruction to the fish.

43,672. Do you think if the soles are coming into the bay, and are not caught by the trawlers, that you would catch them yourselves upon your lines?—We should take a share of them.

43,673. Do you think if the trawlers did not catch the hake outside the bay with their hooks you would catch them?—Yes, with the hand-line. We should catch what were coming into the bay. We should take our share of the hake.

43,674. Would you like the trawlers to be prohibited from hake-fishing in order that you might catch

DINGLE.

T. Kennedy.

1 Sept. 1864.

the hake?—No, because they cannot kill the whole of them, and I catch a share of them.

43,675. Do you think if they caught them with the hook only you would have a better chance than if they were taken by the trawl?—Yes.

43,676. What makes you think that?—Because if the fish come in and we only fish with hand-lines, we do not scatter them away in every place, and we cannot kill the whole of them.

43,677. Do you think that the trawlers in trawling catch very much more fish, or that they frighten the hake away?—They frighten away the hake.

43,678. Have you ever known the trawlers catch with their hand-lines 27 or 28 score of hake?—I have not. I am sure they have not taken that quantity in this part of the bay.

43,679. Are you aware whether the trawlers on the outside ground caught 27 or 28 score of hake last week?—They might on the outside ground, but not inside here.

The witness withdrew.

THOMAS FITZGERALD called and examined.

T. Fitzgerald.

43,680. (*Professor Huxley.*) Are you a fisherman at Anascaul?—Yes.

43,681. How many years have you been a fisherman there?—Thirty years.

43,682. You heard what was stated by the previous witnesses Kennedy and Stack?—Yes.

43,683. Do you agree generally in what they stated?—Yes, certainly, in some parts of it.

43,684. What do you not agree in?—I will tell you. I had a brother, an only brother, and he had been out fishing for many years. He had seven in family, when he was taken ill with the fever and became helpless altogether. I shifted for him and set his spilliards for something like more than a month, when one of these trawlers came down. I begged of him to let me haul away the spilliards.

43,685. Whereabouts was that?—Opposite my own place at Anascaul?—They did not pay any attention to me, although I was shifting to support him in his fever. They took 700 of the spilliard hooks away from me without giving me the value of one of them.

43,616. Did you know the number of the trawler?—Not at all. It was about the break of day that they came down.

43,687. Then you had no redress?—No, I got none.

43,688. When was this?—In the year 1848.

43,689. That was before the first outcry took place?—Yes.

43,690. Did you obtain any good from the byelaw when it was passed in keeping them outside the limits?—Certainly we did. We then got a reasonable share of fish.

43,691. It did the fishing good?—Yes; but it did not do us as much good as before they interfered, nor yet the tenth part of it.

43,692. Then would you like to see the trawlers kept out of the bay altogether?—Fishing is the only means I have of supporting myself and my family, and if I had my own way, above all things I should like to see these trawlers 100 miles out of my way.

43,693. You think they do you so much harm?—I am quite sure of it.

43,694. Do you agree with the previous witnesses that they do harm by catching the spawn of the fish?—Certainly.

43,695. Did you ever see spawn taken up?—I was not on board any trawler. One day a man came up trawling and did injury to my brother's gear. I summoned that man to the petty sessions of Anascaul and they asked him there what brought him down fishing inside the boundary illegally, and the answer he made was that he had not a trawl down, but that he was running adrift. I was not able to observe her at the time. I asked him why he had not his boat numbered and he said she was marked on the bottom. As I have told you I summoned him, but I could not sufficiently prove what he was doing. I was not able to make him haul his trawl so as to show that it was a trawl, but by all the signs it was a trawl he was using. The case was adjourned until I summoned one of the crew, and then by the interference of some of the gentlemen they got off.

42,696. What I ask you is whether you have ever known spawn taken up by the trawl?—No, I never boarded any of them to see.

43,697. Have you ever known herrings frightened away by the trawling?—I can say that I have fished for a few nights and been able to get from 700 to 1000 and from that to 3000 herrings in a night.

43,698. When was that?—In 1848, when four or five of these trawlers came down and trawled over every inch of the ground as hard as they could. At one place they can come within a musket-shot of the shore into 4½ fathoms of water, and they do go in there. The night after they had been there I went out and I could not get a herring, and from that time until the end of the season we did not get 100.

43,699. Did they frighten them all away?—I cannot say, but I think the cause of their going away was the trawling, and that they shifted them all off.

43,700. Have you ever had your trammel-nets carried away by the trawlers?—Yes.

43,701. Were they working inside of the boundary at the time?—Yes.

43,702. Why did you not summon them?—There was no boundary struck out then.

43,703. Was it before 1848?—Yes.

43,704. Has there been much of it since the bye-law?—I have been fishing in five or six fathoms of water when some 30 or 40 of these trawlers have come down trawling. When once they hear from the jolters passing to Tralee that we have got any quantity of fish they come down upon us the second night.

43,705. (*Mr. Lefevre.*) Have you known of any case in which spilliards or trammel-nets have been carried away within the last two years?—No.

43,706. Although the trawlers have been trawling and fishing in the neighbourhood?—They do not trawl at the same time.

43,707. You set your spilliards at night and the trawlers trawl by day?—I thought one of the men you have examined to-day told you that after setting his spilliards he asked a trawler to get out of his way, and they told him to get lanthorns and put on the top of his buoys.

43,708. Do you agree in the evidence we have had before us that the trawlers only trawl in the daytime?—I have often seen the mtrawling by night; often and often I have seen it. They go just as they choose. If they have had a calm day they will be at it at night.

43,709. Within the line of prohibition?—Yes.

43,710. But you do not know of a case in which spilliards or trammel-nets have been carried away within the last two years?—No.

43,711. (*Professor Huxley.*) What time in 1848 was it that your spilliards were taken away?—I cannot say.

43,712. It is affirmed by other persons that at the time you say these lines were carried away there was no trawling here. You say that this took place in 1848 and it is alleged that there were no trawlers here at that time. How do you account for that? Have you made a mistake in the date?—Perhaps I may be mistaken in the year. It may have been 1848 or 1849; I am not sufficiently a scholar to tell you so particularly as that.

43,713. (*Mr. Lefevre.*) You set your spilliards always at night?—Yes; we sometimes use them by day for haddock, but we only set them at night for soles.

DINGLE.

T. Fitzgerald.

1 Sept. 1864.

42,714. Do you set them before sunset?—No, after sunset, between 10 and 11 o'clock.

43,715. Do you leave them on the ground and go back and come the next morning to haul them?—Yes.

43,716. Do you leave any buoy upon them?—Yes.

43,717. What is the nature of the buoy?—Some corks.

43,718. How high are they out of the water?—They are about the size of the ball of my hat. There are some six or seven corks, and there are three or four such buoys on every spilliard.

43,719. And on the trammel-nets how many are there?—Only one and sometimes two.

43,720. What is the size of the buoys in that case?—They are about the size of a two or three gallon keg.

The witness withdrew.

J. Burke.

JOHN BURKE called and examined.

43,721. (*Professor Huxley.*) What is your employment here?—I am in the Coastguard.

43,722. Do you look after the men's nets?—Not more than sending out a boat's crew if required.

43,723. You have no particular charge of the fisheries here?—No.

43,724. It is no particular part of your business to see that the fishery laws are carried out?—No.

43,725. I suppose it is the duty of the boat and the officers to look after the fisheries?—Yes.

43,726. Have you been acquainted with the fisheries here for many years?—I am a native of Dingle, and I am a boat builder by trade; but before I was bound to the trade I was fishing.

43,727. Fishing with the hook-and-line?—Yes, hand-line, and spilliards and nets.

43,728. Trammel-nets?—No.

43,729. Did you fish before trawling was practised in the bay?—Yes.

43,730. Have you ever fished since?—No.

43,731. Have you observed the produce of the fisheries since?—I have.

43,732. Do you consider that the fishing has fallen off since trawling was introduced?—I saw more hake caught five years ago than there was formerly killed here. I should say that there was double the quantity.

43,733. Was that by the trammel-nets?—No, by hand-lines.

43,734. About five years ago you saw a larger quantity than was ever taken before?—Yes; it was the largest quantity to my knowledge; it used to be spoken of as such. They imagine that there is a particular day or a week in the year when they kill a great many. The fishing, as it were, comes to a pitch, and a man will kill seven or eight score; they term it heading the cask. I recollect the fishing 30 years ago. I am the son of a fisherman and I have been fishing myself.

43,735. Then you think that the hake at any rate has not fallen off?—No, it has not; I can give you an instance. I recollect one of Mr. Hussey's men landing close to our watch-house. I asked him if he had got much fish, and he said he had got a great deal. I said, "How much, Tim?" and he said, "I can't tell "you; I have a deal." I went to him when he had landed and I saw a great quantity of fish.

43,736. Then as far as the hake is concerned do you think it has not fallen off?—It had not fallen off five years ago.

43,737. Has it fallen off since?—I have seen it some years better and some years worse; but that was the best year, I think.

43,738. Was it better than 30 years ago?—It was better than I ever knew it.

43,739. What was the produce of the sole-fishing compared with what it is now?—I recollect, when I was fishing on the very ground the trawlers are fishing upon now, that we considered the soles were very scarce. We might get three or four pair, but it was very rare to get six or seven pair.

43,740. (*Mr. Lefevre.*) With the spilliards?—Yes; we used to remark among ourselves how scarce the fish were. When I was away from this country on board a man-of-war I corresponded with a brother-in-law of mine, and he used to mention the quantity of fish they took in the trawlers, and since I came home I have witnessed a great deal taken.

43,741. Have you ever known such a quantity of sole taken by the spilliards as was mentioned just now by one of the witnesses?—I was very much surprised at it. I have never seen it myself.

43,742. It is not in accordance with your experience of spilliard-fishing?—No.

43,743. Then with regard to the herring-fishing do you think that that has fallen off of late years?—I know the herring-fishing fell off before the trawling was introduced here.

43,744. When? Do you recollect how far back?—20 years back.

43,745. Did it get better again?—This year has been altogether an exception to late years.

43,746. Is it much better?—Yes, ever so much better.

43,747. Is it your opinion that the trawling has done any harm?—On days when I was stationed out at the harbour's mouth five years ago I saw the spilliards fishing regularly among the trawlers for cod and ling,—cod principally, and I remarked that trawling had not destroyed the ground as much as had been expected. I recollect Dr. Blennerhassett having a trawl here some years ago, and the fishermen were ready to tear it to pieces. It was thought it would destroy the bay, and surprised I am that it has not done it.

43,748. You say you have seen the hand-line fishermen going in among the trawlers?—Yes, both spilliard-fishing and hand-line fishing.

43,749. You have frequently seen them going in among the trawlers?—Yes.

43,750. Is that on the ground outside the line of prohibition?—Yes, on the western ground, as they call it.

43,751. Is there any means of ascertaining the quantity of fish landed in Dingle?—Do you mean the weight?

43,752. Yes.—Of soles?

43,753. Yes.—I have seen some trawlers take over 250.

43,754. In a day?—Yes, out in the morning and in in the evening.

43,755. What quantity of fish is sent off from Dingle every day?—I cannot say. It varies very much.

43,756. What other fishing villages are there besides Anascaul along this bay?—I am well acquainted with the coast, but I do not know any other creek. They tell me the boats have been done away with in other parts. Since the herring declined there are no boats.

43,757. Then the only other persons who follow fishing are the few farmers who live alongside the bay?—I believe they have trammels further down.

43,758. Then there is no other important fishing interest further down the bay in addition to Dingle and Anascaul?—No, I think not.

43,759. How many boats were there working down from Minard at the time you were an apprentice?—I do not know how many there were at Anascaul, but at Minard there were a few.

43,760. From there to Inch Island how many were there?—I could not tell, but I never had any notion of there being a large number.

The witness withdrew.

WILLIAM ANDREWS called and examined.

43,761. (*Professor Huxley.*) You have interested yourself very much in the fisheries of this bay?—Yes, very much, especially at Dingle.

43,762. You have heard the evidence that has been brought before us to-day?—Yes, I have.

43,763. Do you wish to make any comment upon it to us; if so we shall be glad to hear you?—Perhaps it may be as well that I should make a short statement with regard to the fisheries of Dingle Bay. I am sure we are all indebted to you and to your brother commissioner for the patience with which you have heard the evidence to-day, but I regret that there are now so many of the able-bodied Dingle fishermen absent in Cork on board Her Majesty's training ship, the Hawk. In 1862, when a meeting was held here, there was a large attendance, and also of the Coast-guard officers and magistrates. I have been acquainted with Dingle Bay for many years, and in 1844 there was a very large number of sprit boats working in Dingle Bay. They carried six or seven men each. They were large, cumbersome, open boats and were only fishing at that time with small spilliards and hand-lines, and with a small train of herring nets of no depth whatever. They only took the fish when they came into the inlets and bays upon the coast; nevertheless, the quantity of fish they took was occasionally very considerable, but they never went far out because their boats were heavy and they were not able to work out at sea very well, although very able seamen manned them. At that time I was in the habit of going out in the bay and seeing the capabilities of the bay, I turned my attention to endeavour to improve the fisheries of the place. Then soles were not known to be in such quantities in the bay, and turbot were only rarely taken by the spilliard men.

43,764. Were not soles taken by the spilliard men?—No, very rarely by the spilliard men. They were very rarely brought into the market, and it was even asserted, when I mentioned the extent of the fisheries of Dingle Bay, that it would be found to be erroneous, as the soles were not in such large quantities as I represented them. In 1848 Admiral Sir Thomas Usher, the Marquis of Lansdowne, the Earl of Clarendon, and Sir Charles Trevelyan took an interest in the fisheries, and through their exertions a Royal Charter was granted for working the fisheries on the coast of Ireland. It was proposed to commence in Dingle Bay, and in 1848 we introduced two trawlers, and the first morning we experimented with them with the assistance of O'Flaherty, one of the pilots, we took large quantities of fish. We worked with a small boat until 1849, when we brought a large trawler called the "Nelson," of 60 or 70 tons, and with a trawl-beam of 45 feet in length. The first day we sent her out to the soundings we had traced out, she took 300 pair of soles besides a large quantity of other fish. The fishery went on successfully, and the Dingle men who were opposed to trawling in the first instance saw the advantage of taking the fish to the extent in which it was then taken and joined in with the company, some of them getting boats on their own account. In consequence of the disturbed state of Ireland and from other causes shares were not taken in the company, and the charter lapsed to a certain extent or became in abeyance, and the fisheries went into another channel; but the Dingle men had obtained such an insight into the advantages of fishing with trawl boats in the bay that from time to time they added to the number of boats Their means, however, were very limited and they could not carry out the fisheries to the extent to which even now they ought to be carried out. For instance, in the spring months there are fish in great quantities off Doulus Head, but they have a heavy sea there and 30 to 40 fathoms of water, and their boats cannot work in such a bay as this in more than 25 or 30 fathoms within the headlands. The great roll setting in from the Atlantic greatly increases the strain upon the trawl when it is out. They are not like the large heavy boats they have on the south coast of England. There have been great disputes here from time to time with regard to the trawling, and a great many meetings have been held on the subject. There have been disputes between the Anascaul men and the Dingle men about the spawn. A number of substances, such as the spawn of cuttle fish and different species of sponges, have all been asserted to be fish spawn, but those are errors which have died out and the Dingle men are now all working well. Last year and in the previous season there were immense quantities of cod taken by the canoe men, on the ground upon which the trawlers work. There is one question which is a matter of great importance, and that is the disappearance of the haddock on every part of the coast. That is easily accounted for. They are a voracious kind of fish which go together in shoals, and they do not feed, like the cod and ling, extensively on herrings, the sprats, and smaller fish, but they feed on crustacea and mollusca. They feed on the ground where there are quantities of marine animals, such as the different kinds of crustacea and mollusca and the hermit crab, which in deep water is met without its protective shell. The haddock occasionally come into the bay and have been taken on the south side in great quantities. For the last two years they have moved out of Dingle Bay, but I am certain that off the islands—the Skelligs, and Blaskets, they are in as great abundance as ever. It is only in consequence of the boats not being able to go out to any distance to fish that they are not caught. Coarsovughy is a place where the haddock used to be in great abundance for years, and they were taken by the canoe men. I believe there is not a single haddock to be had there now, yet no trawlers have ever worked there. They have disappeared off certain grounds in that manner, but upon the coast and all round the coast I believe the haddocks are as abundant as ever if the boats could go to the proper grounds. I believe that the number of trawl-boats now working in Dingle Bay would never do any injury to the bay during the season they work in, nor would there be any injury caused to the bay if there were double the number working. As to the manner in which trawling is carried on, I must say that the boats now used are of too small a tonnage, with the exception of one or two, and they cannot work and take the quantity of fish the Nelson used to take with her beam of 45 feet, although in the season the soles are as abundant as ever they were. Of course they shift in the season. One of the witnesses who have been examined to-day stated that at Anascaul they were formerly taken on spilliards in November, but at present there are none taken. The soles which appear here off this part move up the bay, and their time of spawning is March and April. They spawn in the inlets in shallow water and no trawl-boats can work on the ground where they spawn. The time the Anascaul men are taking the sole in greatest abundance is April and May. The fish are actually on the spawning ground in shallow water at that time and they are taken in by no means good condition. After they have spawned they go into deep water and recover. They are taken from May to June in the upper part of the bay, and in the autumn they are out again into deep water.

43,765. Do you agree with the statement of one of the Anascaul witnesses that soles can be taken in large quantities on the spilliard-lines?—No, certainly not, and they were never known to be taken in any great numbers. Occasionally they have been taken during the time they have been running up in the bay to get upon the spawning grounds. They have been taken during the season of spawning; I believe they take the bait much more readily then than at other times. With regard to what the witness Kennedy observed, I think he stated that in 1850 six or seven trawlers went up the bay. Now, there were not that number at that time, there were only two trawl-boats and a few hookers. The same statement was made some years ago, and it was shown to be erroneous. If the men at Dingle had proper sized boats to fish during the season, from

DINGLE.

W. Andrews.

1 Sept. 1864.

Christmas up to April or May, they would take soles in this bay in large quantities, and turbot also. At the same time the hook-and-line men could take cod in great quantities, as they have done this last year. With regard to the trawling frightening the fish, if the trawlers have disturbed and driven the haddocks out of the bay, why have they not also disturbed the cod and ling, which are still found in great quantities. They take the ling when they come to spawn, but in the summer months the cod and ling are in great abundance off the coast in deep water. If these men had large boats to fish for them from May until the end of August the takes of cod and ling would be enormous. They would have to fish, however, in 50 to 70 fathoms of water. Immense quantities have been taken in that way, and also a species of fish called the tusk which was not supposed to exist on this coast.

43,766. A statement has been made to us that the fishery company stopped its operations because it did not succeed in obtaining many fish?—That is perfectly untrue, because at the time that company gave up its operations in 1854 a large amount of money had been realised by the fisheries. The reason it was decided to give up the fishing was that the Limited Liability Act came into force, and the royal charter being still in abeyance, could not be carried out or exercised. The state of the country did not permit the necessary amount of shares to be called in, and consequently, the royal charter could not be made a legal document. I believe that they would have been very successful if they had had a certain number of vessels to work out the fisheries of the coast. Alluding to the places of spawning and the different localities round the coast, the fish spawn outside as frequently as within the boundary lines. The turbot spawn in a bay called Coumeenoole, opposite the Blasket Island; there are an immense quantity of turbot there and up to Beginish Island. There are spawning grounds in the shoal water at the Magharee Islands outside where the boundary line was drawn to prohibit trawling in Brandon Bay.

43,767. Have you attended a great many of the meetings of the fishermen here?—Yes, several.

43,768. Is it your opinion that the statements we have heard to-day fairly represent the arguments on both sides?—I consider that the arguments which have been brought forward with regard to the hook-and-line-fishing and the trawling by some of the witnesses are correct.

43,769. Apart from their correctness do you think they have stated all they have to say?—I think they have stated all they can possibly advance.

43,770. (*Mr. Lefevre.*) Do you know anything of the oyster fishery in Tralee Bay?—Yes, there is a very extensive oyster fishery there; there is a natural bed of oysters.

43,771. What number of boats are there there?—I know nothing of the mode of taking them, but bye-laws have been made to preserve a certain close-time and to regulate the fishery.

43,772. Are there any licences granted from the Crown for laying down beds?—I am not aware of it. I think it is a public fishery.

43,773. I believe you stated that the boats from Dingle are not large enough to work the fisheries as they ought to be worked?—No, they are not.

43,774. But they appear to be worked to a profit?—Yes, I could bring forward a man who was trained by the fishery company and who now possesses a boat of his own and is a capital seaman. We have in Dublin a society, of which I am a trustee, for bettering the condition of the poor of Ireland, and all that is necessary for a fisherman requiring assistance in obtaining boats, lines, or anything else, is to get security from some of the landed gentry, when money will be advanced to him, free of interest, to be repaid by easy instalments. The document I hold in my hand relates to that society.

43,775. Do you wish to put in that document?—Yes. It is as follows:

TRUSTEES for bettering the CONDITION of the POOR of IRELAND.—COAST FISHERIES.

We, the undersigned inhabitants of the parish of barony of and county of have been engaged in the fishing business for years, and have embarked capital for said purpose to the amount of pounds sterling. The operations of our Fishing Association extend from to and embrace the harbours of , and the number of families deriving immediate benefit from our labours are , consisting of individuals.

Being in need of some assistance at this time, to enable us more efficiently to prosecute our fishing employments, we respectfully entreat a loan of pounds sterling, from the trustees for bettering the condition of the poor of Ireland. We solemnly and sincerely declare that the sum hereby sought as a loan, or such portion of it as the trustees shall see fit to grant, together with pounds sterling in our hands, in cash, for that purpose, shall be applied solely for the construction or repairing of fishing boats, or providing hemp, flax, or twine for the making of cordage or nets, the procuring hooks, lines, tackle, and other implements used in fishing, or for the curing of fish for home consumption.

We propose as our securities of in the parish of barony of and county of being by trade or profession and of in the parish of barony of and county of being by trade or profession and we certify that the persons so named as our securities are not to derive any personal benefit or consideration from the working of this association, or by becoming securities for the undersigned.

We refer the trustees for the character of all the parties concerned in this application, and for their solvency, as well as that of the securities named, to of in the parish of barony of county of and post town .

We are willing to enter into a bond, under such conditions as the trustees may determine on, for the repayment of the loan for which we now apply, and we engage to return a faithful and detailed account of our expenditure, of the quantity of fish taken, and to afford such other information as the trustees may from time to time think it requisite to call for.

We depute of post town of as the person to whom communications for us may be addressed. (Here follow the names, residence, and occupation of applicants.)

We, the undersigned, agree to join the persons above-named in such bond as the trustees for bettering the condition of the poor of Ireland may determine on, and we do solemny and sincerely declare that we are not to derive any benefit or consideration by becoming securities for the money hereby sought, and we conscientiously believe the statements in the foregoing application to be strictly true. (Here follow the names, residences, and occupation of securities.)

I have known for years the several persons named in the foregoing application with the exception of Nos. They are persons whom I conscientiously believe to be sober, respectable, honest, and industrious, and sufficient security for pounds sterling, being the amount of their present application.

I am also acquainted with the persons named by the applicants as their securities; they are sober, respectable, honest, and industrious persons, and fully sufficient security for the loan hereby sought.

I conscientiously believe the statements in the foregoing application to be strictly true.

Signed, &c.

43,776. In what depth of water do you think the soles and other flat-fish spawn?—From three to four fathoms and less close in-shore, generally near the rough ground or rather protected by it.

43,777. There is rough ground round about it?—Yes. It is a mistake to suppose that boundary lines could be drawn to protect the spawning grounds, because the cod, ling, and many other fish spawn outside.

43,778. Are you of opinion that the trawlers in trawling in the bay do any harm to the spawning ground?—They cannot, because they cannot work upon the ground where the fish spawn. The cod and ling spawn on the rough ground where the trawlers could not work. None of the fish spawn on the ground where the trawlers trawl.

DINGLE.

W. Andrews.

1 Sept. 1864.

43,779. You advocate a close-time?—I think in regard to Dingle and Galway bays there might be a close-time. If the Dingle men had large able boats, during the summer months they could extend their line-fishing outside the headlands, for instance, off the islands in 50 to 80 fathoms during the summer months, when the cod and ling are in the highest perfection for curing.

43,780. But seeing that the boats they chiefly use are not of large size would you advocate a close-time?—We advocate a close-time, for instance, when the herrings or the hake come into the bay the same as they come into Galway Bay. I think it would be very advisable that the boats should cease trawling from the month of June till the month of November.

43,781. Is that because they might be better employed in any other fishing, or from some other reason?—There are two reasons. The first is, that they would take by the lines a greater quantity of hake in the season, and have a line-fishing that would pay them better than trawling. The market price is so low and the weather during that season is such that they cannot send their fish to market very profitably.

43,782. It is a question, then, of market?—Yes, but at the same time it would be of advantage generally, if they would turn their attention to something else and would not interfere with the men who are following the line-fishing the line-finhing and the herring-fishing at that season.

43,783. Then you recommend a close time, not because you think that the taking of sole or any other fish at that season does any harm?—No, it cannot possibly do that, because the spawning season is all over then, and in addition to that the trawlers cannot work where the young fry are. It is only seines and pole-nets that could destroy the young fish. Small as the trawlers are now they could not work where they would be able to do harm.

43,784. What is the smallest trawler?—About 16 tons; 15 or 16 tons. With regard to trawling in the night-time, I believe they cannot trawl at night; it is almost an impossibility. South of Ventry there is a certain range of trawling ground—clear ground eastward of Minard at Anascaul, but they cannot trawl on that ground unless they have clear weather and a clear light to enable them to see the headlands. There are only very narrow ranges where they can trawl, and as a regular rule they cannot trawl and work at night in Dingle Bay

43,785. (*Professor Huxley.*) Have you a map of the ground capable of being trawled over?—Yes.

43,786. Will you let us have a copy?—I will make out a map for you.

43,787. (*Mr. Lefevre.*) Does it embrace that in Galway Bay?—Yes.

43,788. Then we should like to have that too.—We are anxious here to encourage the fishermen in getting a larger class of boats. They make good pilots and are of great utility on board a man-of-war. I believe there are 70 or 80 of them so employed at this moment who come from Dingle.

The witness withdrew.

Owen Moriarty recalled and examined.

O. Moriarty.

43,789. (*Professor Huxley.*) Are you acquainted with the lobster-fishing here?—I am.

43,790. When did it begin?—I believe I was one of the first. The company had a boat here about 15 or 16 years since for a season or two, but they have dropped it since.

43,791. Were there plenty of lobsters got?—Yes. I started three or four years ago a little boat built on purpose, and I fished the lobsters for a season or two before the rest.

43,972. Did you get plenty of lobsters?—Yes, for the few boats we had we did very well.

43,792. Have you gone on since?—Yes.

43.794. Has it been increasing every year?—Yes, the fishing has been increasing.

43,795. Has the supply of fish increased?—No, it has fallen off from the constant fishing, unless they can find new ground.

43,796. Then does the old ground thus left renew itself?—Yes, the lobsters come back after a time and get better.

43,797. On the whole do they get as many lobsters per boat as they did?—I do not think they do, unless when they go to new ground.

43,798. By going from one ground to another can they get as many lobsters as they did at first?—I think they can.

43,799. Do you yourself carry on the lobster-fishing this year?—No.

43,800. Without entering into private questions can you state the reason?—I have had two canoes fishing, but I did not go myself. I had to provide the boats and gear and I send off the lobsters.

43,801. Then you are actually carrying on the fishing though not personally engaged in it?—Yes, decidedly.

43,802. Within two miles of the mouth of Dingle Harbour on each side is there anything like the quantity of lobsters there was some years ago?—No; where I could get a dozen lobsters a few years ago I shall not be able to get three now.

43,803. In that particular distance, two or three miles from the mouth of Dingle harbour?—Yes, and six miles to the west of it.

43,804. Has the supply of lobsters high up in the bay fallen off?—Yes, but after a time it recruits and comes round, so that when it comes to be fished again it is better.

43,805. You leave the ground and go back to it again and find it better?—Yes.

43,806. Do you think that the fishing could be conducted in such a way as to yield a more steady and constant supply of fish, instead of the fish falling off and coming on again at intervals?—Yes.

43,807. How would you propose to accomplish that object?—I know if a place is constantly fished and reduced as this has been it will work out, unless the lobsters come in from the sea, and I do not know whether they do that or not.

43,808. Would you have some close-time to shut up the fishing for a year or two?—I think it would protect the fishing very much.

43,809. Practically it comes to that now, because when you do not get any lobsters in one place you go elsewhere?—Yes, when we have fished one place we go to another, and then come back again and we find fish.

43,810. (*Mr. Lefevre.*) Is there a great extent of ground on which you fish?—Yes.

43,811. And there are not many men engaged in the lobster-fishing?—No, there are not a great many.

43,812. Has the number fallen off?—It appears that the number has got very low. There is one canoe fishing for a well-boat that goes round the coast.

The witness withdrew, and the inquiry was adjourned until the 6th of September, at Westport.

Westport, County Mayo, Tuesday, 6th September 1864.

PRESENT:

Professor HUXLEY, F.R.S. (Chairman). | G. SHAW LEFEVRE, Esq., M.P.

WESTPORT.

M. Tiernay.

6 Sept. 1864.

MICHAEL TIERNAY called and examined.

43,813. (*Professor Huxley.*) How many years have you known the fishing here?—I was brought up in Inishbofin in my early days, and I joined the service 33 years ago. I have been on the coast, off and on, ever since.

43,814–5. Have you been a fisherman yourself?—Yes, before I joined the service

43,816–7. How many years were you engaged in fishing in the Island of Inishbofin?—Before I joined the Revenue service, I was fishing from the time I was 15 years of age up to the time I was 25.

43,818. What modes of fishing are practised there?—They catch cod, ling, haddock, and all sorts of fish. Large herrings are caught there, and there is mackerel-fishing.

43,819. Are the cod and ling caught with hand-lines or long-lines?—With long-lines and with hand-lines, but mostly with long-lines or spilliards.

43,820. And the mackerel with nets?—With hauling nets; they seine round them. They seined the other day 15,000 at one haul.

43,821–2. Are the herrings caught in the ordinary way with drift-nets?—Yes, and sometimes they anchor the nets and get them in that way.

43,823. Do they fix the nets?—Yes, with two anchors, one on each side, and sometimes they ride with a boat at one end all night.

43,824. How many fishermen were there at Inishbofin when you knew the place?—There were as many sometimes as 1,000, and more than that.

43,825. Are there as many as 1,000 people living in Bofin Island?—There were 1,800 inhabitants there at one time between Bofin and Inishturk; but there are men there from Cork and the Skerries, and from there right round to Kinsale.

43,826. The number fishing from Inishbofin itself would only be a few hundreds?—It would be about 500, to the best of my opinion,

43,827. How many boats were there there in your early days?—I cannot recollect; but there are five quarters or five townlands, and every one had from 30 to 40 boats at that time.

43,828. (*Mr. Lefevre.*) How long ago are you speaking of?—Thirty-three years.

43,829. (*Professor Huxley.*) What kind of boats were they?—Four-oared boats.

43,830. Were they open boats?—Yes. There were generally four and five men in each boat, and there were a good many hookers as well that went with long-lines. Sometimes the fish would be within a mile of the shore, and then, if the fish retired further off, they would take to the hookers or sail-boats, of which they had from 7 and 8 to 10 and 14.

43,831. Open boats?—Half-decked.

43,832. How many of those boats would there be?—At that time there were between 14 and 15 on the island of Bofin.

43,833. Were those large boats the boats they used for herring-fishing, or were they of a smaller size?—They were used for cod and ling, and for taking herrings creeks of Galway and Westport.

43,834. Did the Inishbofin men live by fishing?—They did; for their farms would not support them.

43,835. They all had little farms?—Yes, all of them had a portion of land besides.

43,836. Did they send any considerable quantity of fish into Westport at that time?—Yes, to the quay at Westport. They sent as much fish as they could take. There were as many boats calling as the quay of Westport would hold from the dock down to the end. I have seen 50 boat loads of herrings there at one time.

43,837. Was there the same plentifulness of cod and ling?—The cod and ling were coming also; but there were fish-curers at Bofin curing them for Galway, Kinsale, and Dublin, on the beach.

43,838. Was there plenty of hake then?—There was a good deal, but they would hardly buy it in Westport.

43,839. Was there plenty of haddock?—Yes, lots.

43,840. Fine haddock?—Yes.

43,841. They were plentiful?—Yes, there were plenty of large valuable haddock, and there were turbot also.

43,842–3. What is the condition of the fishery at Inishbofin now?—I passed them a few days ago. I am pilot of the "Seamew" now, and I frequently land there from the steamer, and have a knowledge of the coast all round?—The condition of the fishing is, that if they had gluts of herrings in the winter, they have now no herring-boats to catch them.

43,844. What is the reason of that?—In the course of time, the fishermen have become so much impoverished that they are not able to buy nets, and I do not think, if the sea was swarming with herrings there, they would be able to take them. Very frequently the cod and ling they catch are full of herrings. Their bellies are as full of them as they can be, and yet they have no herring-net to take them with.

43,845. Was the principal part of their profitable fishing formerly derived from the herrings?—From herrings, cod, and ling.

43,846. Do they catch plenty of cod and ling now?—Yes; they can always catch plenty of cod and ling if they have weather that will enable them to go out, and the gear that is necessary for catching them.

43,847. You have no reason to believe that there has been any falling off in the supply of cod and ling?—If they had good weather and long-lines they could catch plenty of them, and they would catch plenty of herrings too. I say that, from the herrings which they find in the stomachs of cod and ling.

43,848–9. Have they gear to catch cod and ling?—They have no gear. There are seven or eight, sometimes ten of them, will join their gear together. They have hardly a spilliard in Inishbofin now.

43,850. Cannot they afford to set up spilliards?—I think not.

43,851. Have their boats gone to pieces as well?—Yes.

43,852. And they have not been able to replace them?—No. I have seen as many as 20 of them buying flax in Westport, in order to make up a seine net between them.

43,853. But the long-lines do not cost as much?—No; but a good spilliard will take 200 hooks, and every man in a boat ought to have two of them. It would take 1,000 hooks altogether in one boat, and it would cost from 1*l.* to 35 shillings to set up a good one.

43,854. And are they so poverty stricken that they cannot muster that?—I do not think they can. What with paying rates and buying provisions every year, through the failure of the crops, they are very much impoverished indeed.

43,855. I suppose that some of them still possess long-lines?—I am told that there are not many in the island now, and, in point of fact, there is hardly a long-line to be found.

43,856. Is there as much haddock as there used to be?—They come every year to the north end of Bofin, where they were always found, but they do not fish for them, they have not the gear.

43,857. What time of the year do they come?—The fishing commences at the latter end of January,

and would continue until the latter end of April for cod and ling.

43,858. Then you are of opinion that the quantity of fish has not diminished on the coast, but only that it is not taken?—I think, if the weather is good, the quantity of fish is still upon the coast. Last year, when I was in the gunboat, we were fishing off Achill Head, and we could get cod and ling as fast as we could haul them up.

43,859. Did you get haddocks as well?—As fast as we could catch them; they are always there with the other fish, and they continue longer in the season.

43,860. Do you know much about the fishing in the rest of the bay?—Yes, I do.

43,861. There are a good many fishermen about the bay?—Yes; there are a good many in a place called Murrisk, but they did not fish last year, for want of boats and gear.

43,862. Are they in the same condition as the Inishbofin people?—Yes; they could man a great many boats, but they have no gear. Their boats are hardly fit to go out.

43,863. On that ground the supply of fish has much fallen off?—They do not know if it is there at all. Last year, they had no gear to go fishing with.

43,864. But the supply of fish to the market must have fallen off?—It did, because they had no convenience for fishing at the time the fish were there.

43,865. Is the bay as full of fish as it used to be; are there as many fish in it?—Yes; I have seen mackerel in great shoals in the bay in the season, when I have been passing in and out in the "Seamew."

43,866. Were there plenty of herrings also?—I do not know, but there was a great sign of fish, such as gannets and gulls.

43,867. There are plenty of round fish?—Yes; not in the bay, but from Achill Head to Inishark Head.

43,868. Is there as much fish here of all kinds as there was in former years?—That I cannot tell, because sometimes at Bofin we might go out with 200 or 300 boats, and take two or three tons each. I have seen the long-lines shoot as many as a thousand hooks, and I have seen the fish floating the lines right on the top of the water. There would be a fish almost on every hook; they raised the lines and all the stones attached to them to the top of the water.

43,869. How many years ago is that?—Not many; perhaps eight, or ten, or twelve years ago. I was in the "Kite" cutter when I saw that.

43,870. Might it be the case now?—I do not know whether it might be at this time of the year or not.

43,871. But at the proper time?—If the weather, answered, I think it might.

43,872. You have no reason to think that the fish in the bay have fallen off?—I think the fish have shown themselves more in the bay than ever they did for some years past. There was a great take of herrings in Killary Bay, and the herrings themselves were nearly as large as the North American herrings. They got a great many of them.

43,873. Is it the case all round these shores, that the people are in a similar state of poverty, and unable to fish from the want of gear?—That is my opinion, and anybody who has been at Inishbofin will tell you the same story.

43,874. I do not speak of Inishbofin alone, but of all parts of the bay?—Yes. Some years I have seen boatloads of herrings caught every night, but they do not look after them now as they did then.

43,875. Have you paid attention to the oyster-fishing here?—I have seen them catching oysters here since I have been in the service.

43,876. Are there large oyster beds here?—There are oysters in every place through the islands, and they dredge every place. Last year they got oysters where I did not think there were any.

43,877. Are they all over Clew Bay?—Yes, inside the islands.

43,878. Are they not outside?—I know of no bed outside the lighthouse.

43,879. (*Mr. Lefevre.*) Do you mean the Arran lighthouse?—No; outside the Inishgort lighthouse.

43,880. (*Professor Huxley.*) Do you suppose there are no oysters out in Clew Bay itself?—I do not know. The boats they use for dredging here are too small to dredge in the bay. I know that upon one occasion we took a dredge on board of the cutter, and we took oysters up outside the lighthouse.

43,881. Does the oyster-fishing remain pretty productive?—I can recollect them getting oysters here ever since I knew the place, and I have been frequently through these islands. I had a hooker, and I used to purchase anything I could make money from until I joined the service.

43,882. Do you think the supply of oysters is as good as ever it was?—Last year was the best year they have had for oysters for these 20 years. I did not think they would get near so many. There were never as many oysters caught in the bay within my recollection as there were last year.

43,883. Do they observe the close time for oysters here?—Yes.

43,884–5. What is the length of the close season?—It is now from April till the 1st of October. Before, they were allowed to dredge in every month that had an "r" in it; now they cannot dredge in September and April.

43,886. Was there not a byelaw of the Fishery Board passed in 1860?—Yes.

43,887. What was the reason that byelaw was passed?—I cannot tell.

43,888. Did you hear anything said about it at the time?—They thought it was for the good of the bay and the fishery. I do not know whether Mr. Barry told them so or not, but I heard the fishermen say that it did improve the bay.

43,889. You have not been engaged in oyster-fishing?—No, but I have been buying them, and taking them to the County Clare, where they bed them.

43,890. Do they cull the oysters here?—They heave them out in the sea, and the Coastguard goes round to see that they do it. They go round very frequently.

43,891–2. The byelaw made by the Fishery Board says:—"All persons engaged in fishing or taking "oysters in Clew Bay, Achill Sound, and Blacksod "Bay shall cull all such oysters as shall be taken or "caught; and shall not remove from any fishing-"ground or oyster-bed any oysters of less dimensions "than two inches and one half at the greatest "diameter thereof, and shall immediately throw "back into the sea all oysters of less dimensions "than aforesaid, as well as all gravel and frag-"ments of shells as shall be raised or taken while "engaged in such fishing." Do you go about to see that the oysters taken are not less than two and a half inches in diameter?—Yes, I frequently did last year, so also did Captain Leveridge's men and the "Seamew."

43,893. The rule has been enforced since 1860?—Yes.

43,894. Have you noticed any improvement in the fishery itself since it has been established?—Last year they had more than for many years, and there have been men getting oysters down in Newport Bay and places where I never saw them dredged before. I have seen them dredged in eight or nine fathoms of water down at Inishtown.

43,895. (*Mr. Lefevre.*) Have there been any prosecutions for taking oysters of less than two and a half inches in diameter?—They heave all of them over that are not of that size.

43,896. Have you known any cases in which there have been summonses taken out against the fishermen for taking them below that size?—We met the boats several times last year, and went among them, but we could not get any oysters of that size in the boats; they had thrown them out; in point of fact, they were all saleable oysters that they had.

WESTPORT.

M. Tiernay.

6 Sept. 1864.

43,897. Then there has been no summons?—No. I have never seen any small oysters on board the boats we have overhauled.

43,898. Do they cull the oysters immediately after taking them out of the dredge?—They are taken out of the dredge, and put on a leaf in the boat. They go through them, and heave the small ones out.

43,899. Do they use a sieve?—No, they pick them by hand, and throw the brood overboard.

43,900. You were speaking just now of boats coming from the Skerries and Kinsale to Inishbofin?—Yes, I have seen eight or ten from Kinsale, and eight or ten from the Skerries.

43,901. At what season?—A little after Christmas they came and remained until May.

43,902. Do they still continue to come?—They have not come since the bounty was knocked off in reference to the fishing.

43,903. How long is it since they came?—They have not come, to my knowledge, for the last 10 or 12 years. There was formerly a bounty upon the fish.

43,904. Do the boats not come from a distance for the fishing at Inishbofin?—From Kinsale, do you mean?

43,905. Yes, or from any other part?—For the last two years I do not think there have been any boats, except those from Bofin itself and this quarter.

43,906. Are there any curing establishments at Inishbofin?—Not at present. All the Westport fishermen go down to buy the fish, and bring it up in hookers.

43,907. Do they buy it fresh?—They cure them there until the buyers go down and bring them up. If they are fresh at the time they are there, they will bring them here fresh.

43,908. There used to be a curing establishment there?—Yes, because there was a bounty upon the fish. They got four shillings a hundredweight for the dried fish, such as cod, ling, hake, and conger eel, and haddock.

43,909. Has there been no curing establishment lately?—There is not at present.

43,910. Was there one set up here at the time of the famine?—I do not think there was any curing establishment there during the famine.

43,911. There is no trawling in the Bay?—No, not about Bofin; the back of Bofin is too deep for trawlers; they could not work on it.

43,912. Is there any in Clew Bay?—The ground is too rocky for a trawl,—it is patchy.

43,913. Is there any ground fit for trawling?—Achill Sound is the only place I know, but there is not much fish there. A trawler tried it, and could not make any hand of it.

43,914. Are there any sole or turbot in Clew Bay?—There are in Achill Sound. There are sometimes plenty there, and also cod and ling.

43,915. Do they catch any turbot and soles with the spilliard lines at Inishbofin?—Yes, they catch all sorts there.

43,916. Do they catch turbot in any quantity?—Yes, there are plenty at Inishbofin.

43,917. As many as there was formerly?—Yes. I have seen some boats at Inishbofin take as many as 10, 12, and 15, and others three and four, and so on, on one spot at the east end of Inishbofin, the Ox Island Sound. If they had proper gear, they would get a lot of turbot, and hardly any other fish.

43,918. Do you speak of now or 30 years ago?—I am speaking of the present time. This is a very good time for it, with mackerel bait.

43,919. You think they would continue now to catch turbot?—Sometimes they do, if they have mackerel bait.

43,920. Then why do they not catch them now?—Because they have not the gear.

43,921. (*Professor Huxley.*) You said just now that the haddock-fishing began at Inishbofin in January; when does it leave off?—I have been catching them until the middle of May.

43,922. Would you leave off then?—Yes, or on the 1st of June.

43,923. When does the cod-fishing leave off?—It begins at the end of January and goes on through March and April. The long-lines are shot at night, and they can get plenty.

43,924. The cod-fishing lasts about the same time as the haddock-fishing?—Yes, but the cod spawn early in the season. On the 1st of March they begin to spawn; some go to the middle of March.

43,925. What bait do you use for cod?—Conger at night for cod, and ling and herrings and mackerel, if we could get them, in the daytime.

43,926. Do any of the fishermen use mussels?—No, there are none here.

43,927. Are the oysters taken by the dredgers here all brought to one quay in the harbour?—They have lately been sold in the harbour to buyers.

43,928. Are they all brought to one place?—They are brought to Captain Austin, and Mr. Williamson and others for England.

43,929. Are they all brought to one place?—Yes.

43,930. Then it is possible for the Coastguard to exercise a supervision over them?—Yes, they do.

43,931. How many boats are there sometimes engaged in bringing in oysters?—To the best of my opinion there were 300 dredging off Newport and Westport last season.

43,932. Do some go to Newport and some to Westport?—Yes.

43,933. Is there a Coastguard officer at Newport?—Yes, that is one of Captain Leveridge's stations.

43,934. Is it possible carefully to examine the contents of the boats and see that the oysters are none of them below the proper size?—We were at it last year at every place, as well as we could, but we could not be always at it; we did it as well as we could.

43,935. Is there a sufficient number of Coastguard men effectually to examine all those cargoes of oysters when they are brought in altogether?—There are not near enough now.

43,936. Then if the fishermen were so minded as to bring in oysters below the legal size, it would be hard to find them out, would it not?—It would be hard for one Coastguard boat to examine 200 or 300 boats here, and another to examine 200 or 300 boats at Newport, but such as we did examine had no small oysters.

43,937. (*Mr. Lefevre.*) How do you overhaul them?—We call them alongside, look at the oysters and measure them.

43,938. Do you have them turned over?—We measure them in the boat to see if any are under the size.

43,939. Do you see the boats unloaded?—They would not have such a large quantity in a row-boat that we would not be able to see them readily. One boat may take three buttekins, another five, and some seven.

43,940. Are the men who dredge oysters farmers as well, or are they fishermen only?—They have all some land on the several islands.

43,941. On the small islands in the bay?—Yes; they go fishing in the season. They go fishing when the herrings come in in their bay, and they mostly come in at the present time and up to Christmas.

43,942. How long is it since the herring came into the bay?—They get a little every year, but there has been a great glut of them for some years. They catch most of them down in Newport Bay, at Minishmore.

The witness withdrew.

WESTPORT.

J. Kennedy.

6 Sept. 1864.

JAMES KENNEDY called and examined.

43,943. (*Professor Huxley.*) You are a fish buyer here?—I am.

43,943*a*. How many years have you been employed in that way?—About 30 years.

43,944. Have you bought fish from Newport as well as from Westport?—I have bought some herrings from Newport, fresh herrings, and from all parts of the bay.

43,945. You are in the habit of buying fish from the fishermen from all parts of the bay?—Yes.

43,946. Do you know what the supply of fish has been of late years?—Yes.

43,947. Do you buy oysters as well as other fish?—No, I do not deal in oysters.

43,948. What do you deal in?—I deal in cod, haddock, turbot, salmon, trout, and various kinds of coarse fish.

43,949. Do you find that there is as good a supply of fish as there used to be 30 years ago?—Not by any means.

43,950. Has any particular kind of fish fallen off more than another, or has there been a falling off in the whole?—The most part of the fish has fallen off because the fishermen have not the means of killing them.

43,951. Do you get as many haddock, in proportion to other fish, as you were formerly able to get?—Not one quarter the quantity for the last seven or ten years.

43,952. But in proportion to the number of cod?—The cod are plentiful, but the haddock have fallen off.

43,953. Have the haddock fallen off far more than any other kind of fish?—Yes; but the men have no tackle for killing fish; many of them have gone to Scotland, and to different parts.

43,954. You say the fish have fallen off?—They have not fallen off, if the fishermen had the means of killing them and the necessary tackle.

43,955. In that case you think there would be plenty of haddock and cod?—Yes, and of turbot and other fish as well.

43,956. Then the scarcity of fish is due to their not being caught?—Yes; and last year part of the men, who had been in the habit of killing fish, had to go upon daily wages to the oyster-beds.

43,957. You heard what the previous witness stated, namely that the reason why less fish is taken now is that the people have no gear?—Yes.

43,958. Do you agree in that opinion?—Yes; there are people in Inishbofin who have no herring nets at all now.

43,959. Is that the case with the fishermen round Clew Bay?—Yes, all round about the small islands there is not one man in twenty who has nets which he can use for catching herrings. We have to go to Galway for herrings now, and have to pay a price for them.

43,960. Do you think that any mode of fishing has been practised here which has been at all hurtful to the fish?—No.

43,961. There never has been any trawling here?—No, I never saw it, except one year, and the man who began it had to give it up again. I believe it was Joe Gibbons of Inishlyle.

43,962. Did he find the bottom bad?—Yes.

43,963. (*Mr. Lefevre.*) Has the number of men fishing for oysters increased very much?—Yes, there are a great number of people working at them now. There have been a great deal more men for the last ten years. They seem to have nothing else to do now, and they have had to turn to the oysters; formerly they could not get men to buy them on this coast. The fishermen who were formerly engaged in killing the fish have now turned to oyster-fishing.

43,964. Do they own the boats they use?—They partly join in the boats and in the dredges.

43,965. They find that a more profitable mode of employing themselves than fishing outside in the bay?—Yes, but they have not the means of killing the fish now. If a poor man loses his spilliard, he may just as well stay at home, as he has not the means of purchasing another.

43,966. But they seem to have money enough to supply themselves with dredges and boats for oyster-fishing?—That does not come to much. Their oyster dredges do not cost one half or one quarter as much as a spilliard.

The witness withdrew.

H. Neils.

HUGH NEILS called and examined.

43,967. (*Professor Huxley.*) Are you a fish buyer?—Yes.

43,967*a*. How many years have you been employed in that way?—Ever since I have been able to know what fishing was.

43,968. Is that some 20 years?—Yes.

43,969. Have you bought fish from both shores of Clew Bay and from Bofin Island?—Yes.

43,970. Is the supply much less than it used to be?—There is not one-tenth part coming in now compared with what it was in former times.

43,971. Has any kind of fish fallen off more than another?—The haddock has.

43,972. Is there less haddock in proportion now than there was 20 years ago?—We do not get as much as we used to get.

43,973. Is that because it is not caught,—is it fished for in a different way?—Generally they go out in Inishbofin to kill haddock for bait for other fish. They use them for killing the cod and ling.

43,974. Do they prefer using them for bait, rather than bringing them in for sale?—They could not kill the cod and ling without having the bait for them.

43,975. Have you any reason to think the haddock has fallen off in the sea itself,—that there are not as many haddock in the sea?—I cannot say that.

43,976. You have no reason for thinking that?—No.

43,977. Has the supply of herrings fallen off like the rest?—Yes, it has fallen off considerably.

43,978. Do you agree with the previous witnesses, that it is because the people have no gear for catching them?—Yes.

43,979. Is not the price of fish sufficiently remunerative to enable those who could catch plenty of it to set up new gear?—They are getting as good or even a higher price for it now than they did formerly.

43,980. The price is higher now than it used to be?—Yes.

43,981. Is not the price of fish sufficiently high when they get a good supply, to leave a large margin of profit to enable them to set up new nets and gear?—At any rate, they are not able to set them up.

43,982. It has been said that 20 people have only one net among them?—Yes.

43,983. But if they get a good fishing does it not yield them sufficient profit to enable them to set up more gear?—I think it ought.

43,984. But they do not seem to increase their gear?—They have not the means of increasing it, and if they lose a spilliard they may as well be lost altogether; they have not the money or means to buy another, and are obliged to go to the wall.

43,985. If the price of fish is good, do not the fish yield them sufficient profit to enable them to set up good gear?—It does not.

43,986. Have many of the people who formerly fished with the long-lines taken to oyster-dredging?—I do not know of any but the men at Murrisk who have done that.

43,987. They have taken to oyster-dredging?—Yes.

WESTPORT.

H. Neils.

6 Sept. 1864.

43,988. How are they able to set up the dredges?—It does not cost much for a dredge.

43,989. But it must cost as much for a dredge as for a spilliard?—I do not believe that it will cost one-fourth or one-sixth part as much.

43,990. Was the money advanced to the Murrisk fishermen to enable them to set up their dredges?—No doubt the persons who buy the oysters will advance money if it is required.

43,991. (*Mr. Lefevre.*) Do all the fish landed here go by road to Castlebar?—Some go to Castlebar and some to Ballinrobe.

43,992. Is it sold round the country?—Yes.

43,993. Is there any curing establishment here?—No.

43,994. Is it all sold fresh?—Sometimes we salt it.

43,995. Do you agree that there has not been a good herring season for some years here?—Yes; there has not.

43,996. Is it because the shoals have not come in the bay in great numbers?—No, I think it is on account of the want of herring nets.

43,997. Do you think that the fish come into the bay in as great quantities as formerly?—I cannot say that, because the fishermen have not had the means of going out and testing it.

43,998. Do you see the appearance of herrings?—There is generally the appearance of herrings every season, but the people have not a net to put into their boats.

43,999. But there are a certain number of men who fish for herrings?—There is not a man from Inishbofin who has a net fit to go out with; if they had nets they might fish.

44,000. But in Clew Bay?—Sometimes they go to look for them, and sometimes they do not.

44,001. Have they taken none for the last four years?—No.

44,002. Have not the nets been shot?—If they see any signs they may go out, but the Murrisk men have not tried for them.

44,003. How is that they have not caught any?—I cannot say; we have not bought any.

The witness withdrew.

O. Campbell.

OWEN CAMPBELL called and examined.

44,004. (*Professor Huxley.*) You are agent to Captain Austin, I believe?—Yes.

44,005. Captain Austin is engaged extensively in oyster-fishing here?—Yes.

44,006. Are the beds he fishes public or private property?—Public property. Those he fishes himself are private property, but those which he buys up are caught on the public beds.

44,007. He fishes a private oyster-bed himself and buys from the public also?—Yes.

47,008. When did the men about the bay take to oyster-dredging?—On the 1st of October.

47,009. But how many years back? Has it been a general practice here for many years back?—Yes, it has.

47,010. Have many persons taken to it of late years?—Yes.

44,011. Have the people who used to practise spilliard-fishing taken to oyster-dredging?—Yes, they think it more profitable.

44,012. How have they become provided with the means of working the oysters?—Those who cannot afford to obtain dredges for themselves have money advanced to them for that purpose.

44,013. Has Captain Austin advanced money for this purpose largely?—I know that he has advanced money.

44,014. Are the greater number of oyster dredges which are set up in reality his property?—No, not the greater number.

44,015. But a good many of them are?—Yes.

44,016. Does he pay wages to those who use them, or does he pay by the take?—By the take; he buys the oysters they bring in.

44,017. Has the supply of oysters been falling off of late years?—Not that I know. I think last season was the best I have ever known.

44,018. Do you recollect the time when the bye-law was made in 1860? Were you Captain Austin's agent then?—No; he was not in the county then.

44,019. He has only been here about two years?—That is all.

44,020. Have you reason to think that the byelaw is strictly observed—that is to say, that the people do not fish from April to September inclusively?—I heard some of them say they were going to fish on the 1st of September.

44,021. That would be breaking the byelaw, would it not?—I do not know.

44,022. Are the oysters which are taken carefully culled and the small ones put back?—I think so. Captain Leveridge's men go round to see that that is done.

44,023. Do you think that superintendence sufficient, and that the small oysters are not taken?—I think they could not take small oysters unknown to the Coastguard.

44,024. They can take no great quantity?—No.

44,025. Do you think it is a good regulation?—I believe it is a very good regulation.

44,026. Is there any demand for the small oysters?—There is for private beds.

44,027. Do people come here from England for the purpose of buying them, in order that they may be laid down on private beds?—No, they do not; they take them first as they are caught and culled. I never saw them look after them in any other way. They do not ask the fishermen to go and take small ones, but they buy those which are taken.

44,028. Supposing the law did not exist, would there be plenty of people calling here willing to buy the small oysters?—I have not heard anything of that.

44,029. Is there anyone besides Captain Austin who works the oyster fishery in the same way? Does Mr. Williamson, from London, come here?—He buys them, but he has no private beds.

44,030. Does he buy oysters largely?—Yes.

44,031. Does he advance money in the same way to the fishermen?—I have no doubt that he does.

44,032. Do most of the oyster dredgers work on the same principle,—that is to say, that funds are advanced to them to buy dredges, and that they then work on shares?—Yes.

44,033. Is that the case with all oyster dredgers?—Yes, except with regard to those we employ on the private grounds; those are paid wages.

44,034. What private grounds are those?—Those at Murrisk.

44,035. Whose property are they?—Mr. Francis Christopher Jervie's, who is lessee.

44,036. (*Mr. Lefevre.*) He has had a licence from the Commissioners?—Yes.

44,037. (*Professor Huxley.*) Are they artificially made oyster-beds?—Yes.

44,038. Oysters taken from the outside and laid down there?—Yes, they are oysters which have been brought in and laid down there.

44,039. Are they oysters which have been bought from the fishermen?—Yes.

44,040. Are they full-sized oysters that are laid down there?—Yes.

44,041. Would it be of any advantage to the proprietor of those beds to be able to obtain small oysters, and lay them down there until they get large?—I believe it would be for the advantage of the proprietor, and for the advantage of the country at large.

44,042. Are those beds between high and low-water marks?—They are.

44,043. Are they above low-water mark?—Some of them are dry at low-water mark.

44,044. Are they all above low-water spring tides? Are they all dry then?—Our boats could not float to dredge them at low water. Some parts of the beds are quite dry, and upon other parts our boats could not float, even one of our small row-boats.

44,045. So that you may say that, for the most part, they are above the level of low-water spring tides?—Yes.

44,046. Would there be any advantage in having such beds in deeper water?—I do not know.

44,047. Do you find they do well where they are put down now?—Yes.

44,048. What is the extent of ground occupied by them?—I do not know exactly.

44,049. Do the oysters breed there?—They do.

44,050. Is there any considerable spat formed every year?—There is in some parts.

44,051. Is the ground good for the spat?—Some parts are very good, and other parts very bad.

44,052. Is that according to the nature of the bottom?—Yes, it is.

44,053. What is the best bottom?—Where we find it hard and clean. If there is any sludge and dirt they die upon it.

44,054. What time of the year do you lay the oysters down there?—We begin on the 1st of October.

44,055. Do you take them upon the ground in boats at high water, and just scatter them down?—Yes.

44,056-7. How long do you allow the oysters to remain there?—We laid a lot last year.

44,058. Were they natural oyster-beds to begin with?—I do not think there was much upon them until Mr. Jervie planted them. Captain Austin has been engaged in planting them too. Mr. Jervie bought oysters and planted them there several times.

44,059. Then the oysters, you tell us, breed on the beds?—They do on the hard bottom.

44,060. What time do you find the spat there?—We find it just about the 1st or the middle of June.

44,061. Do you take any measures for separating the spat from the old shells and distributing it over the ground?—We never do anything of that kind until they grow a year or so older.

44,062. Do you then detach them and spread them about?—Yes.

44,063. Do you find that in that way they multiply very fast?—Yes, and they grow in a better form.

44,064. Then does it seem to promise to become a good fishery there?—Yes; but those which are left alone grow very rough and nasty.

44,065. There has been a considerable increase in the quantity of oysters upon the beds in that way?—Yes.

44,066. Do you use any tiles or bundles of twigs, or anything of that kind, for catching the spat?—No, nothing of that sort.

44,067. Do you prepare the ground before the season of the spat?—Yes. We had some boats there some time age clearing it for the spat, and clearing the weeds away too.

44,068. Do you make any dam, so as to enclose the oysters always within water?—We have made a pond for that purpose.

44,069. Do you find them better in that way?—Yes.

44,070. Do many of them die in the winter?—The sludge and dirt kill them sometimes.

44,071. Does any fresh water come down in that region?—Yes.

44,072. Do the oysters do better not far from the fresh water?—Yes, I find them looking somewhat better.

44,073-5. Does it keep the beds cleaner?—Yes, and the shell looks brighter, and is harder.

44,076. (*Mr. Lefevre.*) What depth of water do you find that the oysters breed in?—Between tide marks.

44,077. Where the oysters are left dry at low tide?—Yes; but that is at a spring tide. They must not be a long time dry, or the spat would die.

44,078. Is there no work done at all upon the beds between the 1st of February and the 1st of October?—No, except to keep the beds watched.

44,079. Do you clean them?—We drag the weeds out which we find floating. We pick the oysters off and put them in again.

44,080. Do you remove the oysters from one part of the beds to another during the close time?—No, we do not.

44,081. Do the boats which are used by the oyster dredgers belong to them, as a general rule?—I believe they do. There are one or two joined in a boat; perhaps there may be three, and they each take a share.

44,082. Then they have not had money advanced to them to supply them with boats?—No.

44,083. They have only had money advanced to them for the dredges?—Yes, that is all. Some of them use their own dredges.

44,084. Can you tell us what size those oyster-beds are?—No, not exactly.

44,085. Are there any other private oyster-beds besides those of Captain Austin?—Not that I know of.

44,086. Can you tell us how many oysters he buys in the course of a year, for the purpose of having them laid down on these beds? How many boat-loads does he buy?—I think he has laid down about 14,000 buttekins since he has had the beds.

44,087. Does he sell them fit for eating after they have laid down there for six months or a year?—Yes.

44,088. They are then fit for the market?—Yes.

44,089. The oysters which are dredged without being laid down in that way are not fit for the market, are they?—No, they are not.

44,090. They are all bought for the purpose of being laid down on other beds?—Yes, most of them.

44,091. Has the price of oysters improved of late years?—It has.

44,092. What is it now?—We have paid 2*s.* 6*d.*, 2*s.* 9*d.*, and 2*s.* 10*d.*

44,093. For how many?—Six stone. We formerly sold them, before Captain Austin came here, for 2*s.* and 2*s.* 6*d.*

44,094. That is two years ago?—Yes.

44,095. Are you able to tell us what it was 10 years ago?—No, I do not recollect what it was then.

44,096. Are there many five-fingers in the bay?—There are a few, but not many.

44,097. Do you take any means for killing them?—We stamp upon all we can catch.

44,098. During the close season, do you collect them at all?—No, unless we get then on the borders of the beds.

44,099. Do you recollect the oyster fishery before the byelaw was made as to the size of the oyster in 1860?—Yes, I do.

44,100. Was there a considerable number of small oysters taken then?—There was.

44,101. There was no care taken to cull them then?—Not much. They were then in the habit of taking them and carrying them away anyhow.

44,102. Does the culling of the oysters take any time?—It does take a great deal of time.

44,103. Does it give the fishermen a good deal of trouble?—Yes.

44,104. Does it prevent them doing a certain quantity of work in the course of a day?—Yes, it does.

44,105. Have you heard any complaints from the men about that regulation?—I have. They have been complaining very much in regard to Captain Leveridge coming after them with his boat, and seeing that they had the oysters culled in a proper way.

44,106. What have been the complaints they have made?—They complain that their time is lost, in consequence of his running after them and chasing them.

44,107. Is much of the ground round Clew Bay fitted for oyster-beds?—According to my opinion, a great deal of it is very good.

WESTPORT.

O. Campbell.

6 Sept. 1864.

44,108. Among the islands?—Yes.

44,109. They are very sheltered?—Yes.

44,110. And mostly in shallow water?—There are some deep places which they dredged last year, but in deep water the samples are very rough.

44,111. Why does not Captain Austin extend the beds out into deeper water than beyond the tide marks?—I do not know.

44,112. Has he any right of property beyond tide marks?—I do not know.

The witness withdrew.

T. Murray.

THOMAS MURRAY called and examined.

44,113. (*Professor Huxley.*) Are you an oyster dredger?—Yes.

44,114. How many years have you been employed in oyster dredging?—I have spent between 13 and 14 years of my life in oyster dredging.

44,115. When was the last time you were dredging?—Last spring.

44,116. Have you noticed any falling off in the supply of oysters, comparing those you get now with those which you were in the habit of getting in former years?—Yes, I have.

44,117. When did you first notice that the oysters were beginning to fall off?—About four, or five, or eight years ago.

44,118. Can you tell us what was the reason of that?—It was said the reason was, that at that time the men did not come down to take oysters. They took them every month in the year. They took them down to County Clare and elsewhere; but since then there has been a byelaw passed, which says that they are not allowed to take any oysters from the bay at a particular time of the year. There was a great meeting held here upon that subject once.

44,119. Has that byelaw been observed, do you think?—The Coastguard have exerted themselves, as far as I could see, to keep the byelaw as well as they possibly could.

44,120. You have been dredging since then yourself?—Yes.

44,121. One part of that law says, that oysters less than two and a half inches across, if brought up in the dredge, shall be thrown back?—Yes. There was a penalty of so much against taking them under that size.

44,122. Did you ever know of anybody being fined for doing it?—I know that the Coastguard at Pigeon Point took up two boats, and summoned the men in them; but through the intercession of some of the gentlemen here they were allowed to go. I do not think they were made to pay the fine, although they were fined, and their dredges, which, in the first instance, were taken, were given back.

44,123. Was that for taking oysters too small?—Yes, for taking oysters under the size, and for trespassing upon a private bed. At the time we are engaged in dredging, we are not supposed to take in any oysters under two and a half inches across.

44,124. You are supposed to throw back again all that you take which are under two and a half inches?—Yes, we leave them on the bed.

44,125. Do you bring up much dead shells, culsh, and so on?—Yes, a good deal.

44,126. What do you do with that?—We have a platform in the boat, and we pitch the shells and the oysters which we do not think fit and right to take overboard. We throw them out upon the ground from which we lift them.

44,127. It would be no object to you to bring them ashore?—No.

44,128. Would you not rather be without them?—It would be an object to us if we were allowed to bring them ashore.

44,129. Why would it be an object to you?—They would make very good manure for the land, but we are not allowed to take them.

44,130. Then you do not take them?—No.

44,131. Do you think that the fishing has been getting worse during the last three or four years?—It has not been as good for several years past as it was last year and the year before.

44,132. What is the reason of that?—Because they have been prevented from taking the small ones. That is my opinion.

44,133. Is there a good market for the small ones? Would people buy them?—There were men who were accustomed to buy them in order to carry them away to the county Clare.

44,134. If you were allowed to take small oysters could you sell them?—I do not know that I could. All the oysters I have taken for a length of time have been taken in my day's wages for Captain Austin.

44,135. Why do you think it is a disadvantage not to be able to take the small oysters?—On account of the caution we have got from the Coastguard. That is the reason the oyster fishermen do not take the small ones.

44,136. But why do you wish to take the small ones?—It is not a wish on my part to take the small ones. I have no wish to disturb them.

44,137. You said the fishing was not as good because you were not allowed to take the oysters?—No. I think it does not exhaust the beds as much as when the small ones were taken.

44,138. Then the beds have been getting better?—Yes, they have.

44,139. Do you think that the fishing has been getting better for the last five or six years?—Yes, I think so.

44,140. You do not think that the fishermen now bring many small oysters ashore?—I do not think they do, but they would do so if they were allowed.

44,141. (*Mr. Lefevre.*) Do you cull the oysters on the ground?—Yes.

44,142. Immediately you pull up the dredge?—Yes. When the dredge is pulled up it is emptied on a board like the leaf of a door. There is a picker there who takes out of that anything not fit to bring to the market and throws it overboard.

44,143. How often do you haul up your dredge?—Every quarter of an hour.

44,144. But what do you empty your dredge upon?—Upon the leaf of a door between two beams in a row-boat, and as soon as it is emptied we put it in again.

44,145. Have you one man always engaged in culling the oysters?—Yes, we have one man always engaged, and if I can spare time along with him I do it myself also.

44,146. Do you recollect the oyster-fishing before this regulation was made?—Yes, for the last 30 years. I have been preserving that oyster-bed of Mr. Jervie's for the last 30 years.

44,147. In former days did you not cull the oysters at all, but take them as you got them?—We did not cull them before the regulation was made, but that was not the way with regard to Mr. Jervie. He always reserved his own part.

44,148. But generally throughout the bay?—They generally took them as fast as they could get them. At one time I could lift 15 buttekins in one tide, but they became so thin that I could not lift half a bushel at last.

44,149. Do you require more men on board your boats now than you employed formerly?—At one time we only had three men in the boat.

44,150. And now you want four men?—Yes.

44,151. Has there been a good spat during the last three or four years?—Very good.

44,152. You have found no falling off?—There has been no falling off on certain portions of the bed.

44,153. Do your boats make more money now by a day's dredging than they did some years ago?—I recollect a time when a boat with three men would go out in the morning and bring in from 25 to 30 buttekins of oysters as the result of the day's fishing.

WESTPORT.
T. Murray.
6 Sept. 81864.

44,154. What money did that bring in?—About 31*s.*

44,155. How much do they make a day now?—Captain Austin gives six shillings.

44,156. Do you mean to say that Captain Austin buys the produce of a day's fishing for six shillings?—He hires the boats for lifting his own oysters when he is shooting them for himself, and he gives those boats the highest price that is going in any part. He gives them from 2*s.* 6*d.* to 2*s.* 9*d.* a buttekin for the whole length of the season they may be dredging.

44,157. Taking last season what did the men make on an average?—I cannot say. I never dredged except by the day's wages.

44,158. What wages do you get?—Six shillings.

44,159. Is that for the boat and four men?—Yes.

The witness withdrew.

JAMES MCNAMARA called and examined.

J. McNamara.

44,160. (*Mr. Lefevre.*) How long have you been dredging oysters?—About ten years.

44,161. Do you find that the supply has been increasing during the last few years?—Yes. We have had a better harvest this year than ever we had.

44,162. Were there more boats fishing than there were in previous years?—Yes.

44,163. What has been the increase within the last ten years?—The reason why there was a decrease before was, that there were some persons here who were striving to get the public beds registered for themselves. There has been a better harvest for the fishermen this year, because they would not allow them to dredge upon particular beds the year before.

44,164. Was that upon Lord John Browne's ground?—Yes.

44,165. I believe he claimed a private right of fishing and prevented the public from fishing?—Yes.

44,166. That right has been abandoned this year, and the public have been allowed to fish upon the beds which were claimed?—Yes.

44,167. That has given you an increased ground to fish upon?—Yes.

44,168. And, consequently, more boats have come to fish?—Yes, a good many more boats have gone upon those grounds.

44,169. In the course of last season what would you make by dredging for oysters?—About 15*l.*

44,170. Was that your own share?—Yes.

44,171. Are you the owner of a boat?—No, I am not, but my father is.

44,172. Does the owner of the boat get any share?—Yes, he does.

44,173. Do you agree with the last witness that the culling of the oysters when they are taken from the beds occupies the time of one man?—No, it does not.

44,174. Then how long does it take?—The owner of the boat must have one man to assist him in picking, because, if that were not so, he would be obliged to pick himself.

44,175. Then do you think that the addition of a boy would be sufficient for that purpose?—Yes.

44,176. Comparing last year with what the oyster-fishing was ten years ago, did you make more money?—Yes.

44,177. Was that in consequence of an increased take of oysters, or in consequence of the increased price you got for them?—It was owing to the increased price.

44,178. Is there any demand for small oysters to lay down on beds?—Captain Austin is, I believe, more anxious for small oysters now than Mr. Jervie was.

44,179. Would he give a better price for small oysters?—Yes.

44,180. Do you recollect, before the byelaw, if the small oysters sold for a larger price than the big ones?—No, the big ones were sold for a larger price.

44,181. The oysters then were only sold for eating and not for laying down?—They were sold for laying down to the County Clare people.

44,182. Then would they not give a better price for small than for large oysters?—They used to pick the big ones for the car men, and to sell the small ones to the County Clare people for laying down upon their own beds.

44,183. I suppose that the greatest quantity of those which are taken now are sold in Dublin?—Yes.

44,184. Is the quantity which Captain Austin takes for laying down a small portion only of the whole?—No. I think that Mr. Baxter had a large proportion of them. He took as much as would load three vessels.

44,185. Were they also sent away by rail?—Yes, they were.

44,186. (*Professor Huxley.*) Do you think that the oysters are properly culled when they are taken now?—Yes, I think they are.

44,187. Then the byelaw is really carried out?—Yes.

44,188. Have you ever known any one fined for infringing the byelaw?—I have never seen a man fined for it here, but I believe there were some fined at one time by Mr. Stretch.

44,189. Do you think that there are many small oysters or much culsh brought ashore?—No, not much.

44,190. Will there be a little brought ashore now and then?—There may be a little.

44,191. But only a little?—No, only a little.

44,192. Whatever regulation might be established, do you think there would still be some brought ashore?—Yes, I think there would.

44,193. But not any considerable quantity?—No.

44,194. Not enough to do you any harm?—No, not enough to do any harm.

44,195. You do not think there is as much culsh or young oysters brought ashore as is sufficient to damage the beds, and injure the fishing?—No, I think not.

44,196. (*Mr. Lefevre.*) Do you recollect the time when oysters were taken here in the months of April and September?—Yes, I do.

44,197. How long ago is that?—It will be about four or five years ago.

44,198. Then was there a regulation made prohibiting the fishermen from taking oysters during those two months?—There was.

44,199. Was that regulation approved of by the fishermen here?—It was.

44,200. Upon the ground that the supply was falling off?—Yes.

44,201. Have your earnings during the whole season fallen off or improved since that regulation was made?—On account of the price, I should say that the earnings have improved.

44,202. Notwithstanding that there have been two months less fishing?—Yes.

44,203. Is that due to the increase in the quantity of oysters or to the increase in the price?—I think it is due in part to the increase in the price, but it is also due to the increase in the oysters themselves.

The witness withdrew.

WESTPORT.

J. Leary.

6 Sept. 1864.

JEREMIAH LEARY called and examined.

44,204. (*Professor Huxley.*) Are you employed in the Coastguard?—Yes, I am.

44,205. How many years have you been in that employment?—I have now been in the Coastguard in Clew Bay for ten years.

44,206. Were you a fishermen before that?—Yes, I was a fisherman in my early days.

44,207. Are you acquainted with oyster-fishing?—Yes.

44,208. Is the oyster-fishing in the bay in a tolerably good condition, or has it been falling off?—I should say that it is falling off.

44,209. Do you mean that it has been falling off for the last four or five years?—I think it is falling off now.

44,210. From what cause?—I think the falling off is due to the great destruction which took place last year. There was a considerable destruction of the brood then, and I am convinced that the take will be quite diminutive this year.

44,211. How did the destruction of the brood take place last year?—It took place from the sale of it.

44,212. Was not the byelaw put in force?—No, they did not attend to it. It could not be put in force.

44,213. Why not?—There was not a sufficient force here to do it.

44,214. Was there a great quantity of culsh and small oysters brought ashore and sold?—Yes.

44,215. Did you yourself see that?—Yes, and I remonstrated with them for doing it.

44,216. And why did you not summon those who did it?—When they saw me they began to cull the oysters. Some of the boats dredge all day and remain till night, to take advantage of the absence of the Coastguard.

44,217. Then do you mean to say that there is not a sufficient inspection?—Yes.

44,218. How many boats were there fishing?—There would not be less than 300 boats.

44,219. How many Coastguard boats are there?—Three.

44,220. One here?—Yes.

44,221. One at Newport?—No; there is one at Inishcaul, about five miles from Newport.

44,222. And where is the third?—At Inishlyne.

44,223. Do those boats go on the dredging ground?—Yes.

44,224. And examine the boats when they are at work dredging the oysters?—Yes; but if the oyster dredgers see us coming, then they will throw the small ones overboard; but if we are not likely to detect them, then they put them in baskets and they put large ones on the top of them.

44,225. Is there no inspection?—No, because the boats discharge them into the large mackerel boats. Fifty Coastguard boats could not sufficiently protect the oysters. Captain Austin has boats, and Mr. Bernard also. You could do nothing with them unless you were to punish the purchasers.

44,226. Does the purchaser take his oysters ashore at once?—Yes, at once; and he lays them down or transhipps them at his own convenience.

44,227. Then your only chance is to inspect the oysters when they are dredging?—Yes; and they avoid that if they possibly can.

44,228. In your opinion is it impossible to exercise a thorough supervision over the oyster-fishing?—Yes, it is impossible, and will be, unless the law is made more stringent.

44,229. Is not the law stringent enough?—We made a seizure of one of Captain Austin's boats, but I believe there was some doubt as to the law.

44,230. Did she have small oysters in her?—Yes.

44,231. You are really of opinion that the oyster fishery is falling off?—I think it is, and I think it will continue to fall off. It will be impossible for the beds to keep up when the brood is being rapidly taken away. They are continually scraping over the beds, and leaving nothing for the brood to adhere to. I think that is very injurious. There were beds here which were very full of oysters some time ago, but they are not in that condition now. I have taken a deep interest in the oyster fisheries, and I have often remonstrated with the fishermen upon the subject but to no purpose.

44,232. What do you yourself think would be the best remedy for the evil you complain of?—I think the best thing would be to enforce the law with greater stringency upon the purchaser. I think he ought to be more amenable to the law than the dredger, whose distress induces him to take the oysters.

44,233. Would you oblige all the oyster dredgers to bring their oysters ashore, and not tranship them at sea?—Yes, I think that would restrain them to some extent; but the purchaser will do all he can to get small oysters. It tells better for him if he has one bushel of small oysters than if he has ten of large.

44,234. Does he pay more for the small ones?—No, he gets them for the same price.

44,235. (*Mr. Lefevre.*) Then he would rather have them small than large?—I know he would; there is no question of that.

44,236. Do the men dredge at night?—They would do so if they were allowed, but they are sometimes on their guard against the Coastguard. We warn them of the danger of dredging at night, but the Coastguard have other duties to perform at night, and they take advantage of a fine night to go out and dredge.

44,237. Is there a regulation prohibiting them from dredging at night?—The byelaw enforces a heavy penalty for dredging by night.

44,238. Notwithstanding that regulation, you say there is a considerable amount of dredging done by night?—I know they would do so if there was likely to be any quantity of oysters to take; but I do not think the take will be anything this season, as the brood has been destroyed. In fact, in the latter part of last season, they could not make more than 2*s.* a man, even when they were working upon the oyster-beds from morning until dark.

44,239. When you say the oysters are falling off, what do you compare them with?—During the last two years, in consequence of the destruction of the small oysters, it has told better for the dredgers; but the spawn adheres to the shell, and passes into the measure with the large oysters, and that has occasioned a great destruction of the brood. In my mind, there is no question that, if they are allowed to continue that practice, the beds, in the course of a very short time, will be destroyed.

44,240. But what do you think with regard to the past, leaving the future out of consideration? You say there has been a falling off in the oysters?—During the famine there was no fishing for them, and they were left alone until 1854. Up to that time there was scarcely any destruction to signify in Clew Bay. After that the beds revived, and then there was a great take of oysters from 1854 to 1860.

44,241. In 1854, how many boats were there dredging?—I should say there were from 100 to 150. Perhaps there were not as many as that in 1854, because the people were only just reviving from the effects of the famine, but a great many have been employed in dredging since.

44,242. From that time down to the present, has the number been increasing?—Yes; and the reason of the increase in the number of oysters taken was that the beds had had such a long time to enable them to revive.

44,243. From 1854 down to the present time, has the number of boats been greatly increasing?—Yes.

44,244. Have they been increasing every year?—Yes.

44,245. Are you able to say whether each boat has been doing as well as a boat did formerly?—Yes.

44,246. Did you hear the evidence of McNamara?—Yes.

44,247. Do you agree with him, that last year was a very productive year for the oyster dredgers?—Yes; and that was because the small oysters were saleable.

44,248. When you speak of the destruction of oysters, you speak rather with a view to the future than with regard to the past?—Yes.

44,249. You think the fishing, as it is now carried on, may do harm?—Yes.

44,250. And not so much that it has done harm hitherto?—I think it has done harm also.

44,251. What is the harm that it has done?—It has destroyed the prospects of future dredging.

44,252. You are of opinion, then, that the regulations which have been established here are to a great extent a dead letter?—Yes, that is my opinion.

44,253. Then any increase there may have been within the last two years in the take of oysters is not due to those regulations at all?—No; but it is due to the violation of those regulations. I should like, with your permission, to say a few words in regard to the herring-fishing in Clew Bay.

44,254. (*Professor Huxley.*) What do you wish to say with regard to the herring-fishing?—I think the falling off in the herring-fishing is owing very much to the use of small nets which are below the proper standard.

44,255. Where are such nets used?—In the whole of the bay.

44,256–7. What is the size of the mesh?—It is scarcely above a shilling.

44,258. Are the meshes an inch from knot to knot?—No, they are not.

44,259. But the shilling mesh is looked upon as the right size?—No; it is below an inch.

44,260. It is very commonly used as a measure of the right size?—I would condemn it.

44,261. You think it is too small?—Yes; no large herring would mesh in it.

44,262. We were told by previous witnesses that the falling off in the herring-fishing is due to the fact that the people have no herring-nets?—I entirely disagree with that.

44,263. Have they as many herring-nets as they had formerly?—They say that they have plenty of nets, but they are not of the proper gauge. In Scotland and on the west coast of England they would not be allowed to fish with the nets they use in Clew Bay.

44,264. We have been told here that there is nothing like the number of nets that used to exist?—Scarcely one-tenth of the boats in number have nets, no doubt.

44,265. Why do you think the small mesh does harm?—The large herrings will not come in to spawn when they strike the small nets. They go off in some other direction. I think it does a great injury to the fishing when the herrings come against the net and are unable to mesh.

44,266. Is there anything else you wish to remark upon?—I have often remonstrated with the fishermen when they have been going out to take a shot amongst the herrings. It is impossible to fall in with the herrings when there is a glut of them among the islands, because, if there is a shoal of them, the fishermen raise such a clamour and noise that you may hear them for miles. I think the noise of their oars is very much against the interest of the fishermen.

44,267. (*Mr. Lefevre.*) What do you think is the number of boats that dredge for oysters in the bay?—I think there have been very little short of 300 this season.

44,268. Are those boats laid up for the rest of the year?—Yes, except when they are employed in getting sea-weed for manure.

44,269. With that exception they are not employed?—No; they do not apply themselves to any other fishing.

44,270. What number of men are there in each boat?—There are three or four men in the boats that go dredging.

44,271. Do you think that in consequence of the regulation made by the Fishery Board there has been an increase in the number of men in each boat?—That is according to the strength of the fishermen and their activity. If they have three good men employed in dredging they will do well enough, but if not, then they have a fourth.

44,272. We were told by one of the witnesses that the effect of being required to cull the oysters upon the ground was to necessitate the employment of an additional man. Is that your opinion?—No; I do not think that it is the case.

The witness withdrew.

Commander GEORGE HENRY LEVERIDGE R.N. called and examined.

44,273. (*Professor Huxley.*) You are Commander of the Coastguard on this station?—Yes.

44,274. It is your duty to see that the regulations of the Fishery Board are carried out?—Yes.

44,275. Were you acquainted with the condition of the fisheries before the byelaw of 1860 was passed?—No, I was not.

44,276. How long have you been here as Commander of the Coastguard?—From the year 1860.

44,277. From 1860 onwards?—Yes.

44,278. Has it been your duty during the whole period of your command here to carry out that byelaw?—Yes, it has.

44,279. How many boats have you for that service?—I have only three stations, and the boats go from those stations.

44,280. Have you only three boats' crews?—Yes.

44,281. Are the people here who take the oysters permitted, if dredging them, to put them at once on board vessels?—Yes.

44,282. Consequently you have no power of exercising a supervision over the cargoes when they are once loaded?—Not after they are once on board the vessel.

44,283. Can you board the vessels if you think fit?—Yes, we can board them.

44,284. Suppose that you do board them, and that you find on board of one of those vessels a number of under-sized oysters, could you seize the cargo?—No.

44,285. On what ground is that?—In the first instance we supposed we could do so, but a mistake occurred last year in the seizure of one of Captain Austin's vessels.

44,286. Will you be good enough to detail the circumstances?—The case was referred to the Board of Works.

44,287. Will you state the circumstances of the case?—The circumstances were these. Captain Austin's hooker had a cargo of oysters on board coming from the fishing ground.

44,288. From his private ground or from the public fishing ground?—From the public fishing ground. She was boarded when she was coming in by a boat belonging to the "Seamew," which was then engaged in the same duty as myself, and Captain Broad, after desiring him to cull the oysters, which he refused to do, threw the whole cargo overboard. The case was referred to the Board of Fisheries, and the reply which was received from the Board I will read to you. It is as follows:—

Office of Public Works,

SIR, 9th November 1863.

ADVERTING to my letter of the 6th instant, I am directed to state that, as the Board are advised with reference to the statement of Commander Broad, in his letter of the 1st instant to you, they are of opinion that the byelaw of the 19th November 1860 only reaches persons engaged in fishing for or taking oysters, and cannot be made available against persons in the hookers which receive those oysters on board for shipment and transport.

Yours, &c.

WESTPORT.

Commander G.H.Leveridge, R.N.

6 Sept. 1864.

44,289. But in any case would the authority of the officer, upon seeing small oysters on board a vessel, extend to the throwing of those oysters overboard? Would it not be the duty of the officer to seize them, and to lay an information before the magistrate?—It would in the case of a boat which had been fishing or was engaged in fishing, but, according to this law, it would not apply to the case of a hooker engaged in shipping them for transport.

44,290. In the case of a hooker conveying them away you have no jurisdiction at all?—No.

44,291. But the officer would hardly have been justified in throwing them overboard if they were on board a fishing vessel?—Yes, he would, if they were in a fishing boat.

44,292. He would be justified in seizing a boat?—We cannot seize a boat under the Fishery Act. We can only summon the people.

44,293. He would have been justified in summoning the people?—Yes.

44,294. But there was no power given to him to seize the cargo and throw it overboard?—No, he would have no such power as that. He would only be justified in summoning, if they refused to throw the cargo overboard.

44,295. So that the officer would have been stepping beyond his jurisdiction if it had been a fishing vessel?—It was a thing I should not have done myself.

44,296. Then, from the correspondence which took place, there was what appears to be an illegality in throwing the cargo overboard?—Yes.

44,297. Had that anything to do with the indisposition of the Board of Works to proceed further?—No; I think their idea was that the byelaw did not touch the vessel conveying them.

44,298. Then that particular mode of procedure had nothing to do with their decision?—No.

44,299. Under those circumstances, what course do you instruct your boats to pursue in order to see the byelaws enforced?—I instruct them to row about among the boats, and to see that they do cull the oysters.

44,300. But there are as many as 300 boats sometimes?—I cannot tell exactly what number of boats there is, but last year there was a great number in all parts of the bay.

44,301. In practice, is it a difficult matter to see that the oysters are not under size? If they were thrown down at the bottom of the boat, would it not be difficult to inspect them properly?—It would be difficult to cull them properly, unless they are culled at the time they are drawn up in the dredge. Sometimes the Coastguard will see a boat coming in, perhaps three miles away, and the moment they see our boat going out, they pull away round the islands, and we cannot catch them. On the north coast, all the way from Newport downwards, they have a large extent of ground.

44,302. You cannot compel the men to haul up their dredges?—There would be no object in doing that.

44,303. If a dredger saw fit to keep his dredge down when he saw the Coastguard boat near him, and only drew it up when the boat was out of the way, you could not help that?—No.

44,304. Then, with the greatest zeal on your part, our supervision does not amount to much?—We should require three times the number of boats we have to do it properly.

44,305. And even then it would be difficult?—Yes. It would take the whole time of the Coastguard to do that, without having anything else to do.

44,306. Then we may take it, that in truth this byelaw is really not enforced?—It cannot be enforced with the force we have at our disposal now.

44,307. I do not suggest that the Coastguard has not done its duty, but it is a duty which, from the nature of the case, it is impossible to perform satisfactorily?—Yes, where the oyster beds are distant, but where they are near the Coastguard station the trouble would not be so great. In such a case, we might frequently go on board the boats, and not find a small oyster in them.

44,308. They will not run the risk?—No.

44,309. Do you ever take occasion to select a dredging boat for examination which you see making its way from the boats, in order to take its cargo on board another vessel?—Yes, whenever we see a boat hauling away, we always chase it.

44,310. Does not that operate as a check?—Yes.

44,311. How far in practice has the byelaw really been observed? I ask the question with a view of ascertaining whether one may ascribe any effect upon the fishery to it.—I think that wherever they could avoid it, they would do so.

44,312. And, therefore, in all probability, they have avoided it?—No doubt they have.

44,313. Can you suggest any other means by which a better supervision could be exercised?—I think one great point would be to make the law reach the vessels that convey the oysters. By that means they could be very easily examined.

44,314. (*Mr. Lefevre.*) Is it the custom here not to land the oysters at all?—They seldom land them. They generally put them in the hooker, which is to convey them, on the oyster ground. Then the purchaser has a place where they are put down for a time.

44,315. You think you ought to have the power of inspecting the hookers?—Yes.

44,316. It would be less trouble to you?—Yes, it would be far less trouble.

44,317. And you think it would be more effectual?—Yes, much more effectual than now.

44,318. How many hookers are there in the bay loading?—There are not many generally. Captain Austin has one of his own, and there are two or three others employed.

44,319. Are there not more than seven or eight vessels altogether?—There are not more than eight or ten, at all events.

44,320. Then it would be an easy matter to keep them under supervision?—It would, as far as the hookers are concerned.

44,321. Are you acquainted with the other fishings in the bay? Have you paid any attention to them?—No.

44,322. How many men are there at the Coastguard stations?—Six at each of two of them, and seven at the other.

44,323. Is their time occupied very much in looking after the oyster-fishing?—A greater part of their time has been taken up in that way.

44,324. And the last two years you have had the assistance of the "Seamew"?—Yes.

44,325. Have her boats been employed in the same way?—Yes.

44,326. And even with that assistance the force has not been sufficient to carry out the work?—Not near sufficient.

44,327. You say the purchasers all have ground upon which they lay down the oysters?—Yes.

44,328. Are they laid down for some little time before they are sent off for consumption?—Yes; they lay them down on certain spots, and when they get a sufficient number they take them up and send them away.

44,329. Is there any other ground in addition to that which Captain Austin has?—They are laid down on his private registered beds.

44,330. Do the purchasers lay them down on their own beds, or on those of Captain Austin?—They are put out on the beds they select, where they can get them easily again for consumption.

44,331. How long do they lay them there?—Until they get a sufficient number for a cargo.

44,332. Are there a considerable number landed on shore and sent by cart to the railway?—They are laid on the beds and afterwards picked out and sent by train.

44,333. Are the smaller oysters left on the beds?—Yes.

44,334. Is there any considerable amount of dredging carried on by night?—No. I do not think they would run the risk of dredging by night.

44,335. Do you think the byelaw is observed?—Yes. There may be a few cases in which it is not, but there are not many.

44,336. Was there much dredging by night before that byelaw was enacted?—That I cannot say.

44,337. (*Professor Huxley.*) Is there any further statement you wish to make to us?—I do not think that there is. If the byelaw were made so as to reach these vessels I think it would be of the greatest benefit. That would operate as a great check.

44,338. It would make the byelaw, in fact, really operative?—Yes, and would benefit the fishery ultimately by keeping the small oysters upon the ground.

44,339. Has any harm been done to the fishery already in consequence of the byelaw not being observed?—I do not think that there has been any material injury done. I think it has acted to some extent as a check.

44,340. Do you attribute the increase there has been within the last two years to the enforcement of that byelaw, as far as it can be enforced?—Yes, as far as I can judge.

The witness withdrew.

HUGH WILBRAHAM called and examined.

44,341. (*Professor Huxley.*) You are interested in the fishing here, Mr. Wilbraham?—I am interested in the oyster fishery.

44,342. Not in other kinds of fishing?—No.

44,343. Will you explain in what way you are interested in the oyster fishery?—I, together with Lord John and Lord Richard Browne, took a lease of some oyster fisheries.

44,344. Where were those oyster fisheries situated?—Inside the lighthouse.

44,345. Inside the Inishgort lighthouse?—Yes.

44,346. Among the islands on the south and the east of it?—Yes.

44,347. You leased those oyster fisheries from the Marquis of Sligo?—Yes, we took a lease of them, but we had some difficulty about the title, and we were not able satisfactorily to prove the title last year.

44,348. When was the lease taken?—Two years ago.

44,349. Having taken that lease under the impression that you had a good title, did you proceed to plant the oyster-bed there?—No, we applied for a title for some of the beds to the Commissioners of Fisheries, and we got a small piece granted to us.

44,350. Was it a natural oyster-bed you began with?—Yes, some parts of it. After we took possession of the beds the public came in upon them, and we took legal proceedings to establish our rights, and failed.

44,351. In the first place, thinking that the Marquis of Sligo had a legal right over this area, you leased the beds from him?—Yes.

44,352. Under what title did he claim that right?—It was a prescriptive right.

44,353. Then, having obtained a lease, you meant to have fished it as a private bed?—Yes.

44,354. What made you think it expedient to apply to the Board of Fisheries?—We found that the ground was trespassed upon, and when we took legal proceedings we failed.

44,355. In point of fact, you failed to establish that Lord Sligo had a title at law?—He had not a sufficient title for us to obtain a conviction.

44,356. That being the case, you applied to the Fishery Board for such powers as they could give you under the Act of Parliament?—Yes.

44,357. Do these powers extend only to the ground between high and low water mark?—They have power up to low-water mark by a later Act—the 13th and 14th I think.

44,358. That would be under the 13th and 14th Victoria?—Yes.

44,359. And the 41st section?—Yes.

44,360. And that gives power to persons, with the consent of the owner or occupier of the land, to form or plant an oyster-bed adjacent to such land, either above or below low-water mark?—Yes.

44,361. That is the section you refer to?—Yes; and the Commissioners gave us a title to some portion of the bed under the Act, but it was only a small portion of what we applied for.

44,362. It would appear from a subsequent paragraph of the same section that they could not give you a title to the whole. The section of the Act is as follows. It is the 13th and 14th Vict. cap. 88, sec. 41:—"Be it enacted, that it shall and may be "lawful for the owner and occupier of any land border-"ing on the sea or any estuary, with the permission "in writing of the said Commissioners, or of any person "or persons with the consent of such owner or occu-"pier, and with the permission in writing of the said "Commissioners, to form or plant any oyster-bed or "laying on the shore adjacent to such lands, and "either above or below the level of the lowest water "marks of spring tides, as the said Commissioners shall "think fit; and it shall be lawful for the several "persons forming or planting any such bed or laying, "to hold the same as private property, and to exercise "an exclusive control over the same; and such oyster-"beds shall be entitled to the like protection as in the "said recited Acts is provided, in case of any other "oyster-beds or layings being the exclusive property "of any person. Provided always, that the forming "and planting of such oyster-beds as aforesaid shall "not give any exclusive right or title to the occu-"pancy of the said shore, except for the purposes "aforesaid, or to the appropriation of any public "parks or beds at present reserved for fishing oysters, "but that the rights herein-before granted and con-"ferred are to be considered as exclusively applying "to places where no such public oyster-beds at present "exist?"—We did not apply for the whole that Lord Sligo claimed as his property. I can show you from the chart what it was that our application referred to.

44,363. (*Mr. Lefevre.*) When did you make that application?—In January last.

44,364. (*Professor Huxley,*) Then was the smaller area for which you applied the property of yourself and co-lessees?—The Commissioners have offered us a part of what we applied for, but we have not accepted or declined it.

44,365. Is it a natural oyster-bed, or have you taken it for planting?—We intended to plant it, if we took it.

44,366. (*Mr. Lefevre.*) Is there any portion of it below low-water mark?—Yes, all of it.

44,367. (*Professor Huxley.*) Are you going to plant it, if you take it, on the French method?—We have not settled what we shall do, if we take it. In fact, we have offered to lease it to a gentleman, or rather the right to it.

44,368. (*Mr. Lefevre.*) We have heard to-day that there is only one private oyster-bed, namely, that worked by Captain Austin?—Yes.

44,369. But in the list of licences granted by the Commissioners there is mention made of three or four beds within reach of this place. Do you know anything of them?—There is one granted to Captain Windham.

44,370. Are there not three granted to Mr. Pike at Achill?—Yes.

44,371. One to Mr. McCormick?—Yes.

44,372. And one to Captain Houston at Killary Bay?—Yes.

44,373. Where are the beds you claim situated?—We applied for the beds at Inishleague, and the Commissioners gave us this (*pointing to the map*).

WESTPORT.

H. Wilbraham.

6 Sept. 1864.

44,374. You applied for all the space from Inishleague to Dorinish eastward of Abbefilon ?—Yes, nearly to Pigeon Point.

44,375. And they gave you the space to Inishlochen ?—Yes, nearly to Finborn.

44,376. What will the total area of that be ?—Not above half a square mile at the outside, but I forget exactly.

44,377. That is a space that is covered at all times by the tide ?—Yes.

44,378. And at many places there appears to be 10 or 12 fathoms of water upon it ?—Yes, fully that.

44,379. Is that ground now fished over by the public ?—Yes.

44,380. (*Professor Huxley.*) Was it fished last year ?—Yes.

44,381. Was it fished in previous years ?—I cannot say.

44,382. Your claim would be based on the fact that it is not public property ?—Yes.

44,383. Is there any other statement you would like to make to us ?—I think the increase in the quantity of oysters last year was partly owing to the dredgers coming on those beds of Lord Sligo's which they had not been in the habit of coming on before.

44,384. Had they been virtually prohibited by the measures Lord Sligo, or you as lessees, had taken from fishing on those beds ?—Yes, certainly, the year before, and although we heard that people had formerly fished over them, still a great many never did.

44,385. Practically the ground had a sort of close time ?—Lord Sligo's tenants were allowed to fish there, and I believe they kept off, or attempted to keep off, all others.

44,386. (*Mr. Lefevre.*) Last year was there a considerable inroad of fishermen from other parts on that ground ?—Yes, people from the north of the bay came and fished. I counted as many as sixty odd boats dredging between Inishlyne and the main land. As to small oysters, we lessees summoned several parties for having small oysters under the size mentioned in the byelaws, and we obtained convictions in two cases, which convictions were affirmed, after an appeal, by the quarter sessions.

44,387. (*Professor Huxley.*) Was that for taking oysters under two and a half inches in diameter ?—Yes.

44,388. Is there any other matter you would like to mention ?—No, I think not.

The witness withdrew.

P. O'Malley.

PETER O'MALLEY called and examined.

44,389. (*Professor Huxley.*) You wish to give some information to us ?—Yes.

44,390. What is it you wish to say ?—I hope you have come here to show justice to the poor, and that you will give them leave to live. I should like to say something about the oyster fisheries.

44,391. You may say what you like ?—I have been dredging for many years. I am 69 years of age, and I never saw or heard of a registered bed until lately, when Mr. Jervie got upwards of 40 acres. We live by oyster dredging and by taking winkles and sending them to England.

44,392. Do you mean to say that the fact of this fishery having been registered does a great damage and injury to you ?—We have been dredging every morning over it until of late, and then they took all my buoys and brought them over here. About four years ago it is ; they had a faction in point of fact.

44,393. What is the nature of your complaint ?—My complaint is, that I have been dredging in Clew Bay, without any hindrance, for many years, and now I am prevented from going where I always went formerly. There were 60 boats dredging there until the people got scarce and went to England. All that we want, is to earn a little money to-day to enable us to keep our little cabins over us and to provide for the morrow, but they are wanting to banish us like rats from the place.

44,394. Who wants to banish you ?—Everybody who wants to keep us off those oysters.

44,395. Who prevents you from dredging there ?—Lord John Browne, and Captain Austin, and various other persons.

44,396. How many persons were summoned last year for fishing on the ground leased by Lord John Browne ?—18 or 19 men.

44,397. Do you wish us to understand that you were formerly in the habit of dredging over the ground which has been subsequently leased by Lord John Browne and his friends ?—I have always been dredging in that place, without any hindrance.

44,398. After that ground was leased were you stopped from dredging upon it ?—Yes, I was last year.

44,399. You were stopped last year ?—They tried to stop me, but I did not stop for them, and I was brought to the assizes at Castlebar.

44,400. Of your own knowledge are you able to say that fishermen were formerly in the habit of dredging over that ground ?—Yes.

44,401. Those very persons who were summoned had been in the habit of dredging over that ground before ?—Yes.

44,402. We have just been told that the summonses had no effect ?—We were brought up here and tried here, and then they sent us to Castlebar assizes, but we defeated them at Castlebar.

44,403. You defeated them ? — Yes, before the barristers.

44,404. You tried the question at law and gained the day ?—Yes.

44,405. Then you will not be troubled with their interference again ?—Yes, they want to do the same thing now, and to take the beds from us.

44,406. You are perfectly at liberty to dredge over that ground now, are you not ?—Yes, we dredge in that very place, and we will dredge if they do not stop us, but they are wanting to stop us.

44,407. At the present moment there is nobody to stop you from dredging anywhere, because you tell us you gained the day at Castlebar ?—Yes, and what we hope is, that you will not stop us.

44,408. We are not going to meddle with you. You must clearly understand that. It is well that everybody should understand it. We are not here for the purpose of making laws or taking them away, but our business is simply to report to Her Majesty, as to what the state of affairs is here.—If they get this space registered, they will put buoys out and protect them, and our nets are broken if they pass over them. We have also the chance of losing our life by them. They are trying to keep all the ground for themselves, and as our crops are bad and we have no corn, no oats, and no potatoes, why we must starve.

44,409. Do you fish in any other way than for oysters ?—I have fished for herrings.

44,410. How is the herring-fishing going on now ?—I should say that it is the oyster dredgers that stop them. In Clare Island and in other places we do not see many herrings coming into the bay at all. Occasionally, in the beginning of the year, there is a small trifle of small herrings.

44,411. You do not see them now ?—No, we do not indeed, although we keep nets for them.

44,412. Have you got a stock of nets ?—Yes.

44,413. How many ?—I have four of them.

44,414. How long are they ?—We have had them much worn, but we could make a new set if we had anything for them to do.

44,415. You do not find the fish ?—No.

44,416. That is because they do not come into the bay ?—We try for them very often, but we do not meet them.

44,417. Do you not see as many as you did formerly ?—We formerly took them in very large quan-

ties. We have sent away all sorts of cargoes of them.

44,418. Where was it that you were in the habit of catching those herrings?—In every place from Inishturk.

44,418*a*. Outside the lighthouse?—No, inside the lighthouse, between the lighthouse and Inishturk.

44,419. Do you now go outside the light and not find them?—Yes, and I take a rod with me to fish.

44,420. Have you been line-fishing?—No.

44,421. Do you use spilliards?—No.

44,422. Have you ever used hand-lines?—Yes.

44,423-4. What fish do you catch with them?—Mackerel, and every sort of fish.

44,425. Do you get much cod now?—No, I get no cod at all.

44,426. Is there no cod at all inside the bay?—No, none until the winter comes.

44,427. I do not mean at this particular time of the year, but do you get any in the proper season?—Yes, a little.

44,428. And do you get haddock?—Yes.

44,429. Is there as much haddock and cod in the proper season now as there was formerly?—No, not half as much.

44,430. How is that?—It is God's will, I suppose.

44,431. What has become of it?—I do not know. I suppose it is decided by the will of God.

44,432-3. As you have gained your cause now, you have nothing much to complain of?—No.

44,434. And you can dredge where you like?—Yes.

44,435. (*Mr. Lefevre.*) How long is it since you had a good herring season?—I cannot remember; about 28 years ago, I think. It is about 40 years ago since we had a good pilchard season here.

44,436. But I want to know with regard to herrings?—I have no book in which I have kept an account, but I should say that for 40 years we have not got any weighty haul.

44,437. Have you had any good take within the last ten years?—No.

44,438. None at all?—We have had a trifle, but not a great haul, such as we used to get in former times.

The witness withdrew.

MICHAEL KELLY called and examined.

44,439. (*Professor Huxley.*) Are you a fisherman here?—Yes.

44,440. What is it you wish to tell us?—What I wish to say is, that I should like to dredge as we have done before all over the bay.

44,441. You do not wish to be stopped from dredging?—No.

44,442. You would consider it a great hardship if you were?—Yes, and a great loss too.

44,443. Then you agree with the previous witnesses?—Yes.

44,444. Does what you say apply to the tract of ground that is leased to Lord John Browne?—Yes.

44,445. You think if you were kept from it it would be a great loss to you?—Yes; they took about 30 of us last year; they got us indicted for dredging there, and they had the case brought to the assizes at Castlebar, and then, when it came to within two or three days of the time, they gave up the law of the case; but we went over for fear it was a scheme of theirs, and now we fear they are coming to try it on again. But we are ready to go to Castlebar again. They want to get rights where they never had them before, and where the public have been dredging ever since it was our fate to dredge. I think it is the greatest wrong that was ever suffered.

44,446. (*Mr. Lefevre.*) You have heard that it has been proposed by the Commissioners to give a licence to these gentlemen?—Yes, it has been reported that that is the case.

44,447. Did not Mr. Barry hold an inquiry here?—Yes.

44,448. Were you here at that inquiry?—Yes.

44,449. Did you not give evidence before him?—Yes, but not at the late examination.

44,450. There was an examination a short time ago?—I was not at that, but I was at the one before it.

44,451. (*Professor Huxley.*) You object to having any ground cut off from you at all?—Yes, we object to have any ground taken from us that we have been dredging on for evermore. We consider it our public lawful right, and we do not want to lose it.

44,452. Is there anything else you wish to mention?—I have nothing more to say, except that I do not wish to see any stopping of our fishing where we have dredged for evermore and our parents before us.

44,453-5. The law as it stands provides that if any part of the sea has been dredged on publicly, and if it has been a public fishing ground, it shall not be made private property. That is the state of the law. At present you have only to prove that it has been a public fishing ground.—You will get plenty of proof of that, if you want it.

The witness withdrew.

WILLIAM CASEY called and examined.

44,456. (*Professor Huxley.*) Are you an oyster dredger?—Yes.

44,457. What is it that you are anxious to say to us?—I wish to say, that we did not care whether we took small oysters or not after we had been prevented from fishing on the public beds and summoned for doing so.

44,458. Having been prevented from going on what you considered to be public beds, you did not care about saving the small oysters. You thought you might get all you could for yourselves?—Yes, because we thought they should not have them all for themselves.

44,459. You thought that those who leased the beds were getting all they could?—Yes.

44,460. And, therefore, you got all you could?—Yes, but we did not want to take small oysters, if we were not prevented from dredging regularly on the public beds.

44,461. You thought you were being deprived of a right, and, therefore, you would do a little wrong yourself?—Yes, just so.

44,462. Is there anything else you would like to mention?—Nothing but what you have heard before with regard to the herring-fishing.

44,463. What have you to say with regard to the herring fishery?—We should be glad to fish for herrings if we were assisted in getting nets and boats. We should be glad to try and fish for them, but we have no nets or boats fit for the herring-fishing, or to fish for those coarse fish, cod and ling.

44,464. The last witness told us there were no herrings worth speaking of?—There are not the men to go and look after them, and they have not got boats.

44,465. Do you think the herrings are there, if anybody went to catch them?—I do not mean to say they are. There is always a little got when the men go out to look after them, but as to the coarse fish they are not looking after them at all. We have not the means of getting spilliards, boats, or nets.

44,466. Is there anything else you wish to say?—No.

The witness withdrew, and the inquiry was adjourned until the 7th of September, at Galway.

Galway, County Galway, Wednesday, 7th September 1864.

PRESENT:

GALWAY. Professor Huxley, F.R.S. (Chairman.) | G. Shaw Lefevre, Esq., M.P.

M. King. *Mr. Macnamara* and *Mr. Regan* appeared for the Claddagh fishermen. *Mr. Concanon* appeared for the trawl fishermen.

7 Sept. 1864.

Martin King called and examined.

44,467. (*Mr. Macnamara.*) Are you a Claddagh man?—I am.

44,468. How old are you?—35 or 36 years.

44,469. How long have you been fishing in the bay of Galway?—I have been fishing in Galway Bay ever since I was 25 years of age.

44,470. Have you ever been trawling in the bay of Galway?—I have been trawling for the last seven years, going and coming.

44,471. In whose boats have you been engaged in trawling?—I have been most of the time trawling in Mr. Sweeney's boats, and in Mr. Stopford's boats part of the time.

44,472. Do you know the points in the bay called Gleninagh Castle and Barna Pier?—I do.

44,473. Is it between these two places that the line within which you are allowed to fish is drawn?—Yes.

44,474. Have you ever trawled between Barna Pier and the islands of Arran and that line?—I have done so often.

44,475. Did you ever trawl inside the line nearer to Galway?—Very seldom.

44,476. But you have done so?—I have trawled inside the limits.

44,477. Did you see any other trawl-boats trawling inside the limits?—I did.

44,478. Have you ever taken small fry with the trawl?—Yes, I have; I have taken a power of it.

44,479. What did you do with the fry,—was it of any value?—We just shovelled it overboard.

44,480. Then I suppose that it was of no value?—Some of it we might keep for our own use on board the vessel, and we should throw the rest overboard.

44,481. Why used you to throw it overboard?—Because it was of no use to us.

44,482. Did you ever examine the fry to see what description of fish it was?—Yes; it was small fish of from half an inch to three inches in length.

44,483. But what description of fish was it,—was it plaice, or cod, or what? what description of fry did you take?—There were doreys, gurnards, plaice, and several other sorts of fish.

44,484. Did you do that often?—Yes, oftener than I can give you an account of.

44,485. In what months of the year did you usually take the fry?—We used to take the most of it from June until August and September.

44,486. Did you ever take up any fish that after it was thrown on the deck spawned in fact upon the deck?—Yes I have seen plaice spawning on the deck, and soles too.

44,487. Where did you take those fish,—will you describe to the Commissioners in what part of the bay it was where you took them?—We have taken them in most places in the bay. It was not confined to one spot but we have got it in different places. At that time of the season the fish I caught would frequently spawn after it was caught.

44,488. From your own experience as a trawler, do you think that the trawl in passing over the ground destroys any fish?—I have no doubt that it does destroy the fish, and it also bares the soil so that it has no food upon it for the fish.

44,489. Would it destroy the spawn of the fish, if such spawn was on the bottom at the time the trawl was passing over it?—Yes, it would indeed.

44,490. Do you consider that trawling does an injury to the fishing in the bay of Galway?—Yes, I consider that it does.

44,491. Will you explain why you consider that it does?—I think that it does, because it banishes the fish and drives them away and scatters them.

44,492. Do you know it to be a fact that it does drive the fish away?—Yes, it does indeed; I know that it does; I am pretty sure of it.

44,493. Have you ever seen shoals of herrings coming into the bay?—I have often seen shoals of herrings coming into the bay, but if I was towing a trawl at the time through a lump of herrings, the result would be that I should frighten them and drive them away.

44,494. You would drive away the herrings?—Yes; towing a trawl through a lump of herrings would frighten the fish, and it would go away at once, and upon several occasions I might be towing a trawl through a lump of herrings, and yet not know it.

44,495. Did you ever meet a lump of herrings or a shoal of herrings while you were trawling?—Yes, I have done so when I have been working down the bay. If I were coming forward I should see a shoal of herrings.

44,496. How many boats are there generally trawling in the bay at one time?—Sometimes as many as 16, sometimes only nine, and from that down as low as six or seven.

44,497. Are they all trawling at the same time?—Yes.

44,498. When you first commenced trawling in the bay of Galway, were the fish any better or in increased qunatity compared with what they have been lately?—Yes, the fish were much better at first when the trawling commenced than they were at the time trawling was stopped.

44,499. When you first commenced trawling can you tell us how many soles you were in the habit of taking after a day's fishing?—When I first commenced trawling we used to take in one trawl from 60 to 70 pairs of soles.

44,500, Was that often and generally the case?—Yes, it was often enough.

44,501. When did you cease trawling?—Last April.

44,502. Was it not shortly before last April?—I believe that I stopped in Galway Bay in March.

44,503. At that time about how many pairs of soles or other descriptions of fish did you take in the trawl?—We were getting scarcely any fish at all in Galway Bay by trawling the last time I was there.

44,504. Did you get none at all?—We got very little.

44,505. Then you did not keep on trawling?—No, we had to go to some other place and trawl, out of Galway Bay.

44,506. Have you ever trawled outside the islands of Arran?—Yes, I have trawled there.

44,507. When you were trawling there, did you ever take much small fry?—We have taken small fry there, but we did not take as much as we took when fishing inside the islands.

44,508. You did not take as much fish outside the islands as inside?—No, we did not.

44,509. If you could get employment again in a trawl-boat, would you accept it?—I would accept it, if the hooking failed me.

44,510. Were you discharged from that employment?—No, I was not.

44,511. (*Mr. Concanon.*) You were at work for seven years?—Yes.

44,512. I believe that Mr. Sweeney had no fault to find with you which induced him to discharge you?—No.

44,513. You have not trawled latterly ?—No.

44,514. Was that because Mr. Sweeney could not bring his trawl-boats out ?—It might be.

44,515. Now was it not because he was afraid to bring out the boats that you did not go with them ?—It might be so.

44,516. Is that the reason you did not trawl with them latterly ?—I believe it was.

44,517. When you began trawling seven years ago, what wages were you in the habit of making by the work ? When you were in the trawl-boat, were you earning 12 shillings a week here ?—Yes.

44,518. You were put on shares then ?—We were, when the fish was going away.

44,519. In the last month you were trawling, did you earn 18 shillings a week each of you on your shares ?—On my oath I did not on the last week we were trawling in Galway Bay.

44,520. Did you in any week in the last month you were trawling ?—No.

44,521. Did you earn 16 shillings each, or how much did you earn ?—For the last fortnight I know I did not get 16 shillings.

44,522. Did you get 15 shillings ?—I am not sure what it was I got.

44,523. Did you get 14 shillings ?—I am not sure. All I know is, that I was obliged to part with trawling, and if I could have got 14 shillings or 15 shillings a week from it, I should not have been so ready to give up trawling in Galway Bay.

44,524. Is it not true that at some seasons of the year the fishing is better in Galway, and then better in some other bay, in Dingle Bay, for instance, so that you are here part of your time, and then in Dingle Bay or elsewhere, according as the fish come in; is that not the way with the trawlers ?—Sometimes they were in the habit of going to other places.

44,525. Is it not the case that the fish will be plentiful here for three or four months in the year, and that then you are obliged to go to some other place ?—There used to be plenty of fish always in Galway Bay.

44,526. Six months ago did you earn 1*l.* 5*s.* a week on shares ?—I did.

44,527. That was twice as much as the weekly wages you used to have when you first began, and one shilling over ?—Yes.

44,528. Do you recollect the inquiry that was held here last Christmas ?—Yes, I do.

44,529. Do you not recollect that, for a short time before that inquiry, the trawlers were afraid to go out,—it would perhaps be for a fortnight before then? —I suppose they were.

44,530. For that fortnight, did not the fish come in great shoals into the bay ?—The fish did come in, I believe.

44,531. Do you recollect the memorial that went up to the Lord Lieutenant ?—I do not recollect the memorial.

44,532. Were the men out fishing last week ?—Not the trawlers.

44,533. I do not mean the trawlers, but your boats. Were they out herring-fishing ?—They were.

44,534. Did they not get a fine take ?—They did not get half as much as they were able to get in former years.

44,535. Did they not get more than they have got for five years back ? Have not the takes latterly been very good ?—They are getting herrings now.

44,536. In plenty ?—Yes.

44,537. Were the herrings sold within the last month at six a penny by the thousand, I mean those herrings you have been getting in Greatman's Bay?—They were sold for 1*l.* a thousand.

44,538. That is at the rate of two shillings a hundred ?—Yes.

44,539. Is that not very cheap ?—Yes.

44,540. There was a great take of them, I believe, was there not ?—Yes, there was.

44,541. Well, now, when do you take most of the small fish you have been speaking of,—do you take most of them in the months of August and September ? —Aye, and in June and July.

44,542. Now, if you were on your oath, would you swear to what a little fish, a fish an inch in size, was,—would you be able to tell what it would be when it was large,—could you swear on your oath what it was ?—What it was ?

44,543. Yes, what kind ? Could you tell what it was if you were on your oath ?—I cannot tell precisely what fish it is, but I know I have taken the fry of small fish from a quarter of an inch to three inches in size.

44,544. You said that the trawl would frighten the herrings ?—Yes.

44,545. Would the Claddagh boats frighten the herrings if they met them ?—They kill the herrings and bring them home.

44,546. But would they frighten them ?—If they did, the herrings would come in again the next day.

44,547. Then you would catch them in the Claddagh boats, but the trawlers would not ?—I never saw any herrings caught in the trawl.

44,548. When you went to Dingle Bay to trawl, were the fish very plentiful then ?—I never trawled in Dingle Bay, but I have trawled in Bantry Bay.

44,549. Were the fish plentiful there when you were trawling ?—Yes.

44,550. Who did you fish for when you were trawling in Bantry Bay ?—For Mr. Sweeney.

44,551. Would the fish run out there and get scarce, and then would you go to another place ?—We were generally about a month there.

44,552. At the end of that time, did you find that the fish were getting scarcer ?—Yes.

44,553. Tell us where you went then. Did you go from Bantry to some other place ?—No; we generally came home then.

44,554. Is there a law of the Claddagh men, that the Spiddle, Renville, and County Clare men shall not go out to fish until the Claddagh men wish to go themselves ?—From Spiddle they might.

44,555. Dare any of the boats round the shore come into Galway Bay here to fish for herrings, except when the Claddagh men wish it, and choose to go out themselves ?—The outside boats fish without the Claddagh men being there.

44,556. And were they hunted by the Claddagh men for doing so ?—Sometimes they would be, and sometimes not.

44,557. Why would they be hunted?—Because it was considered right to give the fish time to come into the bay. It was done by a proper law.

44,558. Whose law was it ?—I cannot tell.

44,559. Was it not Claddagh law ?—It was done in order that the fish might have an opportunity to remain in the bay.

44,560. But whose is the law that would not let the other fishermen come in to fish ?—I believe there is no exact law.

44,561. Are the fish in the bay in plenty now ?—Yes.

44,562. Dare the Renville men or the County Clare men go out to see after herrings, unless the Galway men go out too; would you not sink their boats if they went out ?—I do not know.

44,563. (*Professor Huxley.*) If the Clare men went out, would the Claddagh men attempt to prevent them from fishing; is that so or not ?—Sometimes it would be so, and sometimes not.

44,564. But take the case of this particular time; if the Clare men went out, would the Claddagh men prevent them from fishing ?—I have no doubt they would.

44,565. Why so ?—In order to give the bay time for the fish to come in.

44,566. (*Mr. Concanon.*) Will you tell us if you were out last night yourself ?—I was not. I have been out very seldom in the bay at night-time.

44,567. Do you know Mr. Oliver, who has a trawl-boat ?—I have never seen him with a trawl. He has a fishing-boat.

GALWAY.

M. King.

7 Sept. 1864.

44,568. Do you know whether he was hunted last night?—I do not know it.

44,569. Did you hear that he was?—I am not sure of that.

44,570. Did you know Henry Morris?—I did.

44,571. Was he an Englishman?—So he says himself.

44,572. Are there any men bound over to stand their trial for breaking his arm, and wounding him a few days ago?—I believe there were some people engaged in that.

44,573. Why did they attack him?—I do not know.

44,574. Was he one of the trawl men or not?—He was the skipper of a trawl-boat.

44,575. Has he not since gone away to England and left this place?—I am not sure whether he has gone to England or not.

44,576. What depth of water is there outside the islands of Arran?—There are from 40 to 60 fathoms of water outside the islands.

44,577. Could you in rough weather trawl out there?—Not much.

44,578. You could only trawl there when you had very nice smooth fine weather?—We might trawl with a reef or two.

44,579. I believe that the Claddagh men were obliged, in the years of the famine, to pawn all their tackle,—their nets, and boats, and everything?—The food being so dear, they could not afford to live.

44,580. Was it at that time, namely, in the years 1847 and 1848, that they became so poor,—I mean, at the time of the potatoe failure and the great rot?—There was plenty of fish at that time.

44,581. Were they at that time obliged to pawn their boats?—I never saw a boat pawned.

44,582. (*Professor Huxley.*) You stated, I think, in your examination, that the small fish that were taken in the trawl were doreys, gurnards, and plaice?—Yes; soles, doreys, and several sorts of fish.

44,583. Were there soles besides doreys, gurnards, and plaice?—Yes, there were soles besides.

44,584. Were there any other kinds of small fish?—There were small fish of various sorts.

44,585. Were there small cod or small haddock?—I have often seen small haddock.

44,586. And small cod?—They were not very plentiful. The cod we got were never very small, but we very often took large cod.

44,587. But I am speaking now of the very small fish which you took in your trawl-net,—were they from half an inch to a couple of inches long?—From half an inch to about three inches.

44,588. And they consisted principally of doreys, plaice, soles, gurnards, and haddocks?—Yes.

44,589. Do you think that it did much harm to the fishing?—Yes, I think it did; it destroyed the fish, and did not allow them to become large.

44,590. What proportion of the fish out of the whole haul would consist of these small fish; suppose, for instance, that you hauled up half a ton of fish how much of that quantity would be small fish, unfit for market,—would there be a basketful or a handful?—Perhaps there would be a basketful that would not be fit for sale, and at other times there would be a great deal more. Sometimes one quarter of the fish would not be fit for sale.

44,591. What do you think was the average quantity of small unsaleable fish taken in one haul,—was there as much as one-fourth small and unsaleable fish on the average?—The fish were so weighty that I cannot give you an account of it. The small fish would be very little, and yet there would be a power of fish in it.

44,592. Tell us what in your judgment would be the average quantity of small fish taken in a haul; if, for instance, there were five baskets of fish taken in one haul, would one basket out of that quantity consist of small and unsizeable fish?—We used to get half a basket, as compared with five hampers or ten hampers of large fish; but, at the same time, there might be quite as many small fish taken altogether as large fish, although, of course, they would not fill as many baskets, because they were not as large.

44,593. Then I understand you to say that, supposing there were five baskets of fish taken in one haul by the trawl net, there would be among them from half a basket to a basket of fish not fit for food?—There would be.

44,594. That is what you mean?—Yes.

44,595. Do you think that the quantity of small fish taken in that way was so great as seriously to damage the fishery?—There was not so much small fish taken the last time I was trawling as there was when I first began.

44,596. Do you think that the taking of those small fish did harm to the fishing generally?—Yes, I know that it did.

44,597. Well, then you went on to speak about the spawn being taken up in the trawl; do you mean by that the pea of the fish?—I have seen a fish spawning on the deck of the vessel.

44,598. Doubtless, if you bring fish up from the deep water, at a time when they are full of spawn, some of the spawn will be left upon the deck?—I mean from shallow water.

44,599. It would be the same whether in shallow or deep water; but did you bring up spawn in your trawl?—Fry or spawn?

44,600. I mean the pea of the fish, the eggs and the spawn itself?—No, I did not see any of that.

44,601. You have never seen any spawn in that sense?—Not unless it was the pea of the fish when they have been spawning on the deck.

44,602. Then do you conceive that trawling is a very injurious mode of fishing?—Yes, I do. I know that it is very injurious to the fish.

44,603. You stated, however, just now, in your evidence, that if you were hired to go on board a trawler, you would readily go trawling again?—Yes, I would, if I was not interfered with.

44,604. Then you do not think that it is as bad as you say it is?—I might go trawling to some other place, if this bay failed with regard to trawling.

44,605. Do you think that you would make more money by trawling than you would by hook-fishing?—If it were not injurious to the fishing, I think I might make money by it.

44,606. You tell us, in the first place, that you think trawling is very injurious to the fishing, and then you say you would have no objection to go trawling if you were hired to do so. Those two statements do not agree very well?—I have no doubt that trawling is injurious to the fishing, and I should not go trawling because I could not get any fish.

44,607. We understand you to say that six months ago you were earning as much as 1*l.* 5*s.* a week by trawling; was that when you were working upon a share?—Yes.

44,608. Then, I suppose, at that time you must have been getting a good supply of fish?—Sometimes we were.

44,609. Was that your average earning?—No.

44,610. Did you earn as much as that for five or six weeks together?—No, I did not get 25 shillings a week for five or six weeks together. Sometimes I only got 15 shillings, and sometimes 13 shillings, and from that to 20 and 25 shillings.

44,611. Were your average earnings, taking one week with another, as much as 1*l.* a week?—No, they were not.

44,612. Were they as good as 18 shillings a week?—No.

44,613. How much would be the average?—About 15 shillings, I think, and sometimes it would not be as good as that.

44,614. How long have you been a fisherman here?—I have been a fisherman ever since I have been able to fish.

44,615. Is that for about 20 years?—It is 25 years ago since I commenced fishing.

44,616. You have always belonged to the Claddagh?—Yes.

44,617. Do you recollect how many boats there were 25 years ago?—I recollect when there three times as many as there are now of the large hookers, and they were splendid boats.

44,618. Tell me how many there were at that time?—I could not give a correct statement of how many boats there were.

44,619. If you have been fishing for 25 years, you can recollect 15 years ago?—I was fishing at the time I was 12 or 13 years of age.

44,620. Can you recollect since you were 25 or 26 years old?—Yes.

44,621. Supposing we take 15 years ago, how many boats were there then?—There were many hookers sold when the trawling commenced, and the people went off.

44,622. What people went off?—The owners of the hookers; they gave the hookers up.

44,623. Was that when trawling commenced?—Yes.

44,624. But, if you can say there were three times as many boats as there are now 25 years ago, can you give us no notion of what number there was?—There were ten times as many of the large hookers.

44,625. Ten times as many?—Yes, indeed.

44,626. How many are there now?—There are only very few. There are five or six large hookers, I think.

44,627. Then there were 60 large hookers at the time you speak of?—There are only six now.

44,628. Were there 60 twenty-five years ago?—Yes.

44,629. Were there 60 of the large hookers?—Yes, they were large hookers, and they were splendid boats.

44,630. Were there more people fishing than there are now?—Yes, there were. There were a great many people fishing in our village.

44,631. If there were ten times the number of boats, there must have been a good many more men fishing?—Since then they have not been able to afford the large hookers, and they are obliged to go in the small boats now.

44,632. Do you mean to say that, when they ceased to have the large boats, the same number of people went fishing in the small ones?—Yes.

44,633. How many fishermen are there now in the Claddagh?—I think there are about 400.

44,634. And how many do you suppose there were 20 years ago?—There were a great many more any how.

44,635. Have you any notion of how many men there were?—The population of Claddagh was 700 or 800 men.

44,636. Is that 20 years ago?—Yes.

44,637. (*Mr. Lefevre.*) You say that you began trawling seven years ago?—No, 10 years ago.

34,638. How many vessels were there trawling then?—There were 10 or 11.

44,639. What sized boats were they?—They were boats that came from all parts; from Dublin and other places.

44,640. About what size were they?—The boats would run from about 40 to 70 tons.

44,641. Were they all of that large class of trawlers, or were there any smaller ones among them?—They were large boats.

44,642-3. Did you trawl every month in the year?—Yes, I did; I trawled constantly for four or five years.

44,644. How long were you paid by wages?—I was paid by wages for eight years.

44,645. Then it is only quite recently that you were paid by shares?—Yes, it has been for the last two years.

44,646. You told us that you fished sometimes within the line of prohibition?—I have trawled inside the limits.

44,647. Was that in the day-time or in the night-time?—I used to trawl in the night-time inside the limits.

44,648. How often were you in the habit of trawling in the course of a year within the limits?—I would sometimes get fish inside, but very seldom. Outside was the place in which I have generally been trawling.

44,649. Did you get a larger proportion of small fish when you were trawling within the limits or not?—I have been so seldom inside the bay trawling that I could not get so much fish inside as outside.

44,650. But when you fished inside the limits was the proportion of small fish you caught in your trawl larger than it was when you fished outside?—The small fish we caught then were about the same size as those which we caught outside.

44,651. About the same proportion?—Yes.

44,652. Is there more ground fit for trawling inside the limits than outside?—There is more ground fit for trawling outside.

44,653. When the herring season commenced did you go on trawling all the same?—Yes, I did. It was according as I had the means of going after the herrings that I went or not.

44,654. Were the trawlers at work when the herring men were in the bay?—Yes, they were.

44,655. Used they to trawl at night?—I have been trawling in the night-time.

44,656. Have you been trawling in the night-time while the herrings were in the bay?—Well I did not trawl where the herrings were in the harvest time.

44,657-8. Did you take care to keep away from the herrings during the herring season?—I did not come near them. We generally fished further out in the bay when the herring-fishing was going on.

44,659. Did you try to keep three miles off the drift nets?—No, I have sometimes been close to the drift nets when I have been trawling.

44,660. Did you ever see the herrings dispersed by the trawl?—No, I never saw any herrings in the trawl net.

44,661. Did you ever see them driven away by the trawlers coming among them?—I could not see them in that way, because when the herrings were frightened they would not show themselves. They would not appear to us so that they could be seen.

44,662. Then what makes you think that the trawlers frighten away the herrings?—I am quite sure that they do.

44,663. What makes you sure that they do?—The trawl is so heavy, and we show such a light, especially in fiery water, it would frighten a man as much as the fish.

44,664. You think that the fish must be frightened by so heavy a machine passing through the water?—Yes.

44,665. But you have not seen anything which particularly leads you to believe that?—Yes, I have.

44,666. What have you seen which leads you to suppose that the herrings are frightened by the operation of trawling?—I have seen the trawl appear quite large and like fire in the sea.

44,667. What were you in the habit of doing with the small fish you caught in the trawl?—We threw them all overboard.

44,668. Did you bring any of them home to the market?—We might take a little one from among them.

44,669. But the greater part of the small fish you throw overboard?—Yes.

44,670. Were they alive when you threw them overboard?—Sometimes they were, and sometimes they were not. I should say that the mos of them would be dead.

The witness withdrew.

GALWAY.

T. Flaherty.

7 Sept. 1864.

THOMAS FLAHERTY called and examined.

44,671. (*Mr. Regan.*) Are you a fisherman ?—Yes.

44,672. How many years have you been fishing in the Bay of Galway ?—Twenty years.

44,673. Am I to understand that you have been eight years trawling ?—Yes.

44,674. In whose employment were you when you were trawling ?—I was in the employment of Mr. Smith, also of Mr. Sweeney, and also of Mr. Stopford.

44,675. Have you ever seen fish taken up by the trawl that have spawned on the deck ?—Yes, I have seen plaice spawning on the deck, and codfish and soles.

44,676. Have you ever taken any quantity of small fry in the trawl ?—Yes, I have.

44,677. Will you tell us what quantity you have taken at a time ?—I cannot tell you what number of small fry we have taken at a haul.

44,678. Can you tell us how many baskets you may have had ?—No, I cannot tell you the number of baskets.

44,679. Did you take a stone weight of them ?—I believe I took about a stone weight of them; that would be the refuse and the fry.

44,680. What did you do with them after you took them up ?—We picked them out from the good fish and threw them overboard again.

44,681. Can you say whether they would be dead or alive when they were thrown overboard ?—Some of them would be dead, and some of them alive.

44,682. In what part of the bay did you take the small fry ?—In all parts of the bay.

44,683. Inside the islands of Arran ?—Yes, inside the islands of Arran, and outside of them too.

44,684. Did you take the largest quantity inside the islands or outside ?—I have been oftener inside the islands than out, and I have taken most inside.

44,685. I believe you have been fishing altogether for 20 years ?—Yes, about that.

44,686. Are you able to say whether the fishing in the Bay of Galway has improved or fallen off for the last 20 years,—is it better now than it was 20 years ago, or is it as good ?—It is as good now as it was the first year I fished. I do not know how it was before then, because I was not reared in Galway. I was reared in the country.

44,687. Is it as good now as it was eight years ago, for the poor fishermen ?—I think it is as good now as it was eight years ago.

44,688. Do you consider that the quantities of small fry and small fish taken in the trawl have been the cause of the failure of the fisheries ?—That is more than I can say.

44,689. You cannot say that ?—No.

44,690. For what description of fish is the fishing as good now as it was eight years ago ?—I do not know how it is for coarse fish, but for herrings it is better now than it was eight years ago.

44,691. That is to say, it has been better during the last few days than it has been for eight years previously ?—Yes.

44,692. For the last few days there has been a better fishing for herrings than eight years ago ?—Yes.

44,693. How long is it since the trawling was stopped here ?—It has been stopped since May last.

44,694. To the best of your belief is it not in consequence of the stoppage of the trawling last May that the fishing has been better ?—Yes.

44,695. Do you consider that the stopping of the trawlers from fishing last May has been the cause of the increase of fish now in the Bay of Galway ?—I think it has been.

44,696. What description of spawn and small fish did you take up in the trawl ?—I cannot tell you the amount of it I took up.

44,697. But I want to know what description of fish you took up; can you say if you took up the fry of codfish ?—No, I never saw any cod among them.

44,698. Did you see any doreys ?—Yes.

44,699. And plaice ?—Yes, and whiting.

44,700. Gurnards also ?—Yes, gurnards, and soles, and haddocks.

44,701. Were there any lobsters ?—Yes, there were lobsters also.

44,702. Inside the islands of Arran is it all a spawning bed until you come to the lighthouse ?—As far as I have been trawling in the Bay of Galway it is all a spawning bed.

44,703. Inside the islands ?—Yes; I have seen fish spawning in every place inside the islands.

44,704. Now, with regard to trawling over a spawning bed, do you consider that it would be injurious to the fishing in general ?—I believe that the trawl would take anything in the world that it came across. I do not know what it would take particularly, but I believe it would take anything.

44,705. Then if the fish are spawning on the beds and a trawl runs over the ground at the time the spawn is there, do you consider that that would be injurious to the fishing in Galway Bay ?—I suppose that it would be.

44,706. Do you think that it would destroy the spawn and injure the fishing ?—Yes, it would be sure to do that.

44,707. From the experience which you have had as a fisherman in the Bay of Galway, do you consider that if the trawling was put an end to within the islands of Arran it would improve the fishing in the bay ?—I have no doubt that it would.

44,708. (*Mr. Concanon.*) How long were you engaged in trawling for Mr. Sweeney ?—I think I have been with Mr. Sweeney for seven or eight years.

44,709. You heard this question put and you answered it, namely, whether you thought the stopping of the trawlers had made the fishing better ?—Yes, it did.

44,710. Then will you explain to the Commissioners what it was that stopped the trawlers ?—The poor people stopped the trawlers in order to do themselves good, because they were so poor that they could not stand it.

44,711. Where do those people live, and who are they ?—They live in the Claddagh, but there were people who were opposed to the trawling in all parts of Galway as well as the fishermen.

44,712. Did the people of the town try and put them down, or did they encourage the Claddagh men to try and stop the trawling ?—They did.

44,713. They did what ? — They stopped the trawlers.

44,714. How do you mean—that the people of Galway did it? The gentlemen and shopkeepers; did they encourage the Claddagh men to stop the trawlers ?—I do not know anything about the shopkeepers, but all the people about Galway did.

44,715. They were all assisting in putting a stop to the trawling ?—Yes.

44,716. The people of Galway ?—Yes.

44,717. Did you a short time ago lay an information before the magistrates, that you had been assaulted because you were working in a trawler ?—Yes, I did.

44,718. Before whom did you lay that information ?—Before Mr. Sweeney, Mr. Smith, and Mr. Burbidge.

44,719. But did you lay any information before a magistrate ?—They brought me before a magistrate.

44,720. What magistrate ?—I do not know.

44,721. Were you afraid afterwards to go out ?—I should not have been afraid if I could have got any one to go out with me.

44,722. Were the others afraid from a dread of what the consequences would be to themselves ?—I do not know. Some of them were; but at the same time they did not like to do their neighbours an injury, because they were so poor.

44,723. Did you swear that you were in danger of your life, and that all the men in the trawlers were in a similar position ?—No, I never did.

44,724. What did you swear then?—I said I was afraid.

44,725. Afraid of what?—I was afraid of such a number of people; it was the whole county entirely.

44,726. What were you afraid they would do to you?—I was afraid they would hurt me sure, but I was not afraid they would kill me.

44,727. Were you afraid that they would beat you?—Yes, but there were more people than the Claddagh men to do it.

44,728. Were you afraid that you would be run at by the boats?—No.

44,729. Were you afraid that the Clare men and the other men would run at you and drive you in; did they frighten you on the sea?—No, I was never frightened on the sea.

44,730. Then how was it done?—They said they would do it at night time if they caught us.

44,731. And it was from a dread of that that you abstained from trawling?—Yes.

44,732. Then were there such a peaceable lot of people among the Claddagh fishermen that you were afraid at night that they would attack you on the sea?—I was not afraid of it.

44,733. Why would they attack you?—They might attack me, but I can give you as an answer that I was not afraid of it.

44,734. In consequence of the threats that were used, was it not a fact that Mr. Sweeney and Mr. Burbidge could not send out their boats?—They would have sent them out,if they could have got anybody to go with them.

44,735. Supposing the Commissioners were able to do it, would you hesitate, if they gave you a couple of trawlers to-morrow, in going out? Would you be able to get men without dread, if you had the boats supplied to you to-morrow, to go trawling?—No, I think not.

44,736. Not even for one day?—There would be plenty to try it for one day, but not for doing it constantly. You would not get men to go in the boats for that purpose.

44,737. Do you recollect when the memorial was sent up before the trial in December last year?—I was never here about any memorial.

44,738. About last Christmas were you stopped from trawling?—Yes.

44,739. Was there not a great take of fish one week after the trawling was stopped?—I cannot remember.

44,740. Cannot you recollect last Christmas?—Only very badly.

44,741. About November, which was the month in which the trawlers were stopped last winter, did the fish get plentiful in the course of a week afterwards—I mean every kind of fish?—I know this much very well, that when the trawling was stopped last year there were more fish to be got, of all kinds of fish and hake, than before.

44,742. Were they not got in a week after the trawlers stopped?—Yes, exactly.

44,743. Do you think that the fish grew up in the course of one week?—They might have come in from the rough ground, and when the trawlers were working they may have kept them out on the rough ground.

44,744. After the trawlers stopped, you think they came in?—Yes.

44,745. (*Professor Huxley.*) You said just now that when you were trawling you took about a stone of small fish, some of which were dead, and some alive?—Yes.

44,746. When you took as much as that, how many stone of fish would you get altogether?—Big and small?

44,747. Yes, take the whole haul; I want to get at the proportion?—I have seen upwards of a ton of fish taken in one haul, with no small fish in it at all.

44,748. Supposing that you got 20 stone of fish in a haul, how many out of the whole catch would be small and unfit for food; I only want your opinion or judgment in the matter?—So far as the fish are concerned which we should condemn altogether as of no use, there would not be more than a stone.

44,749. Then about one-twentieth of the whole catch would be unfit for sale?—None of the fish we should condemn would be fit for anything, and there are others that would not be sent to the Dublin market, but which would be packed up and put in baskets and sold in Galway.

44,750. Then, in reality, did you sell all the little fish as well as the large? Did you sell all the small plaice and gurnards, and so forth?—We did not sell the fish, we threw them overboard.

44,751. There was a certain proportion you threw overboard, namely, one stone out of 20 stone?—Yes.

44,752. You quite understand my question. If you took 20 stone of fish, I ask you how much of that quantity would be unfit for food, and you say one stone. Would that have to be thrown overboard?—There was sometimes as much as half a ton of sand among the fish.

44,753. I am not speaking of sand, but of small fish?—We could not tell what would be the weight of small fish there would be in it. We should throw the sand away directly we took up the trawl, and in that case we should throw the sand and the fish overboard.

44,754. I do not want to know anything about the fish you cannot tell about, but what you can tell about.—We did not have much fish, big or small, but we might have a stone of small fish.

44,755. One stone out of 20?—Yes.

44,756. About what time would that be?—In May and June.

44,757. Would you find the same proportion of small fish all the year through?—No.

44,758. Were there some times in the year when you would get less?—We should not get half as much small fish at any other time of the year as we should get in June.

44,759. Does the statement you now make refer to June in particular,—do you get one stone of small fish out of 20 in June?—Yes, and more too.

44,760. And at other times of the year you would get less?—Yes.

44,761. I understand you to say that the fishing now is as good as it was eight years ago?—It is as good as it was eight years ago with regard to the herring-fishing.

44,762. But apart from the herring-fishing, are the other kinds of fishing as good as they were?—We are taken up with herring-fishing now. We cannot go and look for coarse fish. The last time we looked for coarse fish, we got more than we got for eight years previously.

44,763. What time of the year was that?—In the harvest time.

44,764. Last harvest?—From July up.

44,765. Do you mean this particular year just past, within the last two or three months?—Yes.

44,766. From July to September?—Yes.

44,767. In the last July and August, now past, you were getting as much coarse fish as usual?—Yes.

44,768. As much as has been taken any time for the last eight years?—Yes, and more. I did not hear of a boat killing a hundred of whiting for eight years before, and that is the fish we catch in most plenty from July up to Christmas. It is the most plentiful fish then that we supply; but I never saw a hundred caught with any boat since I began to trawl.

44,769. Did you get whiting this last July?—Yes.

44,770. Was there a considerable quantity of whiting?—There was plenty of it. There was as much as you would like to take of them.

44,771. Were they good sized fish?—Yes, they were.

44,772. Did you get anything like the same amount of whiting last year?—No, we only got very little of it.

44,773. Are you able to say what has made the difference between the two years?—I suppose the

GALWAY.

T. Flaherty.

7 Sept. 1864.

whiting which were existing at that time have grown up and come in.

44,774. Do you think that the leaving off of the trawling has given you more whiting this year?—Yes, I believe it has.

44,775. Have the whiting had time to grow up within the last twelve months?—I suppose they have. They must have got time, because they are in now, and there have been none in for eight years before.

44,776. Are there plenty of haddocks in the bay this year?—No.

44,777. Are there no haddocks?—No.

44,778. There have not been any haddocks for a good many years?—I have not seen any haddocks; only an odd one or so since I began to trawl. The year I trawled there were plenty of haddocks, but of late years I have got none at all, with the exception of an odd one now and then.

44,779. Does trawling destroy the fish, or does it drive them away?—I believe that it is destroying the fish.

44,780. Do you think that while the trawling lasted it destroyed all the whiting?—I know that it did. It destroyed whiting, hake, haddocks, and codfish more than any other fish, because they are ground-fish.

44,781. Trawling went on last winter, did it not?—Yes.

44,782. Up to the end of last year?—Yes.

44,783. Until May in this year?—Yes.

44,784. If the trawling, while it went on, destroyed all the whiting, those whiting you are getting now must have grown up to be big fish since last May?—Yes.

44,785. But is that possible?—I think that if the trawling was going on now the fish would be frightened away from the bay still.

44,786. It is rather difficult to imagine that large full-sized whitings, such as you tell us you are taking plenty of now, could have grown to that full size within the last four or five months, and yet that must be the case if the trawlers destroyed them all before, must it not?—Yes.

44,787. Do you think it possible for whiting to grow to their full size in the course of four or five months?—The small fry we have been destroying, of from three to five inches in length, for the last five years, if they had got time to grow up, would have been as plentiful in the bay as they are now, but we were taking them by trawling and destroying them.

44,788-9. Do they take five years to grow up?—Yes. They have been all taken away for eight years. The first time trawling began here, a trawler would take from 1,000 to 1,500 whiting, and from that time to this year, I have not seen more than 100 or 150, and they only take that quantity near the islands of Arran. There are none in the bay where we used to kill them before trawling began.

44,790. How long do you think it takes for a whiting to grow up to its full size?—I do not know.

44,791. Did you mean to say that you thought it took five or six years to grow up to its full size?—No. What we were taking of small whiting all the spring would be growing up throughout the summer time, until the harvest. What we kill now with our lines in the first of the summer were only that length (*measuring*) in the spring, and now they are that length (*measuring,*) and the bay is chock full of them.

44,792. How long do you think it takes a whiting to grow to its full size?—I do not know.

44,793. You did not mean to tell us that it took five or six years?—I did not.

44,794. Suppose that a whiting is three inches long, do you think that such a whiting, in the course of four or six months, would grow to be a foot long?—I do not know that. I do not know how long a whiting will grow.

44,795. Have you no opinion upon it?—No, I cannot give you any opinion upon that. But the fact of the matter is, that if you do not stop trawling in Galway Bay you will destroy all the people and the fishermen living here. You might as well set about building a workhouse for them at once. I cannot go further than that with you.

44,796. You think that Galway Bay is a spawning place for the fish?—I know it is, because I have been trawling over every inch of it.

44,797. What makes you think so?—Because I have taken fish when they have been spawning in every part of the bay.

44,798. Did you ever get up the spawn or the pea of the fish itself?—No. If I have taken it up, I have so much sand with it that it would destroy the spawn.

44,799. But you never did see any?—No, never.

44,800. Did you sign the memorial that was presented a few months ago to the Lord Lieutenant?—Mr. Sweeney and Mr. Burbidge brought me to some lawyers. I did not know where they were bringing me, but they coaxed me up so much that I did go with them.

44,801. Mr. Sweeney and Mr. Burbidge have nothing to do with this, because it is a memorial against trawling?—Against trawling?

44,802. Yes.—No, I never saw the likes of that at all. I have nothing to say further, than that I was trawling myself, and that if I wanted to keep at it because I was gaining more money by it, I should be compelling the other people to beg.

44,803. (*Mr. Lefevre.*) You were trawling up to May last?—Yes.

44,804. When did you first come to the opinion that it was damaging to the other fishermen?—I know it is.

44,805. When did you become of that opinion?—I have been of that opinion at all times. If I had been fishing in other ways since I began to trawl, I believe I should have been in the workhouse.

44,806. Although you thought trawling was doing harm all the while you were fishing, you went on doing it?—Yes, I did, because I wanted to keep myself alive as long as I could, and no one would blame me for that.

44,807. Was it because you made a good deal more money by trawling than by any other kind of fishing that you continued at it?—No doubt, I was making money by it, but I was setting other people begging.

44,807*a*. Did you find that your earnings by trawling were beginning to fall off last spring? Did you make less money than you did when you began eight years ago?—I do not know what I made when I first began to trawl.

44,808. Were you making less by trawling last year than the first year in which you began trawling?—It was on wages that I was the first time that I commenced, and I do not know what the owner was making.

44,809. What were you getting by wages?—From 8*s.* in one week, until I went up to 1*l.* When I was not upon a man's share I was only getting 8*s.* a week; then I got 18*s.* and after that 1*l.*

44,810. When you got 1*l.*, were you paid by wages or by the share?—I got 1*l.* by wages, and on the share I got from 1*l.* to 2*l.*

44,811. What do you think was the average of your earnings per week the last year you were trawling, taking one week with another?—Taking one week with another since I went on shares, as long as I was trawling, I think I got 1*l.* a week or above that, but I cannot exactly tell.

44,812. Did you often trawl outside the islands of Arran?—I did.

44,813. Do you think that, if trawling was prohibited in the bay, inside the Arran islands, it could be carried out profitably from this port?—That would be according to the weather. We were often kept trawling in the bay in consequence of the weather. We trawled outside as well as inside when we could.

44,814. Are you often prevented by rough weather from trawling outside?—We never tried it outside, only one month in the year.

44,815. What was the reason of that?—Because the fish would leave Galway Bay. We would not be able to get fish in Galway Bay. We had taken all of it, and then we were bound to look for it outside.

44,816. Was it in the month of May you could not find any fish in the bay?—Yes, we would not find any then.

44,817. Then, when did you begin to fish again in the bay?—Coming on to June and July; perhaps a week or a fortnight before July. We would be trawling until we destroyed one place, and then we went round all the islands, until we came to the North Sound and further up to Barna Pier.

44,818. When you could not find fish in the bay, you fished outside?—Yes; but it was not worth while to go outside when we had fish inside. It would take us a day and a night to go out and fish and get into the market, if we fished outside.

44,819. You never fished outside the islands of Arran in the winter time?—I never did, but I have heard that other people have done so.

44,820. Did you find any great quantity of small fish when you were trawling towards the end of August and September?—I do not think I did, except fresh-water flukes that would be coming in.

44,821. Did you find any small fish when you were fishing outside the islands of Arran?—Very little.

44,822. But when you came into the bay, after fishing outside in the beginning of June, you found small fish?—Yes, there is plenty of it then.

44,823. How long did you go on finding small fish?—We would be taking it for about a month.

44,824. And, with the exception of that month in the year, was there any time in the year that you took small fish?—No; on the north shore we only took it during that month, but if we went to the south shore in the spring, then we should take the fresh-water flukes I mentioned upon it.

44,825. If you had kept outside the Arran islands during the month of June, you would not have taken any small fish at all?—No.

The witness withdrew.

JOHN GRIFFIN called and examined.

J. Griffin.

44,826. (*Mr. Macnamara.*) You are a Claddagh man, I believe?—Yes.

44,827. Have you long been fishing in the bay of Galway?—I have been fishing ever since I was eleven years of age. I have been fishing ever since that time with a hook.

44,828. Did you ever use the trawl?—I did at one time.

44,829. How long have you been trawling in the Bay of Galway?—I have been seven or eight years, coming and going.

44,830. For whom were you trawling?—I was in one of Mr. Smith's boats.

44,831. Were you ever with anybody else?—No; at that time there was nobody else.

44,832. Have you been trawling with anybody else since then?—Yes, with Mr. Sweeney.

44,833. Up to what time were you employed as a trawler?—Up to last May.

44,834. That is when you ceased to trawl?—Yes.

44,835. When all of the trawlers stopped?—Yes.

44,836. Were you discharged by Mr. Sweeney; did he turn you away?—No, he did not.

44,837. While you were fishing or trawling, did you ever take small fish?—I did.

44,838. Did you ever take fish so small that they were unfit for use?—Yes; I have taken small fish only an inch broad.

44,839. What sort of fish were they?—They were ray, doreys, whiting, haddock, gurnards, and small flukes and plaice.

44,840. What did you do with those fish when you took them?—We used to throw them overboard.

44,841. How much at a time did you take?—More than a basketful, sometimes.

44,842. You sometimes took more than a basketful at a time?—Yes, at one time.

44,843. Was that a thing that often happened?—Yes.

44,844. Very often?—Yes.

44,845. Do you mean to say that that used to happen every time you drew up the net?—There would be very few times that it would not happen.

44,846. Did you ever trawl outside the islands of Arran?—I did.

44,847. What kind of fish did you take there?—I did not take half the quantity of small fish out there that I took inside, nor one-fourth of it.

44,848. Were the large kind of fish which you used to take out there of a better kind than the large kind of fish you used to take inside the islands?—The soles were every bit as large inside as they were outside.

44,849. But how was it with regard to the other kind of fish?—We did not take as much fish outside as we did inside, nor one half.

44,850. Did you ever fish inside the line within which trawling was prohibited? Do you know where the line is?—Yes, from Gleninagh Castle to Barna Pier.

44,851. Did you ever fish nearer to Galway than that line?—Yes, I have fished very near to Galway.

44,852. How near?—Within four miles of the lighthouse.

44,853. How long ago is it since you trawled inside that line?—I was trawling inside the line before Christmas, and even after it last year.

44,854. Are you aware whether your employers knew that you were trawling inside the line?—We were trawling there unknown to the Claddagh people.

44,855. But did Mr. Sweeny know that you were in the habit of trawling inside that line?—Yes, he did, because we could not get any fish in any other part of the bay at that time of the year.

44,856. Did you ever see fish taken up inside the line, and about that direction, that would spawn on the deck after they had been taken up in the trawl?—Yes, I did.

44,857. What were they—soles and plaice?—Yes.

44,858. Do you think that trawling has done any harm to the fisheries of Galway?—Certainly, I do.

44,859. Why do you think that?—If I were trawling there, and were going over the ground with my trawl, I should take up everything that there was upon it.

44,860. Do you think that there is a spawning bed for the fish inside the islands of Arran?—I do think so.

44,861. And do you think that a trawl passing over a spawning bed would do an injury to the fisheries?—I do.

44,862. Would a trawl passing and repassing backwards and forwards in the bay frighten the herrings and prevent them from coming into the bay?—Certainly it would. I am sure of that.

44,863. Do you know how long it is since trawling was stopped in the Bay of Galway?—I cannot say.

44,864. How many months?—Since last May, I believe.

44,865. Is the fishing as good now in the bay as it was before that time?—I could take my oath that there have been mackerel caught at Black Head, where none had ever been seen for 12 years before.

44,866. None have been seen there ever since trawling began?—No, and there is another fish which we have also caught latterly, namely, the whiting.

44,867. Where have you got that?—From Greatman's Bay up to Black Head.

44,868. Is there a good fishing for mackerel and whiting in the Bay of Galway now?—There is.

44,869. When the trawling was going on, was there a good fishing for mackerel and whiting?—We did not see any coming in from the time trawling commenced until it stopped, I can take my oath of that.

GALWAY.

J. Griffin.

7 Sept. 1864.

44,870. You say that you commenced fishing about 20 years ago?—Yes, about that time.

44,871. Are there more fishing boats in the Claddagh now than there were at that time?—No, nor one half, nor one quarter as many. I counted once, when I was a boy, 120 large boats in Claddagh.

44,872. What sort of boats were they?—They were the big hookers.

44,873. And how many are there now?—There are not more than five or six large hookers now.

44,874. Were there more men employed in the Bay of Galway at that time in fishing?—There were 120 boats, without counting other small boats, and there would be six men in each boat in the winter time.

44,875. How many boats were employed when you commenced first?—I counted 120.

44,876. About how many years ago is that?—I cannot recollect.

44,877. Would it be 18 years ago?—Yes, I think so.

44,878. There were 120 large boats employed in the fishing 18 years ago?—Yes.

44,879. And how many of that description of boats are there employed now in the Claddagh?—Not more than five or six.

44,880. Can you tell us how many men there used to be employed in fishing from Galway in those large boats?—There used to be six hands in every boat every winter.

44,881. That would be about 700 men?—Yes.

44,882. What age are you now?—I am about 31 years of age.

44,883. And you say there are only about six large boats now?—Yes.

44,884. How many men are there now employed in the Claddagh fishing?—There are small hookers engaged in the fishing now of from four to five tons.

44,885. But how many tons were the hookers that were employed at the time you speak of in your early years?—Some of them would be 10 tons, and from that up to 11 and 12 tons.

44,886. And the boats now employed are only of from five to six tons?—Yes.

44,887. About how many are there? Are there a hundred?—I believe there are not 100.

44,888. Are there 60?—There are over 60, I believe.

44,889. And six large ones?—Yes.

44,890. There are about 66 big and little in the Claddagh now?—Yes, about that.

44,891. About 18 or 20 years ago were there any small boats in addition to the large hookers you have told us of?—No, there were not.

44,892. Are the people of the Claddagh as well off as they were at that time?—No, nor are they half as well off.

44,893. Are they very poor now?—Yes.

44,894. And were they in a more comfortable position in the time you speak of?—Yes, they were, but they have been obliged to sell their boats, and some of them to go to America. They have been doing that since the time the trawling commenced.

44,895. In your opinion, has the trawling anything to do with that?—It was on account of the trawlers that they went to America. They sold their boats and houses to enable them to do that.

44,896. Do you think that they would have gone to America if the fishing had continued as good as it was 20 years ago?—I am sure that if it had not been for trawling one half of those who have gone to America would not have gone.

44,897. (*Mr. Concanon.*) You could tell, I suppose, how many boats there were ten years ago?—No.

44,898. Nor 15 years ago?—No, because I did not count them.

44,899. All you know is what you did when you were 11 years of age? That is the time you counted them?—I have not counted them since.

44,900. Did you count them then?—Yes.

44,901. Why did you count them?—Because I had nothing else to do.

44,902. Then I may take it that since then you have had plenty to do, and have not had time to count them?—I do not understand you.

44,903. How are you paid now? Is it by the week?—Do you mean in Mr. Sweeney's employment?

44,904. Yes.—No, by shares.

44,905. I suppose you were very comfortable and your poor neighbours were very badly off. The men in the trawlers were very comfortable, were they not?—Yes, they had their living out of it.

44,906. You were getting 1*l.* 5*s.* a week?—No, I was not.

44,907. Did you hear the statements of the other witnesses who have been examined here?—Yes.

44,908. What was the average you were getting?—1*l.* a week sometimes, and sometimes only 5*s.*, and then we were weeks without anything.

44,909. That would be according to the manner in which the fish came in?—Yes.

44,910. That was when you were lately fishing?—Yes.

44,911. When you found that the fish all ran off out of the bay here, did you go off to some other place after them?—Yes. When we were fishing and lost them in that way we used to follow them.

44,912. Then they were in the habit of going away from you?—Yes.

44,913. You would know the times, I suppose, when they would be in the bay?—Yes.

44,914. And then two or three months after that they would go off to some other place?—Yes.

44,915. And you would follow them?—Yes.

44,916. (*Professor Huxley.*) I should like to ask a question about the number of boats 20 years ago. I think you said that at that time there were 120 boats?—Yes.

44,917. And they were boats of a larger description than those which are employed now?—Yes.

44,918. They were then boats of 10 or 11 tons?—Yes.

44,919. Were they decked at all?—There was no deck in them.

44,920. They were open boats?—Yes.

44,921. Can you give us any idea of what a boat of that kind would cost?—As far as my opinion goes, and as far as I have heard my father and other people say, they would cost about 120*l.*

44,922—3. Each boat, with all its fittings and gear, would cost 120*l.*?—Yes.

44,924. What kind of gear was there in those boats?—Cables, that is all.

44,925. Did you use long-lines when you were fishing?—Yes, and spilliards.

44,926. How many long-lines and spilliards would there be?—Every man had two long-lines and spilliards of his own, and also pieces of net.

44,927. How many pieces of net?—Six pieces of net.

44,928. Were they for herring-fishing?—Yes.

44,929. How much do you think, from what you heard then, each man's extent of nets, and spilliards, and hooks, and long-lines, would cost him?—I am sure a man would not be able to get a spilliard for less than a pound.

44,930. And each man had two of them?—Yes.

44,931. That would be 2*l.* for spilliards each man?—Yes.

44,932. What would each piece of net cost?—A piece of net with back-rope, corks, and everything else, would cost over 50*s.*

44,933. That would be 2*l.* 10*s.* more?—Yes.

44,934. What other lines had they?—Two hand-lines.

44,935. What would they cost?—Two shillings or half-a-crown a line.

44,936. Was there anything else required for their outfit?—Only the hooks and leads belonging to them.

44,937–8. Would it cost from 30*l.* to 40*l.* for the outfit of the six men?—Yes, somewhere about that.

44,939. Then should I be right in assuming that 150*l.* would be invested in the boat, including the outfit and everything, in one way and another?—Yes.

44,940. Then, besides that, I understand you to say that each of the fishermen had a small boat?—Yes, and some of them had two.

44,941. What was the size of those boats?—They were only small then, but they have got larger since. They were from three tons to three and a half and four tons.

44,942. What size were they then?—About four tons.

44,943. They were simply rowing-boats?—We call them pookauns.

44,944. What were they used for?—Only for herring-fishing.

44,945. They were used for nothing else?—No.

44,946. Were they sailing-boats?—They were not sailing-boats at that time, but they have got sails in them now.

44,947. I want to confine you to what took place then. You say that each man had one or two of those boats?—Yes.

44,948. One of the larger boats would have six men in it?—Yes.

44,949. Then there would be six times as many small boats as there were large?—Yes, there were.

44,950. Do you mean to say that each of the men who worked in one of the large boats had one small one of his own?—No.

44,951. Then is what you mean to say this, that for every large boat there was a small boat?—Yes.

44,952. So that there were as many small boats as there were large?—Yes, and more.

44,953. Then I suppose that, altogether, there would be about 300 boats?—Yes.

44,954. What has become of those large boats, if there are only five or six left now?—They have been sold, and some of them have fallen away from decay.

44,955. Do you recollect when they were sold?—I recollect when some of them were sold.

44,956. When did the fishermen begin to part with them?—It is not more than four weeks since two large boats were sold.

44,957. Have the fishermen been gradually parting with them ever since the time of which you speak?—Yes.

44,958. For how many years has that been going on?—As far as I can understand it, it has been going on pretty nearly every day since the trawling commenced in the Bay of Galway.

44,959. That is since what year?—I believe that the trawling commenced more than 12 years ago.

44,960. Did they have 120 large boats till within 12 years of the present time?—They have not had them within that time, but they had before.

44,961. How many boats were there 15 or 16 years ago; did they begin to fall off then?—I cannot recollect; I did not count them.

44,962. You cannot tell us when the number of large boats began to fall off?—No, I cannot.

44,963. Did they begin to falk off before the trawling began?—That is a question I cannot answer.

44,964. Will you tell us what is the size of the small boats they have now?—Some of them are boats of four tons, and from that to five and six tons.

44,965. So that they are largish boats?—Yes, they are.

44,966. They are larger than the small boats they had at the time you have been speaking of?—Yes.

44,967. But there are not as many of those boats now as there were of the small boats before?—No.

44,968. What will each of those boats have cost?—If I were to build a new boat now, it would not cost me less than from 20*l.* to 25*l.*

44,969. Are there more than 60 of them?—I cannot tell that.

44,970. Why do they not use the large hookers now?—I donot know. They do not use them.

44,971. Would they not pay if they had them?—I cannot tell.

44,972. Cannot they catch fish enough to make them pay?—No, they are not able to do so.

44,973. What kind of fish has fallen off most?—Every sort has fallen off.

44,974. Have codfish fallen off?—Yes; cod, ling, haddock, and hake.

44,975. Has the haddock fallen off more than any other kind of fish?—I cannot say that.

44,976. You stated just now that there was more than a basketful of small fish taken up at a time in the trawl?—Yes.

44,977. How many baskets of large fish would you get at the same time?—From four to five and six hampers.

44,978. And out of that would there be one hamper which would be of no good?—There would be a small hamper which would be of no good.

44,979. Only a small hamper?—Yes.

44,980. Would one-tenth part of the fish be unfit for sale? For example, if there were 10 baskets altogether, would one basket contain fish of so small a character as to to be unfit for sale?—Do you mean unfit for eating?

44,981. Yes.—No, there would not be as much as one basket out of ten unfit for eating. There would be a portion of it that would be fit to eat.

44,982. Then there would not be one basket in ten that would have to be thrown overboard?—Yes, there would be, and more than that taking the sand and dirt as well.

44,983. But of small fish would there be as much as one basket out of ten thrown overboard?—Yes.

44,984. Then one basket out of ten would be unfit for sale?—Yes, there would be one basket that would not be fit.

44,985. (*Mr. Lefevre.*) At what time of the year do you catch most small fish?—It might be taken at different times; but about St. John's Day, or about the first month of the harvest, most would be taken.

44,986. When is St. John's Day?—On the 24th of June.

44,987. Which month do you call the harvest month?—The month that we are in now; the month that we are killing the herrings.

44,988. If you were to trawl in the bay now, would you expect to take a large quantity of small fish?—I know that I would take a large quantity of small fish.

44,989. Would you find more small fish within or without the limits?—I know that I should get a great deal inside, and that I should get a great deal outside also.

44,990–1. Are you able to say whether you took fewer fish in the trawl the last year you were trawling than when you first began to trawl?—We took seven times as much fish, and even twelve times as much fish the first year I began to trawl as we did the last year I was trawling.

The witness withdrew.

PATRICK RUSH called and examined.

44,992. (*Mr. Regan*) Are you a fisherman?—Yes.

44,993. Where do you live?—In the Claddagh.

44,994. How many years have you been fishing in the Bay of Galway?—I have been fishing there for 30 years.

44,995. How many years of that did you spend in trawling?—About three years.

44,996. In whose employ were you during those three years?—I was in my own hooker.

44,997. When did you give up trawling?—About eight years ago—seven or eight years ago.

44,998. Why did you give it up?—I had to give it up.

GALWAY.

P. Rush.

7 Sept. 1864.

44,999. What was the reason that induced you to give it up?—I gave it up because I got no fish; it would not pay me, and I had to give it up.

45,000. While you were trawling, did you get large quantities of small fry in your trawl?—The first time that I began to trawl I was able to take about a hundred weight that I could bring to the market of every kind of fish—turbots, soles, and gurnard, and every kind of fish, except salmon, herrings, or trout.

45,001. Was there any large quantity of fry?—Yes, there was a considerable quantity of small fish. That, however, was the fish I brought to the market; the rest of the fish I threw away. I threw out a great deal of small fish, of which I kept no account at all.

45,002. At every haul did you bring up large quantities of small fry?—My trawl was only a small trawl; it was not as large as those which the ordinary trawlers use.

45,003. What was the tonnage of your boat?—About 12 tons.

45,004. What was the tonnage of the other boats; those belonging to Mr. Burbidge and Mr. Sweeney?—They would be about 50 tons, I think, but I do not know exactly.

45,005. How many feet in length was the beam of your trawl?—The trawl I had the first time was 28 feet long, but one that I had subsequently was 29 feet long.

45,006. Are you aware whether Galway Bay, from the islands of Arran to Mutton Island, is a spawning ground?—Yes, it is a spawning ground in every place from the islands of Arran to the lighthouse.

45,007. To the best of your recollection, 20 years ago, how many large hookers were there belonging to the Claddagh?—I believe that 20 years ago there were about 60 hookers of about 10 tons, and from that to 11 and 12 tons. There was another class of boats, of which I think there were about 40, which ranged from seven down to six tons; and then there was another class of boats from four to three tons.

45,008. Then there were three classes of boats?—Yes.

45,009. The large hooker, and second-class hooker, and a small boat?—Yes. In the winter we fished with the large class of boats, and were in the habit of taking from five to six nets in every boat belonging to that large class. In the second class of boats we had from four to five nets. They also went out in the winter time.

45,010. From your experience as a fisherman, and having been yourself trawling, are you able to say whether the use of the trawl in the Bay of Galway has had the effect of banishing the fish?—I am sure that it has, and I can prove it. The first time we went trawling in our boats we went from Black Head to Barna Quay; that is the best place for trawling. We worked at it for a short time, and we got from 60 pair of soles up to 120 pair. We went on working, and we worked the ground until we got down to three pair of soles. Well, when we had succeeded in banishing that place, we went off to the southward from Spiddle, and we worked there until we found there were no fish to get. The first time we trawled there we used to get 60 and 40 pair of soles after fishing night and day. We banished the fish, however, and then we worked the bay all round again. We worked it until we got nothing, and then we broke the limits as we could get no fish outside, and worked from Barna Quay to Black Rock. We worked there for three or four days. The first day we got from 40 to 50 pair of soles, but after we had trawled over the ground three or four times we had to leave that place. The next week we only got from two to three pair. Then we worked the southward part of the bay, and there were not as many soles to be had as we had had in the northward, but it was better far for plaice. When we first worked it we used to catch from 10 to 11 hundredweight of plaice, and some very fine fish they were. We worked that ground for three or four weeks—about three weeks, I think. We worked it down to nothing, and then we had to take the boats out and go for round fish. We worked for round fish for some time, and the next year we began trawling, and we could not get half as many fish as we got in the first year. The following year we had to give it up entirely, and some of us had to sell our boats and go to America, because the place had been worked down so much.

45,011. (*Mr. Lefevre.*) Do you mean us to understand that you had to give it up because you could not make it pay?—It would not pay our expenses, and we gave it up.

45,012. (*Mr. Regan.*) During the period you were out trawling what were the other Claddagh men doing? Were they engaged in line-fishing?—Some of them were. Those who could not get a place in the large hookers had to fish by the line. The place we trawled over was where they had to get their living, and when we were trawling they had to go to another place, and very often we used to follow them.

45,013. Do you know whether the trawling has been stopped here?—Yes.

45,014. How long have the trawlers not been fishing?—I am not sure; it is not very long.

45,015. Is it only a few months?—Yes.

45,016. Is it about nine months?—I do not know.

45,017. Since they gave up has the fishing improved in the Bay of Galway?—Yes, the fishing for whiting and herring has improved very much.

45,018. Since the trawling first commenced, have you had a good herring fishery in Galway?—No, we have not had a good fishing at all, but we had a little, I believe, four years ago. At that time I think the trawlers were also stopped. We saw the herrings out from Black Head to Spiddle. They were two or three weeks standing there, and we said that it was because the trawlers went that way that they were not allowed to come in. We started then and stopped the trawlers, and they were only stopped for one week when the herrings came in. They did not stop in the bay long, however, as they all went away again in the course of two weeks.

45,019. Before the trawling commenced, what sort of herring-fishing did you have in Galway Bay?—It was very bad.

45,020. But I want to know how it was before the trawling commenced?—I do not know.

45,021. Had you not a good fishery of every description before the trawling commenced?—Yes, pretty fair.

45,022. Before the trawlers came here to fish, can you say what sort of fishing there was here?—I used to kill, before the trawlers came here, in my own boat, 60,000 herrings.

45,023. You did that before the trawling commenced here?—Yes.

45,024. Have you ever taken that quantity of herrings since?—No, nor the half of it.

45,025. Did you ever take even the fourth?—No; I might, perhaps, once a year or so, kill 3,000 or 4,000.

45,026. I want to understand whether you have had a good fishing or a middling fishing since the practice of trawling was introduced here?—I have never seen a good season since the trawling commenced here. It has been better, however, lately.

45,027. Is that since the trawlers gave up?—Yes.

45,028. Is it your opinion, from your own experience as a fisherman, that if trawling was given up altogether inside the islands of Arran the fishing would revive and get better?—I am sure that it would, because I know very well that the trawling destroys all the small fish.

45,029. Is it your opinion that you could have as good a fishery here as you ever had, if the trawlers were kept outside the islands of Arran?—I am sure that the fishing in the bay has been ten times better since the trawling was stopped than it was when the trawling was going on. It was quite time that the trawling was stopped, because the bay could not stand it, the trawlers were taking so much of the small fish.

45,030. Is it because Galway Bay is a spawning bay that you think that trawling is so injurious to the fishery; is that your reason?—I am sure that it is.

45,031. What is the reason?—I know that it is a spawning bay. The Bay of Galway, if it is not destroyed by trawling, is able, I believe, to supply all the other bays in Ireland from the fish which spawn there.

45,032. Do you think that the trawling would not be half as injurious if it were carried on in Roundstone Bay?—There is no trawling there, but I do not think that it would be as bad upon that coast. There is, however, very rough weather there, and it would be very difficult to fish in Roundstone Bay in bad weather.

45,033. Is it your opinion that every inch of Galway Bay, from the islands of Arran to the lighthouse at Galway, is spawning ground?—I am fully sure of it, because we find banks where the turbot spawn inside the islands of Arran, and I believe that every other kind of fish spawn there as well. It is from the islands of Arran, down the bay, that the fish come when it is their time for spawning.

45,034. Did you ever take the fish up in your trawl, and have them spawning on the deck?—Yes, I have done so with regard to sole and plaice.

45,035. Sole and plaice?—Yes.

45,036. They spawned on the deck?—Yes; we had no deck, but they spawned on the platform.

45,037. (*Mr. Concanon.*) Was there not a great take of herrings lately in Greatman's Bay?—There was about 15 years ago.

45,038. I am not speaking of 15 years ago, but of a month or two ago. Where was the great take of herrings that you had then?—In Greatman's Bay, but I count that the Bay of Galway, because it is only a creek from the Bay of Galway.

45,039. Was there lately as great a take of herrings in Greatman's Bay as there has been for 20 years back?—That was not in Greatman's Bay, but outside of it, in the Bay of Galway.

45,040. The ground there is not too rough for trawling?—I believe there are too many stones there.

45,041. Do you say that they could not trawl there?—No, but they could trawl outside.

45,042. But not where the herrings were taken?—No, but they could trawl within half a mile of it.

45,043. Have not the trawlers worked where the herrings were taken for the last 20 years, and where you say no trawl could work?—No, there are too many stones there.

45,044. Is that not immediately close to Arran?—No, it is about six miles from Arran.

45,045. What brought the herrings in there?—The bad weather may have driven them in there, but I cannot tell.

45,046. Why have you not had great takes in that place and in Greatman's Bay, where no trawlers could work for 15 years?—They were trawling outside of Galway Bay, at the mouth of it.

45,047. Is it because they were trawling in the mouth of the bay that the herrings could not go in where no trawl could work at all?—They could if they liked, but if they were frightened they would not do so. You would not go through a door into a house if you were frightened, and that is the way with the herrings. The herrings started off when they were frightened.

45,048. (*Professor Huxley.*) You admit that there was no trawling inside Greatman's Bay?—No, there was not.

45,049. But was there trawling outside of it, between Greatman's Bay and the islands of Arran?—Yes, between Greatman's Bay and the islands of Arran.

45,050. It is your opinion that trawling outside has kept the herrings off the coast, in the same as if a person stood outside a door he might keep any one from going through it?—Yes.

45,051. (*Mr. Concanon.*) What is the extent of Greatman's Bay?—I do not know.

45,052. How many miles is it across?—It is about a quarter of a mile across.

45,053. Is it only a quarter of a mile across at the widest part?—About three-quarters of a mile.

45,054. Did you take any plaice or sole inside where it is rocky, for the last 15 years?—There is no one fishing for round fish in Greatman's Bay at all.

45,055. Why not?—They never come there; it is only a creek.

45,056. Are there flat-fish there?—Yes.

45,057. Turbot?—Yes.

45,058. Did you ever take any turbot with the spilliards there?—We took it at the outside of the bay and in the mouth of it.

45,059. On the trawling ground?—Yes.

45,060. But inside, where the trawl could not go?—We never fish inside for any fish. There is no place for fishing there. We could not get fish there.

45,061. Why is it that you could not find fish where the trawlers could not go at all?—I would not be fishing it. Any place where the fish go the trawlers follow. Wherever we find fish they follow the boats and fish and trawl there.

45,062. They do not follow the boats where it is rocky ground?—No.

45,063. Then why did you not get the flat-fish there?—We never find flat-fish on sharp rocky ground.

45,064. How many years is it since you gave up trawling?—Seven or eight years ago.

45,065. Did you wear out the ground then and have no fish to get?—I did, and I gave it up.

45,066. Did you hear John Griffin state, that seven years ago, the first year he fished, which would be a year after you gave it up, he used to take twelve and fifteen times as much fish as he did lately?—I believe they had a bank outside there where they were in the habit of trawling. Ailladie Point is the name of the place.

45,067. Will you explain how it was that John Griffin, in Mr. Sweeney's boat, could get twelve and fifteen times as much as you could 15 years ago?—They caught it on Ailladie Point. They found a bank two miles further. Our boats did not go there fishing. I was fishing there once.

45,068. Surely, if you had a boat of 12 or 20 tons, you could catch fish as well as Mr. Sweeney's boats?—I was fishing there; I got 20 brace of soles there.

45,069. How many fathoms of water were you able to fish in with your small boat?—In my small boat I was able to fish in from 27 to 28 fathoms of water.

45,070. Do not Mr. Sweeney's boats fish in from 40 to 50 fathoms of water?—Yes, and deeper than that.

45,071. How deep?—I think he can trawl in 60 fathoms of water.

45,072. Did you ever hear this: that the Government were to be asked to give 5,000*l.* for setting up 60 ton vessels? If that were done, and you had them, could you trawl as well as Mr. Sweeney?—We should not be able to keep them a week.

45,073. Then how is it that Mr. Sweeney and the other owners of trawlers manage to keep them up?—They have kept them up because they have had the bay to themselves. If I had been trawling, and 20 other men had been trawling too, they would have had to give it up many years ago. They have, however, been allowed to have it all to themselves.

45,074. When you were fishing, did you fish a portion of your time in one place, and a portion in another, following the fish?—We took all the fish and banished them away, and then we went to another place.

45,075. Were you one of the men who signed the memorial which was sent up to the Government in December last?—I was.

45,076. Did you hear that memorial read?—Yes, I did.

45,077. Do you recollect that the trawlers at that time were only eight days stopped?—I do recollect that they were stopped; they were two weeks stopped. I think.

GALWAY.

P. Rush.

7 Sept. 1864.

45,078. How long were they stopped?—A fortnight. They were more than eight days stopped.

45,079. Were they stopped for three weeks?—No, I think they were not stopped for three weeks.

45,080. Do you remember that paragraph in the memorial which says that "the trawlers having given "up, the bay abounds in all kinds of fish, and the "Claddagh men are rich again?" Was that true?—Yes.

45,081. (*Professor Huxley.*) We have the memorial before us. The memorial is one that was forwarded to the Lord Lieutenant, and is the one upon which an inquiry was subsequently held in September?—That is the memorial.

45,082. The passage to which Mr. Concanon refers is this:—"A striking proof of the evil effects "of that system has lately been furnished to us by a "temporary suspension of its practice. During the "20 years it has been in existence, the supply of fish "has been gradually diminishing, until of late it may "have been said to be exhausted, or more properly "speaking, scared away, so as to render all our "efforts fruitless. Owing, however, to some local "difficulties, the trawling boats have been unable, "during the last two months, to pursue their usual "avocations, the consequence of which is that the "bay is again filled with fish and all our people are "briskly employed in every direction; hunger has "fled awhile from our doors, and the country is now "more than usually supplied with the judiciously "collected wealth of the ocean." Is that the passage?—Yes.

45,083. The statement there made is, that trawling had been for two months suspended?—Yes.

45,084. (*Mr. Concanon.*) Do you recollect that the great shopkeepers of Galway signed that memorial?—No, I do not.

45,085. Did the merchants sign it?—I believe they did on the Galway side.

45,086. Did the magistrates sign it?—I believe they did.

45,087. Do you believe that they would sign a document going to the Lord Lieutenant without first ascertaining whether what was contained in that document was correct?—All I know is, that before the trawlers gave up we went out with our boats after the herrings, and we stopped there for two or three days fishing, and we had to come back with only six hake.

45,088. When was that?—Before the trawlers were stopped.

45,089. How many days was it that you went out afterwards when you got the bay full of them?—We thought that we should die of hunger, and then we went to the trawlers and told them that they would ruin us altogether if they went on fishing. We asked them for the sake of God to stop until we could see if the bay would come better.

45,090. Did they stop for the sake of God?—They were stopped by fright, because we were powerful and we were prepared to fight for it. We could not stand it, in point of fact. There was a boat of mine at Barna. I should say, however, that a week after we had seen the herrings we fished for them, and then two of the trawlers went out. The week before they went out, there was a boat of mine at Barna which killed 18 dozen of hake, and most of the other boats did the same. They also killed from 200 to 300 whiting. The boats went out for hake. The last week they got plenty and then these two trawlers went out. The next week we went out again to fish, and we could get none. I do not know what was the reason of it, unless it was the trawlers.

45,091. (*Professor Huxley.*) Was it before the trawling was stopped at all that you got a considerable quantity of hake?—Yes, but before they were stopped we had to go out for herrings and got no fish. The biggest of the boats only caught three or four hake, and plenty of them got none.

45,092. (*Mr. Concanon.*) How soon was it after you could get none, and after the trawling was stopped that you got so many?—Three or four weeks after.

45,093. Do you mean to tell the Commissioners that the great ocean was then filled, and that they grew in a month?—They came in.

45,094. Did they come in from the deep?—Yes. When the trawlers are working on the ground the fish are disturbed by the working of the trawl and they go away. That is my opinion.

45,095. Then you think that the great take of fish you had afterwards came in from the deep ocean?—Yes, from the islands of Arran, or from some other place.

45,096. Had you a great take of herrings then?—We had one week.

45,097. Had you a great take of hake?—I did not go fishing at all, but my boat was fishing.

45,098. What kind of fish was it that was caught?—Whiting and hake.

45,099. Did you ever see the bay as full of fish?—They had time then to come in.

45,100. They had time to come from the deep sea?—Yes.

45,101. All I will ask you is, whether when you sent that memorial it was true that the bay was full of fish?—It was true at that time, but the fish fell off when the trawlers went out.

45,102. Would there be danger in one of the trawlers attempting to go out now?—If we were to take away your bread and your dinner from you and keep you for ten days without anything, I would engage that you would watch us very hard, and not let us take it away again. It is the same thing with us.

45,103. Would you not allow the trawlers to work?—We would not, if they do injury to us.

45,104. Would their working hurt you?—Yes.

45,105. Would you allow them to work until the law has settled with you?—Certainly not.

45,106. In the beginning of the season, or at any other time, dare the Barna, the Renville, or the county Clare men go to fish for herrings unless the Claddagh men allow them?—There are about 1,000 boats fishing in the bay. Upon the appearance of a bad night, if we were to go out, we might lose our craft, and if we were in danger of anything of that sort we stop them and allow them to fish the next night. Then, again, if we saw a shoal of herrings outside, in a place we considered that they ought not to be fished, and other boats were going out to fish them, we should ask them to stop until the next night, and so all the fish would have an opportunity of coming in, and then when we went all out together we could take more of them.

45,107. For the last 25 years has it not been Claddagh law to run at any boats that go out before the time fixed by the Claddagh fishermen,—has that not been Claddagh law for the last 25 years?—Yes, it has been in the way I have mentioned, namely, when other boats wanted to go out upon a bad night, and when there was a shoal of herrings outside, and they wished to fish in a place which we considered it not fit to fish in. We say that we gain more by allowing the fish to come inside than by going after them outside. That is the reason we have interfered. We have nothing at all to live by but the bay, and we want to make as much as we can out of it. We wish to live by it, and guard it as well as we can.

45,108. Can you say, of your own knowledge, whether it has been known to the gentry and magistrates, and generally to the people of Galway, that the Claddagh law, for the last 20 or 25 years has been to run down any boats attempting to fish without your approval? Have you run at boats which have been fishing out there, without first having obtained liberty from the Claddagh men to do so?—If we want anybody to speak to our character, we can find plenty here in Galway who will do it, and everywhere else.

45,109. (*Professor Huxley.*) Is it the law of the Claddagh fishermen, that fishermen from other places shall not go out before a certain time, when the other fishermen have all agreed to go out?—That is the

law. As I said before, if we see a shoal of herrings outside, we don't want these countrymen to go out after them until we can get them inside, and all of us take advantage of the fish.

45,110. Have you a law among yourselves, that one man shall not go out to fish before the others are ready to go out?—No, indeed.

45,111. Is there a general agreement among you?—No, but if some of them were not ready to-night then we would wait for one or two nights, until we would all be ready to go out fishing together.

45,112. Then it is an agreement or custom among you that all of you shall wait until everybody is ready before you commence fishing?—That was the way long before this, but it is not so now.

45,113. Was it the pratice 20 or 25 years ago?—Yes, it was.

45,114. How long has it ceased to be the practice?—Since trawling commenced.

45,115. (*Mr. Concanon.*) Is it a law in Claddagh that the fishermen there are not to allow the Renville, Barna, or County Clare, or any other men to go out unless the Claddagh men are ready to go out themselves?—There is no law upon the subject, but if there happens to be a bad night for fishing, we do not allow them to go out after the fish. That would destroy our fishing.

45,116. How would you stop them?—We should go to them.

45,117. But if they said they would go on fishing in spite of you, what would you do to them?—I don't know. I never was there when a case of that kind occurred.

45,118. Did they ever go out to fish without the Claddagh men being prepared to go out too?—Yes, they went last night, and we were not there.

45,119. Was it unknown to you that they were out fishing at the time?—I don't know whether it was or not.

45,120. You did not go out last night?—No.

45,121. Were you advised not to go out because the bay was full of herrings, or were you kept to be examined here to-day; did anything of that kind occur?—No, we did not go out because we did not know that there were any herrings in the bay.

45,122. (*Professor Huxley.*) You have been a fisherman for the last 30 years you say?—Yes.

45,123. You heard what the previous witness stated with regard to the number of boats here?—Yes.

45,124. Do you recollect the time of the famine?—Yes.

45,125. Was there that number of boats the year before the famine?—I believe there were as many boats then.

45,126. Then the number had not fallen off before that time?—The year of the famine was a very good year for us.

45,127. In what way?—Because we had a great time for the fishing.

45,128. Had you a good fishing?—Yes.

45,129. Could you get as good a price for your fish during the famine year as you could previously?—I remember that we could get from 9*s.* to 11*s.* for a dozen pollack.

45,130. Is that a good price?—It is a fine price, indeed; the highest I ever saw.

45,131. Could you sell your herrings as well in the famine year as you could in other years?—No, we sold them for 6*s.* a thousand.

45,132. Do you remember whether there were plenty of herrings then?—Yes, there was.

44,133. That was in the year 1846; there were plenty of herrings at that time?—Yes, and for two years.

45,134. But there was not as good a market for them as usual?—No, there was not.

45,135. Were you, the Claddagh men, as well off as you had been before,—during the famine year and the year afterwards, were you as well off as you usually were?—Some of us were. The men who had large property were as well off, but the pooa men had nothing, and many of them had great families to keep. The markets were very dear, and it was a very hard struggle for living. The famine let some of them down very much.

45,136. How many people were there among the Claddagh men who had property?—There were hundreds of them who had a good property at one time.

45,137. Were there hundreds of them who had property of their own?—Yes, many of them owned from one to three boats.

45,138–41. Do you remember Claddagh as long as 30 years ago?—Yes. I was young then, but I know it was better then than it has been since.

45,142. How were the people off then in Claddagh?—Every man in Claddagh at that time could put a good suit of clothes on his back, or a shilling or half a crown or a pound in his pocket, where now they are not able to get hold of a halfpenny.

45,143. At that time were the Claddagh fishermen in debt? Did they owe money?—Some of them did, and others did not, because they used to sell their boats and get to their credit 20*l.* or 40*l.* Most of them would not be able to raise a halfpenny in the same way to-day.

45,144. Do you recollect an inquiry which was made in the year 1836, not quite 30 years ago?—No, I do not.

45,145. You must have been more than 20 years of age?—Yes, but I did not pay much attention to what took place in the town at that time.

45,146. But you were earning your living when you were 20 years of age?—Yes, I was.

45,147. You were a fishermen then?—Yes, but when I came home then I used to have a shilling to go with to the public-house and drink some spirits, and then I cared for nothing. There were many besides me who did the same thing.

45,148. But have you any recollection of the condition of the fishermen at that time? You have told us that they were well off?—Yes, they were.

45,149. At the time we are speaking of there was an inquiry held at this place, and the minutes of that inquiry are all published. I turn to one particular part of the report, and I find this statement—"The "Claddagh fishermen are for the most part very poor. "Before the late winter fishery commenced the "majority of them had their nets in pawn, and many "were obliged not only to pawn their gear but the "cabin furniture, and even the iron vessels in which "they prepared their food." That is a passage from the evidence of the Rev. Mr. O'Donnell, and is contained in the official report of the inquiry which took place in the year 1836. I find it very difficult to reconcile that statement with what you are now telling us with regard to the fishermen being so well off.—At that time they used to go fishing in the winter time, and they would often go to the shopkeepers of Galway for assistance. They were not in the habit of keeping much money in their possession, but they had boats and property, although they had no money. Then whatever they asked from the shopkeepers of Galway they could easily get.

45,150. Here is a statement from another witness, Mr. Macdonnell,—"Although the Claddagh fishermen "are industrious, they are poor most of them, and the "greater part of their gear is in pawn until required "for the fishery. Then, if money cannot otherwise "be obtained, they pawn the whole of the gear an "realize what they require." Another witness, Mr. Halloran, states that—"Before the winter fishery "commenced this year the large majority of them "had their nets in pawn, and they were in debt to "me 1,200*l.* for rope and material." These are extracts from the printed evidence before us, and it is difficult to understand how it is that your recollection of what the state of the circumstances of the fishermen was at the very same time enables you say that they were exceedingly well off and prosperous.—

GALWAY.

P. Rush.

7 Sept. 1864.

We had much larger boats then, and we had six hands in each boat, and whenever we got short of gear then we use to go to the pawn office and take it out of that.

45,151. Was that the custom then?—Yes, but ever since trawling has been carried on here we have not been able to support ourselves.

45,152. Then, in point of fact, the boats were not altogether your own property then?—Yes, they were our own property.

45,153. But I understand you to say that you had no gear to work them?—We had gear, but about harvest time the fishermen were in the habit of leaving their spilliards and gear in the pawn office, and taking them out again when they required them to fish.

45,154. The statement here is, that when you went fishing your gear was in pawn?—Yes, part of it was.

45,155. Was that the case with the majority of the fishermen?—Some of them would, no doubt, put their gear in the pawn office.

45,156. I suppose you pawned it because you wanted money?—Some of them had very little money, but still they could get enough to eat.

45,157. People who are very flourishing and well off do not generally pawn their goods?—They were not well off, but some of them had property of their own.

45,158. But the people who had good property surely did not pawn the iron vessels which they used in cooking their food?—They did not.

45,159. The statement in this evidence is that the majority did?—They did not.

45,160. Then you do not agree with that statement?—No. There were at that time from 700 to 800 people engaged in the fishing, and they could not all be rich together. Perhaps there may have been 100 of them rich and well off.

45,161. The statement here applies to the majority of the fishermen?—I do not doubt that some of them were poor. They could not all be rich together. Now, at the present time, there are no rich at all; they are all in one line now.

45,162. (*Mr. Lefevre.*) Do you think that at that time fish were more plentiful than they are now?—Yes.

45,163. Were all kinds of fish more plentiful?—Yes, every kind of fish.

45,164. Were turbot more plentiful than they are now?—Yes; we used to be able to catch with our spilliards from 30 to 40 turbot.

45,165. How many haddock and sole?—From 500 to 600 haddock.

45,166. How many soles?—We never caught many soles at all. Some of the small boats used to fish for soles, but I did not.

45,167. I will read to you what was stated in that year about turbot, haddock, and soles—"Turbot are "not abundant in any part of the bay, except the "sound."—That would be since trawling began.

45,168. No, it was in the year 1836—"Haddock "and sole are scarce in the bay, and cod and ling are "not in sufficient quantities for the curers." Do you agree with that statement?—That might be the case in one year or so, but not regularly It might be the case that some part of the year there was no fish, but throughout all the year it would not be so. We were sure to have the fish in some part of the year, but now they appear to have been beaten out altogether.

45,169. Then you think this statement might be true with regard to one year, but not with regard to any number of years?—There are a great deal of fish sometimes, and very little at others. I think there were 100 fishermen who might be considered rich, while the rest of them were poor.

45,170. At what time of the year does your herring season begin?—About this time of the year.

45,171. Have you any particular day on which you go out after the herrings?—We used to begin to fish on a particular night, and when that night came, if there were no herrings in the bay, we used to wait for them. We did not go out to try for the herrings until we saw them.

45,172. Is there any custom or law among the Claddagh men that you are not to go out fishing before a certain day of the year?—No.

45,173. Do you recollect there ever being such a law in existence?—Not in my time; but I have been told that there was before then. The fishermen were better off then than they are now.

45,174. Can you tell me when that rule was done away with?—As soon as the trawling came on, because then every man was obliged to do the best he could for himself.

45,175. Have you ever known fishermen from other parts of the bay begin the herring season before you did?—Yes, many a time.

45,176. And take a large quantity of herrings?—Yes, they began at Greatman's Bay before we did.

45,177. Was that because some of the Claddagh men were not ready to go out?—Some years ago we used to do that, but now every man does the best he can for himself.

45,178. How long was it that you worked you trawl?—For about three years.

45,179. Do you recollect what it cost you to set up a trawl net?—It cost me about 30*l.*

45,180. Were you helped by anybody to do that?—I was, but I could have done it myself.

45,181. You got some assistance?—Yes, from Mr. Ford.

45,182. How many trawls were there set up then by the Claddagh men?—Five.

45,183. Were the owners of those five trawls all assisted by gentlemen in the town?—They gave them the trawls.

45,184. When you gave up trawling, was it because the trawl net was worn out?—No, I have it yet, but I have no cable. I had to sell my boat. It was worth 40*l.* I sold it for 27*l.*

45,185. When you began trawling, did you trawl within the limits?—I very often trawled inside the limits.

45,186. Did anybody try to prevent you fishing within the limits?—No, they did not, but I did not care for them. I worked day and night.

45,187. Did you fish in the day-time within the limits?—Yes.

45,188. Nobody tried to prevent you?—No, we were a good deal stronger than they were, and we did not mind them. They had only small boats for fishing, the larger boats were trawling. The small boats were not able to go out in the winter time, and they did not wish to go against us because we had large boats.

45,189. All the time you were trawling, you were allowed to fish within the limits?—Yes, we were; there was no one to speak to us.

45,190. Was that the case with all the trawlers belonging to the Claddagh men?—I believe so.

45,191. Was the large class of trawlers prevented from coming within the limits?—I did see them coming in, but I think I only saw two of them coming within.

45,192. How many of the larger class of boats were fishing when you began trawling?—There were only four of them at first, but they began to increase till they came up to forty.

45,193. Were there as many as 40 trawlers?—Yes, as far as my opinion goes. I think there were 40 big boats and large hookers.

45,194. All engaged in trawling?—Yes, but they were only trawling for one season.

45,194*a*. Then they were obliged to give it up?—Yes.

45,195. With regard to the larger class of trawling boats, like those of Mr. Sweeney, how many were there of them at that time?—There were about 16 of them at that time.

45,196. They have gradually fallen off in number until there are now only about eight?—They were

Dublin trawlers; they worked in the bay, and they used to go home. When the boats of Mr. Sweency were trawling here, they got a great deal of hake, because the trawl was so big.

45,197. Do I understand you to say that there were only eight of the larger class of trawlers belonging to the bay, and that the others came from Dublin and a distance? Was that so?—I believe there were only four or five boats belonging to Galway, and that the others came from other places to this part,—from Dingle, from Dublin, and other places.

45,198. Since you gave up trawling, do you make as much money as you did when you were trawling?—I do not, because the fishing has been going down since then. I had to sell my boat for 27*l*. I then got a bit of old oak to build a boat, but that oak is now rotting on the quay.

45,199. When did you sell your boat?—Five years ago.

45,200. Did you give up trawling because you had to sell your boat?—No, I would not have sold it at all, only I had nothing to do with it here. She would not keep herself up at all, neither boat, rigging, nor cables.

45,201. Since you left off trawling, have you made as much money by fishing as you did when you were trawling?—I was only trawling for three years. I could not make much, because I was only trawling for so limited a period.

45,202. You have given it up for eight years?—Yes. I have made as much in one night by my hooker as I did in three years by trawling.

45,203. When was that?—It was when we got the herrings, before the trawling came in.

45,204. Before the trawling?—Yes.

45,205. Not since?—No.

45,206. With regard to the taking of small fish, do you agree with O'Flaherty, that you only take a great quantity of small fish in the month of June?—I don't know anything about him, but my own hooker used to take as much as two hundredweight of small fish. They were of no use to me, only fit for little boys. I used to bring them to market, but I could only get from 6*d*. to 9*d*. for them in the market.

45,207. What time of the year did you catch small fish in the greatest quantities?—At this time of the year.

45,208. In the latter part of August and September?—Yes; but we generally get them from the first day we commence fishing. I take them every night, from St. John's Day up to Christmas.

45,209. Is there any part of the bay where you think you would catch more small fish than another?—There was at the northward side. That was where we got most small fish. We have often taken a great deal of lobsters there in the winter time.

45,210. Were you fishing close in-shore?—We were fishing about half a mile from land.

45,211. In what depth of water?—In from 15 to 19 fathoms, and from that up to 24 fathoms.

45,212. Did you ever take any small herrings in your trawl?—No, I did not.

45,213. Or any small cod?—I may have taken small cod, but not much of it. I was not fishing outside then, but inside, and we only got a little cod. My gear was not heavy enough for fishing outside.

45,214. How long does the herring season generally last in this bay?—From this time to Christmas.

45,215. If trawling was stopped altogether for a certain number of months in the year, would that suit you?—I don't know. If the trawlers stopped for some time, when they began again they would destroy the small fish, so that that would be of no use at all. If they do not go outside the islands of Arran, it would be of no use stopping trawling for a time, because at soon as they began again they would destroy the beds of the fish inside.

45,216. Do you think the trawlers do you any injury by trawling in the months of January, February, March, and April?—We say they do.

45,217. What injury do they do?—When we are fishing with the long-lines, these trawlers come over our spilliards, and break them and drag them away.

45,218. (*Professor Huxley.*) Do you recollect the time when the Claddagh men had lines from the Fishery Board?—No, I do not. I was for something like four years surveying in the bay, with Captain Bedford.

45,219. Are you aware that the Claddagh men borrowed money from the Fishery Board, for the purpose of buying boats and getting gear?—I don't recollect it.

45,220. You never heard of it?—No.

45,221. Did I understand you to say, a short time ago, that the people of the Claddagh were not much worse for the famine?—Yes.

45,222. Then it did not do them much harm?—It did not do them as much harm as it did to the country people.

45,223. Without comparing them with the country people, did it do them much harm themselves?—To those who had families it did harm, because the markets were so high, and unless they had money they would not be able to support themselves and their families. But other men, who had property and not large families to support, did not suffer much.

45,224. The year of the famine and the year after that, were there a great many people suffering from poverty in the Claddagh?—Yes, there were many hundreds.

45,225. Was the greater portion of them suffering in that way?—I am sure that a great number of them suffered. There were 700 or 800 people there, and some of them must have been poor. They could not be rich all together.

45,226. Had that anything to do with their parting with their boats?—No. Perhaps there would be three, four, or five who would have shares in a small boat, and some one would buy up the shares.

45,227. When did the number of boats begin to diminish in the Claddagh? When did the people first begin to part with their boats?—From eight years downwards, perhaps from nine years downwards.

45,228. How many years is it since trawling began to be practised here largely?—I cannot recollect that.

45,229. There was a byelaw passed by the Fishery Board in the year 1843, altogether prohibiting trawling within a line drawn from Barna Pier to Gleninagh Castle; do you recollect that?—Yes.

45,230. That was before the famine?—Yes.

45,231. What made the Fishery Board pass that regulation?—Mr. Pierce was trawling here then, and those limits were laid down.

45,232. How many vessels had he here?—Only one.

45,233. Did that one vessel alarm the fishermen?—It did not do them much harm, because he was only trawling for a month or two.

45,234. Did that one boat frighten the Claddagh fishermen, and make them think that the fish were going to be taken away from them?—It did.

45,235. In consequence of that, did they apply for the interference of the Fishery Board?—I believe they did.

45,236. Then was the regulation of those limits established in consequence of an application they made?—I don't know; I am not sure.

45,237. Did you take any part in the petition yourself,—were you one of those who joined in applying to the Fishery Board?—No, I was not.

45,238. Do you know anybody who did?—No.

45,239. Did trawling cease after that regulation was made,—did they leave off trawling?—Yes, some of them did; Mr. Pierce left it off.

45,240. Were there no vessels trawling in the bay for some years after that?—I don't know how many years after that. It was when Mr. Smith came, and Mr. D'Arcy was also trawling here for a short time; he only trawled here once.

45,241. It was not until 12 years ago that there was any considerable trawling?—It is about 12 years ago that they began to destroy the bay with trawling.

GALWAY.

P. Rush.

7 Sept. 1864.

45,242. Were you working a trawl at the time the trawl-boats were prohibited from trawling inside the limits?—Yes.

45,243. You were not allowed to fish inside the line laid down by the Fishery Board when you were trawling?—Yes, I was; I fished inside the line.

45,244. Did you fish inside the line before it was fixed?—Yes, and afterwards as well. I don't think I was trawling at all before.

45,245. You did not trouble yourself much about the line?—No.

45,246. Do you think that other people did?—I believe that some of them did.

45,247. But a good many boats fished inside?—Yes, a whole lot of them fished inside.

45,248. So that that law was not observed?—No.

45,249. What year was it when there was the greatest number of trawlers,—the 40 you spoke of?—I cannot tell.

45,250. Was it during the time you were trawling?—No, it was after that. There were only four trawling when I was trawling.

45,251. Before the famine were there no trawlers on the coast at all?—No.

The witness withdrew.

A. O'Flaherty.

ANTHONY O'FLAHERTY called and examined.

45,252. (*Mr. Regan.*) I believe that you are in the Coastguard service?—Yes.

45,253. You are chief boatman?—I am chief boatman in charge.

45,254. Am I right in saying that you are a native of Arran?—Yes.

45,255. How long have you been in the Coastguard service?—33 years; or between 33 and 34.

45,256. Where are you stationed now?—At Barna.

45,257. How many years have you been stationed there?—Eight years.

45,258. Do you recollect when trawling was first commenced in the Bay of Galway?—I do recollect when it was commenced on a large scale.

45,259. How many years ago is that?—About 12 years or thereabouts, between 11 and 12. There had been some trawling previous to that, but it was not on an extensive scale.

45,260. Do you recollect Mr. Stopford being here?—Yes, Mr. Stopford, of the Irish Fisheries Company, commenced the trawling here.

45,261. What had you to do then?—I was appointed by the Irish Commission of Fisheries to take an account of the quantity of fish caught off and on for about three months.

45,262. You did go out with them?—Yes, with one of the Irish Fisheries Company's trawlers.

45,263. What was the condition of the fishery in the Bay of Galway previous to the commencement of trawling, and what did you do yourself?—All I did was to take an account of the marketable fish that were caught, and also a rough estimate of the coarse and small fish. I saw all the marketable fish counted into the fish hampers before they were sent away by rail to Dublin, but the small fish being thrown overboard I calculated only by guess work.

45,264. While you were on board those boats, did you see any small fish taken?—I saw large quantities of small young fish taken, that were unmarketable and unsaleable.

45,265. What did you see done with it?—It was thrown overboard again.

45,266. Was it dead or alive when it was thrown overboard?—Principally dead. I think I may say that it was the same as dead.

45,267. Now previous to the trawlers coming here, 13 or 14 years ago, what was the condition of the fishery here, was it good or bad?—It was generally good.

45,268. What description of fish did they catch here?—It was according to the season of the year. They used to catch grey gurnards in the summer time, mackerel in the summer time, bream in the fall of the year, in the harvest, and herrings, and in the winter the codfish and ling would come in. Every fish that comes in, they would catch in its own season.

45,269. What was the condition of the fisheries; was it good or bad?—Sometimes there was a partial decrease, but at other seasons there was a good fishing.

45,270. Twenty-four years ago was the fishing good?—Yes.

45,271. Can you recollect 28 years ago?—Yes, and longer than that.

45,272. Can you recollect the large quantities of fish there used to be in Galway then?—I can.

45,273. Have you ever seen one-fourth of that quantity since the trawling commenced?—I have not.

45,274. Have you ever heard of a good fishery since the trawling commenced?—Not as good as it was previous to its commencement.

45,275. Was it ever one-fourth as good?—I cannot say whether it was one-fourth as good or not.

45,276. Do you recollect when the trawlers gave up here, eight or nine months ago?—I do.

45,277. Has the fishery improved since?—The fishery has improved recently, certainly.

45,278. Is that since the trawlers gave up?—Yes.

45,279. And from your experience do you consider that trawling in the Bay of Galway has been injurious to the fisheries?—I do consider that it has been injurious.

45,280. From the islands of Arran to the light-house here, do you consider that the bay is a spawning bay?—I cannot say exactly, but I believe it is. I cannot say from experience that it is, but that is my opinion.

45,281. If trawling were prohibited inside the islands of Arran, would the fisheries, to the best of your belief, revive and be better, or as good as ever they were?—It is my belief, that the fisheries would prove more profitable if trawling were prohibited inside the islands of Arran.

45,282. Could not trawling be safely carried on outside the islands of Arran?—It could be in fine weather.

45,283. Do you know the boats Mr. Sweeney has?—Yes, I have seen them.

45,284. In how many fathoms of water could they fish?—I cannot say exactly, but I dare say they could fish in from 40 up to 50 fathoms of water.

45,285. How many fathoms of water are there outside the islands?—40 fathoms in some places, and in others perhaps 50 fathoms.

45,286. Are there any places where there are only 30 fathoms of water?—I do not know.

45,287. But they could safely fish there?—I think they could in fine summer weather.

45,288. That is from May to October?—Not always; sometimes they could and sometimes they could not.

45,289. But generally speaking they could?—Yes.

45,290. You have known the Claddagh people a long time?—Yes.

45,291. What is the general character of those men, are they peaceable and quiet?—I believe them to be a very quiet and peaceable people.

45,292. And honest?—And honest.

45,293. Are they very industrious?—Indeed they are.

45,294. In what state was the village of Claddagh twenty years ago?—The people generally were well clothed, and their houses were nice and clean, and comfortable to look at. Twenty-two years ago I was stationed at Fairhill, and I remained there from 1842 till 1856. I became intimately acquainted with them at that time, as I went through the village of Claddagh every day. I was also frequently down about the quays, as my duty called me there very often, and I, consequently, became very well acquainted with them.

45,295. And you are able to say that they were most comfortable?—They were, indeed.

45,296. Do you recollect the class of boats they used in fishing at that time?—Of course I do.

45,297. Were they large lighters or small?—They were not large lighters, but they were hookers of from 10 to 12 and 13 tons. They had small boats also. There were a great many large hookers, which have nearly all disappeared now.

45,298. Were there a great number of the small boats?—There were a great number of small boats even then.

45,299. In what state are the Claddagh people now?—They appear to be wretchedly poor.

45,300. Can you form any idea whether there are half the number in the Claddagh now or not?—I declare there are not more than half, as compared with what there were in it when I was first acquainted with the Claddagh.

45,301. When did you go through the village last?—I have not been there regularly for four or five years, but I have been to the village.

45,302. Their houses are not in the same state as they were in those days?—No, they are quite different altogether.

45,303. They are in a wretched state now?—Apparently so.

45,304. Now do you think that their condition would improve if the system of trawling in the Bay of Galway was done away with?—I daresay it would.

45,305. Do you consider that trawling is injurious to the fishing?—I do. I consider that the hand-line fishermen and the trawling men cannot live in the same locality; that the hand-line fishermen will be done away with altogether if trawling is allowed to be carried on extensively in the Bay of Galway.

45,306. Since they first commenced, about 12 or 13 years ago, has the trawling improved or gone worse?—I do not know; I am no judge of it, because I do not see what fish they catch now.

45,307. Are you now stationed at Barna?—Yes.

45,308. What distance is that from Galway?—Four miles.

45,309. Were there a great number of fishermen at Barna when you first went there?—There were.

45,310. How many were there?—I dare say there might have been 100 fishermen—from 80 to 100.

45,311. How many boats had they?—I think there were somewhere about 20 boats, but I cannot state distinctly.

45,312. How many are there now?—Four.

45,313. How many fishermen are there now?—I suppose in the hookers there are not more than a dozen now.

45,314. What has been, to the best of your belief, the cause of this falling off in the boats and fishermen at Barna?—I believe that part of the decline of the Barna fishermen was owing to evictions and to their being turned out of their little cottages there. They were obliged to shift for themselves somewhere else.

45,315. What is the other part of it owing to?—To the decline of the fishing in the bay.

45,316. Occasioned by the trawlers?—Certainly.

45,317. Did you know any persons in Barna who were trawlers,—did you know Mr. Hickey?—Yes but he has been trawling there since I went away.

45,318. Did he give it up?—Yes. There were a great number of the Claddagh fishermen who trawled for a few months, but they found that it was unprofitable, and they had to give it up.

45,319. I believe that Mr. Hickey is a wealthy man, and could carry it on?—He could, if he found it profitable.

45,320. But not finding it profitable he gave it up?—He did.

45,321. (*Mr. Concanon.*) You were appointed in 1852 by the Government to go on board the "Druid"?—I was.

45,322. Did you give a true report in the journal you furnished on that occasion?—I did, to the best of my knowledge.

45,323. Was this passage contained in your report, or something very near it, at page 19: "The 8th of "July 1852 was the first day I went out. The wind "was light and west. The steam sloop-of-war 'Geyser,' "Captain Hinde, was in the roadstead." Do you remember that?—Yes.

45,324. "Forty-eight pair of soles, two turbot, one "brill, and some rough fish, as hake, gurnards, and "plaice and crabs were taken in the trawl." Was that correct?—It was correct.

45,325. "The 'Druid' was threatened by Claddagh "men in hooker No. 32"?—I never made that report.

45,326. That is not your report?—No.

45,327. "And the Coastguard men and crew were "frightened." That was not reported by you?—No, because I was neither frightened nor threatened.

45,328. "The week ending the 17th of July, a "midshipman and three men went out in the vessel"?—That is correct.

45,329. "The 'Druid' trawled four days that week; "the take of fish was great; also for the week ending "the 24th of July; we were out five days that week "and trawled four. At 5 p.m. on the 31st July we "came to an anchor inside Black Head, and landed for "water." Do you recollect that?—Yes.

45,330. "It was refused by the natives; there was "plenty of water, but none for the vessel." Was that in your report?—No.

45,331. "For the week ending the 31st of July, we "were three days out, and had a large take of fish." Were you more than three days, and was it Mr. Tukes that gave you the information?—No; I stood by and saw the fish counted into the hampers.

43,332. Where?—On board the vessel.

45,333. Were you out with them?—Yes.

45,334. Each day?—Yes.

45,335. According to that report?—According to my own report.

45,336. Why did you not represent to the Government that all the small fish were being destroyed? or rather, did you make such a representation to the Government?—No, I did not.

45,337. Will you say why you kept back that portion which was most material, after you had been selected for the purpose of ascertaining what the damage was that was done?—I was under the impression that I was sent there to see if there was any spawn lifted by the trawl; I saw no spawn, and, therefore, I did not report any destruction of spawn.

45,338. Did you report, "no spawn found in the trawl"?—I did.

45,339. You recollect that?—Of course I do. I always said I never saw any spawn taken up.

45,340. You do not in your report?—Yes, I do.

45,341. Did you think it your duty to say, "no spawn, but thousands of small fish." You did not report that?—I do not recollect the terms in which I reported, but I recollect reporting no spawn.

45,342. You state that the Claddagh fishermen are a very peaceable, quiet people?—I do.

45,343. Dare the Barna or the Renville fishermen go out to fish for herrings until the Claddagh men go out?—I knew very well that it was the habit of the Claddagh men to prevent the countrymen from going out to fish until they went themselves.

45,344. Have you ever heard that that law of theirs has ceased?—Ceased?

45,345. Yes; that they have given it up. Could the Barna men venture to go out without the Claddagh men to fish for herrings to-morrow night?—They do not try, at all events, whether they could or not.

45,346. Do you think that the Renville men dare go out?—Well, indeed, my opinion is, that it would not be safe for them to go out unless the Claddagh men went out.

45,347. Why?—Because it is the habit of the Claddagh men to go out and prevent others from going until a certain season, when they consider that the fish are fairly in the bay.

GALWAY.

A. O'Flaherty.

7 Sept. 1864.

45,348. (*Professor Huxley.*) Is that their habit still?—I am not aware whether it has been for the last five or six years, but I know that it was their habit.

45,349. (*Mr. Concanon.*) Do you know whether that habit has changed?—I do not know.

45,350. How long is it since you came to Barna station?—Eight years.

45,351. And the great character which the Claddagh men enjoyed, did they enjoy before or since that time?—Before then.

45,352. Where were you stationed before Barna?—At Fairhill, near Galway.

45,353. How long were you there?—Fourteen years.

45,354. For the last eight years, you say, you have often landed in your boat, coming from Galway?—I am not aware that I said that at all.

45,355. Were you ever assaulted?—Yes, I was.

45,356. By the Claddagh men?—No, I never was assaulted by them.

45,357. Is that the reason you think them peaceable? I want you, as you are in Her Majesty's employment, to tell the truth?—To the best of my knowledge, I will.

45,358. Are you aware that some of them the other day attacked and nearly killed a man?—I heard so.

45,359. Do you account that peaceable?—I know that there are outbreaks occasionally in different parts of the country as well as there.

45,360. Then you still say they are peaceable?—From their general habits I consider them peaceable.

45,361. Are you aware of a vessel nine months ago being obliged to shut up before the inquiry in December last?—I have heard of it.

45,362. Did a gunboat come round here?—Yes.

45,363. Was that in consequence of the very peaceable habits of the Claddagh men at Galway?—There is no doubt that the inhabitants of the Claddagh may be roused as well as other people, when they consider that their interests are at stake.

45,364. Do you think it was a proper mode in which to show that they were roused to fix upon this one unfortunate trawler? Was that a case in which they might be considered to be fairly roused?—I am not accountable for their proceedings.

45,365. You have given them a character, and I want to know why it is you have given it to them?—I have given it to them from their general character and habits.

45,366. (*Professor Huxley.*) Do I apprehend you rightly when I say, that your intention is to convey the impression, that the Claddagh men in general and among themselves, and in relation to their neighbours are orderly and peaceable, but when they think their means of livelihood are likely to be interfered with, they break out?—That is exactly what I mean.

45,367. (*Mr. Concanon.*) How long is it since you have been in a trawl-boat?—Not since 1852.

45,368. Did you report that trawling was injurious to the Bay of Galway?—Yes, and I believe it is.

45,369. Then was your belief formed on the foundation that you knew nothing at all about it?—No, it was not. My reason for believing so was the large quantities of small fish that were destroyed by trawling. I think it must be naturally injurious. There were great quantities of small fish destroyed by trawling, and that would naturally tend to lessen the supply of large fish.

45,370. Did the trawl-fishing continue from 1852 down till 1856?—I believe it did.

45,371. Was it ever as well worked as from 1852 to to 1856?—I believe that was the best time it was worked.

45,372. And there were the greatest number of trawlers then?—Yes, I think so.

45,373. Were you here when the witness Griffin said that seven years ago he commenced trawling and there was never such an abundance of fish as there was then?—I did not hear his evidence.

45,374. (*Professor Huxley.*) The statement was, that he got seven times or twelve times as much fish then as he did in the last year he was trawling, but he did not state that the quantity of fish was more than had ever been got before?—I did not hear his evidence.

45,375. (*Mr. Concanon.*) You did not hear that?—No.

45,376. If you had would you have believed it, considering the great number of trawlers there were then at work?—No, I would not believe that the fishing had improved during that time at all.

45,376*a*. Do you recollect the herring-fishing in 1862?—Yes.

45,377. Was there a good take of herrings then?—It was not to be compared with the takes I recollect about 20 or 30 years ago.

45,378. Was it the best for the last 12 years?—I do not know whether it was or not.

45,379. Was there a good take?—I dare say there was a reasonable take.

45,380. Do you know Greatman's Bay?—I do.

45,381. Do they trawl there?—No.

45,382. Do you recollect the great take in Greatman's Bay, 21 years ago?—There might be a great take, or not, but I have no distinct recollection of it.

45,383. Was there trawling in Greatman's Bay then?—No.

45,384. Could the herrings go in there?—To be sure they could.

45,385. Then if they could go in, is it the trawling that keeps them out?—I do consider that, when a shoal of herrings is coming in and trawling is going on, the trawlers will frighten the shoal away.

45,386. You say that there have been about four or six boats out latterly?—I could not say how many, because I do not know.

45,387. What is the greatest number you have seen herring-fishing?—I cannot estimate the number, because they have been out by hundreds.

45,388. Have they caught and frightened a great number of fish?—They have caught a great number.

45,389. Do you think they did not frighten others?—I do not know whether they did or not; I dare say they did.

45,390. Would you think it right towards the fishermen of this country to stop them because they frightened them?—No, I would not.

45,391. Why not?—It is their only means of living.

45,392. Then would you not think it as fair to allow the trawlers to have a means of living?—I dare say it is as fair for them, but, if the matter were left to my decision, when I saw from 700 to 800 families living by one mode of fishing, and two or three by another, I would give a preference to the 700 or 800, and take steps to keep them comfortable rather than the others.

45,393. Have there been 20 trawl-boats here?—Yes, there have been 17 or 18 sometimes.

45,394. If they had no other means of living than by trawl-boats, what would you do with them?—I would let them take to hand-line fishing.

45,395. But if they had no means beyond their trawl, would you tell them to sell their trawl, and take to hand-lines?—I would.

45,396. Are you aware that, when they have fished for two or three months in one place, they go to another, and that they find the fish very plentiful?—I have observed that they fished this ground occasionally, according to the season.

45,397. Do you think that, if money was raised, and a large number of boats were fitted out, it would improve the condition of the Galway men if they were able to go to Dingle, and Cork, and Bantry, and other places,—would that benefit them?—I do not know whether it would or not.

45,398. (*Professor Huxley.*) When you were trawling, and took so much of the small fish, what was the proportion of the small fish to the full sized fish taken?—There was a greater quantity in bulk of large fish, but in number the small fish would exceed the large.

45,399. But how would it be with regard to weight or measure?—In weight or measure the large fish would immeasurably exceed the small fish.

45,400. Was there one-fifth or one-tenth part of the whole take composed of small unmarketable fish; was there one basket out of every five or ten?—There might be one in five, or perhaps more.

45,401. Under what circumstances were you sent by Government to inquire into the trawling?—One of the Commissioners of Irish Fisheries came down to Galway, and the trawling question was rather vexed at the time; the Claddagh men were very much opposed to it.

45,402. In what year was that?—In 1852. There were many of the inhabitants who thought at that time that trawling would be beneficial, and that perhaps the Claddagh men would take to it. It was under that impression that they appointed me to prepare an account of the quantities of fish taken; and if there was spawn taken, I was to take a specimen of it, and to report to the Commissioners. The whole question was then to be brought before a public Court like this, at some future period.

45,403. Was it no part of that inquiry, how much small and unsaleable fish was taken?—No.

45,404. You did not consider yourself bound to report upon that?—I did not, from the tenor of my instructions. Perhaps it may have been intended, but it was not specified.

45,405. It was not in your instructions?—No; I was instructed to report upon the quantities of large marketable fish, and to take a rough guess of the small fish, which I did also.

45,406. Then you did report the quantity of small fish also?—I gave a rough estimate of it.

45,407. I understood you to say just now that you did not do so?—You did not misunderstand me, because I did not specify that, but I did at the examination which occurred here afterwards.

45,408. (*Mr. Lefevre.*) Do you mean the examination of last year?—I mean the examination which occurred here a short time after the trial of trawling took place.

45,409. (*Professor Huxley.*) The statement with regard to the proportion of small unmarketable fish was not given in the official report?—No, it was not.

45,410. Did it not occur to you at that time that that would form a most important element in the question?—No, it did not.

45,411. Have you any means of forming a judgment as to the total quantity of fish taken by the trawl and line together when the trawling was going on?—No.

45,412. Do you think that the quantity of fish taken altogether by trawling and line-fishing during the time trawling was going on was as great as the quantity that was taken before by line-fishing alone?—I think it was greater for the first couple of years, but I think there was a falling off after the first couple of years.

45,413. Did the whole produce fall off?—Yes.

45,414. Where did the trawled fish principally go; did it come to Galway?—Yes, and from this place was sent to Dublin.

45,415. Was it sent straight on?—Yes.

45,416. It did not supply the Galway market?—Not the prime fish; the principal part of that was sent away.

45,417. So that if the quantity caught remained the same, there would have been a falling off in the Galway market?—There would.

45,418. I understand that you were intimately acquainted with the condition of the Claddagh fishermen 28 years ago?—I was, but not as intimately as 22 years ago, and from that up to eight years ago.

45,419. Still, you had a knowledge of them?—Yes, for the last 30 or 33 years.

45,420. Do you recollect the memorial being sent up?—I have heard of it, but I never read it.

45,421. There is this statement in the memorial, "It is not 20 years since ours was a large, thriving, "and happy community." As this memorial was sent up in 1863, this assertion would refer to about 1843?—Yes.

45,422. That is well within the time you say you were intimately acquainted with the people?—Yes.

45,423. The memorial says: "It is not 20 years "since ours was a large, thriving and happy com- "munity of over 4,000 souls, and the owners of 300 "stout craft, in which we fished the sea with great "profit to the country, and with advantage to ourselves. "At the present time we do not sum up 1,500 persons "nor 90 boats, and no employment is to be found even "for such diminished numbers. The want of em- "ployment, and consequent ruin, which has overtaken "us is due to the reckless system of trawling pursued "in our bay, by which the fish are not only scared "away from their usual haunts and feeding and "spawning grounds, but the spawn itself, to the extent "of many hundreds of tons weight, is annually de- "stroyed, A striking proof of the evil effects of the "system has lately been furnished to us by a temporary "suspension of its practice. During the 20 years it "has been in existence the supply of fish has been "gradually diminishing, until of late it may be said to "to have been exhausted, or, more properly speaking, "scared away so as to render all our efforts fruitless. "Owing, however, to some local difficulties the trawling "boats have been unable during the last two months "to pursue their usual avocations, the consequence of "which is that the bay has been filled with fish, and "all our people are busily employed in every direction; "hunger has fled away from our doors, and the "country is now more than usually supplied with the "judiciously collected wealth of the ocean." Do you think that that is a correct statement? Do you think that the number of people in the Claddagh has fallen off?—I know there was a falling off in the village previous to trawling. In the famine year there was a great falling off in the Claddagh.

45,424. Do you recollect the famine time?—I was in the place at that time.

45,425. You were intimately acquainted with the condition of the Claddagh during the famine?—Yes.

45,426. Had the famine much effect upon the people?—It had indeed.

45,427. Were they much impoverished?—Yes, they were.

45,428. As the result of that impoverishment, were they unable to keep up their gear and boats?—Yes, for a period.

45,429. For how many years did it affect them?—For two or three years.

45,430. Was it because the market for the fish fell off?—Probably, and because the price of other provisions was so high.

45,431. So they were cut in two ways; in the first place, they had no market for their commodities, and, in the second place, the price of provisions rose much higher?—Yes.

45,432. And the result of that was that they were greatly impoverished?—Yes.

45,433. Did a considerable portion of the population emigrate in consequence of that?—I do not think there was much emigration, but the men resorted to the workhouse for a time.

45,434. How long did that state of impoverishment last?—About two years. They gradually improved for a year or a year and a half or so, and they became pretty prosperous again.

45,435. Then from 1846 to 1850 they were in a bad condition here?—They were improving up to 1850.

45,436. But in 1846, 1847, and 1848 they would be badly off?—Yes.

45,437. Did many of them part with their boats or their gear?—Many parted with their gear, but not many with their boats, not a large proportion of them.

45,438. Do you think that the population of the Claddagh has diminished permanently in consequence of the famine?—I know that it has diminished very much. I have reason to believe that there are not

GALWAY.

A. O'Flaherty.

7 Sept. 1864.

more than half the inhabitants now that there were when I originally came to the station of Fairhill about 22 years ago.

45,439. Do you think that, supposing the famine alone had occurred, that it was sufficient to cause the falling off in the population, and the increase of the misery among the people here, or if only the famine had occurred, that they would have recovered?—They did recover after the famine.

45,440. Did they recover completely?—They did recover, and were prosperous up to 1852.

45,441. Do you think it is a correct statement to say that there were, at the time of the famine, over 4,000 souls in the Claddagh?—I cannot be a judge of the population.

45,442. You cannot say if it is correct or not?—I daresay that it is pretty nearly so.

45,443. I ask you the question because the official report of the Commission of 1836, which was only six years before, estimates the population then at 2,000?—It could not have increased so much in that short time.

45,444. That is what we want to get at. I will read the passage. It is contained in the minutes of evidence taken in 1836, and it states, "that the district of "Claddagh within the town parish of Galway, con- "tains about 2,000 persons, nearly all the families of "fishermen." That is in the official report?—I see.

45,445. It is difficult to imagine that, within six years, the population could have doubled?—It is not at all likely; but I was under the impression that there were a great many more people than that in 1836.

45,446. We give no opinion on the subject, but such is the statement of the Report?—My own impression was that the population was larger than that.

45,447. Do you recollect the condition of the people in 1836?—I do.

45,448. Did you hear some statements I read a little while ago?—I did not.

45,449. Then I will read them again.—Can you tell me at what season of the year the report of 1836 was taken?

45,450. The report does not refer to any season, but it gives the evidence of a great number of persons. —I recollect that the season of 1836 was a good season for herring-fishing in the fall of the year, in October and November. I believe there was a good fishing for herrings then.

45,451. The evidence I desire to bring before you is, in the first place, that of a clergyman of the district, the Rev. Mr. O'Donnell. Do you recollect him?—Yes.

45,452. May be taken to be a trustworthy witness?—Yes.

45,453. He says, "By the public census of the "district in 1834, the average number of persons in "each family was found to be only five, including the "parents." Do you think that was the case?—Yes.

45,454. He goes on to state, that "The Claddagh "fishermen are for the most part very poor. Before "the late fishery commenced, the majority of them "had their nets in pawn. Many were obliged, not "only to pawn their gear, but cabin furniture, and "even the iron vessels in which they prepared food." Is that in accordance with your experience of the condition of the people?—I was not acquainted as well with them in 1836 as I have been since.

45,455. But taking that to be their condition in 1836, was their prosperity so great between 1836 and 1842, that they could have acquired considerable property and been perfectly independent?—I do not think that at any time they were perfectly independent, but they had their boats well fitted and themselves well clothed.

45,456. Is it within your knowledge, that in 1842, or at a subsequent period, it was the habit of the Claddagh men to have their gear in pawn when they were not fishing?—No doubt, they always had a habit of pawning when rough weather or adverse circumstances came across them.

45,457. Have you ever known the furniture of their cabins, and the iron vessels they use for food, to be pawned?—They might have been pawned, and I not be aware of it.

45,458. Could you know as much about them as this gentleman, the priest?—No, I could not, because he went into their houses, and I did not.

45,459. Did you know Mr. Macdonnell?—No, I do not recollect him.

45,460. Mr. Macdonnell also states, "Although "the Claddagh fishers are industrious, they are poor. "The greater part of their gear is in pawn until re- "quired for a fishery, and then if it cannot otherwise "be obtained they pawn another kind of gear to release "that required." You see that this is not the statement of one witness, but of two?—Yes.

45,461. At the same time Mr. Halloran gave evidence at the inquiry. Do you know Mr. Halloran?—Yes, Mr. Thomas Halloran.

45,462. He is a rope maker?—Yes.

45,463. He stated, that before the winter fishery of each year commenced, a large majority of them had their nets in pawn, and they were in debt to him 1,200*l.* for rope and materials. From what you know of the circumstances of the Claddagh men, do you think that in six years they could have paid that 1,200*l.* of debt off?—Perhaps they never did pay it off.

45,464. Have you the means of knowing, whether in 1842 they were in debt to the same extent?—From their appearance, I should say not.

45,465. Your evidence is given from the general aspect of the place, and not from any special knowledge of the people?—No, not from any special knowledge of my own.

45,466. (*Mr. Lefevre.*) Your experience in the "Druid" occurred in 1852?—Yes.

45,467. What time of the year?—I think it was in the summer time, in July.

45,468. How many trawlers were there in 1852?—I do not recollect precisely; there might be seven or eight.

45,469. Were you aware of the report which was sent up by the Commanders of the Coastguard, with regard to the fishery?—No, except as far as concerned my own immediate station. They send up a general account.

45,470. Did you ever see the report sent up by the Commander of your own station?—No.

45,471. Is the Commander of the Coastguard here to-day?—He is not.

45,472. When did the fishery begin to decline?—It has been declining, I think, since 1855 and 1856, or even from 1854. It has been declining ever since trawling commenced largely.

45,473. From the year 1854 did the number of trawlers begin to increase?—It did.

45,474. What was the largest number of trawlers you recollect in the bay?—I never recollect more than 15 or 16 at one time. There may have been more, but I do not recollect seeing more fishing at one time.

45,475. What year was that?—I cannot precisely call to mind now.

45,476. I want particularly to be correct, because I want to refer to the reports of the Commander of the Coastguard. I will read the report made in 1854. I want to know if you agree with it. It is the report made by the Commander of the Coastguard.—"The take of fish improving very greatly since the "Claddagh men began to trawl; the take of fish more "productive; the conflicts much less frequent; the "habits of the fishermen more orderly and peaceable "since the Claddagh men have been induced to "trawl." Do you agree with that or not,—that was in 1854?—I know there have been occasional takes of fish, even since trawling commenced, which were very good, but generally it has been much falling off, although there has been a partial increase now and again.

45,477. I will go on now to the year 1855. The next report is, "Owing to the high price of hemp, the

"trawling vessels are not so well supplied with gear "this year, but in nets and lines and vessels there is "no deficiency. Last year harvest fishing was good, "and paid most of the boats pretty well, and the "fishermen are sanguine as to the hopes of the autumn "of this year, and intend going out much earlier than "usual. Those whose gear is ready do not seem in- "clined to wait as formerly for those behindhand. "The general condition may be said to be improving; "although far fewer men and boats exist, they are "better found than before. The winter fishing (round "fish) was much better than it has been for years in "this bay. The spring fishing with nets and lines "was also excellent, but no late or winter herrings in "this district. The summer fishing with long-lines "has never been, I understand, surpassed, and might "be carried out with larger vessels to an important "extent, as the canoes and yawls are in a good take "soon laden, and, of course, return home to discharge, "losing valuable time and opportunity of weather. "The incidents of conflict much less; in fact, dis- "order and fighting seem to have ceased. The habits "of the fishermen orderly and peaceable." That is up to the 1st of January 1855. Do you agree with that or not?—I cannot say exactly, but it may be the fact.

45,478. You do not think that up to that time the decrease had commenced?—Not to any large extent.

45,479. I will take now the next year, up to the 1st of January 1856. This is the report of the Commander of the Coastguard,— "The condition of the "fishermen improved. Boats and gear are generally "speaking in good order. There is a sign of im- "provement. The take of fish is more regular and "steady. The quantity of all kinds has been larger "than for years past (with the exception of herrings), "and continues so. No conflicts have taken place "this year; the trawlers have taken more turbot, "soles, &c. than formerly, and those who can trawl "wish to continue it, being convinced it is not, when "lawfully followed, injurious to the netters and line "fishers." That is the report up to the 1st of January 1856. I suppose we may take it that the decrease of fish had not then commenced?—I suppose not at that time.

45,480. Now in the year 1857, or up to the 1st of January 1858, the following report was made by the Commander of the Galway Coastguard:—"At a good "standard. This year has equalled the last, which "was very productive, save in herrings, which seem "nearly to have deserted the coast. No conflicts; "the fishermen orderly and peaceable." In the year 1858 there does not appear to have been any report at all. In 1859 there was a report, and I will read you what the Commander of the Coastguard said up to the 1st of January 1860. "The general condition of "the fishing establishment is superior to 1844 and "keeps a fair average. The take of fish somewhat "less last year. No conflicts. Fishermen orderly "and peaceable." The report of January 1861, in reference to the year 1860, says,—"A general falling "off, owing to the scarcity of fish. No sign of im- "provement. The take of fish less productive." Do you agree with those reports? I have read you those reports, and I ask you whether you can now state, from what time the commencement of the decline of the fishing took place?—I fancy the supply of fish has been greatly decreasing since 1854 and 1855.

45,481. You do not think then that it was not till 1860 that there was a decline of fish?—No.

45,482. You do not agree with that?—I do not. I think it was declining previous to that.

45,483. When did the number of trawlers begin to decline?—I think they have been declining for the last two or three years.

45,484. Take the year 1860. Can you give us the number of trawlers then at work?—I have no distinct recollection. I never thought I should be asked the question, and I have not seen them except in passing in and out of the bay. I took no particular notice.

45,485. Do you know when the small trawlers employed by the Claddagh men were given up?—I recollect well, but I do not know the time; perhaps it would be ten years ago.

45,486. One of the witnesses said he trawled for three or four years?—They did not all keep it up as long as that.

45,487. Then we may take it that in 1856 or 1857 the number of trawlers was beginning to diminish?—I think so. In 1858 they were beginning to diminish anyhow.

45,488. How are the reports of the Coastguard made up?—The Inspecting Commander makes them up.

45,489. Is it after communicating with the boatmen?—He sends a written category of questions to be answered, asking whether the fish have decreased or increased, and he makes up his report from the answers he receives.

45,490. After looking through the reports of the men below him, he makes up at the end of the year a report for the Commissioners?—Yes, he does.

45,491. Are there many other fishing villages besides Barna in the bay?—There was a fishing village at Arran. I have not been there for a good while, but I believe the fishing has declined there a good deal. I know the hookers have.

45,492. Is that inside or outside of the island?—They fish on the inside. At Killaney, in the large island, there were a good many hookers at one time, but they fish now in canoes.

45,493. Are there any outside the bay?—There are at Gleninagh, inside the bay. There are a great deal of fish there in the spring of the year.

45,494. Inside or outside the bay?—They fish both inside and outside of Black Head.

45,495. Have they found the fish falling off outside the bay?—I have heard them say they did. They complain of their lines being carried away by the trawlers.

45,496. Is there any herring fishery outside the islands of Arran?—There has been no winter herring fishery for the last 20 years.

45,497. Is there any harvest herring fishery outside?—No.

45,498. Do the fishermen all wait until the herrings come into the bay?—Sometimes they get them out in Bushin Bay, and sometimes in Greatman's Bay, and occasionally in Cashla Bay.

45,499. There is no fishery of any importance outside the bay?—No, not for harvest herrings. There used to be large takes of winter herrings outside.

45,500. Do you think that the herring fishery is the principal source of profit to the fishermen here?—Yes, I do.

45,501. Can you say in what proportion?—No.

45,502. You do not know, out of the whole earnings of the fishermen, how much the herring season reckons for?—No, I do not.

45,503. (*Professor Huxley.*) We have before us the report of the Fishery Commissioners, who sat here in 1863, before whom you attended as a witness, and the notes of the evidence given by the different witnesses. In your evidence I find this passage:—"In 1856 and 1857 there were 26 boats in "Barna. There is not more than one-fourth of that "number there now, and the decrease has been both "in size and number." I understood you to say, in the course of your examination, that that decrease was due, in some extent, to evictions. Was that the case?—I think it was, in a certain proportion.

45,504. To how great an extent, do you suppose? Were there five or ten boats that were given up in consequence of evictions?—I think both causes operated together, but I could not say how many are due to evictions, or how many to the falling off in the fishing. I think both causes operated in lessening the number of fishermen.

45,505. Was it for the nonpayment of rent that they were evicted?—No.

GALWAY.

A. O'Flaherty.

7 Sept. 1864.

45,506. What reason was it then?—For the purpose of changing and improving the aspect of the place.

45,507. At any rate, you entertain no doubt whatever that eviction had to do with the diminution?—I think it tended partly towards the diminution.

45,508. Do you not think it would have been well if you had stated that to the Commissioners here? There is not the smallest mention of evictions in this evidence.—Nobody asked me anything about it.

45,509. Your previous answer is this: "I attribute "the decrease in the supply of fish to the decay of "everything connected with the fishing,—to trawling, "which must deteriorate the fishing, by destroying "such vast numbers of small fish."—That was my opinion in general,

45,510. Then you go on to say, "In 1856 and "1857 there were 26 boats in Barna. There is "not more than one-fourth of that number there "now, and the decrease has been both in size and "number." The clear implication to anybody hearing that evidence would be that that number had fallen off in consequence of trawling, whereas you tell us now a large share of that decrease was due to evictions?—I should not say a large share.

45,511. But a portion of it?—Yes.

45,512. As an intelligent man, you must have been aware that it was as proper to explain to the Commissioners then as it is to us now, that something else beside trawling had been concerned in producing the decrease?—My general impression was that I was giving evidence as to the general effect of trawling in Barna, Claddagh, and other places.

45,513. (*Mr. Lefevre.*) When you speak of the decline of fish, do you allude principally to the decrease of herrings or of other fish?—Of all kinds of fish.

45,514. Do you refer also to trawl-caught fish,—plaice and soles?—I have had no opportunity of judging of that; but I speak more particularly with regard to the fish generally caught by the hand-line fishermen, when I say there has been a decrease.

45,515. What is the general rate of wages for labourers in this part?—I cannot say what the rate of labour is; I never employed anybody myself, and there are very few people employed in the locality.

45,516. Is there much employment for the fishermen here in collecting sea-weed?—Yes; they generally spend all the spring of the year in collecting sea-weed. There are very few fish in March, April, and May, and then they employ their time in cutting sea-weed and selling it.

45,517. The herring season occupies them about three months in the year?—About three months.

45,518. And the collecting of sea-weed another three months in the year?—Yes.

45,519. And line-fishing the remainder?—Yes.

45,520. Has there been any falling off in the sea-weed lately?—I am told there is a falling off in the price of it, but not in the supply.

45,521. Do you think the fishermen make as much by it now as they did?—I think they make more of it than they would by fishing.

45,522. Do they make as much profit from it as they used to do?—I do not think they have made as much for the last season as they used to do, because the price was higher in previous seasons; the sea-weed was dear.

The witness withdrew.

Rev. P. Daly.

The Rev. Peter Daly called and examined.

45,523. (*Professor Huxley.*) Have you been long a resident in Galway?—Yes, upwards of 50 years.

45,524. You have been, I believe, officially connected with the place as a minister of religion?—Yes, in this town, but not in the Claddagh.

45,525. Have you taken an interest in the condition of the Claddagh people?—I naturally take an interest in the poor, and especially an interest in them, because they were a peculiar colony, and were of great and vast advantage to the general public.

45,526. Then during the last half century you have paid a good deal of attention to their interests and prospects?—As far as a general interest in their prosperity or adversity as it arose is concerned.

45,527. Do you recollect pretty clearly what was the condition of the people 28 years ago,—about the year 1836?—I have a general recollection of their whole condition for the last 50 years at least, and probably more.

45,528. Were you present when I read extracts from the report of a Commission which sat here in 1836?—I was in Court for a few minutes before you read some extracts, but I did not pay special attention to them.

45,529. Then I will read those reports to you, in order that we may have your opinion as to their accuracy or otherwise in regard to the time to which they refer. But, perhaps, it may be better if you will tell us, in the first instance, what, in your recollection, was the condition of the people about the year 1836, say from 1834 to 1836?—Not being in any manner connected with the locality, I have had only a general knowledge of their condition since I was a boy. I could not turn to particular dates, because I was not connected with them personally, but, as I have already told you, I have a general idea of what their condition has been during the last 50 years.

45,530. Then, in that case, I will read this evidence to you, and ask you if you think it is correct, and if it coincides with your impression?—The inquiry was held in 1836?

45,531. Yes. At that time the Rev. Mr. O'Donnell gave evidence to the Commission. You, doubtless, recollect him?—Yes, he was their parish priest.

45,532. Then he was likely to know all the circumstances?—I think he would know them.

45,533. He states, speaking of the Claddagh fishermen, "The Claddagh fishermen are, for the most part, "very poor. Before the late winter fishery commenced "the majority of them had their nets in pawn; many "were obliged not only to pawn their gear, but cabin "furniture, and even the iron vessels in which they "prepared food." From your recollection of the condition of the people, is it your impression that that is a correct statement?—I have no doubt they did so. I often heard they were obliged, under certain circumstances, to pawn; but I recollect a good deal further back than that myself, when they were not obliged to do any such thing. I remember 50 years back, when I was a boy growing up, and the Claddagh fishermen then were a very rich colony.

45,534. A very rich colony?—Yes.

45,535. When you were a boy?—Yes, and for many years after, even since I became a priest. I knew them in the way of business to have plenty of gold, and they had such peculiar notions that they did not like to lose the gold when once they got it in their possession. They would go and pawn a guinea, and pay interest upon it sooner than change it, so that pawning, in fact, in that way was not a direct proof of their poverty; on the contrary, it arose from a wish to keep the gold.

45,536. Are you of opinion that the pawning of household utensils is not a proof of poverty?—In some cases it is not. I have known of some cases in which it would be no such thing. For instance, I have known people of a reckless nature who would pawn things unknown to other persons of their own family, and that would be no proof of poverty.

45,537. But the evidence we have here is to the effect that the pawning took place by the possessor of the gear. For example, Mr. Macdonnell says,—"Although the Claddagh fishers are industrious, they are

"poor. The greater part of their gear is in pawn "until required for a fishery, and then, if money can- "not otherwise be obtained, they pawn another kind "of gear to release that required." The greater part of the gear could not be pawned without the knowledge of the possessor of it?—The wife might do it unknown to her husband, and a husband unknown to his wife. I do not think that that is a general proof of the poverty of the inhabitants. It does not, in my opinion, affect the general statement a bit.

45,538. Further, in page 113, I find a statement made by the Claddagh fishermen themselves, which may be taken to be authoritative. "Cutting and "carrying sea-weed for manure is the only employ- "ment which the Claddagh have in addition to "their occupation as fishermen. This additional em- "ployment continues for six or eight weeks, com- "mencing in April, and each boat earns by it about "30*s.* a week; it occurs during the worst fishing "season of the year." Then follows this passage,— "The fishermen not selected for cutting and carrying "sea-weed are unemployed at home, by which much "distress is occasioned among them. Not more than "two or three men in each boat are employed by the "sea-weed; the crew for fishing usually consists of "six men." That is a statement made by the men themselves to the effect that there was distress among them at that time?—I am prepared to say that, at different seasons there has been great distress among them, but that is not a feature which is to be taken as a proof in connexion with the case that is before you just now.

45,539. The case before us now is the question of the condition of the fishermen at the present moment, and it is necessary to ascertain what their condition was 30 years ago, when the present asserted cause of distress did not exist?—That is what I expected to be examined upon, namely, to speak to their condition 30, 40, and 50 years ago, and to speak to it down to the present time.

45,540. We are speaking of the condition of the fishermen in 1836, which is nearly 30 years ago, and we desire to ascertain if your impressions of that time are in accordance with the statements contained in the report before us. It is a matter of great importance for us to ascertain what the condition of these people was 30 years ago, when there was no trawling and the assumed causes of the distress which now prevails were non-existent.—From my general knowledge of the city of Galway and the Claddagh I can aver that the Claddagh district 30, 40, or 50 years ago was a rich, comfortable village. The people in those days were probably not as provident as they ought to have been. They were not at all as careful of what they earned as they ought to have been, but they had plenty of money, and they lived most luxuriously, even beyond their proper condition. I can state that as a matter within my own knowledge, and I can state further, that their condition has been declining latterly very considerably, even to a terrible extent. I can tell you more. I remember that for 20 or 30 years of my experience, from the earliest period I recollect the Claddagh, I never knew such a thing as a Claddagh man or woman begging, and now there is a universal necessity for them to do that. At one time there was no such thing as begging in the Claddagh. No fisherman or woman would beg in my early days; that never occurred; indeed they did not require it.

45,541. Then you disagree with the statement made by the Rev. Mr. O'Donnell in 1836?—I do not do any such thing. Such things might occur then, and Mr. O'Donnell might be cognizant of them, but they do not apply in any argument as to the general condition of the people 30 and 40 years ago.

45,542. His statement is absolute. He says, "For the most part they are very poor."—That may be. I cannot aver as a fact, not being professionally connected with them, that it was so. In the early part of my mission in Galway, I became principally acquainted with the general character of the village and of the people, but I know that they were then a rich people. I cannot determine the exact period at which they began to decline, but I should say, from my own experience of 20 and 30 years, from 1806, and I can speak from that early period, that they were a rich people. They may not have been as provident as they ought to have been, but they had plenty of gold in those days. I was employed by my parents in matters of business which sometimes brought me in contact with them, and I know them to have had plenty of gold in those days.

45,543. The same gentleman, Mr. O'Donnell, gives, a few pages on, a more definite statement. He says, "A few of the fishermen have comfortable habitations, "but the greater part of them are in miserable dwell- "ings." That does not relate to a temporary state of things?—No, but it is no proof whatever of an entirely impoverished state. It is a notorious fact, that it was merely small cabins they lived in, but notwithstanding the miserable nature of those cabins outside, you could have eaten your dinner in as much cleanliness, order, and comfort as you could in any drawing-room in Galway. It was a kind of observation made by every person, that although their cabins looked small, the interior of them was comfortable. There might be another reason for their being miserable or poor looking, namely, that they were crowded into a small space. They never went outside that space; there they crowded and were exceedingly numerous. They intermarried amongst themselves generally, and as they became numerous, they often divided their cabins among the children as they married, but inside the interior of their cabins generally speaking was as neat and comfortable as a drawing-room.

45,544. If that had been the case, would not Mr. O'Donnell, their parish priest, have known their condition intimately? He does not say they look miserable, but he says, "the greater part of them are in miserable dwellings"?—I can only state what I believe to be a fact, in whatever way it operates.

45,545. But you see that the two views are different?—I think they can be reconciled. The Claddagh was a numerous colony in those days. The space in which they dwelt was too limited for such a vast number; it contained from 4,000 to 5,000 inhabitants at one time, and if you look at the space occupied you will see at once that it was impossible they could have a very fine description of house.

45,546. The evidence before us controverts that statement. Mr. O'Donnell states again, "The dis- "trict of Claddagh, with the town parish of Galway, "contains about 2,000 persons, nearly all the families "of fishermen." We have it in evidence that there are somewhere about that number now?—There is a great difference in the population now and what it was since I can recollect. I only state what is a notorious fact, and I do not believe there is a single old person in Galway who would not swear to the truth of the declaration I am now making here.

45,547. Again, it is evident that Mr. O'Donnell did not make this statement very hastily, because he goes on to say, "They marry early in life; many of "them too early, but by the public census of the dis- "trict, in 1834,"—therefore, you see he had official means of knowing what the case was,—"by the public "census of the district in 1834, the average number "of persons in each family was found to be only five, "including the parents." That is not a hasty statement, but it is evidently based upon official documents?—I do not undertake to reconcile any man's evidence, or to make any comment upon it.

45,548. From what time do you date the decline of the prosperity of the Claddagh people?—I have been hearing of their great necessities and wants for the last eight or ten years, and it has struck me generally as a fact, that they have been gradually declining for that period, and even longer back.

45,549. Are you acquainted with the effect which the famine had upon them?—From the general state of things connected with public committees and means for giving relief to the poor, I have always

GALWAY.

Rev. P. Daly.

7 Sept. 1864.

looked upon them latterly as being in a very distressed state.

45,550. Did they suffer very much in the period of of the famine?—I understand that they did. For the last nine or ten years I have been hearing of their distress. As I have told you already, one feature in their condition must have struck every man as a proof of their terrible decline, namely, that they have been begging latterly, when, for ages before, such a thing as a begging Claddagh man was not known.

45,551. How long?—I came to Galway as a child, and when Galway was prosperous and a great town, and a town of great business, the Claddagh men were a distinct colony and a distinct race, and were considered as an important feature in the population of Galway.

45,552. Has there been any house building of late years?—I think there has rather been plenty of house falling.

45,553. Are the houses as old as you can recollect, or have they all been built since you can remember?—I cannot give any evidence upon that matter; I never took any observation in the matter. I never was connected with the Claddagh officially; I was only connected with a portion of the fishermen in Barna.

45,554. Was there the same kind of house there 50 years ago as there is now?—Much the same I should think, from my general observation. They were thatched cabins when they were at the richest; their houses used to look, externally, in a very bad condition.

45,555. (*Mr. Lefevre.*) Do you think their condition, in the times you speak of, was much better than that of the people of the same class in other occupations?—Vastly better, inasmuch as they had constant employment in their fishing, and were in constant earnings. They had a vast deal of money to spend, and I am sorry say, on many occasions they misspent it. I have often seen the evidence of their misspending it in the streets, and in drunkenness in those early times.

45,556. Do you recollect the condition of the fisherman in other parts of the bay at that time,—say, for instance, Barna?—I knew the condition of the fishermen there; I was connected officially with them.

45,557. What was their condition as compared with that of the Claddagh men?—The people of Barna were vastly more numerous and a great deal more comfortable than they are now.

45,558. Were they as well off as the Claddagh people?—I do not remember them ever to have been as well off as the Claddagh people, in my early time. I think it was a good deal the effect of the decline of the Claddagh people, that a vast number of them in the Claddagh were forced, in a manner, to leave it and spread themselves elsewhere.

45,559. Have a considerable number of the Claddagh men emigrated?—I cannot tell you particularly.

45,560. You cannot say whether a great proportion of the younger men of the Claddagh have gone away?—I heard of some of them going, but I cannot vouch for anything of that sort. I have not been connected with the district officially, and have, therefore, not taken much notice of such matters. I can only speak of their general condition, of the general and gradual decline of the population, and of the general causes to which I would attribute it.

45,561. What would you say is the average rate of wages for a labouring man in Galway at the present time?—I should think about a shilling a day. I can get plenty of labourers for a shilling a day. They get 1*s.* 2*d.* occasionally, and under some circumstances 1*s.* 6*d.*, but that is only under peculiar circumstances, such as carrying ladders, and helping in building, if a demand for building existed.

45,562. Thirty or forty years ago, what were the wages paid to labourers?—It is very singular that the wages in those days were smaller than they would be disposed to take now.

45,563. What would you be inclined to put it down at?—One shilling a day was commonly the price of a labouring man in the town, but I do not know what it was in the country.

45,564. In the town, it was 1*s.* a day?—Yes, that was about the general average of wages.

45,565. Have the wages of labouring men improved within the last few years?—I cannot exactly lay down a rule of that kind. The only thing is, that labour is now, comparatively speaking, very limited. From the desire of employers, and a general wish to give something that will enable the labourers to live a little better, they generally give 1*s.* 2*d.* a day where they formerly would only give 1*s.* a day.

45,566. Do you think that the condition of the Claddagh men is now below that of labourers of the same class?—I never knew the Claddagh men to be employed in labour such as that you are now alluding to.

45,567. Do you think their condition is inferior to that of labouring men of the same class?—From what I have generally heard of them for the last few years, they are in a most miserable condition; and I have often heard persons officially connected with them say that they are in the most miserable and wretched condition. Some of the persons connected with them attribute it to the want of catching fish, and the want of employment. In fact, every one knows that, as a general rule, the people in the Claddagh now must be poor and wretched. We all know that they principally lived on their fishing, and we also know that they do not get it now, and therefore we must naturally conclude that they must be in a wretched condition. It is the easiest thing in the world to see their condition. There is no use in metaphysically looking into causes. I cannot state the exact cause of the decline, but I can give you a general cause, and that is the only way to look at the question. I think your proper question to me would be, to what do you attribute their present condition?

45,568. (*Professor Huxley.*) You surely do not call this report metaphysical, Mr. Daly?—I think there is a little too much metaphysics in it.

45,569. Is there any other statement that you would like to make to us?—You have asked me nothing about the general condition of the Claddagh men.

45,570. What would you wish to say?—May I ask what is the object of your inquiry?

45,571. One object of the inquiry is to ascertain, as far as possible, the condition of the fishermen.—I thought it related, in regard to local interests, to the effect of trawling upon the condition of the people.

45,572. Our inquiry is by no means confined to trawling.—I grant you that that has a great deal to do with the interests of the fishermen of Galway.

45,573. We shall be happy to hear anything you have got to say.—I have only a general knowledge of the former condition of the Claddagh people, but, from their condition now, we may in a great degree consider this question as affecting the whole locality.

45,574. I think we have been asking you questions on that subject the whole time you have been under examination.—In my former times I knew the Claddagh people to be rich and independent. I know that, latterly, the condition of the Claddagh men has entirely changed. I know, also, that the condition of persons I am connected with in Barna was considerably better when I first knew them than it is at present. I would attribute that change of condition, in a great measure, to the change of the fisheries in Galway.

45,575. You have been officially connected with the people of Barna?—Yes.

45,576. We have been told by former witnesses that the number of fishermen has fallen off?—Yes.

45,577. You are aware that there has been a number of evictions there?—Yes.

45,578. When did those evictions take place?—Principally during the last four or five years.

45,579. To what cause do you attribute them,—for what reason were they effected?—The landlord or his steward would be the only persons who could give an account of that. I attribute it to the persons officially connected with them in their little holdings.

45,580. Was it because they could not pay the rent?—I should say not, in many cases, because people were evicted, in some cases, who had actually paid the rent, but had received notice to quit. They had made efforts to pay it, and had paid it in reality.

45,581. Your statement is in accordance with what we have already heard?—I do not give that as a general rule, but I know that many of the poor people borrowed, in order to keep their little holdings, and to be near the fishing place. They borrowed, and by other means endeavoured to raise what would pay their rent. I never interfere between landlord and tenant, as a priest, if I can avoid it at all, except by way of recommendation; but I must say there were a great number of evictions effected which should not have occurred.

45,582. The evictions did not take place simply because the people could not pay the rent?—Not exactly; in many cases that was not the fact.

45,583. Had that process of eviction anything to do with the diminution in the number of the boats?—Of course they were obliged to quit the place, and their boats would be useless.

45,584. Apart from that, has the condition of the Barna fishermen fallen off in consequence of trawling?—I always understood that to be the great cause of the destruction and diminution in the quantity of fish. I assume that those are facts clear and distinct. At one time fish were very abundant. I remember the time when hundreds of carts were coming into Galway, carrying away loads of fish to every part of Ireland, as far down as Sligo in the north, and into the interior as far as Kilkenny.

45,585. When the line fishermen were fishing here, did they bring all their fish into Galway market?—Generally.

45,586. Was it bought by those whom they call jolters?—We call them cadgers.

45,587. What became of the trawl-fish when it came in?—I believe it was sent off by the trawlers. I believe that was the case. We are a little popish in this country, and we like to have fish on certain days, although we eat it on other days. Such, however, is our disposition. I remember when the town was crowded with fish. I can tell you what I recollect, more than that and it is a feature which ought not to be lost sight of here. I remember when every store and cabin in Galway, and in the immediate vicinity of the town, and for a distance of four or five miles around, was crowded with fish saved and stored up. I remember to have seen herrings stored up under the beds of the poor people, so completely crowded was the rest of the house with the herrings that were saved. Every man and woman, and even children of the age of six or seven years, were employed in saving fish, and in carrying it away. I remember this, as a general rule, not one, two, or three years ago, but twenty years ago.

45,588. About what period?—From 1806 to 1820 or 1830.

45,589. (*Mr. Lefevre*) Do you speak mainly of herrings or of other fish?—I can recollect the time when you could scarcely pass through the main parts of the streets, so crowded were they with fish.

45,590. With herrings?—No; cod, hake, gurnard, and what we call black pollack. We had ling here in enormous quantities; hake, haddock, and fish of that kind were universally to be found here. There were a great many others, of which I do not recollect the immediate appellations. The whole street from the Claddagh, and the new bridge to the west, and all along up the street and down to Cross Street, and all in that direction, were crowded with fish; you could scarcely go through the streets for the crowds there were every day.

45,591. (*Professor Huxley.*) The principal light you are able to throw on the subject of our inquiry is your recollection of the former state of things. You are not a practical fisherman?—No.

45,592. So that it would be useless to ask you about the fishing itself?—Yes, except a general knowledge of what I have heard.

45,593. We have had a number of witneses before us on those points already. Have we now heard from you what you chiefly wish to say?—It would be very hard for me to say that. I naturally expected that questions would be put to me, and as my recollection was aroused I would have answered them. I considered that gentlemen of your experience would have no difficulty in putting questions to me.

45,594. It is very important for us to learn what the condition of the Claddagh men was 30 or 40 years ago, compared with what it is now. We have obtained the means of doing that to some extent already, but we should be glad to have any other information you think we ought to have. As to the practical fishery question, it is not necessary to ask you any questions. All that we desired to obtain from you was a comparison of the condition of the people now with what it was formerly, and your opinion as to the different causes which may have produced any difference which exists. Is there anything which you yourself wish to lay before us?—If you take what I have said as a general description of their condition, I don't know what more I could say. My evidence has been given from continual intercourse with these people, without any reference to this examination. In my intercourse with the poor for years past, I have always found them complain of the want of accommodation and of the want of fish. I know that the state of the market is totally changed; that, comparatively speaking, we have no fish now. I know also that we had plenty of fish in days gone by, and I never heard of any want of fish in the place until recently. I am aware, from my intercourse with the people of late years, that they all attribute the decline of the fishery in the bay to the effect of trawling.

45,595. (*Mr. Lefevre.*) Were the Barna men fishermen all the year round, or are they farmers for a part of the time?—They were generally fishermen all the year round. A few of them might have a patch of potatoes the size of this room or less, but they were generally fishermen.

45,596. Have the Claddagh men any land at all?—I am not aware; but I believe they are entirely employed in fishing. I know that in my earlier days they were entirely employed in fishing. They had more than enough to do, although they were three times more numerous than they are now, in my estimation of them. I am sure that there is not one half of the population now that there was some years ago, and there is not one-third in the village of Barna. In Barna, at one time, there were about 200 houses, occupied generally by fishermen, and at the present moment I do not think there are 20 fishermen in the place. If I had time to examine my books, I could ascertain the exact number.

45,597. We have had evidence before us that the number of fishermen there is very small indeed?—Yes.

45,598. (*Mr. Concanon.*) You have given evidence about the period from 1806 to 1820?—I have no distinct recollection of dates. With regard to the shoals of fish from 1806 down to 1820 or 1830, I do not confine myself to particular years. I know that for many years the condition of the people of Galway was as I have described. There was not a year in Galway in which the people were not employed in saving fish. So much was that the case, such quantities of fish came here, that sometimes there were not purchasers for it, and it was used as manure. Owing to the want of salt and the means of saving it, great quantities of fish were left on the shore, and turned out for anybody who chose to take them away.

45,599. Is that 40 years ago?—I think not.

45,600. How many years ago?—I cannot tell you.

GALWAY.

Rev. P. Daly.

7 Sept. 1864.

45,601. Is it 30 years ago?—It may be. I cannot recollect a fact of that kind. The general feature of the fisheries, in connexion with the Claddagh men, was that it made them rich and independent,—that they depended for their livelihood upon getting fish, and their being rich and independent is a proof that universally they got fish. There was no great decline, one year with another, which signified or was of any consequence. The fishing one year might be better than another, but every year the fish were expected. They made a regular preparation for the fishing, and they had the means of doing so. They always had plenty of money in consequence of the fishing, whereas latterly the fishing has completely declined. I am not learned enough to attribute that to any particular cause, but I can understand perfectly the force of the universal cry which we hear on every side from these poor people, who attribute it to trawling in the bay. The present destruction of the trade in Galway, and the present condition of the people is attributable, I am told, to that cause.

45,602. You have no doubt heard that this little colony of which you speak has been much wronged by the trawlers, and that they are the most peaceable in the county?—Without making any comparison between this county and others, I may say that, taking them together, they are as good a body of men as exists in the whole world. When I say that, I say it from a general knowledge of the morals of the town. It is a notorious fact, and one which I have understood ever since I was a boy, that there was never such a thing as a well founded charge against the morality of the Claddagh men. I know that they were improvident—that they spent their money badly—that they were a great deal given to drunkenness, but the immorality which prevailed in other places I knew them not to be guilty of.

45,603. They marry very early, do they not?—They are as peaceable a body as any other body of poor people, but they are liable to peculiar excitement under peculiar circumstances. Of course a row may occasionally arise among them, and there may be a boxing match among themselves and others, but as a body they are the most peaceable, the most moral, and the best behaved body of people you could meet with. That does not exclude other people from being equally so, but living in the town of Galway, I know that to be what I have stated. That has always been the general opinion and character given to them by the people who have known them best.

45,604. You have given them a good character for being peaceable, do you include in that their peaceable disposition towards the trawlers?—I know nothing personally of their disposition towards the trawlers, but my opinion is, indeed I am sure, that you would be worse than they are if you were affected in the same way. I have not the least doubt in the world, and I speak before gentlemen who know human nature, that human nature ought not to be tried too much, let it be ever so virtuous. People who knew that they had the means, by a certain trade, of obtaining their livelihood and securing the necessaries of life, would naturally become excited when they found that they were deprived of it by any peculiar mode of action to which they had never before been subjected. I say it is not in human nature not to be indignant under such circumstances, and to show it on some occasions by a little irregularity.

45,605. Then from what you have stated you approve of the course they have taken?—If you assert that, you assert what is not the fact.

45,606. Do you approve of the course they have taken?—You said I did.

45,607. Do you approve of the course they took?—I approve of nothing improper.

45,608. With regard to the great glut of fish you have spoken of, how many years is it since you have heard of that—have you heard of it within the last 30 years?—Yes, within that

45,609. Is it more than 30 years since the fish began to decrease?—Within 30 years I have seen a glut of fish.

45,610. Within how many years?—I cannot give you any particular years.

45,611. But it is within 30 years?—Yes, but it is many years since I saw it.

45,612. Is it within 20 years?—I could not tax my memory so as to give any particular date.

45,613. For the last 16 years?—I cannot state dates.

45,614. Have they been scarce for 20 years?—No, on the contrary, I have seen a vast take of fish, especially of flat-fish, within the last 10 or 12 or 14 years.

45,615. Of flat-fish?—Yes. I have bought a turbot within the last 10 or 12 years for half-a-crown that would not be sold now for five half-crowns.

45,616. Were they large fish?—Yes.

45,617. Are you aware that fish are very plentiful now?—I am not aware of it. I went on Friday to try and get a bit of fish, and I could not get a morsel.

45,618. Have they been very scarce during the last month?—They have been very scarce.

The witness withdrew.

M. Tiernay.

MARTIN TIERNAY called and examined.

45,619. (*Mr. Macnamara.*) Did you ever own a trawl-boat?—Yes, I had two.

45,620. Did you ever go out fishing in those trawl-boats yourself?—Yes, frequently.

45,621. How long were you trawling?—About two years, I think.

45,622. How long is it since you ceased to trawl?—About 10 years ago.

45,623. At the time you were fishing in those boats did you observe what particular fish the trawl had when fishing in the bay?—I did, but I did not pay great attention to the taking of fry or spawn. It never occurred to me that an inquiry of this sort would arise, and therefore I did not pay that attention to the matter which I otherwise would, but I observed a large amount of small fry among the fish taken at each haul. Strange to say, when we fished outside the headlands from Cashla Bay to Ailladie Point I found less fry than when we fished more inside the bay. I saw that we found a larger quantity of fry when we were coming in towards the shoal ground within the bay than we found when we were outside within the headlands.

45,624. But it is a fact that very large quantities of fry were taken in your presence?—Yes, so large that I used to be astonished at the smallness of the quantity of marketable fish, considering the great bulk contained in the net.

45,625. What generally became of the fry?—They were flung out; they were useless to carry home.

45,626. Were they dead?—They were either dead or dying.

45,627. They were mixed up with sand, I suppose?—Yes, sand and mud. I observed also, though I did not pay much attention to it, that there was a large destruction among the small lobsters. We used to take up large quantities of shells, which were generally empty of the young fish, and containing the fry of the lobster. Almost every shell used to contain them. They were hauled up in the net and thrown into the sea, and I think there was an immense destruction of lobsters in that way.

45,628. Did you ever trawl outside the islands of Arran?—Never.

45,629. From your experience of trawling in those days, do you consider that trawling has had an injurious effect upon the Galway fisheries?—I have no doubt on the matter. Taking the subject generally, we found that large quantities existed in Galway previous to the time trawling was practised. I was among the first

who followed the practice of trawling, and having seen the large quantities of fish—that were taken then, and having seen also the rapid decline which immediately ensued after the practice of trawling became general, I drew the conclusion that the decline, to a great extent, was owing to trawling. We used to be able to take from 80 to 100 pair of soles, which, of course, we found to be very profitable. I then paid my men so much a week, in fact, I persisted in that as a rule throughout, but the other boats did not. I did that, because it appeared to be so profitable that it would be giving too much away, and I kept the fish to myself; but towards the latter part of the time, the fish caught were reduced to such small quantities, that they did not pay me at all. I did not, however, consider it fair, as I had enjoyed the profitable part of the transaction, that I should change the mode of payment when the fishing became bad; but as a rule, the other proprietors of trawl-boats paid their men wages in the early part of the fishing, and towards the end of it paid them by share, because they could not afford to pay wages.

45,630. Do you consider that in consequence of trawling the fishing has fallen off?—I do distinctly.

45,631. Did you ever see fish spawn on the deck?—No, I never paid any attention to it, but I may have seen it without recognizing it.

45,632. Do you know whether the ground within the islands of Arran, and towards Galway, is spawning ground?—I am sure of it. The temperature of the water in Galway Bay is higher than in any other of the bays, being much exposed to the influence of the Gulf Stream. I may say, that at one time a vessel from the Mississippi came across the bottom of the sea to the lighthouse in Galway. The temperature of the water is high, and it is therefore advantageous for the breeding of fish.

45,633. Do you recollect, when trawling first commenced in Galway, what quantities of fish were generally taken?—I am as clear as I am that we sit here, that the aggregate of fish taken by the line-fishers previous to the existence of trawling in Galway was larger than the quantity of fish taken by the trawlers and line-fishers combined now.

45,634. Were you intimately acquainted with the Claddagh people 20 years ago?—I was.

45,635. What was their state then?—They derived very large profits from their fishing, but they were very improvident in their habits. With regard to some of the extracts from the report, which I have heard the Commissioners read in the course of this inquiry, if they would read them to me as they were read to the other witnesses, I think I could give reasons why the conclusions which are apparent on the surface of that evidence are not the real ones which ought to be drawn.

45,636. (*Professor Huxley.*) We will examine you on that point by-and-by.—I should be glad to be examined upon it.

45,637. (*Mr. Macnamara.*) You heard the report of Mr. O'Donnell's evidence?—Yes.

45,638. He states that the fisherman were wretchedly poor.—I know that to be a fact, but it was not owing to the want of means arising from the fishery, but to the extreme improvidence of the fishermen and the well grounded confidence they entertained that, if poor to-day, to-morrow they would be able to renew their condition by the quantity of fish they would be able to catch. As they got they spent; and if for a week or a month there was any scarcity of fish, they were in the jaws of poverty, and if there was a bad year, they were thrown out entirely, all because they were in the habit of relying upon a constant renewal of the fish from week to week. They never thought of putting by a shilling for a rainy day.

45,639. Did that apply to the owners of the boats, or those whom they were in the habit of employing?—Principally to the owners. The owners of the boats had two shares, and there were generally five or six men in each boat. The owners of the boats had something distinct from the others, although they had a share of the improvident habits of the general community. They had always something left, or they sent their nets to the pawn office, with the confidence that they could release them when necessary. There is one thing stated in the report of the evidence of Mr. Halloran. He is stated to have advanced 1,200*l.* in ropes and other materials. There could be no stronger proof of the implied and probable wealth of the community than that fact, namely, that a tradesman would give 1,200*l.* on credit, believing that he would be repaid in two or three months or so. It shows that he well knew that, if they were poor to-day, they were certain to be rich to-morrow.

45,640. What is the present condition of the Claddagh men?—I know that I have given small sums in charity to men who, a few years ago, say 10 years ago, were as independent in mind, thought, and action as any men I ever saw.

45,641. Does that apply only to individuals or to the general community there?—I mean those who were the most comfortable among them, those who formerly had means and property, but who are now I believe, in the most wretched condition.

45,642. Have you ever gone into the Claddagh?—Yes.

45,643. What is the condition of their houses?—Very poor and wretched. They have not been able to thatch their houses, and the roofs are falling. They are in a most miserable condition.

45,644. From your experience, do you consider that if trawling were put a stop to in the Bay of Galway the fisheries would improve?—Except as a general conclusion, I could not state.

45,645. Is it your opinion?—My opinion decidedly is that it would. It is my opinion, that trawling has destroyed the fish, and, of course, the converse of the proposition, namely, stopping the trawling, would naturally lead to a restoration of the fishing.

45,645*a*. A good deal has been said of the character of these men, and their morals. Do you know anything upon those points?—They are a very peaceable people at all times. There is no doubt that there used to be occasionally an outbreak, and of course they would resist the trawlers sometimes. Latterly, I believe, they grew rather impatient, in consequence of the neglect manifested by the Government in not attending to their repeated claims for assistance.

45,646. Did you ever know or hear of them being brought into court for theft?—You can tell that better than I can.

45,647. I am not giving evidence.—I have seen very few of them convicted of theft.

45,548. (*Mr. Concanon.*) You seem to know a good deal about the fishing?—I do.

45,649. Do you think it takes a long time for the fish to grow?—I have not studied that question, but I should say from three to four or five years, if we are to judge from the salmon.

45,650. We will take cod,—do you think it would take a long time for cod to become a full-grown fish from the time it was spawned?—Perhaps it would take four, five, or six years.

45,651. How would it be with regard to hake?—About the same time. I should say that fish would reach their full size within five or six years.

45,652. Do you believe that fish have become scarce by reason of the young having been destroyed by the trawlers?—I do.

45,653. Were you the writer of the memorial that was drawn up in 1863?—I was the writer of the memorial I heard read some time ago, but I forget the date.

45,654. You subscribed to that document, I suppose?—Yes.

45,655. Was it true, as stated in that document, that the bay abounded in fish?—If you will read the document, I will consider any portion of it to which you wish to call my attention specially.

45,656. The memorial states, "It is not 20 years "since ours was a most thriving and happy community "of over 4,000 souls, and the owners of 300 craft, in

GALWAY.

M. Tiernay.

7 Sept. 1864.

"which we fished with great benefit to the country "and advantage to ourselves. At the present time "we do not sum up 1,500 persons nor 80 boats, and no "employment is to be found even for such diminished "numbers. That want of employment and the con- "sequent ruin which has overtaken us, is due to the "reckless system of trawling pursued in the bay, by "which the fish are not only scared away from their "usual haunts and feeding and spawning grounds, but "the spawn itself, to the extent of many hundreds of "tons weight, is annually destroyed." You see it was not the scaring away of the fish alone, but the destruction of the spawn?—Yes.

45,657. Do you believe that to be true?—Yes.

45,658. The memorial goes on to say, "A striking "proof of the evils of the system has lately been "furnished to us by the temporary suspension of its "practice. During the 20 years it has been in ex- "istence, the supply of fish has been greatly diminished, "until of late it may have said to have been exhausted, "or, more properly speaking, so scared away as "to render all our efforts fruitless. Owing, however, "to some local difficulties, the trawling boats have "been unable, during the last two months, to pursue "their usual avocations, the consequence of which is, "that the bay is filled with fish, and all our people are "busily employed in every direction. Hunger has "fled away from our doors, and the country is now "more than usually supplied with the judiciously "collected wealth of the ocean."—That was literally true at the time it was written.

45,659. Was that within your own knowledge when you wrote it,—was the bay swarming with fish?—I agree with the statement contained in the document. It was comparatively plentifully supplied with fish.

45,660. The people came in with their carts to purchase it and send it away?—Yes, and happiness came again to the Claddagh men.

45,661. You say that the trawlers had scared away the fish, and that it would take five years for them to grow to their full strength. Have you formed any opinion as to what it is that caused this abundant supply within two months?—Of course they might have come in again after being scared away by trawling; there are several reasons given.

45,662. You say in that document, that it was not that they were scared away, but that the spawn was destroyed?—I think I say there that they were scared away.

45,663. (*Professor Huxley.*) There is also the assertion, "and spawn itself to the extent of many hundreds of tons weight is annually destroyed."—At that time there was a confusion of terms in my mind. When I said spawn, I should have said small fry.

45,664. (*Mr. Concanon.*) Was the same impression on the minds of the gentlemen who affixed their signatures to the same document?—I cannot say.

45,665. Are fish plentiful now?—I can buy a dozen herrings for half the money I could a short time ago. I consider that to be evidence that they are more plentiful than they were.

45,666. Did you hear the evidence given this morning as to the whiting, namely, that you have only to go out for them in order to obtain them?—I did not.

45,667. Of your own knowledge, are whiting plentiful in the bay?—I do not know.

45,668. Do you not hear whether fish are plentiful or not?—I know nothing more than this, that there is a plentiful supply of herrings coming into the town. In regard to this memorial, I may say that my assistance was sought in the affair. I was asked to prepare that memorial, and if Mr. Sweeney had asked me to do the same thing, I should have done it with the greatest pleasure.

45,669. You have been asked questions as to the peaceable habits of the Claddagh men. Now I ask you fairly, is there not a determination among them that the trawlers are not to work?—I believe there is.

45,670. Do you believe it would be safe for the trawlers to work unless they were protected?—I do not think it would.

45,671. (*Professor Huxley.*) You were speaking just now of lobsters coming up in the trawl?—Yes.

45,672. Lobsters in shells?—Yes.

45,673. Will you explain what it is you mean?—My attention was attracted by the appearance of young lobsters inhabiting otherwise empty shells, as mussel and other shells.

45,674. Whelk shells?—Yes, especially whelk shells.

45,675. You are labouring under a misapprehension. They are not lobsters at all.—They appeared to me to resemble lobsters.

45,676. They are totally different animals. They are what are called the "hermit crabs."—No, I can distinguish between a crab and a lobster.

45,677. Had they not curved soft tails?—I think so; something like the appearance of a prawn.

45,678. Were they not shaped like this [*describing*], with a long soft tail?—The foremost part appeared like that, but I cannot say anything about the last.

45,679. There can be no doubt they were hermit crabs; and had nothing to do with lobsters in any way. With regard to the temperature of the water in Galway Bay, have you ever examined it with a thermometer?—No, I have not; but from observations which have been made by persons who have been in different waters, and from my own judgment generally of the temperature by feeling the water with my hands, it is manifestly higher than in other places. I believe it will be able to stand the test of trial by the thermometer.

45,680. But that has never been done?—Not that I am aware of.

45,681. You wish me to read passages from the evidence contained in this report?—Yes.

45,682. It is important to be corrected in any wrong conclusions we may have formed, or to have any erroneous statements which are given here put right. The statements to which you refer are these. The Rev. Mr. O'Donnell says,—"The Claddagh fisher- "men are, for the most part, very poor. Before the "late winter fishing commenced, the majority of them "had their nets in pawn; and many of them were "obliged to pawn not only their gear and cabin "furniture, but even the iron vessels in which they "prepared food." Do you propose to make any statement in order to modify the effect of that passage?—I mean to say that that is no evidence of poverty arising from the decay of the fisheries.

45,683. Do you think that if the fishing had been prosperous at that time, that would still have been said of the people?—That is precisely what I mean to say, because they were so improvident in their habits. Although they might have plenty of money to-day, in the course of two days, if they had not gone in the mean time to fish, or the fisheries had declined, they would be just as poor as ever they were, and would then pawn their nets and furniture, confident that at any moment they could raise plenty of money to release them.

45,684. There is a statement at page 113 of the Report to this effect,—"None of the Claddagh boats "earned more than 60*l.* during the late fishery; the "average earnings were less." That statement is to the effect that the yield of the fishery itself was absolutely small?—That might be correct, but yet apply to a single season only.

45,685. The Claddagh fishermen themselves also state, at page 104 of the report, that, "in 1833 the "herrings were not abundant in the bay, not more "than from 1,000 to 6,000 were taken by the boats "in any night during the fishery. The winter herrings "have not been abundant in the bay in any season "during the last 10 years." That is their own statement as to the abundance of the fish.—Does it refer to 1836?

45,686. No, to 1833, and from 1833 on to 1836.—Of course, people like the Claddagh people, in putting forward a memorial to the Government, would naturally colour their statement, in order to attract attention, and can be scarcely held responsible for their statements, because they are very illiterate.

45,687. Is there any of the statements which I read upon which you would like to remark?—I do not recollect any other, but I would wish to combat the conclusion that might be supposed to be arrived at from the evidence, that the apparent poverty and the real poverty perhaps, which seem to have beset the people, arose from the failure of the fish in the bay; in my opinion, it arose from their own improvidence in neglecting to set aside the profits they made to provide for a rainy day.

45,688. With respect to the advances made by Mr. Halloran, the reply you make to that is, that it was evident he expected to be repaid, or he would not have made the advance. Now, at page 117 of this report, we have a statement from the Claddagh fishermen to this effect,—"The boat owners can all "get credit for materials in Galway, but the fishermen "cannot, as they have not any security to give; and "if they cannot obtain a guarantee, they are unable "to prepare for the fishery and the boats to which they "belong are unemployed. Credit is given for twelve "months, and the prices are moderate. Mr. Halloran "gives large credit, and but for him many fishermen "would be without employment." He seems to have advanced his credit very liberally, and without any hope of repayment?—He was a very prudent man, and he derived large profits from the trade.

45,689. But there is this statement from the Claddagh men themselves,—"In the summer the "greater number of fishermen are obliged to pawn "their nets, there being not much employment and "provisions being dear. They are in this distressed "condition when the time for the harvest fishery is "approaching"?—That is correct, and it is a proof of my argument that when the fisheries are over, having spent the profits, then in the absence of a fishery in the poor season of the year, between the harvest and the winter fishing, they had no money, and all their things went into the pawn office until the season for fishing came round again, when they would be at once released.

45,690. What direction did this improvidence take,—they are said to be a very moral people and temperate?—They were fond of social meetings and of spending their earnings in drinking.

45,691. The report contains a statement that the fishermen only do that sometimes after a great fishery, and that they never take drink of any kind to sea?—I never knew them to do so.

45,692. The Rev. Mr. Hughes says,—"The Clad-"dagh people, as a portion of a large town population, "must be considered comparatively a sober and moral "people in general; the fishermen are sometimes ine-"briated after a great fishery, but, as they never take "intoxicating liquors of any kind to sea, and are not "provided with any comforts for subsistence while out "fishing, a small quantity of spirits intoxicates them "when they return. They are often inebriated from "taking only that quantity which town labourers or "tradesmen take as an ordinary allowance." There is also this further statement,—"There is but one "public-house, a very poor one, in the district com-"monly called Claddagh. There was another opened, "which failed in a short time, about two years ago. "However, when the Claddagh men indulge in liquor, "they frequent houses in another part of the town." You will observe the difficulty of all this; if the fisheries really were very profitable, and the men were reasonably temperate, it is difficult to understand how they could spend their money?—I have known, over and over again, a party of them sit down and spend 35*l.* in a night, but that is 25 or 30 years ago.

45,693. At the present time you attribute their distress,—which, according to these reports, seems to be no greater than it was then,—to real want, whereas formerly it arose from their improvidence?—I attribute it now to real absolute want, arising from the absolute failure of the fisheries.

45,694. (*Mr. Lefevre.*) Can you date the decline from any particular year?—Yes, from the very year in which I commenced to trawl myself.

45,695. How long is that ago?—Ten or eleven years ago.

45,696. That would be 1853 or 1854?—Yes.

45,697. How long did you trawl yourself?—About two years. I continued it until I found the fish had so decreased in the bay that it was not remunerative to go on with the fishing.

45,698. What was the size of your boats?—One was of 18 tons and the other of 12 tons.

45,699. Did they trawl continuously?—Yes, more so than most of them. I was in the habit of going out frequently myself, and I recollect that when every other boat would put back I insisted upon mine going out and fishing in the bay.

45,700. Do you agree with the other witnesses that the time at which small fry was mostly found was from June until the latter part of the harvest month?—I observed small fish at all seasons of the year, but there may have been a difference as to the size—in the summer time they would perhaps be smaller than towards Christmas and December.

45,701. In August and September did you find small fish in any great numbers?—In very great numbers, indeed.

45,702. Did you hear me read the reports from the Coastguard Inspector?—Yes.

45,703. I gather from those reports that the decrease of the fisheries had hardly begun until 1860?—I regret to say that I do not attach much importance to those reports. They do not seem to me to be the result of any personal knowledge on the part of the gentlemen who furnished them,—they are rather gathered indiscriminately from other sources.

45,704. You heard a witness say that they were gathered from the men employed under the Coastguard?—Yes; but few of them have the advantage of the experience of Mr. O'Flaherty, because they very seldom go out amongst the trawlers or amongst the fishermen. They would see occasionally on the shore the result of the night's fishing, but as a rule they never went out to take notice of the fishing.

45,705. Did the Coastguard exercise any real supervision in preventing trawling within the limits?—I never observed it, although I have fished within the limits. I went to Kilmurry Bay, where a boat had never fished at all with a trawl.

45,706. Do you think the byelaw as to the limits within which trawling was to be practised was not observed?—As a rule it was neglected.

45,707. If it had been observed would any real good have been done?—I think it was immaterial whether it was observed or neglected, because where the line of demarcation ran was precisely about the central part of the best fishing in the bay. We consider the spawning beds to be to the east and west of the line.

45,708. Do you recollect the inquiry which took place previous to the laying down of that law?—No.

45,709. You did not give evidence upon it?—No.

45,710. But you think that the line was laid down after careful inquiry among the fishermen?—I rather think it was laid down after a protest from the fishermen.

45,711. Do you think that the Claddagh men were not satisfied with it?—They always had an objection to it.

45,712. If trawling were prohibited altogether in the bay could it be carried on successfully outside the Arran Islands?—I cannot say positively, but I believe not. I believe also that if you took the aggregate of good and evil arising from trawling in the bay, and made it a close fishery, considering that the aggregate of the fish taken by the line fishers alone previous to the commencement of trawling was more than the aggregate obtained from both descriptions of fishing

GALWAY.

M. Tiernay.

7 Sept 1864.

since, and also taking into account the fact that where some 15 individuals would be benefitted from the profits arising from trawl-fishing, 500 families would be benefitted by the other mode of fisbing; and taking also into account that even the fish would not suffer much dimunition by a change in the mode of fishery, I think that on the whole trawling ought to be excluded in the Bay of Galway, and indeed in all bays in Ireland, if necessary.

45,713. If trawling were altogether excluded, would not soles be excluded from the market,—soles and plaice would not be caught in any numbers by the line fishermen, would they?—I have heard it stated by the fishermen, and also by the fish dealers as well as by the fishermen, that the boats of the line fishermen used to kill from 30 to 40 and 50 pair a day before trawling was introduced into the bay.

45,714. Fifty pair of soles?—Yes, and 12 and 15 turbot.

45,715. Was that amount killed by each boat?—Yes.

45,716 Since trawling stopped has there been any supply of those fish?—Not by the line fishermen; they do not pursue it now.

45,717. Have you at all considered what would be the effect of stopping trawling during a portion of the year?—I have. I naturally attach great weight to the fact of having certain fish lost to the public, but I can only repeat my answer that a large proportion of the fine fish would still be taken by the line fishermen, and the aggregate of the advantages is in favour of the line fishermen.

45,718. Then you do not think it would be sufficient to stop trawling during a portion of the year, but you would advocate its being stopped throughout the whole of the year?—Yes; if it has the effect I mention of producing a relative quantity of fine fish and of increasing the supply of other fish to such an extent.

45,719. Do you think the trawlers have interfered much with the herring fishermen—I mean in the way of cutting their nets, apart from frightening away the fish?—With regard to that I was reading yesterday an account of some of the herring fishermen in England.

45,720. I mean here; have you had any complaints here?—I hear that they have frightened shoals away by throwing stones at them.

45,721. Apart from the question of frightening them, have they been injurious to the herring fishery?—I can give you no evidence upon that.

45,722. Have no complaints come to your knowledge?—I have heard complaints, but I would not repeat them, as I think they are not well substantiated.

45,723. Was there much trawling during the night time?—Not much; there used to be some, but it was not very general. They generally endeavoured to get in so as to be able to send the fish off by the night train.

45,724. (*Professor Huxley.*) I understand you to say that in speaking of the destruction of spawn in the memorial, and of the many hundred tons weight annually destroyed, you meant fry?—Yes.

45,725. Do you think there is any foundation for the statement that spawn is brought up by the trawl?—I rather think that a confusion of terms existed in my mind, and that the same confusion of terms existed in the minds of most other people here.

45,726. Do you think that spawn is brought up in the trawl, using the term in the sense of eggs of fish?—I can give you no evidence upon that.

45,727. (*Mr. Lefevre.*) Were all the men employed on board the trawlers Claddagh men?—Not all of them, but the principal proportion were.

45,728. We have heard already that they got as wages from 12*s.* to 1*l.* a week?—I do not know any of them who got 1*l.*, except they fished on shares. If they had a fortunate week their profit might rise to 1*l.*, but from 8*s.* to 10*s.* was the average wages. Those who worked by shares had to take their chance of what arose.

45,729. You left off trawling on account of the decrease of fish?—Entirely so.

45,730. But after that the number of trawlers increased?—Yes.

45,731. Particularly of the larger class of trawlers?—Yes, and after fishing for a short time a great many left, finding it unprofitable.

45,732. Did any of the trawlers here fish at any portion of the year in other bays?—There is a well arranged system carried out by the proprietors of trawl-boats, and they have information from every quarter. The moment, they hear by letters, which are constantly reaching them, of the arrival of shoals of fish in any neighbourhood, and they happen to have a bad fishing where their boats are stationed, they send them off at once.

45,733. Is that course adopted by the owners of the large trawlers in Galway?—It is in Dublin Bay by some that I am acquainted with.

45,734. Did the smaller class of trawlers in the bay observe the same course?—No, they belong to the bay.

45,735. And they never fished outside?—No.

45,736. Did they not find it profitable to adopt trawling throughout the year in the bay?—I believe not. The general conclusion I arrive at, in the whole of the matter is, that I knew the fish to be abundant before trawling commenced, and I know it to have fallen off now, until it is almost a nullity.

The witness withdrew.

P. M'Laughlin.

PETER M'LAUGHLIN called and examined.

45,737. (*Mr. Regan.*) Are you a fish dealer?—I am.

45,738. For how many years have you been a fish dealer?—For the last 38 years.

45,739. In the town of Galway?—Yes.

45,740. I believe at one time you were a rich man?—Well, I had enough for myself.

45,741. Do you recollect when the trawling first commenced?—I recollect before the trawlers came in, and when they came in.

45,742. Before the trawlers commenced, what was the state of the fish market of Galway?—I have seen it full of trade and traffic, full of wealth and good earnings.

45,743. What counties, to your knowledge, used to be supplied from the fish market at Galway?—I have seen them coming for fish from Kildare, Roscommon, Mayo, and many other counties.

45,744. Who supplied the market at that time with fish?—The Claddagh fishermen and the people around.

45,745. What kind of fish were they,—enumerate them?—Some part of the fish buyers used to take turbot, soles, lobsters, and salmon; others would take codfish, haddock, and coarse fish, others would take fresh herrings, and some would have salt herrings; it was according as the market was.

45,746. What was the state of the herring fishery 20 years ago?—It was very good.

45,747. Previous to that, what was it, say 30 years ago?—It was very good then.

45,748. What has been the state of the herring fishery since the trawling commenced?—It has been very bad.

45,749. Do you attribute the destruction of the fishery in the Bay of Galway to the trawlers?—I do, because, before the trawlers began, I used to buy from the Claddagh people from 60 to 70 turbot in one day's fishing; I used to buy 20 or 30 from other boats. During the week I generally got about 100 turbot from the Claddagh men, which I believe they took at Arran and upon another bank leading out of Cashla Bay and Greatman's Bay.

45,750. Since the trawlers commenced, have you had large quantities of fry brought into the market of

Galway and small fish ?—I have seen small useless fish come into the market and the people used to laugh at them. They were taken down for guano.

45,751. For manure ?—Yes.

45,752. That was the fry and the small fish ?—Yes, different kinds of fry.

45,753. Did you see large heaps of it brought for that purpose ?—They did not take large heaps in, but if they were in a hurry they threw a great number of them in with the large fish. The fish were so small that they used to stick to the large fish.

45,754. Did the trawlers bring them in ?—Yes, it was the trawlers who did it.

45,755. What other fish did they bring in,—did they bring in soles in large quantities ?—Yes, at one time of the year they devoted their time to fishing for soles. Sometimes I have bought from them 40 pairs in a day, and then down to 10 pairs.

45,756. Were they caught by hand-lines or by trawling ?—By the spilliards. We have had none since the trawling commenced.

45,757. In what state has your fish market been since the trawling commenced ?—It has been very bad.

45,758. Have the fish increased in your market since the trawlers gave up trawling, for the last seven or eight months ?—For the last eight months. I have not seen so many mackerel taken as have been taken this year since the trawling was stopped.

45,759. Since last May ?—Yes, and also so large a quantity of whiting. They have caught them in thousands, and previous to this year I have seen none of them at all for a long while.

45,760. Now, while the trawlers were at work, did you see mackerel and whiting brought into the market in any quantity ?—No, there were only very few caught. Some odd times there would be three or four.

45,761. Before the trawling commenced, did you have plenty of mackerel and whiting in the market ?—Thousands of them. We were in the habit of salting them.

45,762. Have you any recollection of seeing large quantities of herrings here, 30 years ago, converted into manure ?—I recollect the time when they were lying down about the wall, and could get no buyers. They would not pay for ballast, but preferred to take some of the herrings back with them before they would take stones for ballast. I have seen them carried away and thrown out as manure.

45,763. You have not seen that since trawling commenced ?—No, nor for a long time before that.

45,764. Did you know the late James O'Doherty of Galway ?—Yes.

45,765. Do you recollect him turning out thousands of pounds of them for manure, and paying the men for carrying them away ?— Yes.

45,766. Do you know Nicholas Smith, of this town ?—Yes.

45,767. Have you known him do the same ?—Yes; he also had a large quantity, and threw them out.

45,768. How many years is that ago ?—I believe it is about 26 years ago.

45,769. Are the quantities of sole and fine fish coming now into the Galway market more than before the trawlers commenced, or less ?—Since the trawlers commenced, or rather within the first three months after trawling commenced, we could get none, because, where they used to set the spilliards these trawlers trawled, and the spilliard men could not get upon the ground. There was a large place at Gleninagh from which they were in the habit of supplying the town with soles, but since the trawling commenced they have got none.

45,770. Did the Clare fishermen trawl?—No; they were fishermen with the hand-line.

45,771. (*Mr. Concanon.*) What is your occupation ?—I live by my traffic.

45,772. In what do you traffic ?—In anything I think will benefit me in regard to the fish.

45,773. Will you tell me whether, for the last eight years, the line men,—the Clare men,—have sent their fish to Dublin by rail ?—They have not had any to send to Dublin by rail; they only catch a small trifle of haddock when the weather happens to be fine. They have caught, and sent it to Dublin, when there has not been trawling.

45,774. Haddock ?—Yes.

45,775. How long is it since they sent up haddock to the Dublin market ?—Seven or eight years.

45,776. Have they sent up fish to the Dublin market within the last three or four years ?—I have no knowledge of it.

45,777. Have you been purchasing and sending up fish to the Dublin market ?—No.

45,778. Could you get a consumption for it in Galway ?—No; because the cadgers and other people who used to take the fish do not come here now. When the fish declined and fell off, they did did not come, because they could not get half as much as would pay expenses.

45,779. Has that forced you to drive it away to the Dublin market ?—Yes.

45,780. (*Professor Huxley.*) You say you were in the habit of getting a large quantity of soles from the men who used the spilliards ?—Yes.

45,781. Did they bring as many as you wanted ?—Sometimes more than we wanted, and at other times not as many.

45,782. Have they brought in plenty since May ?—No, none, because they could not get them.

45,783–4. Do you think the trawlers have cleared out all the soles from the bay ?—I know the soles have declined.

45,785. Have they cleared all the soles out of the bay ?—They have cleared out the greater portion of them; there may be a few left. I was in the employment of Mr. Brown at the time that trawling commenced, and since then I have not been able to get them from the Claddagh people, because they have all been done up.

45,786. (*Mr. Lefevre.*) What did you give for a pair of soles before the trawling began ?—I got them for sixpence a pair.

45,787. As low as that ?—Yes, I did, and for fourpence a pair before trawling began.

45,788. What would you give for a turbot ?—I bought a turbot for one shilling and sixpence, and two shillings, and down to one shilling, before they began trawling. Sometimes I have paid as much as four shillings.

45,789. That was not the usual price, was it ?—They were not confined to any particular price; it was according to the demand for them. When the cadgers came in, we paid more.

45,790. What was about the usual price ?—Two shillings and sixpence was the price most generally paid That was the highest I used to go.

45,791. Did the fishermen from Inishbofin bring in their fish for sale here ?—They did.

45,792. Do they do so now ?—They do bring in all they catch of it.

45,793. Has the take fallen off there ?—They have got very little since the trawling commenced, except some codfish and hake.

45,794. They do not bring in any haddock now ?—Not much.

45,795. Or soles ?—No soles or haddock.

45,796. And they did bring in soles formerly ?—Yes.

45,797. And turbot ?—Yes.

45,798. Now they do not ?—No.

45,799. Is there any trawling outside the bay off Inishbofin ?—They have not been trawling beyond the Arran Islands. I never knew them to be trawling beyond there.

45,800. (*Professor Huxley.*) Was the reason why the Inishbofin men could not catch haddock because the trawlers trawled over their lines ?—No, but the Claddagh men told me that in the places where they used to get them they cannot obtain any now.

The witness withdrew.

GALWAY.

D. Kelly.

7 Sept. 1864.

DENIS KELLY called and examined.

45,801. (*Mr. Macnamara.*) Have you ever been a trawler?—I was trawling for some time.

45,802. You have trawled both inside and outside of the islands?—Yes.

45,803. How long is it since you did that?—The first time I had to do with trawlers was in 1841. At that time it was a mere experiment. Mr. Martin brought in one from London and he tried it.

45,804. When you first commenced trawling was the fishery good?—It was very good.

45,805. Did it become worse or better afterwards?—Much worse, but at that time, namely in 1841, there were very few trawlers in the country. Mr. D'Arcy had one and Mr. Thompson had one. We worked about three years off and on, not for the purpose of sale but merely for amusement. We trawled along from Slyne Head and caught a great deal of large sole and turbot.

45,806. Was that outside the islands?—Yes, at Slyne Head.

45,807. Have you trawled inside the islands of Arran?—Yes. In 1854 I came to live in Galway. The question of trawling was a very vexed one at that time, and the fishermen were annoyed at Mr. Brown for using trawlers in the bay. A few men in the town collected some money for the purpose of buying trawls for the fishermen, in order to quiet them. About 700*l.* or 800*l.* were collected and distributed. Twenty-four or twenty-five trawls were distributed among the fishermen. They went to fish then, and after a few years they found it would not pay and they gave it up. During those two or three years I had a boat myself, and I fished constantly in the bay.

45,808. Is it your opinion that inside the islands of Arran it is a spawning ground?—I am satisfied that it is every inch of it.

45,809. And the trawl in passing over the spawning bed is injurious to the fishery?—Yes, both in the destruction of fry and by disturbing the ova.

45,810. Did you ever see the fry destroyed yourself?—Yes, thousands of them in a day. I have thrown out half a ton of sea-weed, dirt, and small fish of every description.

45,811. You have thrown it overboard?—Yes.

45,112. Is there anything peculiar, according to your opinion, in the formation of this bay?—I consider that there is. I consider that the Bay of Galway is different from any other bay I know, inasmuch as it is sheltered by the Arran Islands, and I consider that the fish from the deep come into the bay under the shelter of the islands to spawn. Frequently when they have been taken up in the trawl I have seen the soles actually paying off their spawn on the deck. I have seen that in every part of the bay.

45,813. (*Mr. Lefevre.*) What time of the year was that?—In the month of April, and we used to find more soles in the month of April than in any other season of the year. I consider that the time they are coming upon the natural beds to spawn.

45,814. (*Mr. Macnamara.*) Do you consider that the fisheries would be improved by prohibiting the use altogether of trawlers inside the bay?—I consider that it would.

45,815. Were the fish taken outside the islands of Arran of a better description than those which were taken inside?—They are a larger sized fish. In fishing at the back of Slyne Head, in 1841, we scarcely took any small fish at all. In the course of three years I do not think we took a basketful of small fish. That was in the deep sea in 45 and 50 fathoms of water.

45,816. Was it in the summer time?—Yes.

45,817. Is it possible to fish outside the islands of Arran with the trawl for any considerable period of the year?—It all depends on the weather. We can trawl better outside the islands of Arran than inside if it is fine weather, but not in bad weather.

45,818. Do you know what is now the state of the fishermen in the Claddagh?—I know they are in a very poor state.

45,819. You keep an establishment in Galway?—Yes.

45,820. Not far from where they live?—Quite convenient to them.

45,821. Then you know their position?—Yes; they are in a very poor state.

45,822. Since the trawling ceased have you observed any change in their condition?—Since the herring fishery commenced there has been an improvement.

45,823. When did it commence?—It did not commence exactly until yesterday,—that is to say, the herring fishery; there were a few boats which used to get 1,000 or 1,500 fish, but it was not general until yesterday.

45,824. Have you gone every day into the Claddagh?—Yes.

45,825. What is the condition of the fishermen there?—They are wretchedly poor.

45,826. Was it so 20 years ago?—I have known them since 1846, and they were better off then.

45,827. (*Mr. Concanon.*) There was a very good take of fish yesterday?—Yes, a very fine take of fish.

45,828. There has not been a better for many years?—I have not seen a better take of fish since 1840.

45,829. Are you aware that latterly there has been a good take of other fish?—I understand there is a good deal of whiting in the bay, but I have not seen it.

45,830. How long from 1854 were you trawling?—I trawled up to 1856.

45,831. Two years?—Yes.

45,832. You then gave it up?—Yes.

45,833. Are you aware of fish being taken lately in Oranmore?—I consider the harvest fishing is not good at all until they go to Oranmore.

45,834. Have they gone there this year?—Yes.

45,835. How far is that from this place?—Not far,—it is in shallow water to the east of the bay. I never have any confidence in the herring fishery until I see them come from the deep water into the shallow water.

45,836. (*Professor Huxley.*) Were you acquainted with the Galway fishermen in 1847 and 1848?—Yes.

45,837. That was before there was any considerable trawling here?—Yes.

45,838. On what fishing did they depend principally?—On long-line fishing principally.

45,839. Did that support them more than the herring-fishing?—Each fish has its own season. In the months of January and February we have the winter herring-fishing.

45,840. Take the year round, what did they look upon as their principal harvest? Did the herrings yield them most, or the other kinds of fish?—The herrings did, in good seasons.

45,841. Did they depend upon the herrings more than upon any other fish?—They did not exactly depend upon it, as a general rule.

45,842. Would the falling off of the herrings have affected them more than the falling off of any other kind of fish?—I think it would.

45,843. Were you intimately acquainted with the condition of the people in 1847 and 1848?—I was.

45,484. Were they in a different condition from that which they are in now?—They were in a more prosperous state than they are in now, that is, the owners of the boats; of course those employed by the owners of the boats were in a wretched state.

45,845. They were then?—Yes, I have known the owners of the boats to be actually supporting them.

45,846. How many owners of boats would there be in 1847 and 1848 among the Claddagh people?—Of the large 12 ton boats there would be about 60.

45,847. How was it that these people came to be in a better condition than the rest?—Because they had more shares. They had the boat themselves, and they had a share for the tackle in the boat. They had three shares against one held by the men; and besides

that they had their boat, and were in a comfortable position. I have known some of them to have as much as 250*l.* to their credit in the bank.

45,848. Then they could not have been people of such improvident habits as we have heard?—They have not been so lately, but when they had good means they were.

45,849. Before 1847 or 1848 were they?—I had not much knowledge of it then, but I have heard that they were.

45,850. What was it made the change in their habits before that time?—The falling off of the herring-fishing principally, because, after the winter fishery, a boat and crew might have between 160*l.* and 200*l.*, all obtained in the months of January and February.

45,851. And having the money to spend, they spent it?—Yes, very freely.

45,852. Were they in the habit of pawning their boats and nets?—Yes; and, as Mr. Daly said, I have known them pawn a sovereign for a shilling and half-a-crown, until they could release it.

45,853. Did they put the sovereign itself in pledge?—Yes, that is a fact.

45,854. Would those people who had a good deal of money in the bank pawn their nets?—No, I do not mean to convey that; I mean to say that the people who fished in their boats pawned their nets, and the owners released them for them.

45,855. Were the people who would pawn a sovereign for a shilling the owners of the boats, or the persons who worked in them?—They were not the owners.

45,856. They were the persons who worked in them?—Yes.

45,857. I suppose that was done in order to prevent them from spending the whole sovereign?—Perhaps it was.

45,858. It was done to put it out of their possession?—I cannot say what their reason was, but they seemed afraid to part with the gold.

45,859. (*Mr. Lefevre.*) Was there any inquiry by the Commissioners in 1854?—I am not aware of there having been an inquiry then.

45,860. The byelaw which has been referred to has two dates, 1843 and 1854; from that it would appear that it was re-enacted in 1854?—I know that the fishermen have always been displeased with the limits.

45,861. I want to know why it was that this byelaw was re-enacted in 1854?—I cannot tell you, but I know that the men were not satisfied with the limits laid down, and I believe they were perfectly right.

45,862. Would they be satisfied with anything short of keeping the trawlers outside the Arran Islands?—I do not believe it would be of the slightest use to have any other regulation; and I declare, on my oath, that I believe every inch of the ground inside of the bay to be spawning ground.

45,863. You do not yourself speak of having taken up spawn?—You must be aware that the spawn of the sole is so very small that it would be hardly perceptible among the sand.

45,864. Do you think it so small that it would not be taken up?—It might be taken up with the sand, but disturbing it after it had been deposited by the fish would be quite as bad as if it were taken up. If it is once disturbed, it will have the same effect as being taken up and destroyed. I consider also that taking the sole when they are in the act of depositing the spawn is very injurious.

45,865. In what portion of the bay did you take up fish with spawn dropping from them?—There is not half a mile of the bay that I did not trawl in, and there is not a part of it in which I trawled from April to the beginning of May and even from the latter end of March, that I did not find them in that state. That is the reason why I drew a conclusion that there is no part of the Bay of Galway which is not a spawning ground.

45,866. You yourself trawled throughout the whole summer?—Yes, and occasionally, if I might, I trawled through the whole summer and the whole winter.

45,867. Have you considered the possibility of making any regulations to prohibit trawling during certain months of the year?—I have been considering that, and it struck me it would have little effect, for this reason, that if they are stopped at all, you must commence from the 1st of March. The small fish make their appearance about the latter end of May, and they are in a delicate state until the latter end of the month of October.

45,863. And then the herring season sets in?—Yes.

45,869. Then, in fact, you think it would be idle to mention any particular months?—That is my opinion, and, without a boast, I can tell you I have had some experience of fishing. I have been connected with the salmon fishery and the other fisheries ever since I was a boy, and I have taken great interest in the present question.

45,870. Can you give any particular date from which you would say the decline of the fish commenced here?—In 1854, when I first commenced trawling, the fish were plentiful, but in 1856, when I parted with my boat, it was not so. I used to take 120 pair of soles in 1854, and in 1856 they had fallen as low as 20 pair, and even down to 10 pair.

45,871. Do you refer particularly to sole, or to all fish in general?—I am speaking now particularly of sole.

45,872. Do you include the herrings in your remark?—The herrings are taken in a different season,—the trawl does not take a herring.

45,873. But when you talk of the decline of the fisheries, do you include in that the decline of the herrings?—The decline of the herring-fishing has taken place since 1840.

45,874. That is the last year that there was a really profitable herring-fishing?—There was a little harvest fishing since, but not to any great extent.

45,875. Then from 1840 till 1852, when the trawling began, there was no particular take of herrings?—No, not of any consequence. The only take of herrings I have seen since 1840, that I would be satisfied with as a take, was taken yesterday.

45,876. Then the decline of the fishing you speak of, since the trawling has been mainly confined to other fish?—Yes.

45,877. Such as soles, plaice, and haddock?—Yes.

45,878. And cod?—Yes, and ling and hake.

45,879. (*Professor Huxley.*) Do you think that trawling has had anything to do with the decline of the herring-fishing?—I consider, when the herrings first make their appearance in the bay, about the middle of June, that the trawling has the greatest effect in scaring them away.

45,880. On what ground do you base that opinion?—On the dragging of the trawl through the water.

45,881. You conclude that that must frighten the fish?—Yes. I have taken a bit of stick, and have stood beating the side of the boat with it; when the herrings have heard the noise, they have run off. I have frequently done that myself.

45,882. Do you compare the dragging of a trawl through the water to a noise made in that way?—I consider it much worse, particularly at night. If you draw a trawl through the water at night, the sea seems as if it were actually on fire.

45,883. Did any trawling go on here at night?—Yes.

45,884. Is there any oyster fishery here?—Not immediately in Galway.

45,885. Not in Galway Bay?—No. There are some oysters on the Clare side, but they are not breeding beds.

45,886. Are they simply laid down there?—They are simply brought there to feed.

45,887. Is there any part of the bay in which you will find the spawn of fish now?—I think there is.

ALWAY.

D. Kelly.

Sept. 1864.

45,888. In what part?—Every part of the Bay of Galway, but it is so very much diminished that you will find very little of it.

45,889. On the other side of Galway Bay there are some oysters?—Yes.

45,890. Can you give any reason for the failing of herrings from 1840 till 1852?—No, I cannot assign any reason at all.

44,891. Was there no trawling in the bay during that time?—No.

The witness withdrew.

Mr. Macnamara stated that he had no further evidence to offer on behalf of the Claddagh fishermen.

Mr. . Concanon.

Mr. Edmund Concanon called and examined.

45,892. (*Professor Huxley.*) We wish to ask you if you intend to produce any witnesses on your side of the question in open Court?—No.

45,893. We desire to hear your witnesses, if you are prepared with them; and if not, will you tell us why they are not here? We shall then know what to do. I should like to make a statement to you. I will not produce a witness, and the reason why I will not do so is, that my clients believe that it will not be safe for them to give evidence here or elsewhere.

45,894. If you tell us that you are instructed by your clients that they dare not venture to appear here, we will take other measures to ensure a hearing from them?—I am instructed by my clients that they are afraid to come either here or elsewhere.

The witness withdrew, and the inquiry was adjourned.

Galway, County Galway, Wednesday, 7th September 1864.

Present:

Professor Huxley, F.R.S. (Chairman). | G. Shaw Lefevre, Esq., M.P.

P. Sweeney.

Peter Sweeney called and examined.

45,897. (*Professor Huxley.*) Are you a native of Galway, Mr. Sweeney?—No, I was not born here, but I have been here ever since I was a child.

45,898. You know Galway very well?—Yes, very well.

45,899. When did you begin to trawl here?—In the year 1856.

45,900. What led you to commence trawling here?—I was doing business here for a company in connexion with Messrs. Rush and Palmer, and I had an opportunity of seeing what their trawl-boats were doing. I saw the returns come to Mr. Rush, and I was induced to get into the business.

45,901. Were the returns very good?—They were.

45,902. How many boats did you set up?—I only set up one at first.

45,903. What was the size of it?—Thirty-five tons I think.

45,904. It was a decked boat I presume?—Yes, it was a decked boat.

45,905. How many men did you carry on board?—When we first commenced trawling we had a man more than at present. We had four men and a boy.

45,906. Were there many other vessels trawling in the bay at the time you were working there?—Yes, a good many.

45,907. How many?—I suppose there were about 20 vessels.

45,908. Have you any reason to think that at that time they were all doing well?—Yes, they were.

45,909. What did that vessel cost?—It stood me in about 700*l.* with its gear and everything else.

45,910. On what plan did you begin working it; did you give the men whom you employed wages?—Yes, all were paid by wages at that time.

45,911. Were all the boats that were fishing at that time paid in that manner?—Yes.

45,912. By wages?—Yes.

45,913. What wages did you give?—We had a Dublin skipper, as the men did not understand trawling. We paid him 26*s.* a week, the men 10*s.*, and the boys about 5*s.* or 6*s.*

45,914. Did you get men readily at that rate of wages?—Yes; and there were many who would have been glad to get into my employment if I had had employment to give them.

45,915. The skipper was a Dublin man?—Yes.

45,916. The men were Claddagh men?—Yes.

45,917. That was the time the line of demarcation was drawn?—Yes.

45,918. At that time you were not allowed to trawl within a certain line?—No.

45,919. At that time was it profitable to work outside that line?—Yes.

45,920. Did you work outside the Islands of Arran?—Once or twice, but the day must be very fine for that.

45,921. It was not your habit to do so?—No.

45,922. At what time in 1856 did you begin trawling?—I think it was in April 1856.

45,923. How many months did you continue it that year?—All through the year.

45,924. Did you get a good supply that year, all through?—I got what paid me.

45,925. Have you gone on working with the trawl up to within a few months of the present time?—I have not worked here for the last 12 months with the exception of two months.

45,926. How is that?—On account of the interference of the Claddagh men.

45,927. If they had not interfered with you would you still have worked there?—I should.

45,928. Has the yield of fish always been such as to pay you?—Yes. Sometimes we might have had a bad year, but next year would make up for it.

45,929. How many years did you continue the system of paying wages?—Up to within a year and a half.

45,930. What made you change that system?—The fellows were getting lazy and indifferent. They had the wages to get whatever they did, and seeing the way in which the Dublin boats were worked, I considered it better to put them on shares, and give them a sort of interest in the fishing.

45,931. Then it was not because the fishing was falling off that you altered the mode of paying the men and paid them by shares?—No, not by any means.

45,932. In 1856 you had one boat?—Yes.

45,933. Have you increased the number of your boats?—I have.

45,934. When did you add to the number?—In the same year I added another one.

45,935. In the summer of 1856?—Yes.

45,936. When did you add another?—I put one on from time to time.

45,937. How many have you now?—Six at present, but I have had seven. I lost a fine boat in the Roads; it was run down by another boat of my own.

45,938. When was it you added the last one—how many years ago?—I suppose it will be about three years ago.

45,939. You have not added to the number since that time?—No.

45,940. Did each of these boats cost the same sum as the first?—No, there were none as expensive as the first.

45,941. What might be the average cost of those which succeeded the first; were they small vessels?—There was a larger one. I have one of 51 tons.

45,942. What was the size of the first?—The first was 34 tons, and the next was 33 tons.

45,943. What was the size of the smallest?—The smallest is 19 tons.

45,944–5. Were these vessels built for the purpose, or were they vessels that you bought?—I bought them.

45,946. Were any of them hookers such as those used by the Claddagh men?—No.

45,947. Would they not answer your purpose?—No, they would be too small.

45,948. What would be the amount of capital you put into them altogether?—I may say about 3,000*l.* altogether.

45,949. Did you man all those vessels and work them all the year round?—Yes.

45,950. If there were no interference with you, would you be disposed to add to them still; did you find enough for them to do?—I would have continued to fish with them but for the persecution and misery which I have gone through. My life has been threatened, and I have been hooted and hunted. Sooner than go through all that I have suffered again, I would rather go into the poorhouse.

45,951. But, so far as the yield of fish is concerned, were you satisfied with trawling as a commercial speculation?—Yes, I have been quite satisfied with it.

45,952. Have you been yourself trawling?—I have been on a few occasions, but I do not know anything about it practically.

45,953. Is it one of your men who was attacked lately by the Claddagh people?—Yes.

45,954. Have there been more threats besides the actual attacks?—Yes, the threats have been innumerable.

45,955. Do you know much of the conduct of the Claddagh people?—No, I never venture within their limits.

45,956. The statement is that their fishing has fallen off a good deal; have you any knowledge of it?—No, I have no knowledge of it.

45,957. Where does your fish go; where is your market?—Dublin.

45,958. You do not send any into the Galway market?—We do send some coarse fish into the Galway market at times.

45,959. But not the general yield of your trawlers?—No, we should not be able to get any price for it here.

45,960. What is the kind of fish you get principally; what is the staple fish you get in the trawl?—Soles and turbot.

45,961. Do you get any plaice?—Yes, we get plaice.

45,962. Anything else?—Yes, brill.

45,963. Do you have a particular season of the year for each fish?—Yes.

45,964. What are the different seasons?—The best season for soles is from the month of February until the latter end of April.

45,965. What is the best season for turbot?—The summer months, July and August.

45,966. Do you get any codfish in the trawl?—Yes, we get it in the winter.

45,967. Do you get plenty of it?—Yes, we get a deal of cod.

45,968. Do you get any haddock?—No, we only get very few haddock.

45,969. Did you ever get many haddock here?—Yes, we did at one time.

45,970. How many years will that be ago?—When I first commenced trawling here we were able to get a good many haddock.

45,971. Have the haddock fallen off since then?—Yes, they have fallen off very much.

45,972. Have any other kinds of fish fallen off?—I do not think they have. Perhaps they may fall off one season, but they invariably come back again in the next season.

45,973. Taking one year with another, do you get from each of your six boats as much fish in proportion as you were in the habit of getting from your one boat when you began to trawl?—Yes.

45,974–5. Then you will get six times as much fish?—Yes, but if we have easterly winds the bay is done for that year?—We get no more fish that year if we have a continuance of easterly winds.

45,976. Does a continuance of easterly winds drive the fish out of the bay?—It does. We get no more fish that year.

45,977. What is the reason of that?—Indeed I do not know.

45,978. Do you fish at night with your trawls?—Yes.

45,979. Is that the custom here?—Yes.

45,980. Do you work all night as well as day?—Yes.

45,981. How do your people make out the headlands and see what they are about in the night time?—Unless it happens to be very clear in the night time they do not.

45,982. The bay is not lighted, is it?—There is a light in the Arran part.

45,983. Is the fishing better in the night or in the day?—On a moonlight night in the summer time we are able to kill more codfish.

45,984. In the summer time is the fishing in the night better than in the day, or is it the other way?—It is the other way.

45,985. The day fishing in the summer time is the best?—Yes.

45,986. Can you trawl outside the Arran Islands?—Very seldom.

45,987. Is that on account of the badness of the weather, or is it too deep for the trawl?—There is such a swell there that they cannot fish.

45,988. What will be the average yield of each of your trawls; taking one year with another, what will be the average yield per day?—I really cannot say what the average yield will be.

45,989. I mean either the weight or in any other mode by which you can give it to me. Have the prices remained the same?—Yes, they have.

45,990. Have the prices remained the same for some years?—It has remained much about the same.

45,991. What would be the value of a day's haul?—Taking the average it would be 2*l.* or 3*l.*

45,992. The average for the year round?—Yes.

45,993. Do you think that 2*l.* would be a fair average?—Yes, a couple of pounds.

45,994. Have you any notion of the number of cwts. caught in a day on the average?—No, I have not.

45,995. I am speaking now of the earnings of each boat?—Yes.

45,996. That will be about 2*l.* per day?—Yes.

45,997. Have any complaints been made against your boats for carrying away spilliard lines in the bay?—Yes.

45,998. Has that been of frequent occurrence?—No.

45,999. How often has it occurred?—Three or four times. At first they were in the habit of setting their lines across our trawls, and I was fool enough to make good any damage done. When they were coming across us they would say "Heave up your lines, or we will cut your gear?" If the men took up their trawls, then that day would be lost. I disputed with them at last, and the question was brought before the chairman of the quarter sessions, and the matter was decided in my favour. After that they gave over that kind of persecution.

46,000. Since you began trawling, did the Claddagh men take to it?—No, it was before. There has not been one of those trawlers since I commenced.

46,001. Then it was before you began at all that they took to it and left it off?—Yes.

46,002. Why did they leave it off?—They spent all their earnings, and they were not ready when the time came to replace their worn-out gear.

46,003. They tell us themselves that the reason they gave up trawling was that they could get no fish?—When they went trawling they invariably fished within the limits. Nobody ever said anything against them.

46,004. Could they fish outside the limits with their boats as well as you could with yours?—No.

46,005. On account of their boats being smaller?—Yes.

46,006. Can you furnish us with returns of the fish you have sent up to Dublin year after year?—I could if I had the returns here.

46,007. Can you get them?—I will make an application for them.

46,008. There is a statement contained in a report of the proceedings of the Fishery Commissioners in Galway that a subscription was raised here of 700*l.* or 800*l.*, and that it was forwarded to the Claddagh men to enable them to buy trawls, and that they refused it on the ground of the harm which was done to the fishing by trawling?—I know nothing about it.

46,009. (*Mr. Lefevre.*) I think you said that when you commenced trawling in 1856 there were 20 trawlers in the bay. Is that so?—I think there were about 20 trawlers.

46,010. What boats were they; were they boats belonging to Galway, or did they belong to a company?—There was one company—the Royal Irish Fishery Company; there was also the London and West of Ireland Company.

46,011. Were they all trawlers?—Yes.

46,012. What sized vessels had they?—They were large vessels.

46,013. Were they larger vessels than yours were or were they of a smaller size?—They were larger.

46,014. How long were they fishing?—Not more than six months.

46,015. Subsequently to that were there no vessels except your trawlers?—There was a company that lasted a short time.

46,016. How long did it last?—Not more than 12 or 18 months.

46,017. Was that up to 1858, or when did they come to an end?—It was later than that.

46,018. When did they come to an end?—It is four or five years since they were here.

46,019. How many vessels had they at work?—Altogether they had 10 or 12. They had some for the lobster fishery.

46,020. How many had they trawling?—There were 32 boats altogether trawling.

46,021. From 1856 until four years ago?—The West of Ireland Company and the Royal Irish Company were fishing before I commenced at all.

46,022. Before you commenced how many were working at different periods?—The West of Ireland and the Royal Irish Fishery Companies were working up to 1851.

46,023. And the London Company, until when were they working?—Up to four years ago.

46,024. In the year 1861 how many vessels were there at work besides your own?—I suppose there were not more than a dozen altogether.

46,025. In the last three or four years how many have been here?—About the same number.

46,026. Were all the men employed on board your vessels Claddagh men?—Yes, with the exception of the skippers and except the Englishman who was beaten.

46,027. And you began by giving them wages?—Yes.

46,028. After you had been working for some time did you increase the wages gradually?—Yes, up to 20*s.*

46,029. I understood you to say that two years ago you began to pay the men by shares?—Yes.

46,030. Did their earnings amount to more than 20*s.* when they were paid by shares?—Yes, on the average.

46,031. What on the average did they amount to?—The skipper some weeks would have 2*l.* a week.

46,032. And what would the men have?—Sometimes 1*l.* a week.

46,033. They had about that sum?—They had, and sometimes rather more. They exerted themselves better and were out earlier and later.

46,034. Was the result better for the vessel?—I think it was better for all parties.

46,035. Was it better for them and better for you?—Yes, it was.

46,036. When was it that you first met with opposition on the part of the Claddagh men?—The first real opposition was about four years ago when they set fire to a vessel of mine.

46,037. When first you commenced you found no real opposition and had no difficulty in getting men?—No.

46,038. You experienced no difficulty until four years ago?—About that time they set fire to a vessel of mine in the Roads. It was the first vessel I had.

46,039. What did you attribute that opposition to?—To a set of fellows in the town; such men as Kelly and others like him were the cause of all the row.

46,040. How do you explain the fact that four years ago you met with considerable opposition whereas when you commenced trawling and there was a considerable amount of trawling in the bay you met with no opposition?—I cannot account for it in any way except that a set of fellows here have taken the fishermen in hand for political purposes and have been the means of causing all the opposition.

46,041. Did your trawlers fish in Galway Bay, or did they go elsewhere in the season?—Two years ago they went to Dingle Bay.

46,042. Last year did they go elsewhere?—Last year I sent three boats to Bantry Bay. Representations were made that great amounts of fish were being caught. There was a company there under the management of Mr. Pike.

46,043. Was the trawling there successful?—Yes, but it was late in the season when the boats went there. The season was over in point of fact.

46,044. Do you know what proportion of small fish was taken by your boats?—I have no idea whatever.

46,045. Was there any brought home at all?—They always brought home some small fish.

46,046. What was done with it?—It was sold in the market.

46,047. Was it sold for the benefit of the vessel or was it given to the boys?—It was sold for the benefit of the crew and the vessel.

46,048. I think you said that the smaller class of trawlers belonging to the Claddagh men did not observe the limits of prohibition?—So I have been told.

46,049. Did the larger class of vessels observe that regulation?—They always did. They were fined once or twice by the magistrates for trawling within the limits but they did not do so with my wish.

46,050. Did you give instruction to your skippers not to trawl within the limits?—Yes, and the men will to this day swear that they were not within miles of the limits.

46,051. Do the other trawlers observe the limits?—Yes, I am sure they do.

46,052. What would be the effect upon the trawling in Galway Bay if it were prohibited within the Islands of Arran; would it be possible to carry on the trawling outside?—No, it would not.

46,053. Would there be a sufficient number of days in which they could trawl outside the islands to enable them to make a profit from it?—No, they would have to give it all up.

46,054. (*Professor Huxley.*) There was a very strong statement made to-day in the course of the

evidence as to the quantity of small and unsizeable fish taken; have you any knowledge of that?—No, I have not. I never saw any fish taken that was not saleable and readily sold on the quay below.

46,055. Did you not throw overboad fish too small for sale?—I never knew of it.

46,056. When your trawlers fished outside the Islands of Arran, which occasionally was the case, did they take a larger class of fish than those taken inside or were the fish about the same?—About the same.

46,057. Was the take larger?—No.

46,058. Did they catch more fish?—No, there was very little difference.

46,059. I think you said that you now work your trawls with fewer men than you did at first?—Yes.

46,060. You work them now with three men and a boy?—Yes.

The witness withdrew.

HENRY CHARLES BURBIDGE called and examined. *H. C. Burbidge.*

46,061. (*Professor Huxley.*) You are a trawl owner here Mr. Burbidge?—Yes.

46,062. When did you begin to trawl in this bay?—About the year 1854; on or about that time.

46,063. What led you to begin trawling at that time?—I began trawling because I saw that the other boats were doing so well.

46,064. Did you buy a trawl-vessel at that time?—I had a small boat and I put a trawl into her.

46,065. What size was she?—20 tons altogether.

46,066. Was she not rather small for the work?—She was a decked boat and very handy.

46,067. Have you added to the number of your trawlers since?—Yes.

46,068. How many have you now?—Only two. I lost one, unfortunately, this year with all hands.

46,069. Has the yield of those boats been such as to pay you commercially?—It has.

46,070. Would you still add to the number if you could trawl freely in the bay?—I would.

46,071. Can you give us an idea of the total amount of capital you have put in the business?—I have not more than 300*l.* in it now. I have embarked in other businesses as I could not afford to have the capital lying idle.

46,072. You have heard Mr. Sweeney's evidence?—Yes.

46,073. Do you agree with it generally?—Yes.

46,074. Is there anything you would like to add to it?—Nothing particularly.

46,075. Do you agree as to the amount of intimidation exercised by the Claddagh men?—Yes, perfectly.

46,076. Have you experienced it yourself?—Not as much as Mr. Sweeney.

46,077. Have you altered the mode of paying your men the same as Mr. Sweeney has done?—Yes.

46,078. Did you alter it because the fish were falling off?—No, it was in order to give them an interest in the fishing, and induce them to exert themselves.

46,079. After your men were paid by shares were their average receipts greater or less than when they were paid by wages?—I think they were greater.

46,080. Do you keep any book to show the sums they have received?—No.

46,081–2. Can you give us any accurate information upon that point?—No.

46,083. Your impression is that, on the whole, the amount of money you paid after the men were put on shares was equal to that which you paid when they were paid by wages?—Yes, on the average.

46,084. Have you any knowledge of the reason which induced the Claddagh fishermen to give up trawling?—No, I have not, unless it was that they did not put by any money to supply themselves with gear and the like of that.

46,085. You were trawling at the very time they say that trawling was given up by them because it paid so badly?—Yes.

46,086. And you were making enough to reward you thoroughly, and to lead you to invest money in it since?—Yes, and I would certainly have invested more if it had not been for the opposition we have received.

46,087. (*Mr. Lefevre.*) Do you know what the cause of the discontinuance of trawling by the Royal Irish Company was?—I think there was a great deal of mismanagement.

46,088. Have the Dublin trawlers come round here for the last three or four years?—They have been here occasionally. I think they were here two or three years ago.

46,089. Were they here last year?—Yes, but there was only one boat.

46,090. Are your boats now laid up?—Yes.

46,091. Have you been unable to get men to work them this year?—I should not have been if it had not been on account of the intimidation to which the men have been subjected. The men are perfectly willing and would be satisfied to go if it were not that they have been frightened by the other fishermen.

46,092. Can the fishermen make the same wages now as they did when they were trawling?—No; they have several times complained to me since that they have been very badly off. A short time ago two or three of them came to me and said they did not know what to do; they would have to go into the poorhouse.

46,093. Were you men all Claddagh men?—Yes.

46,094. And your skippers too?—Yes.

46,095. They have now returned to their usual fishing?—They have.

The witness withdrew.

PETER SWEENEY, recalled and examined. *P. Sweeney.*

46,096. (*Mr. Lefevre.*) Did you add to your fleet of trawlers from the profits made by trawling as you went on in the business?—Yes.

46,097. Were they built here or did you buy them elsewhere?—The first I bought of Mr. Good, of Dublin.

46,098. And where did you get the other boats?—The others I bought from a Dublin man named Pile. The largest boat I have was a boat belonging to the London and West of Ireland Company. I got it when they sold their boats.

46,099. Can you give any reason for the failure of the Irish Company?—Their failure arose from mismanagement I suppose.

46,100. Not from any falling off in the fish?—They got an immense amount of fish. They spent 36,000*l.* in six months here.

46,101. (*Professor Huxley.*) As much as 36,000*l.*?—Yes.

46,102. (*Mr. Lefevre.*) How many trawlers had they at work?—About a dozen, and they had lobster-boats and steamers here.

46,103. Did they employ Claddagh men also?—Yes, all the Claddagh men were about their gates looking for employment.

46,104. Then the breaking up of this company must have been a great loss to the Claddagh men?—Yes it must have been.

46,105. Were they paid by shares or by wages?—By wages; they had no shares at all.

46,106. When was the company in activity?—About four years ago. They commenced somewhere about May.

46,107. Are there any other trawl owners in Galway besides you two gentlemen?—No.

GALWAY.

P. Sweeney.

7 Sept. 1864.

46,108. Since 1861, with the exception of Mr. Good's boats, there have been no other boats from a distance trawling in this bay?—There has been a Dublin boat but only one trawling here. It left when the last row commenced here.

46,109. Do you find that the take of turbot has been at all falling off?—No, last summer we had an immense quantity of turbot; I never saw so many. We used to take 20 large turbot in a haul.

46,110. Was it not last May that you left off trawling?—We had to take the boats in and give them an overhaul.

46,111. Then it was not on account of intimidation that you left off last May?—We had a rising in the Claddagh.

46,112. And you left off last May on account of the intimidation?—Yes.

46,113. Was there any part of the year when you habitually laid your boats up?—No, we might lay them up once in three years for an overhaul.

46,114. But there was no one month in which you laid them up?—No.

46,115. What would be the effect of making a close time for three months in the year; have you considered what would be the effect of that?—No I have not.

46,116. Would it be injurious to you as a trawler?—Not a great deal.

46,417. Would you, during the summer months, trawl in any other place than in this bay; is there any other place open to you except this bay?—No, I do not know of any.

46,118. Would you trawl outside the Islands of Arran during the three summer months?—No.

46,119. Would the weather not permit you?—No, and the water is too deep. It goes down quite abrupt and becomes very deep.

The witness withdrew, and the inquiry was adjourned until the 10th of September, at Inver.

Inver, Donegal, Saturday, 10th September 1864.

PRESENT:

G. SHAW LEFEVRE, Esq., M.P.

INVER.

Mr. W. Sinclair.

10 Sept. 1864.

Mr. WILLIAM SINCLAIR called and examined.

46,120. Have you been long resident in this neighbourhood?—I have been resident here constantly for the last 15 or 16 years, but I have been familiar with the country from my boyhood.

46,121. Have you interested yourself in the fisheries here?—Yes, very much. I came here to settle in the year 1847. At that time there was great depression, generally speaking, and I took a great interest in the fisheries here. The fishermen had no boats or nets of their own, and I employed 30 men constantly at the hake-fishing and sprat-fishing.

46,122. Can you tell us what is the number of fishermen in Donegal Bay?—There are fishing here at present, this year, I think 24 boats for sprats, and eight men in each boat.

46,123. Is that from the whole of Donegal Bay?—The whole of the sprat fishermen belong to Inver, with the exception of three crews from the Donegal side.

46,124. Can you tell us the number from Inver and Donegal?—I know there were 64 boats fishing here one night for herrings and sprats and they would have, on the average, crews of eight men.

46,125. From Inver Bay and Donegal Harbour there are 24 boats?—Yes, sprat boats with crews of eight men in each. Some of them perhaps have only seven, and some of them as many as nine. There is not a sprat boat on the Donegal coast except those which belong to Inver.

46,126. What is the size of the boats used here?—The sprat boats are from 3½ tons to 4½. The general average will be from 3½ to 4 tons.

46,127. Are there any smaller boats used for the other fisheries?—Yes, there are a considerable number of yawls used for long-line and herring fishing.

46,128. Are the fishermen here fishermen throughout the year, or do they combine farming with their fishing?—The greater number of them have small patches of land, but many have not. Many fish throughout the whole year and depend entirely on fishing for support,

46,129. What are the seasons for the different fish here?—The sprat-fishing generally begins here from the 20th of July to the 10th or 12th of August, generally about the beginning of August or a few days before or after. Sometimes they run in earlier here; this year they did for a short time.

46,130. How long does it continue?—It varies very much. Last year they were taking sprats up to the middle of November. The sprat-fishing last year was principally in Donegal Bay, in the channel that runs up to Donegal on the other side from here.

46,131. What fishing succeeds the sprat-fishing?—The hake-fishing and the long-line-fishing.

46,132. Is there any herring fishery here?—Yes. This year there has been a tolerable herring-fishing, the best there has been within my memory. I do not think there has been such a fishery for the last 20 years.

46,133. Is that the summer herring-fishing?—Yes.

46,134. In what month?—They began here in July, and the season has lasted on until now.

46,135. Is there any winter fishery for herrings?—There has not been any winter fishing for herrings for a long time.

46,136. Then what fishery is there after the herrings?—There is the hand-line-fishing for hake and the long-line-fishing for cod, haddock, and that sort of fish.

46,137. Does that fishing go on through the spring until the sprat-fishing begins again?—Yes, but at times they kill a great many coal-fish. They call them here glassen, and they are I believe the black pollack.

46,138. What is the season for them?—They are principally killed in the spring. They did not kill many this year.

46,139. Is the sprat fishery improving or falling off?—The sprat fishery last year was much better than it had been for several years before. It was very good in 1847 and 1848, and it lasted so for five or six years. It was very good all that time, but rather decreasing. It then fell away very much indeed, and for the last four years until last year there have been hardly any got. Last year the sprats came in again in great quantities into Donegal Channel, but they have hardly come here at all. A few we got here, but the people were badly off for nets.

46,140. What part of the harbour do you call the Channel?—Here from Rock Point up to the town of Donegal.

46,141. Quite in the river?—No, it is not the river. The fish come in over a sandbank which is bare at low water. They come in with the tide and run up to Donegal, and then drop out with the tide very often. Sometimes they stay in all night. The gales of wind drive them in and out.

46,142. Has this season been a good one for sprats?—So far it has been very tolerable. They say there is a vast quantity, but the weather has been stormy and they cannot go after them.

46,143. What are the nets that are used for the sprat fishery?—The nets we use here are seines; they

are nets about 140 yards in length. There are two nets at each end with 20 yards of the bosom of the net or bunt.

46,144. What is the length of the net altogether?—From 100 to 120 and 140 yards.

46,145. Is it dragged on shore?—No.

46,146. Is it dragged in a circle?—Yes, it is dragged in a circle by two boats.

46,147. How many men are there employed in each of the boats?—From seven to eight men.

46,148. Are the nets generally the property of the fishermen?—Yes, they are the property of the fishermen. Each man finds his share of the net. You will find that the bunt of the net is composed of seven depths, or seven shots of 60 meshes of half-inch net. Then below that there is a reef which runs the whole length of the net, and which is from 15 meshes going deeper towards the centre down to 40 meshes.

46,149. What depth of water do they fish in?—They fish out as far as 15 or 16 fathoms of water at night or in muddy water. Generally speaking they prefer fishing where the net will take the ground, but where the water is muddy or on a dark night they can fish out in 15 or 20 fathoms of water.

46,150. Is there any trammel net fishing here?—Yes, the herring are almost all caught by trammel drift nets. They moor them here and make them into trammel nets. When the fishing is good they stay off all night, but they always moor them and do not fish them as drift nets as they do in other places. They drift them down in Donegal Bay where there are strong streams.

46,151. Do they fish for the hake with the trammel net?—Yes. The nets are then heavily weighted and sunk to the bottom.

46,152. I think there was a regulation made by the Commissioners with regard to trammel net fishing in 1860?—Yes. The hake fishers here had got into the habit of leaving their nets out all the day and night. Nobody enforces the law, and the Coastguard takes no trouble about it at all. They have other duties to perform, and they are rather averse to going out of their regular line of business.

46,153. What was the reason that that regulation was passed?—The reason was, an application on behalf of the sprat men who said the sprat-fishing had declined, they thought in consequence of those nets being fished constantly daily and nightly, and the fish left lying in them, struggling in the shallow water at the head of the bay. The Commissioners heard a great deal of evidence; they saw the sprat-fishing and hake-fishing going on, and thereupon they decided that the hake-nets should not be left in the inner part of the bay.

46,154. Within a line drawn from Bunlaghy River to Doorin Point?—Yes.

46,155. That regulation was passed in 1860?—Yes.

46,156. Has it been observed by the trammel fishermen?—No, it has not indeed. I fined some of them here once or twice, but nobody troubles their heads about it. The Inver men, although they bothered my life out to have the regulation, will do nothing to enforce it now they have got it.

46,157. Do the Coastguard trouble themselves to enforce it?—No.

46,158. Are you aware that it is one of the duties of the Coastguard to enforce those regulations?—The Coastguard station here is nine miles down along the point, and it is almost impossible for the Coastguard to do the work effectually. The few people who have the nets out keep a good watch, and if they see the Coastguard boat coming down they cut the moorings and drag for the net when the Coastguard have gone.

46,159. Then notwithstanding this regulation there is a considerable number of nets set within the limits laid down by the Board?—Yes, but there have not been many this year, because there has not been much hake-fishing.

46,160. Are they set during the sprat season?—Yes.

46,161-2. What is the length of the trammel nets?—The trammel nets average from 12 to 16 or 18 nets of 30 yards long.

46,163. In what depth of water do they set them?—In two fathoms sometimes.

46,164. Not deeper than that?—Yes, out as far as 20 fathoms.

46,165. Are they set right across the Inver Bay?—Yes.

46,166. Has there been any trawling in this bay?—Trawling has been prohibited in a line from that point to this.

46,167. Before that prohibition was made was there any trawling?—Yes, but only seldom.

46,168. Are there any trawlers belonging to Donegal Bay?—No; the only trawlers I ever saw came from the Connaught side.

46,169. What sized boats were they?—From 10 to 15 boats. One boat about 25 tons came two or three times.

46,170. Did they trawl quite inside, in shallow water?—Yes, in five fathoms of water.

46,171. Were complaints made to the Commissioners with regard to the trawling?—Yes, there were some rows here. The Inver fellows did not like to see the trawling going on at the time the sprat-fishing was going on, and they had quarrels with them.

46,172. What kind of fish do they catch here in the trawl?—Sole, plaice, and turbot.

46,173. Are the boats not calculated for fishing in deep water?—Those boats which come in here generally are of a pretty good size. The small boats fishing in Donegal Bay never come round here at all, or hardly ever; very rarely.

46,174. There is a smaller class of trawlers fishing in Donegal Bay?—Yes, they fish at the back of a sandbank called the Ridge, but generally in shallow water of about five fathoms. They are boats of about seven tons.

46,175. Was it alleged that the trawlers did harm to the fishing?—It was alleged that the herring-fishing and the turbot-fishing had entirely been destroyed. The men used to take great quantities of turbot with long-lines, and there was a tolerable herring-fishing every summer in the bay, and sprat-fishing in the same way. They said that the trawlers by continually scraping up and down the sand had destroyed the fishing.

46,176. They attributed it to the trawlers?—Yes; evidence was given by the trawling people before Mr. Ffennell, showing that they had totally routed out the turbot, and that when the men tried for turbot they could get nothing.

46,177. In consequence of that was the regulation passed in 1860 prohibiting trawling within certain limits?—Yes.

46,178. That cut off Inver Bay and part of Mullaghmore Bay?—Yes.

46,179. Has there been any trawling since that regulation was passed?—I have only heard of one attempt, which was found out.

46,180. Have there been any trawlers trawling in the bay at all since that?—Hardly at all.

46,181. The small class of boats from Donegal, trawling close in-shore, has been given up?—Yes; they could not trawl in water above five or six fathoms deep, or 10 at the outside, but they never went into 10 fathoms of water if they could help it.

46,182. Has there been any improvement in the fisheries since?—There has been a very considerable improvement. Greater quantities of herring have been caught in Donegal Bay than before, and a greater number of fish has been taken by the hand-lines.

46,183. Did the trawlers catch any considerable quantity of soles?—They got a good many, but they thinned them out with the turbot.

46,184. Do the spilliard men catch any soles?—Hardly any; they take very few soles on lines here.

46,185. Then the result is that no soles are caught now?—Hardly any.

INVER.

Mr. W. Sinclair.

10 Sept. 1864.

46,186. What is the market for the fish here?—The curers come down from all parts of the country.

46,187. Is there any fish sent off from here by rail-road?—No, the expense of carriage is so great.

46,188. Are all the fish that are caught here hawked about the country and sold to the people?—Yes; the sprats, when there is a glut of fish, are bought up by men who salt them in bulk. They take a certain quantity of oil off them and sell them in the winter. All along this coast great quantities of fish are salted by individuals and sold to curers, who take them into the country. When my own boats kill a large quantity I have them salted in that way.

46,189. Have any haddocks been caught in the bay of late years?—The haddock fishery has entirely gone.

46,190. Since when?—It has been getting worse and worse for several years. The first year I fished extensively in the bay, about 24 years ago, I had a house in Donegal Bay, and then it was not uncommon to get from 20 to 30 dozen haddocks in the bay.

46,191. And now what is it?—Last year, in the course of the whole winter, my boats only got two haddocks.

46,192. Was it alleged that trawling in the bay did harm to the haddock fishery?—No, the trawling was over before the disappearance of the haddock, and they never trawled in that part which the haddock frequented.

46,193. I think you said that there has not been for some years a good winter herring fishery here?—Not for many years.

46,194. When was the last good season for winter herrings?—There has not been any good season for 20 years.

46,195. Do you hear any complaints from the sprat fishermen and the other fishermen?—The sprat fishermen and the hake fishermen never agreed very well; I mean the hake-net men in the Donegal Channel. The sprat fishermen and the hake fishermen do not agree very well.

46,196. What are the grounds of the disagreement between them?—The water there is very narrow, and the drift nets are put out for herrings where the tide is running very strong, and of course when the sprat men are drawing their seines in the middle of the drift nets they must interfere with each other.

46,197. Is the herring fishery carried on at the same time as the sprat fishery?—Yes, they are all fishing here, mixed up. There is a very remarkable thing about the hake-fishing which I should tell you. There have been no hake here this year at all. Such a thing has never occurred before. The men have been out several times and tried if they could catch any, and the men from St. John's Point tell me they have not caught one. On the other hand, there has been a most extraordinary quantity of dogfish. They have been here in millions. Anything like them I never beheld before. There were sharks too.

46,198. Were they pursuing the herring?—They did the herring fishery an immensity of harm. The boats came in with two-thirds of the herrings entirely cut to pieces by them.

46,199. There has been a considerable quantity of herrings here this year?—Yes, there has been a very great quantity and they have been very fine,—as fine as ever were seen.

46,200. What part of the bay do they fish for herrings?—They take them partly with seines and drift-nets off St. John's Point, and they work up into the other bays.

46,201. Are you at all acquainted with the fishermen on the south side of the bay?—No; I merely know it as far as Ballyshannon, and it is I believe very insignificant.

46,202. At Mullaghmore the fishery has fallen off, I believe?—Yes.

46,203. The principal fishery in the bay is carried on on the north side of it?—Yes, the great body of the fishermen are all on the north side.

46,204. Teelin is the head-quarters of the line-fishermen?—Yes.

46,205. Are the hake observed in the bay as soon as the sprats and herrings make their appearance?—They generally come a little after the sprats.

46,206. The fisheries go on at the same time, I suppose?—The hake fishery lasts further into the season than the sprat fishery. It has been remarked here that a body of hake would come into the bay, and though they would take the hand-lines as freely as possible, yet when once the trammel nets were shot among them they would take off entirely.

46,207. Are the trammel nets shot at all outside the bays?—No, I have never known them shot further down.

46,208. They generally shoot them inside?—Yes.

46,209. They are entirely confined to the ground on which the seines are used?—No, they are generally outside the ground, and since the byelaw was passed they ought to be entirely outside.

46,210. I thought it was a matter of complaint that the trammel nets interfered with the herring-nets?—Yes, because they fished them up at the head of the bay.

46,211. Was that the ground where the seines were used?—Yes; the seines seldom go beyond 10 fathoms of water, and they used to fish far inside of that. Now the Commissioners' byelaw has removed them to about 15 fathoms of water.

46,212. Is there any lobster-fishing carried on from St. John's Point?—There used to be, but they have been fished out. They have been fished at all times and seasons.

46,213. Is there no restriction as to the size of the lobsters to be caught, or the months during which they are to be caught?—None; no law of any kind is observed in this bay in any way.

46,214. Was the lobster fishery formerly an extensive fishery here?—They used to get a great many, and a great many round the rocky part of the coast.

46,215. Was the lobster fishery carried on by the fishermen?—There generally were men who followed it all through the year. They fished for sprats as well; that is the most lucrative fishing here.

46,216. So that at that time the lobsters had some rest?—Yes, but very little.

46,217. That would be for three months, would it not?—No.

46,218. Have you anything further which you wish to say?—I think not. The only thing I wish to say is, that if any regulations are made means should be taken to enforce them. I would also recommend to Her Majesty's Government, with regard to the existing laws, that there should be some means taken to enforce them.

46,219. Is there a great complaint that the regulations which have been made are not enforced?—Yes; they are not observed at all. For instance, the herring fishery has been carried on here, and not a single man of them knew that it was perfect ruin to keep their nets shot in daylight until I went and told them to take their nets out; yet after that they continued to do the same thing. I wrote to the Coastguard and they came up after a couple of days.

46,220. What regulation do you refer to now?—The regulation which says that herring-nets must not be shot between sunrise and sunset.

46,221. There is a regulation here with regard to trammel nets, but not with regard to herring-nets?—Yes; I mean the 5th and 6th of Victoria, which is quite clear on that point. The seventh section says:—"And be it enacted that no person shall at any "time between sunrise and sunset set, either in the "sea or within the tideway in any estuary, any sea "net for the catching of herrings, or any trammel-"net, or leave any drag or other net in the water "between sunrise and sunset, except stake or fixed "nets for the catching of salmon, as is herein-after "provided, and set also seines or drift-nets for pil-"chards or fish other than herrings; provided such "stake or fixed nets and such seine or drift-nets be

" used at such times and places as may not be prohi-
" bited by the byelaws herein-after mentioned; and
" every person offending by setting or leaving set any
" such nets as aforesaid shall forfeit the same, and
" shall also for every such offence forfeit and pay any
" sum not exceeding 10*l*."

46,222. Then you think that that law is not observed at all?—Certainly not. The best of the fishermen would not do this, but the other fellows put out their nets, and they induce those who wish to observe the law to say, " Why should we be worse off than " our neighbours ?"

46,223. Is the Coastguard unable to enforce the law?—I think they are unable to do so; their other duties interfere with them so much. They are very short-handed now.

46,224. Has it ever been the practice for the larger class of trawlers to work over the outer part of the bay in the deeper water?—Not for many years. One man I knew came down here and tried it for some time, and said it was not worth anything, that he was not able to make it pay as well as it did in other places; that was Mr. Stopford.

46,225. What is the nature of the bottom here?—Mud and sand.

46,226. Is it suitable for trawling?—Yes, very good.

46,227. Have there been any complaints about interfering with the long-line men?—Yes; the long-line men complain very much that the trawlers take away their lines; that was the object of the evidence given before the Fishery Commissioners.

46,228. Was that the complaint against the small class of trawlers?—Yes; and another complaint made against the trawl nets was that they were shot over the long-lines and destroyed them.

The witness withdrew.

George Venables Wilson called and examined.

46,229. Have you been long acquainted with the fisheries in Donegal Bay?—I have been acquainted with them ever since 1845.

46,230. Can you tell us anything about the fishermen in other parts of the bay; can you say what the number is?—There are a great many boats from Glen round to Killybegs and St. John's Point; I am perfectly acquainted with them. There are also fishermen at a place they call Malinbeg at Teelin Head, which I am perfectly acquainted with.

46,231. We have heard what the number of fishermen is in Inver Bay and Donegal Harbour; what is the number from Malinbeg to St. John's Point?—From Malinbeg I should imagine there are as near as I can say at the present moment from 44 to 45 boats with nets.

46,232. Are they for sprat-fishing?—No, for herring-fishing. They have long nets or trams for catching the mackerel and crake herring.

46,233. They are seines?—Yes.

46,234. How many men are there to each boat?—Generally seven.

46,235. Are they fishermen throughout the year, or are they farmers part of the year?—The Malinbeg men and the Teelin men are fishermen throughout the year; the others are partly farmers and partly fishermen.

46,236. Are the numbers of the fishermen increasing or diminishing?—I imagine they are decreasing.

46,237. Have they at all recovered from the effects of the famine of 1846?—A great part of the decrease is the effect of emigration.

46,238. Did the potato famine have much effect upon the fishermen there?—Very much so.

46,239. Did it cause great distress?—Yes, and the Government established a store at Killybegs and bought the fish up for a curing station.

46,240. Was it in consequence of the bad price they got for their fish?—Yes.

46,241. Not from any want of fish?—No, from the want of a market.

46,242. Can you tell us the seasons for the herring; how long is it since there was a good herring season?—I have no recollection of a herring season in my time, except some years ago, when one lasted from a week to 10 days.

46,243. What month was that?—In the month of January.

46,244. With that exception, since you have been acquainted with the bay you have not known any great quantities of herrings taken?—No; there have been a few taken every winter, but only a very small quantity. There has been no fishing in the summer except for the crake herring, which is a coarse description of herring.

46,245. Is it the same as the scad?—I think it is.

46,246. The horse mackerel?—They call them crake herring here.

46,247. Do they fish for it with a different class of nets?—Generally with a net of an inch mesh.

46,248. What is the season for it?—They generally come in July and August, and stop until now, about two months.

46,249. Do you think the herrings during the time you mention have deserted the bay altogether, or are they to be found further out?—We hear occasionally when vessels are coming this way that they pass through shoals of herrings off the land.

46,250. Are the boats of the fishermen not qualified to go any great distance outside?—I imagine not.

46,251. And I suppose the weather is very bad in the winter?—Yes, I have fished in a Scotch lugger for some time with some Scotchmen; it was a large boat, but such was the sea that was running that we could do very little at times.

46,252. With regard to long-line fishing has that fallen off?—Very much so indeed.

46,253. Have they caught fewer fish?—Yes, fewer fish; in fact they have taken nothing for the last few years to signify.

46,254. To what is that falling off attributable?—A short time ago the Commissioners came down and held an inquiry; and it was attributed partly to the use of a very small-meshed net, especially at Teelin, not larger than a sprat net. They used to take small fish which went by the name of shelins. They put a barb in the centre of the net with a mesh not much larger than that of the sprat net, and they take boatfuls of the young fry; we attribute the falling off of the fishery to that.

46,255. Have you yourself seen small fish taken there?—Yes.

46,256. What were they?—Black and white pollack, glassen, and young ling among them.

46,257. Did you find any haddock among them?—No.

46,258. Do you agree with Mr. Sinclair as to the disappearance of the haddock on the coast?—I have not seen any on the coast.

46,259. Can you give us the date of their disappearance?—I have not seen any for seven or eight years.

46,260. Are there any whiting caught off the coast too?—There were very large quantities caught last year and this year.

46,261. Previous to that had there been a good fishery?—No, I do not recollect them off the coast to any extent before.

46,262. There have always been a few, I suppose?—Yes.

46,263. It is not positively a new thing?—No, but they have not been caught in any quantity.

46,264. Has there been a falling off in the take of hake?—No; hake have been taken outside of Inver Bay.

46,265. Are there any trammel nets used along that coast?—Not that I am aware of.

INVER.
G. V. Wilson.
0 Sept. 1864.

46,266. Then the falling off has been in pollack, ling, and glassen ?—Yes. The Commissioners passed a byelaw at Teelin directing that no net should be used there of less than an inch mesh, but that law has not been observed in any shape.

46,267. Do they continue to use the seine-net there ?—They use nets with a mesh not half or three-quarters of an inch ; I have seen them use them myself.

46,268. Do they take the young fish ?—Yes.

46,269. Do they drag them ashore ?—Yes.

46,270. What number of those seine nets are used ?—There were about 14 boats that had them. Some of them used to fill their boats full to the gunwale, and the destruction of young fish was very great.

46,271. Is there any sprat-fishing along that line of coast ?—Not that I am aware of. Off the rocks beyond Teelin used to be a good place for taking glassen, cod, and ling, so much so that Dr. Ritchie established a curing establishment, but for the last four or five years they have done little or nothing.

46,272. Do you attribute the falling off of the fish entirely to the destruction of small fry by the use of the seine net ?—I attribute a good deal of the falling off to that.

46,273. Has the price of cod risen very much ?—Yes ; formerly we could buy a codfish for about 3*d.*, now we have to pay from 10*d.* to 1*s.*

46,274. Can you give any date to the falling off of the fishing ?—It has been greatly falling off for the last 10 years.

46,275. Were these seine nets used before that time ?—There were formerly only two nets which were used for catching the small fish, but they afterwards found it profitable, and increased them until they got to a very large number.

46,276. What use do they make of the small fish ?—They salt them and eat them.

46,277. Have those nets been in use for the last two or three years since the byelaw was made by the Commissioners ?—They were in use before ; they altered them and made them a little larger, but this year they are decidedly using the old nets as usual.

46,278. Do they continue to catch a large number of small fish ?—They have caught a good many this year.

46,279. You have not found the supply of them falling off at all ?—I do not think there has been any falling off.

46,280–1. There is no trawling, I think, between St. John's Point and Malinbeg ?—No.

46,282. Is there any mackerel fishery in the bay ?—Yes, a considerable quantity of mackerel has been caught.

46,283. At what season of the year ?—Generally in August.

46,284. What nets do they use for them ? — Generally the same description of net they use for herrings if they can get them in shore, otherwise the catch them with lines.

46,285. With the seine net ?---Yes.

46,286. How long does the season last ?—I have known it last for six weeks, and I have known it last for only three.

46,287. Used there to be any trawling between the two points you have mentioned ?—There used to be.

46,288. How long ago ?—It was carried on until the byelaw was passed.

46,289. That was in 1860 ?—Yes, about four years ago.

46,290. Do the smaller class of boats from Donegal Harbour come round the point ?—The principal trawlers used to come from Mullaghmore. The fishermen there are the men who principally drive for mackerel at the present time.

46,291. Has the supply of turbot between the points you mention increased or diminished ?—It has fallen off.

46,292. Has there been any reappearance of them since trawling was done away with ?—There have not been as many as there were formerly. This was once a celebrated place for turbot, but now they are very scarce.

46,293. You said that the herrings appeared here twice in the course of the year, are there two seasons for them ?—Yes, in the summer and in the winter.

46,294. Are they full of spawn at those times ?—The summer fish appear to be full of spawn at the time we get them.

46,295. At what particular time would the herrings be full of spawn ?—In the present month. The herrings we had this morning were full.

46,296. Is there any reason to believe that the herrings spawn in the bay. I should imagine that they do—that is, not those herrings but the winter herrings, because those we take in February are what we call spent fish.

46,297. At the end of February ?—Yes.

46,298. Are those fish of a different size and a different character from those you get at the present time ?—Yes, they are much larger ; they are very much larger than the summer herrings.

46,299. Have you anything else to add ? — With regard to the lobster-fishing, we had some men who came down from Antrim a few years ago and fished for lobsters from the one year's end to the other. They fished nearly from Killybegs round to the Glen and they fished the ground out entirely. I have generally fished with lobster pots during the summer, but the fish are exceedingly small and so scarce that it is not worth while to fish for them. The same men have now gone from this part of the coast to a place called Ardara. They are fishing there now and are taking great quantities.

46,300. What markets do they send their lobsters to ?—Generally to Dublin or Liverpool.

46,301. By smacks ?—No, by overland conveyance, packed up.

46,302. Is any regulation observed with regard to your lobster-fishing ?—No, I do not know of any law upon the subject.

46,303. Do they observe any among themselves ?—No, I believe all they take under six inches are counted two for one.

46,304. Do they send all to market they take ?—Yes, everything they take. Formerly in this county we used to fish with baskets, but these men fish with rum-nets.

46,305. What is a drum-net ?—It is a frame work of hoops and over that a net, and at each end there is an entrance made of network. The bottom is a solid piece of wood.

46,306. It is a sort of cage ?—Yes.

46,307. Was the lobster fishery a source of profit to the people of that part ?—Yes, they still fish at St. John's Point, but they don't make anything of it.

46,308. How long were the Antrim men here ?—Three or four years.

46,309. At the end of that time did they exhaust the fish and go elsewhere ?—Yes.

46,310. Have the fish not had time since that to recover ?—No.

46,311. What was the number of boats fishing here ?—About 10.

46,312. Have they given it up now ?—I don't believe they follow it for certain.

46,313. What number of boats came from Antrim ?—I know there were five.

46,314. Did they fish all the year round for them ?—Yes, all the year round.

46,315. Whereas the men on the spot only fish for a part of the year ?—Generally only during the summer months.

46,316. Have you anything more to say ?—I would recommend that a fence season should be set up for the lobsters.

46,317. Would you recommend a close season or a regulation as to the size of the lobsters ?—I would recommend a rest for a month or two.

46,318. During what months would you have a close season ?—I believe the season for lobster breeding is in the spring of the year.

INVER.

G. V. Wilson.

10 Sept. 1864.

46,319. Do you think that one month would be sufficient ?—I should say two months; that would be quite little enough. We take them in the summer months with the pea in them, which shows that must be their time. We generally find them in that condition at that time.

46,320. Have you observed whether there is a great demand for lobsters with pea ?—Certainly, but it is an objectionable thing I think. I may observe that the description of lobster taken from Killybegs to Teelin is far inferior to those taken from Teelin round the coast where the shore is more rocky.

46,321. Are they inferior in point of size or quality ?—In quality.

46,322. Can you give any reason for that; is the ground better situated elsewhere ?—Yes, and the lobsters are better formed and the quality altogether better.

46,323. Is the ground rocky ?—Yes.

46,324. Do you get any crabs at all ?—Very few.

46,325. Is there any shrimping ?—They do not fish for shrimps, but there are a great many on the coast near Ardara.

46,326. Are there any oysters in the bay or along the coast ?—There are oysters in the estuary or harbour of Killybegs, but they are not protected in any shape or form.

46,327. Do they give employment to any large number of fishermen ?—No, they are not protected and anybody takes them who likes. They are only fished for at low-water spring tides. There are oysters in five or six places on this coast, I believe. With regard to Donegal Bay, there are great complaints from the long-line fishermen that when the tide is out as you come down from Donegal the men with the seine nets fish for herrings in the pools and holes that then are there, and that they catch large quantities of flat-fish, young turbot, plaice, which they throw out to die on the shore. They have seen a great many lying dead, and they think that some byelaw should be passed to prevent the seine men from fishing in these holes when the tide is out.

46,328. Is that down the harbour ?—Yes, from Doorin upwards to the island called Hoyle.

46,329. The herrings are left in the hole when the tide goes back ?—Yes, but that is the spawning ground of the turbot and plaice, and if they are taking herrings they displace all the young turbot and plaice, and the fishermen say there has been a falling off in consequence on this coast.

46,330. Do they take the plaice with a seine net ?—Yes.

46,331. Do you know of what size the mesh of the seine net is ?—Generally about three-quarters of an inch. The cod and ling we take off St. John's Point are far superior in quality to those taken down at Teelin.

46,332. Is there any reason for that ?—I cannot account for it; I suppose it is better feeding ground.

The witness withdrew.

DARBY MCGROARTY called and examined.

D. McGroarty.

46,333. How long have you been a fisherman here ?—I have been a fisherman since I was able to fish.

46,334. How long ago is that, how many years ?—I cannot tell exactly. I have been fishing something like 30 years, on or about that time.

46,335. Do you fish all the year round ?—Yes, I have no other support.

46,336. You have no other means of livelihood ?—No.

47,337. What time of the year do you generally commence sprat-fishing ?—I commence it something like a fortnight or three weeks before Lammas, on or about that time. I don't commence altogether regularly at one time.

46,338. How long does your season last ?—Some years to Hallows day.

46,339. What fishing do you then take to ?—We go with long-lines for hake.

46,340. Have you any trammel nets of your own ?—Nothing but a seine.

46,341. Are your long-lines spilliards ?—Yes, the ordinary long-lines; they are spilliards.

46,342. What is the length of your spilliard lines ?—Two hundred fathoms.

46,343. How many hooks have you on one of them ?—Two hundred.

46,344. How many of you go out in a boat ?—From seven to eight.

46,345. Each with a long-line ?—Yes.

46,346. What distance do you generally go out in the long-line fishing ?—Two parts across the bay in the direction of Ballyshannon by Mullaghmore on to St. John's Point.

46,347. Do you fish within the line drawn from St. John's Point to Mullaghmore ?—Yes.

46,348. What fish do you generally catch most of ?—Cod and haddock.

46,349. And ling ?—Ling at times.

46,350. Do you catch many turbot ?—Sometimes we catch turbot but very seldom many turbot.

46,351. Do you catch soles ?—I never saw soles in the winter time on the lines but we catch some in the summer time.

46,352. Have you observed any falling off in the fish you catch with the long-lines ?—Some years they are better with us.

46,353. But taking one season with another do you get fewer fish than you did formerly ?—We catch more of them.

46,354. Do you catch more with the long-lines than you did some years ago ?—Yes.

46,355. Did you catch many haddock last winter ?—No.

46,356. Did you catch any ?—Very few indeed.

46,357. Have you caught many haddock during the last three or four years ?—No, there have been very few indeed.

46,358. Haddock have been very scarce ?—Yes, there have been very few of them but there have been some cod.

46,359. Do you think that the cod are scarcer than they were a few years ago ?—Yes, they are scarcer. When we began to fish them first we could kill plenty of them and haddock also.

46,360. How long ago is that ?—Ten or 12 years ago.

46,361. Have they been scarcer since then ?—Yes, they have.

46,362. In regard to the sprat-fishing how has it been ?—The sprat-fishing is mending.

46,363. The last two years you have had good seasons ?—Yes.

46,364. How was it previous to that, four or five years before ?—We had no fishing.

46,365. Before that had you good seasons, seven or eight years ago ?—Ten years ago we had; we had a good season nine or ten years ago but we have had none worth anything since then till the last year. It has appeared to us that the fishery has been decreasing.

46,366. When you are out sprat-fishing do you find that the trammel nets or drift nets interfere with you ?—We blame nothing for the fish being so scarce for the last few years except the hake-nets.

46,367. You attributed the falling off of the sprats to the hake-nets ?—Yes, since a stop was put to them we think the fish have been mending and coming back again.

46,368. The regulation to put a stop to trammel-net fishing within certain limits was made in 1860 was it not ?—I don't know the exact date; it was four or five years ago.

INVER.

D. McGroarty.

30 Sept. 1864.

46,369. You have observed that the fishing has improved since a stop was put to those nets?—Yes.

46,370. What harm do you think the hake-nets did you?—I think they stopped us in our line of running. I blame nothing but them for that.

46,371. How did they do you harm?—In the first place they would shoot there day and night and when we went out we could not get our lines in clear water. If we got foul of them they smashed our gear and it was a long time before we could get them pulled up again.

46,372. Did you come across them as you were going out with the seine nets?—Yes, we came across them several times.

46,373. Did they prevent you from shooting your seine nets?—They put me out of my course.

46,374. Did they prevent the sprats from getting up the bay?—Yes, I am sure of that; since the hake-nets have been stopped the fishing has been improving.

46,375. Can you recollect how long it is since there has been a good winter herring season here?—One year there was a good herring season.

46,376. How long ago?—About 10 or 12 years ago. There was a pretty good season at Killybegs in the winter.

46,377. How long ago is that?—I don't recollect the year.

46,378. And previous to that had you good seasons?—It is about 30 years since it came and it lasted about six or seven years.

The witness withdrew.

E. Gallagher.

EDWARD GALLAGHER called and examined.

46,379. How long have you been a fisherman here?—I have been fishing sprats and herrings and everything else for 31 years.

46,380. Have you been a fisherman all that time?—Yes.

46,381. Do you do anything else besides fishing?—I am not constantly, but I am generally fishing.

46,382. Have you some land also?—Yes.

46,383. Can you recollect how long it is since there was a good winter herring season?—The first commencement of the winter herring fishery was about 31 years ago as far as I can recollect.

46,384. How long did it last?—It was on backwards and forwards for some years. The second year was the best we ever had. We had a good fishing for four or five years, and then they got lighter for six or seven years.

46,385. After that did you ever have a good season for herring?—No, we have not had a good winter herring season. They came round by Teelin Head and the countrymen there took them. There has only been one season that has been good since, and that was eight or nine years ago.

46,386. At the time you speak of, when you say there was a good herring season, did many boats come from a distance?—Yes, there were a number of Skerries men, Arklow men, and others who came here.

46,387. Did they bring their fish ashore or carry it away with them?—They salted their fish, and bought a good deal from the countrymen.

46,388. What number of boats were there from Inver at that time?—Every boat that was able to go and had trams went to the fishing.

46,389. Were there more men fishing from Inver then than there are now?—I think there were more men, a good many more.

46,390. Had they better or larger boats?—I don't know that there has been any difference in the boats; the boats were about as large then.

46,391. In regard to the summer herring fishery, how long is it since you have had a good summer fishing?—We have had no good summer fishing for a long time. This is the best summer fishing we have had in our bay and the best I recollect for 30 years.

46,392. How long did your season last this year?—It began in July and will go on till Christmas.

46,393. Then it is not over yet?—No, I hope not.

46,394. How many boats have there been after the herrings?—There would be 50 or 60 boats out altogether.

46,395. Do you own herring-nets yourself?—Yes.

46,396. What is the length of them?—There are seven or eight men in a boat, and every man has his own net of from 15 or 16 fathoms to the rope.

46,397. What depth?—From three to four deepings of 60 meshes deep.

46,398. What is the size of the mesh?—From 36 to 37 to the yard.

46,399. Do you own a boat yourself?—Yes, I do.

46,400. Then when you have a take of herrings how do you divide the proceeds; does the owner of the boat get a share?—Yes, he gets a share of everything.

46,401. And a share for himself besides?—Yes, the boat gets a share and every man gets a share for his equal share of nets.

46,402. What time are the herrings you take at this season full fish; are they full now?—They are full about August. That is the time when the summer herrings are at their best. They will be coming in condition, get full, and then they spawn.

46,403. When do you think they spawn?—The herrings we have now will come in and go round the coast and get very small again.

46,404. What time do they spawn?—At the latter part of the harvest.

46,405. About November?—Yes.

46,406. Do they spawn in this bay?—They spawn on the foul shores outside. They spawn on any place where they can get rough ground.

46,407. You do not think that they spawn in-shore in the bays?—They do not; they go outside to the foul ground to spawn.

46,408. When do the winter herrings spawn?—About the latter end of February. In February they will spawn in the boats and among the nets when we are working at them.

46,409. Are the herrings you get now much smaller than those you get in winter?—Yes, the summer herrings are always smaller.

46,410. When the sprat season is over, do you take to the long-line fishing?—Yes, but I do not follow it much in the winter time myself.

46,411. When you have been sprat-fishing have you found that the trammel nets interfere with you at all?—They come in our way, but every man must do the best he can. No doubt they are in the way, but then we get in their way as well.

46,412. You have herring-nets as well as sprat-nets?—Yes.

46,413. You think that both should have a chance?—Yes, I think both herring and sprat nets should have a chance.

46,414. When you have been sprat-fishing have you found herring-nets in the way?—They will be in the way, but we use the nets which we think will pay us best. Whatever we find to be best we get to and do the best we can at it.

46,415. Do you take both in the boat with you?—Yes.

46,416. If you find a chance for the herrings you put the drift-nets out?—Yes.

46,417. And if you have a better chance for the sprats you take the seine nets?—Just so.

46,418. You have no complaint to make with regard to either of them?—No.

46,419. Have you any hake-nets?—No, I have no hake-nets.

46,420. Have they interfered with your seine nets at all?—There were complaints of that some time

ago when we lost the sprat-fishing because they would set their nets across the bay, and would not let the fish come in.

46,421. There was a regulation made prohibiting trammel nets being set there ?—Yes.

46,422. Do you think that has been effectual ?—Since then we have found the sprat-fishing improving and the herring fishing too.

46,423. Have you any other complaint to make about the fishing ?—No, I have not.

The witness withdrew.

P. Byrne.

PATRICK BYRNE called and examined.

46,424. How long have you been a fisherman here? —I have been fishing for the last 30 years.

46,425. What fishing do you carry on ?—Sprat-fishing.

46,426. What else ?—I fish also with herring-nets.

46,427. Do you fish for hake also ?—I have fished only for hake with the line for the last eight or nine years.

46,428. Have you got any trammel nets for hake ? —No, I have not at present. I have not had for five years.

46,429. Have you a sprat-net of your own ?—Yes.

46,430. And a herring-net also ?—I have no herring-net now.

46,431. Have you any complaint to make with regard to the fishing ?—No, I have not. I have no complaint to make against any poor man for the way he takes to earn his bread.

46,432. When you are not fishing for sprats with seine nets, do you find the hake-nets in your way ?—Sometimes they will be in our way, and we get foul of them. Perchance we should not be able to see them out.

46,433. Do you think the hake fishermen now observe the regulation which has been made with regard to setting their nets; do they set their nets within the line drawn from Doorin Point to the mouth of the Bunlaghy River?—I suppose they go backwards and forwards, but I do not know. They are sometimes inside and sometimes outside.

46,434. What time of the day do they set their hake-nets ?—I do not recollect. I suppose they put them out sometimes earlier and sometimes later. They would put them out early if they thought proper.

46,435. Do they put them out before sunset ?—Yes, I suppose they do at times, but at other times they do not.

46,436. Is there anything you know of that could be done to improve the fishing in any way ?—I cannot say.

46,437–8. There are no regulations that could be adopted that would tend to improve the fishing ?—I don't know. Perhaps the shooting of their nets in the daylight would be injurious, and it would be better if they did not do so.

46,439. We have been told that the herring-net fishermen go to the pools, and drag them, taking all the small fish ?—It is the Donegal men who do that. It is not done on this side.

46,440. Do you know the difference between a young herring and a sprat ?—I can not say that, but I know that a sprat will never be a herring.

46,441. Do you know the difference between a sprat and a young herring ?—Yes, I do.

46,442. Do you take a considerable number of young herrings in the seine nets when you are fishing for sprats ?—Sometimes we do, but it is very seldom.

46,443. Is that in the early part of the season or the latter part, or is it all through the season that you get herring fry ?—In the latter part of the season, but we take up very little of it.

46,444. You take up very little ?—Yes, very little.

46,445. But what you do take up is taken up late in the season ?—Yet.

46,446. Do you find that they fetch as good a price as the sprats or not ?—No, I think not.

The witness withdrew.

J. Moran.

JAMES MORAN called and examined.

46,447. How long have you been a fisherman ?—For the last 12 years.

46,448. What kind of fishing do you practise ?—Sprat fishing, herring-fishing, and hake-fishing, according as they come in.

46,449. Have you a hake-net of your own ?—Yes.

46,450. What size is it ?—It is 15 fathoms to the rope. Every man has the same share of a net.

46,451. What depth ?—It is 60 meshes deep.

46,452. How many rows to the yard ?—We make them now 13 rows to the yard, but some make them with a mesh smaller than that.

46,453. What is your season of the year for the hake fishery ?—From this season on till Christmas.

46,454. From the beginning of September until Christmas ?—Yes.

46,455. Where do you set your nets ?—Before the line was laid down we fished them in from two fathoms of water up to 20.

46,456. Since that regulation was made where do you fish ?—Just as we can. Sometimes we take the nets inside and sometimes outside the line.

46,457. Then you do not observe the regulation ?—We know what it is.

46,458. Since that regulation has been made have you fished within the line ?—Yes, just as often as we found Mr. Sinclair's back turned.

46,459. Then you fish as often within the limits as without ?—Yes, if we thought we could get more fish inside than out, then we should fish inside.

46,460. Were you fishing with a hake-net last year ? —Yes.

46,461. Have you begun this season ?—Not yet.

46,462. Last year did you have a good take of hake ?—Not on this side.

46,463. Where did you catch them ?—The weight of what we killed was outside the line, but we killed a good many on the Donegal side.

46,464. What time of the day do you shoot your hake-nets ?—Since the regulation was established as to shooting them within certain limits we do not shoot them in the daytime.

46,465. Since that regulation was made you have only fished inside in the night-time ?—Yes, we should be afraid of setting them inside in the daytime.

46,466. When you have fished within the line of prohibition you have set your nets after sunset ?—Yes, and before if we happen to be out before.

46,467. When do you take them up again ?—If we could get the length of them, before sunrise, but if not they would lie an hour longer.

46,468. Have you ever left your nets out all day ? —Many a time we have.

46,469. Since that regulation was established ?—Yes. I only recollect to have left mine out once since that regulation was made.

46,470. In the bay ?—Yes, in the bay.

46,471. What is the size of the buoys which you have attached to your nets ?—They are a good size.

46,472. What are they like ?—Small kegs, one to each net.

46,473. Is there one at each end of the nets ?—Yes.

46,474. Since the regulation was made have you ever set your hake-nets in the bay within the line when the sprat fishermen were at work ?—No.

INVER.

J. Moran.

10 Sept. 1864.

46,475. I think you said that you fished for sprats yourself?—Yes.

46,476. Have you got a sprat-net yourself?—Yes.

46,477. Do you often have your sprat-nets and your hake-nets at work at the same time?—I have not for the last two or three seasons.

46,478. Why is that?—Because when we are working for sprats we interfere too much with our hake-nets.

46,479. When you had a good sprat season you have not had time to attend to the hake?—No, we leave the nets on shore.

46,480 Before, when the sprat season was not so good you put in the hake-nets in preference to the sprat-nets?—Yes, because we had not far to go for them, and part of the crew could go and haul them.

46,480*a*. Do you think that setting the hake-nets in the bay prevents the sprats from coming in?—I cannot say whether it does or not.

46,481. Do you think the hake-nets do any other harm to the fishing?—I think there are no nets which are used which in their time do not do harm. Of course if we have these nets in the water for the whole of the day it will do harm.

46,482. What harm does that do?—It scares away the fish which are coming in.

46,483. Is it the fact of the nets being there that scares away the fish?—Yes.

46,484. Or is it the fact that there are fish in the nets?—Both will scare them away.

46,485. Do the hake putrifying in the nets scare away the fish?—Yes, I think so.

46,486. Then you think it is not the mere fact of setting the nets within the line of prohibition which does harm, but that it is also the setting of them in the daytime?—It is my opinion that it was not the harm done to the fish that led some of the fishermen to want that regulation.

46,487. What was the other reason?—The reason was that the fishermen on one side followed those nets, and the fishermen on the other side did not, and they grudged us the money we were earning.

46,488. Do I understand that you do not think that the setting of hake-nets in the night-time does harm to the seine-fishing?—I don't think it does. What is the use of the fish coming in if they are not caught.

46,489. You think that if the hake are there they ought to be caught?—Yes. There would be no good in their coming in our length if we did not get them.

46,490. Do you use sprat-nets only in the daytime?—I use them both night and day.

46,491. Only on moonlight nights?—Yes, light and dark nights too.

46,492. If you find hake-nets set across the bay where you are coming with the sprat-nets what do you do?—If we come foul of them we get rid of them as we best can.

46,493. Do you often find it the case that you do get foul of them? Take the last two seasons, has it often occurred during the last two seasons?—We were kept too far out.

46,494. Do you mean that during the last two seasons the hake were so far out that the trammel nets were not set on the same ground as the sprats were?—Yes.

46,495. There was no interference then?—No.

46,496. If a number of hake come into the bay and the trammel nets are set among them, is it the case that they will not take the net the next day?—I have been fishing for months, and I have found them take the net just as readily at the end of the time as at the beginning.

46,497. Do you find that the trammels work better by night than by day for hake?—Yes, they do.

46,498. You catch more by night than by day?—Yes. I never killed as many in the day as in one night in dark and wet weather, about nine or ten years ago.

46,499. Do you think it would be disadvantageous to the fishermen here if the regulation with regard to the setting of trammel-nets for hake within the line was strictly kept?—We have never got many of them outside or inside the line since the regulation was made.

46,500. You have not had a good fishing since?—No.

46,501. If you had a good fishing coming on would it be a disadvantage to you if that regulation were strictly observed?—I cannot say because we have no had any proof of it yet. We have had no fishing of that kind since the regulation was made.

46,502. But did you not catch a good many hake this last season outside the line?—Yes.

46,503. In former years have you caught a great number of hake within the line of prohibition?—Yes

46,504. What proportion of your take in a year would be caught within the line of prohibition?—The whole weight of fish we killed then was killed inside the line. That was all the good fishing we had, namely, when we got them inside the line.

46,505. How many of the Inver men have hake-nets?—Not many here. The fishermen between this and St. John's Point have them as well as the Inver men.

46,506. How many come into the bay?—There are a good number, perhaps 30.

46,507. Have you any other remark which you wish to make about the fishing?—No.

46,508. What is the size of the boat that you use for the sprat-fishing?—Her tonnage is about four tons and the keel is 20 feet long.

The witness withdrew.

W. Sinclair.

WILLIAM SINCLAIR recalled and examined.

46,509. Can you tell us what the cost of a sprat-boat will be?—About 9*l*.

46,510. And the cost of the nets?—The cost of the nets would be seven times 2*l*. 10*s*.

46,511. Have most of the fishermen here a share in the seine nets?—Each man finds his share. He first finds one sheet for the bunt of the net, and then a sheet for the wings of the net, and then a share of the reef, which is a net that runs from one end of the entire seine to the other. He has also to find a share of the ropes and corks for the net, and the tar which barks it, and he has also a share for the swing.

46,512. Does the owner of the boat get a share?—Yes, and every man gets another share.

46,513. Has the cost of the fit out of nets increased of late years?—It has considerably, owing to the price of hemp which has risen in consequence of the American war.

46,514. Is not flax used very much?—Yes, but it has risen proportionately. It is now 40 per cent. dearer than it was.

46,515. How many of these seine-nets are there at work?—Twenty-four and more nets were at work this year.

46,516. Are any considerable quantities of young herrings taken?—I never knew any quantity, except one year, and in that year they came in in vast shoals all round the coast.

46,517. What year was that?—It is about seven or eight years ago.

46,518. Was it followed by any shoals of large herrings?—No, it was not. Everybody expected it would be, but it was not.

46,519. What time of the year did you observe those young herrings?—About this time of the year.

46,520. You did not observe any increase in the fishing season following?—No; it was said that there were vast quantities of herrings on the inaccessible parts of the coast to the north of Teelin.

46,521. What time of the year was that?—In the following winter, but the people there were only able to go out very little after them, and the herrings did not come here.

INVER.

W. Sinclair.

10 Sept. 1864.

46,522. With the exception of that year you have not observed any take of young herrings?—No, only upon that one occasion.

46,523. Was the previous year a good herring season?—No; they appear to have come in by accident, and nobody knew where from. There is another class of boats they use here for long-line fishing and hand-line fishing, which are yawls.

46,524. What is the cost of them?—A good one will cost about 9*l.*

46,525. Are they sailing boats?—They generally have one sail, but some of them have two sprit sails.

46,526. They are the Greencastle yawls?—Yes, and capital boats they are.

46,527. Can you give us any notion of the value of the sprat-fishing here in the course of the year?—The people who had the best opportunity of calculating it in Donegal last year said there were upwards of 3,000*l.* worth of sprats sold in Donegal, and as far as I can calculate there were about 200*l.* worth sold on the shore. There are no fish that come out of the sea that are reckoned as valuable for the poor people as the sprats. We call them the poor man's herring, and there is no fish as valuable for the poor here. They are sold here by the load.

46,528. What is the price of the sprats?—A load contains about three bushels, and it is sold for from 2*s.* 6*d.* to 4*s.*

46,529. From 2*s.* 6*d.* to 4*s.* for three bushels?—Yes.

46,530. When did sprat-fishing commence off this coast?—They have been at it as long as I can remember, but I dare say there are men here who can tell you when the first seines were made. I have heard the old men say that they used to catch them with nets like large landing-nets before they had seines.

The witness withdrew.

PATRICK MCBREARTY called and examined.

P. McBrearty.

46,531. What part do you come from?—From St. John's Point.

46,532. How long have you been a fisherman there?—I have been fishing backwards and forwards for the last 43 years.

46,533. What kinds of fishing do you practice there?—Long-line fishing and herring-fishing.

46,534. And sprat-fishing?—No, I do not fish for sprats, but I have been trammeling for mackerel and crake.

46,535. What is the season for herrings there?—We kill no harvest herrings; we have no nets for them, and we do not go looking after them. We remain about our own shores.

46,536. How long is it since you had a good herring season?—About nine years ago we killed for a fortnight capital herrings.

46,537. Since that have you had no good herring-fishing?—We have not had any good herring-fishing for 30 years.

46,538. Are you speaking now of summer or winter herrings?—It was winter herrings we killed at Killybegs.

46,539. How long ago is it since you had a good winter herring-fishing?—We have killed none for nine years.

46,540. When did you kill them before that?—I think it is 31 years since they commenced with us, and they remained with us for seven or eight years, during which time we got good weighty fishings.

46,541. You have had to depend mainly on the long-lines since then?—Yes; every year we are at them as hard as we can.

46,542. What fish do you catch most of with the long-lines?—Cod, ling, and some odd glassen, and an odd turbot. Sometimes we also get an odd haddock. About 20 years ago we could kill from 10 to 12 dozen haddock with the long-lines, but we have not been able to do that for a few years past.

46,543. How long is it since the haddock disappeared?—I think it will be 15 years ago.

46,544. As long as that?—Yes, since they left off coming here.

46,545. Since then you have caught nothing to speak of?—No, nothing to speak of.

46,546. Have you been catching large quantities of cod?—Yes, a fairish quantity. Sometimes, not being able to get bait, is a great "back-set" to us.

46,547. What bait do you use?—Lugs; but if we could get fresh herrings that would be best.

46,548. What is your season for cod?—From New Year's-day.

46,549. Up till when?—Up to the 1st of March.

46,550. Then I suppose the failure of the winter herrings has been a great detriment to the cod fishery on account of the bait?—Yes, it has been very bad for us in regard to the cod and ling fishing at times.

46,551. Was that because they followed the winter herrings into the bay?—Yes, they followed the food; we got them in our herring-nets at that time.

46,552. You took cod with the herrings in your nets?—Yes.

46,553. How many men are there at St. John's Point who are dependent on fishing for their livelihood?—The whole place depends upon it.

46,554. How many are there?—There are seven boats' crews at St. John's Point.

46,555. Three years ago had you a great falling off in the fishery?—This is the best year of the fishing we have had lately.

46,556. Two or three years ago you had a falling off?—Yes, no fish were taken in that winter.

46,557. What was the reason of that?—I cannot tell, but we were in a bad state for four years.

46,558. When did it improve again?—Last year it began to improve again, and I think this is a better season still.

46,559. Did the falling off affect all kinds of fishing?—Yes.

46,560. Cod and ling and glassen?—Yes.

46,561. Did you find they were all falling off at the same time?—Yes.

46,562. You can give no reason for it?—Indeed I cannot. I know no reason except that the fish left the bay.

46,563. Have you got any hake this year?—No, not one.

46,564. This last year has been an improving one?—Yes.

46,565. Have you caught enough to enable you to make a livelihood?—What with fishing and putting in a bit of a crop we have.

46,566. Have the St. John's men got a little land?—Most part of them have got none.

46,567. What do they do then?—They make kelp of the seaweed. They dry it and take it to market and sell it.

46,568. Are there many boats employed in collecting kelp every year?—They commence in the month of May and they are working at it until the present day. They take it to Mullaghmore and they sell it there. That is generally their support in summer.

46,569. How long has that been the case?—Seven or eight years. If it were not for that there would not be a creature of them left at St. John's Point at the present day.

46,570. Has there been a great decrease of the population there?—Yes, they have gone to America, Scotland, and other places.

46,571. What are the fish that go by the name of shelins?—I think they are nothing but glassen.

46,572. The young glassen?—I see nothing else that they can be.

46,573. Have you yourself got nets for the hake?—I have not, and I never had.

INVER.

P. McBrearty.

10 Sept. 1864.

46,574. Have the St. John's men any ?—No.

46,575. Do they not get hake ?—They do with the long-line, but not with the net. They only catch an odd one or so. We catch them with the hand-lines, which we throw over the side of the boat. There will be six or seven men in a boat; five of them will be fishing, and the other two will be hauling up the boat. We have often filled our boats with them in that way.

46,576. Have you any complaints to make with regard to any of the modes of fishing practised here ?—No, I have not.

46,577. You said two men will be hauling up the boat, could you not anchor the boat ?—No, we cannot anchor there; the stream is strong, and if we were to anchor the lines would be swept away.

The witness withdrew.

G. V. Wilson.

GEORGE VENABLES WILSON recalled and examined.

46,578. Are you able to state what the general condition of the fishermen at St. John's Point is ?—It is wretched in the extreme.

46,579. Are they in a worse condition than they were 10 years ago ?—Decidedly.

46,580. To what do you attribute that? — Ten years ago many of them occupied land in a great measure, now they do not; they have gone so far back that they have had to give up their land.

46,581. They depend solely on the fishing now ?—Yes.

46,582. And you think they cannot make a livelihood out of it ?—I imagine not. We have the greatest proof of that in the increase of our poor rates.

46,583. Is it because it is not a favourably situated place for fishing ?—I think they have no gear. There are subscriptions constantly being got up to raise money for buying lines and repairing the boats for them.

46,584. Has the condition of the people at Inver improved ?—Decidedly not.

46,585. Compared with what it was 10 years ago ?—Last year they had a good fishing, and this year every man seems to be provided with his own nets.

46,586. Out of last year's fishing they saved money enough to provide themselves with gear ?—Yes.

46,587. Were the effects of the famine felt on this shore ?—Yes, the poor rates were very largely increased. I got a boat and supplied all the nets to a crew.

46,588. Was that at St. John's Point or Inver ?—At Inver they fished for sprats. I got 46*l.* 17*s.* as my share.

46,589. Were you to have half of the profits ?—Yes.

46,590. That must have considerably more than paid for the gear ?—Yes.

46,591. Was that an unusually good season ?—There had not been many sprats taken for some years before until last year.

The witness withdrew, and the inquiry was adjourned to the 12th of September, at Moville.

Moville, Donegal, Monday, 12th September 1864.

PRESENT:

J. CAIRD, Esq., M.P. (Chairman). | G. SHAW LEFEVRE, Esq., M.P.

MOVILLE.

C. McKinney.

12 Sept. 1864.

CHARLES MCKINNEY called and examined.

46,592. (*Mr. Caird.*) Have you been for some time acquainted with the fishing interest here ?—Yes.

46,593. Have you been engaged in it as a fisherman ?—I have.

46,594. For many years ?—For a good many years.

46,595. Then speaking within your experience, can you tell us whether the present state of the fishing and the fishermen here is improving or deteriorating ?—They are both falling off.

46,596. Within what period do you refer to, how many years ?—I should say for the last 20 years.

46,597. Is there a falling off in the number of the fishermen ?—Yes.

46,598. Has that resulted solely from a decrease in the quantity of fish, or is it the cause of the falling off ?—I think it has resulted from a decrease in the quantity of fish.

46,599. Has there been any emigration which may have taken away the fishermen quite irrespective of the question of fishing ?—Yes.

46,600. Is that going on at the present time ?—I believe so.

46,601. Can you tell us, speaking of 20 years ago, what was the number of the fishermen then engaged in fishing in Lough Foyle compared with the number fishing there now ?—I would say one-third more.

46,602. Were the boats then of the same class and character as they are now ?—Yes, much about the same.

46,603. Was the fishing tackle then of the same kind as is used now ?—Yes.

46,604. Has there been no change either in the size of the boats or the description of the tackle employed in the fishing ?—It is nearly about the same.

46,605. Has the condition of the fishermen themselves within that period improved or fallen off ?—I think they are a great deal worse.

46,606. Are the fishermen as a class purely fishermen, or are they also farmers ?—A great many of them are farmers and work a few potatoes for sale.

46,607. Has their condition been at all affected by the state of agricultural success or otherwise in that period ?—I do not think they lose much time in fishing for their labour on the land.

46,608. Taking the general condition of the whole of the fishermen here, is a large portion of their time spent in fishing or is the larger portion of their time spent in the cultivation of the land ?—The largest portion is spent in fishing when they can get any fish, but the fish have fallen off very much on the coast.

46,609. What particular kinds of fish are caught here ?—Codfish and turbot.

46,610. Are there any flat-fish ?—They get some flukes.

46,611. Do they get soles ?—Yes, and plaice and all that kind of fish.

46,612. Is the quantity of cod and turbot caught now not so great as it used to be in former times ?—It is not.

46,613. Is the quality as good ?—Yes.

46,614. To what do you attribute the falling off in the cod and turbot ?—They cannot find them on the old fishing grounds.

46,615. Were those old fishing grounds inside the lough ?—No, there is one about 18 miles out at sea, called the Hoyle Bank, to the eastward.

46,616. (*Mr. Lefevre.*) Is that the bank off Inishtrahull ?—Yes.

46,617. (*Mr. Caird.*) What kind of fish did it principally yield ?—Codfish and turbot principally.

46,618. Has that bank been famous for its fish for many years within your recollection ?—Yes.

46,619. Does it not continue to be so now ?—It does not.

46,620. When did it begin to fall off?—With the exception of three years they have not been plentiful for the last 20 years.

46,621. Were those three years the last three years?—No, they were not.

46,622. To what do you attribute the falling off?—I cannot say exactly, unless they have caught them in a great measure.

46,623. Have there been more boats fishing on the bank within recent years than there were formerly?—No, not nearly so many.

46,624. Has there been any mode of fishing practised on the bank which you think has been likely to injure the fishing?—I do not think there has been.

46,625. Then there is no cause to which you can attribute it at all?—No.

46,626. Is there any other good fishing ground for cod and turbot besides that bank?—They only fish that bank in the summer, and in the harvest if the weather is fine. They get codfish nearer the shore in the winter, up in the Roads here.

46,627. Is it a very exposed part of the sea where this bank is; is it in the open sea?—Yes.

46,628. What kind of boats do the fishermen go on the bank with?—Small yawls from about 16 feet to 24 feet long.

46,629. Is the character of the boats not such as to make it dangerous to go to the open part of the sea in bad weather?—The boats they have now are very good sea boats, but I think they are rather small.

46,630. Do boats from any other parts of the coast of a larger size go upon the bank?—No, there may be some boats from Malin Head that go sometimes but they are nearly about the same size.

46,631. What kinds of fish are caught in the lough?—Codfish.

46,632. Has the lough-fishing improved or fallen off within the last 20 years?—The fish are scarcer a great deal.

46,633. Do you know any cause for that?—No.

46,634. Is trawling much practised in the lough?—There are a few trawl-boats I believe.

46,635. Has that long been the case?—It has been. They have been trawling in the lough on the south side beyond the banks for the last 15 or 20 years.

46,636. Has it ever been alleged against the system of trawling that it is injurious to the fishing and to the brood of fish?—I do not know that it has.

46,637. That is not a prevalent opinion here is it?—No.

46,638. What kinds of fish do they catch with the trawl?—Flukes and skate and soles.

46,639. Are there many soles caught here?—I believe they do get some, but I am not much acquainted with the trawling; those are the kinds of fish I see them bring in.

46,640. What kind of fish yields on the whole the largest return during the year to the fishermen?—Codfish.

46,641. Is the herring a fish that is much caught here?—They have been very scarce for the last two or three years.

46,642. Was there ever a good herring-fishing here?—Yes, there have been some very good seasons of herring-fishing, but not lately.

46,643. (*Mr. Lefèvre.*) Do they come into the lough?—Yes.

46,644. (*Mr. Caird.*) Are they cured here?—No, they are mostly all sold fresh.

46,645. There is no curing establishment here?—No.

46,646. Have you any observation to make in regard to the herring fishery; is there anything you desire to bring before us as to the mode in which it is practised?—These small boats do not go much outside the lough to fish. There have been large shoals of herrings outside and there have been no boats and nets to go after them.

46,647. Then the fish have been lost for want of being properly looked after?—Yes.

46,648. Have the fishermen here never been able to get a larger sized description of boats to follow the fish further to sea?—No; the greater part of them are fishing in other men's boats; they are fishing on shares.

46,649. Are they boats of a different character?—No, they are about the same.

46,650. Are there any valuable oyster beds in Lough Foyle?—I believe there are.

46,651. Have they been improving or diminishing in yield in recent times?—I am not much acquainted with oyster-fishing, but there are men here from that part of the bay who can give you information about it.

46,652. Is there any good lobster fishery here?—Not inside the lough.

46,653. Is there any outside?—Yes.

46,654. Along the coast?—Yes.

46,655. Is it followed successfully?—Yes.

46,656. Is it a considerable fishing?—No, they do not get very many, only a small quantity.

46,657. Are there many boats engaged in it?—There are a good many.

46,658. Is it an increasing fishery?—It has not been increasing this last year I believe.

46,659. Do you know whether the lobsters have begun to diminish in quantity?—The men tell me that this has been a very successful season.

46,660. Are there any mussel beds here?—There are.

46,661. Is there plenty of bait for the fishermen and is it to be got easily?—Yes.

46,662. Then they have no difficulty as to bait?—No.

46,663. Is there any restriction at all as to the times at which you may fish for herrings?—There is no restriction.

46,664. You fish at any time you like?—Yes.

46,665. Is there any restriction of any kind imposed here upon the fishermen as to the times they may fish any description of fish or as to the places in which they may fish?—There is no restriction. They may fish when they like and catch what they can, but the fish are not plentiful.

46,666. Can you tell us if there is a close time for trawling appointed?—I do not know exactly the time. I have nothing to do with it. The trawling is generally outside.

46,667. Is there any mackerel fishery here?—No, except they catch some in the herring-nets.

46,668. In regard to the herring fishery have you got a summer and winter fishing here?—They get a few sometimes in the winter, but very few.

46,669. Have they ever looked for them much in the winter?—Yes, they have looked for them and they have found them rather scarce.

46,670. In some cases we have found on the coast of Scotland that they do not appear to have looked for them, but now they have done so recently, they have found them in the winter; is that the case here; do you know anything about it?—Yes.

46,671. Do you think if they were looked for here in the winter they would be fallen in with?—I daresay they would.

46,672. Are they in good condition when they are caught in the winter?—They are not.

46,673. Not in the month of January?—No.

46,674. Is there any sprat fishery here?—None that I know off.

46,675. Can you tell me the price of fish as compared with what it was in your younger time?—They are a great deal dearer than they have been.

46,676. Can you compare the price of cod by the dozen 20 years ago with what it is now?—Yes; I have bought them myself at 2*s.* and 2*s.* 6*d.* a dozen about the last year the bounty was given which I think was somewhere about the year 1832. I have paid as much as two guineas a dozen for them since then.

46,677. What may be the price now?—The codfish are not in exactly; it is too early in the season, but they are selling I believe for about 12*s.* and from that to 30*s.* and 36*s.* a dozen.

MOVILLE.

C. McKinney.

12 Sept. 1864.

46,678. If there had been anything like the same quantity of fish caught it would be a much more paying business now than it was then?—Yes.

46,679. Do you think the fishermen on the whole are getting the full advantage of the additional price?—The fishermen are most anxious to catch them if they can get them, but they have been so scarce that the price has gone very high. If there were plenty the price would be less again.

46,679*a*. In your opinion is the price affected as much by the quantity caught here as by the increased market for them?—The market has increased, of course.

46,680. Have you noticed that the quantity has so perceptibly diminished?—Yes.

46,681. (*Mr. Lefevre.*) Have you observed the same decrease both in the lough and outside?—Yes.

46,682. Do the trawlers fish on the bank you told us of—the Inishtrahull bank?—No.

46,683. They do not work that bank?—No.

46,684. They fish inside and outside the harbour along the Magilligan bank?—Yes.

46,685. Do you know what number of trawlers there are that are engaged in fishing?—I could not exactly tell the number.

46,686. Do you know what number of boats belong to Moville and Greencastle?—I cannot exactly say.

46,687. About what number?—From Moville very few go out to the bank—they fish about the lough; but the Coastguard would give you better information upon those points than I can.

46,688. Do the winter herrings come into the lough?—I do not know. It is seldom we try for them.

46,689. In summer do the herrings come into the lough?—Yes.

46,690. What month is that?—They have been in this last month.

46,691. In August?—Yes.

46,692. Are they there for more than a month?—They went away very quick. I think they stopped a month.

46,693. In what condition are the fish then?—Very good.

46,694. Have they any roe in them then?—Very little.

46,695. Are they very fat?—Yes.

46,696. What sized fish are they?—They are middling sized herrings. The first they get are rather small.

46,697. Do you know the Loch Fyne herrings?—No.

46,698. Can you say for how much of their time the fishermen are employed in fishing; is it as much as one-third or more?—It will be more than one-third or one-half.

46,699. They are employed in fishing fully one-half of their time?—Yes.

46,700. Are the same men employed in dredging for oysters?—No.

46,701. Are the oyster dredgers a different class of men?—Yes.

46,702. Do they have different boats for that?—They are about the same boats. Perhaps you will allow me to call your attention to the state of the pier at Greencastle built by the late Fishery Board, which is in good state of preservation, but useless for the purpose for which it was intended, there not being a sufficient depth of water to admit of the entrance of any large fishing boats or trawlers. I would therefore suggest that a few hundred pounds should be expended in improving the pier so as to make it useful as a harbour for boats which would be required to search for and fish in the deep-sea fisheries round the coast.

The witness withdrew.

T. McCandless.

THOMAS MCCANDLESS called and examined.

46,703. (*Mr. Caird.*) Are you a fisherman here?—I have been but I am not at present.

46,704. What kind of fishing did you follow?—I followed cod-fishing and trawling principally; sometimes herring-fishing when there were any to be got, and I have dredged a little too.

46,705. How many years back does your experience extend?—I remember the fishing for 20 years, and it is 15 or 16 years since I commenced it myself.

46,706. First, as regards cod-fishing, where have you been most successful in finding cod?—Off the land on the bank which McKinney referred to.

46,707. Did you fish there 16 years ago?—No, but I have fished there 12 years ago.

46,708. With long-lines?—Yes, it has never been fished with anything else but long-lines.

46,709. When did you fish it last?—About four years ago, but I see what the men are taking off when they go there.

46,710. Are there as many people and boats employed in fishing it now as there were when you went?—Not one-half as many, and the quantity of fish is not a quarter as much as it was then.

46,711. Is the bank very extensive?—Yes, and to the best of my opinion the further off the land the better fishing they would get if they could venture to go there. They do not go, however. One Moville man went about 16 miles further to the northward and in an hour and a half he loaded his boat with cod and grey fish which he caught with hand-lines.

46,712. (*Mr. Lefevre.*) What grey fish?—It is a grey thing as large as a cod—tussacks or grey lords we call them.

46,713. Are they coal fish?—Yes.

46,714. (*Mr. Caird.*) When was that?—Last season.

46,715. Did anybody follow his example?—No, most of them were afraid. It was a fine day when he went. He was losing sight of the land when he got there, but it was a calm day, and it took 20 hours to bring him in.

46,716. (*Mr. Lefevre.*) What season of the year was it?—About the middle of June. He went out two or three times and was always successful. He loaded his boat whenever he went out.

46,717. (*Mr. Caird.*) Then in your opinion there is plenty of fish to be had?—I do not think there is plenty, but there are more off the land than where the fishermen go, even off the bank, where they expect to get fish in the spring of the year. If they got one fine day they would venture out there. In February on a fine day they would get a few fish, but perhaps for two weeks at a time they cannot venture out again.

46,718. Are the boats so small that there would be much danger in it?—Yes. If they have a breeze from the west they cannot pull out.

46,719. Have you seen boats of a larger size out there?—No, no larger than our 6 feet-beam boats and 24 feet keel.

46,720. Are there any other fish found there except cod?—There are turbot. It is the best place for turbot.

46,721. How do you catch turbot there?—With the long-lines.

46,722. On the same lines as the cod?—Yes, a boat could scarcely trawl on those banks, because the tide sets close in.

46,723. Is it a soft bottom?—No, hard sand and shells.

46,724. What depth of water is there?—They fish in from 15 to 40 fathoms, according to where they find fish. Some seasons of the year they get fish near the bank on the sand. Early in the season they get it on the rough edges.

46,725. You have never seen any trawling on the bank?—No, they have often intended to try, but they

are afraid that they would lose their nets as the tide would carry them across.

46,726. When did the quantity of cod caught on the bank begin to show a diminution?—For 20 years they have not got many; but in 1848 or 1850 there were one or two seasons in which they got a reasonable quantity. Some of the men loaded their boats for some few days, but since then they have not been so plentiful.

46,727. If they had decked boats and could keep at sea in bad weather would they be more successful?—I have known them be for two weeks when they could not go out at all. They would get out in the spring for one day, and then would have to lie on the shore for two weeks again.

46,728. What kind of bait do they use here?—For the most part buckies and mussels.

46,729. Do they ever try herring bait?—Yes, often, but is not to be got, because there are so many dog-fish, and they would break off the bait at once; sometimes they are plentiful and sometimes not.

46,730. Have you fished for cod anywhere else?—Yes, in the river often, close at hand.

46,731. In the lough?—Yes.

46,732. Also with the long-lines?—Yes.

46,733. Have you been successful in it?—We have done very well sometimes, but we have done nothing for a number of years. As compared with what it was formerly there has been nothing done at all for the last 20 years; it has not been as good as it was before during all that time.

46,734. Have you yourself within your own experience noticed a great falling off?—Yes, particularly within the last two or three years.

46,735. What do you suppose is the cause of it?—I cannot give you any reason for it at all.

46,736. Do you agree with the previous witness that there are fewer fishermen than there were 20 years ago?—Yes, there are; but if there were fish to be had there would soon be as many fishermen as ever there were. The reason the fishermen do not fish constantly is that they cannot get a supply of fish to keep them at it. If they could get plenty of fish they would keep at it.

46,737. Then it is the want of fish that has led to the falling off in the fishermen?—Yes, I am sure that the greater part of the fishermen would keep constantly at it if they could only get fish.

46,738. And the falling off cannot arise from over-fishing because the number of fishermen has increased?—Yes.

46,739. Have you been a trawler?—Yes.

46,740. Can you tell us whether that mode of fishing is injurious to the supply of fish?—I never heard any person complain of it. I do not believe it has been so on the Back Strand.

46,741. What do you catch in the trawl?—Sole, turbot, flounders and ray.

46,742. You do not catch cod?—No, never.

46,743. Do you get any haddock?—No, we scarcely ever get haddock here. Some odd times we get a hake or a conger.

46,744. Have you not heard the fishermen attribute the falling off of the fish to the injury done by the trawl?—No; I do not believe that the codfish are ever taken by the trawlers at all and there are but few of them that spawn there.

46,745. Where do you trawl?—Well up the river and on the Back Strand.

46,746. Where is the Back Strand?—At the back of Magilligan Point. The codfish scarcely ever go into the bay, they keep more outside; in the spawning season they go to the banks outside.

46,747. On the banks upon which you do not trawl?—No; I never saw a trawl there. There is a little bank called Dunmore which is a fine place for fish in the spawning season, and there was never a trawl-net shot there.

46,748. (*Mr. Lefevre.*) Whereabouts is it?—It lies off Culdarff Bay.

46,749. How far is it?—Near the shore and it extends for four or five miles out.

46,750. (*Mr. Caird.*) At what season of the year do you trawl?—We can trawl outside the river at any time; but the fishermen among themselves have made it a general rule from the 1st of February to the 1st of July not to trawl in the river. They never shoot a net in the river then because if any fishermen were fishing at that time they could stop them and have them fined.

46,751. (*Mr. Lefevre.*) Is that only a rule among the fishermen themselves?—I know there is such a rule among the fishermen; but I never heard of one being laid down by any other person.

46,752. (*Mr. Caird.*) You do not know whether there has been a byelaw laid down by the Fishery Board?—I believe it is done in consequence of an Act made by the Commissioners.

46,753. (*Mr. Lefevre.*) How long ago?—It is within my memory; perhaps 10 or 12 years ago.

46,754. (*Mr. Caird.*) There is a regulation of that kind?—Yes.

46,755. And is it adhered to?—Yes, carefully.

46,756. And there is no trawling within the bay from the 1st of February until the 1st of July?—No, not from Magilligan Point.

46,757. From the 1st of February until the 1st of of July there is no trawling?—No.

46,758. But after July there is?—Yes.

46,759. Can you tell us for what reason the months from the 1st of February to the 1st of July have been fixed for close months?—No; I cannot give you a reason for it, but that is the time they have fixed.

46,760. Would the spawn be destroyed during that period if the lough was fished then?—I do not know exactly where the flat-fish do spawn.

46,761. Would the young brood be destroyed if it was fished at that time?—I expect it was on that account that they made a law of that kind to protect them.

46,762. There is a law prohibiting trawling during that period?—Yes, and it is strictly observed; no man tries to trawl then.

46,763. Have you fished in all the other months in the year in the lough?—No; because the fish are plentiful outside. In rough weather we fished outside in some seasons of the year. After we commence on the 1st of July for a month or six weeks the fish are very plentiful inside.

46,764. Do you not find that in warm weather the fish are plentiful in shallow water?—That does not make much change in the river; the fishing is best outside close to the land.

46,765. Have you trawled outside and in during all the months that are not close months?—Yes.

46,766. You have been fishing all that time with the trawl?—Yes.

42,767 Have you ever observed that you brought up spawn in the trawl?—I never saw spawn the size of my hand brought up by a trawl-net.

42,768. Did you, on the average, bring up in your nets, any large quantity of small immature fish unfit for the market?—We might do that sometimes, but not often. There is a kind of brown-back about the fishing-ground, which is a small fish and never grows any larger.

46,769. Is it a small flat-fish?—Yes, they are a species by themselves, they are not the same as the other kinds; we generally bring them home because they are sweeter fish.

46,770. They are not thrown back again into the sea?—No.

46,771. They are brought for sale and use?—Yes, for our own use, we like them better than the large ones.

46,772. Except those fish, is there any large quantity of immature fish brought up and thrown away as useless?—No none.

46,773. Is there any considerable destruction of the brood of fish by that mode of fishing?—I am not aware of any.

MOVILLE.

T. McCandless.

12 Sept. 1864.

46,774. (*Mr. Lefevre.*) Do you take any young turbot?—It is very seldom that we get any; we lift on odd one now and then, but if we lift a small one we drop it overboard; it is however very seldom that we get one, we might fish for a week and not get one. The sole is the principal fish we catch by the trawl in the river.

46,775. (*Mr. Caird.*) When did trawling commence in the river?—There has been trawling there for the last 50 years.

46,776. Then it is not at all a recent mode of fishing?—No, there were far more boats trawling 25 years ago than there are now.

46,777. What is the length of the beam of the trawl used here?—It is according to the size of the boat; it will run from 20 to 30 feet.

46,778. Are they all decked boats?—Yes, they are all decked boats, but they are only small.

46,779. They could go to sea then?—Yes, in moderate weather; perhaps some of the boats will be from 25 to 40 feet long, but they have only small beams.

46,780. Are they good sea-boats?—They are very good, but they are not fit for very bad weather.

46,781. Do they keep at sea for some time when they go out?—They generally keep at sea for a day or two, and then come in to dispose of their fish and get provisions.

46,782. Do they keep the trawl down for one tide?—That depends upon where they are drifting, sometimes it will only be down for half an hour, and at others it may be down for three or four hours.

46,783. Have you observed in trawling, that in passing over the same ground continuously you exhaust the fish?—No, I believe that where the ground is constantly trawled the fish improve because the ground rope drags up the ground and enables the fish to obtain food. We find that we get more fish if we are fishing over where another trawl has been shot than if we go away to new ground.

46,784. Then you find it advantageous to trawl in the same locality?—Yes, we believe it trawls up the sand and exposes the worms to the fish.

46,785. You do not avoid places where you have been in the habit of trawling?—No, but we generally go back to such places again, because we find that the flat-fish always gather where the ground has been trawled over; it is often the same with dredging. If you go where the boats have been dredging and along the edge of the bank, you will get three times more flat-fish than if you kept out.

46,786. With regard to dredging for oysters, have you practised that?—Yes, a little.

46,787. Are there several oyster-beds in Lough Foyle?—Yes, a good many.

46,788. Are there any other places?—I have heard the Portrush men say that there are fine oyster beds by the Skerries off Portrush, but they do not dredge any; they have lifted them often on their long-lines.

46,789. Are there many beds in Lough Foyle?—Yes, there are a good many.

46,790. Are they private property?—No.

46,791. They are open to any of the fishermen?—Yes, any man who likes to dredge upon them.

46,792. Have the oyster beds been dredged for many years?—I hear old men of 60 and 70 years of age talking about oysters having been very plentiful when they were young men 15 and 20 years of age.

46,793. Is there any regulation adopted by the oyster fishermen in regard to the time at which they should fish?—Yes, they stop on the 1st of May, and do not begin until the 1st of September.

46,794. Does anybody enforce that regulation or do they observe it themselves?—I believe it has been a regulation the same as trawling.

46,795. Is it carefully observed?—Yes, and there is a fine against breaking it.

46,796. Is there any other regulation among the fishermen here, as to the modes in which the oyster beds shall be fished?—No.

46,797. Every man follows his own way?—Yes.

46,798. Has the number of boats and men employed on the beds in Lough Foyle increased or diminished of recent years?—I think there were as many last season as there have been for the last 10 or 15 years. I believe they got more oysters last season than before. The oysters were not as large but the fishermen have been able to get large quantities during the last two years.

46,799. Then the oyster beds have not diminished in their yield at all?—For two years they have got more oysters than they did for five or six years before. About 20 years ago I believe the oysters were very plentiful.

46,800. Do any strangers come upon these oyster-beds to fish?—No fishermen go there except the fishermen belonging to Lough Foyle.

46,801. Would the men of Lough Foyle prevent other men from going there?—No, they would not.

46,802. But they do not come?—No.

46,803. Are there any artificial beds in the lough?—No, except one at Whitecastle. A man named Reed, an oyster dealer from Liverpool, has bought young oysters from the fishermen; they were what I used to throw overboard, and he gave them 6*d.* a hundred for them and planted them.

46,804. Where did he plant them?—At Whitecastle Point, about five miles from here.

46,805. Do you know how it has succeeded?—I have not heard.

46,806. Is the planting continued?—No. It is the only bed that has been planted and I believe it has been a failure.

46,807. Has Mr. Reed ceased to buy the young oysters?—Yes, he only bought them for a short time one season.

46,808. (*Mr. Lefevre.*) Did he have a licence from the Commissioners?—No, he had no licence at all.

46,809. (*Mr. Caird.*) Has the price of the oysters much increased of late years?—Last year they were 4*s.* a hundred for nice sized oysters; that is a very fine price.

46,810. What market do they send their oysters to principally?—To Liverpool and Belfast. The price is according to the size and quality. There are some that are hardly worth anything, and there others that are worth 5*s.* a hundred.

46,811. Are the men who practise oyster-fishing successful in their business?—They make wages. If they can make 2*s.* 6*d.* and 3*s.* a-day they consider it better than labouring on shore.

46,812. What kind of oysters are those which are caught here; are they large or small?—They are of different sizes according to the different places from which they are obtained; towards the mouth of the river they are large, and further up the river they are smaller.

46,813. Is there any oyster bed that has been fished out at all?—They find them very often at the end of the season when they have been working a good while getting a great deal scarcer than they were at the beginning of the season.

46,814. Have you ever fished for lobsters?—No, I have not. I believe there are oyster beds in the river which they have not found at all. They found one last year which they knew nothing about, and they got a large quantity of oysters from it; it was however only a small bed.

46,815. Are you a herring-fisher?—I have fished herrings.

46,816. Is the herring fishery an important fishery here?—It is not. The men very often do not make anything in the season from it. This season they caught a few and they made a few pounds by it. We principally look to the herring fishery to enable us to get a few for bait in the winter time; but they have been very scarce lately. I believe there have been large shoals outside, but no man has gone out to try for them.

46,817. Are the codfish sent fresh to the market or are they cured?—When they are scarce they go fresh to the market, but if they are plentiful in the summer

time they are cured. In the winter time they go fresh to the market. They keep better in the winter, and it is not necessary to put them in ice. It would not pay if they were obliged to purchase ice.

46,818. (*Mr. Lefevre.*) What is the number of boats dredging for oysters?—In Lough Foyle there may be 40 or 50 boats employed at it.

46,819. Not more than that?—No.

46,820. Has that number diminished of late years?—I believe a number of years ago there were more than there are now.

46,821. I see that in 1836 there were 80 boats dredging?—There is not that number now.

46,822. Have the boats diminished since then?—Yes.

46,823. How many men are there in each boat?—Four men.

46,824. Have they each a dredge or have they only one dredge to a boat?—Only one dredge. Some are adopting a lighter dredge, and are beginning to use two.

46,825. Do they cull the oysters in the boat?—Yes.

46,826. Of what size do they take them?—If they are too small when they bring them ashore they cull them, and they will not buy them for small ones.

46,827. Do they cull them on board?—They take the small ones out when they come on shore. Out of 1,000 or 1,200, perhaps, there may be 100 small ones which the purchaser will not take; he picks them up however, and sends them to market, and they add to the profit.

46,828. What do they do with those they bring on shore and cull?—The person who buys the large ones takes them and picks them up with them.

46,829. He takes them up with the large ones?—Yes.

46,830. Does he get a smaller price for them?—I believe he does. If there are a few left behind he generally gets them for nothing.

46,831. Are the oysters taken up here fit for eating at once?—Yes.

46,832. They are not bought in order to be laid down on other beds?—No.

46,833. Is there any demand for oysters for laying down on other beds?—There was only one man here who bought a few for laying down, but the thing did not answer well.

46,834. What is the size of the oysters?—There are some of them very small, and there are some quite as large as a saucer.

46,835. What is the size that the buyer would reject as too small?—That depends upon the bed they are caught on. The oyster that would be objected to here would be a sizeable oyster up the river.

46,836. What is the size that would be rejected down here?—A small one about two inches would be rejected here.

46,837-8. An oyster above that size would be taken?—Yes.

46,839. What size would they reject there?—Much smaller oysters would be rejected there.

46,840. An inch?—No, an oyster an inch across would be a very small oyster that would be hardly worth opening.

46,841. What is the smallest oyster up in the lough the buyer would reject?—He would not count an oyster an inch in size as an oyster at all.

46,842. Would the buyers purchase anything above that?—A penny piece is about an inch, and that would be a very small oyster.

46,843. Would they take oysters an inch and a half across?—Yes, about that.

46,844. I think you said there were some oysters that fetch a good price?—There are some small and some large.

46,845. Do they require to be laid down on other beds?—No, they never lay them down.

46,846. Does the size of the oyster depend upon the depth of water?—The depth of water does not make much change. Further up the river they are smaller but there are some beds upon which the oysters are smaller and others upon which they are larger.

46,847. In the same depth of water?—Yes.

46,848. What is the general depth of water in which you find the oysters?—We get them in from six feet of water at low-water up to six and seven fathoms. They do not appear to be confined to any particular depth of water at all.

46,849. Are they ever uncovered at all at low-water?—No, except there are banks close to the oyster beds at low spring tides where you might gather up oysters if you were walking.

46,850. Have there been good breeding seasons here for the last two or three years?—Yes, they have been plentiful here of late.

46,851. Has there been a good spat for the last two years?—Yes.

46,852. Have you observed on the whole any falling off in the take of oysters?—Yes, they are not as plentiful as they were a number of years ago.

46,853. Does not each boat get as many, or are there not as many brought in altogether?—Each boat does not get as many and there are not as many brought in altogether.

46,854. How do you account for that?—The oysters are scarcer.

46,855. Can you give any reason for the falling off?—Of course, taking the small ones is very injurious. I believe that the time Mr. Reed bought a large quantity and planted them that that was an injury to the beds, but that is not being done now.

46,856. How long ago is that?—In 1860.

46,857. Four years ago?—Yes.

46,858. It has not occurred since?—No; it was only for one season. The small ones are never taken off our beds down here and they are never brought ashore, and yet oysters are scarcer now than they have been within my memory.

46,859. Notwithstanding that there were formerly a great many more dredges at work?—Yes, but if the oyster beds are down in the mouth of the river or anywhere else and are left undredged they would die; they would be covered up with sand.

46,860. Then do you think that a certain amount of dredging does no harm?—Too much dredging will do harm, but a certain amount will not. There is one bed here at Greencastle where there was a fair supply, but there came a heavy gale of wind, and the men did not fish upon it for about two months. At the end of that time they went back to it and all they dredged up was shells; the oysters were all dead.

46,861. Do the oyster beds shift about a good deal?—I do not think they do. I think they generally keep their place.

46,862. If there is a heavy gale of wind you find they move?—No, a heavy gale of wind will not shift the oyster beds, but it lodges sand upon the beds and injures the oysters.

46,863. How many trawlers are there fishing in the lough?—There are about eight trawlers belonging to Lough Foyle altogether, perhaps there are nine, and there are four or five boats which come from Lough Swilly to fish.

46,864. There are about nine altogether belonging to Lough Foyle?—Yes.

46,865. And occasionally there are others coming from Lough Swilly?—Yes.

46,866. What season of the year do they come?—Their boats are small, and they generally come after the open season in the summer time.

46,867. What is the average tonnage of the trawlers?—The largest is only 15 tons, and from that they go down to about six tons.

46,868. How many men have they on board each of them?—There are generally three men on board.

46,869. Do they fish all the year round either inside or outside?—No. On the 1st of January they lay them up until June on account of the bad weather.

46,870. Then during the close season they do not trawl at all?—No.

MOVILLE.

T. McCandless.

12 Sept. 1864.

46,871. They do not go outside?—They can go outside; they go out in May if they consider the weather fine enough. Sometimes they go out in May and June.

46,872. Then when the close season is over do they come inside?—Yes, because they can work inside at any time, but it is only on a fine day that they can work outside.

46,873. Is most of the ground in the lough trawling ground?—No, there are a great many parts of the river where they do not get fish, and on the other hand there are a great many places where a trawler could not work for wreck.

46,874. Do you trawl over the same ground in the lough as that upon which the line fishermen use their lines?—No, the line fishermen generally fish in the deep of the Channel and we generally trawl nearer the shore.

46,875. In what depth of water do you trawl?—In from two fathoms to seven fathoms.

46,876. Not deeper than that?—No.

46,877. Are your trawlers not adapted for trawling in deeper water?—If we found the fish more plentiful we should trawl there, but the wreck injures us very much.

46,878. Do not the line fishers go there and set their lines on that ground?—It is very seldom that they fish for codfish here, but they do sometimes for flounders.

46,879. What is the size of the mesh of your trawl?—Four inches.

46,880. Is that the largest?—It is generally about that throughout.

46,881. Is the take of fish you get by the trawl falling off?—Yes, we have found them a great deal scarcer than they were at times.

46,882. Compared with 10 years ago, are they scarcer now?—Yes, particularly outside, and they are much scarcer inside. They were more plentiful outside 10 or 12 years ago than they are now.

46,883. Has there not been much difference inside?—No; there has been a little difference, but not so much.

46,884. What particular kind of fish has got scarcer?—All kinds of fish are getting scarce; flounders are getting scarce and sole also.

46,885. Do you find as many turbot as you did formerly?—No, not so many, but the fishermen do not depend so much on the turbot. They will fish for a week and scarcely get a turbot in the net. We depend principally upon soles and flounders.

46,886. During that time has not the number of trawlers increased considerably?—No, I think not.

46,887. Ten years ago were there as many as there are now?—Yes.

46,888. In 1836 there were only two trawlers working?—The number has been about the same for the last 10 or 12 years.

46,889. Can you speak of any time when there were fewer trawlers at work?—Our men have been trawling for 20 years and more than that.

46,890. You yourself do not know?—No.

46,891. Do you send your soles to Londonderry?—No, they are generally sent from this river to Liverpool, Glasgow, and Belfast.

46,892. By smack or by steamer?—By steamer.

46,893. Has the price increased?—Yes, we have a very fine price if we could get enough of them.

46,894. Has the price increased much within the last 10 years?—Yes, it is much better.

46,895. Then, on the whole, the fishermen who trawl are in the same condition as they were?—I do not think that the trawling men are worse; I think they are as well off as they were 10 years ago.

46,896. Do the trawl-boats belong to the fishermen themselves?—Some do and some do not.

46,897. Are the men paid by share?—Yes.

46,898. Do you think the money the fishermen make now is as much as it used to be ten years ago?—I suppose to the men it is nearly as good as it was ten years ago, but 20 years ago the fish were much more plentiful.

46,899. Do the soles reach a great size here?—The soles we get outside are of a different class from those which we get in the river. The soles got outside are larger and lighter in colour.

46,900. What size do they run?—From about half a pound to one pound inside, but outside they run from two pounds to three pounds.

46,901. Do you think the soles leave the lough in the season?—We never get such small ones outside as we catch in the lough.

46,902. You think they are always in the lough?—Yes, I think so, and those outside are scarce in bad weather.

46,903. Is there much ground outside upon which your trawlers are capable of trawling?—We only trawl close to the land.

46,904. Do any of the larger class of trawlers come off here to trawl?—Some years ago two or three boats came from Liverpool and they got large quantities.

46,905. But not of late years?—No.

46,906. Is there much ground off here fit for trawling?—Yes.

46,907. For the larger class of boats?—Yes.

46,908. Are there any of the larger class of trawlers in Lough Swilly?—No, no larger than in Lough Foyle.

46,909. What number of trawlers belong to it?—I think about the same number as in Lough Foyle, or perhaps less. Perhaps, there are only six boats.

46,910. (*Mr. Caird.*) Does Lough Swilly yield much the same description of fish as Lough Foyle?—Yes; but what brings the trawlers to Lough Foyle is that they are restricted to a particular ground in Lough Swilly. They are trying now to get leave again. They are not able at present to get a sufficient quantity of fish to enable them to subsist, and the gentleman who stopped them I heard is now trying to get the prohibition removed.

46,911. Has he found that he made a mistake?—Yes; the fish keep above that ground in rough weather and they cannot catch them.

46,912. Is there any restriction which you consider injurious to the interests of the fishermen?—I think not. I think it right to have the lough closed at a certain season of the year.

46,913. Have you ever observed the condition of the oysters at the beginning of the season and at the end of the season?—Yes, particularly at the beginning. At the beginning they are not so good.

46,914. When is the beginning of the season?—The 1st of September.

46,915. Then during that month they are not so good?—No, I do not think they are.

46,916. At the end of April and the beginning of May are they as good?—Not as good as they are at other seasons of the year, but I have often seen them caught down here. In deep water some of the boats get them better than in any other season of the year in April.

46,917. In deep water?—Yes.

46,918. Have you heard that it would be an advantage to have a later close-time and to make the open-fishing commence at the beginning of October, leaving it also an open time during the month of May?—I never heard the fishermen say anything about that.

46,919. Is there no opinion of that kind among the fishermen here?—No.

46,920. They do not complain of the present regulation in any way?—No, they are anxious and willing to get to work to make a few shillings in that season.

46,921. (*Mr. Lefevre.*) Do you recollect trawling in Lough Foyle before the regulation was made?—I recollect it for 17 or 18 years.

46,922. You were yourself trawling before that regulation was made?—No, it is only eight or ten years since I commenced trawling.

46,923. Was there much trawling during those close-months before the regulation was made?—No.

46,924. Did they trawl during the time?—Yes.

MOVILLE.

T. McCandless.

12 Sept. 1864.

46,925. How long is it since the regulation was made?—About 10 or 12 years ago.

46,926. You have not found that since that time the fish have increased in quantity?—No, they have not increased a bit; I think they have gone less.

46,927. Then what makes you think the regulation has done good?—I do not say it has done good in the way of improving the fish.

46,928. You were speaking then of oyster regulations in regard to close-time?—Yes.

46,929. Are you of opinion that this regulation is of any particular use to the trawl fishermen?—I do not think it is. I do not think the fish would be scarcer if they were trawling all the year round.

46,930. You think the regulation might as well be done away with?—Yes; the regulation in reference to trawling might be done away with. I do not think it improves the fish at all to have it, because even at the beginning, for the first two weeks they begin to fish, the fish are more plentiful than they are afterwards, and in the close season, when the rough weather comes on, the fish gather to the ground again.

46,931. Then has this regulation taken from you a good deal of fishing?—Sometimes it takes away from us the very best time of the fishing.

46,932. Would you recommend any alteration of the close-time, or would you do away with it altogether?—I would not say that it would be right to do away with it altogether. I do not know whether that would be an improvement to the fishermen or not; it might improve the fishermen, but not the fish.

46,933. I think you said you did not know where the soles spawn?—No, I do not; but my belief is, the soles we catch outside are not those which we would ever catch in the river.

46,934. But where do the soles in the lough spawn?—I expect they spawn in the river. They are much more plentiful from Killmore, and inside that down to Londonderry.

46,935. Do you not trawl on that ground?—No; because the bottom is rough with stones. One man tried it this year, and before he had gone 200 yards his net was torn to pieces. Nevertheless, the torn net had 40 pairs of soles in it.

46,936. Do they spawn there?—I believe they do.

46,937. Do you know what the spawning season is for the soles within the lough?—No, I do not know the spawning season.

46,938. Do you get a better price for the sole when it is a full fish?—We sell them by the pair, and soles that are small and light we put up by twos and threes to make a pair.

46,939. When the fish are full of spawn, do you get a better price for them?—No; the condition of the sole in that way does not act. The price is according to the market. We may get a shilling a pair, and next week if there is a scarcity, 1*s.* 6*d.* I never heard a buyer complain in the market of the soles sent to him. The sole is a fish which we generally get in good order. There is a system sometimes carried on in fine weather of trawling with round nets and sweeping them on shore. I think that is injurious. They shoot the nets round and round, and very often they practise it here on our strands outside, but that is only late in the season.

46,940. Is there any seining in the bay?—None in this bay, except down at the mouth of the river, where there are sometimes young glassen and codlings drawn by nets. I have known them to draw a boatful of small fish.

46,941. Have you seen it yourself?—Yes, I have seen boatloads brought to this quay and to Magilligan Point, and sold by the hundred.

46,942. They were small flat-fish?—Yes. It is generally late in the season that that is done.

46,943. What are they; are they soles?—No, the soles seldom come so close to the land.

46,944. What are they then?—Flounders generally.

46,945. Not soles or turbot?—No; generally they go out into deeper water.

46,946. Then these are not young fry, but are the small class of flounders?—Yes; but very often young fry are drawn in with them. There are some places down along the north side of this where they draw young fish.

46,947. How many of those nets are there used at the mouth of the river?—They are not used at all unless they find the fish at the mouth of the river. Sometimes they never use them in the course of a year. Sometimes they shoot them for glassen.

46,948. When they see a shoal of glassen?—Yes.

46,949. Do you think it does any harm to the fishery?—Yes, I think it does. I think it destroys a great many young fish. It has a small mesh, and I think it does more injury than anything else on the coast.

46,950. (*Mr. Caird.*) Is there any regulation that prohibits the use of that small mesh on this coast?—I believe there is.

46,951. Is it enforced by anybody?—I believe if the Coastguard caught them they would fine them; but it is seldom that they get hold of them.

46,952. Are the Coastguard instructed to prevent such a mode of fishing?—I think they are.

46,953. They would probably do so if it were carried on to any great extent?—Yes.

The witness withdrew.

JOHN LOUGHREY called and examined.

J. Loughrey.

46,954. (*Mr. Caird.*) Are you a fish dealer?—I buy fish.

46,955. Have you been here long as a fish buyer?—Twelve or 14 years.

46,956. Within your experience, in the course of those 12 or 14 years, can you tell us if the quantity of fish brought in here for sale has increased or diminished?—It has diminished very much.

46,957. Is there any particular kind of fish that has diminished more than another?—The codfish have diminished most of all, I think.

46,958. Has that arisen from the fact that the number of fishermen has diminished?—I cannot account for it. The boats that are fishing now do not get near the same quantity they did a few years ago.

46,959. Are there as many boats employed now as when you first began 14 years ago?—I think not.

46,960. Are there as many men?—No, nor as many men.

46,961. Are the fish that are now brought here as good in quality?—I do not see any difference in the quality.

46,962. In size and quality they are as good as they used to be?—Perhaps they are hardly as large.

46,963. The price has much increased, has it not?—Yes, it is five and ten times as much sometimes.

46,964. Then it cannot be from the want of price, but because the fish have diminished in proportion; is that the fact?—Yes, that is the fact.

46,965. Did you hear the evidence of a witness who said that if the fishermen went to sea further they would be successful?—Yes.

46,966. Do you think the diminution in cod-fishing may arise from the boats not being sufficiently large to run the risk of a heavy sea?—I think that is principally the cause. Because there have been so many of them lost in going to that bank they are afraid to go out except in fine weather.

46,967. (*Mr. Lefevre.*) Do you mean the Inishtrahull bank?—Yes; it is called the Hempen and Isle bank also. The principal bank for the fishing is called Isle bank or Hempen bank.

46,968. What distance is it away?—Eight or nine miles from the land.

MOVILLE.

J. Loughrey.

12 Sept. 1864.

46,969. (*Mr. Caird.*) Have many fishermen been lost there in fishing upon that bank?—Almost every year some are lost. I think there were some lost last year.

46,970. Boats and boats' crews?—Yes. Some time ago I think there were nearly 40 or 50 people lost.

46,971. Has that deterred them from going?—They cannot go to that bank except in the finest weather.

46,972. That may be the reason partly why the fish have diminished?—When they do go of late years they have not been able to get as many as they did formerly.

46,973. Have they been using the same description of line and bait?—Yes, the very same.

46,974. What other fish do you buy when you come here to purchase?—Turbot.

46,975. Has the supply of turbot diminished?—Yes, that has also diminished.

46,976. Are the turbot caught on the same banks?—Yes, and upon other banks round the Island of Inishtrahull. There are other banks they take them on in addition to that of which I have been speaking.

46,977. Are they caught by long-lines?—Yes.

46,978. Are there no vessels from any distance which come to fish on those banks and bring their fish in here for sale?—I never saw any.

46,979. There are no strange vessels?—No.

46,980. Do you buy soles?—Not generally; we did buy them.

46,981. Do you buy trawled fish?—I have not for some time been buying trawled fish.

46,982. Where do they go to market then?—Principally to Liverpool and Glasgow. We ship also.

46,983. For Liverpool and Glasgow?—Yes.

46,984. Do you buy herrings?—No.

46,985. Do you buy lobsters?—Sometimes I do.

46,986. Have the lobsters increased or diminished?—They have diminished also.

46,987. Have you heard any cause assigned for that?—I do not know what the cause is.

46,988. Do you suppose that they are over-fished?—I do not think they are.

46,989. Are they caught all the season through?—No, only in the summer time.

46,990. In what state are the lobsters when they are caught?—We consider them in prime condition when they are caught here. They will not be catching them for more than another fortnight, but that is principally owing to the weather.

46,991. Do you buy oysters?—I never did.

46,992. (*Mr. Lefevre.*) Do you know the difference between the soles caught outside and those caught inside?—No.

46,993. Can you tell us what proportion of the fish brought in here is brought by the trawlers as compared with the long-line fishermen?—The proportion of fish?

46,994. Yes.—The trawlers do not take any except soles and flounders and occasionally a turbot.

46,995. But in point of quantity do they bring in as much fish as the long-line fishermen?—I do not think they bring in one-tenth part as much.

46,996. What number of long-line fishermen are there?—From Greencastle down to this place there are about 25 boats.

46,997. How many months of the year are they fishing?—They generally fish all the season round if the weather is not too stormy; but as scarcely any of the boatmen have not a little bit of land, in the spring they are engaged in putting in the crops, and this season of the year in saving them.

46,998. How many men are there you call long-line fishermen?—I can scarcely say, but generally there are six in each boat.

46,999. Then besides Greencastle and Moville are there not other fishing villages?—There are scarcely any of the Moville men who go outside.

47,000. Then they are mostly Greencastle men?—Yes; the Moville men fish in the river.

47,001. Have you found that the price of line fish has been increasing of late years?—The price is regulated altogether by the supply. If the weather is stormy and the fish scarce, they become very dear.

47,002. The markets in other places are regulated by the supply as well as this?—Yes; but here in stormy weather there are very few fish taken, and then the price rises at once. The price is also regulated by the demand in Glasgow and Liverpool.

47,003. Taking the last season as compared with what it was 10 years ago, has the price increased?—Yes, very much. Codfish, which have been sold as low as 2*s.* 6*d.* and 3*s.* a dozen, were sold last year as high as 2*l.* and 2*l.* 2*s.* a dozen.

47,004. Was that an exceptional price?—Yes, but I paid 2*l.* 2*s.* myself last year.

47,005. For a dozen?—Yes, there being 14 to the dozen.

47,006. What sized codfish were they?—Not so large as the fish you will get in Dublin. Ours is a shorter and a thicker fish. The fish in Dublin are a larger fish than ours.

47,007. Do you buy from the Lough Swilly people at all?—No.

47,008. (*Mr. Caird.*) Are all the fish that are brought here sent fresh to the market?—In the winter time when they get fish plentifully they may not be able to send all away, and then they generally split them up, take off the heads, clean them, bone them, and put them in hampers. They powder them with a little salt, and send them to the market in that way.

47,009. Is there a large quantity of fish in the winter sent to the market in that way?—Yes, a great quantity, especially of cod.

47,010. Do they keep in that state for several days?—Yes, and they are sold by the hundredweight in Glasgow and Liverpool.

47,011. (*Mr. Lefevre.*) Is the supply of line fish caught within the lough considerable?—Of codfish?

47,012. Yes?—Not near so large as it has been formerly. As compared with the quantity caught outside the lough it is very small.

47,013. How many men are there fishing inside the lough?—I cannot tell how many men, but I can tell the boats fishing in the lough.

47,014. How many boats are there?—Perhaps 10 or 12; I do not think there are more.

47,015. Have you ever got any haddock here?—Very few.

47,016. In former years did you buy any quantity?—Haddock have always been scarce. They were not very plentiful. In some of our boats fishing outside we may get two or three, while others will have none at all.

47,017. Ten years ago was there a considerable supply?—No; I do not recollect that haddock were ever plentiful. Sometimes there have been none at all.

47,018. You do not recollect any time when there was any large supply?—No, I do not recollect any time when the haddocks were very plentiful.

47,019. (*Mr. Caird.*) In your opinion has the supply of fish diminished here?—Yes.

47,020. And the cause of that, as far as you yourself conceive, is that there is a want of boats of sufficient power to go in the stormy season to look after them?—I believe if they were able to look after them and to go further to sea they would get more, but they are afraid to go with the boats they have.

47,021. Is there any mode of fishing practised here which in your opinion leads to a diminution of the supply of fish?—I never heard of any.

47,022. Then it is purely a want of capital to provide boats of sufficient size to go further to sea?—Yes. If they went further to sea and had better boats they would get more fish.

47,023. The greatly increased price has not as yet tempted capital to be expended in that way?—There are no boats fit for going to sea here.

47,024. The price having risen so greatly one would imagine that it would have tempted men of

MOVILLE.

J. Loughrey.

12 Sept. 1864.

capital to go into the business and provide boats; has it done so?—No.

47,025. From your experience as a fish buyer do you think such an outlay of capital would be very remunerative?—I cannot tell that, because the coast is bad and dangerous, and the boats might be lost. There are no harbours except that at Moville.

47,026. And Lough Swilly?—Yes.

47,027. (*Mr. Lefevre.*) And Portrush?—Yes.

47,028. That is a harbour?—Yes, and Port Stewart also.

47,029. (*Mr. Caird.*) Then it is not from the want of harbours; there appear to be far more within the same distance than there are on the east coast, in many places?—I cannot account for it in any way except it is that.

47,030. Do you think the distance from market is in any way a hindrance?—There is a good opportunity of sending fish to market by steamer.

47,031. There is a good access to market?—Yes.

47,032. And a good price?—Yes.

47,033. And a regular demand for fish?—Yes, for more than we can get.

47,034. Has any particular kind of fish decreased more in quantity than another?—I think the codfish have decreased most of all.

47,035. Do you remember whether there were ever large takes of herrings here?—I do not remember, but I have heard the fishermen talk of getting more than they got lately.

47,036. This never was a place celebrated for the catch of herrings?—I believe that formerly there was a good quantity got, but latterly there has not been many. A few we got this year for a few days. I think that one of the reasons why the codfish has failed is owing to the absence of sand eels from the banks. They have gone off; and then again there has been much loss of life from the want of proper protection.

47,037. Of what kind?—The fishermen should be protected by some vessel moored in the place where they could run to. I have known 70 widows and orphans left in one day.

47,038. Seventy?—Yes, in my time.

47,039. There is no help for the sand eels having left the place?—There is no help for that. They have to go to a greater distance for them; if they find a failure in one place they have to go to another.

47,040. The sand eels having left the place, it is beyond the power of any person to remedy?—Yes; but it shows the fish have not become extinct, but that they have gone a little further off, and if there were a place the fishermen could resort to for protection and to save their lives, I would engage that they would go out.

47,041. (*Mr. Lefevre.*) They would then go further out?—Yes.

47,042. Would that protection be supplied by a vessel anchored outside the lough?—Yes, I think it would. At the beginning of the gale they are often far distant from the land.

47,043. Have you fished the river very much?—Outside the river I have had a trawler of some 40 tons sent out.

47,044. Would not a vessel stationed upon that bank be difficult for the boats to get access to?—At the beginning of a gale they would go to it.

The witness withdrew.

JAMES MCCARRON called and examined.

J. McCarron.

47,045. (*Mr. Caird.*) What description of fisherman are you?—I fish with lines and dredge for oysters, and have been at the herring-fishing also.

47,046. Have you long been a fisherman here?—I have been fishing ever since I was a little boy.

47,047. And you are still at it?—Yes, since I have been able to fish.

47,048. Have you as a line fisherman fished on the same ground as where they were trawling?—Yes.

47,049. Did you find that trawling did any injury to you as a line fisherman?—Not a bit.

47,050. Have they not come in contact with your lines?—Sometimes when they could not see them they might.

47,051. By accident?—Yes.

47,052. They have not taken away fish you yourself ought to have caught?—No.

47,053. They have not disturbed your fishing in that way at all?—No; they would not unless they came upon me by accident, and a body must give in to that.

47,054. Do you fish outside?—No.

47,055. Do you never go outside at all?—No, except when I have been fishing for herrings.

47,056. What kind of fish have you caught inside?—Cod and flounders.

47,057. Are the cod and flounders as plentiful as they were some years ago?—No, they are not as plentiful at all.

47,058. Do you find any difference in them?—Yes.

47,059. Do you get a better price for them than you did formerly?—Yes I get a deal better price.

47,060. Then if you could get the fish they would be worth while looking after?—Yes; a man is better paid when he sells them cheaper, because in that case he generally has a larger number.

47,061. Are there more fishermen engaged now in fishing inside the lough than there were when you began?—Yes, I think there are.

47,062. There are more now?—Yes, a good deal more.

47,063. How many boats are there fishing now?—A great number, but I do not exactly know the number.

47,064. When do you think they began to increase?—I cannot say what time they began to increase. Whenever the wind blows the fish come in more plentiful than they do at other times.

47,065. Into the river?—Yes.

47,066. It is not your opinion that the fish are regularly decreasing, but that they alter from year to year—that sometimes they are more plentiful and sometimes less?—Yes.

47,067. According to the weather outside?—Yes.

47,068. Have the fishermen who formerly fished outside come in to fish in greater numbers?—Yes, in the winter when there is bad weather; they cannot go outside then. A man is not able to get out to fish in bad weather.

47,069. Have you some land as well as being a fisherman?—I have no land, but I have lived by fishing ever since I was a boy.

47,070. You were constantly employed as a fisherman?—Yes. I have reared my family by fishing, and I have lived all my days by it.

47,071. Have you made a tolerable living by it?—No, I have been a poor fisherman all my life.

47,072. Have you any sons?—Yes.

47,073. Do they follow the same business?—They did, but some of them have gone to sea now.

47,074. Do the sons of the fishermen here generally become fishermen?—Yes, and if the fish fail they go off to sea and try some other plan.

47,075. (*Mr. Lefevre.*) Have you got a boat of your own?—Yes.

47,076. What did you pay for it?—I suppose it cost me about 9*l.* when I had it built.

47,077. Have you long-lines of your own?—Yes.

47,078. And have you an oyster-dredge?—Yes.

47,079. Have you any drift-nets for herring?—Yes.

47,080. What did you give for them?—They mostly cost 1*l.* a stand. There are about six or seven stand in a boat and every one costs 1*l.*

47,081. Does each man who goes on board to fish bring his own portion of net?—Yes, every man has one or one and a half. I purchased my own nets. I had boys of my own and I kept my own nets.

MOVILLE.

J. McCarron.

12 Sept. 1864.

47,082. How long ago is it since you had a good herring season?—Five or six years ago.

47,083. What was the year?—I cannot recollect the year.

47,084. About when was it?—Five or six years ago.

47,085. Was that a summer or a winter season?—A summer season.

47,086. Did you ever go for the winter herring outside the lough?—No.

47,087. Did you ever get the winter herring inside the lough?—Very little. Sometimes we do, but we do not follow it much in the winter; if we find them we may have a dip, but it is too cold to be out.

47,088. Do you ever fish for herring with the seine or drag net in the winter?—No, they are not plentiful enough. The nets float.

47,089. Do you only fish with the drift-net?—Yes, with a floating net.

47,090. It is not anchored?—No, and it floats away.

47,091. Do you ever sink your nets?—No.

47,092. Do you ever ground your nets or anchor them?—No, they float away.

47,093. Do you ever sink them so that they may go to the bottom and lie upon the ground?—Yes; if we come in shallow water they will go upon the bottom, but they generally float.

47,094. Where do you find the herrings mostly when they are in the Lough?—They are in all places in the Lough. We do not often go far above the point of Killmore. It is not a wide enough space up there for us.

47,095. Are there any trammel nets set for hake here?—No, we never catch the hake here. We get them ashore. Sometimes there are one or two in the herring-nets occasionally.

47,096. Do the herrings spawn in the lough here?—Yes, I think they come to spawn here.

47,097. They spawn in the lough?—Yes, I think they do.

47,098. What time of the year?—I do not know.

47,099. Do you mean the autumn herring?—They will come in the sumer time to spawn also.

47,100. Have the herrings you take in the lough in the summer time any roe in them?—Yes, they have.

47,101. Is it a full fish?—Sometimes. You may get an odd one full and others not full.

47,102. The greater proportion is not full?—No, the greatest number are not full. They are not all alike. You will get some full and some not full.

47,103. Do you ever take the spent fish in the lough?—No, we do not get any spent herrings here. They only come at a certain season, and they are not spent. They come generally in the summer time. We never fish them after Christmas.

47,104. Do you find the trawlers trawling in the bay when you are drifting for herrings?—No, it is in the night when we fish for herrings.

47,105. Do not the trawlers work at night in the lough?—Yes, they do, but we do not go so high to fish; it is too narrow.

47,106. You do not work over the same ground?—No, we do not. They trawl in the winter time through the whole of the lough.

47,107. Do you set your long-lines at night?—Yes, and we lift them in the morning.

47,108. How do you buoy them?—With corks.

47,109. Have you not lost any lines from trawlers coming across them?—No.

47,110. Did you ever trawl yourself?—Yes.

47,111. Did you make a better living by it than by line-fishing?—No.

47,112. Do you think the trawlers are more successful and that they make a better thing of it than the line fishermen?—No, I do not think they do, if a man has boats of his own.

47,113. Are you an oyster fisher?—Yes.

47,114. Do you find that the quantity of oysters on the beds is increasing or diminishing?—They are plentiful. There are more than there were years ago.

47,115. Are they a good deal more plentiful?—Yes, they are far more plentiful. I have seen them very scarce, when we could not get 300 in a day.

47,116. What could you get now?—A thousand or 1,500, but we should not get that every day.

47,117. How do you sell them now?—We sell them at different prices, about 15*s.* a thousand.

47,118. (*Mr. Lefevre.*) Is 15*s.* a thousand the price this year?—Yes, that is the price I have got for them.

47,119. (*Mr. Caird.*) Is that the highest price you have got this year?—Yes.

47,120. What was it last year?—I think 1*l.* is as much as I got last year.

47,121. They were higher last year?—Yes; oysters are higher in the winter on account of the scarcity; they get higher then.

47,122. Is the number of men employed in oyster-fishing increasing?—There are a power of men employed.

47,123. More than there were?—Yes.

47,124. Are the beds more closely fished than they formerly were?—No, about the same.

47,125. It has not had the effect of diminishing or of increasing the oysters?—The oysters are better than they were years ago.

47,126. Have any new oyster-beds been found in the lough?—Yes, in different places.

47,127. Are there particular places where you have been more successful than others?—Yes.

47,128. Are they well known?—It just depends upon how you come upon them, if you find those spots out you will work upon them, and if they fail then you go somewhere else.

47,129. In what month are the oysters in best condition?—I never saw much difference in them; we begin on the 1st or 4th of September, and we fish until May.

47,130. Do they not improve in condition as you go on?—Yes, but mostly they are in the one way; I never heard any complaints of them one time more than another.

47,131. (*Mr. Lefevre.*) Do you cull the oysters when you take them on board?—Yes we pick them out and shovel out the small ones; we throw them over on to the bed again so that they may grow up again.

47,132. What number of boats do you say there are?—I could not say, there are a great number of them.

47,133. Have they really increased in number of late years?—Yes, they are better than they were some years ago.

47,134. How long can you recollect, 20 years ago?—Yes, or 25 years ago.

47,135. Do you think they have increased since then?—Yes, they are better now than they were then. they failed, and since then they have mended again.

47,136. Do you think the number of boats has increased since then?—I think there are more boats than there were.

47,137. Do you think there are more than 40 boats engaged in the fishing?—Yes indeed, there are far more.

47,138. Are there 80?—Indeed I cannot say, but I am sure there are more than 40.

47,139. Do they come from all places about the bay?—Yes, from places all along the river; they do not dredge much about here, but they come from all parts along the river; no boats dredge higher than Tyre, they do not go to dredge at Killmore.

The witness withdrew.

MOVILLE.

JOHN MACRAE called and examined. *J. Macrae.* 12 Sept. 1864.

47,140. (*Mr. Caird.*) You are the chief boatman to the Coastguard here?—Yes.

47,141. Have you been long stationed here?—For about four months.

47,142. Where were you stationed before here?—At Garston.

47,143. Is that in this neighbourhood?—About nine miles off.

47,144. Were you long stationed there?—About three years.

47,145. Have you any knowledge of the state of the fisheries here?—A little.

47,146. Have you received any instructions from your commanding officer as to enforcing any regulations with regard to the fisheries on this coast?—Yes.

47,147. What are those instructions?—In the first place there are particular instructions with regard to the herring fishery. We are to go on board the herring-boats and see that they are carrying on the fishery in a legal manner.

47,148. Is that with regard to the mesh of the net?—Yes, the size of the mesh of the net.

47,149. What other legal manner?—That they are fishing in a peaceable manner and so on.

47,150. Is there any regulation as to a close-time with regard to the herring-fishery here?—No, we prevent them from drawing the small seine-nets on the shore.

47,151. Is it one of your orders to prevent that?—Yes.

47,152. Have you had occasion to carry that order into effect?—No, there have been no nets of that kind on the part of the coast where I have been stationed.

47,153. You have not seen that kind of fishing practised?—No, it has not come under my immediate notice.

47,154. What other regulations have you?—We are required to go on board the trawlers and examine their nets, and so forth.

47,155. To see that their meshes are of the proper size?—Yes.

47,156. Have you had occasion to find fault on that ground?—No.

47,157. Their nets have been of the proper size?—Yes, all that I have seen.

47,158. Is there a prescribed size?—Yes, about four inches is the prescribed size.

47,159. Is that from knot to knot?—No, two inches from knot to knot.

47,160. Have you any other orders and regulations with regard to the fisheries?—No, nothing else.

47,161. Have you had occasion frequently to interfere with the fishermen?—Not since I came here. I have had on other parts of the coast.

47,162. What is the reason you have had nothing to do; are the fishermen here more orderly than in other places?—The fishermen are very orderly here, and they have not fished with illegal nets since I came.

47,163. You have no orders with regard to the long-line fishing?—No, I have nothing to do with that.

47,164. Have you any orders with regard to the place where trawling may be followed; is there any law laid down?—There is.

47,165. In this lough?—No, this lough is not mentioned in our instructions.

47,166. Then you do not interfere with the trawl fishermen in regard to the place where they shall fish?—No.

47,167. Is there a close-time within the lough laid down in your instructions?—Yes, Lough Swilly is mentioned but not Lough Foyle.

47,168. Is there no mention of Lough Foyle?—No, not with regard to trawling.

47,169. (*Mr. Lefevre.*) Then you know nothing of the regulation we have been told of to day about a close-time for trawling?—No.

47,170. You have had no instructions with regard to that?—No.

47,171. Then may the men trawl for the whole year?—No; but I don't know the day on which the season for fishing commences nor the day on which it ceases.

47,172. You have no instructions from your superiors to stop trawling at certain portions of the year here?—Yes, we have.

47,173. Where does it appear?—In my instructions, (*handed in for inspection*).

47,174. (*Mr. Caird.*) Does it apply to trawling generally, or is it in reference to the trawlers in Lough Foyle?—To trawling generally, right round the coast of Ireland.

47,175. Is there any trawling allowed outside from the 1st of February until the 1st of July?—It is not legal to trawl anywhere outside in the close season.

47,176. (*Mr. Lefevre.*) Can you point out anything in these instructions relating to that?—I have not examined them particularly myself.

47,177. (*Mr. Caird.*) Are you quite positive that there is a prohibition against trawling outside at any season of the year?—No; but I considered that it was not proper in the close season to trawl for fish.

47,178. It is not what you consider, but have you any positive orders on that point?—No.

47,179. (*Mr. Lefevre.*) You have no orders except those which are contained in this book?—No.

47,180. Then if I cannot find instructions to that effect in this book you have no orders in any other way?—No.

47,181. Then I may tell you that such instructions are not to be found in this book?—I thought they were.

47,182. (*Mr. Caird.*) Have you ever been on the cod banks which have been referred to about 18 miles off?—No.

47,183. Was that book of instructions sent to you?—No, it was lying in the station before I came here.

47,184. The instructions have not been renewed to you of late?—No.

47,185. (*Mr. Lefevre.*) Do you know what number of oyster-boats there are employed in dredging for oysters?—I could ascertain by referring to the books at the station. I could see what are registered from the station but not from the whole lough.

47,186. Can you tell us in round numbers?—No.

The witness withdrew.

JOHN MCKINNEY called and examined. *J. McKinney.*

47,187. (*Mr. Caird.*) Are you a fisherman?—Yes.

47,188. Do you fish outside?—Yes.

47,189. With long-lines?—Yes.

47,190. Have you been long engaged in fishing outside here?—For 12 years.

47,191. Have you followed it very constantly?—Yes, I do nothing else.

47,192. How far do you go to fish on the outside?—About 18 or 19 miles off the land.

47,193. What bank is that?—Hempen.

47,194. Is that the place to which you always go to fish outside?—That is the furthest place I go.

47,195. Have you done that all the 12 years you have been engaged in the fishery?—Yes, when the season of the year will enable us.

47,196. What season can you most safely go?—From the 1st of February until the 10th of September.

47,197. What is the size of your boat?—About 22 tons.

47,198. Is it an open boat?—Yes.

47,199. How many men have you in it?—Five.

MOVILLE.

J. McKinney.

12 Sept. 1864.

47,200. Are there many boats engaged in that fishery at present?—There are 15 or 16 now.

47,201. Have they increased or diminished since you have been fishing?—They have decreased.

47,202. What has been the cause of that?—I don't know.

47,203. Have they been lost?—No, there have not been many lost in my time, only about three, I think.

47,204. Have you found the fish on that bank increasing or diminishing?—They are diminishing.

47,205. When did that begin to show itself most?—About six years ago.

47,206. Have you any idea what is the cause of that?—No.

47,207. Have you not formed any opinion in your own mind as to what is the reason of that diminution?—No, I cannot say anything with regard to it, except that a shoal of fish at one time gathered and tore all the meat up and we have never seen the fish properly gathered since.

47,208. There was a large shoal of dog-fish?—Yes, very large.

47,209. Was it larger than usual?—More than was ever known before.

47,210. Do you think that caused a diminution in the fish?—Yes; there has never been any fish worth anything since.

47,211. You still go there though?—Yes.

47,212. Do you use the same lines you used before?—Yes, and better lines.

47,213. More hooks?—Yes, more hooks and better prepared.

47,214. Do you use the same kind of bait?—Yes.

47,215. Do you ever use herring bait?—Yes.

47,216. Do you find it very good bait for catching cod?—We have better bait than herrings, namely, buckies.

47,217. Are buckies better?—Yes, and mussels.

47,218. Do you find that buckies and mussels are as good bait as herrings in the spring months?—Yes, and better. It is only outside the rocks that the herrings are the best bait.

47,219. Do you get many turbot?—We have not got many for some years back. The turbot we get have not been of any consequence.

47,220. Have you ever attempted to go further to sea than those banks to which you refer?—No, I never did.

47,221. Have you ever seen any fishermen who have done so?—No.

47,222. Are there any other boats from any other part of the coast which fish on that bank in addition to yourselves?—Yes, the back country boats.

47,223. Are they increasing in number or diminishing?—I don't know.

47,224. (*Mr. Lefevre.*) What do you call "back "country boats"?—Those from about Glengad and Inishtrahull.

47,225. To the westward?—Yes.

47,226. (*Mr. Caird.*) Do you bring all your fish in here for sale?—Yes; in fact we never go regularly to the bank for fish. We may not be able to get out there more than twice in one week.

47,227. If you had better boats do you think you could make a better thing of it?—I think we could.

47,228. What kind of boats would suit you better—decked boats?—Yes.

47,229. Could you fish with the long-lines if you had decked boats?—Yes.

47,230. Have you seen any decked boats fishing there?—No, none but our own boats.

47,231. No strange boats?—No.

47,232. No boats from Scotland or any of the English decked boats?—No.

47,233. They do not go to that bank at all?—I have never seen any of them on it.

47,234. Have you ever seen any deep-sea trawlers upon that bank?—No.

47,235. Then it is not on account of any diminution of the quantity of fish upon the bank but because there is a difficulty in getting to it that there has been a falling off?—I think the difficulty in getting to the bank is worse than the fish.

47,236. You mean the falling off of the fish?—Yes.

47,237. When you can go there you can get fish?—We are afraid to stay too long.

47,238. Then it is not because there is any diminution of fish but because you are afraid to remain on the bank in consequence of having insufficient boats?—We could not stop longer than two or three hours at one time except we had boats that would live in all weather.

47,239. Except you had boats which would keep the sea in bad weather?—Yes; our boats could not live in more than a breeze.

47,240. (*Mr. Lefevre.*) You found the same difficulty eight or 10 years ago?—Yes.

47,241. And you got the same quantity of fish?—No.

47,242. What other kinds of fish do you catch besides cod and turbot?—I never follow any other except herrings in the summer time.

47,243. Do you catch ling?—Yes.

47,244. Coal fish?—Yes.

47,245. And haddock?—Yes.

47,246. Have you observed any falling off in the haddock?—Of late years they have vanished entirely.

47,247. Since when have they disappeared?—There have been no haddocks to be got on Hempen Bank for the last ten years.

47,248. Before that did you catch many?—Yes; in the spring of the year we could get four or five dozen at a shot.

47,249. Now you cannot catch any?—No; I have fished a season and never seen the face of one.

47,250. Do you catch whiting?—No.

47,251. Have you never caught any?—No.

47,252. Do you find that you lose much of your fish by the dog-fish; do they come and take them away off your hooks?—No, not many; they do not come and take any on the bank.

47,253. Do they come and take the other fish off your hook and eat them?—No.

47,254. When the dog-fish are in this part do you find any other fish?—We do not find the other fish on the banks at all.

The witness withdrew.

J. McLaughlin.

JOHN MCLAUGHLIN called and examined.

47,255. (*Mr. Lefevre.*) Are you a fish buyer here?—Yes.

47,256. Do you buy fish both from the long-line men and the trawlers?—Yes.

47,257. From the trawlers as well as the long-line men?—Yes, trawlers and all persons who come to me. I buy turbot and all other kinds of fish.

47,258. Do you agree with the other witnesses that the supply of fish has fallen off here?—I don't know particularly about that, but I have not got nearly as many as I used to get.

47,259. You have not got as many fish as you got in former years?—No, not half as many.

47,260. Do you find the same diminution in the trawl-fish as you do in all other fish?—I don't buy many trawl-fish.

47,261. Do you find the same diminution in the trawl-fish as in the others?—They are always lessening.

47,262. Trawl-fish as well as others?—Yes, they are.

47,263. To what do you attribute the falling off?—I cannot tell; but there are not nearly so many as there used to be. They are every year getting worse. We get less of them every year; we have done so for the last three years.

MOVILLE.

J. McLaughlin.

12 Sept. 1864.

47,264. Do you have to pay more for them?—Yes.

47,265. A good deal more?—Yes, a great deal.

47,266. Do you think the number of boats employed has diminished also?—I think so.

47,267. And the number of men?—Yes; the fish have altogether left this compared with what they were two years back, and every year they are getting less and less.

47,268. (*Mr. Caird.*) Is the number of fish caught outside getting less or the number caught in the lough?—There are scarcely any in the lough now at all. Those which are caught in the lough are useless altogether; they are small codlings.

The witness withdrew.

JOHN GAMBLE called and examined.

J. Gamble.

47,269. (*Mr. Caird.*) Are you a fisherman?—Yes.

47,270. What is it you wish to add to the information we have already received?—I think if we had larger boats than we have we should be able to increase the fishing, because we are not able to go to sea to look for fish in our present boats. They are not fit to go far from land.

47,271. Are you generally an outside fisherman?—Yes; I go 20 miles off frequently.

47,272. It is the difficulty of going to sea in your small boats that you think has decreased the quantity of fish?—I think the fish have been abundant off the coast in the deep-sea fishing; but we have not boats which are able to go there at all.

47,273. If you had better boats would you follow them; do you find that the further out you go the more fish you can get?—Certainly we do; the further off land we go the more fish we get.

47,274. Have not the fishermen been making enough money to enable them to get larger boats themselves?—No.

47,275. They are not able to get enough to enable them to buy larger and better boats?—No, they cannot.

47,276. And owing to the want of boats they are unable to go further out?—Yes.

47,277. Do any of the great London companies who have property down here aid the fishermen at all?—No; they never give us anything here.

The witness withdrew, and the inquiry was adjourned until the 14th of September at Carrickfergus.

Carrickfergus, County Down, Wednesday, 14th September 1864.

PRESENT:

J. CAIRD, Esq., M.P. (Chairman). | G. SHAW LEFEVRE, Esq., M.P.

CARRICK-FERGUS.

J. Stannus.

14 Sept. 1864.

JAMES STANNUS called and examined.

47,278. (*Mr. Caird.*) Have you been long acquainted with the state of the fishing interest in Carrickfergus and Belfast Lough in this neighbourhood?—Yes, I have.

47,279. Can you tell us whether, within the experience over which your observation extends, the supply of fish here has increased, has remained stationary, or has diminished?—For the two last years the supply has increased.

47,280. During the last two years the supply has increased?—Yes, there has been a greater quantity of fish caught during the last two years than for five or six years previous.

47,281. Are there more men employed now in the fishing than there were 10 or 12 years ago?—There are more men employed.

47,282. Are the number of boats increasing?—There are 10 boats now; there were only five or six following the fishing five or six years ago.

47,283. What particular boats do you refer to?—The trawlers and the dredgers I am speaking of at present.

47,284. With regard to the line-fishers, has the number of their boats increased also?—No.

47,285. Are the line-boats diminishing?—I think so.

47,286. Has the quantity of fish caught by the line increased or diminished?—I think it is diminishing.

47,287. Do the line-fishers and the trawlers fish on the same ground?—Occasionally.

47,288. Do they interfere with one another?—I don't know that they do now; they very seldom fish in the bay.

47,289. What class of fishers, then, fish in the bay?—The line-fishers do not, except in the winter time when they cannot get outside. The cod and such fish they go after they get outside.

47,290. Then, when you say the supply of fish during the last two years has increased, you refer specially to the supply of trawled fish?—Just so.

47,291. Have there been any regulations made restricting the trawlers to a certain part of the lough?—There have been.

47,292. When were they first put into operation?—Perhaps 10 or 12 years ago.

47,293. Has any change taken place in regard to those restrictions since they were first published?—No.

47,294. Are they enforced?—Partially.

47,295. Have the fishermen since those restrictions were established, within the last two years, during which you say the fishing has increased, resorted to the fishing ground within the interdicted space as fixed by the regulations?—I have seen them fishing inside the limits prescribed.

47,296. Have you seen the kinds of fish which are caught by the trawl fishermen?—Yes.

47,297. Are there many small fish among them?—A great number.

47,298. Has that been the case within your recollection; have small fish always been brought up in the trawl-nets?—No.

47,299. Did they at any time fish without catching small fish?—No, they did not; but perhaps they had one-fourth or one-third of small fish, all the rest being countable fish.

47,300. They would have three-fourths countable fish and one-fourth small fish?—That is about the proportion.

47,301. They were caught in the earlier time to which you refer?—Yes.

47,302. Has that been about the proportion during the last two years?—No, that was previously, five or six years ago.

47,303. What has been the proportion during the last two years?—There have been as many small ones got as large ones.

47,304. Are those small fish marketable?—They get them sold, but I should not like to use them.

47,305. They are sold, are they?—Yes, they sell them.

47,306. When you say that the supply of fish by the trawlers has increased during the last two years, do you refer to all kinds of fish or to marketable fish?—All kinds of fish.

CARRICK-FERGUS.

J. Stevens.

14 Sept. 1864.

47,307. In your opinion is there any injury done by fishermen fishing within the interdicted bounds?—I think there is.

47,308. How do you reconcile that with the statement that fish are more plentiful now?—It is the immense quantity of small fish they have caught along with the other fish that has made them more plentiful.

47,309. When did they begin to get small fish?—Within the last three or four years.

47,310. Did they use nets with a small mesh; is the mesh of the net smaller than it used to be?—No, I think it is about the same size. I think it is 2½ inches from knot to knot.

47,311. How do they get a larger proportion of small fish than they did before?—By fishing on the banks.

47,312. Did they not fish on the banks before the regulation was adopted?—No, I do not remember them fishing off there.

47,313. (*Mr. Lefevre.*) What banks do you refer to?—What are called the Whitehouse Banks.

47,314. They are inside at the head of the lough?—Yes.

47,315. (*Mr. Caird.*) Are the banks to which you refer within the interdicted bounds?—Yes.

47,316. What is the depth of water upon them?—Perhaps only one fathom at low water.

47,317. Within your recollection of the trawl-fishing are you able to say that they did not fish upon those banks at all, although they were not prevented?—They were not prevented, but they did not fish there.

47,318. Did they find fish in the other parts of the lough without much trouble?—Yes.

47,319. Can they find them there now?—There is not one-half or one-third of the fish to be got now in the places where they used to get them 30 or 40 years ago.

47,320. Do you refer now to trawl-fishing?—Yes, to trawl-fishing altogether.

47,321. Has the long-line-fishing during the same period improved or decreased in value?—I believe it has decreased considerably.

47,322. Is there not some season during which fishing by the trawl is interdicted altogether?—Yes.

47,323. What season is that; is it from the 1st of September until the 1st of April?—No, it is not until the latter end of August.

47,324. The regulation says from the 1st of December until the 1st of April. Trawling is altogether prohibited within the lough between these dates?—Yes.

47,325. Do you think that is a judicious regulation?—I cannot say.

47,326. Have you ever had your attention called to it?—No, I have not.

47,327. Can you tell us what kinds of fish have increased, if any have increased?—I know of no increase in the fish in the lough.

47,328. Are there any kinds which have particularly fallen off?—Yes, cod and haddock. We used to get cod and haddock here sometimes with the long-lines, but they are very scarce now; codfish are very scarce also.

47,329. How is it with regard to turbot?—Turbot are very seldom caught indeed. Perhaps there may be a turbot or brill in the course of six weeks or so, but only occasionally one.

47,330. How is it with regard to soles?—Soles are getting scarce also.

47,331. They are caught by the trawl?—Yes.

47,332. Is there any good mackerel-fishing?—Very little, indeed.

47,333. Are there any mullet got here?—There are mullets occasionally. They come up the harbour, but only very few are got.

47,334. Is the herring fishery here a source of much profit to the fishermen?—No.

47,335. Is there not a good herring fishery here?—No, it has been a loss to the fishermen for the last two or three years. They have had to go from home and to go as far up as Dublin Bay to fish.

47,336. Then during that time do they cease the fishing in the lough?—Yes.

47,337. Do you think they have not made as much by following the herring-fishing as they would have done if they had remained fishing here?—They had to leave this place on account of the scarcity of the fish.

47,338. Have the herrings frequented this lough in any quantity within your experience?—Yes, up above Carrickfergus we have got them in large quantities.

47,339. Do the fishermen go out here to meet the herrings as they are passing southward?—They will go out for 10 or 12 miles around.

47,340. Are the shoals of herring supposed to pass round from the north to the south?—I have had no experience of that, but I believe they do.

47,341. Can you tell us anything of the oyster beds in Belfast Lough?—There is an oyster bed which has recently been worked upon and they get a considerable quantity of oysters from it. It is about two miles above this town.

47,342. Is there a large and valuable oyster fishery in this lough?—It cannot be called large.

47,343. Is it improving or diminishing in value?—The oyster-fishing as to quantity has improved within the last three years.

47,344. Are the oyster beds private property?—They are the property of anybody who chooses to fish upon them. Any fisherman can go upon them.

47,345. Does nobody claim a property in them?—No; one gentleman applied to the commissioners to get a piece of beach so that he might lay it down partially for the propagation of oysters.

47,346. Was there a licence issued in favour of a gentleman in this neighbourhood for that purpose?—Yes, to Mr. Walker.

47,347. Has he taken any steps to form a bed?—I was with him when he laid out a portion of the bed. We got several thousand oysters and put them down among hurdles, but the place was too exposed and there was not a proper barrier to keep the sea from washing away the seed of the oysters.

47,348. Was the ground enclosed for an oyster bed?—No, that was the worst of it. There was no protection to it. There was a certain portion that was 18 inches deep at low water.

47,349. Was it intended as a feeding or breeding ground?—A breeding ground.

47,350. What has been the result of it?—The sea was so heavy in an easterly gale and the brood when exuded was so weak that it was washed away. A great number of little oysters about that size (*measuring*) have been washed away, while a few others have obtained a hold.

47,351. Are the operations continued there with the view of making that a useful bed?—No, the gentleman who got the licence has gone to the Cape of Good Hope.

47,352. The whole thing has been given up?—The whole thing is at a stand at present.

47,353. Did it prove a failure, or would constant enterprise have proved the advantages of the speculation?—No doubt if there had been a regular barrier of stones it would have prevented the spat from being washed away.

47,354. Has that been the only attempt made in the lough to form an artificial bed; are all the other beds in the lough natural oyster beds?—Yes.

47,355. Have the natural beds continued to be fished regularly for many years within your knowledge?—Yes.

47,356. Have they continued to yield rather more largely than they formerly did?—The bed about two miles above the town has only been fished recently.

47,357. Is it a bed that has only been recently discovered?—No, it was known before; it was only recently fished.

47,358. Have they found a considerable quantity of oysters upon it?—Upon one portion of it in the

course of a day they were able to get 1000 countable oysters.

47,359. Are there any regulations among the fishermen or established by any other body to prevent the improper waste of those oyster beds?—Not that I know of.

47,360. But the result has been that without any regulations the take of oysters has been increasing?—It has increased for the last two years. They will get oysters until they dredge the beds out. I remember when I was a little boy the dredgers arranged among themselves to make a bed and to keep the oysters upon it. They built a barrier upon the shore close to the harbour and they had millions of oyster spat on it, but the tide washed it away every time it came on.

47,361. Is there any lobster fishery here?—There is.

47,362. Has it improved?—I do not think it has; they have to go a considerable distance out for lobsters.

47,363. Outside?—Yes, among the Copeland Islands and Garron Head.

47,364. Are there many people engaged in the lobster fishery?—Three boats, sometimes more and sometimes less.

47,365-6. Is there a scallop fishery also?—Yes.

47,367. Is there a large fishery of scallops here?—No, but we get them.

47,368. Are there good beds for mussel bait here?—They can get plenty of bait.

47,369. What is the kind of bait principally used by the line fishermen?—It is a shell-fish which they use principally and which they call buckies.

47,370. Are there plenty of those buckies to be had?—Yes, they have pots and they set them out in the lough, and they get the buckies in those pots.

47,371. Then there is no difficulty felt from the want of a plentiful supply of bait?—No, there is plenty of bait.

47,372. Has the price of fish within your knowledge very much increased?—I think not. I think it has not increased.

47,373. Is not the price of fish higher than it was 20 years ago?—No, I think not. I am speaking principally in reference to flat-fish.

47,374. Is the price of flat-fish about the same as it was 20 years ago?—About the same.

47,375. Do the fishermen follow any other occupation except that of fishing here?—No.

47,376. They are not small farmers; they have no land?—No.

47,377. They are purely fishermen?—Purely fishermen.

47,378. Do their sons become fishermen?—Their sons become fishermen perhaps for a short time, but mostly all of them go to sea.

47,379. Is their condition improving or otherwise?—Their condition is not improving by their profession but their condition is improving. We may impute that to the manufactories in the neighbourhood and to the fact that their daughters and wives are making a livelihood by embroidery and sewing.

47,380. In addition to what the men make by fishing?—Yes.

47,380*a*. Their condition is improving, but not in consequence of the take of fish being greater or the price being better?—No; the condition of the inhabitants altogether has considerably improved. Their houses are very snug compared with what they were formerly.

47,381. Are the line fishermen making a better business of it than the trawl fishermen?—Yes, on account of the mills and the sewing. The line fishermen are a much more industrious class of people than the trawlers.

47,382. Have you such a knowledge as would enable you to tell us what the take of fish will be in one shot with the lines now, compared with what it was at the earlier period to which your experience extends?—No.

47,383. (*Mr. Lefevre.*) I think you said that the number of trawlers has increased of late years?—Yes.

47,384. How do you account for that if the fishing has not been improving?—I don't know how to account for it.

47,385. Do you think the increase in the number of trawlers would show that they are making a good livelihood by it?—They are not. There are a number of labouring people who have been initiated into the trade. Perhaps they may have one good fishermen in a boat and two or three others who are not acquainted with fishing at all.

47,386. Has there been any attempt to prevent trawling within the limits laid down by the commissioners?—Yes, there have been many attempts; the boats have been seized and the nets taken from them.

47,387. Have the Coastguard in many cases interfered?—Yes.

47,388. And yet notwithstanding that, trawling continues to be carried on within the line?—They make a stolen march occasionally at night.

47,389. Is it only occasionally at night that they do it?—It cannot be done by daylight, and they can get more fish in any case by trawling at night than in the daytime.

47,390. Do you think it impossible to prevent trawling within those limits?—I don't think it impossible.

47,391. How could it be done?—Stringent laws and attention to enforcing them would do it.

47,392. Do the Coastguard take steps to stop it in the night-time?—They have done so.

47,393. By rowing boats down the lough?—Yes.

47,394. Is there any time of the year when you have observed more small fish than at another time?—Yes, in the summer time.

47,395. In what months?—From May to August.

47,396. Have you yourself seen small fish brought ashore in the boats?—Frequently.

47,397. Do you know what the small fish are mainly; what sorts of fish are they?—Plaice principally.

47,398. Is there any codfish among them?—No.

47,399. Any herrings?—No.

47,400. Or soles?—Occasionally a very few soles are got.

47,401. Are there any turbot?—No.

47,402. Then in fact we may take it that they mainly consist of small plaice?—Yes, and also a great quantity of ray.

47,403. Do the line-fishermen take any plaice within the lough?—They sometimes hook some of them, but only seldom.

47,404. That is not a class of fish they fish for?—No, it is round fish.

47,405. Do they ever get soles on the long-line in the lough outside?—They may, but it is a rare occurrence to get a sole on the long-line.

47,406. Is the regulation with regard to restricting the trawlers as to time observed?—Yes.

47,407. From the month of December till April the trawlers do not trawl inside the lough?—No, they dredge then.

47,408. Are the boats used then in dredging oysters?—Yes.

47,409. During that time does the number of line-fishermen fishing inside the lough increase?—In winter time they are necessitated by bad weather to fish inside.

47,410. But except in the case of bad weather the line-fishermen do not fish in the lough?—They do occasionally; they fish for young fish called codlings.

47,411. What size are they?—About 10 or 12 inches long, and some of them are 18 inches long.

47,412. Do they catch a considerable number of cod only about 10 inches in length?—I have seen a good many caught about that size.

47,413. Caught in the lough?—Yes.

47,414. At what time of the year do they catch them?—They get them from the early spring and through the winter in moderate weather.

47,415. Do you recollect the inquiry which took place here previous to the regulation being established

CARRICKFERGUS.

J. Stannus.

14 Sept. 1864.

as to the time at which trawling should be allowed in the lough?—I do, but I do not remember the time.

47,416. I mean with regard to prohibiting trawling from December until April?—Yes, I remember the inquiry; I think that Mr. Barry and somebody else came down here.

47,417. On what ground was trawling prohibited at that time?—It was upon the evidence of several gentlemen, I think the evidence was principally taken in Belfast.

47,418. What were the general grounds given for making that regulation?—I do not know what the reason of it was; my opinion is that it was considered desirable to give the fish time to increase in bulk and quantity.

47,419. Was it on the ground of their catching small fish at that time of the year; was that the ground?—I believe it was principally in order to allow the brood time to increase in the season.

47,420. Do you yourself see any reason why trawling should be prohibited during that time?—I think that is a very good reason why it should be.

47,421. You say that small fish are taken principally in the summer time; would it not be better to limit trawling in the summer?—No, but there is a particular portion of the ground upon which these small fish are got.

47,422. Is that in the summer time?—The same kind of fish would be got in any season of the year.

47,423. Early in the winter?—Yes, at any season of the year it would be got on those banks.

47,424. Then is there in your opinion any reason why the trawlers should be prohibited at one time of the year rather than another?—Well, I do not know that; I do not see the reason why.

47,425. Do you know what the number of the line-fishermen is?—I think there are about 10 boats.

47,426. And how many men in each boat?—From four to six men in each boat.

47,427. Do you know anything of the Grooms Port men?—No.

47,428. What number of boats are there employed in dredging for oysters?—There are 10 boats at present, but they are not all dredging; some of them are dredging now.

47,429. On the average are there 10 boats dredging?—There are 10 boats at present dredging.

47,430. Are they all employed as trawlers during the season?—Yes.

47,431. Do you think that the line-fishermen are making a better livelihood than the trawlers; do they make larger earnings on the whole?—I do not know that they make larger earnings, but they are more careful of their money. There are some of the line-fishers who are commissioned by the Harbour Commissioners of Belfast as pilots. They bring ships in when they are out fishing.

47,432. Is there much trawling outside the lough?—No, there is no trawling outside.

47,433. Then to what do you attribute the falling off of the line-fishing outside?—I do not know, it seems to be a general case; I was talking to several persons within the last eight or 10 days with regard to the fishing on the south-west side of the Scotch coast, and they told me that it had decreased there as well as here.

47,434. You think there has been a general falling off?—Yes.

47,435. Then you think that falling off has no relation to the trawling?—I think not.

47,436. Has there been the same falling off of line fish within the lough as outside?—The round fish are not as plentiful.

47,437. Have they fallen off in about the same proportion as the fish outside?—I should say so.

47,438. Then do you think that it is due to trawling?—I do not think it is.

47,439. Then you think the taking of small fish at the head of the lough by trawlers does not interfere with the line fishermen?—I do not think it does.

47,440. (*Mr. Caird.*) Do you know whether the herrings spawn in the lough?—I cannot say; I have seen very small herrings about two inches long in the lough; I have seen them in our harbour here.

47,441. Do they fish herrings in the lough with the seine-nets?—No.

47,442. Always with drift-nets?—Yes.

47,443. (*Mr. Lefevre.*) When do you last recollect herrings within the lough?—They got herrings last year.

47,444. Did they get them in any quantity?—No, there was only a small quantity.

47,445. When do you recollect any quantity of herrings within the lough?—Fifty years ago or nearly, I suppose.

47,446. What would you consider a fair average season?—Five or six maze.

47,447. I do not want you to take an extraordinary fishing but an average fishing?—We have had no average fishing for the last 40 years in the lough.

47,448. Then you can give no reason, I suppose, for the falling off of the herrings within the lough?—No, I cannot.

47,449. (*Mr. Caird.*) Do you think the traffic of the steamers up and down has had any effect in destroying the fish in Belfast Lough?—I think not, the fish get their food at the bottom.

47,450. Have the herrings been prevented from entering the lough by the steamers passing up and down?—That is very possible; they would go as deep as they could. I have been out catching herrings, and I have known that if a blow were struck upon the gunwale of a boat the fish would go down at once.

47,451. No observation of that kind has been made by the fishermen to your knowledge, I mean with regard to the effect of the steamers upon the fishing?—No.

The witness withdrew.

B. M. Smith.

BARRY MARTIN SMITH called and examined.

47,452. (*Mr. Caird.*) What are you, Mr. Smith?—I am master of the guild of fishermen, trawlers and dredgers.

47,453. Do you claim any exclusive right on the part of those you represent to trawling and oyster-dredging in Belfast Lough?—I do not call it Belfast Lough; I call it Carrickfergus Bay; it is so laid down in the ancient maps.

47,454. What do you consider the limits of Carrickfergus Bay?—From Farr Furlongs in the county of Antrim to Beerlooms in the county of Down; it is so laid down here in the charter.

47,455. What charter do you refer to?—The charter of King James.

47,456. What charter rights do you claim?—An exclusive right of fishing in the bay or the waters of the Bay of Carrickfergus.

47,457. Of all kinds of fishery?—Yes, exercised by the trawlers and dredgers.

47,458. Have the parties you represent exercised such rights for any long period?—I believe they have from time immemorial, quite outside the memory of man.

47,459. Has the system of trawling been a mode of fishing long in practice here?—I believe it has.

47,460. Can you speak from any knowledge of the fact?—My own knowledge would not go very far back.

47,461. (*Mr. Lefevre.*) How many members are there of this guild?—There are a good many; I cannot exactly state the number. Their names are enrolled in a book; I can supply you with it afterwards.

47,462. Is the right you claim a right exclusively belonging to the guild or to the whole town of Carrickfergus?—It belongs to one particular guild of fishermen, but I take it for granted that it was given for the benefit of the inhabitants of the town at large.

47,463. Can any of the inhabitants exercise that right?—Not unless they are members of the guild.

CARRICK-FERGUS.

B. M. Smith.

14 Sept. 1864.

47,464. Is the charter granted to a certain guild?—Yes, they are formed into a guild by a grant to the mayor and corporation of Carrickfergus.

47,465. Are all the members of the guild fishermen?—They are not.

47,466. How many are fishermen?—Nearly all of them are; there are only a few exceptions. The charter gives power to the mayor, sheriffs, burgesses, and commonalty.

47,467. Has not the question come before the courts of law already?—Yes, and it has been decided very often in our favour.

47,468. Has it not been decided against you?—The parties have sometimes not been properly represented.

47,469. Is it not the fact that it has been decided against you?—It is, and it has been decided for the fishermen also repeatedly.

47,470. (*Mr. Caird.*) That being the case we must decline to enter into a question which has been decided already in a court of law. We are not prepared or authorized to deal with such questions.—I was only anxious to lay the case before you.

The witness withdrew.

J. Ingram.

James Ingram called and examined.

47,471. (*Mr. Caird.*) Are you acquainted with the fishing interests of Carrickfergus and Belfast Lough?—I am a little.

47,472. Have you been a fisherman?—I have fished for twelve months.

47,473. Have you had good opportunities for observing the progress of the fishery here?—Yes.

47,474. Has the supply of fish taken in Belfast Lough as far as you have observed been increasing, stationary, or diminishing?—I think it is decreasing.

47,475. Is there any particular kind of fish you refer to when you say so?—I mean flat-fish.

47,476. Are those the fish taken by the trawl?—Yes.

47,477. Then do you think that the trawlers do not make as good a fishing as they used to do?—They are not making as good a fishing out of it as my father did when he had a boat.

47,478. How long is that ago?—He was for 15 or 20 years in partnership with Mr. McKie.

47,479. Were his boats of the same size as those used now?—No, they were larger.

47,480. Had he a decked boat?—Yes.

47,481. In what part of the lough did he follow trawl-fishing?—He fished in all parts of the lough, from Whitehead up to Holywood.

47,482. Is the same ground used now?—Yes, except the prohibited ground.

47,483. At that time was there no prohibited ground; did the fishermen go far up the lough?—Yes, they fished off Holywood.

47,484. Is the proportion of small fish taken now by the trawls, increased or diminished as compared with what it was then, 15 years ago?—I think it is in general about the same; they took all kinds, both large and small.

47,485. Have the men and the boats employed in trawling increased or diminished?—The boats have decreased; there is not such a number of boats as there was. I think at the time my father had a boat here there were 10 or 12 men belonging to it.

47,486. How many are there now?—Six or eight, I think.

47,487. Can you speak precisely?—I am not sure, but I think there are not more than eight.

47,488. Can you speak precisely to the fact?—Not to one or two; I think there are about eight now, and in my father's time there were 10 or 12.

47,489. Has there been a decrease in the boats?—Yes, in the number of boats.

47,490. Do you agree with the previous witness, that during the two last years the fishing has been more productive than previously?—I did not hear the previous witness. There is one thing I can state, that I have caught as good fish inside the prohibited ground as outside.

47,491. Do you think it has been an advantage to the fishery here that a restriction is made in regard to the prohibited ground?—Not the slightest, I think it is just the reverse.

47,492. Have you yourself trawled outside?—I have trawled from Whitehead up as far as Holywood.

47,493. Have you been more successful there than inside?—That would be according to the season.

47,494. What season are you more successful outside?—In the latter part of the year.

47,495. In the warm weather are you more successful inside?—Yes, the fish congregate up in the lough in warm weather.

47,496. Have you ever seen any spawn in the trawl nets when they have been taken up outside?—I have seen as much outside as inside.

47,497. Have you seen much spawn of fish brought up in the trawl net inside?—I am not sure what spawn is, but the fishermen said it was spawn.

47,498. Was there much of it?—Yes, a good deal sometimes.

47,499. (*Mr. Lefevre.*) What was it like?—It had a pulpish, jellyish look.

47,500. You cannot say that it was spawn?—No, I cannot.

47,501. (*Mr. Caird.*) Do you trawl on the same ground as that upon which they dredge oysters?—Yes.

47,502. Do you catch flat-fish on the same ground? Yes, they get oysters in all parts of the lough, and the ground must be clean both for dredging and trawling.

47,503. Are dredging and trawling followed both at the same time?—Yes, they are doing both at present. There is a close season for both, but both are open at present.

47,504. Twelve or 15 years ago was there a great proportion of small fish caught with the large fish?—There were always small fish caught with the large.

47,505. Were there many of them so small as to be useless for food?—A great number were brought ashore that were quite small and were scarcely fit for food.

47,506. What was done with them?—The fishermen got their share. The boat got one share of them, and the rest went to the fishermen.

47,507. Did the fishermen use them for their own food?—They either used them or sold them.

47,508. They were not thrown away as useless?—No, certainly not.

47,509. Have you seen any thrown away as not being fit to bring on shore?—I have seen a few thrown away.

47,510. But not any large proportion of the whole catch?—No, only a few.

47,511. Is the proportion of small fish unfit for human food increasing?—I cannot say.

47,512. You have not heard that alleged against the trawling now?—No; there was a great number of small fish caught when I was fishing, the same as there is at present.

47,513. Do you know anything about the long-line fishing?—No.

47,514. Have you any knowledge of the oyster-fishing?—I have a little; I have dredged.

47,515. Have the oyster beds been increasing in productiveness of recent years?—In some parts they have, in others they have not. From last Christmas until the close of the season the oysters were more plentiful than ever I remember.

47,516. Was that on the same beds you previously fished on?—No, this was an old bed.

47,517. An old bed re-fished?—Yes.

47,518. Are the beds in sufficient number to allow of some of them remaining unfished for a time?—I do not know anything with regard to that.

CARRICK-FERGUS.

J. Ingram.

14 Sept. 4864.

47,519. Are there any regulations established by the fishermen themselves or by other people as to the mode in which the beds shall be worked?—No, there is no regulation that I am aware of.

47,520. Anybody can fish where he pleases?—Yes.

47,521. There are no fees paid for doing so?—No.

47,522. Has the number of oyster beds increased?—I think it has rather decreased.

47,523. Has the price of oysters increased?—It has since my father's time.

47,524. Has it increased lately, within the ast two years?—No, I think it has been stationary; it has been much about the same.

47,525. Was not the price last year more than it was formerly?—No, they were cheaper last year The fishermen were paid from 8*s.* to 10*s.* a hundred for oysters.

47,526. Are they very large oysters?—Yes, the largest caught anywhere.

47,527. Has there been any change in the average size of the oyster caught on these beds within your time?—No, they are about similar now to what they were 15 and 20 years ago, with the exception of this old bed.

47,528. Have you any regulation among yourselves as to the size of the oyster you bring ashore; if you catch any of a smaller size do you throw them back?—No; there are two kinds of oysters here, one they call the scrab.

47,529. Do you select them yourself?—Yes. The small Carrickfergus oyster is the worst oyster caught. There is less fish in them than in any I know. The large oysters are the best that are caught and the small ones are the worst.

47,530. Have the oyster beds in the lough been fished for many years without any regulation and without showing any diminution in the quantity of oysters yielded by them?—Yes.

47,531. You say they are rather increasing in yield than diminishing?—Yes, they were more plentiful from last Christmas up to May than ever I remember.

47,532. Have the commissioners issued any regulations for fishing those beds?—No.

47,533. Is there any desire among the fishermen themselves that any regulations should be adopted?—No, I never heard of any.

47,534. They prefer being left as they are at present?—Yes.

47,535. Do you know anything about an artificial oyster bed that was attempted to be formed by Mr. Walker in the lough?—I heard them say he had put down some oysters opposite Green Island, but that is all I know about them.

47,536. Do you know whether any other attempt has been made with success to establish an artificial bed in the lough?—No, that was the first attempt I ever heard of.

47,537. Has any attempt been made to take the oysters and lay them down on feeding grounds so as to get them in a better condition for the market?—No, I never knew oysters laid down here.

47,538. Talking of the season, is there any opinion on the part of the fishermen themselves as to the correctness of the time fixed as the season for fishing oysters?—It has been the rule that in every month with an "r" in it they should fish them; that is from September until May.

47,539. They do not desire to see any regulations made upon the subject?—No, I think not.

47,540. Do the oysters improve as the season goes on?—Yes.

47,541. Does that improvement continue up to May?—Yes.

47,542. Are they as good in April as they are at Christmas?—They get milky in April and May.

47,543. Then it would not be considered advantageous by the fishermen that the season should be prolonged until after May?—No, they do not wish to fish them then, and there would be no sale for them. The lobster season comes on then.

47,544. Is the lobster fishery improving in yield here?—I think it was decreasing last year. They were scarcer then than they have been and smaller.

47,545. Do you think they have been over-fished?—The reason the fishermen give is that they have been fished all the winter. Our fishermen only fish them in the summer time.

47,546. (*Mr. Lefevre.*) Is the close time for oysters strictly observed?—Yes, the fishermen pay attention to it themselves. They would not fish them out of season.

47,547. Do you recollect the time here when there was no close time for oysters?—No, it was always just the same as it is now.

47,548. There always has been a close time?—Yes; the fishermen would regulate it themselves. They only fish in the months which have an "r" in them. They do not fish them either before or after; they would get no sale for them then.

47,549. Do the fishermen cull the oysters when they take them out of the dredge?—No, they take them in and put them in baskets. The fishermen get the small oysters but the boat and gear get none.

47,550. What do they do with the small oysters?—They sell them.

47,551. What is the smallest-sized oyster they take?—They take them as small as a five-shilling piece.

47,552. Is there a ready sale for oysters of that size?—There is very little sale for them, in fact there are very few small ones among them. Out of 200 they get in a day there will not be more than two dozen small oysters.

47,553. What is the reason of that, does the dredge not take them up?—I do not know what is the cause of it.

47,554. Are there many oysters bought here by vessels from a distance for the purpose of laying down on other beds?—No, I never heard tell of it. There is generally a consumption for all that are caught, and they are so very high in price that it would be a bad speculation to lay them down after giving 8*s.* or 10*s.* a hundred for them.

47,555. Are the oysters fit for eating immediately they are taken up?—Yes.

47,556. Can you speak positively as to the number of trawlers there were 12 years ago?—I think at the time my father had a boat there were 10 or 12.

47,557. You think the number has rather diminished?—Yes.

47,558. Is that, in your opinion, owing to the regulations laid down by the commissioners?—I think the regulations laid down by the commissioners were injurious to them.

47,559. Do you think it is to that rather than to a decrease in the fish that it is owing?—It is owing partly to that and partly to the decrease of fish. I think the fish have not increased in consequence of limits being laid down.

47,560. Why?—I do not know the cause, but there is not as much fish taken.

47,561. Do you mean that as many fish have not been taken on account of the limits being laid down?—Yes.

47,562. Do you think that the regulations are observed or not?—They are to a certain extent.

47,563. Do you think that the trawlers do fish during the night time within the limits?—I cannot say. I never saw them do it or knew it myself. I have fished inside before the limits were laid down, and I have got as prime fish off White Abbey and off Holywood as in any part of the lough.

47,564. Have you observed boats fishing within the limits during the daytime?—I have seen boats inside the limits.

47,565. High up in the lough?—Yes, but I could not tell if they were fishing or not; I was not on board.

47,566. Is it your opinion that the regulation fixing a limit has been injurious to the trawlers here?—Yes, it has been, and I think it does not add to the fish.

47,567. Do you think it does any good to the line fishermen here?—I cannot say that. The only good it does that I know of is that they can shoot their lines

inside without coming in contact with the trawlers. If you were to prohibit the trawlers from trawling inside altogether you would exterminate the boats and the fishermen, and send 50 men to the poorhouse.

47,568. They could not fish outside the Lough?—No, neither the boats nor the men are fit for fishing outside.

47,569. Is there ground outside fit for the larger trawlers to work upon?—There was a company set up in Belfast which tried for a season and did not succeed at all. They followed the deep-sea fishing and did not succeed at all. They had wells in their boats.

47,570. What is the principal fish the trawlers take in the lough?—Flukes, flounders, brill, sole, and turbot occasionally.

47,571. Do they take plaice in large numbers?—The plaice are the principal fish, it is only occasionally that they get sole, brill, or turbot.

47,572. Then if trawling were prohibited in the lough, the trawlers, you think, would be exterminated?—Yes.

47,573. And would the supply of fish be much diminished?—Certainly it would.

47,574. Would the line fishermen supply their place?—Certainly not.

47,575. They would not take the fish now caught by the trawlers?—They might take a few but not such a large number.

47,576. Is there any considerable amount of turbot brought in by the line-fishermen from outside?—No, only very few.

47,577. Can you give us any idea as to what portion of the year the trawlers fish outside the lough?—At the latter end of the season they fish more outside. The fish shift very much in the lough. One time they get them off Holywood, then in Bangor Bay. In 40 or 48 hours they will shift, and after a gale of wind you will not get any.

47,578. Do they fish outside the lough in the close-season?—No.

47,579. Do they fish for oysters at that time?—Yes, they dredge for oysters.

47,580. Do you know whether the supply of haddock has fallen off of late years?—I think it has. This lough was always a bad place for haddock, but occasionally they get them on the long-lines.

47,581. Did the trawlers ever take any haddock?—Very seldom. They may have got an odd codfish or haddock, but only seldom.

47,582. Do you recollect years ago a supply of haddock being brought from outside the lough?—Certainly.

47,583. But of late years, during the last six or seven years, you have not obtained any?—I do not think there have been many caught since then.

47,584. (*Mr. Caird.*) Is it a long time since the regulation was adopted restricting the trawl-fishing during the months of December, January, February, and March?—It was since the last Commission was down here.

47,585. Before then did they fish in the winter months?—Yes, up to Christmas.

47,586. Has it been a loss to the fishermen to be prevented from fishing in December?—Yes, they have got fine fish then.

47,587. Were the fish in good condition then?—Some were and some were not.

47,588. What was the reason that influenced the commissioners in taking off the winter months?—I cannot say.

47,589. Has it been followed by a diminution to that extent during those months of the fish brought to the market?—Yes, there has been a great diminution since then.

47,590. Have the fishermen who would otherwise be employed in fishing in those months any other occupation at that time?—Nothing but dredging.

47,591. Dredging for oysters?—Yes.

47,592. They do all dredge for oysters?—Yes; when the close season for fishing commences they dredge for oysters; they have no other means of living.

47,593. If they had not been prohibited from fishing would they have continued the fishing?—Yes, they would take them up to Christmas. Before the commissioners made the close season they fished for white fish up to Christmas. I have known them catch flat-fish up to Christmas. That is the time the flat-fish go outside. They got them off Causon Point very large.

47,594. After that did they not fish?—Some go to Scotland to fish rather than dredge.

47,595. To Whiting Bay?—Yes, and different parts of Scotland.

47,596. In January, February, and March did the trawl fishermen in former times refrain from fishing?—One or two boats might fish, but they would not all fish generally.

47,597. Was it because there were very few fish to be caught in the bay at that time?—Yes; but some of the men who did not have dredges would fish occasionally.

47,598. Are we to understand from your evidence that the trawl fishermen complain of being restricted from fishing during the month of December?—I think they would fish then if they were not prevented.

47,599. Do you know any reason yourself why they should be prevented from fishing in the month of December?—The only thing is that that is the season when the fish are in spawn; they are full fish.

47,600. Then would it be more likely that the brood of fish would be destroyed?—Yes, I think that is the time they deposit the spawn.

47,601. You told us about a Belfast company having tried large trawlers for trawling outside, and also well-smacks?—Yes.

47,602. When was that?—About 15 or 20 years ago.

47,603. How long did they continue at it?—A season.

47,604. One season?—Yes.

47,605. Was that sufficient to give them a good knowledge of the probabilities of success or failure?—They tried every place and there was a failure wherever they tried it.

47,606. Where did they try it?—Outside of White Head, Black Head, off the Copeland light, and in Bangor Bay.

47,607. Were they trawling?—They were only trawling, I believe.

47,608. Did they give it up because they were unsuccessful?—Yes, it was a complete failure.

47,609. Has it never been attempted since that?—No, never.

47,610. Do any of the large English trawl-vessels ever come there?—I think not.

47,611. (*Mr. Lefevre.*) Have you observed any time of the year when there have been more small fish caught than at others?—Sometimes they are smaller than at others.

47,612. At what time of the year?—At the beginning of the season, in May and June. They get larger the further the season goes on.

47,613. What would be the effect of stopping trawling here during three out of the five summer months?—In May, June, and July?

47,614. Yes.—It would ruin the fishermen. They could not make a livelihood in any other way. The oyster season closes in May, and they do not fish them after May, and they would be three months without anything to subsist upon.

47,615. You do not think it would be advantageous to the fishing or to the fishermen?—No, and the fish are prime then.

47,616. And even at the risk of catching small fish you think the fishing does no harm during those months?—I think not. You will get very good fish during that season.

47,617. It would do a great deal of harm if the fishing were stopped during those months?—Yes.

The witness withdrew.

CARRICK-FERGUS.

J. Wortley.

14 Sept. 1864.

JONATHAN WORTLEY called and examined.

47,618. (*Mr. Caird.*) Are you a trawl-fisherman here?—Yes.

47,619. Have you been many years engaged in that business?—Yes.

47,620. How many?—For the last 15 or 16 years.

47,621. Were you engaged in the trawl-fishing before the regulation which has been adopted by the Commissioners at Dublin was established?—Yes.

47,622. Were you in the habit of fishing on the same ground then as that which is now interdicted?—Yes.

47,623. Can you tell us whether the quantity of fish which you now catch on the average is increasing or diminishing?—During the last two years they have been rather scarcer than they were before.

47,624. Has there been any considerable difference in the proportion of large and small fish you catch with the trawl?—I caught as many small fish 16 years ago as I do at present.

47,625. Do you catch any large proportion of small fish in your trawl?—None but what are fit for the market.

47,626. None so small as to be thrown overboard?—There may be small fish among them, but we throw them out alive.

47,627. What is the size of the mesh of your net?—From 2 to $2\frac{1}{2}$ or 3 inches.

47,628. Is the mesh of the bag smaller?—Yes.

47,629. When it drags does it get pretty close?—If a weight of fish gets into the bag it will.

47,630. Do you not catch large and small?—Yes, if they get entangled amongst the seaweed.

47,631. Are the small fish alive when you throw them overboard?—Yes, they go to the bottom instantly.

47,632. Are those you throw overboard generally alive?—I am certain of it.

47,633. Is there any large proportion thrown overboard and utterly destroyed?—No, I do not think so Those we throw overboard are all alive.

47,634. How long have you the trawl down at a time?—Sometimes an hour, sometimes not a quarter of an hour, and sometimes an hour and a half.

47,635. Not longer?—No.

47,636. Do you put your trawl down and take it up several times during a fishing?—Yes, perhaps seven or eight times in a night.

47,637. Is it in the night that you trawl?—Yes, mostly, now.

47,638. What is the reason of that?—Because we dare not go where we could get anything in the daylight.

47,639. Has the regulation forced you to be night fishermen instead of day fishermen?—Yes, and has caused us to run a deal of risk.

47,640. If there were no regulation would you fish the same ground in the daytime that you do at night?—Yes, because we can get nothing anywhere else.

47,641. Were you in the habit of fishing the same ground in the daytime as you do now at night?—Yes, we were.

47,642. Do you catch as many fish in the daylight now?—I have caught as many in the day as in the night, but unless the water is clear we get more at night. At this time of the year when there is much fire the water gets all in a glow, and we know that that hurts the fish; in that case we get none that night.

47,643. Has it imposed any increased hardship on you as a fisherman to be obliged to fish at night?—Of course it has.

47,644. Has the number of trawl-boats increased within your experience?—When I commenced the trawling first there were as many boats as there are now. Then they fell back to four or five. Now there are 10, but they are not all trawling.

47,645. Then is there now about as many as you had when you began to fish 15 years ago?—Yes, about the same.

47,646. And the same number of men employed?—Yes.

47,647. Are they the same kind of boats?—They have a better kind of boat now.

47,648. And larger nets?—Yes.

47,649. Do you make larger catches with them?—Up to the last two years we did.

47,650. What may be an average catch in one haul by the nets?—I have got as high as 30 score large and small, which have all been brought ashore.

47,651. Thirty score of what kind of fish?—Flat-fish.

47,652. Were they all flat-fish?—Yes.

47,653. What kind of fish were they, plaice and soles?—Plaice in general.

47,654. Were there no soles?—Perhaps we may have got one or two, or the like of that.

47,655. Are plaice the chief kind of fish you catch in Belfast Lough?—Yes, but we get sole, turbot, and brill occasionally.

47,656. Do you get many turbot?—No, they are scarce.

47,657. Do you get any very small turbot?—No; for the last six months I have only caught three turbot, and 25 pounds was the lowest.

47,658. Whereabouts in the Lough was that?—Above Holywood.

47,659. A long way within the prescribed line?—Yes, a long way.

47,660. Has the price of your fish increased of recent years?—Since I commenced fishing I never knew them as dear as they have been this season.

47,661. Then at present the fishing should be remunerative to you?—That is on account of the scarcity of the fish.

47,662. Is this season not turning out well as a fishing season with you?—The fish are scarce, and the ground is so dirty that we cannot work upon it, and the reason of that is that it has not been trawled over. The trawling stirs it up and the tides wash the dirt away. If it is not trawled over the dirt lies there and the water has no effect upon it.

47,663. Was the system of trawling long practised before you yourself engaged in it?—I am sure it was; there is not a man here in court now who remembers the time.

47,664. When there was no trawl-fishing?—Yes, not in this lough.

47,665. Has it been your experience that during all the time trawl-fishing has been continuously going on the supply of fish has not diminished?—I do not think that it did until within the last two seasons, and the reason we give for that is that the ground has not been worked over regularly.

47,666. Why has it not been worked over regularly during the last two years?—Because we cannot get leave to do so.

47,667. You only do it at a risk and hazard?—Yes. The Coastguard and Revenue cutter watch us night and day, and we can only get there by stolen marches.

47,668. Did you in former times fish in the month of February?—No.

47,669. Did you find that that was much of a disadvantage?—No. We would not care about being prevented from fishing in February and March, because the season would close of itself at that time. There are no fish to be got during those months. There might be some in the latter end of March.

47,670. You would make no complaint of that regulation?—No. I do not think it does us much harm.

47,671. You only complain of the limit with regard to the bounds within which you are to fish?—If we had liberty to work through the lough the months which we have for a close-season would do us no harm.

47,672. Is there any general opinion among the trawlers that any diminution which has taken place in the fisheries has arisen from the banks not being regularly fished?—I believe they are all of one opinion.

47,673. Do you find that by going repeatedly over the same ground you can get more or fewer fish?—We do.

47,674. What do you get—more fish or fewer ?—We get more fish, because we consider that we keep the ground clean and stir up food for the fish.

47,675. What depth of water is there on the ground ?—We work in from two fathoms to seven or eight fathoms of water.

47,676. There is no part of that ground that is ever left dry at low water ?—No.

47,677. What length of beam is generally used in the trawl ?—From 31 to 35 feet.

47,678. What is the size of the boat you use ?—From about eight to 14 tons. That would be about the size, taking the boats through. The smallest will be about eight tons.

47,679. Can a boat of eight tons carry a beam 35 feet in length ?—No, but one of 14 tons can.

47,680. Is that a decked boat ?—No.

47,681. Is it half-decked ?—Yes, half-decked to the mast.

47,682. As a trawl-fisherman do you say that your business yields more fish than that of the line-fishermen with the same number of men ?—Yes, at certain seasons of the year. During the trawling season the market is better supplied by the trawlers than by the line-fishers. They do not practise line-fishing in the summer time.

47,683. Do you fish over a greater number of months in the year with the trawl than the line-fishermen ?—Yes, we do.

47,684. Do you or the line-fishermen bring the largest quantity of fish to market from Belfast Lough ?—We bring the largest quantity.

47,685. Do you think there is much difference ?—There has been a great difference for some time back.

47,686. Do the line-fishermen and you occasionally fish on the same ground ?—Very seldom.

47,687. Do you at all interfere with each other ?—We interfere more with them when we are dredging for oysters than with the trawl.

47,688. Have they their long-lines laid on the oyster banks ?—Yes, and we may get foul of them before daylight and tear them away, and put them out of two or three days' work.

47,689. Have you trawled outside ?—Yes, outside White Head.

47,690. Do you ever come in contact with the line fishermen's lines when trawling outside ?—No.

47,691. Do they not fish there ?—No, very little.

47,692. Then the long-line fishermen and the trawl fishermen do not practically come in contact with each other ?—Very seldom ; it is a great rarity.

47,693. And they do not fish for the same kind of fish ?—No.

47,694. Do the long-line fishermen catch many of the same kind of fish you catch ?—Not many. When they are fishing for cod at this time of the year they may get some plaice.

47,695. Do you get any codling ?—No.

47,696. Do you get any haddocks ?—No, very seldom.

47,697. Do you get nothing but flat-fish ?—We get very little except flat-fish. We get some hake and conger eels.

47,698. Are you an oyster fisherman ?—Yes.

47,699. Do you find that the oyster beds are yielding as well now as they did in former years ?—I never remember the oysters as plentiful as they were last season.

47,700. Do you, as an oyster fisherman, desire any regulation to restrict you as to the mode in which you should fish oysters ?—I do not think there is any occasion for a regulation of that kind.

47,701. Do you think the season prescribed for close-time for oysters is the proper season ?—I think so ; it is so, to the best of my opinion.

47,702. There is no regulation of any kind with regard to the fishing of the oyster banks ?—Nothing more than the close season.

47,703. And anybody may fish on the banks who likes ?—Yes.

47,704. Any stranger coming into the lough ?—Yes, it is open to all.

47,705. Do any strangers ever come to fish upon the beds ?—No.

47,706. Is there any limit as to the small size of the oyster you can bring ashore for the market ?—There is not.

47,707. You are entirely guided by your own opinion upon that matter and the demand in the market ?—Yes. The under net we use for catching oysters is made of iron rings. It takes 10 inches of iron to make one of those rings, and we think that those rings are wide enough to let any oyster go through which is not fit to be taken. There are a great deal smaller oysters than any we can catch which pass the market.

47,708. Where do they come from ?—I cannot say, but I have seen them.

47,709. Would they be condemned in Belfast Lough ?—No, I think not. I have seen them the size of half-a-crown here in Belfast market.

47,710. Are they not caught here ?—No.

47,711. Do you get Loch Ryan oysters here ?—No.

47,712. (*Mr. Lefevre.*) You do not think there is any necessity for a regulation limiting you as to the size of the oysters you are to take ?—I do not think there is.

47,713. You do not, in point of fact, catch small oysters here ?—There are none very small. Any very small oysters we catch we throw out ; they are of no use to us.

47,714. Do you cull them on the deck ?—Yes ; we throw them out if they are not fit for the market.

47,715. Do you use your trawl-boat for dredging oysters ?—Yes.

47,716. How many dredges do you have ?—From seven to eight. Some have eight and some have seven.

47,717. What sized dredges are they ?—The knife is $3\frac{1}{2}$ feet in length.

47,718. Do you think it better to have that number of dredges than a large one ?—We could not work a large one in this part of the lough.

47,719. How is that ?—There are too many stones and dirt on the ground.

47,720. It would be too heavy to bring up ?—Yes.

47,721. Do any of the boats work with only one dredge ?—There are some about Grooms Port and Donaghadee where there are nothing but oysters, but not here.

47,722. What is the number of boats dredging for oysters in the lough ?—There were four dredging last season.

47,723. Only four ?—Yes.

47,724. Were there only four boats dredging for oysters in the whole of the lough ?—I mean from Carrickfergus.

47,725. But how many were there in the whole of the lough ?—I cannot say how many there were from Grooms Port.

47,726. Do the trawl-boats belong to the fishermen ?—Yes.

47,727. Do you own one yourself ?—I do.

47,728. What did it cost you ?—She cost me upwards of 30*l.*

47,729. How much did the gear cost you ?—I cannot say exactly. I did not keep an account of what the gear cost.

47,730. Do you think the flat-fish are not in the bay from December to April ?—I cannot say that. I think they leave, or they go where we cannot catch them on to the foul ground where the trawls cannot get near them.

47,731. Do you find it more profitable to fish for oysters at that time ?—We do that because we cannot get fish to catch, and another thing is that the price is very low. We could make nothing out of them.

47,732. Are the fish not in good order at that time ?—They are not as good at that time as they are at other times.

CARRICKFERGUS.

J. Wortley.

14 Sept. 1864.

47,733. You tell us you do fish within the limits during the night-time ?—Yes.

47,734. Then do you not think that on the whole that part of the lough gets as much fished as it was formerly ?—No.

47,735. Do you think that the fishing has diminished there ?—Yes. If it were more fished upon it would be more productive. I think the regulation has done a great deal of harm to the public at large. Many a day we should be able to work in the daytime when we cannot work at night, upon dark nights, for instance, when there are so many steamers and vessels passing up and down the lough that we should have to work in their road, which would be very dangerous.

47,736. Do you consider that part of the bay the best part for flat-fish ?—Yes.

47,737. Before that regulation was made did you fish there during the greater part of the year ?—We only fished there up to Christmas at the furthest, even when we had liberty.

47,738. What is the greatest depth of water you can trawl in ?—Seven fathoms inside the lough, until we go outside beyond Carrickfergus and Grey Point; we can then work up to eight and 10 fathoms of water.

47,739. Your boats are not calculated to fish outside the lough ?—No, they are too small for deep-sea fishing.

47,740. Then the effect of any regulation to prohibit your trawling altogether in the lough would be to put an end to your calling as trawlers ?—Of course it would. I have worked outside with the company.

47,741. Did you work for them outside ?—I did.

47,742. What was your experience ?—We could not catch any fish until we went on the prohibited ground, and then we could catch plenty.

47,743. Do you think there are no fish on the grounds outside ?—If they had been there we should have got them as well as on the prohibited ground.

47,744. Is the bottom fit for trawling ?—It is very coarse. All we could make outside would not keep up our nets; the ground was rough and we only lost our time.

47,745. Was it due to that that the fishing was not profitable ?—The fish were scarce, too; they were very scarce.

The witness withdrew,

A. Donald.

ALEXANDER DONALD called and examined.

47,746. (*Mr. Caird.*) Have you been long a line fisherman here ?—Yes, a good while.

47,747. How many boats are engaged in the line-fishing here ?—In the winter time I think there are about five or six.

47,748. Is that all the line fishermen there are in Belfast Lough ?—There were more, but a great many of the young men have gone to sea and left it.

47,749. Are there not as many now at Carrickfergus as there used to be ?—No.

47,750. Ten or 15 years ago were there more boats engaged in line-fishing than there are now ?—Yes, there were more.

47,751. You were accustomed to catch more fish than you do now ?—For the last two years we have not got as many codfish as we were formerly in the habit of getting.

47,752. Is it only within the last two years that a decrease has taken place ?—We got more before. For the last two years we have not got as many.

47,753. Where do you fish with your long-lines ?—From Whitehouse down to Lough Larne.

47,754. How far out at sea ?—Off Lough Larne.

47,755. How many miles out at sea ?—Perhaps two or three.

47,756. In what depth of water ?—In 50 fathoms and from that down to four fathoms.

47,757. Is it rough ground or smooth ground ?—It is a kind of rough ground.

47,758. Do you get better success on the rough ground than on the smooth ?—Sometimes we get a good quantity of codfish in the lough.

47,759. Do you sometimes set your long-lines in the lough ?—Yes.

47,760. In what part of the lough do you fish ?—About Whitehouse Point we shall get good codfish up to Christmas.

47,761. Has there been any perceptible decrease in the cod caught within the lough during the last few years ?—Yes; we have not got as many for the last two years.

47,762. What has been the cause of the diminution during the last two years ?—I cannot say.

47,763. Do you and the trawl-fishermen fish on the same ground ?—Yes.

47,764. Do they ever come foul of your lines ?—They have done so sometimes.

47,765. Do you think they interfere at all with your success as a line fisherman ?—I cannot say anything concerning that at all; I have nothing to do with that.

47,766. Have you ever fished above the restricted boundary with your long-lines ?—Yes.

47,767. Have you had much success there ?—Yes, I have got a great deal of cod there.

47,768. Are you restricted in your fishing to any part of the lough or may you fish where you please ?—We may fish where we like.

47,769. There is no restriction against you ?—No.

47,770. Is the quality of the cod you get now as good as it was in former years ?—I think they have been better in quality this season.

47,771. Has the price improved ?—Yes; but before my time I believe there was a higher price than that. Some of our men have got more for them than ever I did, but that was before my time.

47,772. Have you plenty of bait here ?—Yes.

47,773. What bait do you use ?—Buckies; they are whelks.

47,774. Do you ever use herring bait ?—Yes.

47,775. Do you find it a good bait for catching fish ?—Yes, very good.

47,776. Are you a herring fisherman ?—Yes.

47,777. Have the shoals of herrings decreased or increased of recent years ?—We have got very few this season.

47,778. Do you go out to sea into the Channel to fish for herrings ?—We go a good way off here.

47,779. Do you often see shoals passing from the north to the south up the Channel ?—Yes; I have seen them here, a great many of them, many a time.

47,780. Do you remember when there were any large catches of herrings in Belfast Lough ?—Many years ago inside Green Island I got 7*l.* worth in a haul there.

47,781. Was there a great quantity caught that year in the lough ?—Yes; and we have got a few maze in other years, but we have not got so many at a haul.

47,782. What is the time when you usually get them in the largest quantities ?—We usually get them in the largest quantities up the lough about this time of year.

47,783. How long does the fishing continue ?—Sometimes longer and sometimes shorter. One year we got them well on to Christmas; then we did not get them for so long a period, for a few years.

47,784. Do you get the herrings here now ?—We have not tried them here for awhile.

47,785. Do you get any turbot on your lines ?—Yes, on the lower bank and on the east bank.

47,786. Do you get as many as you did formerly, or more ?—I have not tried there for a long time.

47,787. There are no restrictions at all against your mode of fishing in any way ?—No.

47,788. Have you any complaints to make as to anything interfering with your mode of fishing ?—No, I have no complaints to make.

47,789. (*Mr. Lefevre.*) How many boats are there from Grooms Port ?—I cannot say.

CARRICK-FERGUS.

A. Donald.

14 Sept. 1864.

47,790. Do you recollect the inquiry which took place here before the Commissioners with regard to trawling?—Yes.

47,791. Did you give evidence upon that occasion?—Yes.

47,792. Did you then complain about the trawlers?—I cannot say whether I did or not. Some of the fishermen did.

47,793. You gave evidence?—Yes.

47,794. You were then a line fisherman?—Yes.

47,795. The other line fishermen gave evidence against them?—Yes.

47,796. In consequence of that inquiry these regulations were made?—Yes.

47,797. Have you experienced any benefit from them?—I do not say that they have been of any benefit.

47,798. There were two inquiries here, were there not?—Yes, I believe there were.

47,799. At one of them the regulation was made as to the limits?—Yes.

47,800. And at the other as to time?—Yes.

47,801. Have you found that neither of those regulations has done you any good?—I cannot say.

47,802. Do you mean that you have not found much good from them?—I make no complaint.

47,803. Is there no complaint now from the line fishermen?—No.

47,804. Do you think it would do harm to the line fishermen if these regulations were done away with?—I cannot say.

47,805. I want to know your opinion, do not be afraid about giving it?—No; I cannot say.

47,806. Have you observed whether these regulations are strictly adhered to?—No.

47,807. What is your opinion; do you think they are observed or not?—Did not one of the men tell you that they were not kept?

47,808. Is that also the result of your own observation?—Yes.

47,809. You have now no complaint to make?—No, I have nothing to say against any man. I have no wish to say anything; we must all live.

47,810. Do you think it would be of advantage to the line fishermen if those regulations were adhered to?—As long as they keep clear of us I do not want to interfere with them.

47,811. Have you found that since the regulation was made with regard to a limit you have fished more in the lough than formerly?—No; we fished as much in the lough then as we do now. As long as they keep clear of us we do not wish to fall out with them.

47,812. When you have fished within that limit have you caught more fish than you caught formerly?—I cannot say. We got as many fish then as now.

47,813. You got about the same quantity?—Yes.

47,814. Have you observed any diminution in the cod in the lough?—There are not as many got in the lough as there were formerly.

47,815. Do you think that catching the codling does any harm?—Perhaps it may.

47,816. Do you think you catch too many of them?—It may hurt the cod.

47,817. What is the season of the year when you fish mostly in the lough?—From Halloween until Christmas.

47,818. That is within the lough?—Yes; we get codfish then. Sometimes we get as many in the lough as we can get outside.

47,819. After Christmas where do you fish?—We shift out into the deep sea.

47,820. When was the last good herring season that you can recollect?—I cannot say; we have not had a good herring season for a good many years.

47,821. Have you got herring nets?—Yes, I have.

47,822. Do you use them every year?—Yes.

47,823. But you have not had a good take for some years?—No, I have not had a good take.

47,824. Do you know what time the herrings spawn here?—They mostly spawn about this time of the year.

47,825. In the lough?—Yes.

47,826. Is there a winter season besides?—No, we do not bother after them in the winter time.

47,827. You do not look after them then?—No.

47,828. Are they on the coast?—They may be, but we do not look after them.

47,829. Have you any reason to believe that they are on the coast in the winter?—They may be there. They must be in some place not far off, because we see the spawn or the small herrings.

47,830. You see small fry in the lough?—Yes.

47,831. When do you see them?—I saw them about a month ago. I have seen lots of them away up the lough.

47,832. Inside the lough?—No, outside; but I have seen them inside too.

47,833. Do you see any signs of herrings in the winter?—No, we see no signs of them in the winter.

The witness withdrew.

J. Morrison.

John Morrison called and examined.

47,834. (*Mr Caird.*) Are you a line fisherman?—I was.

47,835. Have you had a long experience of fishing in this neighbourhood?—Yes, I have been fishing for a good while.

47,836. You have been fishing for a good many years?—Yes.

47,837. Can you tell us whether the quantity of fish caught by each boat is as great now as when you began to fish many years ago?—Not the half of it. It has diminished one half.

47,838. Has that been a gradual or has it been a sudden diminution?—It has been a gradual diminution for some years back.

47,839. When did you first observe it begin to diminish?—I think it has been diminishing for the last 20 years.

47,840. Has there been any particular kind of fish that has diminished more than another?—I think the herring and the cod have diminished most.

47,841. The herring and the cod?—Yes.

47,842. The cod are as good in quality now as they were, are they not?—I think they are. I did not fish much last winter, but I think they are. They are not as plentiful, however.

47,843. Do you remember when the prohibition as to trawling in the bay was established?—Yes, I heard tell of it.

47,844. Was it not established in 1854 for the first time?—I cannot say.

47,845. It is a long time within 20 years, since it was established?—Yes.

47,846. But you found that the diminution of the cod began to take place 20 years ago?—Yes.

47,847. Then that was before the restriction was established?—It was.

47,848. Do you know whether the restriction has had any beneficial effect upon the cod-fishing?—I cannot say that it has had.

47,849. You are not aware that it has?—No.

47,850. What is your own opinion as a fisherman as to the effect of the trawling upon the interests of the line fishermen?—I think it has no effect outside.

47,851. None at all?—None outside.

47,852. Has it any effect inside, within the restricted boundary?—I could not say that it has had, because I have seen the fishermen getting cod plentifully on the lines. I have seen 10 dozen caught off the point when we have been working with dredges.

47,853. At the same time the trawlers were trawling on the ground?—Yes, I have seen from 10 to 20 dozen caught off the point.

47,854. Have you heard the opinion often expressed by the trawlers that the more they trawl upon the ground the more they provide food for the

CARRICK-FERGUS.

J. Morrison.

14 Sept. 1864.

fish?—I have heard them say that, but I do not know anything about it.

47,855. Have you noticed the trawlers going on the same ground with continued success?—Yes, I have.

47,856. Have you followed them with your lines with equal success?—I did not meddle with them.

47,857. But have you fished upon the same ground?—Yes.

47,858. And at the same time?—No.

47,859. Have you fished upon the same ground within a short time afterwards?—Yes.

47,860. Perhaps the next day?—The next night.

47,861. On the ground on which they had been previously trawling?—Yes, and dredging both.

47,862. Did you find plenty of fish notwithstanding that fact?—Yes, I have seen the time when they have been dredging all day that we have let our lines lie all night, and we have got plenty of fish.

47,863. On the same ground?—Yes.

47,864. What kind of fish did you get; were they cod?—Yes, codfish in November, and from that on to Christmas.

47,865. Then on the same ground where you got cod the trawlers got flat-fish?—Yes, in the month of October.

47,866. Both of you were fishing different kinds of fish?—Yes.

47,867. And both of you were successful?—Yes.

47,868. As a fisherman, is it your experience that you have most success in the lough or outside?—There have been no fish worth noticing in the lough for some years.

47,869. Do the line fishermen have the best success outside?—Yes, but the fish are very scarce there also. The cod seem to have gone off our coast altogether.

47,870. Have you any reason which in your own mind you can assign as the reason why the fish have left your coast?—No.

47,871. Is there any mode of fishing practised on the coast that could have frightened them away?—No, not that I know of. There is no natural cause that I could assign.

47,872. Is there any other cause?—No.

47,873. But the fish have decreased?—Yes, and very greatly.

47,874. What would be a fair average day's fishing with a boat with lines 20 years ago?—I do not remember what it would be 20 years ago, but I have seen the time when we have been getting 5*l.* worth in a day. That was a long time ago.

47,875. In one boat?—Yes.

47,876. Was that an exceptional day's fishing; was it a particularly good fishing?—Yes, it was. On the average we should not make more than 1*l.* a day.

47,877. That was in former times?—Yes.

47,878. What can they make now?—I cannot tell; hardly anything scarcely. They do not get 5*s.* or 6*s.* in a morning for the whole boat's crew.

47,879. For a whole night's fishing?—Yes.

47,880. Sometimes they get more than that?—I do not think they have exceeded half a guinea a day.

47,881. How many men are there in a boat?—Five.

47,882. And they have not got nearly as much as you did in former times on the average?—No.

47,883. Then they must be making a poor business of it?—They are making nothing at all scarcely.

48,884. Then the line-fishing is not an improving fishing just now?—No. It has greatly decreased, and our young men have mostly all gone to sea.

47,885. And the sons of the fishermen do not become fishermen?—No.

47,886. And the number of boats is not increasing?—No.

47,887. There is no restriction of any kind on your mode of fishing?—Not a bit.

47,888. And you have no difficulty in getting plenty of bait?—No.

47,889. You have a good market for your fish?—Yes, a good market.

47,890. Then you attribute the falling off entirely to a dearth in fish?—Yes.

47,891. Do you remember the herring-fishing in old times?—I remember it 50 years ago.

47,892. Was there a better fishing then than now?—Yes, a great deal better.

47,893. Year by year was the fishing better?—Yes, for 20 years we could get 12 maze of herrings off Black Head, and very fine herrings they were.

41,894. In what season was that?—In June and July.

47,895. Were the shoals of herring on their course at the time up the Channel from the north?—Many a time I have seen them go up and down the lough.

47,896. Was it up the lough or outside that you were most successful?—They went right up the Channel.

47,897. Where were you most successful in catching them?—Outside White Head and Black Head.

47,898. Out at sea?—Yes.

47,899. Outside the lough altogether?—Yes.

47,900. Do they not fish there now?—No.

47,901. Is there no herring-fishing there?—No.

47,902. Did you ever have a winter herring-fishing in the old times you mention?—Yes, we used to get them up the lough.

47,903. Are they the same kind of fish up the lough as those which are caught outside?—No, they are not.

47,904. Are they smaller fish?—Yes. The summer herring are the big herring.

47,905. What time did they get the fish up the lough?—I do not know how many years ago it was, but there was a good fishing at Christmas. They made a living out of it at Christmas.

47,906. Up the lough?—Yes.

47,907. Has that ceased?—Yes.

47,908. How many years is it since that was done?—About seven, I think.

47,909. Do the herrings spawn in the lough?—There have been no herrings in the lough for some seasons.

47,910. Do you ever get spent fish?—Yes, some odd ones.

47,911. When?—If we get a few hundred we may get some spent fish among them.

47,912. (*Mr. Lefevre.*) When did you observe the cod begin to fall off?—I think it has been within the last 20 years that they have fallen off.

47,913. During the last two or three years have you observed a greater falling off than usual?—Yes, they have been very scarce for the last two or three years.

47,914. Previous to the last two or three years what would you consider a good take for each set of long lines?—Four or five dozen would be a good take.

47,915. To each boat?—Yes.

47,916. How many lines are there to each?—Seven, and sometimes eight. Every line has 14 score of hooks four yards asunder.

47,917. Then you would call four or five or six cod to a set of lines a very bad take?—Yes.

47,918. What is your most profitable season for cod-fishing?—From November until the month of March.

47,919. Previous to the last two or three years what would each man make in the course of a week?—They would not make 7*s.* 6*d.*

47,920. Do you recollect pretty well as long ago as 25 years?—I do.

47,921. What did you then make per week?—From 8*s.* to 10*s.*

47,922. Do you agree with what the last witness said with regard to trawling; did you hear the last witness?—Yes, but what was it he said?

47,923. He said he had no complaints to make?—I have none to make.

The witness withdrew.

ARTHUR KERNAGHAN called and examined.

47,924. (*Mr. Caird.*) Did you hear the evidence of Wortley ?—Yes.

47,925. Do you agree generally with the evidence he gave us ?—I think he is very correct in a part of it. There are no fish to be got outside now at all.

47,926. (*Mr. Lefevre.*) Outside the limits ?—Yes, I was three weeks at it, and I did not lift a fish the whole time.

47,927. (*Mr. Caird.*) Was that outside the limits ?—Yes.

47,928. Have you since fished inside the limits ?—Yes, and outside too.

47,929. With what success have you fished inside?—With very little for the last three months. There has been very little success for three months in any part. The ground is very dirty, and we have to cut away our net very often when we get it alongside.

47,930. Has the ground become more foul since the limits were enforced ?—Yes; as a general thing all over the lough it is in a dirtier state. There is a thing we call the Marylug, which we lift up in our net by a ton at a time.

47,931. Has that increased of recent years ?—Yes, they are more numerous than they were thirty years ago.

47,932. What is the reason of that ?—I can give no account of it ; the dredges cannot get any oysters or anything of that sort for them.

47,933. Has that anything to do with the restriction preventing you from fishing the banks as regularly as you would do ?—If we could go far enough in the lough to keep it clean it would be better.

47,934. Part of the ground is clear ?—No, it is very dirty.

47,935. Wherever it is clean do the fish go ?—Yes.

47,936. Is that the ground you frequent for trawling ?—The cleaner we can get it the better.

47,937. Do you not clean it by the process of trawling ?—Yes, we do, but we would rather save ourselves that labour. If we get dirt in our nets it injures the fish.

47,938. Is the dirt you get in the nets the kind of food the fish would take ?—It is a little kind of mussel—a small shellfish.

47,939. Do the line fishermen find fish on the ground that is foul ?—There is very little fish there. There are none on the foul ground ; but on the stony ground and the rocky ground they go for codlings.

47,940. How many years is it since you began to fish with the trawl ?—Thirty-seven years.

47,941. Did you fish over any part of the lough at that time that you chose ?—Yes, in any part we liked.

47,942. What part was chiefly fished at that time; where did the fishermen find themselves most successful ?—From White Abbey across the lough. The Marquis of Donegal had a boat there to try for the fish, or we should never have thought of going there.

47,943. When you first began to fish you fished outside the limits now laid down ?—No, not outside of them, but I have fished further up the lough since.

47,944. When did you begin to fish further up the lough ?—About 24 years since.

47,945. Did you find yourself more successful by going up the lough ?—Yes, the ground was all clean; there were no stones or foul ground.

47,946. Was it an easier process fishing up the lough ?—Yes, it was easier for the nets.

47,947. Was it shallow water ?—Yes, but there are mussels in the lough that the fish feed on.

47,948. Do you get much fish on the soft ground you speak of ?—Yes, there are small mussels about the size of this (*measuring*) that the fish live on and small razor fish.

47,949. Are they found on the smooth ground ?—Yes, all on the smooth ground.

47,950. Over what breadth does that smooth ground extend ?—The breadth in one part of the lough would be about two and a half miles ; off Rochford it will extend only half-a-mile.

47,951. Is that off the Copeland light ?—Yes.

47,952. In other parts it is two and a half miles broad ?—Yes.

47,953. And what length ?—I suppose about twelve miles, that is, taking the place where they begin to trawl and going on until you end trawling.

47,954. Is the direction in which you trawl over the banks according to the wind ?—We trawl with the tide, and if the tide does not answer we trawl across with the wind.

47,955. The smooth grounds well up the lough are the grounds you find most productive of fish ?—Yes.

47,956. Have you been in the habit for a number of years of following much other fishing over the same ground ?—Yes.

47,957. Have you ever found that the fish have decreased in quantity from being over fished ?—They have been decreasing of late years. I was out all night this week for fourteen fish altogether.

47,958. Have you noticed whether the proportion of small fish is greater now than it used to be ?—We get more small ones at the present time. We had more the last time we were out than ever we had. Our nets are very large in the mesh ; it is styled a two-inch mesh but it is really a four-inch mesh. The meshes are two inches from knot to knot and four inches in length pulled out. That is sufficient to let any small fish out.

47,959. Do you not get any very small fish ?—No, we throw out a third of what we get.

47,960. Are they dead ?—They are quite alive. I have had them three days alive in taking them to Greenock.

47,961. Are they not killed by the trawl?—The trawl never hurts them.

47,962. Then the greater portion of the small fish you get is alive ?—Yes.

47,963. Very little injured ?—Yes, if they were injured we should get them dead.

47,964. You do not get them dead ?—No, I never saw a dead fish come up.

47,965. (*Mr. Lefevre.*) How often do you draw up your trawl ?—From four to six times a day, sometime oftener. If we have not sufficient wind to trawl our net we take it up sooner.

47,966. How many hours is it generally down ?—From a quarter of an hour to an hour, and from that to an hour and a half and two hours.

47,967. You do not drag a whole tide ?—No, we cannot take in our net in the lough.

47,968. Why can you not do so ?—We should gather so many star fish, wreck, and weeds.

47,969. You have to lift your net for that reason, and not on account of the quantity of fish ?—Yes.

47,970. You turn and come back again ?—Yes, and if we find fish in our net we go a little further the next time.

47,971. Do you think that the more you fish on the same ground the more fish you get ?—There have been plenty since I have gone to them. The more we trawl over the ground the more plentiful they are. If they only get three or four days stand they get as plentiful as ever. Perhaps the boats going over the ground may shift them for two or three miles.

47,972. Are there no parts of the fishing ground inside the restricted limits which have shown any sign of decreasing ?—No, the fish are plentiful in the lough, and the shallower the water you go in the more fish you get.

47,973. Does it depend on the season of the year; in warm weather do not the fish go further up the lough ?—Last year they were all over the lough.

47,974. Do you ever trawl outside the limits?—Yes.

47,975. With what success ?—With none at all.

47,976. Is there no good smooth ground outside the limits ?—There is smooth ground down each side

CARRICK-FERGUS.

A. Kernaghan.

14 Sept. 1864.

of the White House; it is all foul if we go too near White Point.

47,977. Is there not so much smooth ground out side the limits as inside?—There are some parts upon which we cannot work outside. We work outside when the fish are there in June and July; we work there by night all we can.

47,978. Do you prefer in some cases to work in the night instead of the daytime?—The water is clearer then, and we get more fish at night.

47,979. I do not quite understand whether there is as much smooth ground for fishing with the trawl outside as within?—The ground is very rough except we go far out to the bank.

47,980. Is it good ground for fishing?—Yes, for two months.

47,981. Do you fish it then?—Yes.

47,982. What two months are those?—June and July.

47,983. Is the ground better than the more shallow water up the lough?—It is for soles and large plaice during those two months.

47,984. Then do the fish shift their ground?—Yes, they shift their ground and work in the lough.

47,985. You would like to be allowed to follow the fish?—I would like to follow the fish.

47,986. Do you ever come in contact with the line fishermen?—I never got foul of the line fishermen except twice in my life, and that was at night.

47,987. Did you entangle their lines?—No, if we do anything of that sort we put a buoy upon their lines to show where they are.

47,988. That does not often happen?—No, only twice in my life.

47,989. You do not often catch the same kind of fish that they do?—When they are fishing for flat-fish we do. We get ray, dabs, brill, soles and plaice.

47,990. But the great proportion of your fish is not the same as the great proportion of the fish got by the line fishermen?—No, theirs are nearly all cod-fish. We may get an odd codfish, or a haddock, or a conger eel.

47,991. Are there any boats fishing at Grooms Port?—Yes.

47,992. How many?—Five boats.

47,993. Are they better found boats than yours?—They are all alike, and they are all a little out of order.

47,994. Are your boats a little out of order?—Yes, they are.

47,995. Are the Grooms Port boats better?—I do not think they are; they do not fish all the year, but they have bits of land as well.

47,996. Do they come inside the lough too?—Yes, they do.

47,997. In what season?—When they know the fish to be there; they can know in 12 hours if there are fish up the lough.

47,998. Do they fish within the limits?—Yes, they do.

47,999. Is there any good turbot-fishing outside the lough?—There is at Grooms Port and Black Head. They go there.

48,000. Is there a good turbot ground outside?—No, they take them with the lines where we cannot trawl. Turbot is a fish that likes to be near the rough ground.

48,001. Are you yourself the owner of a trawl-boat?—Yes, I have been the owner of a trawl-boat for 37 or 38 years.

48,002. Have you made less by it of late?—I have made very little by it lately; we are hardly able to keep up the boats at present.

48,003. Do you agree with the previous witness that the last two years have been better years for trawling?—They have been worse for me.

48,004. It has not been so with you?—No, I have never done so badly as I have done for the last three years.

The witness withdrew.

Captain William Swinburne, R.N., called and examined.

Capt. W. Swinburne, R.N.

48,005. (*Mr. Caird.*) Are you Inspecting-Commander of the Coastguard?—I am.

48,006. Have you and your officers and men any instructions with regard to enforcing certain regulations which have been laid down for the fishing in Belfast Lough?—There is to be no trawling or fishing inside a line drawn from Carrickfergus Castle to Rochport on the opposite shore. Any boats or trawlers seen there are immediately chased by the boats of the Coastguard or by the cutter when we have one here, and the strictest orders to that effect have been given to the officers by me.

48,007. Do you know if the result of that watchfulness on the part of your men has been to prevent trawling altogether?—Not altogether.

48,008. Are you aware whether trawling is carried on in the night-time still?—I believe they do if they can. I have only a small force and I am not able to enforce the regulation so rigidly as I might otherwise do.

48,009. Does this constant watching of the fishermen in this way interfere with looking after the interests of the revenue?—It takes the men away from patrolling the coast.

48,010. Is patrolling the coast set aside to enable your men to attend to these directions?—Not unless we have a suspicion that the boats are out. Then, and then only, do we man a boat and send it out at night, and of course the patrols are lessened and the guards weakened by so doing. I consider that our first duty is to protect the coast and the guards would not be withdrawn if they could not be spared.

48,011. Practically, I suppose, there is no attempt to interfere with the restriction during the day?—Decidedly not. The illegal trawling is generally carried on off White House.

48,012. I suppose the trawlers do not attempt to trawl during the day?—They do attempt it, but if they see our boat putting off they throw their nets overboard and make off. I found that the cutter we have had here occasionally can put a stop to it better than the boats. The fishermen keep a look-out and as soon as they see a boat launched they throw their gear overboard and are off.

48,013. Then practically the regulation is enforced during the day?—Yes.

48,014. And it is only evaded during the night?—Yes, when we have not sufficient men to man the boats or watch the ground.

48,015. (*Mr. Lefevre.*) How many men have you here in the lough?—At this station there are seven men and one officer.

48,016. And how many are there on the other side?—I know nothing about the other side. At White House there are six men and one officer, which is too short a complement.

48,017. Is there another station on the other side of the lough?—There are four stations on the other side.

48,018. I take it that they have the same orders?—Yes, I know they have. There have been one or two cases brought into court.

48,019. Are there seven men at each of these stations?—I do not know; they vary very much. Some of them have 10 men, and some only four. I have only three men and a chief boatman in charge. The largest number, including an officer, is 10 for two stations.

48,020. What is the width of the bay of Carrickfergus at the point where the line of limit runs?—Four miles and a half I think.

48,021. What increased force of men would you require in order to keep off the trawlers in the night-

CARRICK-FERGUS.

Capt. W. Swinburne R.N.

14 Sept. 1864.

time ?—I should require at least double the present complement of men and boats. If it was requisite to keep a boat afloat at night I should have two crews to relieve each other, but in most weathers in this port these light open boats could not live.

48,022. Would an increase of seven men at your station be sufficient for the whole bay ?—No, nor anything like it.

48,023. Would you require an increase at another station ?—Yes, at White House station, six miles from here ; they would require an increase there and also on the opposite side.

48,024. Would that not be some distance from the line of limit ?—No, that is the extreme south point where the trawlers go.

48,025. Then in your opinion you would require two additional boats' crews with a full complement of seven men in order to enforce the regulation ?—Yes, on this side of the lough.

48,026. Can you tell us the number of fishermen's boats at Grooms Port ?—Not at Grooms Port, but I can here.

48,027. What is the number here ?—There are seven large boats belonging to the trawlers and there are 22 or 23 of the smaller line boats.

48,028. Are they all used for line-fishing ?—Yes, and oyster-fishing.

48,029. Are they all used for line-fishing ?—Yes.

48,030. That would indicate that there are about 55 men employed in line-fishing ?—There are from 50 to 60 men.

48,031. Besides the trawlers ?—Yes, besides the trawlers.

48,032. How long have you been here ?—Four years.

48,033. Has the number decreased since you have been here ?—I consider it pretty much at a standstill. There are one or two boats less now from old age. They apply for fresh licences as soon as they have the means of setting up another. The boats are certainly not on the increase ; if anything they are on the decrease.

48,034. Do you think all the trawlers trawl within the limits or is it confined to a certain number of them ?—I think pretty nearly all of them do if they can get the chance.

48,035. And not one more than another ?—No ; there are two or three whom I see here whom I have cautioned very often.

48,036. (*Mr. Caird.*) I think you stated that your experience here has extended over four years ?—Yes.

48,037. Can you give the Commissioners any opinion of your own as to the advantage or disadvantage of this restriction on the supply of fish to the general market ?—I have heard complaints that the fish in the market are very small.

48,038. But you are not prepared to offer any opinion as to the policy of this restriction or otherwise ?—I think I can hardly say anything about that.

The witness withdrew.

JOHN WORTLEY called and examined.

J. Wortley.

48,039. (*Mr. Caird.*) Have you heard the evidence which has been given by the trawl fishermen to-day ?—I have heard some of it since I came into the court.

48,040. Is it long since you began to fish with the trawl ?—It is between 50 and 60 years.

48,041. Has the number of men employed in trawl-fishing increased or diminished within that time ?—There were more at one time than there are now.

48,042. Is it paying as well as it did in olden times ?—No.

48,043. Are the trawl fishermen not making as good a fishing as they did formerly ?—Yes, and the reason of that is that the fish are not fetching as good a price as they did formerly.

48,044. Are you sure of that ?—Yes.

48,045. Can you tell us in figures ?—I have sold flat-fish as high as 24*s.* a hundred, six score to the hundred, and now they are selling as low as 15*s.*

48,046. Is that a diminution of price that has been going on regularly ?—It has been a good while going on.

48,047. Are the fish got in greater quantity ; is that the cause of it ?—The fish are not got in as large quantities as they used to be in olden times.

48,048. Are there not as many caught in the lough as in olden times ?—They were more plentiful four or five years back than ever I remember them, but they have been scarce this season.

48,049. Have you noticed whether the proportion of small fish caught now is greater than it used to be ?—When they fish now on the prohibited ground there are more small fish than there are outside.

48,050. Have the trawlers been making a good livelihood by their business ?—They have not been making a better livelihood this season. Sometimes they make a middling good livelihood by it, but they have made very little this season on account of the scarcity of fish.

48,051. Do they make more money by oyster-fishing than by trawling ?—Last year they made a good season by oyster-fishing. They found a new bed last year and they made a pretty good thing of it, but where they used the trawl outside here the oysters are very scarce. One of the large boats was dredging outside the whole day for 100 oysters.

48,052. (*Mr. Lefevre.*) Are you a member of the Guild of Trawlers ?—I am.

48,053. How many of you are there ?—I cannot tell the number.

48,054. How many trawlers are members of that guild ?—I suppose I may say about 20.

48,055. Does the guild provide for you when you are old ?—No.

48,056. When you are unfit to work does the guild provide for you ?—No.

48,057. Then what benefit is it to you ?—In the guild we are sworn to assist each other in case of necessity. If the boats are going to receive harm we are sworn to assist one another and to tell each other where the greatest quantity of fish is likely to be caught.

48,058. Do you pay anything every year to the guild ?—No.

48,059. Do you receive anything from it ?—No, we receive no benefit from it and we pay nothing to it.

The witness withdrew.

BARRY MARTIN SMITH recalled and examined.

B. M. Smith

48,060. (*Mr. Caird.*) You desire to offer some information to the Commissioners on the part of the trawl fishermen at Carrickfergus ?—I have known the fishermen, the trawlers, and dredgers of Carrickfergus for a good many years. I know them to be a peaceable well disposed body of men, who were not willing to offend against the criminal law of the country until this byelaw was passed first in 1854 prohibiting them from fishing within certain bounds from Kilrood Point in the county of Antrim to Great Point in the county of Down. A second inquiry was held before the Commissioners after which a further byelaw was passed

CARRICKFERGUS.

B. M. Smith.

14 Sept. 1864.

prohibiting them from trawling within a straight line from the Coast of Carrickfergus to Rochport in the county of Down. The inhabitants here are entitled to beach their boats in the harbour and yet this point excludes them totally both in coming into the harbour or coming out. They are actually within the prohibited limits. That byelaw has had a very injurious effect upon them; they have been prosecuted or persecuted in various ways, and if it were not that I have had the opportunity of fishing up certain points of law it would have been difficult to have kept them out of gaol.

The witness withdrew.

J. Thomson.

JOHN THOMSON called and examined.

48,061. (*Mr. Caird.*) You are a county magistrate?—Yes, for Down and Antrim.

48,062. Have you observed the operation of the restrictive regulation established in regard to trawling in the Lough of Belfast?—Yes, I have taken a very deep interest in the question, and as far as I can understand it the law has never been fairly tried. The fishermen have broken it both by day and night.

48,063. Not during the day; I think we were told that by the Inspecting Commander?—Yes, they have frequently broken it during the day. I pointed out two of them breaking the law as I was coming down to this place to-day.

48,064. Were they not dredging for oysters?—They may be just now, but I do not understand that they could be dredging for oysters; they only dredge in those months which have an "r" in it. I can positively state that the law has been violated day and night, and that it never has had a fair trial. I can further state that it is totally impossible for the Coastguard to prevent the fishing by day or night. There is no difficulty in the trawlers dropping their trawls if they see the Coastguard or any other boat coming off. They heave over their rope with a small catch attached to it, and, as the law stands, unless you see the men actually fishing you cannot prosecute them. It has often struck me that if there was a regulation to prevent fish of a certain size from being brought to the shore the Coastguard in that way could exercise a surveillance over the boats, but not otherwise.

48,065. Would it not require a large number of additional watchmen to prevent the infringement of such regulations?—Yes, I think it would.

48,066. Who would pay the expense of that?—That I cannot say.

48,067. (*Mr. Lefevre.*) Have you formed any opinion as to the number of men to be employed?—No, my opinion is that if they were prevented from bringing small fish ashore that would be the best mode of preserving the fishery.

48,068. You think that would be better than laying down limits?—Yes, I think it would.

48,069. Would you advocate doing away with the present regulation?—It has never been tried fairly, but if there was a prohibition preventing small fish being brought ashore, then I think you could come to a good conclusion. The small fish are now caught in very large quantities. I frequently visit the market to make an inspection and I have noticed large quantities of small fish.

48,070. (*Mr. Caird.*) They are saleable fish I suppose?—No, they are not.

48,071. Are they not sold?—Yes, they are sold in the market.

48,072. The fish are sold for food?—Yes.

48,073. (*Mr. Lefevre.*) What are they?—Plaice.

49,074. (*Mr. Caird.*) Is there any other observation you desire to make to us?—There is one remark I would wish to make further. As far as my experience goes, and I have fished in the lough many times so that I know it perfectly well, my impression is that our fishermen are degenerating. It is said that the fish are degenerating and going away, but I think the fishermen are degenerating as well. The young men are all leaving. They are going to sea and leaving the old men to fish as if they were afraid to pursue the fishing as they did in former times. I have noticed that the Grooms Port boats are a better class of boats, and though one witness said they come to fish up here on the preserved ground I have not noticed them. It would be very easy to distinguish them because they are a different style of boat from the Carrickfergus boats. They fish in deeper water and I have also noticed that the Grooms Port boats catch fish which are darker than those which are caught here. They are also larger and better. There is no doubt that the fishermen here have some reason to complain; whether it is from a diminution in the fish or not I am not able to say, but certainly, the poor unfortunate men get no price for their fish. I frequently come here and visit the boats as it is only a distance of seven or eight miles from where I live, and I have noticed that the fishermen here sell their fish to dealers in Belfast who only give them $1\frac{1}{2}d.$ for fish I am charged $7d.$ or $8d.$ for in Belfast. So long as that system exists it is impossible for any class of boats to find a profitable employment.

48,075. Then the great evil seems to be that the class of purchasers is not more extensive and that they do not enter more into competition with each other for the fish?—That is one great evil.

48,076. Is there a great abundance of fish?—I am not prepared to say.

48,077. The fact is that there is not a great abundance of fish here?—Some have said that there was and some not.

48,078. (*Mr. Lefevre.*) Do you think that the fact of the young men going away to other professions has affected the supply of fish?—I do. I do not think the present men work the sea as the fishermen did before.

48,079. Do you think if the boats were manned by younger men and they went out to the same places they fished upon formerly that they would catch the same supply of fish?—I think it is probable.

48,080. We heard today that the wages and earnings of the line fishermen have been $7s.\ 6d.$ a week?—Yes.

48,081. In the report of 1836 it is stated that their earnings were only $6s.$ a week?—Yes.

48,082. Is that a sufficient temptation to induce men to remain in the trade?—I think not, but I do not think the line-fishing boats are kept in the same style they were kept in in my younger days, nor do they go as far out to sea.

48,083. (*Mr. Caird.*) Does not that all show that the trade is not a prosperous one and that the young men are going out to other things which are more remunerative?—Yes; the young men are going more as sailors. As a matter of course these men do not follow their own profession, but as to the preserved ground I am strongly of opinion that the byelaw has never had a fair trial. Whether it be right or wrong I know not, but my impression is that if it does not damage the spawn it would be as well to have no preserved ground, inasmuch as the regulation cannot be kept.

48,084. Is there any evidence that the spawn is damaged?—I do not know that.

48,085. Is there any evidence that can be brought before us to show that it is damaged?—I think one of the men stated that he often got it up in the nets.

48,086. Outside and in?—Yes.

48,087. That was something the fisherman called spawn but he did not know whether it was spawn or not?—The bay is a very shallow bay, and if there is spawn there I think it would be taken up.

The witness withdrew.

JONATHAN WORTLEY recalled and examined.

CARRICK-FERGUS.

J. Wortley.

14 Sept. 1864.

48,088. (*Mr. Caird.*) You are anxious to say something in reference to the evidence of Mr. Thomson?—Yes; he mentioned that there were two boats out fishing to-day and breaking the regulation. Those are boats that are out dredging for oysters; they have neither of them a trawl nor a trawl-beam on board.

48,089. Do you know that as a fact?—Yes.

The witness withdrew, and the inquiry was adjourned until the 15th of September, at Carlingford.

Carlingford, Louth, Thursday, 15th September 1864.

PRESENT:

J. CAIRD, Esq., M.P. (Chairman). | G. SHAW LEFEVRE, Esq., M.P.

CARLING-FORD.

Lieut. M. Knox, R.N.

15 Sept. 1864.

Lieutenant MARCUS KNOX, R.N., called and examined.

48,090. (*Mr. Caird.*) You are Commander of the Coastguard here?—Yes.

48,091. You have been stationed here for two years?—Yes.

48,092. Then you have had an opportunity of ascertaining the state of the fisheries in Carlingford Lough, and in the neighbourhood?—Yes, I was stationed here also 20 years ago for two years, namely, in 1843 and 1844.

48,093. Then you can give us some comparison with regard to the state of the fishing now, and what it was 20 years ago?—Yes.

48,094. What is the principal kind of fish which is to be found in Carlingford Lough?—The principal thing is oysters. There are very little fish in the lough, and they are not fished regularly.

48,095. Then is the principal business of the fishermen in Carlingford Lough oyster-fishing?—Yes; occasionally they go to the sea outside after herring-fishing.

48,096. Is there no other description of fishing except the herring-fishing sought after by the Carlingford fishermen?—No they do not think it worth their while.

48,097. Was that the case 20 years ago?—No.

48,098. What was the case then?—White fish and flat-fish were caught in considerable quantities then in 1843, 1844, and 1845

48,099. In this place?—Yes.

48,100. By the long-line?—Yes.

48,101. They did not trawl?—No, but they trawled outside.

48,102. What number of boats is there now engaged in the oyster-fishing?—I will tell you shortly.

48,103. Have they increased or diminished?—They have increased within the last two or three years.

48,104. The oyster boats?—Yes. There is a great complaint about the shortness of the open season. The open season here only lasts four months, while it is eight months everywhere else.

48,105. Is it an open season from the 1st of November until the 1st of March?—Yes.

48,106. In other quarters it is from the 1st of September to the 1st of May?—Yes.

48,107. What is the reason that that curtailment of the season has been adopted here?—Because they were taking all the small oysters. The fishermen themselves gave evidence at Warrenpoint before the Commissioners that it would be better for them to have a longer close season. It was at their suggestion, I believe, that the period for the close season was extended.

48,108. Then the change was made at the suggestion of the fishermen themselves?—It was.

48,109. What year was it that that change was made?—I cannot say; I was not here at the time.

48,110. Are you aware whether the change has resulted in an increased supply of oysters?—There has been a better description of oysters, and I think an increased supply. I think the supply has been greater for the last two years than it was before.

48,111. Have you before you now papers from which you can tell us the number of boats engaged in oyster-fishing at the present time?—I cannot tell you all the boats engaged. The lough is divided and registered into two divisions.

48,112. If you could give us the number of boats for the whole of the lough it would be better?—I think I can do that. There are 220, I believe.

48,113. There are 220 boats in Carlingford Lough altogether?—Yes.

48,114. Can you compare that number with any previous date accessible to you?—There were 357 in 1842 and 1843.

48,115. Now there are only 220?—Yes.

48,116. That is a great falling off?—Yes.

48,117. Are the boats of the same class that they were then?—They are a better description of boat now, I think.

48,118. Are they manned by the same number of men?—No, there were 887 men at that time.

48,119. How many are there now?—Not more than 460. They have fallen off by nearly one half.

48,120. At that time a number of these boats were engaged in white-fishing, and not altogether in oyster-fishing?—Not altogether. The season was not altogether a close season then. They did not observe the seasons for oyster-fishing as they do now. There was no law of that nature then.

48,121. But, as showing the comparative increase and decrease of the oyster-fishing here, these figures would not give us a correct representation?—No, they were not all employed in oyster-fishing at that time.

48,122. Not in 1844?—No.

48,123. But all the boats you have now are employed in oyster-fishing?—Principally in oyster-fishing.

48,124. Are there many natural banks of oysters in Carlingford Lough?—They are all natural banks but one. There is a bank belonging to a man named Elmore.

48,125. Are there many natural banks all over the lough?—It is principally on this side and in Rosstrevor Bay that there are oyster banks.

48,126. Are these oyster banks open to every fisherman?—Yes, they are open to all.

48,127. There is no claim of royalty or right of payment?—No, except at one place I have mentioned, which is below Carlingford.

48,128. Are they fished without any other regulation among the fishermen which all must observe?—The oysters are taken subject to a certain size. I think they must be $2\frac{1}{2}$ inches across. They must not take smaller oysters than $2\frac{1}{2}$ inches in diameter.

48,129. Who looks to the enforcement of that regulation?—I and my men and the constables.

48,130. It is part of your duty to see that oysters of no smaller size than what will go through a certain ring are brought ashore?—Yes.

48,131. Then those oyster beds in Carlingford Lough have been fished continually during the period over which your experience extends?—Yes.

48,132. They continue to yield as much as they did at any former time?—I think last year the yield was as good, if not better, than it had been before.

CARLINGFORD.

Lieut. M. Knox, R.N.

15 Sept. 1864.

48,133. They have not shown any signs of being over-fished ?—No, I do not think they have, but the season is too short for that.

48,134. Do the seasons vary according to the spat being good or otherwise ?—The year before last was a good season. Last year it was not quite so good as the year before, but they were a finer description of oyster last season than they were the year before.

48,135. Is there not a system adopted here of taking the oysters up and placing them on feeding beds so as to get them into better condition ?—No, but they put them in rings, and they are not to be sold under a certain size.

48,136. Are they taken direct from the beds ?—They are put into large rings and sold by auction to the buyers.

48,137. Are they taken direct to the market for consumption ?—Yes, by men with carts.

48,138. (*Mr. Lefevre.*) What is the size of the ring ?—It is the size of this court house or larger.

48,139. I mean what is the size of the ring by which you measure the oysters ?—That ring is $2\frac{1}{2}$ inches in diameter, and the smallest oysters must be of that size.

48,140. What is the other ring you spoke of ?—It is a kind of place in which there is a little water where they throw the oysters down and cover them round with stones.

48,141. Is that in order to keep them alive until they are ready to be sent off ?—Yes.

48,142. (*Mr. Caird.*) Anything that does not pass through the small ring is allowed to go to market ?—Yes ; anything that passes through that ring is not allowed to go to market, at any rate if we can prevent it. The beds are dry at low-water spring tide, and the people then gather up the oysters. Children and women go down and gather them.

48,143. Are all the oyster beds dry at low-water spring tides ?—Most of them, but not all.

48,144. Are they injured in the winter by the severity of the weather ?—Yes, they are ; large numbers of them get into deep water.

48,145. You mentioned that there was one bed which was in some degree an artificial bed ?—Yes.

48,146. Where is that ?—Below Carlingford. It is the only place below Carlingford Harbour where they get oysters at all.

48,147. When was it established ?—By licence from the Commissioners.

48,148. Was it regularly planted as an oyster bed ?—Yes, I understand that the gentleman who has it got some oysters from Arklow.

48,149. Is that a different description of oyster ?—Yes, it is quite different from the Carlingford oyster.

48,150. Is it a larger or a smaller oyster ?—A larger one. People don't appear to like it. Carlingford is famous for its oysters. The present owner of the bed bought it from Mr. Burton.

48,151. Bought the oyster bed ?—Yes.

48,152. Has that oyster bed been found to be a profitable speculation ?—I don't think it has been very profitable. The proprietor complains to me that he cannot manage to get oysters. He never buys except in the close season. He cannot get at them in winter as it is only low-water spring tide at 6 o'clock in the evening and 6 in the morning, and it is always dark.

48,153. (*Mr. Lefevre.*) Does the regulation with regard to the close-time affect him as well as the natural beds ?—Yes.

48,154. (*Mr. Caird.*) Are his oysters laid down on the bed for feeding, or do they breed on the bed ?—They breed.

48,155. Are you sure of that ?—Yes, he tells me that the bed has improved a great deal since he got it.

48,156. You cannot tell us when the white-fishing which was practised 20 years ago began to cease to be practised in the lough ?—I have heard it was in 1846 and 1847.

48,157. During the famine ?—Yes, the fishermen got into such a state of poverty that they could not prosecute it. Then the fish became scarce, and the fishermen do not think it pays them to go now.

48,158. Was it at any time a lough in which there was a good supply of fish ?—Yes, it was very famous for fish long ago.

48,159. Are the fish not to be found now in the lough ?—I don't think they are as plentiful; certainly not.

48,160. Is there any cause which has rendered them them less plentiful ?—Not to my knowledge. There is no trawling.

48,161. There has been no over-fishing of any kind ?—No.

48,162. Is it a soft bottom in the lough ?—No, some parts of it are soft, but the other parts are principally gravel.

48,163. (*Mr. Lefevre.*) Does the ground upon which the oysters lie consist of mud ?—It is generally hardish mud.

48,164. Is it clay ?—No ; mud.

48,165. (*Mr. Caird.*) Is it easily dredged ?—Yes.

48,166. Is there any mackerel-fishing here ?—A good deal outside the bay. Some boats get 70 or 80 dozen off Derryhogue.

48,167. When the mackerel make their appearance are they always followed ?—I think they are generally, but not so much as they might be.

48,168. Is the herring-fishing followed very carefully when any herrings appear upon the coast ?—Most of the boats are well prepared.

48,169. Are many herrings caught here ?—Some years there are. About this time in September and October they come off Derryhogue Bar.

48,170. Just outside ?—Yes.

48,171. The herrings do not come inside the lough ?—Yes, there have been a few for the last few nights, but not many.

48,172. Are they caught with the drift-nets ?—Yes.

48,173. The fishermen here do not use seine-nets for catching them?—No, they do not use seine-nets at all.

48,174. Is there any winter fishing for herrings here ?—No.

48,175. Do the herrings not appear on the coast in the winter ?—Not that I am aware of ; not later than the months of September, October, and the beginning of November.

48,176. With regard to the close-time for oysters you say it was upon the representation of the fishermen themselves that the close-time was extended from September until November ?—Yes.

48,177. And also made to include the months of March and April ?—Yes.

48,178. That was making the close-time four months longer than in other parts of the coast ?—Yes, there are eight months of open fishing in other places, and only four months here.

48,179. Have you heard any opinion from the fishermen lately as to whether they think the extended close-time should be maintained ?—Some are for it, and some against it.

48,180. Have you had an opportunity of forming an opinion yourself as to the policy or impolicy of that extension of close time ?—It is supposed that it tends to increase the quantity, and to allow the fish to become better.

48,181. Are there any circumstances connected with the oyster beds in Carlingford which make it necessary to have a different close-time from that which is adopted in Belfast Lough and other loughs on the coast ?—The oysters are very easily taken.

48,182. Are they more easily taken here than elsewhere ?—They can go out in all weathers to take them. The small boats can do it, but it takes the larger boats in Belfast Lough.

48,183. Then the ground on which you think a restriction of that kind ought to be maintained is the sheltered nature of the harbour ?—Yes.

CARLINGFORD.

Lieut. M. Knox, R.N.

15 Sept. 1864.

48,184. (*Mr. Lefevre.*) What measures do you adopt to prevent the taking of small oysters?—I make the boats go out in the evening and I look into the oyster boats occasionally to see that they are getting no smaller oysters than they ought to take. We watch them when they come on shore, and measure the oysters with one of the rings, and we watch the rings upon which they are laid also.

48,185. If you found small oysters in the rings, what would you do with them?—We should take them away and put them in the deep water, which we occasionally do when we seize any. There were a great number of summonses last year, and fines were inflicted. Any oysters that are taken in that way are put into the deep water.

48,186. Do the fishermen cull the oysters immediately after they are taken up in the dredge?—Yes, in the boat they are supposed to see that nothing is taken which is not of the proper size. I believe that is what they generally do.

48,187. Do the dredges take up any considerable number of small oysters?—Yes, they may take up any quantity. There is nothing to prevent them taking up small oysters. Of course they would go through the dredge if they were very small.

48,188. Have you any reason to believe that there are any small oysters sold here?—If I knew it I would not allow it.

48,189. Have you any reason to believe that there are any sold?—Sometimes they may take some of them home and use them themselves.

48,190. But they are not sold for the purpose of being laid down elsewhere?—Not since I have been here. I believe it was done before. There was a vessel that took an immense quantity some years ago, and the fishermen say that in consequence the fish declined.

48,191. How many men are employed in the service; how many of the Coastguard are there here?—I have 32 or 33 men under me in this lough.

48,192. They undertake that duty in addition to their other duties?—Yes, it is a very onerous duty. They have many other duties to perform, but they were ordered to do this also.

48,193. Do you recollect how many of the boats you speak of 20 years ago fished with the line?—No, I cannot tell you. There were a good number that fished with the line, but I cannot say the number.

48,194. There was no trawling in the bay at that time?—No, I do not remember that there were any trawls here, but they were in the habit of trawling outside. The trawlers belonging to Carlingford used to work where the oysters are taken and the fishing-boats were all attached to Carlingford at that time. The larger ones were at any rate.

48,195. Are there no trawlers belonging to Carlingford now?—There are six belonging to Carlingford.

48,196. What sized boats are they?—They are from 15 to 20 tons, or perhaps from 12 to 20 tons.

48,197. How many men do they take in each boat?—The tonnage of the six boats is 67 tons, and they have 34 men.

48,198. Is there any other place in the lough from which they trawl?—No, there is no other place in the Lough except Carlingford. We have 34 men and six boats of 67 tons altogether.

48,199. (*Mr. Caird.*) Are there any lobsters caught in the lough?—There are outside the entrance to the light-house at a place called Bellagan.

48,200. Is it a valuable fishery?—There are a great number got.

48,201. Are there several boats employed in it?—I don't know; it is just out of my jurisdiction. It is in the Dundalk district, but there are a great number of small lobsters caught there. They are principally small lobsters.

48,202. Does it continue to yield as much as it did formerly?—I think they have done very well this year.

48,203. Is there a crab fishery?—They catch crabs, but not many.

48,204. Are there any other shell-fish in the lough?—No.

48,205. Is it a place where bait is easily found?—They can get any quantity of bait—of lug bait.

48,206. And buckies?—I don't know about buckies, but they can get any quantity of lug bait.

48,207. Are there mussel beds here?—No, but I never saw such a place as Carlingford for lug in my life; the strand is covered with them.

48,208. (*Mr. Lefevre.*) Do you think that any of the Dublin trawlers trawl in the bay now?—They never come inside the bay.

41,209. You have no reason to believe that there is any trawling here now?—No.

48,210. (*Mr. Caird.*) Are you aware whether there is any regulation which prohibits trawling in Carlingford Bay altogether?—Yes, it is not allowed.

48,211. Then would you prevent it?—Yes

48,212. You have instructions to enforce that regulation and prevent trawling?—Yes.

48,213. Do the fishermen desire to trawl if they had leave?—I don't think they do. There is a line drawn from Cranfield Point to St. John's Point and Dunany Point, and they dare not come to trawl inside that.

48,214. At the time you refer to when you were acquainted with the bay formerly, were there a certain number of trawlers that belonged to the bay?—Yes.

48,215. They did not trawl in the bay?—They did occasionally, but principally outside.

48,216. Is there any complaint among the fishermen that they are prevented from trawling in the bay?—I never heard any complaint. There are a few rocks round the entrance to the lough at Bellagan Point where lobsters and crabs are found; they put down pots for them.

The witness withdrew.

J. Murphy.

James Murphy called and examined.

48,217. (*Mr. Caird.*) You are a fisherman here?—Yes.

48,218. Have you been long acquainted with the fishing in Carlingford Lough?—Yes, I have been fishing for 28 years and I never missed a season.

48,219. You have been constantly fishing all that time?—Yes.

48,220. Do you remember when there was trawling in Carlingford Lough?—I never recollect any trawling here in my life.

48,221. What mode of fishing has generally been adopted here?—Dredging for oysters and herring-fishing, I think, in this harbour.

48,222. There has been no white-fishing?—No.

48,223. No line-fishing?—In the spring of the year there are some lines, but they get nothing but scad and a few codlings.

48,224. It is purely oyster-dredging and herring-fishing?—Yes.

48,225. Has that been all that has been practised within your recollection?—Yes, as long as I can recollect.

48,226. Has the number of boats and men increased or diminished during that time?—The boats have decreased greatly. I recollect that there were 26 smacks from this port at one time and now there is not one to be seen.

48,227. Then they have fallen off altogether?—They have.

48,228. In what way were those smacks employed?—In carrying potatoes to Dublin in the spring of the year and in fishing in July, August, September and October.

CARLINGFORD.

J. Murphy.

15 Sept. 1864.

48,229. Was that outside?—Yes, they went to Howth, to Scotland, to Ardglass and other places.

48,230. Were they employed in dredging for oysters in the winter time?—Yes.

48,231. Those large smacks?—Yes, from September to March.

48,232. How many are there now?—There is only one which I have myself.

48,233. What is the cause of that falling off?—The boat owners are generally all poor men and they were obliged to be responsible for fitting them out, and if the season went against them they were broken up entirely.

48,234. Has the opening of the railway put a stop to the traffic in carrying potatoes to Dublin?—Yes.

48,235. That had nothing to do with the yield of fish?—No.

48,236. Have the oyster beds within your recollection continued to be as productive of fish as they were in earlier times?—No, they are less productive than they were 20 or 30 years ago.

48,237. Were there more oysters caught then than now?—A great deal more.

48,238. Has the falling off been very considerable?—There has been a great decrease in the oyster-fishing.

48,239. Was the catch less last year than you recollect it in former years?—I recollect when a boat would get as much as four boats could get last year.

48,240. Were there more boats last year than in former times?—I think there were fully as many.

48,241. Were there as many boats fishing?—I think there were.

48,242. Are the oysters taken into the different ports in this lough?—Yes; wherever the small boats belong to they take them in and put the oysters in the rings.

48,243. Where are those rings situated?—Along the shore from this place down to Warren point.

48,244. Is Warrenpoint the place from which the oysters are chiefly sent to market?—Yes, they are taken from Liverpool.

48,245. You say that on the whole there has been a decrease in the quantity of oysters caught?—Yes.

48,246. When did that decrease begin to show itself?—There have been none caught here for 15 or 18 years.

48,247. None?—No, it was not worth while to catch them until a few years ago.

48,248. Then did the boats begin to be more productive?—They did.

48,249. What was the cause of that?—A boat from London came here and loaded oysters not larger than half-a-crown, and after that the oysters decreased for a long time.

48,250. There is nothing of that kind permitted now?—No, there is not.

48,251. Has that been carried on to a considerable extent?—I never recollect but that one London boat.

48,252. There is nothing of the kind now?—No.

48,253. (*Mr. Lefevre.*) You only recollect that one case?—Yes.

48,254. Do you think that that one cargo could have affected the whole catch?—It was a vessel of 60 tons and she was loaded to the decks.

48,255. From the time they began again to fish the oysters, has the yield continued to increase?—I don't think they were as good last season as they were the year before.

48,256. Do you think the beds are now fished?—I think they are. There are a great number of small boats, and if they find a new bed they scrape it clean in no time.

48,257. Has it occurred to you whether any regulation could be adopted by which that could be put a stop to?—No, they are lifting the oysters all for the market.

48,258. The small boats do the same as the large boats in that way?—Yes.

48,259. Is the regulation which prevents small oysters from being lifted sufficient to protect the oyster beds?—Yes.

48,260. Is that a sufficient regulation without any other of any kind?—Yes.

48,261. Do you recollect the time when the open fishing for oysters was diminished by four months?—We always dredge here from November till March. From that time it is stopped.

48,262. In Belfast Lough they dredge from September until May; are you aware of that?—No, I know nothing about it.

48,263. Were oysters never dredged here within your recollection except from November till March?—No.

48,264. You do not recollect the time when they were dredged from September?—No, unless they smuggled them, but November was the time appointed.

48,265. Then it is an old regulation here?—Yes. That has always been the regulation here, namely to dredge from November till March.

48,266. Can you say, speaking as a fisherman, whether it is the general opinion of the oyster-fishermen in Carlingford that that regulation from the 1st of November till the 1st of March should be maintained?—I think it is.

48,267. Is there any desire on the part of the fishermen to begin earlier or to go on later?—No, there is not.

48,268. Are you aware that oysters are marketable in the other months of the year in which there is an "r"?—Yes, I am aware of that.

48,269. Are they not in good condition in September and October?—They are in good condition in September.

48,270. But you have no wish to fish them?—No.

48,271. Do you think it of advantage to the oyster beds that that regulation should be continued?—Yes, I think so.

48,272. Because it prevents to a certain extent the over-fishing of the beds?—Yes.

48,273. Has it always been the opinion of practical fishermen here that that regulation should be maintained?—Yes.

48,274. In what other business are the fishermen engaged when the oyster-fishing is not going on?—Anything they can earn money at.

48,275. Have they mostly bits of land?—Some of them have, and some of them have not.

48,276. What other employment do they follow; do they follow that of agricultural labourers?—Yes, a good many of them do.

48,277. What do they use their boats for at other times of the year; are they laid up?—Yes, 100 boats are laid up. They are small boats, which they have for the purpose, and they are fit for no other business.

48,278. If the herrings appear on the coast are a good many of them used for them?—They are rather too small for the herring-fishing; they have boats for the herring-fishing.

48,279. They have boats in addition?—Yes.

48,280. They do not use the same boats for herring-fishing and for dredging for oysters?—They do not.

48,281. How many boats are there that are fit for herring-fishing here?—At present?

48,282. Yes?—I daresay there are 100.

48,283. Are they all out fishing this season?—They are all prepared and ready.

48,284. The herrings have not made their appearance yet?—They are just beginning to come now.

48,285. Do I understand that for 15 years there was no oyster-fishing in the bay?—No, there was not. We did not follow it for 14 or 15 years.

48,286. You gave it up altogether during that time?—We could make no wages by it.

48,287. When did it begin again?—About two or three years ago.

48,288. Has the price of oysters improved ?—Yes, very much so.

48,289. Within the last two years ?—Yes, we have a fine market for oysters here.

48,290. Were there no oysters on the ground during the time of which you have been speaking ?—Very little. Trials were often made, but they could get nothing.

48,291. Do you recollect trawling inside the bay ?—I never recollect any trawling in the bay in my life.

41,292. Where did the trawlers from Carlingford trawl then ?—All outside ; they are prohibited from trawling here.

48,293. Has the condition of the fishermen here improved ?—No, it has not.

48,294. You get a better price for oysters ?—Yes, there is a better price for oysters.

48,295. When you were young did you go out line-fishing ?—I was only one season out line-fishing.

48,296. Were they plentiful in the bay then ?—No.

48,297. How many boats were fishing ?—Eight or 10.

48,298. How many men in each ?—Nine.

48,299. What fish did they catch ?—Mostly cod. It was nearly all cod.

48,300. And haddock ?—Yes, a few haddock.

48,301. Did they catch any flat-fish ?—Very few on the long-lines.

48,302. Did they occasionally get a turbot ?—It was very seldom they got a turbot.

48,303. Have they now altogether given up fishing with the long-lines ?—Yes, they have done so for many years.

48,304. How many years should you say ?—I think it is 20 years, or even more than that.

48,305. Did they take many codlings in the bay ?—A good many.

49,306. At what time of the year ?—About October.

48,307. Do you think they do not come in the bay now ?—They may, but it is not worth while to go hand-line fishing.

48,308. At the time you speak of did the men who were fishing make a good earning by it or not ?—I believe they did.

48,309. Did they fish with long-lines ?—Yes, with long-lines outside.

48,310. (*Mr. Caird.*) There were not many caught in this bay ?—Very few.

48,311. Can you give us any information about the artificial oyster bed which has been formed in this lough ?—Yes.

48,312. How long ago is it since it was begun ?—I think about nine or 10 years ago, but I cannot exactly tell the date.

48,313. Were you engaged in the formation of that bed ?—No, I was not.

48,314. You have observed it ?—Yes, I have been on it at different times.

48,315. The proprietor took means to stock the bed ?—There was a man from Dublin who took the oysters down here and sold them to a man named Elmore.

48,316. From whence did he bring his stock of oysters to put on the bed ?—From Arklow.

48,317. What was the object of going to Arklow when he could get them here ?—There were none here then.

48,318. Has that stock continued to breed on the bed ever since ?—Yes, when it is attended to.

48,319. Are they a different description of oyster from those found on the natural beds ?—Yes, they are not of as good quality.

48,320. Would they not bring as good a price ?—They are not of as good quality.

48,321. Does the bed continue to be as productive now ?—Yes, every year.

48,322. It is not supplied with fresh stock ?—No.

48,323. The brood is produced on the bed itself ?—Yes.

48,324. (*Mr. Lefevre.*) Does he buy every year from Arklow ?—Not at all.

48,325. Does he keep the bed exclusively in his own hands, and fish it himself ?—He does.

48,326. (*Mr. Caird.*) Has it been profitable to him ?—I think it has when he has attended to it.

48,327. Is he here ?—No.

48,328. Is there anybody representing him ?—No.

48,329. (*Mr. Lefevre.*) I see the size of the bed is about 50 acres ?—Yes.

48,330. Is it all below low water ?—He cannot get at them until the 20th of March.

48,331. (*Mr. Caird.*) Cannot he dredge them ?—He would spoil the bed if he dredged them.

48,332. Then he picks up the oysters from the bed at low water ?—Yes, they gather them by the hand, and take them up.

48,333. (*Mr. Lefevre.*) Why is it that he cannot go on the bed during the months you speak of ?—The tide does not ebb on them from Michaelmas until March, and he cannot get at them.

48,334. Why ?—The tide in the winter time ebbs only after dark.

48,335. Then the close-time operates rather hardly upon that ground ?—Yes.

48,336. (*Mr. Caird.*) Has anybody else applied to get a licence to make another oyster bed in Carlingford Lough ?—No, I never heard of any.

48,337. Has it not proved so remunerative an investment as to induce other people to follow the example ?—It has not.

48,338. But it still continues ?—Yes.

48,339. Does he let it to anybody to fish ?—No.

48,340. Have you any idea of the quantity of fish he gets from it in one season ?—No, I have not. He gets a good deal some seasons, and then after that he gets careless about it, and strangers make free with it.

48,341. Is there anybody looking after it ?—No.

48,342. Does he pay anything for his licence ?—I don't know whether he does or not.

48,343. (*Mr. Lefevre.*) Do the fishermen pay anything for the rings in which they deposit the oysters ?—Not at all.

48,344. Does each boat have a ring to itself ?—Yes.

The witness withdrew.

PATRICK RICE called and examined.

48,345. (*Mr. Caird.*) Are you a fisherman here ?—Yes.

48,346. Have you long been a fisherman here ?—Yes.

48,347. How long ?—I have been for many years backward and forward dredging. I fished in this season of the year, and then I dredged from November until the 1st of March ; but we fish now for herrings in the lough and outside.

48,348. Have you ever followed line-fishing ?—Often.

48,349. Was there more line-fishing formerly than there is at present ?—No, it was much about the same. There is only line-fishing for ray and codlings and such things as that.

48,350. That fishing is continued now ?—Yes.

48,351. Do most of the fishermen who have oyster-boats occasionally use lines for fishing ?—A good many of them in the slack season go out, but others will not be bothered with it. They go for fish for their own use.

48,352. Is there not a sufficient quantity got to make it an object to the fishermen ?—No.

48,353. It has not fallen off then compared with what it used to be within your recollection ?—Not a bit.

CARLINGFORD.

P. Rice.

15 Sept. 1864.

48,354. It is about the same?—Yes; they can get them still if they follow the fishing.

48,355. Do you remember trawling in the lough?—No, there never was trawling in the lough, I believe.

48,356. Has the oyster-fishing become more productive than it used to be?—Yes, there have been twice as many got for the last two or three years back.

48,357. Are there more oysters than there used to be before that?—Yes, there are 10 for one in comparison with what were got 20 years ago.

48,358. What has been the cause of the increase?—I do not know; I think they were banished away by the big wind we had 25 years ago.

48,359. Was that in 1837; there was a great gale in 1837?—I think it was.

48,360. Is it the opinion of the fishermen here that that gale really injured the oyster banks?—Yes.

48,361. Was the falling off after the gale really perceptible?—Yes, and it was not worth a man's while to go after them; he could not make a shilling a day for 15 or 16 years after that until within the last four or five years.

48,362. Did you then begin it again?—Yes.

48,363. Had you ever on any previous occasion noticed that a heavy gale rendered the oyster-fishing less productive; had you noticed the falling off of oysters in consequence of heavy winds before?—No.

48,364. That was the first time?—Yes.

48,365. Is that the only reason you can assign for the decline of the oysters?—We think that was the reason.

48,366. Was the price of the oysters as good then as it is now?—No, it is rather better now.

48,367. Is it much better?—Yes it is.

48,368. How did you happen to think of renewing your search after the oysters about five years ago, after so long a cessation?—There were always a few going after them, but they made nothing at it until two or three years ago.

48,369. Did the oyster beds then begin to yield better?—Yes, twice as much.

48,370. And there has been a continuance of better yields ever since?—Yes, there has.

48,371. And the number of men and boats has increased?—I think both the men and the boats have increased.

48,372. Then lately I suppose there have been no signs of the oyster beds becoming less productive?—Not a bit.

48,373. They are doing very well?—They are doing very well; but we are going now to the herring-fishing. We do not care to begin oyster dredging until the 1st of November.

48,374. Are the men very particular that they do not bring oysters in that will pass through the ring by which they are measured?—The men here earn 2*l*., 3*l*., or 4*l*. a night in the herring-fishing, and if there was anybody out after the oysters it would be very injurious to the herrings.

48,375. Has the herring fishery increased or diminished within the last few years?—It is much about the same. It looks pretty well this year.

48,376. Are there many boats employed in the herring-fishing when the herrings appear on the coast?—Yes.

48,377. How many?—There are 25 or 30 of them.

48,378. Have you to go far after them?—We get them in the lough and off the Bay of Dundalk at times.

48,379. Have you any winter herring fishery?—Yes, we get some in the lough in the winter.

48,380. In the month of January?—Yes.

48,381. Do you take them then?—Yes.

48,382. Are they in good condition then?—No, they are not.

48,383. (*Mr. Lefevre.*) What condition are the herrings in now; are they full fish?—Yes, the herrings are all full now; they come in to the shore to spawn where they can.

48,384. Do they come inside the bay?—Yes, they are inside the bay.

48,385. Do you ever take many inside the bay?—Yes.

48,386. How far up?—As far up as we might draw our nets ashore at Warrenpoint. We were last night fishing and got great lots of fish.

48,387. Do they come every year into the bay?—Yes, every year.

48,388. What time do you observe that they are spent fish?—About November.

48,389. Have you observed what the nature of the ground is upon which they spawn?—I think they spawn mostly upon the hard ground. They will spawn on the oyster beds as well as anywhere else.

48,390. What depth of water do they spawn in?—We get them in one fathom of water, and from that up to eight or nine fathoms.

48,391. Do you ever sink your nets?—Yes, down to the rocks, and we lose them on the rocks.

48,392. When you are fishing in eight or nine fathoms of water?—Yes, in eight or nine fathoms of water; we let them lie down there.

48,393. Sometimes they touch the ground?—Yes, we let them touch the ground.

48,394. Do you find that the fish when you take them up are in the act of spawning?—Yes, sometimes there is no spawn in them, and sometimes they are full. We can get as many as we can carry in a boat.

48,395. Do you recollect an inquiry taking place here in reference to trawling about 10 years ago?—No.

48, 396. Do you recollect an inquiry here in 1851?—No.

48,397. Was there an inquiry made by the Commissioners previous to prohibiting trawling in the bay?—I heard them talking about preventing them from trawling in this river. They prevented them from trawling between Carlingford Bay and Dundalk Bay.

48,398. And they extended the line to this bay I suppose?—Yes, there is no trawling here.

48,399. Was there any inquiry at Carlingford by the Commissioners?—I cannot recollect.

The witness withdrew.

P. Elmore.

PATRICK ELMORE called and examined:

48,400. (*Mr Caird.*) Are you a fisherman here?—Yes, sometimes.

48,401. Are you an oyster fisherman?—Yes.

48,402. And a herring fisherman?—Yes, sometimes.

48,403. When you say sometimes do you mean that you are not always at it?—No, only when the fish are on the coast.

48,404. What is your employment in other seasons?—Cadging, and fishing in other countries, and working on the land. We have only a limited time for fishing here.

48,405. You are here during the whole time of the oyster-fishing?—Occasionally I am.

48,406. Have you a boat?—Yes.

48,407. Do you find it a profitable business?—It has been very good for the last five or six years, and has done very well.

48,408. Is the take of oysters with your boat increasing?—Yes, and I think the oysters are increasing in the river.

48,409. You are not over-fishing the banks?—No.

48,410. You do not begin to fish for oysters until the 1st of November?—No.

48,411. Do you object to that?—I do not.

48,412. You do not desire to see that regulation altered in any way ?—No, I do not.

48,413. What do you think is the advantage of having the regulation as it is here different from what it is in other places, and giving you four months lest in the year to fish oysters ?—The first cause is thas all the poor men here have little fishing boats ; they make up a train of nets at one time of the year, and dredging would injure them. They follow herring-fishing from this time up to November, and then they go to the oyster-fishing until the first Saturday in March.

48,414. Then it is convenient for the fishermen that that regulation should be enforced ?—Yes.

48,415. Is it of advantage to the oyster banks ?—Yes ; the longer the oysters are left at rest the better they are. If they were dredging in the Bay of Rosstrevor now they would get oysters, but they would not be good for much. Two months hence there will be a great improvement in them.

48,416. They will be in better condition ?—Yes. Oysters at this time are not in good condition. The oysters are only recruiting after having spawned; they are much better from November down to Christmas.

48,417. Are the oysters not in good condition in March ?—They begin to fail then.

48,418. Then from the 1st of November until the 1st of March includes the fishing when the oysters are in the best condition ?—Yes, all throughout Ireland.

48,419. If the herring-fishing was falling off in the month of October, would it be of advantage to you to be allowed to fish oysters in the month of October ?—No, I think not ; the fishermen would have then to get in their harvest and take up their potatoes, and the oysters would remain there still.

48,420. Then it is partly from other circumstances as well as the advantage to the oysters themselves that you wish the present close-time to be continued ?—Yes ; but still it is of advantage to the oyster beds.

48,421. But the oysters have improved ?—Yes, and they have time for themselves still.

48,422. Has the number of men employed in fishing oysters increased ?—They have inceased a few, but not many.

48,423. Was there a good spat last year ?—Yes, it was very good.

48,424. Does not the yield of oysters on the beds vary much, taking one year with another, in consequence of a good or bad spat ?—Yes, according to a good season of spawning, and if they are particular in not taking small oysters.

48,425. Is that carefully looked after ?—It ought to be.

48,426. But is it ?—It is only looked after in a middling way ; I cannot say that it is well looked after at all.

48,427. Would the oyster fishermen themselves find a market for oysters below the size which it is lawful for them to take ?—Yes, they would.

48,428. Who would buy them ?—Some of the carriers who would drive them through the country. I have been in the habit for the last year or two of sending to Liverpool; I get rather a better price there, and they have a better sample of oysters. I think it is as beneficial to the dredgers not to take in the small oysters as to take them.

48,429. Are the dredgers here in the habit of taking small oysters ?—I am certain that if they were all to do so it would be very much to their disadvantage. I do not believe they would bring in any of the small oysters ; any oysters that will go through the ring they do not bring in.

48,430. Is it your habit when you take the dredges up to cull all those which are too small, and to throw them back ?—They take the dredge up and bring on board all that there is in it, but afterwards they take the shovel and throw out the small oysters and the filth.

48,431. Is that done by all the dredgers ?—Yes, unless some individuals may take a sample of small ones of no use to them or any other person.

48,432. Is there no other regulation at all in regard to your oyster-fishing ?—There was another regulation in our neighbourhood. We used to get oysters along the shore.

48,433. When the tide was out ?—Yes, at low spring tides the beds were not covered in July and August ; the water is warm then, and there were widow women and orphans in the neighbourhood who would go out and get 200 or 300 small oysters from the rocks, and they were able to get a small price for them ; that was very well for them when they were in necessity, and was of great service to the country. By the last regulation however they are not allowed to gather them or to sell them during the season. I strongly object to that, because for my own part I do not think it ever did a bit of harm or injury to the dredging part of the river to gather them on the shore.

48,434. That has been put a stop to ?—Yes, for a few years past. Before the regulation there were a good many women and children who were able to earn an odd shilling, but they have now been left destitute and cannot earn a penny.

48,435. Are the oysters in good condition then ?—The rock oysters are in good condition at all seasons of the year.

48,436. (*Mr. Lefevre.*) Why could they not be gathered in the winter ?—The spring tides do not allow them to be gathered then. They might be gathered at eight or nine o'clock in the morning, or at nine at night in the winter, but it is generally dusk and they could not get them. I myself and my father before me have often got a cargo of oysters which have been obtained in that way in the summer season ; we have bought them on the shore in July, August, and September, and have shipped them in September to Dublin.

48,437. Then you desire to have the opportunity of gathering these oysters in September ?—Yes.

48,438. (*Mr. Caird.*) That is entirely discontinued now ?—Yes, it has been for the last six years.

48,439. Is it not the case that within the last five and six years the yield of oysters has increased ?—It is.

48,440. Has the regulation had anything to do with that ?—I think not ; I do not think the gathering of those oysters ever did any harm to the oyster beds.

48,441. (*Mr. Lefevre.*) They must have been in the same condition in the summer as the other oysters ?—Those oysters I mention we used to get to the extent of about 10*l.* or 20*l.* worth and bring them into our own rings until the month of September, when they were sent up to Dublin in very good condition.

48,442. Then they would be in the same condition as the oysters you take out of the dredge ?—Yes.

48,443. They were not fit for eating at once, but you laid them down ?—Yes.

48,444. Do you think that the gathering of oysters ought to be allowed for the purpose of laying them down on other beds until the season for eating oysters arrives ?—It would do in that way, but I think it would be better if they had permission to sell their hundred or two of oysters and make the most of them.

48,445. You would allow them to sell oysters in the close months ?—Yes, I think it would do no harm to anybody ; and I will tell you another thing, there is nothing to be done with regard to the oysters except to prevent the lifting of small oysters by the dredges.

48,446. Do you recollect the oyster-fishing before the disappearance of the oysters in 1837 ?—Yes ; the fishermen think the oysters were very much injured by that gale.

48,447. Do you recollect the gale ?—I was in the south at the time.

48,448. Do you recollect the oyster-fishing before then ?—I do.

CARLINGFORD.

P. Elmore.

15 Sept. 1864.

48,449. Were they in great abundance then?—They were not more plentiful than they are now.

48,450. In those times were the people allowed to dredge all the year round?—They did not fish all the year round; they began to fish on the first Monday in November, and they went on until the first Saturday in March. We had seen our error; we saw our oyster beds reducing, and we thought it best to have a regulation made.

48,451. Do you think that in those times the taking of small oysters diminished the total quantity you could take?—I am certain that that was the cause of it. We had no rules or regulations in those days, but we dredged away and sold all we got. We could get three prices for the oysters in the one ring, but now we have only one price.

48,452. You say there has been a good appearance of herrings here this year?—Yes.

48,453. How long is it since you had a good year?—I suppose it will be 16 years ago. We have not had a better appearance for the last 16 years than we have now. I mean inside the bay.

48,454. But every year you have had them outside?—Yes.

48,455. But it is 16 years since the herrings appeared in great abundance up the bay?—We used to get a few of them, but not so many for the last 16 years as we got this morning.

48,456. How long does the herring season last here?—Generally until November.

48,457. From September?—From any time from Lammas when we can see an appearance of herrings. If they get them they continue fishing.

48,458. Have you herring nets of your own?—I have got a new train and a part of one.

48,459. What do you consider that you can earn by the oyster-fishing during the season?—Some seasons we can make 5*l.* or 6*l.* by it, clear, from November to the first Saturday in March.

48,460. Five or six pounds?—Yes, and 7*l.* Some boats will make more than others. You may have a better dredge than I, and may get more.

48,461. Do you consider that 6*l.* would be the average?—Yes, that is as near as I can go.

48,462. How many dredges do you work in your boat?—One dredge; our ground is very soft.

48,463. How many men are there in each boat?—Three, but some of the big fishing-yawls have five.

48,464. Is one more occupied in dredging?—Yes, and one is engaged in culling the oysters. The chief thing wanted here is to prevent the dredgers from taking the small oysters.

The witness withdrew.

H. Elmore.

HENRY ELMORE called and examined.

48,465. (*Mr. Caird.*) Have you heard the evidence given by the previous witnesses?—Yes, and I think that all they have stated is quite correct.

48,466. Do you desire to add anything to what has been stated by the previous witnesses?—I do not know of anything else that I could say.

48,467. You agree generally with what they have stated?—Yes.

48,468. Is there any point upon which you desire to offer an explanation?—It is our opinion,—the opinion of the whole of us,—that we should like to maintain the short season, and that we ought to cull the small oysters, and put a stop to the taking of the small oysters.

48,469. You desire regulations to restrict you upon those points?—Yes; if we are allowed to take the small oysters we shall ruin the place altogether.

48,470. You would restrict the fishing from March until November?—Yes.

48,471. That is the opinion of all the fishermen in this lough?—Yes, we think the season is long enough for the number of men employed in it. The fishery would not bear a longer season, they would work all the oysters out if they were eight months fishing them. The oysters also improve in the months which have been extended for a close-time.

48,472. You find the oysters in better condition?—Yes.

48,473. Have you seen the oysters gathered on the rocks during the summer months?—Yes.

48,474. Are they not in good condition?—Yes, in the summer.

48,475. Would they not be in good condition on the banks at the same time?—I daresay they would.

48,476. Are the rock oysters of the same size as the oysters that are dredged?—No, they never grow as large as those which are dredged.

48,477. Are the oysters which are found here of the same size as those which are found in Belfast Lough?—They are pretty large here, but there are some parts of the river where they are far larger than others. On the soft ground they grow the best.

The witness withdrew.

P. Elmore.

PATRICK ELMORE recalled and examined.

48,478. (*Mr. Caird.*) The close of your fishing for oysters is the 1st of March?—We generally stop upon the first Saturday in March.

48,479. Are you in the habit of fishing the rings in which you deposit the oysters after the close of the season?—If we catch 50,000 or 60,000 we are in the habit of laying them down in our rings, and we cannot get them until the close season is over.

48,480. Does anybody prevent you from taking them away from those rings when they are not upon the oyster beds, but in the rings?—Yes, the Coast-guard prevented us last year.

48,481. Would it be very convenient for the oyster fishermen here that they should be allowed a certain time within which they should be able to take away the oysters they have put within the rings?—Yes, without that they get no market for their oysters at the latter end of the time; nobody can buy them.

48,482. What period would be sufficient to enable you to get them all away?—We should want until the latter end of April.

48,483. You would require more than a month?—Yes, perhaps six weeks. A man cannot sell his oysters all in one day; he must wait for a market.

48,484. You desire to have the power of shipping the oysters after the close of the season; I mean those oysters which you have caught from the oyster banks during the open season?—Yes.

48,485. That would be convenient for the fishermen here?—Yes.

48,486. (*Mr. Lefevre.*) What was the price of the oysters last year?—The price during the season last year was from 23 to 25 and 26 shillings. My brother bought 500*l.* worth and could not get them away.

The witness withdrew.

Lieut. M. Knox, R.N.

Lieutenant MARCUS KNOX, R.N., recalled and examined.

48,487. (*Mr. Caird.*) It has been stated by the fishermen that it is a hardship upon them that the oysters they catch up to the close of the season, and which they allege they deposit in rings until they can be sent to the market, are not allowed to be sent away after the regular season for catching oysters has

CARLINGFORD.

Lieut. M. Knox, R.N.

15 Sept. 1864.

closed. Are you aware if there is any objection to allow them a longer time for sending their oysters away?—It is not allowed at present.

48,488. (*Mr. Lefevre.*) Do you consider that the first byelaw laid down by the Commissioners in reference to the Carlingford fishery prohibits it?—I consider that it does—it prohibits me from allowing any removal after the 1st of March.

48,489. You so interpret it?—Yes.

48,490. Do you consider it necessary that it should be so carried out?—It ought to be carried out in order to keep a close season. If the oysters in those rings were left open for another month they might as well be left open altogether. I think there would be no objection to allow a week or a fortnight for the purpose of enabling them to sell their oysters, and to prevent them from forcing them upon the market at a low price.

48,491. You think without any disadvantage to the fishery the fishermen might be allowed an extension of a week or ten days for the purpose of getting the fish they have already caught sent to the market?—Yes, I think so, but no other oysters should be caught and put there.

48,492. You think it would be objectionable if it were extended to a greater length than that?—I think it would lead to fishing clandestinely.

48,493. It would lead to fishing on the banks after the season had closed?—Yes, both to fishing and dredging clandestinely.

48,494. The byelaw to which you refer is this: "That between the 1st day of March and the 1st day "of November in any year it shall not be lawful for "any person to dredge for, take, catch, or destroy any "oysters, or oyster brood within the said lough of "Carlingford, or off or from any of the shores or rocks "of the said lough, and any person offending against "this byelaw shall for each such offence forfeit and "pay a sum of five pounds?"—Yes.

48,495. You consider it comes within the words "take off or from any of the shores?"—Yes, it comes within the meaning of that byelaw.

48,496. Have you ever taken the opinion of the Commissioners upon it?—No.

48,497. Has it come within your observation that the oysters which have been left in those rings, have remained unsold at the end of the season?—There were some left there last year. They made a representation to me and I allowed them a week upon my own responsibility.

48,498. Did they get them away?—Yes.

48,499. At the commencement of the week were there a considerable number of oysters in the rings?—No, only a few; there were about two or three bushels and the men sunk them I think.

48,500. Do you think there has been any dredging at night after the season has been over?—There was.

48,501. Was there during the week you speak of?—I cannot tell, but I think about that time there was. I had information that there had been, and I myself heard two or three boats pulling in the lough one night. I went off after them, but the boats got away. I went off myself to look after them. This year before the end of the season I will refer the matter to the Commissioners and ascertain from them how I am to interpret it.

The witness withdrew, and the inquiry was adjourned until the 16th of September, at Dundalk.

Dundalk, Louth, Friday, 16th September 1864.

PRESENT:

J. CAIRD, Esq., M.P. (Chairman). | G. SHAW LEFEVRE, Esq., M.P.

DUNDALK.

T. Maginnis.

16 Sept. 1864.

THOMAS MAGINNIS called and examined.

48,502. (*Mr. Caird.*) Have you long been a fisherman here?—It is 25 or 26 years since I was first able to go to fish.

48,503. Are you well acquainted with the whole of the fisheries in Dundalk Bay?—Yes, from Clogher Head down to the Boyne with long lines.

48,504. How many boats are there engaged in fishing here?—There are eight boats belonging to our place; there are seven at Giles's Quay, and at Annagaussen there are five or six.

48,505. Can you tell us the number of boats engaged in the fishing all round the bay?—There are about 15 or 16 at Giles's Quay, eight of which are at the line-fishing, and there are six at Annagaussen, and 14 or 15 fishing off Clogher Head.

48,506. There are between 30 and 40 altogether?—Yes.

48,507. How many men are there in each boat?—Between five and six.

48,508. Are they all long-line fishermen?—Yes.

48,509. Is there no other kind of fishing adopted in the Bay of Dundalk except line-fishing?—No.

48,510. Twenty years ago were there more boats fishing in the bay than there are now?—Yes, double what there are now.

48,511. In your opinion the number of boats engaged compared with what they were 20 years ago has diminished?—Yes, it has.

48,512. Has the same kind of fishing always been adopted here?—No.

48,513. Have there ever been any trawl fishermen fishing in the bay?—No. There was one trawl-boat at Dundalk once.

48,514. Is that boat still here?—No.

48,515. Why is that; is it in consequence of the regulation which has been adopted to prevent trawling in the bay?—I suppose so.

48,516. Was the bay much trawled before tha regulation?—Yes, I have seen eight or nine boats in it at one time.

48,517. Were they boats belonging to the place?—They were boats from Clogher Head and Balbriggan.

48,518. Of what size were they?—From 10 to 15 tons or more.

48,519. How long ago is that?—Ten or 12 years or less.

48,520. When was the restriction imposed by the board in Dundalk?—In 1851.

48,521. Since that time has there been no trawling inside?—No.

48,522. Can you tell us if the supply of fish has increased or diminished since 1851 in this bay?—The fish are not as plentiful in the bay as they were at that time.

48,523. There are not as many fish to be got in the bay now as there were before the restriction was imposed?—No, nor in any place out in the deep. We cannot get them more there than in the bay.

48,524. Did the trawlers at that time catch the same description of fish as you did with the long-lines?—Yes.

48,525. Do you get turbot and soles?—Turbot, soles, plaice, and dabs.

48,526. The same kind of fish?—Yes.

48,527. Have you trawled in the bay?—No, but I have been with them. We go out to protect our lines.

48,528. Is the bottom soft and easily trawled?—It is.

DUNDALK

T. Maginnis.

16 Sept. 1864.

48,529. Do you think, as a long-line fisherman, that it has been of advantage to you to have the restriction established against trawling in the bay?—I think it would be a great improvement to the fishery if there was never a trawl-boat in the bay. The haddocks spawn in the deep, or at any rate we calculate that they do.

48,530. Do they trawl outside?—Yes, outside beyond the headlands.

48,531. Beyond the line of restriction?—Yes.

48,532. How many trawl there now?—Twenty and 30 in a stretch.

48,533. Do they ever get foul of your lines?—Yes, they have taken the lines at Clogher Head. They have taken many lines both this season and last.

48,534. Do you fish on the same ground as that upon which they trawl?—Yes.

48,535. Do you get plenty of fish there now?—We used to get a power of fish, but we do not get it now. We get an odd whiting and a few codfish.

48,536. Then doing away with trawling has not increased the supply of fish in the bay?—It is the trawl-boats that have done away with the fishing altogether.

48,537. There has been no trawling since 1851?—Not in this bay, but what signifies that?

48,538. Do you go far out to sea?—We go in 21 fathoms of water.

48,539. How many miles from the headlands?—About nine or ten from the Mourn shore.

48,540. Do you find plenty of fish when you go far out?—Indeed we do not.

48,541. Is there any particular kind of fish that has decreased more than another?—Yes, the haddocks have gone away altogether.

48,542. Do you get as many cod as you got formerly?—No, nor one-half as many.

48,543. Is the quality of the fish as good?—Yes, but we get very few of them. We used to get 50 or 60 some nights, and now we only get six, seven, or eight.

48,544. Is the price the same as it was formerly?—The price is dearer and the fish are still getting dearer. We have been getting 15*s.* and 16*s.* a score for haddocks, and we used to sell them for 10*d.* and 1*s.*

48,545. Are your boats better?—Yes.

48,546. And your lines longer?—Yes, we have better lines altogether.

48,547. The whole of your tackle has improved?—Yes.

48,548. (*Mr. Lefevre.*) What is the size of your boats now?—They are good-sized yawls.

48,549. How many men are there in them?—Five or six. They are about 23 or 24 feet long.

48,550. What sail do they carry?—About 30 yards of lug sail.

48,551. (*Mr. Caird.*) A single lug sail?—Yes.

48,552. You are a herring fisherman also?—Yes, sometimes, but only very seldom.

48,553. Has the herring-fishing within the last 20 years improved or diminished?—They are scarcer than they were 20 years ago; they are a good deal scarcer in the bay.

48,554. Is there not a good herring-fishing going on now?—Yes, at present.

48,555. At this moment?—Yes, and they are fine herrings too.

48,556. Have you been out at the herring-fishing?—I have not been out yet.

48,557. Where are the boats getting them now in the bay?—Near Giles's Quay, in three fathoms of water.

48,558. Are they large shoals of fish?—Yes, they come in great quantities. Some of the boats have got 14 and 20 maze.

48,559. Then the prospect of the present season is a good one?—Yes, it is.

48,560. Does it vary from year to year?—It does.

48,561. Has there been no regular falling off in the herring-fishing such as you have described in the white-fishing?—No.

48,562. From what direction do the shoals come?—From the Carlingford shore, and they go in a southerly direction.

48,563. How long do they remain on your shore here?—They stop here sometimes until near Christmas.

48,564. Do they come in July or August?—They always come in the latter end of August.

48,565. Then you have two or three months fishing?—Yes.

48,566. Is it a very profitable fishing for the fishermen?—Yes, it is the best they have.

48,567. The best fishing you have?—Yes.

48,568. Is it better than all your other white-fishing?—It is indeed.

48,569. Do boats come from other parts of the country?—Yes, from all parts, from Clogher Head.

48,570. Do the Scotch and Manx boats come here?—Very few.

48,571. Is it only the Irish boats?—Yes, only the Irish boats fish here.

48,572. Do you fish entirely with drift nets?—Yes.

48,573. Do you never use a seine net for catching herrings?—No.

48,574. Have you any regulations with regard to the time at which you shoot your nets?—Yes.

48,575. What are they?—We do not shoot them until after sunset.

48,576. You never shoot before sunset?—No.

48,577. Is there anybody to enforce regulations as to that?—Yes.

48,578. Who?—The men themselves do it.

48,579. The men agree among themselves not to shoot before sunset?—Yes.

48,580. They believe it would be injurious to the fishing if they did?—Yes.

48,581. And they generally observe that rule?—Yes, it is never broken.

48,582. When do they take up their nets?—Before sunrise.

48,583. Is there any officer to enforce any regulation among you?—No, there is not.

48,584. Is there anyone to inspect the size of the mesh of your nets?—Yes.

48,585. Who?—The Coastguard inspect them sometimes.

48,586. What is the size of your herring nets?—I do not know what the exact size is; it is the right size.

48,587. Is it an inch mesh?—Yes.

48,588. Do you buy all your nets from Scotland?—No, we do not, but we have been getting them lately from Scotland, and they are the best nets.

48,589. Are they made of soft twine?—Yes.

48,590. Do you use flax nets?—Yes.

48,591. Do you make them yourselves?—No, they are made in Carlingford and sold.

48,592. Have you any lobster fishery in the bay?—Yes.

48,593. Is it a good one?—Yes.

48,594. Is it increasing?—They are getting them plentifully, but there are only a few men fishing them.

48,595. Is it not a profitable fishery?—It is, but the man the land belongs to will only allow certain people to fish for them.

48,596. Are they only found on certain parts of the coast?—Yes.

48,597. On a certain person's land?—Yes, where the coarse ground is.

48,598. Does he charge anything for fishing?—No.

48,599. He only gives leave to certain people?—Yes.

48,600. Is the supply of lobsters increasing or diminishing?—They have been very plentiful this season.

48,601. It is rather a privilege, then, for a man to get leave to fish for those lobsters?—It is a very good fishery.

48,602. Do the fishermen make money by it?—Yes.

48,603. Is there plenty of bait to be had here for fishing?—Yes.

48,604. What kind of bait?—Mussels or lug.

48,605. There is no want of it?—No; mussels are rather scarce.

48,606. Is the condition of the fishermen better than it was 20 years ago?—It is not; I think it is a deal worse.

48,607. Is there any suggestion you could make to us to improve the condition of the fishermen by enabling them to make a better business of it?—I do not know.

48,608. Is there any complaint you have to make as to any restriction upon you?—No, except that we think the trawl-boats are doing away with the spawn of the haddock.

48,609. You imagine they do you harm?—Yes, we think they do away with the spawn of the haddock.

48,610. Have you ever seen them taking up spawn?—Yes, I think I have. I have been to see their trawls when they have been going away with our lines. I have seen them haul the trawl in, and I have seen a great deal of spawn upon it when it has been hauled up in the bay.

48,611. How long is it since they came off your coast to trawl?—Fourteen or 15 years ago they were very numerous here; they came from all parts to fish here.

48,612. Are they numerous here now?—Not here, but in the deep they are.

48,613. They are numerous off your shore outside?—Yes.

48,614. Was it the Dublin Bay fishermen who came here?—Yes, and the Balbriggan fishermen.

48,615. Have they been in the habit of coming here for 15 or 16 years?—Yes.

48,616. Were they in the habit of coming previous to that time?—Not as many of them as now, not half as many as now.

48,617. Are they increasing in number?—They are.

48,618. Then if they are increasing in number they have had a good business of it?—They will not long have a good business of it, they will soon get it all scraped away.

48,619. (*Mr. Lefevre.*) What is the size of the vessels they have?—From 50 and 60 to 70 tons.

48,620. Are they much larger than those vessels that came trawling in the bay?—Those large boats did not come here.

48,621. They were not in the bay?—No, they were outside.

48,622. Do you think the byelaw sufficient to prevent trawling in the bay?—Yes, it has prevented it altogether in the bay.

48,623. Do you think that the large class of trawlers do you harm by trawling outside?—Yes, I think they do; they do away with the spawn of the codfish and haddock.

48,624. What depth of water do they trawl in?—In 26 and 27 fathoms.

48,625. Do you think the cod and haddock spawn out in that depth of water?—Yes, I think so. They never spawn in shoal water. It is generally outside that they are caught.

48,626. I think you said that on one occasion you went to cut away the trawls inside the bay?—Yes.

48,627. When was that?—When they had liberty to trawl in the bay.

48,628. How long ago?—In 1850 or 1851.

48,629. Before the regulation was made?—Yes, earlier than that a good while. They were going to sink us in the bay.

48,630. When did you observe that the diminution of the haddock first began?—The haddocks were very numerous in this bay always.

48,631. When did you observe them falling off?—They have been falling off for the last two or three years very much indeed; there are none at all.

48,632. Have they not been falling off longer than that?—No.

48,633. Have they fallen off as much within the bay as outside?—No, there was a time when there was always a good pull of very large haddock in the bay, but they are all away now. We used to take haddock of 3 or 4 lbs. weight in the deep, and there are none at all there now.

48,634. Have the cod been falling off?—Yes.

48,635. When did you observe the falling off to begin?—Three, four, or five years ago.

48,636. Before that time had you plenty of them?—Yes.

48,637. And plenty of haddocks too?—Yes.

48,638. Did you give evidence in the inquiry previous to the making of the byelaw?—I gave evidence 12 months ago.

48,639. Do you recollect the inquiry taking place here in 1851?—No, I do not.

48,640. Was there an inquiry here 12 months ago?—Yes, there was.

48,641. What was it about?—About a company here who wanted to set up a trawling boat. We got notice that the commissioners intended to inquire into the state of the fisheries here. They came down from Dublin.

48,642. Was the proceeding on the part of the company opposed by the fishermen?—Yes, men from all parts belonging to the long-line fishery opposed it.

48,643. Where do you send your fish to market?—It goes to Dublin and Liverpool.

48,644. Does it come to Dundalk?—Yes.

48,645. Is it bought upon the quay?—Yes, by men who send it to all parts.

48,646. Do you fish inside the bay or outside?—In the winter season I fish outside the bay mostly, but in the summer time I fish inside.

48,647. When do you begin to fish inside?—In March.

48,648. You fish throughout the summer in the bay?—Yes; in the winter for cod, whiting, and haddock.

48,649. I think you told us that you caught flatfish?—Yes.

48,650. Where do you catch them?—Inside the bay.

48,651. With long-lines?—Yes.

48,652. What do you catch?—Fifty or 60 pair of soles sometimes.

48,653. Is that very rarely the case?—No, they are very plentiful. Four or five years ago they were very numerous.

48,654. They have been numerous for the last few years?—Yes; but there are fish that cut away our lines. The dog-fish take them away and cut away the lines altogether.

48,655. In what depth of water do you take soles with the long-lines?—In from 14 or 15 up to 16 or 17 fathoms of water.

48,656. Do you ever take soles outside the bay?—Yes, but only very few of them. We may get a few pairs.

48,657-8. What price have you been getting for soles this last season?—We sold them at 6*d.* a pair some years ago when they were plentiful, but we can get 2*s.* or 2*s.* 6*d.* for them now.

48,659. Do the fishermen own any land?—No, they have no land or anything except the houses they live in.

48,660. Are they fishermen all the year round?—Yes, they have nothing but what they get by fishing.

48,661. How long is it since you had a good herring season in the bay before this year?—Last year was a pretty good season.

48,662. Before that I think you told us the herrings had not been numerous for some time?—The season before last year was a bad season, and so also was the season before that.

48,663. It is only occasionally that the fish come into the bay in great numbers?—That is all.

DUNDALK.

T. Maginnis.

16 Sept. 1864.

48,664. Do you often go outside the bay for them?—Not often.

48,665. You wait till they come in the bay?—Yes.

48,666. Do you go into Carlingford Bay for them?—Yes, and off Clogher Head.

48,667. And into Dundrum Bay?—Yes.

48,668. Do you fish with the long-line in Dundrum Bay?—No, all by the side of it.

48,669. Are there any long-line fishermen in Dundrum Bay?—Yes, there are a power of boats fishing there with long-lines.

48,670. Can you say how many?—I have seen 12 or 14 and even more than that at one time fishing.

48,671. There is no want of fishing in the bay?—No.

48,672. Do you find herrings here in the winter at all?—Yes, we see them. The codfish throw them up when we take them in the boat.

48,673. Do you go out with the drift-nets in the winter?—No.

48,674. Then do you only see the herrings when the codfish throw them up?—Yes.

48,675. Where do you get the codfish at that time?—In eight or nine fathoms of water, outside the bay.

48,676. (*Mr. Caird.*) You say the best time for fishing the bay with your long-lines is the winter?—Yes.

48,677. Have you been in danger of having your long-lines cut by the dogfish?—Yes, we could not fish at this season of the year; they destroy our lines.

48,678. You do not get as good a fishing of soles as you did formerly when you used your lines in the night?—No.

48,679. But that is not from any want of soles, but because you cannot fish properly for them?—We could get more soles if we could fish for them at night, but we cannot do it on account of the dogfish.

48,680. You think there are plenty of soles in the bay if you could catch them?—I don't think they are so plentiful as they were, or near it.

48,681. (*Mr. Lefevre*) Do you mean that there is the same falling off inside the bay as outside?—Yes, with regard to sole and haddock.

48,682. And also with regard to cod?—There used to be a deal of haddock, and we get a deal of haddock and cod after a gale.

48,683. Do you catch any codlings in the bay?—Yes, a great many.

48,684. Of what size are they?—Fourteen pounds weight, and from that down to 6 and 7 lbs., and from that down to 2 and 3 lbs.

48,685. As low as 2 lbs.?—Yes.

48,686. What length would a codling of that size be; would it be less than a foot long?—One of 2 lbs. would just be about a foot long.

48,687. Is that the smallest size you get?—Yes.

48,688. When do you catch them?—From about this time until April.

48,689. In the bay?—Yes.

The witness withdrew.

N. Crosby.

Nicholas Crosby called and examined.

48,690. (*Mr. Caird.*) You are a fisherman?—Yes.

48,691. Do you fish from the same village as the previous witness?—Yes, I do.

48,692. Do you agree generally with the evidence he has given?—I suppose so.

48,693. Is it the result of your experience that the fishing in the bay has diminished?—It is more plentiful.

48,694. More plentiful?—Yes, it is more plentiful than when the trawlers were in the bay.

48,695. When did the trawlers cease to come here?—Since the time of the restriction, whenever that was.

48,696. Since the time the restriction was passed?—Yes.

48,697. (*Mr. Lefevre.*) That was in 1851?—Somewhere about that time.

48,698. (*Mr. Caird.*) Has the quantity of fish caught in the bay increased since that time?—Yes, flat-fish, plaice, and turbot also.

48,699. Are the fishermen getting a good fishing now?—Yes.

48,700. Do the people of Dundalk complain that they do not get fish here?—Yes, but we send them off to Dublin and Liverpool.

48,701. Is it because you can get a better market for them elsewhere that you send them to other places?—Yes.

48,702. Has the quantity of fish caught here increased for the last 10 years?—Yes, the quantity of plaice has.

48,703. Is plaice the only kind of fish that has increased much?—Yes, but we get plenty of cod from this time of the year up to Candlemas.

48,704. Do you catch the plaice on your lines?—Yes, in the daylight; they will take no bait at night.

48,705. The previous witness said he made the best fishing at night?—There is a time of the year for that.

48,706. Do you find that you make the best fishing in the daytime?—Yes, with regard to plaice-fishing. For round fish, for cod, haddock, and whiting, it is best at night.

48,707. What description of fish is most plentiful in the bay?—Do you mean in the winter time?

48,708. I mean all the year?—In summer, mullet, salmon, trout, and plenty of eels.

48,709. Do you use seine nets in the bay?—There are not many of them here.

48,710. What is the size of the mesh of those nets?—Seven inches.

48,711. Do you get any fine cod in the bay?—Yes, we do.

48,712. Have they increased?—They are not as plentiful as they were at one time, or near it.

48,713. When did they begin to diminish?—Four or five years ago they were more plentiful than they are now.

48,714. Do you get turbot in the bay?—Yes, they have been very plentiful in the bay for two or three years.

48,715. Are they plentiful now?—Yes, when the water is muddy.

48,716. Are they of fine quality?—Yes.

48,717. Has the number of fishermen increased in the bay in consequence of the fish being plentiful?—There are twice as many as when I first went.

48,718. Then the quantity of fish caught here is increasing?—It is with regard to the plaice-fishing.

48,719. And codfish also?—Codfish are not as plentiful as they were four years ago.

48,720. Do you follow the long-line fishing all the year round?—Yes, the whole year round.

48,721. You have no other occupation?—Not a bit. I have been fishing with long-lines since I was 14 years of age.

48,722. Is the price you get for your fish now as good as it was then?—It is as good as it was 14 years ago.

48,723. It is no better?—No, not a bit. If we get haddocks in the winter time we get a good price for them.

48,724. Have you any complaint to make to us in regard to any mode of fishing practised here which you think injurious to you as a fisherman?—When the trawl-boats were coming into the bay they destroyed the fish and the lines likewise.

48,725. But there are no trawl-boats coming into the bay now?—No, not one.

48,726. There have not been since the year 1851?—No; but I have seen them taking our lines and dragging them with the tide.

48,727. You have no complaints of that kind to make now?—No.

48,728. Have you any other complaint to make?—No; I have summoned them for taking my lines and robbing the boat's crew. I caught them in the fact.

48,729. Is there any mode of fishing that destroys the brood or spawn of the fish?—No, nothing in the world. There were bow-nets used in the bay, but they have been done away with.

48,730. What were they?—They were hauled against the flood. They would take fish as small as a button. They fed the pigs with them.

48,731. You have no complaints of that kind to make now?—No.

48,732. (*Mr. Lefevre.*) You think that since trawling has been done away with, the quantity of plaice has been increased?—Yes.

48,733. But that of other fish has not?—No; two or three years ago the haddock were very plentiful, but for the last three years they have been getting scarcer and scarcer every day.

48,734. They have disappeared in the bay as well as outside of it?—Yes.

48,735. With regard to the soles, have they decreased?—They are not as scarce as they were four or five years ago, but we cannot work for them on account of the dogfish.

48,736. Do you find the dogfish close in-shore?—They come into the bay when we are fishing in the summer season.

48,737. Do they come in after some other fish?—They come in after every sort of fish; they are the most ravenous fish we ever see.

48,738. How many soles have you caught in a night?—Thirty pairs.

48,739. How many plaice?—Seven or eight score, some of them large and some small fish.

48,740. Do the trawlers bring their fish into Dundalk?—Yes.

48,741. Are there as many flat-fish brought in by the long-line fishermen as there were?—Three times as many.

48,742. What time of the year used the trawlers to fish in the bay?—Generally from the 1st of June until the latter end of November.

48,743. In the winter?—No, they did not fish in the winter time.

48,744. Do you think that trawling outside the bay does you any harm?—Sometimes it does, if they are fishing when the fish require peace. Plaice-fishing is over about the month of November. After that you would not get one if you were to offer a sovereign for it.

48,745. Do they leave the coast?—No, they lie up and live on suckers.

48,746. They will not take your bait?—No. When the haddock fishery begins, as soon as the hard weather comes we follow them into the deep.

48,747. What harm does trawling outside do you?—If we go there at two o'clock in the morning and work our lines, the trawlers come and sweep them away when we are not watching them.

48,748. Do you often fish at night in the winter time?—Yes.

48,749. Did you lose any this last winter?—No; I was never in much danger in that way.

48,750. You have not lost any yourself?—No.

48,751. Then with that exception you do not think the trawlers do you much injury?—They would not do us much injury if they would not come upon our lines. At the same time they take away and catch the fish we should get.

48,752. They take the fish you would get?—They take any kind of fish, and spawn especially, if the net is dirty. They will take it then, no matter how large the mesh is. If the net happens to be dirty it will sweep up all the spawn.

48,753. Have you seen them take the spawn?—Yes.

48,754. What kind of spawn?—Codling spawn and black sole spawn.

48,755. You mean small fish?—Yes.

48,756. In what depth of water do they take the young cod?—In about 25 fathoms; they would take it anywhere it is. They would pick up a button from the bottom.

48,757. At what time of the year?—Any time they put out their net. They would take anything from the bottom.

48,758. Have you observed any time of the year more than another when the trawlers take small fish?—They take them any time they put their net out; they take them every time they come across them.

48,759. But is there any particular time in which they take more small fish than at another time?—In the spring time of the year they take most; that is the time the fish spawn.

48,760. Have you even seen them haul up their trawls?—Yes.

48,761. Have you been trawling yourself?—No, but I have often come alongside of them when my lines were in danger of being taken.

48,762. What proportion of small fish would they take up?—A hundred in number.

48,763. A hundred small fish?—Yes.

48,764. How many big fish?—Sometimes about the same number.

48,765. A hundred big fish and a hundred small fish?—Yes, and sometimes not half of it. If they came upon ground that had not been trawled upon before they would take more than if they were working upon ground which had been trawled upon before.

48,766. What time of the year are the trawlers in the greatest number off here?—They never trawl until the nights begin to get short.

48,767. Not in the winter?—No.

48,768. What is the length of your long-line?—It has 400 hooks.

48,769. How many fathoms long?—There is a fathom and a half between every hook.

48,770. What bait do you use?—Wórm, oyster, and mussel.

48,771. What are the oysters you use for bait?—They are in the sand, a foot and a half deep; they are what they call sligs or cock oysters.

48,772. (*Mr. Caird.*) Do you find that they make very good bait?—Yes, they are very good bait.

48,773. (*Mr. Lefevre.*) What do you catch the sole with?—With worms.

48,774. (*Mr. Caird.*) You say you do not get plaice in the cold weather?—No, we do not.

48,775. Is that during the whole of the winter months?—We get them for about five weeks before St. Patrick's-day, and for about a month after November.

48,776. Do you get them up till Christmas?—Not until five weeks before St. Patrick's-day, and then they go down to the sand again.

48,777. Do you think they are lying in a dormant state all the winter?—They are.

48,778. They cannot be taken at that time with bait?—No, they would not take bait.

48,779. Can they be taken in any other way?—I believe the trawlers would take them.

48,780. When you cannot take them?—Yes.

48,781. Is there a large supply of them to be found in the winter time if they could be taken?—There is.

The witness withdrew.

JAMES M'GROWTHER called and examined.

J. M'Growther.

48,782. (*Mr. Caird.*) Are you a fisherman here?—Yes.

48,783. Have you long been acquainted with the fishing in Dundalk Bay?—I have been acquainted with it for about 20 years.

48,784. What mode of fishing do you practise?—Long-line fishing.

48,785. Has the supply of fish increased or diminished within that time?—I don't know whether it has diminished, but there are a good many more

DUNDALK.

J. M'Growther.

16 Sept. 1864.

practising it. There are three fishing now for one that there was then.

48,786. There are three times more people fishing now than there were 20 years ago?—There are that number at Black Rock anyhow.

48,787. Does each boat make as good a fishing as it did then?—I think it does in general.

48,788. From that we are to conclude that there is a great increase in the fishing here?—Haddocks have decreased for a while past, but we got haddocks here the year before last when none were got round the coast of Ireland.

48,789. Have any been got this year?—No, not yet.

48,790. Is not the time come yet?—No.

48,791. Were there good haddocks here last year?—Yes.

48,792. Had they disappeared in other parts for some time previous to that?—The small haddock disappeared, but we have got some large haddock which have resorted to the bay for some time.

48,793. Has the cod-fishing continued as plentiful?—No.

48,794. Is the fishing for plaice better?—The plaice are fully as good.

48,795. How is it with regard to turbot?—Turbot are fully as good as they were then.

48,796. Do you remember the time when the restriction in 1851 was established against trawling in the bay?—I do.

48,797. Has it had any effect upon your fishing as a line-fisherman?—I think it did us a great deal of good. It was very right that a stop should be put to trawling.

48,798. Do you think the bay has yielded as large a quantity of fish since trawling was put a stop to?—Yes, it must have done so, because the trawlers take away a great deal of the fish from us.

48,799. But putting together trawl and line-fishing, do you think the fishing with the line alone yields more fish than both together did before that restriction was enforced?—Yes, I suppose it does, because there are more following it now than ever did.

48,800. There are more at it now?—Yes.

48,801. There are more getting a good living out of it?—They are just getting support.

48,802. Are the fishermen in better circumstances than they were 20 years ago?—I believe that 20 years ago they had a good deal more help than they have now. They had plenty of potatoes then and they have none now.

48,803. Do the fishermen here not have potatoe ground?—Yes, but the potatoes have been bad for many years.

48,804. Last year they were pretty fair?—Yes.

48,805. And this year they look well?—Yes, and I hope they will continue to do well.

48,806. Is it a matter of great importance to the fishermen that there should continue to be a good crop of potatoes?—Yes.

48,807. They derive a good deal of their assistance from that?—Yes.

48,808. Have you observed trawling vessels when they are trawling outside the bay?—I cannot say that.

48,809. Do you ever go alongside?—No, they keep far off.

48,810. Have you never been alongside and seen any of them raising the trawl?—I have been close to them.

48,811. Have you ever noticed what kind of fish they had in the trawl?—No.

48,812. Do they bring up spawn or young fish?—They must bring it up.

48,813. But you have not seen it yourself?—No, I have not, but they cannot miss it.

48,814. Do you fish with the long-lines outside the bay?—Sometimes in the winter season.

48,815. On the same ground as that upon which they trawl?—Yes.

48,816. Do they trawl outside in the winter season?—Yes.

48,817. Do you find that when you are line-fishing upon the same ground as they are trawling that their trawl-fishing injures your line-fishing?—Certainly it does.

48,818. Do they get many fish outside the bay?—I cannot tell you that indeed.

48,819. Are there any oysters here?—No, except that kind of oyster we use for bait.

48,820. Are there any oysters for sale as food?—No food is made of those oysters; the poor men use them for bait.

48,821. Do they get abundance of them?—Yes, they do.

48,822. Are they dug from the sand?—Yes, with a spade.

48,823. Have you any complaint to make with regard to any regulation at present in force in regard to the fishing in the bay?—I have nothing to complain of if the same regulations are kept up which exist at present.

48,824. You desire to see them kept?—Yes.

48,825. You think they are for your benefit as a line-fisherman?—Yes.

48,826. Is it a fact that you do not get any plaice during the cold months in the winter?—We get them from the latter end of July until November; then there are no plaice got from the latter end of November or December till the latter end of July.

48,827. That is a long time?—Yes.

48,828. Between six and seven months?—Yes.

48,829. At that time do the trawl fishermen get them?—I do not know, but the plaice are not in season then. I suppose they would get them.

48,830. If plaice were caught at that time do you not think they would be of use for food?—No, I think not.

48,831. Have you yourself ever eaten them at that time?—We get none of them at that time except a few small things which are of no use. It is the haddock and codling we get then.

48,832. Are you a fisherman only, or have you any other occupation?—I have no other occupation.

48,833. All your life you have been a fisherman?—Yes, nearly all my life.

48,834. For a number of years?—For about 20 years.

48,835. You find regular employment all the year round in fishing?—That is all the employment I have to support a family.

48,836. (*Mr. Lefevre.*) You belong to Black Rock?—Yes.

48,837. How many boats are there there now?—We had eight, but there have been two broken up in the place, so that there are only six now.

48,838. How many men are there to each boat?—There are six to two or three, and five to the rest. There are six to three, I believe.

48,839. Are there 30 men?—More.

48,840. How many?—Nearly 50, I believe. There are young men fishing who are not counted in the boats at all, but I am sure there are 50 altogether.

48,841. Are there men belonging to Dundalk who used to trawl?—Yes, but there are none of them here. I don't see any of them here to-day, although they came here in opposition to us the last time the commissioners were down here.

48,842. The proposition which was made then was opposed by the line-fishermen?—Yes.

48,843. Do you bring all your fish into market at Dundalk?—Yes, the fish are generally sent here, except in the winter time, when if the haddocks are plentiful they are sent away to Dublin and Liverpool.

48,844. The general supply is sold on the quay at Dundalk?—No, it is brought into market here.

48,845. And sold in the market-place?—Yes.

DUNDALK.

J. M'Growther.

16 Sept. 1864.

48,846. And then sent off by rail to other places?—There is no great supply sent off to other places except Dundalk.

48,847. The fishing supplies Dundalk?—Yes, and more than Dundalk; some of them go to Carrick and Ardee. There are different markets for the fish. The St. Giles men have a market of their own, but we are nearest Dundalk.

The witness withdrew.

S. Hagan.

STEPHEN HAGAN called and examined.

48,848. (*Mr. Caird.*) You are a fish buyer here?—Yes.

48,849. What description of fish do you buy from the fishermen?—I buy salmon, turbot, sole, and haddock.

48,850. And plaice?—It is very seldom that we buy plaice.

48,851. Have you been for some years a fish buyer in Dundalk?—Yes.

48,852. Do you find that the supply of fish from the fishery in the bay has increased or diminished?—I cannot exactly say.

48,853. Do you find that more fish is offered to you now than some years ago?—I think it is much about the same.

48,854. Is there any decided difference, either last year or this year, as compared with former years?—Not that I am aware of.

48,855. Can you go back previous to 1851 in your recollection of the state of the fish market?—Yes.

48,856. Was there a larger supply of fish at that time when trawling was allowed in the bay than there is now?—I never got any fish from the trawlers here.

48,857. Did they not bring their fish here?—No, it is from the line-fishermen that I have got the best fish.

48,858. Do you know whether the number of long-line fishermen in this bay has increased?—I think there are no fishermen about this place except those who are here at present. I think they are all here.

48,859. Is the price you give the fishermen for the fish greater than it was a few years ago, or does it continue pretty stationary?—I think it is about the same.

48,860. Has no kind of fish increased in price in consequence of scarcity?—Any kind of fish would increase in price if there was a scarcity.

48,861. But is it a fact that no kind of fish has increased?—I suppose it is.

48,862. Is there any kind that has increased in price in consequence of scarcity?—Salmon, or turbot, or sole, or anything would increase in price if there was a scarcity.

48,863. Are there any fish that have increased in price in consequence of scarcity?—Yes, turbot have.

48,864. Are turbot dearer than they used to be?—Yes.

48,865. Do you pay a larger price to the fishermen for them than you formerly did?—Yes, I have done so this season.

48,866. Is there any other kind of fish for which you pay a larger price?—There is not.

48,867. Then the supply is quite equal to the demand here?—I think it is.

48,868. Do you get as many fish supplied to you as there is a demand for in the market here?—I do, and more.

48,869. Do you send some of it away to other markets?—Yes.

48,870. Do you supply the Dublin and Liverpool markets?—We send some to Dublin and some to Liverpool, and sometimes to other places.

48,871. Have you found that the haddock have increased lately?—They have not, I think.

48,872. The last witness told us that for the last year or two they had begun to get haddock again?—They were got here when they were not got anywhere round the coast of Ireland.

48,873. Did you get them?—Not this year or last.

48,874. Do you get turbot here in abundance?—No there are not many unless they are got on the top of the tide.

48,875. Are they fine in quality?—Yes, they are pretty fair.

48,876. Can you give us an opinion as to the advantage or disadvantage of having discontinued trawling in the bay?—I cannot.

48,877. Do you get any lobsters?—Yes, but not about the rocks here.

48,878. Do they not come from the bay?—They come from the Cooley side.

48,879. Are they increasing in quantity?—Yes, they have been more plentiful this year than they have been for five or six years back.

48,880. Then the lobster ground does not seem to have been over-fished?—I don't think it has been.

48,881. You do not get any oysters in the bay at all?—No, only what we get from Carlingford.

48,882. Do you get any mackerel?—Yes.

48,883. Do they come pretty regularly every season?—Yes.

48,884. Have they been got in greater or less abundance of late years?—They have been more plentiful this season.

48,885. In your experience as a fish buyer would you say that the quantity of fish caught on this coast is increasing or diminishing?—I cannot exactly say, but if the men were fitted out better than they are it would increase.

48,886. For what reason do you think so?—I think it would if they had good boats and plenty of lines.

48,887. Are they at present deficient in boats and lines?—I think they are.

48,888. Would that enable them to go further to sea?—It would.

48,889. Would it increase their chance of getting more fish?—I think it would.

48,890. Then you do not attach much importance to the fishing in the bay merely; you think it would be to their advantage to go further to sea?—I think so.

48,891. Do they go far to sea in search of fish?—They do, but that is according to how the weather answers.

48,892. (*Mr. Lefevre.*) Do the boats generally belong to the fishermen?—They do.

48,893. Are many new boats being built?—I think not.

48,894. Are the boats generally in bad condition?—Yes, some of them are.

48,895. Is the gear in bad order?—I don't know. I suppose the fishermen here can tell you better than I can.

48,896. How long have you been here as a buyer of fish?—14 or 15 years.

48,897. Do you know how many purchasers of fish there are here attending the market?—No, I do not.

48,898. Are there many besides yourself?—There are three or four more.

48,899. Is there any considerable quantity sent off by train from here?—There is sometimes.

48,900. But not as a general rule?—No.

48,901. Did you ever send for fish to Dublin to supply your customers?—Yes.

48,902. Then the fish caught by the fishermen is hardly sufficient to supply the market?—Sometimes they catch more than sufficient to supply the market, but when we do get any good fish we send them away to Dublin or Liverpool.

48,903. If your customers want turbot or soles do the fishermen here bring in enough for you?—If they have them we buy them, and if not we send to Dublin for them.

DUNDALK.

S. Hagan.

16 Sept. 1864.

48,904. Do you often send to Dublin ?—Yes, many a time.

48,905. Do you think that on the whole you buy more fish from the fishermen than you did 14 years ago ?—I think I do. I was buying very little 10 or 12 years ago.

48,906. Your trade has increased, I suppose ?—Yes.

48,907. From your observation of the market do he fishermen bring in more fish than they used to do ?—Well, I cannot say that they do not.

48,908. (*Mr. Caird.*) Do you buy salmon ?—I do.

48,909. Has this been a good salmon year ?—Yes, the best season that we have had since I can remember.

48,910. Were salmon formerly caught in the bay ?—There are very few of them caught in the bay; they are all caught in the river.

48,911. Are they caught with draught nets ?—I don't know with what sort of nets they are caught.

48,912. (*Mr. Lefevre.*) Did you attend the meeting of the commissioners last year ?—No, I was not at home.

48,913. Have you heard many complaints about the supply of fish here ?—No, but I know if we have good fish we have to send them away to other places.

48,914. Is there not a good market here for the best quality of fish ?—No, very seldom.

48,915. Do the fishermen ever bring in soles ?—Yes, they do.

48,916. Do they bring in as many as 30 pairs here in the daytime ?—It may happen that they may not bring in any sometimes.

48,917. Is it very seldom you get soles from the fishermen here ?—Very seldom.

48,918. Have you ever known a fisherman bring in as many as 30 pair of soles ?—No, never.

48,919. You have never seen such a thing in the market here ?—No.

48,920. What would you say is the average supply of soles to the market here ?—I cannot say; I have not seen many for some time back.

48,921. Did you all last year have anything like a supply of soles to the market ?—There was sometimes.

48,922. What do you call a good supply ?—Two or three dozen pairs.

48,923. (*Mr. Caird.*) Does the whole of the catch of the fishermen come to this market ?—Some of them sell them at home, at their own place, and others come here to make a sale of their fish.

48,924. So that all the fish caught in the bay do not come here ?—No, many go away in different directions, and some come to this place.

48,925. (*Mr. Lefevre.*) What would you call an average supply of plaice to the market here ?—We see a pretty fair supply of them sometimes, and we get a great lot of them if there is a good year.

48,926. What would you call a good supply ?—Six or seven creels.

48,927. That is a large supply ?—Yes.

48,928. What would be the average supply ?—Two or three creels would be a fair supply.

48,929. During the summer time ?—Yes.

48,930. Are there none during the winter ?—There are not a great deal during the winter I don't look much after them in the winter because I am then looking after the oyster trade.

The witness withdrew.

F. Prendergast.

FRANCIS PRENDERGAST called and examined.

48,931. (*Mr. Caird.*) Are you a fisherman here ?—Yes.

48,932. How long have you been a fisherman here ?—25 years.

48,933. Are you a line-fisherman ?—Yes.

48,934. A long-line fisherman ?—Yes.

48,935. Do you fish chiefly in the bay ?—Yes.

48,936. Do you remember the time when there was trawling in the bay ?—Yes, I do.

48,937. Did the trawlers have great success then ?—Sometimes they did and sometimes not. They often came in when they had not got a shilling's-worth of fish. I attended a trawl-boat for three years, and 55*s.* worth of fish was the most I ever saw come in with her.

48,938. For one day's work ?—Yes, night and day.

48,939. Do you often make that in your line boats ?—Sometimes I do, and more. Since 1851 I have got 18*s.* a night by haddock fishing.

48,940. Have you got anything like that lately ?—That is about six years ago, but I have caught 21 pairs of soles since 1851 to my own share on the bare sand.

48,941. With the line ?—With the long line.

48,942. Did you never catch that while trawling was going on ?—I never got that to my own share.

48,943. Can you say from your own experience respecting trawling in the bay that it was disadvantageous to you as a line-fisherman ?—I can only say this, that if they had continued trawling in the bay the fishing would not have been worth twopence to us; our bay is too small for trawling.

48,944. Has the bay increased in the yield of fish since an end was put to the trawling ?—Yes.

48,945. Have you been getting more and more every year ?—Yes, thank God for it.

48,946. You are making a good business of it now ?—Yes.

48,947. How many soles do you catch now in a night's fishing ?—We cannot work at the fishing now on account of the dogfish.

48,948. The dogfish injure your lines ?—Yes.

48,949. Could the trawlers fish at a time when you could not fish with advantage with lines ?—Yes. There are a great quantity of dogfish in the bay now, and they tear our lines up; but for the last three years past there never were as many turbot caught in the bay as there have been of late; there never were as many caught within my memory for 25 years.

48,950. Then the supply of fish in the bay is increasing ?—It is of turbot and black sole and plaice.

48,951. Are the turbot you get of fine quality ?—Yes.

48,952. Do you ever fish outside the bay ?—Yes.

48,953. At what time of the year do you fish outside the bay ?—We go from December up to the latter end of March or April.

48,954. Outside ?—Yes.

48,955. You do not find much success in the bay in the cold months ?—No.

48,956. How is that; why did you not go inside instead of out ?—When the days are getting a little lengthened they go to spawn outside and we follow them up to the month of March. The fish all come upon our shore when the nights are getting short.

48,957. They come into the bay ?—Yes, but towards the month of March again they go off the beach and we follow them off the Bay of Carlingford.

48,958. You follow them up to the month of January ?—Yes, we do.

48,959. Do you get good success outside ?—We do at times.

48,960. Do you fish in the same parts that the trawl fishermen frequent ?—Yes; they will be trawling there off the Bay of Carlingford.

48,961. Just at the same place that you are fishing with your long-lines ?—Yes.

48,962. Do you and they interfere with each other ?—Not there.

48,963. They do you no harm there ?—No.

48,964. Then you have no objection to trawling being permitted outside ?—Yes, I have.

48,965. Do you find that you are as successful outside now as ever you were ?—I cannot say we are

altogether, outside, because I remember we used to get 25 or 30 score of haddocks in from about 12 to 15 and 18 fathoms of water, of from one pound to eight pounds weight each.

48,966. (*Mr. Lefevre.*) Setting aside haddock, is the fishery good?—No, it is not.

48,967. When did the falling off begin?—About five years ago. The haddock have come in for the last two years.

48,968. But with regard to the other fish, how is it with regard to cod?—Cod have fallen off too.

48,969. When did they fall off?—We have had a good many of them for the last couple of years in our own bay.

48,970. (*Mr. Caird.*) Another witness told us that the haddock had been better for the last two years?—Yes, in our bay, but last year was much worse than the fishing we had years ago in our bay.

48,971. In the bay?—Yes, we only got very few haddocks in our bay last year.

48,972. One of the witnesses told us it was the best fishing you had?—No, it was not.

48,973. Was it the best you have had for the last two or three years?—Yes; for the last two or three years not a haddock has been got that has not been got in Dundalk Bay. We got from two score to 12 score, and they were sent to Dublin, Belfast, and England.

48,974. Do the dogfish come into the bay now more than they did?—Yes.

48,975. Is that not a sign that other fish are plentiful?—Yes.

48,976. But when they come into the bay you cannot fish for the other fish?—They do no harm to us in the winter time.

48,977. Is it the fact that you cannot fish with your lines when there is a quantity of dogfish in the bay?—We cannot fish with our lines at nights, but in the day they do not meddle with us. The plaice will not take the bait at night, but the black sole will take it. Then, with regard to the haddock, if there is not a breeze from the south and east they will not take the bait from sunrise until the sun goes down, even if we are shooting through millions of them. If there is a south wind to make the water go we can get them at daylight, but if not they will not take the bait until sunset.

48,978. Is it your habit to fish both night and day in the bay?—It is. We follow the fish according to the season they come in.

48,979. The only hindrance you have is when there is a great quantity of dogfish in the bay?—Yes, then we cannot work our lines.

48,980. On account of the quantity of dogfish?—Yes.

48,981. (*Mr. Lefevre.*) When did you observe the increase of dogfish?—A couple of years back; it follows the fish into the shoal water.

48,982. Have you taken many to speak of lately?—Yes; sometimes they do us very great injury. Some of the fishermen have lost half a score of lines, and others have lost all, while others have come away safe.

48,983. (*Mr. Caird.*) Could the trawl be fished with success when there are dogfish on the ground?—I cannot tell.

48,984. The dogfish could not hurt the trawl?—I cannot say anything about that.

48,985. (*Mr. Lefevre.*) Do you belong to Black Rock?—Yes.

48,986. Do you think the fishermen in your place have increased in number?—At the time I went to fish, about 25 years ago, there were about 20 fishermen at Black Rock, and now there are over 40.

48,987. How many are there at Giles's Quay?—I cannot tell you, but I believe there are double the number there.

48,988. You said you attended upon a trawl?—Yes.

48,989. How many trawlers were there then?—One from Dundalk and three from Clogher Head, and they came from the Bay of Carlingford, and from Dundalk, and from all parts.

48,990. How many came from Carlingford?—I have seen six in the bay.

48,991. Were they generally trawling in Dundalk Bay?—They did sometimes, according to the season.

48,992. Was that put a stop to?—Yes, our bay was swept clean, because it is only a small bay of sand. It is a rough part from Giles's Quay down to Salterstown.

48,993. What depth of water is there there?—From five fathoms down to two and a half fathoms on the rough ground.

48,994. Did the people who were trawling discontinue it after the regulation was established?—Yes, they were not allowed to trawl.

48,995. Did they give up their trawl-boats and take to other modes of fishing?—I think they took to long-line fishing. I do not know whether they followed it outside, but they were not allowed inside.

48,996. Did those boats trawl most outside the bay or mostly inside the bay?—They took the trawl in any part where it was not coarse ground, but I never saw them in Dundalk trawling outside the Point. I do not know what may have been the case with the Clogher Head or Carlingford men.

48,997. Do the line men bring in anything like the quantity of flat-fish that the trawlers used to bring in?—Yes, I think they bring in more. No matter where we shoot now we can get a day's wages.

48,998. When the trawlers were trawling in the bay did the hookers bring in any flat-fish at all?—Yes, they did.

48,999. Then, taking the whole supply together, is more brought into the market now than there used to be?—I think there is; indeed I am sure of it.

49,000. Only one of the trawlers was in the habit of bringing in fish to Dundalk?—Yes.

49,001. The others took their fish elsewhere?—Yes, unless the weather was bad.

49,002. Where did the other trawlers take their fish to?—To Dublin market; Clogher Head and Carlingford were their harbours.

49,003. (*Mr. Caird.*) What is the greatest number of trawlers you ever saw in the bay?—Four inside the point of land.

The witness withdrew.

THOMAS HANLON called and examined.

T. Hanlon.

49,004. (*Mr. Caird.*) Are you a line fisherman?—Yes.

49,005. You have heard the evidence which has already been given by the line fishermen here?—I belong to Giles's Quay.

49,006. Have you heard the evidence which has been given by the other fishermen?—Yes.

49,007. Have you anything to add to what they stated, or is there anything in their evidence with which you disagree?—There is. We fish at the herring-fishing and the Rock men never do. We fish for mackerel as well as for herrings.

49,008. And, in addition, are yo a line fisherman?—Yes.

49,009. Can you tell us whether the shoals of herrings that come off the coast here are increasing or diminishing compared with what they were some years ago?—They have been increasing since the trawlers left off. The trawlers take the spawn of the herrings and destroy it. When the herrings get liberty to settle on the sand they leave their spawn in the sand, and the haddock and codfish also come in upon the spawn of the fish.

49,010. Do they come in to feed upon it?—Yes, they feed upon the spawn of the herrings.

DUNDALK.

T. Hanlon.

16 Sept. 186

49,011. Then do you think in consequence of the spawn being left undisturbed you get a larger supply of cod and haddock ?—Yes.

49,012. Are you aware whether that has really been the result of the discontinuance of trawling in the bay ?—It has.

49,013. Have you observed it ?—Yes.

49,014. Did you ever see spawn on the sand ?—I have seen it in the fish's belly, and I have seen it in the codfish.

49,015. Have you, as a line fisherman, observed that you get a better fishing in the bay now than you did before trawling was prevented ?—Yes, I do, because when the fish spawned the trawl destroyed the spawn on the ground.

49,016. Do you get the same kind of fish that the trawl fishermen were in the habit of getting ?—We get as large a supply of fish as ever I saw in the trawls. Very frequently they get as small a take of fish as ever I saw on the long-lines, but what I complain of is that the trawling destroys the spawn and the brood ; they move the sand and take the spawn up in their nets.

49,017. Then you approve of the regulation which has been established ?—I do.

49,018. You wish to see it continued ?—Yes, I wish to keep trawling off on account of the destruction it does to the spawn of the fish.

49,019. Did you ever come in contact with the trawlers outside the line within which they are prevented from coming ?—Yes, I did, and they have taken our lines away in their trawls.

49,020. Are there many of the deep-sea trawlers which now come on the fishing grounds you frequent outside Dundalk Bay ?—Yes, they fish outside since they have been prevented coming in the bay.

49,021. Are there many fishing there now ?—There are a good many.

49,022. Are they very successful now ?—Yes, they are.

49,023. Do you find that the quantity of fish you can catch on your own ground has increased or diminished in consequence of that ; are there as many as ever ?—I am sure there are more fish in the bay since trawling has been prevented.

49,024. But outside of the bay on the fishing grounds here are there more fish ?—I think if the trawlers were prevented outside there would be more fish. The haddock we used to get are not coming inside since the trawlers have been trawling outside.

49,025. Have you not got them lately ?—Not half as many as we formerly did.

49,026. Did you ever get them outside in the deep water ?—Yes.

49,027. Do you get them now ?—We do not have a boat's load now, and we have never got them for eight or nine years as we used to get them.

49,028. Do you recollect when the trawlers first came to this bay ?—I do not.

49,029. I thought you recollected the bay before trawling began ?—Yes.

49,030. Did you get large hauls of haddock before there was any trawling here ?—Within my memory we have never got haddocks as plentiful as we got them when the trawlers kept away.

49,031. With regard to the herring-fishing, you say that you regularly fish for herrings whenever they appear off the coast ?—We have as good herrings in Dundalk Bay as ever I saw, but if the trawlers come in in the night they knock them so much about that we shall not have herrings in the bay 24 hours afterwards. They disturb them by the trawls and will not allow them to settle on the ground.

49,032. Have you noticed when the herrings came in here from what direction they came ?—They came from the southward sometimes, and from the eastward at other times. I do not know where the shoals came from we have now.

49,033. But it appears that the herrings are as good as ever you saw them ?—Yes, to the best of my opinion.

49,034. Has the herring-fishing off Dundalk been improving or diminishing of recent years ?—It is better.

49,035. It is better ?—Yes.

49,036. Do you think the whole supply of fish caught in this bay has improved or diminished of recent years, taking the herrings and everything else ?—It has all improved since trawling has been put down.

49,037. (*Mr. Lefevre.*) How long is it since you had as good a shoal of herrings in the bay as you have had this year ?—We had a good shoal last year.

49,038. And before that how long ?—I think we have had a good share of herrings every year for the last five or six years, but I think there never was a better fishing than there is at present.

49,039. Then previous to doing away with trawling had there been any decrease in the quantity of herrings ?—Yes.

49,040. Had you observed the falling off ?—Yes. When the herrings spawned on the sand and the trawler came across it he moved the sand and took the spawn away with him.

49,041. What I want to ascertain from you is what the supply of herrings was before trawling was done away with and what it has been since trawling has been done away with ?—When the trawlers came into our bay they did not give the herrings an opportunity of settling in the bay.

49,042. Did you observe immediately after trawling was done away with that an improvement took place in the herrings ?—Yes.

49,043. Have they gone on improving ever since up to the present time ?—Yes, and all sorts of fish have improved.

49,044. But with regard to the herrings, have you had good takes ever since 1851 ?—Yes, ever since the trawlers were shut out.

49,045. Ever since the trawling was stopped ?—Yes.

49,046. And before the trawlers were shut out was the fishing very bad ?—I cannot say, but to be sure they destroyed the fish when they came in.

49,047. But is it the fact, that you have taken more since trawling has been done away with than before ?—Yes.

49,048. You are quite sure of that ?—Yes, any sort of fish that spawned on the sand in our bay would be injured by the trawlers. The trawlers took away the spawn by moving the sand.

49,049. Has the number of fishermen increased at Giles' Quay ?—Yes, there is a good number now.

49,050. How many are there now ?—I suppose there are between 14 and 15 boats.

49,051. How many men are there in each boat ?—Mostly five men in each boat.

49,052. How many were there there 14 or 15 years ago ?—They have been improving every year.

49,053. Are there fresh boats built every year ?—There are. There is one thing which I may tell you, namely, that when the poor men have no good lines they let the best of the fish go. When they get a good fish on their line it is not able to hold it.

49,054. Do you mean to say the fishermen have not got good lines ?—No, they have not.

49,055. Is that because they are so poor ?—Yes, that is just it.

49,056. They have not got money enough to buy good lines with ?—That is a sure thing, and when a good codfish or a good haddock gets caught upon a bad line he can obtain his liberty.

49,057. What is the reason the fishermen have bad lines ?—Because they have not money enough to buy good ones with.

49,058. Then they have not made a good thing of the fishing of late years, since they cannot pay money enough to purchase good gear ?—Since the bad times came they have been more pushed than they were before.

DUNDALK.

T. Hanlon.

16 Sept. 1864.

49,059. Have they never recovered since the famine of 1846?—They have never been as strong since as they were at that time.

49,060. They have never been as well off as they were before?—I don't recollect the fishermen to have been as well on our shore as they are at present since the famine.

49,061. How long is it since the improvement began; is it only this last year?—Yes, this last year and the last three years, because the potatoes are getting better and stronger everywhere, and the fishing is better too.

49,062. Are the fishermen of Giles' Quay dependent on the land?—Yes.

49,063. How much land do they have?—They have no land at all. There are no fishermen at all who have any land except a very few; they have only a house and a garden.

49,064. Then is it the price of potatoes you refer to?—Yes.

49,065. How many hooks has each man?—About 600.

49,066. And are there five in each boat?—Yes, some have four and some have five.

The witness withdrew, and the inquiry was adjourned until the 17th of September at Skerries.

Skerries, Dublin, Saturday, 17th September 1864.

PRESENT:

J. CAIRD, Esq., M.P. (Chairman). | G. SHAW LEFEVRE, Esq., M.P.

SKERRIES.

C. McCourt.

17 Sept. 1864

CHRISTOPHER MCCOURT called and examined.

49,067. (*Mr. Caird.*) Are you connected with the fishing here?—Yes; with the herring-fishing, but not with any other.

49,068. Are you acquainted with the state of the white-fishing here for some years past?—Yes, I have been at the white-fishing here during a portion of my lifetime but not a great deal.

49,069. Can you give us any idea of the progress of that fishery here, whether it has been improving or otherwise?—The white-fishing has been on the decrease for some years back.

49,070. From what period can you date the commencement of the decrease?—I am not able to state accurately, but I should say from 10 to 12 or 15 years as near as I can recollect.

49,071. About some 15 years ago there were more boats engaged in the white-fishing here than there are now?—Far more.

49,072. Can you tell us the number then and the number engaged now?—No, I cannot.

49,073. Can you tell us the number of men engaged then and now?—There are not any engaged in the white-fishing now, and there was a first-rate fishing on the coast of Ireland.

49,074. Are there none here now?—No; none, except those engaged in the herring-fishing.

49,075. (*Mr. Lefevre.*) What do you include in the white-fishing, cod and haddock?—Yes.

49,076. And any flat-fish?—No; that is what we call the long-line fishery, the hook fish.

49,077. (*Mr. Caird.*) When you say that there are no persons engaged now in the white-fishing, you do not include the trawlers?—There is only one trawler here; at any rate I do not know of any more.

49,078. He is the only person engaged in white-fishing?—Yes; and he is three or four months idle out of the year, if not more.

49,079. Does he fish off the immediate coast?—Yes; nearly in-shore.

49,080. Nearly in-shore?—Yes.

49,081. Does he fish within the limits prescribed not to be fished upon by a trawl-boat?—I believe that he does; but I think he does less harm in-shore than he does outside, in regard to the herring-fishing and the long-line fishing too.

49,082. Does he catch many fish?—Sometimes a good deal, and sometimes very little.

49,083. Then he can do no injury to anybody here if there is no other fishing?—I do not think the like of him can do any harm to any person. It is the Dublin trawlers who do the harm.

49,084. I see there are many old boats in the harbour, were they fishing-boats?—They were fishing-boats in former times.

49,085. How long is it since they were used for fishing?—Some three or four years, some less; some were only hauled up last year.

49,086. What kind of fishing did they follow?—They followed in their turn the long-line fishing; but they were generally engaged in the coasting trade and in speculations.

49,087. They were not employed altogether in fishing?—No.

49,088. There seems to be nearly a score of them?—Indeed, there are a good many.

49,089. Are they hauled up for want of employment?—Yes, for want of employment.

49,090. What was the employment they had formerly?—They were engaged in the coasting trade, in carrying potatoes and in herring-fishing.

49,091. They were not so much fishing-boats then?—They were fishing-boats in former years until the fishing got bad, then they knocked off and took to other employment, and now from the want of that employment they are hauled up.

49,092. Do they belong to people in this place?—Yes; they all belong to people in this place.

49,093. Have the people to whom they belong fishing-boats of other descriptions?—Some of them have and some have not.

49,094. Do you know when they were built?—I do not.

49,095. Is it a long time ago?—Some will not go back for a long time at all.

49,096. They seem all to be of one class?—Some of them are not more than 15 or 16 years of age, and that is not old for a vessel.

49,097. Were any of them built at the time there was a bounty given upon the fishing?—I believe some of them were.

49,098. Had the withdrawal of the bounty anything to do with the disuse of the boats?—They drew the bounty when it was given.

49,099. Had the discontinuance of the bounty anything to do with the discontinuance of those boats?—I will not say that, because the bounty was discontinued before the boats were hauled up here.

49,100. Did those boats continue to fish after the bounty was discontinued?—Yes.

49,101. Is there any particular kind of white fish that has decreased here?—The haddocks have decreased most.

49,102. Are there no haddocks caught here now?—No, nothing to speak of; but our people can give a better statement with regard to the long-line fishing than I can.

49,103. There are no long-line fishermen here are there?—No, there are not.

49,104. Do vessels from other quarters come here to the long-line fishing?—No further than the next town to us.

49,105. From Balbriggan?—No, from Rush. At Balbriggan they do not work at the long-line fishing at all.

SKERRIES.

C. McCourt.

17 Sept. 1864.

49,106. Has the herring fishery improved of recent years?—Yes.

49,107. Has that improvement been very marked?—Yes, it has.

49,108. When had you your first very good herring-fishing?—It has improved very much within the last three or four years. It has been improving every day here.

49,109. Does it look well at present?—It does.

49,110. Have you any notion what has been the cause of the improvement in the herring fishery on the coast?—I do not exactly know; I cannot say that.

49,111. Has there been a large quantity of herrings taken here?—There has been sometimes.

49,112. You do not know if there have been any herrings spawning on the coast at all?—I do not know that. It is not for us to say. It is always thought that the herrings spawn on the rough ground.

49,113. You have no knowledge on the subject yourself—you have not made it a matter of observation?—No; the herrings spawn where I could not see them. It is generally thought that they spawn on the rough ground.

49,114. Is there any mode of fishing employed on this coast which you consider injurious to the interest of the fisheries?—No, I could not say that.

49,115. Are there any restrictions established on this coast which you think injurious to the interest of the fishing?—The only thing I think injurious to the fishing here is trawling; that I think is injurious to the fish altogether; it destroys both the young and the old.

49,116. But I understand that trawling is not permitted along the shore here?—It has not been permitted for some years. There was an Act passed against it, but there is no one to put it into operation.

49,117. Do any vessels belonging to the port except the small one you have mentioned, trawl along the shore within the limits in which trawling is not permitted?—I do not exactly know what the limits are here.

49,118. Is it not well known and understood here where the limits are?—I do not think it is.

49,119. "Outside of St. Patrick's Island;" do you know that?—Yes.

49,120. In a straight line drawn to the point of Clogher Head from St. Patrick's Island; inside a line drawn between those two points trawling is not permitted?—That is where it should be permitted I think if they had done right; it is outside where we get the herrings.

49,121. Do you think there is no injury done to the brood or spawn of the fish by trawling inside that line?—Not one tenth part of the injury that is done outside.

49,122. Is there much trawling inside?—There may be some boats in-shore from Balbriggan, but the Dublin boats trawl outside and there are plenty of them to be found there.

49,123. Have you ever seen the Dublin boats trawling inside that line;—Yes.

49,124. Often?—Yes.

49,125. Does anybody interfere with them?—I never saw anybody interfere with them.

49,126. At what part outside do you imagine the harm is done?—From the line outside to 18 fathoms and 20 fathoms of water, and even 40 fathoms. They trawl there day and night at all times. They are even waiting there with their nets until the herring-boats haul their nets in the morning in order to put down their trawls into the balls of fish.

49,127. But the trawling has done no injury to the herring fishery because you say the herring fishery has improved?—But it has done injury to it. The herrings would be more plentiful if it were not for the trawlers. The herrings spawn on the rough ground, but they have trawled over the rough ground and have made it all smooth.

49,128. When did trawling outside begin to be very extensive?—It has been extensive for a good many years; it is too far back for me to recollect.

49,129. Twenty years ago?—Yes, and more.

49,130. Has it been for more than 20 years within your knowledge?—Yes, and more than 30 within my own knowledge.

49,131. All along this coast?—Yes.

49,132. Has it been carried on pretty much on the same ground all that time?—Yes.

49,133. Has that ground been frequented by an increasing number of boats of late years?—Yes, by double and treble the number there formerly were. I might venture to say there have been five times the number.

49,134. Is the number increasing very much?—It is, but it has now nearly condemned itself because they cannot get a livelihood out of it; I think that is as good a proof as I know of against the trawling. There were only five boats trawling out of Dublin last summer and they were not able to support themselves. Now the herrings are striking in towards the shore; I counted 36 or 37 boats here no longer ago than yesterday.

49,135. Were they looking for the herrings?—They were discharging their fish off the coast.

49,136. (*Mr. Lefevre.*) Were there 36 trawling-boats?—Yes.

49,137. (*Mr. Caird.*) Independent of the herring-boats?—Yes, they have nothing to do with the herring-boats at all.

49,138. They do not fish for herrings?—No, they do nothing but trawl all the year round.

49,139. Do they find that the other fish follow the herrings?—Yes, exactly; the nearer they can get to the ball of fish the more fish they will get.

49,140. And have you as a herring fisherman seen that they have done any harm to the herring-fishing by trawling?—They scatter the herrings. If the trawl is put down in the midst of a great ball of herrings they scatter the herrings away.

49,141. Do they trawl in the daytime or at night?—They trawl both day and night when there are no herring-boats out, but when the herring-fishing is going on they wait until we haul our nets in.

49,142. Do they trawl day and night sometimes?—Not while the herring-fishing is going on.

49,143. They do not come foul of your drift-nets?—Yes, they do. Last year they tore a man's nets and took some of them away.

49,144. He would have been able to recover his loss if he had been able to follow them, would he not?—I think he did recover some of the damage, but I am not able to state whether he was paid in full or not.

49,145. Have you any regulations among yourselves or fixed by others as to the time at which you are to shoot your herring nets?—We have no regulations. I think we ought to have some, but the regulations should not be made among ourselves; there should be some proper authority to enforce them.

49,146. Do you observe any regulations at all?—No, not any.

49,147. Do you shoot before sunset?—Of course some of them do, and when one shoots then they all go on shooting. They begin to shoot in order to get a berth, but they should not be allowed to do so; they ought not to be allowed to shoot before sunset.

49,148. Is it common for the fishermen here to have their nets shot before sunset?—Yes.

49,149. Do you think that that alarms the fish and disturbs the shoals?—Yes.

49,150. Does it prevent them from rising?—Yes.

49,151. Have you observed that?—I have not. I have fishing boats although I have not been at the fishing, but I know that it does from the experience I had in former years.

49,152. Do the fishermen desire to have some official authority over them to restrict them to shooting their nets not earlier than a certain time?—I think it would be for their interest if they had.

49,153-4. (*Mr. Lefevre.*) How many fishing boats

have you got ?—There are somewhere about 23 or 24 here.

49,155. Herring-boats ?—Yes, I believe 23 is the number.

49,156. How many men are there in each ?—There are 165 men and boys in the 23.

49,157. How many have you got yourself ?—Two.

49,158. When did you buy them ?—Three years ago.

49,159. Did the great increase of herring-boats take place three or four years ago ?—More than two thirds of the increase in this place took place then.

49,160. Previous to that time there was not a considerable herring fishery from here ?—No.

49,161. I suppose it was about the same time that trawling was given up here ?—They have not been trawling here for many years ; they were not able to get bread at it, but when other things failed they took to the herring-fishing.

49,162. How long do you recollect this place ?—For more than 40 years.

49,163. Do you recollect the year 1836 ?—Indeed I do.

49,164. We are told that at that time there were 38 boats belonging to this place and six or eight men in each ?—Yes ; some of them are lying here at present.

49,165. They were mostly trawlers ?—They were not regular trawlers ; they might trawl at certain seasons of the year.

49,166. Can you recollect what number were trawlers ?—No.

49,167. Was it only a small proportion of them ?—There might be a good many in different seasons of the year.

49,168. What were they mostly employed upon ?—In former years they were employed at hook-fishing, a good many of them, and at certain seasons of the same year they would be employed at trawling, then in buying fish, and in running to the market, and such things as that.

49,169. The boats you use for the herring fishery are not the same boats employed in that ?—No, they are not the same at all ; they are the proper lugger-rigged boats.

49,170. What has become of the boats that existed in 1836 ; are they all laid up now ?—No, not all ; we have them in different occupations.

49,171. But they have all given up fishing ?—Yes.

49,172. Except one trawler ?—Yes.

49,173. There is no white-fishing now except by this one trawler ?—Not a bit of it.

49,174. When did the line-fishing begin to fall off ?—Fifteen or 16 years ago, or more than that.

49,175. Is it more than 20 years ago ?—Yes.

49,176. Can you say what number there was 10 years ago ?—Indeed I cannot.

49,177. Can you say what number there was four years ago ; were there then some of them employed in trawling or line-fishing ?—There might be a couple employed four years ago in trawling, but not in long-line fishing.

49,178. When did the men here gradually give up trawling and hooking to take to the herring fishing ?—I suppose about 10 years ago.

49,179. I suppose the same men who are now fishing the herrings used to fish with the hook and line ?—Yes, the very same, with a little addition to them. The young ones are growing up and the old ones are dropping off.

49,180. Did the trawlers and the hookers disappear about the same time ; did the fish fall off about the same time ?—I think they did near about the same time.

49,181. What earnings would the herring fishermen make now in the season ?—Do you mean here ?

49,182. Yes ?—It varies very much.

49,183. Take last year ?—It varies very much.

49,184. Last season did they make good earnings ?—Some did, and some only got middling good earnings.

49,185. Did your boats do pretty well ?—Yes, they did pretty fair.

49,186. What did you make last year ?—I suppose we averaged about 350*l.* from the boats for the year.

49,187. How are the earnings shared in the boat ?—There are 17 shares made of it.

49,188. How many go to the owner of a boat ?—There are seven hands in a boat and each man gets a share, and the boats and nets get all the rest.

49,189. Do you deduct the expenses first ?—No, all the expenses come out of the owner, every halfpenny-worth.

49,190. You divide it into 17 shares afterwards ?—Yes, all the expenses fall to the owner ; he pays for all.

49,191. What would each man make out of your boats last year ?—From 20*l.* to 22*l.* I should say.

49,192. How long did the herring season last ?—From the 25th of May until the middle of December.

49,193. Was there another herring-fishing after Christmas ?—No, we generally give it up here before Christmas.

49,194. At what time did you find the fish full ?—It is generally about July and August that the fish are full.

49,195. Did you take any spent fish later than that ?—They do not take spent fish here ; they come in different shoals of fish and the spent fish are here in the winter. The spent fish are a bit smaller than the others.

49,196. When do you find them here ?—About a week ago.

49,197. The second week in September ?—Yes, and they come here now.

49,198. Is there any interval between the finding of those fish and and the summer fish ?—No, the weather makes a difference ; if it gets a little severe it is too far distant for the boats to go.

49,199. In what condition are the fish now ?—In very good condition.

49,200. Are they full of spawn ?—If they were full of spawn they would run in the boats and nets, but they do not run now ; you will see the spawn running when they are full but they are not running now.

49,201. Then you think they are a different class of fish from those you caught a fortnight ago ?—Yes.

49,202. Are they not as full as those fish ?—No, they are not as large.

49,203. Are they not as full of spawn ?—No.

49,204. Do you say that you have observed an increase in the Dublin trawlers within the last few years ?—Yes, a very great increase.

49,205. And has there been an increase in the herring fishermen ?—Yes.

49,206. And have the trawlers gone on increasing ?—Yes, everywhere.

49,207. Then you have had an increase in the herring fishermen notwithstanding that the Dublin trawlers have been trawling in great numbers ?—Yes.

49,208. Do you think that has affected the supply of herrings ?—Yes, it must have done so; they kill both large and small.

49,209. They do not take the herrings in their nets ?—The herrings are too knowing for them ; the net was not made for the herrings.

49,210. Then what harm do they do you ?—They kill the spawn.

49,211. Do you mean the young fish or the spawn ?—I mean the spawn; without the spawn there would be no fish.

49,212. Do you think they trawl over the rough ground where the herrings spawn ?—Yes, but they have made the rough ground all smooth nearly; the herrings are not found on the rough ground off here at all now.

49,213. Do your fishermen fish on the ground which the Howth fishermen frequent ?—Yes.

49,214. Then there is no distinction between the

SKERRIES.

C. McCourt.

17 Sept. 1864.

herring fishermen here and the Howth fishermen?—No, they all go together here.

49,215. Do you know what the number of Balbriggan trawlers is now?—No.

49,216. (*Mr. Caird.*) Are there any shellfish caught here, lobsters or crabs or oysters?—There is an oyster-bed about here but no person from here dredges upon it; there used to be a boat from Dublin dredging here just outside St. Patrick's Island.

49,217. It is not dredged at all now?—No, not to my knowledge.

49,218. Is it not worth dredging; is it not a good bed?—It may be a good bed but I think they are very small.

49,219. The fishermen do not dredge it now?—Not for some years.

49,220. Has it been discontinued because it was not supposed worth while to follow it?—The people here have discontinued it at all events; they had very large oysters here.

49,221. Were they saleable?—Yes, they went to Dublin from here.

49,222. Is that bed entirely untouched now?—Yes; there was no dredging there last year, but there was one boat upon it from Dublin before.

49,223. Is that the only oyster bed on this coast?—It is the only one I know of.

49,224. Then oyster-fishing is not followed here?—No, not here in this place.

49,225. Is there any lobster-fishing?—No, there is no lobster-fishing.

49,226. Or crabs?—Yes, there are crabs; in the summer time they put out the creels for them.

49,227. Are there plenty of crabs to be found here?—I think so.

49,228. Is crab-fishing not followed here?—No, they have worn them out; they followed crabs in the summer time and I think they have worn them out, and they are not able to make bread out of them now.

49,229. Is the herring-fishing in the month of May a more remunerative business?—Yes.

49,230. It pays better?—Yes.

49,231. (*Mr. Lefevre.*) At what season of the year have you observed most of the Dublin trawlers trawling off this shore?—There have been more at this season of the year than any other time, and I can count 36 or 37 coming into the bay every night.

49,232. Do they land their fish here?—Yes.

49,233. And send it off to Dublin?—Yes.

49,234. How long do they generally fish off this shore?—Perhaps six weeks or two months; they go as long as the fish stay here.

49,235. Then during the herring fishery they do not fish in the night-time, but as soon as the principal portion of the herring-fishing is over they do fish at night?—If they land their fish in the daytime they run out to sea again.

49,236. They run out to sea in the night-time?—They will keep quite clear of the herring-fleet if they can, but of course a man in a herring-boat is afraid to see these vessels running through the herring-fleet in the night-time; on a dark night it would be very dangerous.

49,237. Have there been many cases in Skerries of the loss of nets?—No, I cannot say there have been many cases; there was one that occurred here last year.

49,238. One case out of the 23 boats?—We had not 23 boats last year; we have 23 this year but we had only 13 last year.

49,239. Has there been any case this year in which the fishermen have lost their nets?—Not that I have heard of.

49,240. (*Mr. Caird.*) During the period of the herring fishery is it common for the fishermen to shoot their nets here on the Sunday evening?—Not with our class of people, but there are fishermen who fish for herrings who do so.

49,241. But not from the Skerries?—No.

49,242. They come from a distance?—Yes, they come from Arklow.

49,243. None of your fishermen do so here?—No, they may go out during part of the season when there is bad weather if they can get a fair evening; if the fish have had rest enough they may go out on the Sunday night.

49,244. Then in that case they do go out?—Yes, for an odd time if they get a fair night.

49,245. What is the principal reason you do not go out on a Sunday evening; is it in order that the fish may have a certain rest, or because you object to fishing on Sunday?—We do not like to trespass on the Sabbath if we can avoid it, but we consider that the fish get rest enough on the Saturday and Sunday night in the summer time.

49,246. Do you think that that rest is beneficial to the fishery?—Yes.

49,247. You think you make a better thing of it by giving the fish those two nights' rest than you would by fishing all the time?—Yes, we generally remark that the two first nights of the week we make the best fishing.

49,248. Would you desire any restriction against fishing on Sunday?—Yes, I would.

49,249. Is that the general feeling of the fishermen here?—Yes.

49,250. (*Mr. Lefevre.*) You would not extend that to the winter fishery?—No.

49,251. You call the winter fishery the fishing that begins in September?—Yes, in the first week of September.

49,252. Do you ever observe a great number of boats out fishing on the Sunday night in the summer?—Yes.

49,253. How many?—I cannot state the number.

49,254. Are they Howth boats?—No, they are Arklow vessels. I cannot say that the Howth boats go out.

49,255. Then their numbers cannot be very considerable because there are not a very great number of Arklow boats that come up here?—Yes, there is a good number.

49,256. Do you think the Scotch and Manx boats fish on Sunday?—Not to my knowledge.

The witness withdrew.

P. Edwards.

PATRICK EDWARDS called and examined.

49,257. (*Mr. Caird.*) You are a fisherman here?—Yes.

49,258. And you were formerly employed in trawl-fishing?—Yes, some 16 or 18 years ago.

49,259. Have you found the herring-fishing improving very much in the last year or two?—Yes, it has improved here, and the cause of it I think is the improvement in the nets, the improvement in the fishing boats, and the quantity of boats on the coast.

49,260. Can you go further to sea now and fish with better effect in consequence of improved boats and better tackle?—Yes, we have better materials and a different style of fishing.

49,261. When did that improvement begin?—It began to my knowledge about four years ago. Perhaps it may have commenced before that, but I think I am right in saying about four years.

49,262. You are not a line fisherman?—No, I never fished with a line.

49,263. There is no line-fishing here now?—No, there is not.

49,264. Do you remember when there was any line-fishing?—I do.

49,265. You were then a line fisherman?—No, I was not.

49,266. Was line-fishing successful here?—It was.

49,267. What kind of fish were caught then?—

Generally haddock, and small cod and large ones sometimes.

49,268. Have the haddock entirely disappeared?—We cannot see any here now.

49,269. There are no haddock here now?—No.

49,270. What was the reason the line-fishing was entirely given up here?—I think the cause of it was that they could not find the haddock, they were the principal fish that were being caught by the line then.

49,271. Had there formerly been a large and valuable haddock fishery here?—No; there were a few boats here which generally went out in the morning; they were out about four, five, or six hours; they shot their lines and came in. Four men fished in a boat, and they would sometimes get from 2*l.* to 4*l.* and 5*l.* worth of fish.

49,272. (*Mr. Lefevre.*) What sized boats were they?—Yawl boats.

49,273. Open boats?—Yes, and they carried one sail.

49,274. With four men in each?—Sometimes five.

49,275. (*Mr. Caird.*) Did the haddock-fishing suddenly cease?—That I cannot tell, because I was not in the place at the time it did cease.

49,276. Have you ever heard any reason assigned for it?—I have heard the old fishermen say the reason the haddock went off the coast was, because trawling killed the spawn and the small fish.

49,277. Was it trawling in the bays or in the deep sea?—Both; the Dublin trawlers trawled in both waters.

49,278. Were you long engaged as a trawler—for any time?—Some two years.

49,279. In the deep sea or along the coast?—Principally down the coast.

49,280. In-shore?—Yes.

49,281. Along the coast?—Yes; I trawled one winter in Campbeltown Loch in Scotland.

49,282. What fish did you get here?—Generally plaice and flukes; sometimes haddocks when we went down to Clogher Head in 18 fathoms of water.

49,283. Was that before any restriction was adopted?—Yes.

42,284. Were there many boats then engaged in trawling?—From here there would be six or seven at that time.

49,285. Did they make a good business of it?—Sometimes they did.

49,286. On the whole did they make a good business of it?—On the whole I think it did not pay.

49,287. Was there line-fishing at the same time?—At that time there were one or two boats fishing with lines in the winter season.

49,288. Did the line fishermen or the trawlers make the best wages?—I should suppose that the line men did.

49,289. Did you continue trawling until it ceased to be profitable?—Yes, it was not profitable when I was at it. I did not consider that I could make a living by it.

49,290. Did you kill much of the small brood of the fish?—I was very young then, but I remember seeing small fish not fit for anything thrown overboard which had been killed by the trawl.

49,291. Were they not alive?—No, they would be dead when they came in in the trawl.

49,292. Was there a large proportion of them in that state?—I cannot give the amount, but I have thrown them out myself.

49,293. Did you ever see any spawn in the trawl?—I cannot say that I have, but I have heard the fishermen say they have seen spawn in the trawl.

49,294. (*Mr. Lefevre.*) How old were you then?—Fourteen years of age.

49,295. You were a boy on board?—Yes.

49,296. How many men were there?—Six men and a boy.

49,297. What was the size of the boat?—From 30 to 32 tons.

49,298. Do you recollect what were the earnings which each man made?—The earnings sometimes differed. I cannot strike an average. Sometimes they got 1*l.* in a week, and at others not half a crown in the week.

49,299. You cannot say what the average was?—No, I could not strike an average, but the average was so small that the men could not get a living out of it.

49,300. Would it average 6*s.* a week?—I suppose it might, or a little more.

49,301. Do you know that the Dublin trawlers, the larger class of vessels, only carry three men and a boy?—Yes.

49,302. Do you think the reason why the trawler you fished in did not pay was that it carried too many men?—That might have a tendency towards it; but the vessels have been gradually improving. They have finer vessels now with larger trawls and winches to haul the trawls.

49,303. A vessel of 40 or 50 tons manned by three men and a boy is more likely to pay than a vessel of 30 tons manned by six men and a boy?—Yes, the shares in our vessels would be less, and in addition the large trawlers kill more fish, because they can go out into deeper water.

49,304. Do you recollect when the trawlers you speak of gave it up altogether?—No, I do not.

49,305. Do you mean to say that there were only one or two hookers then at work?—I think there were plenty at this place. I will not be positive, but I think there were only two this last winter I mean at the trawling.

49,306. They were only yawls?—No, there were large boats of 30 tons and so besides the yawls.

49,307. How many of those yawls were there?—Six or seven.

49,308. The hookers you speak of were of the same class of vessels as the trawlers?—Yes, about 30 or 35 tons.

49,309. (*Mr. Caird*). Did you not go to the deep-sea trawling at all?—No, we did not.

49,310. You were within that line of restriction which has been mentioned?—Yes.

49,311. And you say that trawling within that line ceased to be profitable before the restriction was adopted?—Yes, it did.

49,312. The boats were beginning to give it up altogether?—Yes, they got slacker and fewer.

49,313. Is there any desire on the part of the fishermen on this coast to resume trawling within that line?—I think not. Any man who can keep clear of a trawl on this coast will do so if he can earn a livelihood by long-line fishing or herring-fishing.

49,314. Because he makes better wages?—Yes.

49,315. That is the ground upon which he would keep clear of trawling?—Yes.

49,316. (*Mr. Lefevre.*) The trawlers were badly found then, were they not?—The Dublin boats now are much improved.

49,317. Were not your boats badly found formerly?—No, they were fishing in the same style.

49,318. Were they fit to go any distance?—Yes, they were fit to go in the Channel if they wished.

49,319. Were they fit to trawl regularly any distance from the coast?—I think they were, but they were not as fit as the Dublin vessels.

49,320. Do you think that enforcing a line of prohibition had any bad effect on the trawling on the coast?—Not on this coast.

49,321. You do not think it interfered with the ground on which the trawlers trawled?—No, it did not, because I do not think they have ever observed the line.

49,322. Is there any trawling within the line of prohibition now?—Yes, I see them fish there.

49,323. The Dublin trawlers?—Sometimes the Dublin boats, but generally they are outside, but the boats from Balbriggan do.

49,324. You do not think they observe the restriction?—No, they do not.

49,325. How many boats are there at Balbriggan?—Seven, I think.

SKERRIES.

P. Edwards.

17 Sept. 1864.

49,326. Do you know what number of men they carry?—From three to four men; three men and a boy and four men, I think.

49,327. When you were trawling was a winch used on board the trawler?—Not on the one I was in, but some of the boats did use a winch.

49,328. I suppose, then, that not having a winch you wanted more men?—Yes, that was the cause—not having a winch.

The witness withdrew.

N. Quin.

NICHOLAS QUIN called and examined.

49,329. (*Mr Caird.*) Are you a fisherman here?—Yes.

49,330. Have you long been acquainted with the state of the fishery here?—I went to sea in 1812.

49,331. Can you tell us from your own recollection whether there are as many boats engaged in the fishing here now as there were in the earlier time to which your memory extends?—There were a great number of fishermen then in addition to the herring-boats. We were then engaged in long-line fishing, and we fished round to Bofin Island and to Sheep Haven.

49,332. Had you large boats then?—Yes.

49,333. It was during the bounty time?—Yes, there was a premium on the fish then. We had 3*d.* on every fish that would bear the stamp on the tail, but afterwards the bounty was done away with. We fished first, however, for the bounty.

49,334. Was a second payment established then?—Yes, we had a second premium paid on every fish killed.

49,335. Who paid it?—We got it from England.

49,336. From the Government?—Yes.

49,337. Was that inducement to go on fishing for a bounty discontinued?—Yes.

49,338. It was another description of bounty?—Yes; but it was more an inducement to the men. The men all got a share of it, whereas the bounty all went to the owners.

49,339. Up to what year was that premium given?—After the bounty was done away with.

49,340. Until when?—It was not of long duration. To the best of my knowledge it lasted for about three years.

49,341. Was it given up in the year 1821?—No, it was not given up until after that. We had a bounty on the deep-sea fishing in 1821, after the herrings. Then we got our boats fitted out here, and we had of course a certain number of nets to a certain number of men, and we had to make 60 shots before we could obtain the bounty; but we found it a thing almost impossible to do.

49,342. Then you used to buy fish from other people?—No, only what we killed ourselves. We went on the east coast of Scotland to fish upon the bounty. We fished in this channel, but we had to put in 60 shots before it was a complete season for us.

49,343. What mode of fishing was that; long-line fishing?—No, herring-fishing. This was after the bounty was taken from the long-line fishing.

49,344. While the bounty continued on the long-line fishing did you then sometimes fish on the east coast of Scotland?—No; but we did on the north-west coast of Ireland round to Bofin Island.

49,345. You also fished in Ireland with long-lines?—Yes.

49,346. Which of the two coasts did you find most profitable of fish?—Towards Bofin Island.

49,347. You found more there than on the east coast of Scotland?—Yes. If we could make two shots with our lines we could make a good week's work of it.

49,348. How long have you discontinued fishing off Bofin Island?—Since the bounty has been taken off.

49,349. It did not pay to go?—No.

49,350. Then that system has been entirely discontinued?—Yes.

49,351. Then it was altogether supported by the bounty?—Not entirely; we had the fish as well.

49,352. But when the bounty was withdrawn it did not pay?—When the bounty was done away with the men who owned the vessels would not fit them out because they said it was not paying them.

49,353. Was that the principal cause of the falling off in the number of boats engaged in the white-fishing here at that time compared with the present?—In my opinion it was.

49,354. They were not prevented at that time from fishing anywhere on the coast?—They fished off this place, but they chiefly went round there because the fish were more plentiful. They made them up on the vessel, and had them ready for the market when they came home.

49,355. Are the fish on this coast now not as plentiful as they were in your earlier recollection?—I think they are.

49,356. They are quite as plentiful?—Yes; the ling and the conger eel and those kinds are pretty plentiful out here to those who follow them, but they are not as plentiful as they were on the north-west coast of Ireland.

49,357. At any time?—No.

49,358. Is there any mode of fishing practised on this coast which you think injurious to the interests of the fisheries?—Not that I know of, unless trawling is injurious to the spawn of fish.

49,359. Have you been in a trawl-boat?—When I went an apprentice first that was my occupation.

49,360. But not since then?—Yes, I was in one of the Dublin trawlers.

49,361. Were you out in the deep-sea trawling?—Yes, out in the Channel.

49,362. How long ago?—In the years 1820 and 1821.

49,363. Has the deep-sea trawling been practised ever since 1820?—Yes, and long before that.

49,364. It is a very old mode of fishing?—I think it was about 1816 when we had the first of the trawlers; they were English trawlers that came over here.

49,365. Did they at that time fish upon the same fishing grounds which the trawlers go upon now?—They fished in shoaler water than they do now.

49,366. They go into deeper water now?—Yes, they go more out into the Channel. Any place where they can find out a bank is the best place for fishing.

49,367. Do you remember when the restriction was established ordering that no trawling should take place within a certain line?—Yes. At the time I speak of, when we went round the coast as far as Sheep Haven and to Bofin Island, and sometimes to Horn Head, we were prevented trawling by an old Act of Parliament within the headlands, and we did not trawl within the headlands.

49,368. But there has been a restriction passed in reference to your own place; are you aware of the restriction which passed in 1851?—I had nothing to do with trawling then.

49,369. You have observed the state of the fishery here since that time?—Yes.

49,370. Are you of opinion that the restriction then established along this coast prohibiting trawling within that line has been advantageous or otherwise to the fisheries?—I have not seen any restriction. They have always been trawling here.

49,371. Then there has been no difference since that regulation was passed?—Not a bit. There were a few boats fishing in the offing at one time and the officers stopped them. That was the only time I ever knew them to be stopped.

49,372. Then you tell us that the restriction is not really observed here?—Not now, and I never knew

of any interference except in the instance I have mentioned. A few of the Balbriggan boats were stopped at that time and their trawls were taken from them.

49,373. How long did that prevent them from going upon the restricted ground?—It did not prevent them at all. They were fined some small sum I believe.

49,374. And they now fish as if there were no restriction established?—Yes.

49,375. Has that regulation had no effect either one way or another with regard to the produce of fish?—No, I think not.

49,376. (*Mr. Lefevre.*) Do you recollect how many boats formerly went fishing off Inishbofin?—There were about nine in number. There were seven, eight, or nine fishing for three years for the bounty there.

49,377. Not more than that?—No, and they were all from this place.

49,378. All from the Skerries?—Yes, but all the Galway fishermen fished there too.

49,379. When did they give up going there?—Since the bounty was taken away.

49,380. Where did they go after that?—They betook themselves to other employments.

49,381. And then they took to trawling?—Some of them did.

49,382. Do you recollect the first year that trawling was commenced by the Skerries boats?—No, I do not. All the boats belonging to the place were trawling when I can first recollect.

49,383. When you were a boy?—Yes, there were 30 or 40 of them.

49,384. As many as that?—Yes; I suppose there were 50 boats at the fishing when I first went to the sea.

49,385. Then it is a very old trade in this place?—Yes.

49,386. Older than the Dublin trawlers?—Yes; but the Dublin trawlers beat them, because the people here have not been able to fit themselves out.

49,387. The Dublin trawlers have better boats, and they are manned by fewer men?—Yes; their boats have been got up by companies, and our people are only poor industrious people.

49,388. Did the Dublin men trawl over the ground the Skerries men trawled over?—Yes.

49,389. And they soon drove them off the ground?—Yes; because they had better means, and were all strong men. Our people were only poor men endeavouring to make a livelihood out of it.

49,390. Have the men who used to trawl taken to herring-fishing or gone away?—Some of them are dead, but some of them go yet.

49,391. The others have taken to herring-fishing?—Yes, they have all taken to herring-fishing now; they get a better livelihood by it.

49,392. What fish did you take in the trawl?—Soles, and turbot, and plaice, haddock and all kinds.

49,393. They were all brought into this port here?—Yes, they were brought in here to go to the Dublin market.

49,394. Can you give us any date or mention any year when the trawling began to fall off?—It began to fall off to my knowledge in 1821. It fell off then from what it was before; it fell off greatly then.

49,395. Ten years ago were there many trawlers?—No, there were only about five or six trawling here about 10 years ago.

49,396. There were not more?—No.

49,397. Were those the old boats which had been used in 1820, or had any new ones been built?—There had been many new boats built since, and some of the old boats are here on the coast yet, but of course they have had to be made nearly new since those dates.

49,398. Were there any of the larger class of trawl-boats built since the year 1836 here?—No; I do not know if any have been built in this place since 1836.

49,399. Because in 1836 there had been no trawlers built since 1820. Then I presume that all the boats now laid up were built before 1820?—When they could not pay at the fishing they turned them into carrying vessels.

49,400. Did they go off to other work?—Yes.

49,401. (*Mr. Caird.*) When you had a white fishery here did the local fishermen fish in the same way at the same season of the year as the Dublin trawlers?—Yes; but our people tried different ways at the fishing from what they did.

49,402. What different ways did they try?—They would be at long-line fishing here in the winter and trawling in the summer time. As long as they were able to work the long-lines round the north-west coast of Ireland they went round there when there was a bounty.

49,403. (*Mr. Lefevre.*) Why is it that the Balbriggan men have continued trawling when it has been given up from the Skerries?—They have no other means of making their bread.

49,404. Does it answer to the Balbriggan men still?—I think it answers, as some fish in that way still.

49,405. The men at Rush are line fishermen?—Yes.

49,406. They make it pay still?—Yes, they make a better livelihood by the lines.

49,407. How is it that there are no line fishermen in the Skerries?—The old men dropped it altogether and the younger branch of our people were not brought up to it.

49,408. What do the fishermen of the Skerries, who fish in the herring season, do at other times?—They carry potatoes round the coast.

49,409. They do not fish at all in other seasons?—No.

49,410. The herring season only lasts five months?—Between five and six months, from May until Christmas.

49,411. In other parts of the year they go in coasting vessels?—Yes.

49,412. (*Mr. Caird.*) The Dublin trawlers fish the whole year round with the trawl?—Yes, unless in the summer season when they cannot get men to man them; they go in the herring-boats then.

49,413. When your coasting boats were trawling you did not fish the whole year round with the trawl, did you?—No. They are a different kind of boat we have now for fishing boats compared with the coasting boats.

The witness withdrew.

JOHN KNIGHT called and examined.

49,414. (*Mr. Caird.*) You are a fisherman at Rush?—Yes.

49,415. Have you had a long experience there in the fishing?—Yes, for 35 years.

49,416. What kind of fishing is practised at Rush?—Ling-fishing, cod-fishing, and conger eel-fishing, and in former times there was haddock-fishing, but the haddocks have left us altogether.

49,417. Is it only line-fishing that you practise?—Yes.

49,418. Is there no trawling?—We use a trawl to get bait.

49,419. You trawl for bait?—Yes.

49,420. What kind of bait?—Flukes, gurnard, and plaice.

49,421. Do you get them in-shore?—In-shore with the trawl. We trawl in 30 fathoms of water and from that down to five fathoms.

49,422. Are there many boats engaged in trawling for bait?—All the long-line fishermen in the place trawl.

49,423. How many boats are there?—Ten, and from eight to 10 men in each of them.

49,424. Are they decked boats?—Yes.

SKERRIES.

J. Knight.

17 Sept. 1864.

49,425. What is the tonnage of them?—From 20 to 35 tons.

49,426. What is the rig?—They are smack rigged, all but one wherry, which has two masts.

49,427. How many lines do they carry?—Each man will have from 15 to 20 lines.

49,428. How many hooks on each line?—Sixteen or 17 on an average.

49,429. (*Mr. Lefevre.*) Are the same boats employed in trawling?—Yes, they trawl for bait; they trawl twice a week.

49,430. But only for bait?—Yes.

49,431. Not to supply the market?—No, unless we get a turbot or some fish like that.

49,432. ((*Mr. Caird.*) Has the number of boats increased or diminished within your recollection?—It has decreased, by means of the bounty being knocked off.

49,433. Do you remember the time when there were a good many more boats at Rush than there are now?—Yes, I remember when there were 30 boats, or nearly 30.

49,434. About the same size as the present boats?—Nearly the same; perhaps not quite as large.

49,435. Then the decrease took place in consequence of the withdrawal of the bounty?—Yes.

49,436. Not in consequence of a falling off in the supply of fish?—In consequence of that too, but we get as good hauls of fish in the summer now as we did 20 years ago.

49,437. Do you find that the catch of your boats now on the ground that you frequent for fishing is as good as it was some years ago?—At times it is.

49,438. On the whole do you make as good a fishing as you did some years ago?—Just the same. We make as good a livelihood by it.

49,439. Do you get any haddock?—No, we get no haddock at all.

49,440. Do you recollect when there was much haddock caught?—I do.

49,441. What is the cause of the falling off of the haddock?—The trawling.

49,442. Do the trawlers get many haddock?—They did when they first commenced to trawl.

49,443. When did they cease to be as numerous?—Somewhere about 15 years ago. Every year they have been getting less and less, and within the last four or five years there have been none at all.

49,444. Have you attempted to fish for them further out at sea?—Yes.

49,445. And have you found them further out?—There are no haddock at all in the Channel.

49,446. Have they left the Channel altogether?—Yes, and in consequence of trawling, I think.

49,447. Is there any other fish that has declined in a similar manner?—Yes.

49,448. What?—The codfish.

49,449. They are not as plentiful as they were formerly?—No.

49,450. Would you give the same reason for that?—I cannot exactly say that it is the trawl which is making the codfish so scarce, but some winters we get more than we do in others.

49,451. Do they get any cod in the trawl?—No, only an odd time or so; the Dublin trawlers do occasionally.

49,452. They do?—Yes, in the spring of the year when they are on the banks to spawn they catch cod in the trawl.

49,453. The trawling in the deep sea has continued as long as you can recollect?—Before I can recollect they were trawling.

49,454. Has it had any effect upon your fishing as a line fisherman?—Yes, a very great effect.

49,455. Has it had any effect upon line-fishing except with regard to the haddock?—Yes, we have cast our lines in the evening and have found a great part of them taken away by the Dublin trawlers.

49,456. That is when the Dublin trawlers happen to come across your lines?—Yes.

49,457. Is that a frequent occurrence?—Yes, very often.

49,458. Is there no regulation to prevent them?—None at all, and they will not give up our lines to us, except an odd time when they bring them ashore and throw them all down in a lump.

49,459. Is that of frequent occurrence?—Very often, especially in the winter time.

49,460. Is there no regulation to prevent anything of that kind?—None, unless we could find a man trawling the lines away and go to law with him.

49,461. You could then prosecute him for doing an injury to your lines?—I have never seen it done, and yet they do great harm to us in regard to our lines.

49,462. Do you say that you trawl for bait yourself?—Yes.

49,463. In the daytime or at night?—Mostly in the daytime, very seldom at night.

49,464. Is that the only bait you use?—In the summer time we catch some mackerel up to this time.

49,465. Do you use that for bait?—Yes, the mackerel and gurnards we get on the hand-lines.

49,466. Have you a good supply of bait?—Sometimes we have, and sometimes it is scarce.

49,467. Do you ever use mussels or anything of that kind?—No, we use no shell-fish except for the haddock. When we had the haddock formerly we dredged for scallops.

49,468. Have you found the turbot increasing or diminishing in supply?—Turbot has decreased and soles too.

49,469. Do you get many soles on your hand-lines?—None on the hand-lines; we get them in the trawl when we trawl for bait.

49,470. You do get them when you are trawling for bait?—Yes, black sole, and sometimes turbot and plaice.

49,471. Do you also follow herring-fishing?—No.

49,472. Do the fishermen at Rush not take to the herring-fishing?—There is only one boat there that does.

49,473. Do you find a better catch of white fish at the time the herrings are on the coast?—Yes, there is, especially of ling.

49,474. Is that the time when you are most successful with your fishing?—It is; but at present the long-line fishing is pretty fair. We get a good many conger eels, but we have a good way to go out, nearly to the Isle of Man, in order to keep clear of the trawl-boats.

49,475. (*Mr. Lefevre.*) You say that your hookers are employed all the year round with the long-lines?—Yes.

49,476. With the exception of two days a week when they are trawling?—We do not trawl more than once a week for bait.

49,477. Is that all the year round?—Up to Christmas; there is no trawling then until the summer time again.

49,478. When do you begin trawling?—About May.

49,479. And you trawl one day a week?—Sometimes we have a sweep every day to get bait for the lines.

49,480. Do you know the restriction as to trawling from Dunany Point to St. Patrick's Island, and from St. Patrick's Island to Howth Head?—Yes.

49,481. Have you observed that restriction?—No, I have trawled inside it.

49,482. Is that the case with all the Rush boats?—Yes.

49,483. Does anybody interfere with you?—A man had his trawl taken away once and was summoned and fined 1*l.*

49,484. Your object is to catch small flukes?—Yes, for bait.

49,485. Do you not find them near in-shore?—Yes; we make bait of all sorts of fish we take except turbot, and black sole.

SKERRIES.

J. Knight.

17 Sept. 1864.

49,486. Do you catch any large proportion of turbot and black sole?—No, it is only an odd turbot that is got.

49,487. Do you get plaice?—Yes.

49,488. Do you use plaice for bait?—Yes.

49,489. What are your seasons for line-fishing; what fish do you catch from Christmas onwards?—Cod from Christmas until May.

49,490. All cod?—Yes, all cod. We rarely get a haddock.

49,491. What is your ground for the cod, is it just off Rush?—No, east of Howth and east of Clogher Head.

49,492. What distance from the shore mostly?—In the spring of the year we will be four leagues from the shore.

49,493. Not further than that?—No.

49,494. What do you do in May?—We fish out deeper then. We go in 50 or 60 fathoms of water, and from that right down through the Channel off the County Down.

49,495. What do you catch then?—Conger, ling, cod, and skate.

49,496. Do you catch turbot then with the long-line?—No.

49,497. Or sole?—Some odd times we get a halibut, but we catch no soles. Our hooks are too large for the sole.

49,498. How long does that season go on?—As long as the good weather continues.

49,499. Until when would you say?—At present we are fishing out there until the end of September or the middle of October. We are now buying herrings for bait. At times, when we can get them cheap, we take them and go to the deep water.

49,500. Do you find it a good bait for the cod?—Yes, the best.

49,501. And for ling?—Yes.

49,502. When should you say that the ling-fishing season in the deep water is over?—The ling-fishing is over now. We get some ling, but the proper season is over.

49,503. What fish are you getting now?—Conger eel mostly and a few ling.

49,504. How long will that go on?—Until the bad weather sets in.

49,505. What fish do you catch then?—We go to work with the cod, and go on until May.

49,506. Then during the herring season you are fishing outside the herring-nets?—Yes; we take care we do not come in among them; they would drag our buoys away from us.

49,507. In the winter season do you find that the trawlers come upon your lines?—Yes; they drag our lines away.

49,508. Did you ever take the number of the trawlers who did that?—In the night-time we cannot see them.

49,509. You only shoot your lines at night?—We generally like to have them in the water before the night-time, but the trawlers trawl night and day.

49,510. Do you sometimes shoot your lines in the daytime?—Yes.

49,511. Do you find that you catch more fish on the rough ground or on a sandy bottom?—Sometimes we do, and at other times we do not. The ling mostly keeps on clean ground.

49,512. Where do you get the cod?—The cod go on rough and smooth ground.

49,513. Do you catch many sole on the long-lines in-shore?—We catch no sole at all on the long-lines.

49,514. What bait do you use in-shore?—Whelks.

49,515. You do not catch any sole at all?—No.

49,516. Do you occasionally catch a turbot?—Only seldom a turbot.

49,517. Are your hooks too large for the soles?—They are too large for any small fish.

49,518. Do you catch many plaice?—No; an odd time we get a plaice, but very seldom.

49,519. Then you do not think that the line of restriction as to trawling has had any effect in preventing trawling within that line?—We do not mind it.

49,520. Do the Dublin trawlers trawl within the line?—Yes, night and day. I have seen them this week trawling on it.

49,521. Do they trawl in the daytime or only at night?—Night and day. This week they have been trawling there night and day.

49,522. Have the Coastguard never interfered with them?—I never saw them do so.

49,523. Do you think it would be possible to prevent trawling between St. Patrick's Island and Howth Head?—I think so.

49,524. You think the Coastguard could prevent it if they thought fit?—I think so, but I do not think that trawling inside does any injury.

49,525. It does no injury?—No. The fish mostly spawn out in the deep water on the rough ground, but the haddock was a real native of the coast until the trawlers came upon it. I have seen small haddocks not three inches long in my own trawl.

49,526. Do you think that trawling in deep water does more harm than trawling in shallow water?—I think it does.

49,527. What fish spawn out in the deep water?—The haddock always make for deep water in the spring of the year when they spawn.

49,528. Do the cod spawn in deep water?—Yes, but they are a shallower fish than the haddock in the spawning season.

49,529. Have you observed the Balbriggan trawlers?—I have seen them there.

49,530. Do they trawl within the limits?—I cannot say.

The witness withdrew.

W. Lee.

William Lee called and examined.

49,531. (*Mr. Caird.*) You have heard the evidence of the previous witness?—Yes.

49,532. Do you agree generally with all he has stated?—Yes.

49,533. Is there anything you would like to add to what he has said, or upon which you would wish to give us further information?—I was trawling 14 or 15 years ago when we were making a haul for haddocks or anything we could come across, and we got 1,700 haddocks in one haul.

49,534. Was that in the deep sea?—Yes, in 40 fathoms of water. I counted them from curiosity.

49,535. How long was that ago?—Fourteen or 15 years, and if I were to trawl there now I should not get one on the same ground.

49,536. How far was it from the land?—About four miles from Rockabill.

49,537. Is that fishing ground at present trawled over by the Dublin trawlers?—Yes, they trawl over it constantly.

49,538. And are there no haddocks found there now?—No, none at all; and as to cod we have got 20 score of cod in a shot, and now if we can get a hundred at any time in the winter, or six score or seven score, we think it a wonder; yet we used to get 20 score.

49,539. Did you get that number commonly?—Yes, and 17 and 18 score.

49,540. On the same complement of lines?—Yes.

59,541. Have you not better lines now?—Yes, they are longer.

49,542. They have more hooks?—Yes.

49,543. Do you go further to sea?—There is a medium in cod-fishing; sometimes we get them in-shore, sometimes in 30 or 40 fathoms of water.

49,544. Do you find them on the same ground you

SKERRIES.

W. Lee

17 Sept. 1864.

used to find them in former times?—Yes, but they are very scarce.

49,545. They are scarcer now?—Yes, we think it a wonder if we get a hundred or six or seven score now, when we could get 20 score in former times.

49,546. Are there more boats now from Rush than there were then?—No, there are not more than 10 now and there were 20 then.

49,547. Fifteen years ago?—It is about 20 years since we had all those boats.

49,548. Within the last 15 years have the boats increased or fallen off?—They have decreased.

49,549. Within the last 10 years have they increased or fallen off?—They have decreased since 10 years ago. I think we have less boats than ever we had at Rush.

49,550. Are they bringing in more fish than ever they did 10 years ago?—No, except conger or cod they only bring in very few, and of haddock they bring in none.

49,551. Taking the whole of the fish brought into Rush, is the quantity increasing or diminishing compared with what it was 10 years ago?—There is no decrease in the conger eel. We get them plentiful; no trawl can damage them. We get them out in the deep water, on the muddy ground where the trawl cannot go.

49,552. Do you trawl out in deep water?—Yes, for bait, but they have spoiled our trawling there. They have taken all the bait away; we cannot get any if we trawl there now.

49,553. Do you trawl now in the bay?—Yes, for bait.

49,554. Do you think that your trawling in the bay does any injury to the line-fishing?—Yes, I think the trawl hurts the long-line fishing every way, no matter where they trawl. I have pulled out spawn from the trawl itself; the loops of it have been full of it, and I have flung it overboard.

49,555. Was that in the deep water or in the shallow water?—Both in the deep water and in the shallow water.

49,556. What season of the year was that?—The summer season.

49,557. What kind of spawn was it?—I cannot describe the sort of spawn.

49,558. (*Mr. Lefevre.*) What did it look like?—It looked like small beads or berries joined one to another.

49,559. Did it look like a bunch of candles?—No, they were small things like grapes mostly.

49,560. Are you sure that it was not whelk spawn?—I know that well.

49,561. What is whelk spawn like?—Like a honeycomb. We used to kick them before us on the strand like footballs.

49,562. Did you throw this spawn overboard again?—Yes; we threw it over the side of the boat out of our road.

49,563. Would you desire to see any restriction adopted that would prevent any particular kind of fishing that is now practised?—I do not know of anything except trawling, especially the Dublin trawlers. Nothing can stand their trawls. They are so heavy and weighty in themselves that nothing can stand against them. They are not the same as our trawls at all. If we were on the rough ground it would tear our nets or break our ropes, but they have got strong trawls with which they can trawl on the rocks or anywhere. It would take a good rock to bring them up.

49,564. You would wish to see trawling put a stop to altogether?—Yes, inside and out, and I can work a trawl as well as any man in Ireland.

49,565. Would you yourself wish to be prevented from trawling for bait?—Yes; I would take my chance of getting bait.

49,566. Would you get it in another way?—Yes.

49,567. You do not think it would be sufficient to prohibit trawling within the bays?—Well, I do not know. Everyone, even the Dublin boats, when it is blowing very strong would be glad to get in the bays to trawl when they can do nothing outside. The Dublin trawlers come in under that pretence as strong as they are.

49,568. Was it ever the case that the Rush boats did nothing else but trawl?—No, we always followed the long-line fishing.

49,569. Always the long-line fishing?—Yes.

49,570. When did you first begin to trawl for bait?—Always, as long as I can remember.

49,571. The same plan has been pursued as long as you can recollect?—Yes, as long as I can recollect we have trawled for bait. We have lines for mackerel, and we do not trawl if we can get some mackerel.

49,572. (*Mr. Caird.*) With regard to the herring-fishing, what herrings do you catch?—It is a shoal of large herrings that keep out in the deep water. They never come to the shore, at least we think so, and they spawn in very deep water, in from 60 to 70 fathoms of water. We see them every season.

49,573. What time of the year do they spawn?—I cannot tell; the herrings are always spawning. We see all kinds of small herring mixed up with herrings of a larger size. They are this size and that size, and you will see them all mixed up together in one day if you happen to come across them.

49,574. (*Mr. Lefevre*). In the same shoals?—Yes, I have seen them in the nets myself as small as the net can take them and from that up to a larger size. I have seen them as small as my finger among the mackerel.

49,575. (*Mr. Caird.*) I think you were going to say something about the shoals that spawn in the deep water?—We never see those large herrings in and about the shore, but we see them every summer out in the deep water.

49,576. Are they a large herring?—Yes.

49,577. What size are they?—Some of them are a foot long; they are as large as mackerel.

49,578. Are they caught at this season?—Yes.

49,579. By the drift-net fishermen?—Yes, in the deep water, but the weather is now getting broken and the fishermen are afraid to go after them.

49,580. Do they get more of them now than they used to get formerly?—I do not know.

49,581. Are the deep-sea herring full fish at present?—Well, I do not know. I do not know how the herrings spawn at all only as I see the small fish, or what sort of spawn it is. We see the little fish in the mouths of anything we catch with the hand-line.

49,582. (*Mr. Lefevre.*) What can you earn a week by the long-lines at Rush?—We make 2*l.* with some of the boats and from that to 10*s.*

49,583. Is that 2*l.* divided among the eight men?—No, 2*l.* a man and from that to 1*l.* and 10*s.*

49,584. What would be the average per man?—I cannot say.

49,585. Is that all the year round?—No, they sometimes get very little.

49,586. Do they make 10*s.* or 12*s.* a week all the year round?—They may get 10*s.* or 12*s.* a week.

49,587. Do the boats belong to the fishermen?—Yes.

49,588. Are the owners fishermen?—Some of them are, and some are not.

49,589. Are the others tradesmen in Rush?—Not all of them. A widow has two or three boats and some people in Dublin have two or three.

49,590. Do you share the profits?—Yes.

49,591. How much goes to the boat?—We have two shares for the boat, and they keep a boy, and half a share for the boy, and one share for each of the men.

The witness withdrew.

SKERRIES.

The Rev. THOMAS GREEN called and examined.

Rev. T. Green.

17 Sept. 1864.

49,592. (*Mr. Caird.*) You have heard the evidence which has been given to-day ?—I have.

49,593. Do you think we have substantially had a full statement of the whole case as regards the fisheries at the Skerries ?—I held a meeting of 12 or 13 persons engaged in the fisheries, and the evidence given to day embodies substantially the evidence given at that meeting.

49,594. Is there anything that occurs to you which might be added in addition to what has been stated ?—There are a few facts I can speak of from conversing with the fishermen. In the first place, with regard to trawling, the trawl-net used by the fishermen here is larger in the mesh than that of the Dublin trawlers and does much less injury. They complain that the trawl-net of the Dublin trawlers is smaller in the mesh, and that the smallest class of fish is taken. In addition to that, they have a kind of apron with which they protect the trawl and which will admit of nothing passing through it; that was a fact stated at the meeting held here and it was generally concurred in.

49,595. (*Mr. Lefevre.*) What is the mesh used by those men ?—The exact measurement I could not get at.

49,596. It is mentioned in the report of 1836 as $2\frac{1}{2}$ inches from knot to knot ?—I do not know. There are some men here who can give evidence as to the mesh.

49,597. (*Mr. Caird.*) Is there any other point which you wish to mention ?—Yes, there is another point. The object of the inquiry is to ascertain whether the fish is diminishing or increasing, and the fact of their increasing is concluded from the fact that a larger number is caught; but it must be borne in mind that the Scotch train of nets is that which is used here. That is as deep as the Cornish men use, but the Cornish men are not as successful as they were years ago. If I were to represent the fishing by its results I should say the fishing is declining, but that the Howth and Skerries fishermen by using the Scotch train have had better results. It may be that there are more fish caught than fish left to be caught.

49,598. But the supply of fish has increased to the public ?—Yes; but the question is, whether it comes from a smaller quantity than the smaller supply came from before.

49,599. Is there any other point you desire to mention to us ?—Another point is, as to the Sunday fishing. All concur in the observation that on Monday and in the early part of the week there is a very successful fishing, and we attribute that to the fact that the fish get two days' rest.

49,600. They are undisturbed for two days ?—Yes. The fish must be disturbed by the boats going in among them, and I think it is for the real interest of the fishing during the summer time that all fishing should be prohibited on the Sunday and even the Saturday too.

49,601. (*Mr. Lefevre.*) You spoke of a meeting having taken place here ?—Yes, I collected the men together on a Sunday evening.

49,602. With a view to this meeting ?—Yes; to select the most intelligent of the fishermen so as not to have confusion arising in consequence of having bad witnesses coming forward. There is another fact I might mention, all are unanimous in requiring some regulation of the fishery itself, especially with regard to not shooting the nets before sunset. They require that there should be some Government cutter to go among the fleet and give a signal. They say that that is done at Stornoway in Scotland, and they see no reason why the same regulation should not be established here, where you have Englishmen, Manxmen, Scotchmen, and Irishmen all fishing together.

The witness withdrew.

EDWARD D'ALTON called and examined.

E. D'Alton.

49,603. (*Mr. Caird.*) Have you been stationed here for some time in command of the Coastguard ?—For about a year and a half.

49,604. Have you any instructions here to enforce the regulations in regard to trawl-fishing within certain limits upon this coast ?—I believe such instructions have been given but not in my time.

49,605. They have not been repeated to you ?—No.

49,606. Do you not consider it to be part of your duty to prevent fishing within those limits ?—Certainly it is my duty; an Order in Council some time ago was issued, that within a straight line from the east point of Saint Patrick's Island to Clogher Head no trawling was to take place and I assure you that more trawling has taken place inside that line than outside of it.

49,607. But you have no instructions to enforce that Order in Council ?—I never received any.

49,608. Do you not hold it to be any part of your duty, or has your superior officer not told you that it was your duty, to prevent trawling within that prohibited line ?—Never.

49,609. You have not taken any measures to prevent it ?—I have never taken any measures, inasmuch as if I did it would positively be more than we with our small force here could do; it would take up all our time.

49,610. You could not follow your legitimate business of looking after the revenue ?—I could not.

49,611. But at any rate you have not any directions to do so ?—No, never.

49,612. Has any one complained against you for not doing so ?—No.

49,613. Is there any other Coastguard officer in this part; is there one at Balbriggan ?—There is a Coastguard station at Balbriggan.

49,614. Have any instructions been issued there ?—I am not aware.

49,615. Have you ever seen any interference whatever with the trawl fishermen within the limits ?—Never.

49,616. They are allowed to trawl there or not as they please ?—Yes.

49,617. (*Mr. Lefevre.*) How many Coastguard stations are there between St. Patrick's Head and Clogher Head ?—Balbriggan is one, Nannywater two, and the mouth of the Boyne three.

49,618. Yours makes four ?—Yes; and Clogher Head is the extreme point.

49,619. That would be five ?—Yes.

49,620. How many men are there at each on the average ?—There are six or seven men at each station.

49,621. Do you think their united force would not be sufficient to make the regulation observed ?—No doubt it would, but our legitimate duties would have to be neglected.

49,622. How many additional men would be required to enforce that regulation ?—A boat's crew at each station.

49,623. An addition of six men at each station ?—No, of four.

49,624. Do you think that with that addition it would be possible to exclude trawling within the headlands ?—Yes, I do.

49,625. Would it be necessary that they should row at night ?—Certainly.

49,626. Do the Balbriggan boats trawl within that line ?—I believe so.

49,627. And do you think the Dublin trawlers do so also ?—Certainly.

49,628. Have you observed them yourself ?—Yes; always inside the line, but very seldom indeed outside.

49,629. And is that the case also within the line

SKERRIES.

E. D'Alton.

17 Sept. 1864.

from St. Patrick's Head to Howth Head ?—That I am not aware of.

49,630. You do not know that line so well ?—No.

49,631. I suppose the ground between St. Patrick's Head and Clogher Head is particularly favourable for trawling ?—It must be, because all the trawling goes on inside those points.

49,632. Can you give us any accurate information as to the number of trawlers in Balbriggan ?—No, I cannot.

The witness withdrew.

H. Kappock.

HENRY KAPPOCK called and examined.

49,633. (*Mr. Caird.*) Are you a fisherman here ?—Yes.

49,634. You wish to make a statement with regard to your herring-nets having been carried away by trawlers ?—Yes; they were carried away by the Dublin trawlers.

49,635. Where was it, and when ?—It would be four miles north of St. Patrick's Island.

49,636. What was it that happened ?—A trawler, about nine o'clock at night, came across our train and tore three of our nets. One was taken away altogether and the other two were torn.

49,637. Was that within the line from St. Patrick's Head to Clogher Head ?—Yes, it was within that line.

49,638. Did you make any complaint or find out which boat had done it ?—I had a small boat attached to the fishing-boat that carried two or three men, and I put off with it and got on board the trawler, and gave him a hand to clear the nets of his trawl. He went to work at once to haul his trawl up.

49,639. Did you get the nets clear ?—Yes, but we got them greatly torn.

49,640. It was purely accidental on his part, I suppose ?—Well, we had our light up and they had only a small crew on board. They ought to have left one man on deck to keep watch. I think they had left a boy there to keep watch and he had gone to sleep.

49,641. Was he trawling at that time ?—Yes, with his head on the land.

49,642. Is that the only instance in which you found a trawler coming across your nets ?—That is the only one since I have been fishing.

49,643. Did you get any compensation from him for the destruction he had committed ?—He was not agreeable to give me anything, and I had to put the case into the hands of the magistrates at Dublin.

49,644. What happened then ?—I got paid.

49,645. (*Mr. Lefevre.*) You took his number ?—Yes, and the name of the boat.

49,646. Is most of the herring-fishing here carried on outside that line from St. Patrick's Head to Clogher Head ?—From this time to Christmas most of it is carried on inside that line.

49,647. In the early part of the season how is it carried on ?—Then it is outside.

49,648. Is that the best part of the season ?—The early part of the season is the best part.

49,649. Then more than half the herring-fishing is carried on outside that line ?—Yes, two-thirds of it.

The witness withdrew.

T. Derham.

THOMAS DERHAM called and examined.

49,650. (*Mr. Caird.*) Are you the owner of a trawl-boat here ?—No, but a brother of mine is.

49,651. Do you fish in a trawler ?—Yes; but I have been herring-fishing all this summer.

49,652. Have you been a trawl fisherman for some years ?—Yes; I have been fishing for 24 or 25 years off and on.

49,653. Is there any other trawl-boat belonging to this place ?—Not at the present time.

49,654. Were there in former times ?—There were once, perhaps, as many as a score.

49,655. What has been the cause of their being discontinued ?—The enlargement of the boats for the potato trade, which was good for a time. That made them too large for fishing, and they were then employed in running fresh herrings to Liverpool and elsewhere. By that means the class of men who had been in the habit of trawling wore off, and the younger men knew nothing about it.

49,656. Is yours the only boat left ?—Yes, the only one.

49,657. Do you go out to the deep sea to trawl sometimes ?—Yes.

49,658. What is the size of your boat ?—Thirty tons.

49,659. What is the length of the beam ?—Forty feet.

49,660. What is the size of the mesh of your net ?—There is a difference somewhat in the net, the part nearest the vessel is about 5 inches.

49,661. What is it towards the bag of the net ?—It would be somewhere about 3 inches.

49,662. Is the smallest mesh you have about 3 inches ?—It is rather more than 3 inches when first made, but by getting tarred and wet it creeps up to a little less than that.

49,663. On the average it is about 3 inches ?—Yes.

49,664. Do you fish in deep water in part of the season, and in shallow water in another part ?—Yes.

49,665. Do you fish all the year round with the trawl ?—Very near all the year round.

49,666. Will you tell us the different seasons and the different places you fish in ?—At this time of the year we trawl outside Clogher Head up to 18 fathoms of water; then when the plaice fall in we go into five and six fathoms, and from that to two fathoms.

49,667. Within the bay ?—Yes.

49,668. Then are we to understand that during the summer season you fish within the prohibited line in deep water ?—Yes.

49,669. And as the season progresses you come inside to follow the plaice ?—Yes.

49,670. During the winter do you fish inside that line ?—Yes.

49,671. What kind of fish do you get there ?—Plaice.

49,672. Anything else ?—Sometimes a few hake, sometimes cod, sometimes turbot, and sometimes sole.

49,673. Do you catch many small fish ?—Yes, small flukes and grey gurnard.

49,674. Do you catch many unfit to be sold in the market ?—Yes, a good many too small for the Dublin market, but we preserve them for our family use; they are divided among the men.

49,675. Are there large quantities unfit for use that are thrown overboard ?—There is no doubt a small quantity destroyed. Most of them they bring up alive on the deck and throw overboard, and perhaps some others may be dead.

49,676. Would there be a large proportion alive ?—There would be a good many living when we throw them out.

49,677. Do you find that there is a larger proportion of small fish thrown overboard in shallow water or in deep water ?—Very often I see more in deep water.

49,678. Is the quantity of small fish you catch with the trawl either in deep water or shallow water on the increase or decrease, compared with what it was in former times ?—I have seen plaice in four fathoms of water, there are plenty at a certain time of the year, as much as there was when I first went to sea.

49,679. They are as plentiful now ?—Yes.

49,680. Do you agree with the evidence we have had to day, that the haddocks have decreased ?—Yes; in 1851 there was a law put in force by the officers of the Coastguard to protect the shore, and some men

when they were not able to earn bread outside were obliged to come in-shore; then, because they were fishing in-shore it was said they were breaking the law which had been made by the Coastguard here for protecting the coast. I saw the Coastguard fire a shot at the boats; the boats abandoned their trawl by slipping it and putting a buoy upon it so as to enable them to get it again. I did not see what harm they were doing, because there was a proper season for the men to catch flat-fish inside, namely from this time forward until Christmas, and it is during that time that they fish inside.

49,681. What boats fish there?—The Balbriggan boats and ours, but we have only one boat now at the Skerries.

49,682. That has no reference whatever to the decrease of the haddocks?—In 1851 the law was made to prevent the trawl fishermen from fishing inside. Some of the Clogher fishermen did not trawl at that time; they have two or three trawlers now. The fishermen were afraid to fish in the bay, but I saw the haddock men come with their boats and shoot their lines across the trawlers; it came after that that the haddocks went away altogether, and it is a mystery for any man to know the reason.

49,683. Did they go away suddenly?—Yes.

49,684. Do you not admit in any way what was said by the line fishermen, that it was in consequence of the spawn of the haddock being destroyed by trawling?—It did a great deal of harm to the spawn of the haddock, but they do not spawn in this bay.

49,685. Where do they spawn?—My father was an old fisherman and he always said that out here to the east of Lambay there was a bank where the fish mostly spawned, when the nights got long in this time of the year. I have often heard the fishermen say they wished for a breeze, or an east wind, to drive the fish off into the bay; and yet the trawling went on, and by constantly continuing it they have torn away the spawn on the ground on which the fish spawned.

49,686. Then you think it is trawling that has injured the haddock-fishing?—No doubt outside, but there is no spawn of any sort along the bay, unless it has the spawn of flat-fish in it. The haddock and the herring go to the rough ground to spawn, and a man will not shoot his trawl where there is rough ground. We go by the marks on the land where we are to shoot our trawl; if any accident happens we take a mark and keep clear of that place again.

49,687. (*Mr. Lefevre.*) Do you agree with the other witnesses that the Dublin trawlers trawl within the limits?—Yes, they trawl in as far as we do, from this time up to Christmas.

49,688. Do they not fish off the shore after then?—No.

49,689. Where do you go after Christmas; do you still fish within the limits?—Yes, still within the limits, and when the days get a little longer we trawl outside again. There are days when the weather will not allow us to trawl in deep water, and then if the nights are fine we get out and trawl in deep water.

49,690. Have the Balbriggan boats increased or not?—At one time there were 15 or 16 boats in Balbriggan.

49,691. How many are there now?—They wore away until there were only one or two.

49,692. How many are there now?—Perhaps as high as eight.

49,693. They have rather increased then?—Yes, they have been less since I went to sea, and now they are increasing again.

49,694. How do you account for the trawlers falling off at Skerries?—The owners took to speculating and something else.

49,695. Do you make as good a profit out of the business as you did?—I have seen as much got out of trawling of late years as I saw when I first went to sea, but I do not think that the fish are as plentiful as they used to be.

49,696. Do you think you can make more by trawling than by line-fishing?—Our people have not followed line-fishing for many years back. There is a good deal of loss attending line-fishing; they have to trawl in order to catch bait.

49,697. Is there a good deal of expense incurred in procuring bait?—They have to work a trawl for bait which may put them into from 10*l.* to 20*l.* expense.

49,698. You say that the Coastguard tried to enforce the regulation established here?—Yes they did.

49,699. How long did they try to enforce it?—About a couple of years.

49,700. After that they did not try?—The men were afraid and very often they had the net put down alongside without dragging it.

49,701. The Coastguard enforced the regulation for two years and then it fell off?—Yes.

49,702. After that they did not prevent trawling within the line?—No, because the officers here and the officers at Balbriggan saw that the men were not able to fish outside, and that if they were not allowed to fish inside they would have nothing to do but to beg.

49,703. What would be the effect on the Balbriggan trawlers and your own of enforcing the line of prohibition; suppose the Coastguard stopped trawling within the line from Clogher Head to Saint Patrick's Head what would be the effect on the trawlers?—The men might stop in-shore because their boats cannot go to the deep water to contend with the Dublin trawlers whose boats are of 70 or 80 tons.

49,704. The Dublin boats are better fitted to keep far out at sea?—Yes.

49,705. Your boats are not fit to go far out?—No. They are in general not half the size of the others.

49,706. Then in fact the prohibition would put a stop to your trawling altogether?—Yes, and to the Balbriggan trawlers. There is only one here and it would not be of much matter whether she stopped or not.

49,707. How many men are there in each of the Balbriggan trawlers?—From five to six.

49,708. Is that not a large crew for boats of that size?—It is an old system they practise; they worked in that way formerly and they carry it on still.

49,709. The Dublin trawlers have only three men and a boy?—Yes, three men and a good strong boy, or two small boys.

49,710. They are larger vessels?—Yes, but they have purchases instead of working by hand.

49,711. For hauling in the rope?—Yes.

49,712. Would it not answer for you to haul up the trawl with a winch?—Yes.

49,713. What are the earnings of a Balbriggan boat?—They might average, if they follow it throughout the year, about 10*s.* a week; some weeks they might get 20*s.* or 25*s.*, some 30*s.*, some only 8*s.*, and some 12*s.* or 15*s.*

49,714. Do you trawl within the line drawn from St. Patrick's Island to Howth Head?—I do not trawl much on that side.

49,715. Do you ever trawl in Dundalk Bay?—No, I never trawl in Dundalk Bay.

The witness withdrew, and the inquiry was adjourned to Balbriggan.

Balbriggan, Dublin, Saturday, 17th September 1864.

PRESENT:

BALBRIGGAN. J. CAIRD, Esq., M.P. (Chairman). | G. SHAW LEFEVRE, Esq., M.P.

J. Carton.

17 Sept. 1864.

JAMES CARTON called and examined.

49,716. (*Mr. Caird*). Have you long been a trawl fisherman here?—Yes, for 40 years.

49,717. And you are well acquainted with the fishing on the coast?—Yes, as well as any man you can find.

49,718. Do you remember the time when there was a prohibition made against trawling within a certain line?—I do.

49,719. Have you, since that prohibition was established, continued to fish both outside and inside that line just as you please, in the same way that you did before?—Just the very same.

49,720. It has made no difference in your trawling?—No; it is according as the weather is. If the weather is fine we go further off, and when it is wild weather we come close in. We follow the fish inshore.

49,721. You come inside when the weather is very bad?—Exactly.

49,722. And you go into the deep when the weather is fine?—Yes.

49,723. Do you not find in shallow water in the summer time, in warm weather, that you can get more fish?—No, they are scarcer in the summer time, far scarcer in the summer time. Fish get to the deep in the summer.

49,724. During the last 40 years have you and the fishermen here followed trawling on this coast?—Yes, during the whole of that time.

49,725. Were there many more boats employed in trawling 20 or 30 years ago than there are now?—Yes, a good many more than there are at present.

49,726. Did they begin to decline at the time of the potato famine?—Yes; it would be somewhere about the famine time.

49,727. Had the famine anything to do with it?—No; they had been falling off before and they have been falling off since.

49,728. Had the number of fish you were able to catch begun to fall off in quantity?—No, it had not.

49,729. (*Mr. Lefevre*). What was the reason of the decline in the number?—The owners were not able to keep them after the bounty was taken off.

49,730. (*Mr. Caird.*) When the bounty was taken off the boats fell off in number?—Yes.

49,731. (*Mr. Lefevre.*) Did they give a bounty on the fish caught by the trawl?—We always had 1*l.* each for the boat.

49,732. Were not the trawlers used at that time also as hookers during a portion of the year?—At a certain season of the year they were trawling, and the rest of the year they were hooking.

49,733. These boats were employed as hookers in order to get the bounty?—Yes.

49,734. And as trawlers for the rest of the year?—Yes.

49,735. They did not get the bounty for fish caught by the trawl-net?—No; they got the bounty for the hookers, and they hooked during part of the year.

49,736. Then when the bounty was done away with it was no longer an object to keep so many vessels here?—No.

49,737. Do your boats now fish sometimes with the hook as well as with the trawl?—No, they do nothing but trawl now.

49,738. Do you follow trawling the whole of the year round?—Yes, constantly.

49,739. (*Mr. Caird.*) Have you no other occupation?—I go with an odd cargo of seed potatoes between this and Scotland.

49,740. At what time of the year do you do that?—In January and February; but for one boat that does that there are ten which follow trawling the whole season round.

49,741. Is the quantity of fish you catch increasing or diminishing?—It is still increasing.

49,742. Is there any particular kind of fish that has been fished out?—The haddock is the only fish that has failed.

49,743. Can you give any reason for the failure of the haddocks?—No I cannot give any reason for it.

49,744. Do you find that when you are trawling your trawls can go on the same ground one after another with success?—Do you mean in catching flat-fish?

49,745. Yes?—The flat-fish are fully as plentiful as ever I remember.

49,746. Do you get any turbots?—Yes, a great number of turbot, brill and sole.

49,747. Do you get them now?—Yes, at present.

49,748. Inside the prohibited line?—Yes.

49,749. And outside also?—Yes; I see no difference.

49,750. Have you observed that in consequence of fishing for a long time within that prohibited line the quantity of fish you can catch with the trawl is diminishing?—Not in the least.

49,751. Are there just as many now as there were before?—Yes, as far as I can recollect.

49,752. Do you get a better price for them?—Yes, far better.

49,753. Then is it a better business now?—I think it is in the best time of the year. Now is the best time for trawl-fishing.

49,754. How long does it go on?—From this time until Christmas.

49,755. You do not follow the herring fishery at all?—No.

49,756. Do you find at the time the herrings are on the coast that you can get better hauls of other fish?—Yes, there are more hake and turbot, but the turbot are fully as plentiful without the herring fishery as ever I saw them.

49,757. At present?—Yes.

49,758. Do you get any cod with the trawl?—We get an odd one occasionally.

49,759. Not many?—No, only a few odd ones.

49,760. Have the number of plaice increased?—Yes.

49,761. And are they as good in quality as ever they were?—Yes; more were got last year, this time 12 months, than I ever remember for 30 or 40 years.

49,762. Do you get many sole?—Yes.

49,763. What do you consider a fair fishing of sole for one day's work with the trawl?—Sometimes five and six pairs, or 10 pairs. When we get out in the deep water we get eight and 10 pairs and three and five pairs in a haul.

49,764. Do you make good earnings by the trawl fishing?—Yes, pretty fair.

49,765. Do you make more than the line-fishermen?—I think we do equally as well.

49,766. How many men have you in a boat?—Five or six.

49,767. Do you think that each of those five or six men have as good or better earnings than the same number of line fishermen?—Sometimes they get far more and sometimes less.

The witness withdrew.

THOMAS CARVAN called and examined.

BALBRIGGAN

T. Carvan.

17 Sept. 1864.

49,768. (*Mr. Lefevre.*) Are you a fisherman here ?—Yes.

49,769. A trawl fisherman ?—Yes.

49,770. What is the greatest number of trawlers you recollect here ?—There were 17 sail of trawlers here at one time.

49,771. How long ago ?—30 years ago or more.

49,772. Did they begin to fall off in number ?—Yes.

49,773. Ten years ago how many were there ?—Ten years ago I suppose there were as many as there are now—about eight or 10.

49,774. Since that has the number decreased ?—Yes, they have fallen off since then and they have increased again since.

49,775. You cannot go out to fish as far as the Dublin boats can ?—No, we cannot.

49,776. Do the Dublin boats come within the line of prohibition ?—Yes, as often as we do.

49,777. Do you know that the Dublin boats only carry three men and a boy ?—Yes.

49,778. What is the reason you carry five and six ?—Because we work on a smaller piece of ground and in shallow water. They go out in the deep water backwards and forwards and they can keep their trawl out.

49,779. Their boats are larger than yours ?—They are double or three times as large.

49,780. If they can work their boats with three men and a boy how is it that you require five and six men to work yours which are so much smaller ?—We make our hauls shorter and oftener.

49,781. Do you work your trawls up with a winch?—Yes.

49,782. How often do you take it up ?—Every two hours, or three or four hours. The Dublin boats will go sometimes for eight hours.

49,783. Is an extra number of men necessary in your boats ?—We could not do without them because we must keep our trawl on the ground where the fish are.

49,784. Do you believe that the supply of fish is increasing rather than diminishing ?—It is increasing every day, particularly in the shallow water where no herrings ever spawn. We cannot get close enough to the shore at present after the fish.

49,785. Do you catch more plaice and soles in the shallow than in the deep water ?—Yes, double and treble the quantity.

49,786. At what time of the year ?—Up to the present time; from this till Christmas.

49,787. From September until Christmas ?—Yes.

49,788. And after Christmas where do you go ?—After that the fish go to the deep.

49,789. Do you follow them ?—We follow them as long as we can and as long as the weather will allow us.

49,790. Do those who can employ their vessels in the coasting trade after Christmas ?—Some odd ones do ; perhaps one out of 10 will go for a load of potatoes and upon other business.

49,791. Do the others follow trawling all the year round ?—Yes, they have nothing else to live by.

49,792. What would be the effect upon the fishermen and boats here if the regulations were strictly carried out so as to prevent trawling within a line from Clogher Head to St. Patrick's Island ?—We might go to the poorhouse. There would be nothing else for us to do ; our vessels are not fit to go to the deep in bad weather.

49,793. Are they not fit to go where the Dublin boats go ?—No, except on a fine day. Upon such a day as this they might go out.

49,794. Would it also take away the best of your fishing ?—Yes.

49,795. (*Mr. Caird.*) Would these fish be caught by anybody else if you did not catch them in the trawl ?—No.

49,796. Would the line-fishermen get them ?—No, they would not.

49,797. Do you send your fish to Dublin from here ?—Yes, all goes to Dublin.

49,798. All by rail ?—Yes, it goes to Dublin or Liverpool.

49,799. Does any of it go by steamer to Liverpool ?—Some of it goes from Drogheda, and from Liverpool to London sometimes.

49,800. Have you any idea of the largest quantity you ever sent away by rail on the same day ?—I don't know the largest quantity sent away altogether. The largest quantity I ever got by fishing was 80 score of plaice in three hours.

49,801. With one trawl ?—Yes, with one trawl in three fathoms of water three parts of a mile from the shore.

49,802. Was that a common fishing ?—Yes, and if we were to go half a mile or a quarter of a mile further off we should get nothing.

49,803. If these fish had not been taken by you in the trawl they would not have been taken by the line ?—No, the line fishermen would not have taken one of them.

49,804. (*Mr. Lefevre.*) Do you catch many small fish ?—No, not any but what some person can use. We catch none that we can say are not of use. Our meshes are large.

49,805. What is the size of your mesh ?—Three inches from knot to knot.

49,806. Do you mean on the line ?—Yes, I suppose it will be six inches when pulled out straight.

49,807. Is the mesh smaller at the pocket of the net ?—Yes, but that is the smallest of the mesh, in the other parts it is from six to seven inches.

49,808. Do you not bring up a certain number of fish that are unsaleable ?—No, none but what some poor person can use.

49,809. What are those small fish mostly ?—What we call flukes.

49,810. Are there any turbot and soles ?—No.

49,811. Do you mean to say that you never take up small soles ?—No, unless after a heavy breeze of wind they roll in, and a few small ones get entangled in the net.

49,812. What size are they ?—Three or four inches. We generally get them alive and throw them out.

49,813. Do you get any small turbot ?—None but what are of use. We get them both small and large, but we get none that some gentlemen cannot use.

49,814. Do you ever take any small cod ?—No, no small cod.

49,815. Any small haddock ?—No, none that I have ever seen, either in Scotland or England.

49,816. Did you formerly catch any haddock in your trawl ?—Yes, thousands of them.

49,817. Were they good sized fish or small ones ?—They were all good sized fish.

49,818. When did they begin to disappear ?—About 10 years since, I suppose.

49,819. Before that had you a pretty regular supply ?—Yes, we had a very fine supply. We got from 10 to 20 and 30 score, after four hours dragging with the trawl.

49,820. What do you think has been the cause of the falling off in the haddocks here ?—I am unable to say what has banished the haddocks.

49,821. What should you say the men earn by trawling here ; what wages ?—Sometimes they earn 1*l.* a week for their share, at other times not 10*s.*, at other times not 5*s.*; sometimes they get as much as 30*s.*

49,822. What will be the average throughout the year ?—16*s.* or 18*s.*

49,823. Do the boats belong to the fishermen here ?—Yes, they do.

49,824. How are the men paid ?—The owner of the boat gets two shares for the wear and tear of the boat; each man gets a share. The owner finds the boat and all the materials; he gets two men's part and each man gets a share.

BALBRIGGAN.

T. Carvan.

17 Sept. 1864.

49,825. Are all the boats owned here by the fishermen?—Yes.

49,826. Have any boats been built or bought lately?—None have been built here for the last 30 years, and if any poor man is not able to repair his boat it must lie there.

49,827. Do you ever use the boats for the herring fishery?—Not the trawl-boats.

49,828. Are they not fit for that?—No; they are too heavy.

49,829. If trawling were stopped within the line of prohibition would the boats be fit for any other kind of fishing?—No, they would not.

49,830. Could they be used as hookers?—In the summer time they might, but not in the winter.

49,831. If you used them as hookers would they catch the same class of fish you do now?—Of course in the summer season.

49,832. What would you catch with the hook and line?—Cod, skate and conger eel.

49,833. But not the same fish you catch now?—No.

49,834. Are your boys brought up to the same business?—Yes, all our young men are brought up to the same business, and we follow it throughout the year.

49,835. (*Mr. Caird.*) You say that you have lately made some very large hauls of plaice?—Yes.

49,836. Has that been of recent occurrence; was it this year? Yes.

49,837. Were the hauls you got as large as you ever made before?—Yes, they are not here at present but we expect to get them in the course of another fortnight. They come in regularly after the food as naturally as anything else.

49,838. Is the food upon the ground?—Yes, and the trawl cleans the ground so as to enable the fish to get at the food.

49,839. Do you find that your trawling on the ground has not prevented the regular return of the fish?—It has not done so in my day, and I have been 50 years at it; but the fish have been increasing every year.

49,840. It is quite as great as ever it was?—Yes.

49,841. You think the fish are increasing?—They have been increasing more for the last few years than ever I remember.

49,842. (*Mr. Lefevre*). Do you ever trawl over the same ground day after day in succession?—Yes, for a few hours at a time, we have been working over the same spot for weeks.

49,843. Do several of the boats sometimes follow one another closely?—They follow one another constantly.

49,844. Is there any difference in the quantity each will get?—No; one boat coming along will get as much as another and when they come back again they will get the same quantity of fish and perhaps more.

49,845. Have you ever trawled in Dundalk Bay?—Yes.

49,846. Since trawling there was prohibited?—No; not for the last 15 or 16 years.

49,847. Did it ever form a good portion of your fishing ground?—Yes, there are as fine fish in Dundalk Bay, if we were allowed to catch them, as we can take anywhere.

49,848. How is it that you have left off fishing within Dundalk Bay and yet have continued fishing within the other line of prohibition?—Because it was strange ground. It was too much out of our road, and if a southerly or easterly wind came on it was not easy to get out of it.

49,849. Then it was not because you were prohibited from trawling that you gave it up?—We always got a living along this shore and this was the place upon which we constantly trawled.

49,850. Did the boats from Carlingford fish in this bay?—No, there were never any boats belonging to Carlingford trawl-fishing that I remember.

49,851. We were told that there had been five or six trawlers there?—Not within the last 40 or 50 years.

49,852. Is this the only place along the coast where the fishermen have trawl-boats?—This place and Ringsend are the only places where there are any trawl-boats and we have no other business to live by.

49,853. Do the Rush hookers fish in this bay?—Yes, they come among us for bait.

49,854. Do they fish for bait?—They set their lines in the deep.

49,855. Do they trawl in the bay for bait?—Yes.

49,856. Do they set their lines here?—In the winter time they do.

49,857. Then do you not come across the long-lines of the Rush hookers?—No.

49,858. (*Mr. Caird.*) Do you look out for herring-nets when the herrings are on the coast?—Yes.

49,859. Are you careful not to keep among them?—We haul our trawls if we come near them.

49,860. Do you trawl at night?—Seldom during the herring fishery; we lay the boats up then.

49,861. Why do you do that?—Because we are afraid of doing harm to the herring-nets. We can get good wages on the quay and we never shoot a net.

49,862. (*Mr. Lefevre.*) Would it not answer for the men here to have herring-boats as well as trawl-boats?—We are not able to get them. There is no one to assist us.

49,863. Then you do not make money enough out of your trawling to set up other boats?—No; we are scarcely able to keep our families, and those men who have herring-boats do not get them by their own earnings; they have gentlemen to help them.

49,864. Do you earn enough money to enable you to keep your trawls in good condition?—No.

49,864*a*. Are they falling out of condition?—They are falling off every day. There is a poor man here with a big family who carried away his mast and his boat is laid up in consequence. He cannot get a new one.

49,865. Then it is not as profitable a business as you have said?—A man with seven or eight children and a wife to support upon 17*s*. or 18*s*. a week cannot save much out of that.

49,866. Do the men take potato grounds here?—No.

49,867. Then the fishermen here have no land to depend upon?—No, all that we get is out of the bottom of the sea; and if that is taken away we may go and suck our fingers. At this season of the year we can get the best of plaice, gurnards, turbot, and soles; but if you were to keep us a mile from the shore we might as well stop in the harbour.

49,868. When does the season begin?—From this time up to Christmas.

49,869. Just as the weather begins to get cold?—Yes, and the nights long.

49,870. The fish come into shallow water?—Yes, they come naturally into shallow water then.

The witness withdrew.

J. Rogers.

JOHN ROGERS called and examined.

49,871. (*Mr. Lefevre.*) Are you a fisherman here?—Yes.

49,872. Are there any seine-nets used in this bay?—Yes.

49,873. How many?—They are used by a gentleman of this country, Mr. Thomas Preston, who kills more small fish in a day than we should kill in hundreds of years.

49,874. How many of these nets are there?—I cannot tell.

49,875. Are there three or four?—There are more than 20.

BALBRIGGAN.
J. Rogers.
17 Sept. 1864.

49,876. Are they habitually used along the coast?—Yes, whenever they think proper to go out.

49,877. Do they catch many small fish?—Yes, they catch an abundance of them no larger than this (*measuring*) only fit to feed the pigs with.

49,878. What kind of fish are they?—Small turbot, plaice, brill, and sprats.

49,879. (*Mr. Caird.*) Yet that does not diminish the fishing here?—No.

49,880. It makes no difference?—No.

49,881. (*Mr. Lefevre.*) Have they used these nets for a long time or only recently?—They have been used for the last 20 years.

49,882. They do not use them specially for catching small fish?—They use them to catch trout and mullet.

49,883. And mackerel?—Sometimes small soles, plaice, salmon, turbot, and brill.

49,884. What is the mesh of the net?—The mesh is not an inch.

49,884*a*. Are they more calculated to catch small fish than your trawl?—Yes.

The witness withdrew, and the inquiry was adjourned until the 21st of September, at Greenock.

Greenock, Renfrewshire, Wednesday, 21st September 1864.

PRESENT:

JAMES CAIRD, Esq., M.P. (Chairman.) | G. SHAW LEFEVRE, Esq., M.P.

GREENOCK.
W. Gallacher.
21 Sept. 1864.

WILLIAM GALLACHER called and examined.

49,885. (*Mr. Caird.*) Have you been for many years a fish dealer and fish-curer here?—Yes.

49,886. And you are well acquainted with the different varieties of fish brought to the Greenock market?—Yes.

49,887. Can you tell us from your experience whether the fish caught in the sea here are increasing, stationary, or diminishing?—They have been decreasing for a number of years.

49,887*a*. What kind of fish in particular do you find is diminishing?—In fact all kinds have been diminishing.

49,888. Do you refer to white fish other than herrings?—They are both alike; the white fish are diminishing quite as much as any other fish.

49,889. What kind of white fish was found here in considerable quantities in former times?—Whiting and haddock, but whiting especially.

49,890. And are whiting not got here now?—Very few.

49,891. Can you recollect at what time any perceptible diminution took place in the catch of whiting?—About eight or nine years ago.

49,892. And with regard to haddock, were they ever found in any great abundance here?—Not here, but down about Campbeltown.

49,893. Was there ever any large quantity of white fish caught here other than herrings?—Between this and Campbeltown there were great quantities caught.

49,894. But taking a line to the east of Arran was there any very large quantity caught?—Yes.

49,895. Has it perceptibly diminished?—Yes, it is clean gone.

49,896. Were there any flat-fish caught?—Yes, a good many.

49,897. Any soles?—Yes.

49,898. Turbot?—Yes, and turbot.

49,899. And have they also diminished?—I cannot say much about them, the boats are not trying them in the way they used to do. They are trying them on the bank up here, but not down there. They used to get a good many out of it, but the boats are not fishing now. There are not more than two trawlers in Campbeltown which are trying for them now where there used to be eight or nine.

49,900. Is it beam-trawlers that you mean?—Yes.

49,901. Do you know what is the reason the fishing has been partially abandoned?—The reason is that most of the fishermen went away to engage in the boats going to Howth and the Isle of Man herring-fishing. The trawlers cannot get crews for their boats.

49,902. Do the men find a more profitable fishing elsewhere?—Yes, they find it more profitable to go to the herring-fishing. The men at the herring-fishing are all paid wages, but they were on shares at the trawling.

49,903. Is it because the fish have ceased to be so plentiful, or because the men have found a more profitable occupation and have gone elsewhere, that the fishing has been abandoned?—When these men were engaged in the herring-fishing there was no trawling. It was from this time until the new year that they generally went out to trawl. They are not out trawling now, but there are no fish coming up this way. All that we are getting now is just a few small codlings and whiting.

49,904. Where are they caught?—At Campbeltown.

49,905. Are they line-fish?—Yes.

49,906. There is some trawling on some of the banks off Greenock?—Yes.

49,907. Beam-trawling?—Yes.

49,908. What kind of fish do they get with the trawl?—Flounders and flat-fish.

49,909. Flounders and plaice?—Yes.

49,910. Has the supply of flounders on these banks increased or diminished of late years?—It has increased this year, more so than in the last five or six years; they have done uncommonly well.

49,911. Where are those banks situated?—Just right opposite this harbour.

49,912. Do you know what depth of water there is where they fish?—The place where they fish is on the other side. It mostly ebbs at low water. It is on the other side of the bank.

49,913. Is that towards the entrance to the Gare Loch?—Yes.

49,914. Is it up the Gare Loch?—No, it goes up by the hill across Helensburgh.

42,915. Have you any idea of the length and breadth of the bank?—I cannot say.

49,916. Has the bank been constantly fished in the same manner for many years?—Yes.

49,917. Has it been more productive this year than for many years?—Yes, there have not been so many fish taken off it for eight or nine years.

49,918. Can you say that the mode of fishing practised there is injurious or otherwise to the fishing?—Well, I cannot.

49,919. If that method of fishing has been practised for many years, and if the fishery has been better than for many years, one would naturally conclude that it has not been injurious to the fishing?—I have got fish off it for the last 35 years, and I am sure that for 20 years we have not got as many as we have got this year.

49,920. Has the number of men and boats increased?—The number of boats has increased, and is still likely to increase. There are two or three more

GREENOCK.

W. Gallacher.

21 Sept. 1864.

going to fish there, I believe, and there are six boats at the present time.

49,921. Are the boats and the trawls larger than they were?—They run from eight to ten tons on the average each boat.

49,922. Do they trawl in the day or the night?—They trawl both by day and by night, but generally with the tide.

49,923. Do they make a good business of it?—Generally they do.

49,924. Is the price of the fish caught in the trawl increasing?—The price is very steady; 16*d.* they get for them.

49,925. Is there any other trawling in the Clyde, in the waters near to Greenock?—No, there is nothing else.

49,926. Is there any trawling near to Cumbrae or the Island of Bute?—Yes.

49,927. Are there banks there?—Yes.

49,928. Do they continue to yield as much fish as they used to do?—I cannot say. None of them have been tried lately.

49,929. Have you heard it alleged that on the bank opposite Greenock, which seems to be so successfully fished, any spawn has been destroyed by the trawl?—I cannot say.

49,930. Have you ever seen any small or immature fish brought in by the trawl?—Not by the trawl, but I have by the lines.

49,931. Are any of the small fish caught in the trawl thrown overboard again as unfit for the market?—I never knew one to be thrown over the side. The mesh of the net is too large to allow the small fish to stay in.

49,932. What is the size of the mesh of the net?—About 2 or 2½ inches.

49,933. Does it get small at the cod end?—I cannot exactly say.

49,934. (*Mr. Lefevre.*) Do they catch nothing but flounders on that bank?—Nothing but flounders.

49,935. (*Mr. Caird.*) Have you had occasion to observe the condition of the herrings caught by the drift-nets and those caught by what is termed trawling?—The difference?

49,936. Yes, the difference in their condition?—I have got them often, but I cannot say much about the condition of the herrings. The trawled herrings were generally plumper and finer.

49,937. Are they finer fish?—Yes, and plumper.

49,938. Have you ever cured the trawled herrings?—Yes, thousands of barrels of them.

49,939. Can you cure them as successfully as the drift-net herrings?—Yes, and they have taken better in the market, and I have got a better price for them.

49,940. That is the trawled fish after they are cured?—Yes.

49,941. Then is the price of the trawled herrings usually higher than the price of the drift-net caught fish?—For a number of years we used to give more for them because the drift-net herrings were always smaller.

49,942. Does the trawl-net catch both large and small herrings?—It is very seldom that they take small herrings; they take them in the Kyles of Bute but about Tarbert I never saw them get any of them.

49,943. You say that the trawled fish are larger and finer in quality as compared with the drift caught fish?—Yes.

49,944. And that that is shewn by the price they realize?—Yes. I have seen at Ardrishaig Point as high as 24*s.* given for trawled herrings, where the net herrings would not bring more than 14*s.* a barrel.

49,945. Have you noticed whether on looking at the fish the trawled fish are much injured in their scales or otherwise?—They are generally not as well scaled as the drift herrings although I have sometimes got drift-net herrings nearly as bad. If they get a large shoot they may even be worse.

49,946. Are the trawled fish chiefly sent to the fresh market?—Yes, but they cure a great number of them.

49,947. Is the fresh market an increasing market?—It has been decreasing because there has not been so large a quantity caught. There is not a box of herrings coming in now for ten that used to come.

49,948. But the demand is what I refer to?—The demand is good, but we cannot get the quantity.

49,949. What I mean is this, suppose there was a good fishing now, and looking back to your experience of a good fishing in former times, would a larger proportion of the catch go into the fresh market now than would have been the case years back?—Yes.

49,950. There is a larger demand now for fresh fish?—Yes.

49,951. In comparison with what it was in former times?—Yes, if it could be got, but we cannot get it.

49,952. Has the price of herrings much altered within recent years?—Yes, a great deal.

49,953. In what way? Go back for five or six years and tell us in what way it has altered?—We were selling herrings for from 25*s.* to 30*s.* a barrel and for the last two or three years we have been selling them at 2*l.* 5*s.* 0*d.* Last week I sold herrings for 2*l.* 7*s.* 0*d.* a barrel, and three years ago I should have been glad to have got 27*s.* a barrel for the same quality of fish.

49,954. Has the quantity caught in Loch Fyne been increasing progressively?—No.

49,955. Has it been diminishing?—Yes, it has been diminishing for the last two or three years, and Mr. Hutchinson, the agent for the Loch Fyne boats, will be able to tell you that he has not been carrying one box for ten that he formerly carried.

49,956. It is a bad fishing this year in Loch Fyne?—Yes.

49,957. Is it an unusually bad fishing?—It was as bad last year.

49,958. (*Mr. Lefevre.*) Was it as bad last year as it is this?—Yes.

49,959. But in 1862, the year before that, the fishing was the best ever known in Loch Fyne for many years?—Yes, but for the last two years the fishing has been very slack.

49,960. (*Mr. Caird.*) What is the slackness in the fishing ascribed to?—I cannot tell.

49,961. There has been no trawling during that time?—No.

49,962. Practically the trawling during those two years has been entirely suppressed?—Yes.

49,963. (*Mr. Lefevre.*) Trawling was put a stop to in 1861?—Yes.

49,964. (*Mr. Caird.*) Then during 1861, 1862, 1863, and 1864 there has practically been no trawling in Loch Fyne?—No.

49,965. Nor in the Kyles of Bute?—No, nor in any of the places about here.

49,966. Then the diminution in the fishing for the last two years cannot be ascribed to trawling?—No, because there has been no trawling to injure the fishing.

49,967. Speaking as an extensive fish-curer what is your opinion, either from your own knowledge or from what you have learned, as to the advantage or disadvantage of permitting trawling for herrings?—I believe it was of great advantage to the public at large as the herrings were always cheaper when trawling was practised.

49,968. Do you in any way ascribe the higher price of herrings to the cessation of trawling?—Yes.

49,969. Is that because a smaller quantity has been caught?—Yes, and the price on that account has always kept up.

49,970. Was that your opinion when you were examined before the Commission a year or two ago?—Yes, I had the same opinion then. I have not altered my opinion.

49,971. At that time it would appear from the evidence that the majority of the curers here had an opinion against trawling?—Yes, they had.

49,972. Have they in any way changed their

opinion?—I think that most of the Glasgow curers have changed it.

49,973. Do they not think now that trawling is injurious to the fishing?—No. They are not now getting the quantity of herrings they used to get. They wanted me to sign a petition against it, and I told them they were doing an injury to themselves if they stopped trawling, as all the herrings got from Loch Fyne would be few enough to supply the fresh market, but if they allowed trawling the fresh buyers would take the trawled herrings and allow the net herrings to go to the salters. I think the curers have now seen their mistake; they have not been able to get trawled herrings and they have been obliged to obtain great quantities during the last two years from Norway. I believe they always had plenty of herrings in Norway, but the people could not send them here as our prices were too low.

49,974. Since the discontinuance of trawling the prices have increased and have allowed of the importation of foreign herrings?—Yes.

49,975. Have you ever heard it alleged that the trawl-net is injurious to the spawn and the brood of herrings?—I cannot say that.

49,976. You have no knowledge upon that point?—No.

49,977. Have you any opinion in regard to the advantage or disadvantage of the close-time which prevails on the west coast from the 1st of January to the end of May?—We had always good herrings in January, in Loch Fyne.

49,978. Had you any large quantity of herrings in Loch Fyne in January?—Yes, the best fishing we had in the whole season was in January.

49,979. That has been entirely put a stop to by the close-time?—Yes.

49,980. Can you tell us when the close-time began?—It commenced I believe in 1861. It commenced when the trawling was stopped.

49,981. (*Mr. Lefevre.*) There were several Acts that did away with trawling?—Yes.

49,982. (*Mr. Caird.*) It was the Act of 1860 that introduced the close-time?—I think it was.

49,983. Then it came into operation in 1861?—Yes.

49,984. The fishing in 1862 was a very successful one?—Very successful.

49,985. So that the close-time of 1861, if it had any effect at all, was not disadvantageous to the fishing?—No.

49,986. But in 1863 and 1864 you say there has been a very bad fishing?—Very bad.

49,987. And during that period the close-time has been rigidly observed?—Yes, the fishing of 1862 was good, but it has been bad ever since.

49,988. Then as shown by the fishing of 1863 and 1864, as far as it has gone, the close-time has been of no advantage?—It has been of no advantage; we have not had one third or one fourth of the quantity of herrings we used to have.

49,989. I think you stated that the herrings were in fine condition always in January?—Yes.

49,990. Did they take the market readily?—Yes.

49,991. Have you any idea what quantity of herrings were caught in January in Loch Fyne?—I cannot say; the Fishery officer can tell you better than I can.

49,992. Is there a desire on the part of the fishermen as far as you know and of the fish-curers that the close-time in regard to the month of January at least should cease?—I think it should cease in January.

49,993. Is there a general desire that it should be observed strictly from the beginning of February until the 1st of June?—I think so.

49,994. Is that the general opinion?—Yes; I have spoken to several upon the subject, and that appears to be their opinion.

49,995. Do you think from the experience you have had in the fishing that it would be an advantage to the public that the close-time in the month of January should be discontinued?—Yes.

49,996. Because the fish are in good condition at that time, and there is no apparent advantage in having so long a close-time?—Yes, and the fishermen got large quantities of herrings in that month; it was generally the best fishing month in the season.

49,997. (*Mr. Lefevre.*) What was the condition of the fish in January?—They were in fine condition.

49,998. Was the roe getting larger at that time?—You would not know the difference.

49,999. (*Mr. Caird.*) Do they begin perceptibly to lose condition as the season goes on?—Yes.

50,000. (*Mr. Lefevre.*) Do the herring spawn at all in Loch Long?—Yes, we have got quantities of full herrings in Loch Long and in Gare Loch.

50,001. But there is no considerable fishing there, is there?—No there has been none this season.

50,002. They do not come up there until after the close-time sets in?—I have seen them get fine good herrings in the month of June.

50,003. I think you said there was a very small fishing in Loch Long?—The fishing is small, but the herrings are always large.

50,004. What time of the year do they spawn in Loch Long?—I cannot say; it was generally some time in the month of August that they spawned there, but I cannot say for a number of years back whether that continued to be so.

50,005. Have you yourself ever used a trawl net for herrings?—No, never.

50,006. Then you have only bought herrings from the trawl fishermen and cured them?—Yes.

50,007. Have they sold you all the fish they catch in the trawl net, or have they selected fish from the trawl net and sold them to you?—No, they just send them as they get them counted out of their boats.

50,008. Have you found them nearly all of the same size or do they vary?—They were just the same as the net herrings; we get some larger and some smaller, but we get just the same among the drift net herrings.

50,009. Did you not get a considerable number of small fish also?—No.

50,010. Much smaller than are caught in the drift-net?—No, as a general thing the fish were larger.

50,011. But were they not mixed with small fish?—Sometimes, but they were not as much mixed as those caught by the drift-nets.

50,012. Was there any time of the year when you observed a larger number of small fish than at any other time?—Yes, at the latter end of the season.

50,013. Did you find that you got as large a price for your trawled herrings when they were cured as you did for the drift fish?—We generally got more because they were larger.

50,014. Did you not sort them yourself?—Our own men salted them.

50,015. Did you take out the larger ones and cure them?—No.

50,016. Did you salt all as they came?—Yes.

50,017. Did you cure many herrings yourself that were caught in January?—We used to cure a great number in January; more so than in any other month.

50,018. Did they fetch as good a price in the market as the others?—Yes, just the same.

50,019. Where would they be caught mainly?—From Minard up to the head of the loch, but I was seldom out on the ground.

50,020. You say that not much is to be gathered from the returns of the fishing since 1861, because although in 1862 there was a good fishing, in 1863 and 1864 there had been a great falling off?—Yes.

50,021. So that it does not tell much one way or the other?—No.

50,022. Either upon the question of trawling or upon the question of close-time?—No, I do not think so.

50,023. You think there is not much to be gathered from these data as to whether the close-time has been

GREENOCK.

W. Gallacher.

21 Sept. 1864.

of advantage or not?—I think the close-time in the month of January is a disadvantage.

50,024. Has the number of boats fishing during the open-time increased since the close-time was established?—I cannot say that.

50,025. The number of fish caught in 1862 was very considerable?—Yes.

50,026–7. It was nearly three times the amount caught the year before?—I believe it was.

50,028. You spoke of whiting being supplied to the market here?—Yes.

50,029. Where were they caught?—Mostly at Largs and Campbeltown.

50,030. Were they caught by the long-line?—Yes.

50,031. How many boats are there fishing with long lines from Greenock?—There are only some two boats fishing now, but they get nothing but flounders.

50,032. Was there in former times a larger number?—Some time ago there were six.

50,033. What class of boats were they?—They were only small skiffs.

50,034. With two or three men in each?—Three men.

50,035. There are now only two boats?—Only two.

50,036. Can you form any opinion as to the cause of the falling off of the whiting?—Well, I cannot say what it is. We used to be able to get any quantity at Campbeltown. We could get what would fill any number of boxes, but it has so fallen off now that there is scarcely a box to be got.

50,037. Do the boats from Greenock fish over the same ground as the Campbeltown men?—No.

50,038. Was there any trawling on the ground where the whiting were caught?—Not that I am aware of. In the sound of Kilbrannan they used to get great quantities of whiting.

50,039. There is no supply now in these estuaries except of flounders?—No, they are getting very few round fish at Campbeltown, such as small codling and whiting.

50,040. Can you recollect any time when whiting were caught up as high as Loch Long?—Yes.

50,041. How long ago?—We have got a great many here during the last two years out of Loch Long and Gare Loch.

50,042. How are they caught?—With a net.

50,043. With a trammel-net?—With a net five or six inches to the mesh.

50,044. Is it a fixed net?—Yes, I think it is fixed.

50,045. Or is it used as a drift net?—I cannot say, I never saw it used, but I have seen the fishermen take as high as 20 and 30 and even as many as 60 hake with the herrings. Down the Sound of Kilbrennan there might be plenty of cod and conger eel got, but they cannot get bait.

50,046. What is the reason of that; is it on account of the close-time?—Yes.

50,047. Then the close-time has operated as a disadvantage to the line-fishing?—Yes it has hurt the line fishermen very much. They can get no other kind of bait for cod or ling.

50,048. Was January a good month for catching cod and ling?—Yes, very good.

50,049. And hake?—Yes; in fact from November and December the fishing was very good. The fishermen used to get large quantities of them both in those months and in January and February.

50,050. You are not prevented from taking bait for the line-fishing in November and December?—No; but the boats will not give up the herring-fishing then.

50,051. They would not take to cod-fishing until the herring season is over?—No.

50,052. Then the line-fishing has been put a stop to by the close-time preventing them from catching the bait?—Yes.

50,053. Would it be possible to permit the catch of herrings for the purpose of bait and to keep up the close-time for herring-fishing generally?—I think it would. The fishermen say that if they only got a basket or two they would ask for no more, and they could get that at almost any time when the weather was moderate.

50,054. Would it be possible to permit fishing to that amount without letting in the larger fishing?—Yes, I think so, and I would allow it. They could be fined for taking them to sell, or any person buying the herrings for sale could be fined. Permission should only be given to the fishermen to take the quantity they wanted for bait. I knew them last year to slip out and take as many herrings as would bait their lines, but before they came in they had to rub up the bellies of the fish they had caught for fear any pieces of the herrings should have got into their stomachs.

50,055. I suppose that was because they were afraid of being summoned for having herrings in their possession?—Yes.

50,056. Then practically the enforcement of the close-time has put a stop to line-fishing during the close months?—Yes, and formerly during those months we used to get large quantities of ling and cod and eels at Tarbert, Campbeltown, and Kilbrennan Sound.

50,057. As high up as Loch Long?—Yes.

50,058. And also conger eels?—Yes, a great many conger eels.

50,059. (*Mr. Caird.*) Have you as a curer found that the trawled herrings are ever so heated as to be incapable of being cured?—I have never seen that.

50,060. Then if such an assertion as that were made, so far as your experience goes, you think it would be incorrect?—I have never seen it. During the last 40 years I have never known the herrings to be spoiled except upon one occasion when there was a late catch in the Kyles of Bute on a Saturday night; they would not take them out because they were afraid of the minister, and on Monday morning they were spoiled.

50,061. (*Mr. Lefevre.*) Do they ever mix the drift-net and the trawl-net herrings together, or do they cure them separately?—They have generally been cured separately, because the trawled herrings being larger will fetch more money. In fact there are very few of the curers willing to take the small drift-net herrings when they can get the large trawled herrings.

The witness withdrew.

W. McCullogh.

WILLIAM MCCULLOGH called and examined.

50,062. (*Mr. Caird.*) You are a fish-curer in Glasgow?—Yes.

50,063. And have been so for some years?—Yes, for 18 years.

50,064. Then are you well acquainted with the state of the fisheries in the Firth of Clyde?—I am pretty well acquainted with it. I should be at all events.

50,065. Have you formed any opinion as to the advantage or disadvantage of the system of fishing with the trawl-net as it is called in Loch Fyne?—Yes, I have formed a decided opinion against it.

50,066. What reasons do you give for that opinion against the system?—Because I have seen them at one time getting a great amount of trawled herrings which they have sent into the market, and which has reduced our market very much. At other times when we could not get trawled herrings I have found the other herrings going up very much. In point of fact the people who traded in herrings did not know what to do.

50,067. Then your first objection is that sometimes the market is over supplied with fish?—Yes, it is glutted at times, but there is no regular time. Some-

times there is a very great glut and at other times there is nothing coming in at all, and the herrings will rise in price 10*s.* or 12*s.* a barrel. There is no steadiness in the market at all.

50,068. During the time the trawling system was permitted by law was the average price of cured herrings as high as it is at present ?—I have known the price higher.

50,069. But what was the average price ?—I daresay it would be as high.

50,070. Has there not been a considerable rise in the price during the last two years ?—No, there has not. In 1862 there was a great reduction of price at the latter end of the season on account of the cod-fishing.

50,071. What may be the average price per barrel for cured herrings at the close of the fishing ?—It depends on each year's fishing.

50,072. Do you remember the price for some years back ?—I remember the price at the close of 1862. They were down as low then as 20*s.* and 21*s.* a barrel.

50,073. What was it in 1861 ?—I cannot recollect just now.

50,074. Can you not go further back than 1862 ?—I could not unless I examined my books.

50,075. Was it much higher in 1861 ?—It was.

50,076. Was it as high in 1863 ?—I consider that it was higher.

50,077. What was the price then ?—At the latter end of the season it was 30*s.* per barrel.

50,078. What other objection have you to the system of trawling ; do you know anything about its being destructive to the spawn or brood of fish ?—We consider that it is. We never see the quantity of other fish coming to the market which we used to see in former times.

50,079. Do you mean of white fish ?—Yes of white fish. We have never seen the quantity of white fish come into the market since trawling was allowed.

50,080. Then you think that it destroyed the spawn of other fish besides herrings ?—Yes, we think so. We are of opinion that it was torn up with the herrings when they were trawling for herrings.

50,081. Have you ever seen spawn taken up in the trawl ?—Yes, repeatedly, as thick as my finger.

50,082. In any large quantity ?—Yes, at Ballantrae I have seen it so thick that you could float a barrel with spawn.

50,083. We are now speaking of herrings in Loch Fyne and the Kyles of Bute ?—About four years ago I saw them taking up spawn in the Kyles of Bute.

50,084. What kind of spawn ?—Herring spawn.

50,085. Was it in any large quantity ?—I could fill a spoon full among the herrings.

50,086. Among a whole boat of herrings ?—Here and there among them. I saw that especially one time at the ferry at Kaimes four years ago.

50,087. Have you found that the fish caught by the trawl are so injured as to be unfit for curing ?—There is one thing I know, and that is that we can never find a trawled herring that is not a little blackish at the bone in curing.

50,088. Do the trawled fish bring as much as the herrings caught by the drift-net ?—It depends on the size. We used to get small trawled herrings and large trawled herrings too.

50,089. Do they salt them ?—No, but we get them at different times. They did not always get large herrings in the trawl. They as often get small herrings as large.

50,090. Which on the average brought the best prices ?—The large herrings, of course.

50,091. But which kind ; those caught by the drift net or those that were trawled ?—If the herrings were of the same size the drift-net herrings would bring more money.

50,092. Are there any other objections that occur to you against the mode of fishing by the trawl ?—There is another objection which I think is a serious one.

50,093. What is it ?—The fishermen who used to trawl became very much demoralized and very outrageous. They became so outrageous that they did not care what they did. The drift-net men told me that they frequently went among their nets and robbed the nets, in addition to which they cut away the buoys. Now that is a very serious objection I think.

50,094. Is it not a fact that the quantity of fish caught in Loch Fyne has diminished last year and this year ?—Yes.

50,095. And there has been no trawling whatever ?—None, as far as I am aware.

50,096. None at any rate has been permitted ?—No.

50,097. Any that has been done must have been on a very small scale ?—Yes, just so. In 1862 there was a superior year ; that was two years after the trawling closed.

50,098. Only one year ?—Yes, only one.

50,099. The law was passed in 1860, but did not come into operation that year ?—No, it came into operation in 1861.

50,100. Then 1862 was the second year after the system had closed ?—Yes, more fish were caught in Loch Fyne that year than I can ever remember.

50,101. Do you know whether the general opinion of the fish-curers in Glasgow is in favour of continuing the system of trawling or not ; what is their opinion with regard to the advantage or disadvantage of continuing trawling ?—I believe that the majority there are against it.

50,102. Have they not altered their opinion ?—No, I have been constantly in conversation with them but I am not aware that there has been any alteration.

50,103. Have you any opinion as to the advantage or disadvantage of a close-time in the herring fishery ?—I should be very much inclined to ask for another month if it is found that good herrings can be obtained in that month.

50,104. Do you mean the month of January ?—Yes.

50,105. You think that the month of January might be included with advantge in the open season of fishing ?—Yes.

50,106. Are the fish in good condition then ?—Yes, they are in better condition then than they are afterwards.

50,107. And are a good many fish caught ?—Yes, among the Northern Islands and in Loch Fyne.

50,108. Are they sold fresh or cured ?—The majority is cured at that time of the year.

50,109. In January ?—Yes, especially in the Northern Islands. They are all cured in the north about Portree in Skye. I have heard the Gairloch fishermen complain of the want of bait in January. That is the general time they get the codfish in Gairloch. I believe that the fishing for codfish has very much fallen off in consequence of the want of herring bait.

50,110. Herring bait being the best bait for cod ?—Yes, I believe so.

50,111. Do they not fish cod in the months of February and March also ?—Yes.

50,112. Then as far as bait goes it would be of advantage to the fishermen to take bait in those months ?—Yes, but if you give them those months for that purpose in the loch you must give them that time everywhere else.

50,113. I believe you have no practical knowledge of the white-fishing other than herring-fishing ?—Yes, I have cured codfish.

50,114. You do not cure any codfish caught in the Firth of Clyde ?—No.

50,115. They are caught more in the north and among the western islands ?—Yes, cod and ling.

50,116. Have you any knowledge of the yield of white fish in the Firth of Clyde other than herrings ?—No.

50,117. You do not deal in those fish ?—No.

50,118. (*Mr. Lefevre.*) Could not the line fisher-

GREENOCK.

W. McCullogh.

21 Sept. 1864.

men get bait from the east coast?—They get mussels sometimes.

50,119. But I mean herrings?—I think it would be too far away for them to get them from the east coast.

50,120. Did I understand you that it would be desirable that during the close-time the fishermen should be allowed to take herrings for bait or not?—I would not go beyond the month of January.

50,121. After that you would stop the taking of herrings altogether even for bait?—Yes.

50,122. Do you think that it would not be possible to permit the taking of herrings for bait?—You could scarcely draw a line.

50,123. Would they catch them for other purposes—for sale?—It would let in an inroad. It would be scarcely possible to allow trawling then.

50,124. Is the month of January the best month for the line-fishing?—It used to be the best month. I have heard sad complaints from the Gair Loch fishermen and the long-line fishermen who used to go over to Scalpa and get their herrings there.

50,125. Do you agree with the last witness that the line-fishing in this estuary has been virtually put a stop to in consequence of the fishermen not being able to get bait?—As far as the deep-sea fisheries go there was never much cod and ling got in this loch; they were mostly got outside.

50,126. How far outside?—Five or six miles; mostly about Ailsa Craig and on towards Campbeltown.

50,127. Further up the loch than that is there not a considerable quantity taken?—There has been a considerable quantity of whitings got about Campbeltown, and I believe they used to trawl where they got those whitings.

50,128. But there has not been any quantity of cod, ling, and conger got?—No, they are further out.

50,129. Have you yourself ever purchased herrings from the trawl fishermen?—Never.

50,130. Not for curing?—Never.

50,131. You have always made your purchases from the drift fishermen?—Yes.

50,132. Then you do not agree with the last witness that as a rule the trawled fish are rather larger than the others?—No, they are larger at times, the same as the drift-net herrings are. Perhaps for one week you may get large herrings, and then another week only get small ones. That is especially the case in Loch Hourn. In Scalpa we are getting large ones. It does not follow that the trawl-net always takes large herrings. In the majority of cases it will be only small herrings that the trawl-net will take.

50,133. Are they different shoals of fish?—Yes.

50,134. Do the shoals run generally of the same size, or do you find small and large herrings mixed up in the same shoal?—We sometimes find them mixed up and at other times they are all large, while at other times they will be all small.

50,135. Can you state of your own observation whether the trawl fishermen ever caught a great variety of fish in the same catch; for instance, some very large and then going down to very small in the same haul?—I have seen them myself delivering fish out of the boats along the quay at Tarbert, the greater part of which were small ones but with a few large ones mixed up with them. I have seen them with very large fish and with very small ones in the same catch.

50,136. What were the smallest fish the trawlers took?—I have seen them taking herrings from 1,400 to 1,500 to the barrel, and I have seen them taking them as large as not to be more than 500 or 600 to the barrel.

50,137. Would those smaller fish when cured fetch a good price in the market?—Not if other fish were in competition with them.

50,138-9. Was there no demand for small herrings?—Not in our market. We can sell half-a-dozen barrels of large herrings when we cannot sell one of small herrings.

50,140. You also spoke of the line fish, and said that while trawl-fishing was permitted you did not take the same quantity of line fish on account of the small fish being taken in the trawl?—It was the herrings I referred to.

50,141. What sized small herrings did you refer to as being taken—those you have just mentioned?—Just so.

50,142. Were these the smallest size you have known to be taken?—I have seen them in the Kyles of Bute at the latter end of the season take herrings as low as 2,000 to the barrel; it was a disgrace to see them taken.

50,143. What time of the year was that?—About four years ago. It was the last year they were permitted to trawl.

50,144. But what time of year was it?—In the month of December.

50,145. Did you see them yourself?—Yes, I saw them sent on shore. No one would buy them.

50,146. What was done with them?—They laid there till they rotted.

50,147. Were any of them sent to the market?—Yes, lots were sent to the market and sold at 5*s.* and 6*s.* a box.

50,148. You spoke of spawn being taken up in the trawl, are you sure that it was not spawn coming from the full fish?—I expect it was spawn coming from the fish, from the large herrings that they caught at that time.

50,149. It was not spawn taken up from the spawning-ground?—No. I think they had been spawning there, and the spawn was taken up among them or they were fish ready to spawn.

50,150. Fish ready to spawn and spawn dropping out of the fish were taken up?—I think so.

50,151. It was not spawn dragged from the spawning bed?—What I saw led me to think that the fish were ready to spawn, and that they spawned when the net took them up.

50,152. There is considerable difference in dragging spawn from the spawning ground and taking fish in the act of spawning?—I do not think they would trawl the spawn up so readily unless the fish were ready to spawn.

50,153. You think the fish were on the spawning ground?—Yes.

50,154. Did you observe the fish yourself?—I observed the spawn sticking hard together. I think if the fish had spawned after they had been caught in the net the spawn would not have got so close together and been so thick; it would have been more loose. There is another serious objection I wish to make with regard to the fishing, and that is to the small nets used in Loch Hourn. They are just now catching very small herrings, and all that is done in consequence of using very small nets. The small nets they use are killing all the herrings just now.

50,155. What are the nets you speak of?—They are drift-nets for herring-catching. They are nets of a smaller mesh than the legal mesh.

50,156. Do they shrink by use to very much less than the legal mesh?—Yes, they are far less. I believe there is an Act against them, but there is no one to look after enforcing it. There is no Fishery officer in the north challenging the nets, but, on the contrary, they get permission to fish with anything. I think if there is an Act against the one thing there ought to be an Act against the other.

50,157. How many meshes to the yard have they shrunk to?—To above 40.

50,158. What sized fish will they take?—They are taking fish just now 2,000 to the barrel. I have two or three barrels in Glasgow at this time that are as many as 2,000 to the barrel.

50,159. Is there a considerable quantity of those fish sent to Glasgow just now?—Yes.

50,160. Is it sold as fresh fish in the market?—No, all cured.

50,161. You spoke of great quantities of trawled fish being thrown into the market at one time which

you said was injurious to the curers ?—Yes, it is decidedly injurious to the trade.

50,162. Was the principal quantity of it sold in the market as fresh fish or bought by the curers ?—It was sold both as fresh fish and cured.

50,163. Then the effect of its coming into the market was to lower the price of fish and that affected the price of cured fish ?—Yes, and hurt the curer so that he did not know what he was doing; it made him disgusted and rather inclined to push himself out of the trade.

50,164. You found it to your disadvantage to have the prices constantly going up and down ? You would rather have the prices even ?—Yes, that has been the case for the last two or three years.

50,165. Do you think the public would rather have them level ?—It is of no advantage to the public to pay 40*s.* a barrel to-day and 20*s.* a barrel to-morrow.

50,166. Do the poor people here buy fish to cure them themselves by salting them ?—It is very rarely they do. I do not think they do. Those who want fresh fish buy them fresh, and those who want salt herrings buy them salted.

50,167. They do not take the advantage of a cheap market ?—No, they have not so much economy about them.

50,168. The country people do not do that ?—No ; when they want a barrel of salt herrings they buy them salted from the curer.

50,168*a*. I suppose the curers take advantage of the low price and buy large quantities when they are thrown upon the market ?—At times they do.

50,169. And I suppose also that there is a large demand for fresh fish at that time ?—The demand for fresh fish becomes lower, and the price gets down generally as the quantity must be got through ; they must be sold, because they will not keep fresh.

50,170. Do the poorer class buy large quantities of fresh fish ?—They do.

50,171. Particularly while the price is low ?—I have seen them buying when the price was dear as well as when it was low. They buy what they want whether the price is low or high. They are the cheapest food they can get.

50,172. You do not think the price makes any difference with the poor purchasers ?—I have not found it to be so in my experience.

50,173. Then is it the curer only who gets the advantage of the low price ?—I do not see that the curer gets it either ; the fish are forced upon the market, and they must be sold for whatever they will bring.

50,174. I suppose it does not very much affect the price of the cured fish in the long run taking the year through ?—No, but it affects the demand for cured fish very much for a time.

50,175. (*Mr. Caird.*) Have you ever cured any trawled fish yourself ?—No, but I have seen them when they were cured, and have judged them before the Fishery officer.

50,176. You have not cured them yourself ?—No.

50,177. Then you cannot speak as to whether they are so heated in some cases as to be unfit for cure ?—I have seen them cured in Glasgow when I consider that they were not fit to be cured.

50,178. Do you know whether the market for fresh herrings, as compared with the market for cured herrings, has been increasing ?—In the towns it has been, but not in the country.

50,179. But it has in the large consuming towns ? —Yes.

50,180. Is a large proportion of the fish caught now sent into the market fresh ?—Yes, a much larger proportion than there used to be from Loch Fyne.

50,181. Has there been a large quantity of herrings imported here ?—There has.

50,182. When did that begin ?—It has been the case for the last six or seven years.

50,183. Has it been increasing ?—Well, it has been. Not this year, but the year before there was a large quantity of Norwegian herrings in this market.

50,184. Are they good fish ?—Some of them are, and some of them are very inferior.

50,185. Are they equal to your own drift-caught herrings when cured ?—The large fish that come in are not cured as well as they should be, or they would be as good as ours. They would be quite as good as ours if they were properly handled and properly cured, but they are not as well up to curing them as we are.

50,186. Is there any brand upon the herrings cured here ?—No, we find our own name the best brand we can put upon them.

50,187. Have you no desire for the Government brand ?—Not on the west coast. We do not send them away to the foreign markets, but send them to the home markets, and the better we can cure them the better we can sell them.

50,188. Your herrings are recognized in the market by your own names as the brand ?—Yes.

50,189. And the name of the curer is a guarantee taken by the purchaser for the quality of the cure ? —Yes, but they are opened and examined besides.

50,190. There never has been any demand on the part of the curers here for the use of the Government brand ?—Not that I am aware of. There has been no such demand on the part of the west coast curers.

50,191. (*Mr. Lefevre.*) You spoke of great variations in the price occasioned by trawled herrings being thrown into the market ?—Yes.

50,192. Can you give any instance of the difference of price between two market days ?—I could not exactly name a day, but if I referred to my books I could.

50,193. Without naming a day can you mention what the difference of price would be ?—There would be such a difference as 10*s.* or 12*s.* a barrel.

50,194. Falling from what ?—From 2*l.* a barrel down to 30*s.*

50,195. In one day ?—Yes, in one day.

50,196. (*Mr Caird*). Taking the interests of the consumer into consideration, can you tell us whether the advantage or disadvantage of trawling for herrings has been shown by an increase or decrease in the total supply of fish ?—I do not think I could show that.

50,197. Or by an increase or decrease of the price ? —I think I have referred to the decrease in price already. I say that it is of no advantage to the consumer to have to pay 40*s.* a barrel one day and 20*s.* another. I think on the average there has been no advantage to the consumer at all.

50,198. If you take the interests of the consumer to be represented by the quantity of fish that go into the market in the course of the week, would you say that the quantity supplied to the consumer under the present state of the law, when there has been no trawling, has increased or decreased ?—I think it has neither increased nor decreased since trawling has been given up, taking one year with another.

50,199. Then we are to conclude if it has not increased, that so far as that goes there has been no advantage to the consumer in consequence of giving up trawling ?—Well, I do not think there has. If you want a supply of herrings, then is the time that the Norwegian herrings come in to fill up the gap.

50,200. You, as an opponent of trawling, admit that as far as an increase in the supply to the consumer throughout the year is concerned there has, so far as it has gone, been no increase of the supply of herrings in consequence of the suppression of trawling ?—None, except in 1862, the second year after trawling was prohibited ; there was a great increase then, but we have not had any increase since. I rather think there has been a falling off for the last two years.

50,201. If trawling were again permitted, would there be an increase in the quantity ?—I cannot say that. We cannot tell what the fish will do. I dare-

GREENOCK.

W. McCullogh.

21 Sept. 1864.

say the men with the largest experience know very little of the run of herrings, when they are going to come and when they are going to go.

50,202. You have not yourself formed any opinion as to whether the herrings breed in the lochs or whether they come from the open sea?—I think they must breed there, or they would not be spawning there.

50,203. Do you know whether the dog-fish have been increasing or diminishing, or whether they go and come?—They go in great shoals. Sometimes there are a good many, and at others there are scarcely any.

50,204. Have many been seen this year?—No, but in the previous year there was a large number.

50,205. Last year?—We generally find more off Stornoway and the Island of Lewis.

50,206. The cod and all other kinds of fish prey on the herrings?—Yes, they follow after them.

50,207. (*Mr. Lefevre.*) Is there any part of the seas in which you have observed that the supply from the trawlers was greater than from another part?—In the month of December, when the fish came through the Kyles of Bute they go to the spawning beds off Ballantrae. There used to be an immense gathering there.

50,208. Was the supply by the trawlers then very large?—Yes, they got them in the narrows, and killed them almost altogether. That is the time when I saw such very small herrings.

50,209. Then the last month of the season was most favourable for the trawlers?—Yes.

The witness withdrew.

D. Douglas.

DONALD DOUGLAS called and examined.

50,210. (*Mr. Caird.*) You have for a number of years been acquainted with the white-fishing in the Firth of Clyde?—Not exactly white-fishing. I have seen it and I have been about it, but I have been more particularly connected with the herring-fishing.

50,211. Have you ever trawled for flounders on these banks?—No, I have trawled for herrings.

50,212. But not for other white fish except herrings?—No; I presume you mean beam-trawling?

50,213. Yes.—No.

50,214. Your experience has chiefly been in connexion with the herring fishery?—Yes.

50,215. Where did you fish?—At Strachur, opposite Inverary; then at Tarbert, and as far as Caradon. I have been drift-net fishing and trawling.

50,216. Do you think that the two kinds of fishing can be carried on together without disadvantage?—Yes, to the greatest extent. The trawler does not put out his net where he can get spawn. The trawler in olden days, about 40 years ago, would require to jump on the rocks and draw everything on shore on the banks. Now-a-days they shove their engines out as far as they can, and shoot their nets out in deep water.

50,217. Do they not haul them on shore?—No.

50,218. Do they bring the fish on board?—Yes, they could trawl in the middle of St. George's Channel now.

50,219. Have you ever seen any spawn brought in by the trawl-net?—No, they could not bring it in in a place like that.

50,220. What was the quality of the fish you usually got with the trawl net?—We have had from 10 to 12 and up to 30 and 40 barrels of the finest trawled herrings in the months of January and September. They would run from about 550 to 600 in a barrel. The shoals of small herrings they would not get in one case out of ten.

50,221. Do you think the shoals of herrings caught by the trawl are different from those caught by the drift-nets?—They are larger herrings, and they are better, and they are one-third more valuable.

50,222. They are better in quality?—Yes.

50,223. Do they take the cure as well?—Yes, they have been cured just as well. Mr. McCullogh says he could detect them, but I think not if they were properly cured.

50,224. Do you take some small herrings as well as large herrings at the same time?—There may be a few mixed up with them sometimes, but very seldom. The shoals of small fish and the shoals of large fish do not go together generally speaking; they may in one case out of 10, but not more.

50,225. Do you ever catch fish so small as to be unfit for the market?—No.

50,226. You always turn them to account?—They tell me that in the Kyles of Bute they get them very small, but I never fished there.

50,227. Have you fished for herrings in January?—Yes, and cured them.

50,228. Have you found them in good condition then?—Yes, in capital condition on the 16th of January.

50,229. Were they as good as they were in September?—Yes.

50,230. Do you think it is a great loss to the public and to the fishermen that they should be precluded from fishing herrings in January?—Yes, and it is a great matter to the fishermen to be prohibited from getting 200 or 300 herrings in February or March for bait when they wish to go out after the line fish.

50,231. It is a great injury to them?—Yes, it is a great injury to them that they do not get liberty to take 100 or 200 of herrings in those months.

50,232. Have you fished with herrings as bait for line fish?—Not particularly, but I have been in a boat with those who do.

50,233. (*Mr. Lefevre.*) Have you cured both trawled fish and drift herrings?—Yes.

50,234. Have you ever mixed them together in the same lots?—No, I cannot say that I have. When I buy drift-net herrings I cure drift-net herrings, and it is the same with trawled herrings. The trawled herrings are most profitable and most successful to the buyers.

50,235. When you have cured two lots of herrings, one of drift-net herrings and one of trawled herrings, of the same size, have you observed any difference in the market price?—The trawled herrings would bring more.

50,236. Why?—Because they are larger and better.

50,237. But, assuming them to be of the same size; did you often buy them of the same size as the drift-net herrings?—There may be a difference of one shilling or two shillings in a barrel for the name of the thing but it is a mere cypher.

50,238. Which would get the best price?—They tell you that they would rather have drift-net herrings, and perhaps they would deduct about a shilling a barrel.

50,239. What is the reason of that, do they look rather brighter?—Not a bit. If you get herrings mangled in the water or on board the drift-net boat they are as much injured and without a scale on them as the trawl-caught herrings. In the case of trawled herrings, if you take them out as soon as the bag comes in you will only find that there are a few of the afterings that are at all injured, and when they are put in the boat they sell cheaper than the rest, perhaps they may have been mangled a little.

50,240. You say that the public do give one shilling or two shillings more per barrel for drift herrings when they are of the same size as the trawled herrings?—Not a bit, you will sometimes pay dearer for trawled herrings than for drift herrings.

50,241. I thought you said that when drift-net herrings and trawled herrings are of the same size the public would give one shilling or two shillings more for drift-net herrings?—The buyers will but not the public.

50,242. Do you mean the curer?—Yes, but not the public.

50,243. Not the public when the herrings are cured?—Quite so.

50,244. But the buyer will give one shilling or two shillings more?—Yes.

50,245. Then I suppose he makes it good again out of the public?—Yes, he is always looking for himself. The question with the curers is to get this close-time established and to get their herrings cured and put in stock. Then they know one another's price and can put the public at defiance.

50,246. I want to know what the reason is that induces the buyer to give one shilling or two shillings extra for drift-net herrings?—He does it to keep up his policy.

50,247. Do you think it would be possible during the close-time to permit the catching of herrings for the purpose of bait?—It would be a great object to let the fishermen have a basket now and then.

50,248. Do you think it would be possible to allow such a catch of herrings and at the same time to prevent it for the purpose of sale?—I think they ought to be allowed to get a few baskets of herrings for bait. I would allow one boat in five to go out and catch a lot of herrings and distribute them among their neighbours under the superintendence of the police. One boat might go one night and another another.

50,249. Would it not be difficult to insure that the fishermen did not take more than were sufficient for bait?—It would be impossible for them to do so, they would be captured at once and put into gaol if they did it. They cannot do it at present.

50,250. How would you have the regulation carried out?—I would authorize one boat to go out at a time.

50,251. To catch as many as they liked?—No.

50,252. Only a sufficient quantity for bait?—Yes.

50,253. If they caught more than was necessary for bait would you have them throw away the remainder or allow it to be sent to the market?—They would take very good care that they would not catch more than they wanted. They know where there is a good shoal of herrings and where there is not and they would know how much they ought to take and would take only that quantity, so that they would do neither themselves nor any other person any harm. I would not allow a boat's load to come in for sale but I would allow one boat to go out and catch the quantity and divide it amongst the rest for bait.

50,254. Would you restrict them to a certain quantity of herrings?—Yes, according to the number of hooks they had on their lines.

50,255. But if they shot their nets and caught more than the number?—They could not catch many more. A porpoise or a dog-fish would eat as much or more than they would capture.

50,256. If they caught more than sufficient for bait would you prohibit them from selling it?—Not if the herrings were middling good. In that case I would not, but they should not make a practice of it.

50,257. Would it be possible to permit that, and at the same time generally to enforce a close-time?—Quite so, but at the same time I would give them the month of January as an open time.

50,258. Do you think that a close-time as regards the trade generally is a good thing?—Yes, there is nothing like it.

50,259. Is that on the ground that it benefits the fish?—Yes, and it enables the natives to attend to other occupations. Every boat is shifted on shore.

50,260. On that ground you approve of a close-time?—Yes. There is no smuggling, and they are not jealous of one another. All the Loch Fyne and Arran and Largs men go away to other things, and there is no jealousy.

50,261. Do you think that the enforcement of a close-time keeps up the fish; that it prevents the destruction of the fish?—It prevents it in the Kyles of Bute. When the fish come in there they are very small, only about one and a half or three inches long, and it prevents smuggling going on, and it gives the fish a chance of taking the Channel again.

50,262. Do you mean by smuggling catching small fish?—Yes.

50,263. The drift-nets will not take the small fish?—There are some of the drift-nets that can catch them small enough.

50,264. I suppose that is where they are smaller than the legal size?—Yes, when they are less than 36 meshes to the yard.

50,265. But the ordinary drift-net would not catch any large number of small fish?—All the nets that are required to be 36 meshes to the yard ought in the first instance to be 34½ because they will shrink a little after they are used.

50,266. Is there a considerable number of drift-nets used of which the mesh is less than the legal size?—Yes, and the reason of that is, that when they run from the open Channel and come into the Kyles of Bute in October and November they begin to capture the small fish.

50,267. Do you think there is a considerable number of nets of less than the legal mesh?—I do not think there are many but there are blackguards in every place, and we cannot avoid it. There are good and bad in every place you go to; there are some black sheep wherever you go.

50,268. (*Mr. Caird.*) Have you observed, as a fisherman in Loch Fyne, that sometimes the best fishing of the season is in the upper part of the loch and sometimes in the lower part?—Sometimes they get what they call the gut-pock herrings; that is herrings which if you squeeze you will see worms coming out of them. I have been told by the fishermen that a great number of these herrings have been caught in the month of October, but when they leave they will begin to get fat fish. They go up the loch and when they return they are got opposite Otter Ferry in the month of December or January; but then the close-time is on for the Tarbert and Largs people and they cannot get them. I believe that is the thing that caused the row between the fishermen.

50,269. Do you think that these herrings come into condition when the close-time begins?—Yes.

50,270. You say you have fished both in the upper and lower parts of the loch?—Yes.

50,271. Do you mean that in the same year you have been fishing in the upper part of the loch, and also in the lower part?—Yes.

50,272. In some years did you have a better fishing in the upper part and in some years a better fishing in the lower part?—Yes.

50,273. The trawling was almost exclusively carried on in the lower part of the loch?—Yes, there was very little towards Inverary.

50,274. Almost all the drift-net fishing is in the narrow part of the loch?—I have seen them trawling up from Tarbert to Ardrishaig.

50,275. In the narrow part of the loch?—Yes.

50,276. But the trawling principally goes on in the lower part of the loch?—Yes, it used to be carried on in the broader part of the loch.

The witness withdrew.

JOHN MCCLEAN called and examined.

50,277. (*Mr. Caird.*) You have had a long experience as a fish-curer here?—Yes, for forty years.

50,278. Have you formed any opinion yourself as to the advantage or disadvantage of the mode of fishing called trawling for herrings, as practised in the Firth of Clyde and Loch Fyne?—My opinion is that trawling is against the fishing.

50,279. You think it injurious to the interests of the fishing?—Quite so.

50,280. Has your opinion been in any way modified

GREENOCK.

J. McClean.

21 Sept. 1864.

since you gave your evidence in 1862 ?—There has been nothing to change my opinion since then. I do not think that trawling has anything to do with a larger shoal or a smaller shoal coming in. Trawling has nothing to do with that. You get poor fish when a smaller shoal comes in, but that has nothing to do with trawling.

50,281. The shoal of fish is quite independent of either one mode of fishing or the other ?—Quite independent, but trawling destroys a great number of herrings when they do come in.

50,282. Does it destroy them without sending them to the market ?—Yes.

50,283. In what way ?—If a heavy shoal comes in they will put down their trawl into it, and take an immense quantity, but they will not lift one-fourth part of it.

50,284. What becomes of the rest ?—It falls to the ground, becomes dead, and putrifies in the water.

50,285. Have you seen it ?—I never was a trawler, but I know that it is done.

50,286. Then that is mere suspicion on your part is it ?—No, the men have done it; they have told me so themselves.

50,287. Have they told you that they have caught fish in such large quantities that they could not be got into the boat, and that on that account a considerable number were lost ?—Yes, that is my opinion. When trawling began first, they hauled their nets ashore the same as they drag a net for salmon. They go further into the loch now and shoot their nets in a different way; I have known them bring in large quantities to the beach. They would wade out into the water as far as they could and lift them by basketfulls, but I have seen large quantities lying around, which the boats could not contain.

50,288. If there had been more boats could they have taken them all ?—Yes, but they could not calculate upon there being so great a quantity.

50,289. If the object of fishing is to catch a large quantity of fish that seems to be a very successful plan ?—Yes, but they leave as many on the ground as they take away.

50,290. Is it likely that fishermen, endeavouring to make as much as they can by their labour, will throw away fish needlessly if they can avoid it ?—They do not throw them away, but the boats can carry no more.

50,291. Does that often happen ?—It did when they began first. I do not know if they do that now when they take them in the open sea.

50,292. You cannot tell us whether under any different system there is a loss of fish ?—No; but when trawling began first the fish were all dragged on shore.

50,293. But lately when trawling was permitted that system was not followed ?—No, not taking them on shore, but if they came across a shoal of fish near to the shore they would surround them.

50,294. Your first objection is, that a large quantity of fish was thrown away because it could not be brought ashore ?—Yes, it was left in the water.

50,295. And became unfit for food ?—Yes, and even those that were got were in such a state that the blood did not come out of them. I could tell a barrel of trawled herrings from a barrel of drift-net herrings very easily.

50,296. Have you heard the evidence of other witnesses who tell us that trawled herrings bring as good a price as the drift-net herrings ?—I heard the last witness.

50,297. Have you yourself ever cured any trawled fish ?—I would not buy them while I could get net herrings. I cannot recommend them as being as fit for human food as the net herrings.

50,298. Are they not finer fish often ?—They are larger often, and would be finer if they were caught by nets.

50,299. What is the particular process in the trawl-net fishing by which they become so injured as to be unfit for human food ?—There is such a quantity taken in a boat that it has a bad effect upon the market; often they cannot get them in on that day, there are so many of them; but those who have drift-nets know the quantity which has been taken, and two hours afterwards there is no market for fish at all.

50,300. But do not the drift-net fishermen get heavy and light hauls also ?—Yes, but not such heavy hauls as the trawl-net fishermen.

50,301. If they were left free to follow their trade as the drift-net fishermen are and were not hurried or frightened by the fear of being detected, could they not make arrangements for bringing their fish to market as favourably as the drift-net fish ?—They were not hurried before the law was made.

50,302. And were they inferior then ?—Yes; I heard Mr. Methuen, the late curer, asked what difference there was in the value of a barrel of trawled herrings, and that of a barrel of drift-net herrings, and he said 20*s*.

50,303. Twenty shillings a barrel ?—Yes.

50,304. Would you as a herring-curer say that there was that difference ?—I would not buy them at all.

50,305. If no herrings were coming into the market except those caught by the trawled nets, would you refuse to buy them ?—Not if there were no others, but there are always drift-herrings as well as trawled herrings.

50,306. Have you ever bought any trawled herrings ?—Not to my knowledge.

50,307. Then you cannot speak from experience ?—I have had experience in seeing them bought and sold, although I have not bought them myself.

50,308. Is it not the fact that large portions of them are cured ?—Yes.

50,309. And sold in the market ?—No doubt of it.

50,310. Do they bring a much less price ?—Yes.

50,311. Is there a considerable difference in the price ?—Yes. The trawled herrings have always the blood about them. The blood goes right through the fish, and it is impossible to take it out of them. The drift-herrings are brought in quick, and gutted, and the blood comes freely away from them, whereas the trawled herrings always look black at the bone.

50,312. For the supply of the fresh market is the trawled fish as good as the drift-net fish ?—Yes, if it is got to market quick; but if they are killed in great quantities, and are long in coming, they are not as good. For instance, if a steamer coming in this afternoon had 300 boxes of trawl-caught herrings, and half that quantity of drift-herrings, buyers would give 2*s*. 6*d*. for the trawl-caught herrings and 3*s*. 6*d*. for the drift.

50,313. Without looking at them ?—Yes.

50,314. Is that the case with all the buyers ?—It is generally speaking.

50,315. Do you know whether within the last two years the supply of fish from Loch Fyne has considerably increased ?—Two years ago there was as large a quantity as ever I knew.

50,316. That was in 1862 ?—Yes.

50,317. But I mean taking 1863 and the present year ?—It has not been so large, but nobody can give any notion of what the reason is.

50,318. But nevertheless it is the fact ?—It is, but may be they may go north and south for 30 or 40 years. We get a great season one year and not much the next year. We can never give any account of the herrings in that way.

50,319. Was it not the case that the greatly increased take of 1862 was ascribed to the stoppage of the trawling ?—I never thought it.

50,320. It was given as the reason, was it not ?—It was by ignorant people.

50,321. You do not think that the system of getting herrings by the trawl, or by the drift-net affects the quantity that comes into the market ?—No, if a large body of fish comes into the Channel the trawling has nothing to do with it. They come into the Channel and up they go into the loch.

50,322. You think the fish are injured rather in the

process of catching them than that the quantity that may come is injured?—Yes.

50,323. It is an objection physically to the mode of catching fish?—Yes, to the mode of catching fish, and I have no doubt that they lift great quantities of spawn.

50,324. But you do not yourself know anything about it; you cannot speak from your own knowledge?—I have seen the boats when they have been fishing at Ballantrae throwing out baskets of spawn.

50,325. In what sort of condition are the fish then?—They are not fit for eating in February.

50,326. Are they brought to the market?—Yes, and are forced into Liverpool and the English markets where the people have not much skill with regard to them.

50,327. But they were taken in the market and consumed?—Yes.

50,328. Although they were in an unfit condition for the market?—Yes.

50,329. Have none of those fish come lately to the market?—The law prohibits them entirely now.

50,330. There is nothing of that kind now?—No.

50,331. Then what you state with respect to the spawn does not refer to Loch Fyne, but to the fishing banks of Ballantrae?—There may be spawn in any place. I do not believe that we understand where spawn is to be found. There may be spawn in every place.

50,332. What opinion have you in regard to the advantage or disadvantage of the present close-time from the 1st of January until the 1st of June?—I think it is very necessary along here as far as the Mull of Cantire, but I would have no close-time from the Mull of Cantire to Cape Wrath.

50,333. Have not good herrings been taken in the month of January in Loch Fyne?—I have had boats for 30 years and I have never sent them out in the month of January. It would be of no benefit to fish for herrings then, and I have always taken the boats in.

50,334. Have you found the herrings in good condition then?—They have been coming in very seldom of late, but generally they were not in such good condition.

50,335. Then you do not want any change in the period of close-time?—No.

50,336. You do not desire that the fishing should be open in the month of January?—Not on this side of the Mull of Cantire, but I think it ought to be on the other side.

50,337. Why do you draw a distinction?—The reason is that I have seen large quantities of small fish coming into the Kyles in February.

50,338. We are not speaking of the month of February, but I wish you to confine yourself to the month of January?—I think February should be more protected than January.

50,339. The question I put to you is, whether you desire to have the fishing open in the month of January?—I cannot say particularly as to January, but I am quite positive as to February and March.

50,340. It is pretty generally agreed that there is an advantage in the close-time then, as regards the condition of the fish; but it is alleged, with regard to the month of January, that the fish are in good condition then, and that they might be taken with advantage to the public?—Yes, that may be the case. I say nothing against the fish in January.

50,341. Then you would not apply your objection as to the line you draw from the Mull of Cantire to the north to the month of January?—No, I think there would be no occasion for it then at all.

50,342. Do you think the fishing should be open in Loch Fyne in the month of January?—No, only from the north to the Mull of Cantire.

50,343. Then why do you make that distinction?—Because I never saw trawling north of the Mull of Cantire. It is only drift-net fishing that is practised up to Cape Wrath, and there is no necessity for any close-time.

50,344. In any month?—No.

50,345. Have you any experience or knowledge of the Stornoway fishing?—Yes.

50,346. Are you aware that their opinion is clearly in favour of a close-time in March and April and part of May?—I am not aware of that; but I know that in February and March the fishermen may be starving north of the Mull of Cantire and that they are not allowed to put a net out.

50,347. If codfish can be caught in Loch Fyne in the month of January why not fish them there as well as on the other side of the Mull of Cantire?—I have no objection to the month of January.

50,348. (*Mr. Lefevre.*) Have you any boats of your own?—Yes.

50,349. How many?—Four.

50,350. What did they cost you?—From 60*l.* to 90*l.*

50,351. Each?—Yes.

50,352. And the nets?—Twenty barrel of nets will come to 60*l.*

50,353. How many men go out in each boat?—Four and three in the small ones.

50,354. How do you pay them; is it by the share?—No, they get so much a month and a shilling for every cran they take.

50,355. How much a month?—Generally 2*l.* a month and a shilling a cran.

50,356. Do you provide nets and boats and everything?—Yes.

50,357. Do you buy herrings as well?—Yes.

50,358. Do the curers buy from the same men or go into the market and buy whatever fish comes in?—The curers sometimes send a vessel to buy the fish where the fishing is going on, and she hoists a flag to show that she is a buyer.

50,359. Do the curers have regular customers of whom they buy?—No, perhaps Tom, Dick, or Harry may come and offer us 50*s.* telling us that that is the price, but then another may come and offer us 60*s.* and then we go to him.

50,360. Does that take place on the quay here?—No, they go alongside the vessel and they take the herrings on the deck.

50,361. You have a vessel out there?—Yes, buying at the place where the fishing is going on.

50,362–73. Then when trawling was practised in the loch did you give instructions to your buyers not to buy from the trawlers?—Yes, but there is no trawling in the north.

50,374. Do you not think the fish come into the lochs for the purpose of spawning?—No, I never did think that.

50,375. What is the process of curing here; do you gut the fish?—We put them on the vessel's deck, throw salt on them, then gut them, and put them in tubs and into barrels; we let them stand till next day and head them up.

50,376. When you gut the herrings do you observe that the drift-net herrings are better fish than the trawled herrings?—Yes, the blood comes away quite freely.

50,377–8. From the drift-net herrings?—Yes, and the herring is white, and when it comes to be consumed in the market it is quite white, while the trawled fish is black right through all up and down.

50,379. What is that due to?—The herrings taken in the trawl are crushed one against the other, there is always such a heavy quantity.

50,380. Do you mean that when they are thrown into the boat in such an immense quantity they are thrown together and crushed?—They take up in the trawl 10, 20, or 30 barrels at a time and there is a great weight of them put in the boat together, but if they are taken by the drift-net they are all caught by the throat and they are not crushed in any way.

50,381. Do you think that the superior quality of the drift-net herring is due to their being meshed?—No, I do not say that.

The witness withdrew.

GREENOCK.

J. Hunter.

21 Sept. 1864.

JOHN HUNTER called and examined.

50,382. (*Mr. Caird.*) You are a fish merchant and curer?—I am not a curer; I am chiefly a dealer in dried fish, but I have also been a dealer in herrings for upwards of 30 years. I never cured any, however.

50,383. You are well acquainted with the state of the fishing in the Firth of Clyde?—Yes.

50,384. In regard to other fish than herrings is the supply increasing or diminishing?—With regard to the white fish, in the small fish, haddock and whiting and fish of that sort brought here for the fresh market, there has been an extraordinary decrease for the last five or six years.

50,385. To what do you attribute that decrease?—If I felt at liberty to give an opinion at all I should attribute it to beam-trawling and to the disturbance of the fish beds in the river.

50,386. (*Mr. Lefevre.*) Where used the supply to come from?—The Largs people send large quantities here from the Kyles of Bute, and Tarbert, and from Campbeltown.

50,387. (*Mr. Caird.*) There is very little beam-trawling here now?—It is prohibited, I believe, now. The complaint was that beam-trawling was the cause of the slackening of the fish.

59,388. Was there any beam-trawling off Largs and the Kyles of Bute?—I cannot speak to that, but there was at Campbeltown.

50,389. Do you purchase the fish caught on the banks off Greenock and which would include a large supply of flat-fish?—I do not do anything in flat-fish. My business is chiefly, if not altogether, confined to the herring fisheries and to salted and dried fish such as cod and ling.

50,390. Have you an establishment in the Hebrides for the curing of fish?—No, I am a buyer and seller.

50,391. Do you buy from Newfoundland?—I buy in considerable quantities from there.

50,392. Where do you get your principal supply from?—Chiefly from Stornoway and the Island of Lewis, and Lerwick in Shetland.

50,393. Is the supply increasing?—The supply has been steady for some years. One year it may be a little up and another year a little down.

50,394. Has the price been pretty steady?—It has risen considerably since the beginning of the gold fever in Australia. One-eighth or a tenth part of all the cured ling goes to Australia. The ling about a dozen or 13 years ago was as low as 13*l.* or 14*l.* a ton, and now the price is about 20*l.* a ton.

50,395. Do you attribute that to so small a proportion as an eighth being taken to a different market?—Yes.

50,396. That has so materially altered the supply and demand as to affect the price in that way?—It has chiefly been the cause of the increased price of ling and codfish.

50,397. Has the supply of fish or the means of taking it increased in any degree with the increase of price?—Not materially.

50,398. It has not had the usual consequence of an increased price, namely, that of causing an increased endeavour to meet the demand?—Not to any extent. The ling-fishing both in Shetland and Lewis on the whole has been pretty much the same for many years. It may have been a little up one year and a little down another. This year, I believe, it has been somewhat less.

50,399. There has not been any particular change any year?—No, it remains stationary, but rather increasing on the whole.

50,400. With regard to herrings, you have had experience as a buyer of herrings?—Yes.

50,401. Do you cure herrings?—No, I do not cure any.

50,402. Do you buy cured herrings?—Yes, I have done so for 30 years.

50,403. Do you buy fresh herrings?—No.

50,404. Nothing but cured herrings?—No.

50,405. Do you limit your purchases to herrings caught in a particular manner?—I have never bought trawled herrings to my knowledge. I once bought a lot of herrings and was imposed upon. A quantity of herrings were sold to me for drift-net herrings, which I thought were trawled, but I never bought any to my knowledge.

50,406. Where do you buy your herrings chiefly?—I buy them as they come to market. If the fishing is good in Loch Fyne I get the best supply there, but when the fishing has been deficient there we get the bulk of our herrings from the west of Ross-shire.

50,407. You do not go round Cape Wrath?—None of those herrings come here.

50,408. Do none of the east coast herrings come here at all?—No, they would not be used here.

50,409. Do you send any of your herrings abroad?—Occasionally we send a few in firkins to Austria, but there is no such thing as a shipment of herrings to any part of the world out of our own locality.

50,410. Then the question of the brand does not arise here?—No, the brand would be of no use here. It never has been of any use on the west coast of Scotland, and it may be a question whether it is of any use anywhere.

50,411. Your herrings do not go to markets where a value is placed upon the brand?—No.

50,412. Has the price of cured herrings materially increased of recent years, or has it much altered?—It is impossible to give a proper answer to that question, because the price is affected by the quantity that comes into the market. It is very noticeable that some years a large lot of herrings are in Loch Fyne. For instance, in 1862 there was an immense quantity there; indeed it was the largest fishing I ever remember. Last year the fishing was tolerably good, but this year up to the present time it has been very indifferent, and the price will be affected very much according to the quantity that comes in.

50,413. (*Mr. Lefevre.*) As far as the season has gone is the catch much less than it was last year?—I think so, but I have scarcely seen a barrel of Loch Fyne herrings at all. They have gone to Glasgow, but there have been very few here.

50,414. (*Mr. Caird.*) Has the price increased in consequence?—The price of all cured herrings coming to this market last year and this year has been high, whereas in 1862 it was lower than ever I remember it.

50,415. Was that from the great quantity which came in then?—Yes.

50,416. Going back to one or two years before 1862 what was the price as compared with what it is now?—Perhaps this year the price has been higher than it has been for a number of years; say the last 10 years.

50,417. Then during the time trawling was permitted the price was not as high as it is at present; is that the fact?—I could not answer that distinctly. My memory will not carry me back as far as that. I have a very strong impression that even before trawling was permitted by law it was winked at and carried on. My impression is strong that that practice tended to the destruction of the herring, and consequently to their scarcity. The first deep impression I got upon that subject was five or six years ago when in the months of February and March fish were brought into the market and chiefly sent to England, which, in my opinion, were actually unfit for human food. Whether that was the case or not they were herrings that were scarcely the length of your finger. They were perfect trash, but, if they had remained in the sea, in the course of a couple of years there would have been millions of herrings more. The food of the people was destroyed in that way at that time and from that moment I have had a very strong feeling, even with the experience of the last two years, during which the law has been enforced, that trawling ought not to be permitted.

50,418. (*Mr. Lefevre.*) What year are you speaking of?—The year I refer to was about six years ago. The herrings were caught in the months of

February and March. There were immense quantities of herrings brought into the market of the size I have described, and they were a kind of fish I would not put upon my table.

50,419. (*Mr. Caird.*) Were they trawled herrings?—Yes, wholly.

50,420. Were they from Loch Fyne or the Kyles of Bute?—They were from the Kyles of Bute chiefly, if not solely.

50,421. That has now been discontinued?—Yes, it is not allowed now.

50,422. Yet the effect of that discontinuance has not been to increase the supply of herrings in Loch Fyne?—There was no trawling in 1861, and there was no material increase in 1861, but in 1862 the increase was marvellous.

50,423. But that was not the case in 1863?—Then in 1863 there was an ordinary sort of fishing, and this year up to the present time the fishing has been very slack.

50,424. Then you cannot argue anything from the result of the discontinuance of trawling either in favour of or against it, as it has in both cases been more and less?—In 1862 when the fishing became very plentiful we had a sort of notion that the discontinuance of trawling had something to do with it, but my opinion has altered since the fishing has got slack.

50,425. You do not hold to that opinion now, seeing that it has not had much effect?—I am pretty much of the opinion of Mr. McClean, that we do not know where the herrings come from and what year they will be plentiful or slack.

50,426. You think that is altogether independent of trawling?—Yes, except so far as trawling destroys immense quantities of the small fish.

50,427. You spoke of a particular year?—The impression that trawling was injurious first took hold of me in that year.

50,428. Did you see an immense supply of small fish in any year except that?—I never saw so many as in that year.

50,429. Was that a plentiful year for fish?—From the new year up to July there was just an ordinary season, I believe.

50,430. (*Mr. Lefevre.*) Can you state distinctly what year it was?—It was about six years ago, but it will be very easy to get information upon the matter by communicating with David Hutchinson and Company, who bring all the fish to market.

50,431. That was before the close-time was enforced?—Yes, it was after Christmas and new year's day.

50,432. (*Mr Caird.*) The taking of that fish could not occur now?—No.

50,433. That objection is removed, and it is not possible to occur during the present state of the law?—Not as long as the close-time is enforced.

50,434. Have you formed any opinion as to the advantage or disadvantage of maintaining a close-time from the 1st of January to the 1st of June in the Firth of Clyde?—When I gave evidence before the previous Commission I said from the 1st of January to the 1st of July, but since then my opinion is changed, and I am inclined to think there should be a month longer open time.

50,435. Do you find the fish in good condition on the 1st of January?—They are not so good as in the other part of the season, but they are still pretty good fish.

50,436. Are they good marketable fish?—A large quantity of herrings was got in Lewis last year in the month of January, and those herrings were quite suitable for the Irish market.

50,437. Have you bought fish which have been caught in Loch Fyne, or anywhere in the Firth of Clyde, in the month of Jynuary, and found them to have been of a marketable quality?—I do not remember ever buying cured herrings in January. I have seen them come fresh.

50,438. Do they generally go fresh to the market at that time?—Yes, the curers generally, without any law to prevent them, stop curing about Christmas time.

50,439. (*Mr. Lefevre.*) What is the market for your cured fish; where do you sell it?—Do you mean the dried fish?

50,440. No, the herrings. Do they go abroad?—No, it is almost entirely a home consumption.

50,441. They do not go to the Mediterranean?—No, none of them. Some cured red herrings may go, but no white herrings.

50,442. You say you never bought trawled herrings. You have made that a rule, I suppose?—I never bought any to my knowledge.

50,443. Were there any merchants who devoted themselves entirely to trawled herrings; were there any curers who cured only trawled herrings?—I never knew any curers in Greenock who bought trawled herrings. They have been bought in Glasgow, but always under the rose. They would rather have the others if they could get them.

50,444. But there was a considerable number of trawled herrings cured was there not?—Yes, I believe so, sometimes.

50,445. Would they have a separate brand?—There is no brand here.

50,446. Would the curer put a brand on them himself to indicate that they were trawled herrings?—There is no brand used at all on the west coast. A or B may have his mark on the barrels, and C and D may have theirs.

50,447. There is nothing by which the public could judge whether the herrings are trawl-caught herrings or drift-caught herrings?—No, until the barrel is opened.

50,448. Would they see the difference then?—Yes. Any shopkeeper, who is in the habit of selling herrings, would know at a glance.

50,449. What would be the difference?—The trawl-caught herrings have a dull sooty appearance, whereas the other herrings are clear and shiny.

50,450. To what do you attribute that?—When the herrings are taken with the drift-net every herring is killed in its own hole. In the case of the trawl all the herrings are caught in an immense heap, and in struggling and dying they rub the scales off and destroy each other.

50,451. Is there any difference in point of quality?—I think if they get the scales rubbed off they do not cure as well as if they had the scales on. Then there is another thing. If trawled herrings or drift-net herrings are allowed to remain with the blood in them, they will not cure well. Except they use the knife as soon as possible and cut their throats, the blood does not come away. That is not so much the case in the drift-net herrings as in the trawled herrings. You could not cure a snared rabbit, nor would you cure beef if you did not first bleed it.

50,452. Do you think that the process of meshing the herring lets the blood out of the fish?—I think the process of drift-net fishing is such, and the fish are only taken in such quantities that they can be gutted in a few hours and the blood let out. They are handled easier than the fish caught in the trawl-net, and you have nice, sweet, well-cured fish; but if your herrings are caught in large quantities, as they are sometimes caught by the trawl-net, then they not only get spoiled outside and knocked and bruised about by each other, but they are much longer in being bled.

50,453. There is nothing peculiar then in the mode of catching, but the fact that the trawl-killed herring cannot be gutted as soon as the drift-net herrings?—Yes, and the drift-net herrings are not thrown in such a heap together.

50,454. But when they take the fish from the drift-net they throw them in a heap together?—Yes, they stand the same chance then. I never saw a trawl-net worked, but I understand it bags them all up, perhaps a ton of them at a time, and it is impossible that they can be cured before sundown.

GREENOCK.

J. Hunter.

21 Sept. 1864.

50,455. But a large quantity may be sent off to the fresh market, and the buyer can cure what proportion he thinks fit; whatever he has time for?—If you trawl herrings in the proper season of the year, from the 1st of June to the 1st of January and February, you get them in large quantities. It would not affect the quality of the fresh herrings. They are never gutted, but they are taken to Glasgow and other markets and sold fresh.

50,456. For other purposes you think the trawled herring is as good as the drift-net herring?—It is not as good.

50,457. Why?—Because the scales are rubbed off, and they are much knocked about.

50,458. That is from being thrown in a heap in a boat?—Yes.

50,459. By using more boats the heaps would not be as large, and the herrings would not be so much damaged in that way?—As I stated before, the trawl-net occasionally, and indeed very often, falls in with an immense load of herrings, and it is impossible to bring them ashore or put them alongside the boats to be taken on board without destroying them to a large extent.

50,460. (*Mr. Caird.*) Have you any knowledge at all of the pilchard-fishing in Cornwall?—None.

50,461. Then you are not aware that the pilchards are caught by the seine-nets in the same way, and there is no complaint of the difficulty of salting and curing them?—I am not aware of that.

50,462. (*Mr. Lefevre.*) The pilchard is not gutted, would that make any difference; it is salted without being gutted and sent off to the market?—I cannot speak as to the pilchard.

50,463. Do you know whether any large quantities of Norway herrings are sold here?—Yes, I have bought and sold them myself.

50,464. Are they caught by the drift-net?—I understand they are caught in a different way from the drift-net fishing, but not by trawls. I understand they are bagged in the fiords or bays of Norway and enclosed in nets. The result is that they are never so nice and sweet as our herrings.

50,465. Do they not fetch as good a price as the drift-net herrings here?—No.

50,466. Is it an inferior price?—Yes, much less than the Scotch cured herrings. Perhaps their herrings are better occasionally than ours, but the price is very much lower. We had Norway herrings last year ranging from 1,500 to a barrel up to 700 and 800, so that the same difference prevails there as here. My opinion is that the herrings caught on the western coast of Ross and Sutherlandshire are about the same as those caught in Loch Fyne.

50,467. One of the witnesses stated that one of his objections to trawling herrings was that it threw great quantities of fish upon the market at one time. Do you entertain the same objection?—No, I do not hold that; I am a free-trader.

50,468. You do not think that is a serious objection?—No.

50,469. Do you think the public get an advantage from the depreciation of price brought about in consequence of a great quantity of fish thrown into the market?—The public, of course, if there is a great supply, get the benefit of it, and if that were the only evil effect of trawling I would not say a word about it; but my notion is that if the practice of trawling is authorized by the law, it would in the end destroy the fishing inside the Mull of Cantire. It ought never to be allowed even as high as Tarbert or in the upper part of Loch Fyne.

The witness withdrew.

L. McDonald.

LEWIS MCDONALD called and examined.

50,470. (*Mr. Caird.*) You are a fish-curer I understand?—I cure a little.

50,471. And you are a buyer of fish?—I buy very few.

50,472. Are you a practical fisherman?—I fish. I have a boat or boats that fish and the fish that they take I cure.

50,473. You have been acquainted with the fishing in the Firth of Clyde for many years?—Yes, for nearly 60 years.

50,474. Are you acquainted with the white-fishing other than the herring-fishing, in the Firth of Clyde?—I have not done anything for a long time with white fish.

50,475. Can you tell us if the white-fishing other than herrings is increasing or diminishing here?—I cannot tell. I know that in this neighbourhood the fish are much scarcer in the water than they were.

50,476. Are you acquainted with any reason to which you can attribute that?—No; I find it the same on the whole of the coast. It is the same in the north of Scotland. When I used to go north, thirty years ago, we could get any quantity of cod or haddock, but now we can scarcely get any.

50,477. How long is it since that change took place?—It has been taking place gradually for the last 10 or 12 years.

50,478. Have you ever heard it said that the frequent passage of steamers up and down and the disturbance of the water has had any tendency to frighten away the fish?—That has been said, but I do not think there is any truth in it.

50,479. There can be no truth in it as regards the herrings in Loch Fyne?—No, and I think there is no truth in it as regards the north Highland lochs. They are seldom visited by any steamers at all.

50,480. With regard to the herring-fishing, are you practically acquainted with the different modes of fishing by trawl and by drift-net?—I never fished with a trawl.

50,481. Then you cannot give us any opinion of your own gathered by your own experience as to the quality of the fish caught by the trawl or the drift-net?—I have seen the fish caught by the trawl; I have seen them frequently.

50,482. What is the quality of them as compared with the quality of the drift-net fish?—I think they are the same fish. They may be larger. There is a kind of herring in Loch Fyne which they do not take by the drift-nets at all.

50,483. What is your opinion as a practical man as to the advantage or disadvantage of the trawl system of fishing in regard to the herring fisheries?—Do you mean in regard to the extermination of the fish?

50,484. I mean in regard to the supply of fish to the public?—I think if trawling is permitted, the public would be much better supplied and more cheaply with fish. That certainly is my opinion.

50,485. From what do you draw that opinion?—From what I have seen of the trawlers. I was two years ago in Tarbert and there were 400 or 500 boats then fishing with the drift-nets and there were two boats that went out smuggling with the trawl and I believe those two boats were taking in more fish than the 400 or 500 that were fishing with the drift-nets.

50,486. Are you speaking just now after a careful consideration of the facts when you make such a statement as that?—Yes.

50,487. And from your own personal observation?—Yes.

50,488. Two boats fishing with the trawl killed as many fish as 400 or 500 boats fishing with drift-nets?—That was my impression at the time.

50,489. Have you had frequent occasion to observe the process of fishing with the trawl?—No.

50,490. You have not often seen it?—I have not seen it.

50,491. I do not mean this year, but when it was permitted?—I have not seen them fishing, but I have

seen the trawl-boats after they have come in with their fish.

50,492. Then do you tell us that the discontinuance of the system of trawling, it now having been entirely put a stop to by the law, has diminished the supply of fish to the market?—That is my opinion.

50,493. Do you attribute the falling off of fish in this and previous years to the discontinuance of that mode of fishing?—I believe if trawling had been permitted for the last two years back the supply would have been much greater than it has been.

50,494. Do you think the fish have been on the coast, but have not been caught because that mode of fishing has not been adopted?—The fishermen tell me that there are plenty of fish upon the coast.

50,495. Have you observed the quality of the trawled fish as compared with the drift-net fish?—I have seen them in the boats, but I have only bought very few of them.

50,496. Have you cured them?—Yes, a few of them.

50,497. Did they cure as readily as the drift-net fish?—Yes, just as good.

50,498. You found no difference?—I do not see why there should be any difference. I believe that the trawled herrings, instead of being longer in coming to the market, come quicker into the market. It is generally the case with the drift-nets, that when they haul the nets they haul the herrings in with the nets. Then there is another process gone through which is what they call shaking or taking the fish out of the nets. That generally occupies a very considerable time, and the herrings if they are long among the nets deteriorate very much in quality, whereas the trawlers do not require to go through that process at all. When they haul up the trawl, as I understand, they have baskets or some machinery by which they take the herrings out of the nets at once, put them into a boat, and send them away to the market. They are generally in readiness to be put into the boxes or barrels before daylight.

50,499. Do you believe that while the system was allowed, any large proportion of the fish caught by the trawlers was thrown back into the sea, or left on the shore, the catch being so great that the people could not dispose of them?—I think that has been the case.

50,500. Did that occur very often?—It has been the case when they got very great quantities and the way I accounted for it was, that trawling was just in its infancy when it was declared illegal. The poor trawlers went out then and if they were caught they were often heavily fined. Therefore, they went out as it were to smuggle.

50,501. They went out by stealth?—Yes, and they were not prepared for great hauls; but if trawling were legalized then those engaged in trawling could make better arrangements.

50,502. To get rid of the fish with advantage?—Yes, and they would get them taken into their boats.

50,503. Do you think it is a cheaper mode of catching fish than the drift-net fishing?—I think so.

50,504. The boats and nets are cheaper and cost less money?—Yes, much less.

50,505. What is the difference between the cost of a drift-net boat with its fleet of nets, and a trawl-boat with her nets?—I should think that a trawl and a boat would not exceed 30*l*. and I consider that any man fitting out a boat with drift-nets would find it cost him altogether for the boats and nets 150*l*.

50,506. Are the same number of men engaged in each boat?—There are four men in a trawler, but generally there are two boats connected with a trawl. Two boats go together as far as I understand. They may have a trawl in each boat, but whatever they take is divided between the two boats.

50,507. So that it is eight men that the take of the one net is divided among?—Yes.

50,508. How many men fish in a drift-net boat?—The smaller boats have three and the larger ones four.

50,509. Would you consider that in the course of a season the quantity of fish got by the trawl-boat would be equal or greater than that got by the drift-boat?—I think generally speaking the take would be much greater by the trawl-boat.

50,510. Then the conclusion would be, that that is a much cheaper mode of effecting the same object?—I believe it is much cheaper.

50,511. Do you know if any quantity of small immature fish is caught by the trawl that would not be caught by the drift-net?—I cannot speak from my own experience further than what I have heard.

50,512. What have you heard?—I have heard that in the Kyles of Bute in February and March there are great quantities of small fish taken.

50,513. That is in the close-time when fishing is not now permitted?—Yes.

50,514. But in the legal fishing time would they be caught?—I have not heard of small fish being caught in any other season.

50,515. Have you ever heard of or seen spawn caught in the trawl-net?—I never heard of it, nor do I believe that the fish spawn where they trawl.

50,516. Have you formed any opinion as to the advantage or disadvantage of having the month of January included in the close-time?—No, I have not.

50,517. Do you find that the fish are in good condition in the month of January?—I never fished in the month of January except very long ago and the fish were not so good then, but I have been told that in the Kyles of Bute last year they had good fish in January if they had been allowed to fish them.

50,518. With regard to the white-fishing other than herring-fishing, do you think it a great hardship to the fishermen that they cannot get bait during the close-months?—Yes.

50,519. And that it has tended to diminish the supply of fish during those months to the market?—I think so.

50,520. (*Mr. Lefevre.*) Are there many drift-boats belonging to Greenock?—I do not think there are many, but I do not belong to Greenock.

50,521. Where do you belong to?—To the opposite side,—Helensburgh.

50,522. Do you recollect any considerable take in Loch Long or Gare Loch?—I do, but it is long ago.

50,523. How long ago?—Eight or ten years ago there was a very good fishing in Gare Loch.

50,524. And in Loch Long also?—Yes, in Loch Long.

50,525. How was it before that?—Before that, for a long time, there was very little in either of the lochs. About 40 years ago there used to be a regular fishing in both lochs.

50,526. Has any cause been assigned for the disappearance of fish from those lochs?—I cannot assign any cause.

50,527. Do you think the greater traffic of the steamers has had anything to do with it?—No, I do not think so.

50,528. Is there still a very considerable amount of fishing in the Firth of Clyde up as far as Gourock and as far as Rothesay?—Very little. There is very little inside of Cumbrae or the south end of Bute.

50,529. But up the Kyles of Bute there is a good deal?—Yes, in the narrows.

50,530. In Rothesay Bay?—There are not many there, but they are got in considerable quantities in the loch abreast of Rothesay Bay.

50,531. Loch Strivan?—Yes.

50,532. Do you agree with some of the previous witnesses who have told us that trawled herrings would not fetch as good a price as drift-net herrings when cured?—I give my own opinion, and I have already stated what I believe to be the fact.

50,533. You have yourself bought trawled herrings and sold them?—Yes.

50,534. Do you find that the public ask any questions as to whether the herrings are trawled or drift herrings?—Well, no, they never ask any questions, and some that I sent out were sent out on the understanding that they were trawled herrings.

GREENOCK.
L. McDonald.
21 Sept. 1864.

50,535. Do you put your name on the barrels containing both kinds of fish?—We do not put our name on the barrels; there is just a mark that we put on the barrels.

50,536. A trade mark, I suppose?—Yes, and that trade mark is put on the document that accompanies the barrels.

50,537. Do you put that trade mark indifferently on the trawled and the drift fish?—Yes.

50,538. Is there any difference in the price?—No, I have not found any difference. Other people may have done so, but I have not.

50,539. Have you ever mixed the two kinds of herrings in the same barrel?—Not often.

50,540. Do you find that the drift fish are more regular in size than the others?—I never found that they were. I have found as great a difference in the drift-net fish as in those caught by the trawl. I never bought many trawled fish. I have, however, bought some lots of them but not many.

The witness withdrew.

JOHN STEPHENSON called and examined.

J. Stephenson.

50,541. (*Mr. Caird.*) You are a fisherman at Tighn-na-Bruaich in the Kyles of Bute?—Yes.

50,542. Do you get other kinds of fish than herrings there?—Yes, at times we follow hand-line fishing.

50,543. Is there any beam-trawling off your coast? Yes, at times.

50,544. For flat-fish?—Yes, for flounders.

50,545. Is it some of the fishermen of your own place that do it?—No, there is nothing of the kind along our coast at all. They all come from this place or Glasgow.

50,546. Do they come to your place?—Yes, along Loch Riddan. We have tried to get them out of our way at the time we were shooting our nets.

50,547. Have they been there lately?—Two years back.

50,548. Not since then?—No, I did not see them last year.

50,549. Then the practice is not common now?—I cannot say that it is, but I saw two down at Rothesay Bay working last spring.

50,550. But they are not there daily?—No, not daily; they do not belong to the place.

50,551. What kind of fish do you catch with the hand-lines?—Whitings and small cod. We only get a few whitings.

50,552. Are there only few fishermen employed in that?—They are gentlemen who fish on the coast in that way.

50,553. Not for the market?—No, for their own use.

50,554. Is there no trade carried on there for the supply of the market with white fish?—Yes, there is deep-water fishing, such as hake-catching, with deep-water nets set at the bottom. They take hake and cod.

50,555. What time of the year do they do that?—All the winter, when they drop the herring-fishing.

50,556-7. Do you use any bait?—No, we use deep water nets.

50,558. What kind of fish do you catch?—Hake, cod, and stemlocks, and ling, and some large haddocks.

50,559. In what months of the year?—They stop the herring-fishing at the commencement of the new year, and they carry on the other fishing until the commencement of the herring-fishing again, or rather until the time comes for preparing to go to the herring-fishing.

50,560. Has that been the custom as long as you can recollect?—No, it is about two or three years since it commenced.

50,561. Then it is quite a recent introduction?—Yes, it is a new thing altogether.

50,562. What led to the introduction of that mode of fishing?—I cannot say.

50,563. Who began it?—I cannot say that either.

50,564. Are there any fishermen at Tighn-na-Bruaich who practise that now?—Partly.

50,565. Are there many engaged in it?—There are a good many off Rothesay and Port Bannatyne.

50,566. Are they very successful?—They are doing better than the herring fishermen, I believe, and they are making more money.

50,567. Is the supply of fish from that mode of catching increasing?—It was less last year.

50,568. (*Mr. Lefevre.*) Have they given up line-fishing in order to take to it?—I do not think they were following the long-line fishing.

50,569. (*Mr. Caird.*) You do not fish with the net in that way?—No.

50,570. Then you cannot speak of your own knowledge upon the matter?—No, I have only seen them. I can see them fishing daily.

50,571. How many boats are engaged in it?—Every one that chooses to commence. It needs a smaller sized boat and another kind of net altogether, and every person cannot set up two trains of nets, one for herring-fishing and one for hake-fishing.

50,572. (*Mr. Lefevre.*) What time do they set those nets?—They set them in the evening and they haul them in the morning.

50,573. Before sunset do they set them?—Yes, about sunset.

50,574. What time do they take them up?—In the morning, as soon as they can see daylight.

50,575. Do they ever leave them out all day?—Not to my knowledge.

50,576. Are the nets anchored?—Yes, they are all anchored, and they have buoys attached to each end.

50,577. (*Mr. Caird.*) Then they are set in the evening and lifted in the morning?—Yes, they are hauled in the morning.

50,578. Can you tell us if a large supply of fish is obtained for the market by that kind of fishing?—I think there is more than there used to be. I have seen them sold for from 6*d.* to 1*s.* a piece and sometimes 1*s.* 6*d.* a piece.

50,579. What are they sold for now?—There are none at present.

50,580. But what do they fetch at the time they are fished?—Last year they fetched from 6*d.* to 1*s.*

50,581. Is the price falling?—It did not fall much last year, not a great deal, because they were not so numerous.

50,582. Are you a herring fisherman?—Yes.

50,583. Are you a trawl fisherman or a drift-net fisherman?—I have always been at the drift-fishing.

50,584. Have you ever fished with the trawl at Tighn-na-Bruaich?—No, I never saw a trawl drawn in my life.

50,585. Is there no trawl-fishing there?—Yes, in the Kyles of Bute. The Loch Fyne herrings come down there at the latter end of the fishing mostly. They keep to the shore all along and we follow them with our nets.

50,586. With your drift-nets?—Yes.

50,587. Has there been no trawl-fishing there?—Yes, all the trawlers used to come there at the latter end of the season.

50,588. They come from Loch Fyne?—They come from Tarbert and all the places they chose.

50,589. You never saw them fishing?—I never saw a trawl drawn in my life.

50,590. Then you have not seen what was got in the trawl-net?—I have seen an abundance of what they have caught in the trawl-net. I could smell them for six weeks after they had been taken in the trawl. I have seen the ground where the trawlers have taken the fish covered with dead fish and they would stink for six weeks after the trawlers went away.

50,591. Did they get them in such quantities?—Yes, and I have seen the poor people of the Kyles

getting barrels to place them in for their own use after the fishermen had gone away.

50,592. Then it was a great advantage to them to get them in that way?—It might be, but they were always complaining of them.

50,593. Who were complaining?—Themselves; there were so many herrings raised and spoiled and taken away altogether from use.

50,594. Were there more herrings got then than are now got by the drift-net fishermen?—I cannot say that there were, but when the fish got jammed in the deep water with the shoals very thick the trawlers could manage to take in all the lot and keep them there until such time as they were able to take away with them what they chose, but there were times when their trawls broke owing to there being so large a number of herrings. They also heated and hurt one another to such an extent that there was scarcely a scale left upon them, and when the scales are taken off the herrings, when you come to pack them in barrels, they stick and become jellied as there is not a scale to separate one herring from another.

50,595. Have you ever seen that?—Yes, I have seen it.

50,596. Have you cured trawled herrings?—No, I never cure trawled herrings. I never did.

50,597. Have you seen trawled herrings cured?—No, except by the country people who have lifted a barrel or two after the trawlers have gone away.

50,598. Those fish would be partly destroyed?—They were taken out as soon as they could get them.

50,599. But in consequence of the entire stop which has been put to trawling there has been no trawling on your coast for two years?—No.

50,600. Have you had an increased supply of herrings for your drift-nets?—We have had at the latter end of the season, but we have had none at the fore end for two or three years.

50,601. Then it has not done you much good?—In Loch Strivan we have had no herrings for two or three seasons. The season before then was extraordinarily good.

50,602. Has there been no advantage to you from the discontinuance of trawl-fishing?—I cannot say whether the trawl men were doing any harm in that way or not.

50,603. You cannot say whether they did harm or good?—Not in that way, for the herrings which were coming to Loch Strivan were coming early and spawning there.

50,604. (*Mr. Lefevre.*) Were you deputed to come here by the persons who signed this petition?—Yes, together with two other men.

50,605. Where do the fishermen who signed this petition live?—Just along the shore in our neighbourhood.

50,606. What is the name of the place?—Tighnna-Bruaich.

50,607. How many of them are there?—There are not the names of half of them there; the notice was so very short, we did not see it until Monday. We went out in the fore end of the week and were not gathered together again until Saturday.

50,608. Then the feeling of the fishermen there is very much against trawling?—Yes, and no wonder. There are many who were trawling themselves at one time who are drift fishermen now. They know what the consequence would have been better than I do because I never wrought with a trawl in my life.

50,609. Did the fishermen practise trawling for some time?—Yes, for a time.

50,610. Are they now all drift fishermen?—Yes, they must be. There was a vessel caught there last year; she was seized and taken from the men who were fined in Rothesay.

50,611. Were they trawling for herrings?—It could not be proved properly. They urged me to give them some herrings to overlay two or three barrels with, but mine were herrings that I had caught by drifting.

50,612. Yours were drift-herrings?—Yes, there are no trawlers now.

50,613. Then were they drift-herrings on board this vessel?—Yes, but it was a few days past the close-time.

50,614. Have you any other objection to make to trawling than those you have already told us?—I cannot say any more about it.

50,615. Do you think that any number of small fish were taken by the trawlers?—I do not think it at all, but I am sure of it. I have seen 2,500 herrings sold for sixpence in Coldrie, because they could not get them off in any other way. I saw a man buying them for his pigs.

50,616. What time of the year was that?—I think it was in February.

50,617. That has been put a stop to by the close-time?—This was before there was any stoppage.

50,618. But since the close-time has been enforced that could not occur?—They could not get small herrings there now. We are obliged to haul the drift-nets now and again and the small herrings would go through the net; the net would not be able to hold them; it is impossible in a drift-net to get small herrings.

50,619. If the trawl-net were used during the open-time do you think it would catch a considerable number of small fish?—I do not think it at all, because I am sure of it. They will take in the small fry of the herring along with the large ones. It is quite easy to understand that. I heard one of the witnesses say something about encircling the fish in deep water and not coming on shore at all, but they can use their nets in the middle of Loch Fyne and draw them in bodily, teeming the fish into the boat the same as a pocket of meal.

50,620. Do you recollect how many trawl-nets there were used in the Kyles?—I cannot say.

50,621. Was there a considerable number?—Perhaps 200 or 300 and sometimes not half that number. There were a great deal too many of them, however. We could not get our own nets set out and they would carry away our bouys if we did not get out of the way.

50,622. Do you think the two modes of fishing could not be carried on together in the Kyles of Bute?—I do not, and the fishing could not continue long if we all got trawls, and in addition there would be murder if that happened, because I should be for shooting here and you would also be shooting there, and there would be nobody to interrupt us. We should very frequently all be wanting the same spot.

50,623. Do the trawlers and the drift men wish to fish on the same ground?—There would be no use in the drift fishermen fishing if trawling is to go on. They would be obliged to get a trawl the same as the rest and work with it as long as they could.

50,624. Were there many of those trawl-nets owned by the fishermen around your part?—There was a good deal at one time.

50,625. Were they fishermen living in your part or mostly fishermen who came from Tarbert?—They were about the part I live in as well as Tarbert. Those who could purchase the two kinds of nets had them. The trawl-net and the drift-net are not the same thing at all.

50,626. Have you got a drift-net boat of your own?—Yes.

50,627. And a net?—Yes a small one, but a good many of us join with one another and have half a boat and a train between two.

50,628. Are you of opinion that the trawling should not be allowed again?—I am. It ought not to be allowed.

50,629. Have you formed any opinion with regard to the close-time?—As far as I understand last year the fish were very good in the early part of the close-time. The night I had to drop it I got four maze, that is, 2,000 fish, and I cured them for my own use with the exception of 300 which I gave to a man who lost his vessel. I found them a good deal better than

GREENOCK.

J. Stephenson.

21 Sept. 1864.

they were at the fore end of the month. We all considered that that was on account of the herrings shifting from Loch Fyne. I have been fishing there until the 4th of March before now.

50,630. Do you think the fish come up the Kyles after they leave Loch Fyne?—They go down the shore seeking their way out again. The people of the place could hear them plainly for more than two months after we dropped fishing.

50,631. Do you think the close-time begins too early?—For my part, so far as our place is concerned, I would rather that we lost June altogether and got the month of January instead.

50,632. You would begin the close-time from the 1st of February and go on until the end of June?—Yes. We would rather close that month, and get January for fishing upon our coast.

50,633. Do you think it would be of advantage to have a close-time from the 1st of February?—I would not ask to fish longer than February.

50,634. You do not desire to see the herring-fishing allowed all through the year?—No.

50,635. Do you think that a close-time does good?—Yes.

50,636. Do you fish with the long-lines yourself?—No, I never had a long-line of any consequence.

The witness withdrew.

J. McCarter.

JAMES MCCARTER called and examined.

50,637. (*Mr. Caird.*) Have you anything to add to the evidence given by the previous witness who comes from the same quarter; do you agree with what he has stated?—I have been a fisherman myself.

50,638. Have you ever fished with the trawl?—Yes.

50,639. Have you found it an easy mode of catching fish?—Not very easy. People have to work with it before they can catch fish.

50,640. Can you make a better catch with the trawl than with the drift-net?—No, I have done better with the drift-net than with the trawl.

50,641. You have done better on the whole?—Yes.

50,642. Do you think the system of trawl-net fishing is injurious to the fisheries generally?—I am convinced of it.

50,643. What harm does it do, do you think?—It was doing a good deal of harm, in my opinion, at times.

50,644. What harm did it do?—In the first place, I have seen boatloads of herrings lying dead which were never lifted after they had been killed by the trawl.

50,645. You say you have been a trawl fisherman yourself?—Yes.

50,646. Have you done that yourself?—No.

50,647. Have you caught them in such quantities that you have been obliged to leave them lying?—We may have left a few lying, but we have generally managed to lift most of them.

50,648. Was it generally the case that the fishermen managed to lift most of them?—At times it was.

50,649. What other objection have you to trawling?—In the next place, if we are working with the drift-nets close to where the trawlers are we are troubled with them and cannot fish.

50,650. The trawl-net fishes in shallower water than the drift-net?—It fishes both in deep and shallow water.

50,651. And cannot the two be carried on together?—No, not in the one place. That will never do.

50,652. Can the trawl-net be used where the drift-net cannot be used?—There may be a chance place where it can.

50,653. Is it often the case that there are quantities of herrings in particular places where the drift-nets cannot be used and the trawl-net might be used with advantage?—We could shoot a small piece of drift-net in any place where they can trawl.

50,653*a*. Do you think that since trawl-net fishing has been put a stop to altogether it has been of any advantage to the fisheries in increasing the quantity of fish caught by the drift-nets?—For my part I think we have had a better fishing since trawling was put a stop to. The first year after it was stopped we had a very good fishing, and last year the fishing was pretty fair.

50,654. How has it been this year?—It has not been very good yet, but the weather has been very coarse for the last four weeks. It was pretty fair in the first part of the season.

50,655. (*Mr. Lefevre.*) Do you think the fish are still in the loch; do you think the fish are there, but that they have not been caught on account of the weather?—I believe there are fish there and they were caught in the fore part of the year.

50,656. Has the coarse weather prevented you from going out?—We cannot fish in coarse weather. We can neither trawl nor carry on any other sort of fishing in bad weather.

50,657. Have you ever seen the trawled fish cured?—Yes, some of it.

50,658. Did they cure well?—We were not pleased with it.

50,659. It is stated in this petition or memorial which you have sent to us from Tighn-na-Bruaich that the fish taken by the trawl are unfit for curing by becoming heated and being knocked about more by the trawl than by the drift-net?—Yes, there is no doubt of that. They are knocked about and frightened.

50,660. In consequence of that do they become heated; have you ever noticed that that is the case?—Yes. The whole of the scales are off them when they are caught in the trawl. Perhaps they may take 200 or 300 which are not, but the great body of the fish would be in that condition.

50,661. Had you a share in a trawl-net yourself?—Yes.

50,662. How long?—For a number of years.

50,663. When did you give it up?—I gave it up some time ago.

50,664. Was that when the law forbade your fishing?—Yes.

50,665. Did you make a good livelihood by it while it lasted?—Yes, I could always make a livelihood by it.

50,666. Did you make a better livelihood by the drift-net or by trawling?—I was fishing with the drift-net also. It was only at the latter end of the year that I fished with the trawl. I fished with the drift-net in the summer.

50,667. Was it only late in the season when the fish came close in-shore that you used the trawl-net?—The fish came close in-shore all through the season, but we commenced trawling at the latter end of the harvest time when the fish came into the Kyles of Bute.

50,668. Were they abundant then in the Kyles of Bute?—Yes.

50,669. Then you fished nearer home?—Yes, but we went some distance from home also.

50,670. What distance from the shore would you go out with the trawl-net?—We trawled in the middle at times; half way across to the other side.

50,671. Across what?—Wherever the herrings were. If the herrings were in the middle, half way across, we should go out there to trawl for them. It was not in the shallow water that we trawled along.

50,672. In what depth of water can you trawl; is there any limit as to the depth of water?—I cannot tell that. When we were trawling in the deep water the trawl would not go to the bottom. It would be right on the surface, at the top.

The witness withdrew.

ROBERT MCLEAN called and examined. GREENOCK

R. McLean.

21 Sept. 1864

50,673. (*Mr. Caird.*) You are a fisherman at Largs?—Yes.

50,674. What kind of fish do you get at Largs other than herring?—We get a number of white fish. We used to catch whiting, cod, ling, and haddock with the lines after this time of the year, and in the winter time after the herring-fishing was dropped.

50,675. Do you not catch them now?—No, they are not to be had. I cannot be positive whether it will be eight or 10 years, but it is somewhere near about that time, since the whitings became almost extinct.

50,676. And are the other fish you then caught not to be had either?—There are a few cod and ling caught, but there have been very few haddock for some years; in point of fact there have been scarcely any.

50,677. What is the cause of that?—There have been various reasons. My opinion in reference to the decrease of white fish on this coast is that they trawl too many of them away on the Cantire coast with the herring trawl-nets. The white fish go into shallow waters where there is a clean sandy bottom, and if these trawl-nets make a circle round the fish they take them pretty clean away. About the beginning of the new year they are generally working away west of us. When the fish begin to leave Cumbrae, they go round by the back of Bute to the Cantire coast. The fishermen used to follow them that way, and in some seasons they got immense quantities of them at Campbeltown. It is in the spring of the year, towards the beginning of the year, that these fish spawn, probably in March or April, or somewhere about that time, and I think that the system of trawling for herrings at that time of the year has had a very bad effect. It has nearly extirpated the whitings altogether.

50,678. Do you mean by the destruction of the spawn?—By destroying them in a spawning state. I cannot be positive where they spawn, whether they spawn exactly on our shores or not; it is very difficult to follow them in all their different habits.

50,679. Have you ever seen these different kinds of fish caught in the trawl-net with the herrings when they were fishing for herrings?—They have been caught on our side of Cumbrae, and I have seen when they were trawling in Lightfoot Bay in the spring of the year large quantities of small haddock, small cod, and small trout, caught in the trawl-nets by so narrow a mesh that you could scarcely put your finger in it. They were trawling at the time for small herrings for bait.

50,680. If the regulation with regard to close-time, which now prohibits fishing in February, March, and April, were rigidly carried out, that injury could not be sustained?—It would not be so severe; there is no mistake about that.

50,681. It could not occur at all?—Wherever they trawl at any season of the year they would do injury. The fish are very small now. The spawn deposited in March or April is only small just now, and a trawl working among it would take in the whole of those young fish. When I first went to the herring-fishing I used to put out a line for white fish, and I could get fish at any time along any of the bays from Skipness Point, or from Tarbert to Campbeltown; but during the years that trawling was carried on there were no fish to be got. I can bring forward the testimony of the people living on the coast now who say that since trawling has been stopped there is an appearance of the return of fish to the coast.

50,682. Since trawling has been given up?—Yes, since trawling was prohibited.

50,683. You think that trawling is injurious at any time of the year to the young of other fish than the herring?—Yes, I certainly do, except ling. I do not suppose they set in-shore, but the codfish and the white fish, and the young haddock do.

50,684. Was there ever a large quantity of fish caught at Largs?—Yes, there was a large quantity sent to Greenock and Glasgow.

50,685. Has that ceased now?—Almost entirely. We used to fish in 25 or 30 boats, and that number has now been reduced in the present day to about six. Last summer there was not such a thing as a line-fishing boat at all until within a few weeks. Yet they used to get haddock and various other kinds of fish with the line. I do not attribute the whole of the decrease of the haddock to trawling them in-shore, but I think that is very injurious to the haddocks. I have heard a great talk about getting them for bait, and I think it very injurious to the fish along the Firth of Clyde to allow them to get herring bait and catch the spawning fish at that season of the year. That is one of the great causes of our fish being far too much fished.

50,686. In the spring months?—Yes, there are far more fish caught with the hook without the trawl at all than the sea can keep up.

50,687. Then your view would go to put an end to fishing either by trawling or by lining?—If it was practicable I would have a close-time for a month or so for the heavy fish as well as for the herrings.

50,688. You would have a close-time for the white-fishing?—Yes, in the Firth of Clyde; there are none cured in the Firth of Clyde; they are generally sent fresh to market, and at that season of the year they are not very good; they will not buy them after the middle of April.

50,689. As a practical fisherman can you suggest any plan by which any regulation can be adopted which would tend to increase the supply of white fish?—Do you mean cod?

50,690. Yes, and other white fish also?—There would be difficulty in the matter.

50,691. Do you ever catch any flat-fish?—We get a few but not many.

50,692. Is there any beam-trawling on your shore at all?—They catch flat-fish by what they call the small-line-fishing. The fishermen who work for the heavy fish work about 300 or 400 hooks, with from one to one and a half to three fathoms between the hooks. The small-line fishermen work with from 1,500 to 1,800 hooks for whiting and small cod and haddock, and such like fish as that. If anything could be done perhaps it would be as well to limit the catch with the heavy lines, and have them to work with the other lines. That is what they used to do with us long ago before they got the herring bait. Then they went for a few of the heavy fish, but subsequently they caught a great number of the heavy fish full of spawn when they were going up to Greenock direct from Tarbert. It has been since then that the fish have fallen off so.

50,693. (*Mr. Lefevre.*) Are you yourself now fishing with the line?—I have been fishing with lines more or less for a number of years, but last year I was not. The year before I was.

50,694. Have you yet observed any increase in the quantity of line-fish caught since trawling has been done away with?—There is an appearance this year of a few more whiting, but it will take some time before the spawn can get properly grown up.

50,695. Do you think that the four years during which trawling has been stopped are not sufficient to enable the fisheries to show an improvement?—I think they are scarcely sufficient. There used to be large quantities of whiting caught, and there have not been within the memory of man so many years without a large take as there have been since trawling was first practised.

50,696. How long is it since there was a large take of whiting?—Seven or eight or ten years.

50,697. Did the haddocks disappear about the same time?—The haddocks continued later, because they are a fish that are more in the deep water.

50,698. When did they disappear?—For three or four years they have been very scarce.

50,699. What do you use as bait during the close-time?—During the whole of the year we mostly use buckie for cod, and the haddocks will take it sometimes,

GREENOCK.
R. McLean.
21 Sept. 1864.

and we cut up conger eel for ling. We find that a very good bait for ling, and if we have a tide to suit we can go to the shore and procure shell-fish for bait. That makes a good bait, but there is a great deal of labour in obtaining it. A great many of the fisherman say they cannot get bait, but I think if they were willing to work they could get plenty of it. There are many places in which shell-fish could be obtained, which would make capital bait for other fish.

50,700. Before the enforcement of a close-time for herrings did you use herrings for bait? — Very seldom; sometimes the fishermen did use them when they got them from Tarbert. They got them when they were working with the trawl in the spring. That was the time when they caught heavy fish in a spawning state.

50,701. Did they catch larger fish with the herrings than with the buckie?—They caught more of them; it had the effect of clearing up the ground. If I were to shoot a line with buckie bait at the time the fish are spawning, I should not catch many of them, but I could get a great many with fresh herrings. I think that a buckie on the whole is as good a bait for a cod as a herring when they are not spawning.

50,702. Do you recollect the time when there were beam-trawlers at work down the loch?—Yes, they are working every year down the coast.

50,703. How many of them?—I am not able to say how many; we used to have three or four out from Largs 10 or 15 years ago. It would perhaps be about 21 or 22 years since they commenced there first. When they commenced beam-trawling down with us they got large flounders weighing five or six pounds, but the effect of trawling has been in a great measure to do away with those large fish. There is scarcely one of those full-grown spotted-back flounders which we used to have then to be got now. They have gradually cleared them away as they have gone on fishing them. There used to be two or three boats belonging to Fairlie which were working for some years. I believe that one of the Greenock boats also went down and worked there, and the experience of the fishermen has been that if they were getting cod or ling, whenever the trawlers began to work over the ground, as they frequently did for three times a day, the next day they got nothing at all, or only a few small cod.

50,704. That was the case after trawling?—Yes.

50,705. Did the trawlers take the small cod?—I do not suppose they did. I do not suppose it is more than the disturbance occasioned by the beam of the trawl, but the beam-trawl I consider, in going over the ground and stirring the herrings and other fish that are spawning does great harm. There used to be a class of herrings on this coast before trawling commenced which deposited their spawn during the middle of the harvest, but since trawling became prevalent that class of fish year by year has been becoming extirpated in the Sound of Kilbrennan and Loch Strivan.

50,706. Is there now only one class of fish in the lochs; do the herrings only spawn early in the year?—When I was at the fishing first we used to get a great number of fish in the lochs. We got a great number of small herrings after the large herrings went away, and they left us after they had spawned.

50,707. What time did those herrings spawn?—We generally went to look after them about the middle of August.

50,708. Were they full fish then?—Yes.

50,709. Do you now never see any of them?—There are very few to be seen now.

50,710. (*Mr. Caird.*) Is there any of the trammel-net fishing, described by the previous witness as being practised for the last two years in the Kyles of Bute, practised off your coast?—Yes, we all work at one system of fishing.

50,711. You fish with the trammel-net off your coast?—Sometimes in the early part of the year I fish with the trammel.

50,712. When did you begin to fish with trammels; how long is it since you began to use that kind of net?—It was with the trammels I began to fish first.

50,713. Is that many years ago?—Twenty years.

50,714. What is the size of the net of the trammel?—A trammel with two barrels is 200 yards long.

50,715. Is that the kind of net spoken of as being anchored at the bottom of the sea for the catching of ling and hake?—No.

50,716. You do not use that net?—No.

The witness withdrew.

H. Morris.

HUGH MORRIS called and examined.

50,717. (*Mr. Caird.*) You are a fisherman at Largs?—Yes.

50,718. Do you concur with the previous witness that the white fish, other than herring, has much decreased on your coast of recent years? — Yes, greatly.

50,719. What is the cause of that?—I cannot very well account for it; we used to blame the flounder-trawling for disturbing the fish at night.

59,720. Was there any flounder-trawling on your shore?—Yes, I have trawled for them myself.

50,721. Is that done now?—There were two boats working at it last winter.

50,722. Were they successful?—They did very little.

50,723. Has flounder-fishing with the trawl-net diminished?—Yes, down with us; that may not have been the case off Greenock Bank, but it has been down with us.

50,724. You say you have fished with it yourself?—Yes, for two or three years.

50,725. Did you kill anything besides flounders with it?—Some chance times we killed a cod.

50,726. Did you do any injury to the spawn?—No, I never saw spawn in the net.

50,727. What harm did it do then?—When we were working for white fish we have been working long-lines, when a trawler has come after us trawling. The result has been that when we came to work over the same ground again, we could not get half the quantity of fish.

50,728. After the trawls had passed over the same ground?—Yes, we would shoot our lines afterwards, but we always thought that the trawling had disturbed the fish.

50,729. Are you a herring fisherman?—Yes.

50,730. Do you approve of trawl-fishing or not?—Yes.

50,731. Did you ever try it?—Yes.

50,732. Is it an easy mode of catching fish?—I do not know; it is sometimes very successful, and at other times there is a great deal of work for very little fish.

50,733. What harm does it do?—I have seen it take flounders and small fish the size of half-a-crown. A great number of herrings also were taken.

50,734. Did you take small herrings?—There were some small herrings taken too.

50,735. Was there no large quantity of small herrings taken?—I have seen the time when we have been getting them very small, when we have been drawing them for bait.

50,736. Were they so small as to be of no use for food?—They were of no use for food.

50,737. Were they lost altogether?—We generally took the smallest and baited our lines with them.

50,738. What size would they be?—They were quite small; perhaps four or five inches long.

50,739. What is the principal injury done to the herring-fishing by the use of the trawl?—I think it breaks up the fish and disturbs them.

50,740. Did it break the shoals of fish?—Yes, and

disturbed them. It scattered them away a good deal.

50,741. Have you observed that when you have been fishing with the trawl ?—Yes.

50,742. Was it in a quarter where the drift-net fishing was going on ?—Not, it was about Cumbrae, just off Largs. I never trawled about Tarbert or at Loch Fyne.

GREENOCK
H. Morris.
21 Sept. 1864

The witness withdrew.

DANIEL MCEWEN called and examined.

D. McEwen.

50,743. (*Mr. Caird.*) You are a fish-curer in Greenock ?—Yes.

50,744. Have you been for a number of years acquainted with the whole of the fishing interests of the west of Scotland ?—Yes.

50,745. But especially the herring-fishing ?—Yes, the herring fishing principally, but the cod and ling as well.

50,746. Have you observed the consequences of the recent legislation in regard to trawling for herrings in the Firth of Clyde and Loch Fyne ?—Yes.

50,747. What has been the effect of that legislation in your opinion ?—I think it has proved a decided benefit both to the public and to the parties interested in the herring fishery.

50,748. The effect of that legislation was in the first place to prohibit trawling ?—Yes.

50,749. And in the second place to establish a close-time ?—Yes.

50,750. Do you approve fully both of the total prohibition of trawling and of the close-time as it at present exists from the 1st of January to the 1st of June ?—I approve entirely of trawling being suppressed, and I may say that, while my opinions have not been in accordance with the close-time as fixed by law, I have no objection to its being continued. At the same time I think it should be relaxed until the 1st of February, and if there is to be any change of the law, the 20th of June, I think, would be the most fitting time to commence operations.

50,751. Does that opinion extend beyond the close-time in the Firth of Clyde ?—To the entire west coast of Scotland.

50,752. South and west of Cape Wrath ?—Yes.

50,753. Would you make no distinction on any part of that coast in the close-time ?—No.

50,754. From the Mull of Galloway to Cape Wrath ? — Yes, the only relaxation I would give would be liberty to fish for herrings for bait for white fish.

50,755. You would not allow them to fish herrings in the month of January for sale ?—Yes, in that month I would.

50,756. As a fish-curer, having experience on the subject, you would recommend the month of January to be made an open month ?—Yes, and from the 20th of May until the 20th of June I would have a close-time.

50,757. (*Mr. Lefevre.*) During that time would you allow them perfect liberty to fish for bait ?—Yes.

50,758. (*Mr. Caird.*) In what way would you control that liberty or restrict it ?—If any herrings were caught or sent to the market for sale they would be liable to be seized.

50,759. Do you think a restriction of that kind would be sufficient to prevent fishing for herrings except for bait during February, March, April, and May ?—Yes, I think it would be quite sufficient.

50,760. Do you know whether any restriction preventing fishing for bait would be injurious to the white-fishing ?—I would not go the length of saying that the restriction which has been established here has been injurious, as the decrease in the catch of white fish may have arisen from other causes. It may have arisen from the laziness of the fishermen themselves. They have been in the habit of getting a sufficient supply of bait by going out for a short distance and using a small piece of net, and they complain that they are now required to go out some miles further for a different description of bait.

50,761. Are you aware that in that season, in the opinion of the most experienced fishermen, the herring bait is the best for cod ?—I am not aware of it.

50,762. If they state that in their opinion the herring is the best taking bait for cod would that be a reason for allowing them to fish for bait at that time ?—I do not coincide in that opinion.

50,763. But you have no particular knowledge of the fishing ?—No further than that I have seen it conducted. I do not think the fishermen will state that as a reason, or that no other bait is good. Herrings at certain seasons of the year may be the best bait but at other times they are not.

50,764. Is it only during those particular months that they use herrings ?—At other times the fish would not take them.

50,765. Then you are perfectly satisfied with the state of the law as it at present exists, totally prohibiting the use of the trawl-net for the catching of herrings ?—I think it ought to be totally prohibited in every shape and form.

50,766. Do you think the prohibition has been beneficial to the supply of fish to the public ?—Yes.

50,767. Do you think that it has increased the supply of fish to the public ?—Yes.

50,768. Have more fish been caught since the prohibition was made or not ?—I think, if you will take the period of years, up to this time, during which it has been enforced, that there has been an increase in the quantity of herrings caught.

50,769. The bill was passed at the end of 1860 ?—Yes, and the law was enforced in 1861.

50,770. The fishing in 1861 was a better fishing ?—Yes.

50,771. In 1862 there was a remarkably fine fishing ?—Yes.

50,772. In 1863, again, there was a middling fishing ?—That was caused by coarse weather.

50,773. But it was nevertheless the fact ?—Yes.

50,774. It was a poor fishing ?—Yes, I believe so.

50,775. And during the present year there has not been a successful fishing ?—I think the fishing on the west coast has been more successful than for some years past.

50,776. Has the fishing in Loch Fyne been as successful as it was in 1862 ?—Yes, the fishing in Loch Fyne set in about this time of the year in 1862, and if we have good weather I think we may have as good a fishing as we have had on the average of ten years.

50,777. But as far as it has gone during the four years this law has been enforced there has only been a remarkably good fishing in one year ?—Yes, we never had anything approaching it before.

50,778. In the other three years the fishing has only been an average ?—Yes, in two of them.

50,779. You do not include the present year ?—No, nor 1861 as one of those years.

50,780. In 1861 the Acts that are at present in force were not in existence ?—The entire suppression of trawling in Loch Fyne by Act of Parliament was not in existence in 1861.

50,781. Was the Act passed in 1861 ?—Yes.

50,782. Then it did not come into force until 1862 ?—No, 1862 was the first year of the decided suppression of trawling.

50,783. (*Mr. Lefevre.*) There was an Act in 1861 but it was not quite effectual ?—No, it was not.

50,784. (*Mr. Caird.*) Can you specify the objections you have to the system of fishing by trawling ?—Yes, I can give them to you very distinctly from a petition which I see here from the Inverary fishermen.

50,785. Will you tell us from your own knowledge what your objections are to the mode of fishing by

GREENOCK.

D. McEwen.

21 Sept. 1864.

the trawl?—In the first place I object to the trawl-nets in consequence of their catching a vast amount more fish than they are able to land. Often when they get heavy loads of fish they kill from ten to one hundred times the quantity they are able to take ashore.

50,786. Do you consider that by that mode of fishing they are very successful in catching herrings?—Sometimes; at particular times they are.

50,787. Would it not be possible, if trawling is found so very successful a mode of fishing herrings, to adopt such arrangements as would enable the fishermen to take ashore all the fish they catch?—I do not think that is possible with the trawl-net.

50,788. Could not the trawl-nets, gear, and boats be so improved as to admit of their doing all these things in a more business-like manner?—I believe they could be improved, but I do not think it would be possible for them to land all the fish they catch.

50,789. Why would it be impossible for them to do that any more than it is possible for the drift-net fishermen to land their fish?—The drift-net fishing is quite a different thing; the net is suspended in the water; the meshes will only catch a certain number of herrings, and the buoys attached to the nets keep them floating. The nets are attached to the end of the boats and they are always hauling them in. They cannot catch more herrings than the number of meshes in the net, but the trawl-net can surround the fish and there may be hundreds or thousands of barrels in the inside of the circle which they make with their net. It is quite impossible for the boats to take those herrings out, for this reason, that as soon as the bulk of the herrings gets into the net, the dead herrings tumble through and fall to the bottom of the water, and those which have more life and which get less smothering are only taken to the shore if the water is shallow.

50,790. Is that in consequence of the mode of fishing, or is it in any other way necessitated by the fishermen being obliged to fish by stealth, owing to the present state of the law?—I do not think that that has any effect. I do not think that the fishermen fishing by stealth has anything to do with the cause of their losing so many. I know, from personal experience, that before trawling was suppressed there were thousands of barrels of herrings lost in Loch Fyne, although there was no attempt on the part of the Fishery Board, or of the Fishery officer, or the steamer, to put down trawling.

50,791. (*Mr. Lefevre.*) Was that in the year 1853 or in 1854?—It would be from 1853 up to 1860.

50,792. (*Mr. Caird.*) Was it very common for that to be the case?—Yes, almost in any case if they fell in with a heavy shoal of herrings. It was quite impossible to avoid it.

50,793. Then the objection is that they catch too many fish by that mode of fishing?—They catch more than they are able to land; they destroy herrings without any cause for it.

50,794. What is your next objection?—My next objection is that they break up the shoals of herrings.

50,795. Have you reason to know that from any experience of your own?—I think, in 1859, in the months of October and November, there was a good fishing for herrings in Loch Fyne. There was no trawling going on then in the upper part of the loch, but in the course of a few days afterwards the trawlers went up among them and commenced trawling. The consequence of that was that before the fishing season was half over almost the whole of the herrings went away out of the loch. That I believe was generally the case when the trawlers went to work among them.

50,796. But there were shoals of fish up in the narrow part of the loch before trawling began?—Yes, and they would remain there until December or January I believe. The same thing has happened in other years.

50,797. Is it the case, that in certain years, in the upper part of the loch,—the narrow part,—the takes of fish are more successful than in the broader part, and that in other years the fishermen are more successful in the lower part; does the catch vary in that way?—I believe it does.

50,798. When trawling was practised there was it carried on to a much greater extent in the lower part of the loch than in the upper part?—I believe the principal part of the trawling was carried on from Skipness Point.

50,799. Were the herrings in the lower part of the loch more numerous than in the upper part?—They varied. Some years they were better in one part and some in another.

50,800. If a system of trawling which you think calculated to break the shoals was so much practised at the entrance of the loch and at the lower part of it, would that not most likely be followed by this result, that the shoals would never get up in large quantities to the upper part of the loch at all?—If you allow trawling to go on in the lower part of the loch the consequence will be that you will have little or no herrings in the upper part.

50,801. But was that the case when trawling was permitted in the lower part of the loch; was there not a good fishing in the upper part then?—There was never a good fishing in the upper part of the loch when there was a good fishing in the lower.

50,802. But while there was trawl-fishing carried on in the lower part of the loch has there not been a successful fishing in the upper part?—Not as a rule.

50,803. Have there not been years in which there has been a successful fishing in the upper part of the loch, notwithstanding that trawling has been carried on in the lower part?—There might be an exception, but it would only be for a short time, when the two were practised at the same time.

50,804. Can the two be practised at all without the one being a serious injury to the other?—I don't think they can.

50,805. Is not trawling oftener practised in the shallow parts?—It is more successful there, but the drift men can fish in shallow water just as well as the trawlers can. They oftentimes fish with the net touching the bottom.

50,806. We have had it stated to us in evidence that the fish which are often caught by the trawl are in smaller shoals and a larger sized fish than those which form the larger bulk of the catch with the drift-nets?—My experience is that you will catch herrings of different sizes with the trawl-net, from the size of a minnow to the largest size it is possible to get them.

50,807. (*Mr. Lefevre.*) What length?—Some will be very small. I have seen 9,000 herrings in one barrel, caught in the month of October.

50,808. Caught by the trawl-net?—Yes, by the trawl-net. A legal sized drift-net would not catch at the outside herrings of a smaller size than 1,600 to the barrel.

50,809. (*Mr. Caird.*) What was the size of the mesh of the trawl-net?—They have them of all sizes, from one-inch downwards.

50,810. Have they not a legal size like the drift nets?—No.

50,811. Could not a legal size be enforced?—I don't think that would affect the question at all.

50,812. For what reason?—The mesh of the net does not continue of the same size as when it is suspended in the water. It can be stretched out, and a great bulk of herrings coming into it jams the meshes all up together.

50,813. (*Mr. Lefevre.*) Do you mean that the fish in the middle of the shoal would not have an opportunity of escaping?—Yes, supposing the net had a mesh of five or six inches to only one inch in width, the bulk of the herrings pressing against it would not have an opportuuity of escaping through the mesh. The mesh is strained by the pressure against it, when the fish get jammed up.

50,814. That would only be the case when the takes are enormous?—They will never fish with the trawl

except when they see a shoal of herrings. They will not put out their nets except where there are fish.

50,815. (*Mr. Caird.*) Do I understand you to say that the dragging of the net contracts the mesh?—Yes.

50,816. And therefore a regulated size of the mesh, if it was the same as that of the drift net, would not be followed by the same result?—Not at all.

50,817. Have you observed whether in general in the takes of the trawl-net the fish are larger than those caught in the drift-net?—I think they are much smaller.

50,818. Smaller on the average?—Yes. Now they would be very much smaller.

50,819. Have you seen herrings caught by the trawl-net cured?—Yes.

50,820. Have you cured them?—Yes.

50,821. Do you find that they cure as well as the others?—No, they do not.

50,822. What is the difference in that respect?—The fish are much the same as if you were to take a cod and bleed it and attempt to cure it afterwards. It will not cure if you keep it for any time without its having been bled.

50,823. Is it not the fact that there are many barrels of trawled herrings cured and sold in the market?—It was the fact.

50,824. When the law was not enforced?—Yes.

50,825. Did they sell at inferior prices as compared with drift-net caught fish?—I think they did almost invariably.

50,826. Was that because they were inferior in quality?—Yes.

50,827. Did they find a better market in the fresh market?—I think not. I think the same sized herrings caught by drift-net men would always fetch more. If you got herrings 500 to a barrel, caught with the drift-net, and herrings of the same size caught by the trawl, the drift-net herrings would command a better price in the fresh market than the trawled herrings.

50,828. Although of the same size?—Yes, the drift-net herrings always command a better price.

50,829. Do they look better?—Yes, and they are better to eat. You will not find the difference so much in fresh herrings as in cured herrings, but at any time they will not command the same price as the drift-net herrings.

50,830. When they are sold fresh is that the case?—Yes, when they are sold either cured or fresh.

50,831. (*Mr. Lefevre.*) What would be the difference in price?—That will altogether depend upon the market. If there are a great many trawled herrings and a few drift-net herrings the difference will be more than if there are a great many drift net herrings and a few trawled herrings. In that case it would not be so much.

50,832. To what extent do the prices vary?—I have known a difference of 1*l.* in a barrel of herrings, and I have known also when the difference has been only 5*s.* If there are only a few trawled herrings the difference between them in that case will be less, because the herrings will be in better condition.

50,833. (*Mr. Caird.*) Was the result of trawl-fishing to increase the supply and lower the price?—I don't think it was. There might have been an increase in the supply, for the time being, if they got heavy shots, just the same as is the case at times with the drift-net men. If we have a heavy fishing it will beat down the price in the market, either for fresh or cured fish. Of course it naturally depreciates the price, and if on the other hand there is a small fishing it sends the fish up in the opposite direction.

50,834. Is there any objection which you have to urge against trawl-fishing?—Yes, I think it injures the spawning ground.

50,835. Have you seen any injury done by the use of the trawl-net to the spawning ground?—I have not seen it, but I know from many who have been fishing and who have been seeing it that it is the case.

50,836. Was that the case when they were fishing in the open season, or was it more so when they used to fish in the spring months?—In the month of August you will get plenty of foul herrings; at least they used to get them at the head of Loch Fyne. They spawn at the head of Loch Fyne and in Loch Ridun in shallow water, and if you allow trawling to go on there the result will be that you will trawl up the spawn from the bottom of the water.

50,837. (*Mr. Lefevre.*) What months do you allude to?—The months of August and September, but I do not know that they do not spawn all the year round.

50,838. (*Mr. Caird.*) Is that the case in particular parts of the loch?—Yes.

50,839. The places you mention are in the upper part of the loch?—Yes, at the head of Loch Fyne and in Loch Ridun.

50,840. Would it not be possible to adopt an enactment by which the spawning grounds might be excepted from trawling?—No, I think not, I do not think the fish limit themselves to those two particular places.

50,841. Are you aware as a fact that the trawl-net does bring up the spawn of herrings?—Yes, I think there cannot be the slightest doubt of it; I have not seen it done, but I have known it to be the case. I have seen spawn which has been lifted in the Kyles of Bute after the trawlers had recently passed over the spawning bed.

50,842. Was that in the month of September?—No, in the spring months.

50,843. Can you give us any instance in the months of August and September, in the open fishing, in which the spawn of herrings has within your knowledge been taken up by the trawl-nets?—I can only give you that instance in the Kyles of Bute, and that was in the close-season. I cannot give an instance such as you desire at present, but I have no doubt that I could if I would put myself to some little trouble.

50,844. Trawling for herrings in the upper part of the loch has always been illegal?—The trawlers never went there to trawl for herrings for two reasons. In the first place the other fishermen would not allow them, and in the second place they would not be able to get a price for the fish at that season. They would only get spent herrings and they would get little or nothing for them.

50,845-6. (*Mr. Lefevre.*) The herring that is usually taken here does not spawn in August or September?—They have been spawning to a large extent in former years in Loch Fyne.

50,847. But the close-time has been fixed on the ground that the herrings spawn between January and June?—As far as my information goes, I believe it is a different class of herring that frequents the loch in the months of August and September to those which are here at an earlier period. I believe they are local in their habits.

50,848. The herrings you get are mateys; they seldom have roes in them?—Yes, they have a considerable quantity of spawn at this moment. They have more or less spawn in them now.

50,849. They are not full fish?—You can get an odd herring which is a full fish.

50,850. But the bulk of them are not?—They spawn in January and February and March.

50,851. (*Mr. Caird.*) You say that in the upper part of Loch Fyne it would not have paid the fishermen to take the fish because they would have been out of condition and almost unsaleable?—Yes.

50,852. Would not that be a sufficient motive to prevent the fishermen from fishing?—I don't think it is a motive to prevent them from fishing at all, because I have seen them selling herrings in Glasgow when they have only been getting 1*s.* 6*d.* for five or six thousand of them. It would not pay them to fish under such circumstances but still they persevered in it.

50,853. It would not pay them at that season of the year?—No.

50,854. That season is what is now the close-time?—Yes.

GREENOCK.

D. McEwen.

21 Sept. 1864.

50,855. Then that fishing is discontinued now?—Yes.

50,856. Have you any other objection to trawl-fishing?—No, I think that is about the extent of my objections.

50,857. (*Mr. Lefevre.*) Do you know whether the trawl fishermen since they have been prohibited from fishing with the trawl have all gone into the drift-net fishing?—I think that almost the whole of them have and they have been pretty successful with their drift-nets.

50,858. Have you bought any of their take for curing?—Yes.

50,859. Have you reason to know that they are as well satisfied with the drift-net fishing as with the trawl-fishing?—So far as I can discover from their personal opinions—if they were allowed to speak their opinions entirely unfettered they would be much inclined to keep the law as it at present stands. I think that drift-net fishing is more lucrative to the fishermen than trawling.

50,860. Have you any boats of your own?—Not directly but indirectly I have.

50,861. Have you advanced money upon them?—Yes.

50,862. Have you also vessels out purchasing herrings?—Yes.

50,863. When herrings were being caught by the trawl did you give instructions to your men not to buy the trawled herrings?—No.

50,864. Did you buy trawl-caught herrings?—Yes, while it was quite legal to buy them I did as other people did.

50,865. Did you mix them with the other herrings at all?—No.

53,866. Did you sell them under a different brand?—We object to the brand. We use none at all.

50,867. Have you no trade mark at all?—No.

50,868. (*Mr. Caird.*) You have no brand of your own?—We brand no name at all.

50,869. (*Mr. Lefevre.*) Have you no mark at all?—No; we sell our herrings the same as we would a barrel of flour or a barrel of meal; we object to the brand in all shapes.

50,870. Did you sell herrings bought from the trawlers as trawled herrings?—Yes, but we had great difficulty in selling them, although they were cheaper to the consumer; we had great difficulty in selling trawled herrings.

50,871. Were the purchasers able to tell the difference?—They would not buy them at all in many cases.

50,872. Did they always examine each barrel of herrings; were they sold open?—We sometimes sell the herrings without their seeing them at all, and at other times they come and look at them.

50,873. Was there a difference in the trade for drift-net herrings and for trawled herrings?—Yes, the consumer would not buy trawled herrings as readily as he would buy drift-net herrings.

50,874. Was there the same difference in the fresh market?—Yes.

50,875. Do you agree with the other witnesses that a larger class of herrings was caught by the trawl-net than by the drift-nets?—There was at one time, perhaps 15 or 20 years ago, and until within the last five, six, or seven years ago, a class of herrings of a pretty large size running from 500 to 600 per barrel; they were pretty regularly caught in the early part of the season by the trawl men, but those herrings have been entirely destroyed by the trawl-nets. There is no such thing got now with very little exception; probably they may get a few hundred in June.

50,876. Were they caught by the drift-net also?—Yes; I do not think there is a class of herrings of any size in Loch Fyne that would not be caught by the drift-net.

50,877. They would not be habitually caught by the drift-net?—No.

50,878-80. Then do you agree with the witnesses who have told us that a much larger class of herrings than that generally caught by the drift-net was caught by the trawl-nets?—No more than that there is no restriction of the size of the mesh of the nets. The mesh is generally one inch from knot to knot, but where there is a larger class of herring they use a larger size. They always work with a larger sized mesh in the early part of the season.

50,881-84. What is the size of that mesh?—From 32 or 33 to 35 to the yard.

50,885. When you speak of the trawl-nets injuring the spawning ground do you mean that they dragged the spawn from the ground where it has been deposited?—Yes; sometimes they land the spawn on the shore, and if they do not land it on the shore it is dragged and lifted from the bottom of the ground, so that the other fish can get at it and devour it. The natural coating upon it is torn off and the other fish then devour it.

50,886. Have you seen it landed in that way?—I have seen it brought ashore in the trawl-nets.

50,887. Is there a considerable portion of the upper part of Loch Fyne in which the trawl-net can be used?—They can use the trawl-net in any part of the loch.

50,888-9. And drag it ashore in any part of the loch?—If there are rocks they cannot do so, but they work the nets in the way that we call circle-fishing, and when they lift the herrings they are more or less injured.

50,890. Was a large proportion of the trawling in deep water, before it was put a stop to, carried on?—No; in the greater part of the trawling of late years the nets were all dragged ashore.

50,891. By a limitation of the place where trawling should be carried on, could any of the evil you mention be remedied?—I cannot see any way at all by which trawling could be allowed to go on in any part of the west coast of Scotland.

50,892. Have you paid any attention to the catch of pilchards in Cornwall?—No.

50,893. Does not that resemble the trawling on this coast?—I think not.

50,894. Are you aware that they take large quantities of pilchards in the same kind of nets?—I understand that they work the pilchard seines in Cornwall, that they take the seines and surround the fish and keep them in a limited space, and that they then lift the pilchards out of the seine.

50,895. Could not that mode be adopted here?—I don't think it could be adopted with regard to herrings.

50,896. Is it different from circle-net fishing in deep water?—Yes.

50,897. In what way?—In circle-net fishing in deep water the boats go round about and form a circle, and if there is a heavy shoal of fish the fish that are in the bottom of the circle, being compressed, die and drop through to the bottom; you can only lift a limited quantity out of the whole. In point of fact you are killing fifty thousand times more than you are able to land in your boats.

50,898. Is that from bringing the net tight round them?—Yes.

50,899. In order to prevent them from escaping?—Yes, they kill immense quantities at one time. My late uncle bought no less than 100 barrels of herrings from one person that had been lifted on shore at Ardlamont. They had been killed by the trawlers and left there. I have not the least doubt that there would be 10 or 20 times that quantity carried away by the tide.

50,900. When the herrings are dragged ashore this kind of loss does not take place?—It takes place inasmuch as lots are killed and drop out of the net before they can get it into shoal water.

50,901. In regard to the condition of the fish, to what is the inferior condition of trawled fish due, do you think it is due to their not being meshed?—The herrings that are caught in the drift-net bleed from the neck, the trawled net herrings are smothered and do not bleed at all.

50,902. Is their condition also due to their being heaped up in masses ?—Yes.

50,903. Which do you think the greater of the two evils ?—I cannot tell you. I have not paid sufficient attention to the subject. I think that smothering and blocking them up in that way are both very bad.

50,904. (*Mr. Caird.*) Is there anything you desire to add to your evidence which I have not asked you? —Yes. There is another matter to which I should like to direct your attention. In the late report upon this question the Commissioners gave as our reason for being opposed to trawling, that it is a trade question, and that we desire to prevent it for our own purposes. Now I distinctly deny that. I say that if trawling is proved to be beneficial, if it really does increase the quantity of herrings, it is our business to be decidedly in favour of trawling, but I cannot see that we have any ground of that kind for supporting it.

50,905. (*M. Lefevre.*) We have heard that one objection to trawling is that it throws upon the market a large quantity of fish, and that it causes great irregularity in the price ?—I don't think so.

50,906. Do you attach importance to that objection ?—Not the slightest. It is all bosh.

50,907. Do you think the public would be rather benefited than otherwise in that way ?—It makes no difference if there is a large quantity of fish, whether they are trawled or drift-net herrings ; the public get the benefit. I have never found the price of herrings so low either in the fresh or the cured market as it has been since trawling was abolished.

50,908. You say that the fish sold in the market during the prohibited time ought to be liable to be seized ?—Yes.

50,909. Is there any supply coming from other places at that time ?—Yes, from the east coast.

50,910. How would it be possible to distinguish between the east coast fish and the west coast fish ?— The fish distinguish themselves by the quality.

50,911. But would it not be difficult to enforce a regulation of that kind ?—No, there would not be the slightest difficulty.

50,912. (*Mr. Caird.*) You say that since trawling has been abolished fish have been low in price ; do you refer especially to 1862 in which there was a very large catch of fish ?—Yes.

50,913. Not to the year or two which have elapsed since ?—No, but I believe that in this year up to July herrings were as cheap as ever they were.

50,914. Last year were they not dear in price as compared with the price when trawling was permitted ?—I think it was much about the same.

50,915. Then the price has not altered for the average of years ?—We have not had sufficient time to average the years yet ; we have only had two years of it.

50,916. But it was an exceptional year to which you referred as giving the lowest price of the fish ?— Yes, it was the best year's fishing we ever had.

50,917. Was there not nearly four times the quantity of fish caught that year than was caught in any other season ?—I don't think that.

50,918. By the returns of the Fishery Board that was so ?—The Fishery Board returns are not worth the paper they are written upon.

50,919. In 1861 by these returns the total catch of herrings was 20,246 barrels and in 1862 it was 79,893 which is very nearly four times as many ?—Yes ; you are referring now to the total catch throughout the whole season I think.

50,920. Yes.—Not to the quantity caught in Loch Fyne ?

50,921. Yes, there were 20,246 barrels caught in the one year and 79,893 in another; that would account for the falling off in the price that year ?—Yes, to a certain extent.

50,922. (*Mr. Lefevre.*) Though you say these returns are not to be relied upon for the total quantity, do they give a comparison of one year with another ? —They are very rough returns.

50,923. For instance, do they give a correct return of herrings shipped in boxes ?—I do not think with regard to the west coast that there is any reference to fresh or cured herrings. The returns furnished to the board are anything but accurate.

50,924. But would the Custom House returns be accurate ?—There are no Custom House returns.

50,925. Would it be possible to collect accurate statistics ?—Not in the manner in which they are now obtained.

50,926. Would it not be possible to collect them in some other way ?—Yes, it is quite possible by compelling each boat which is at liberty to fish for herrings to give returns of the number of fish caught, and they might be required at the end of the season to give the total quantity they had got.

50,927. How do they ascertain the quantity cured ? —They ask me how many I have cured ; but there are thousands of barrels they never know anything about.

50,928. Even of cured herrings ?—Yes ; I think in 1859 they gave the number of trawled herrings taken in that year, at 7,130 barrels or boxes. We were certainly a little astonished by the returns they gave that year. We took some little interest in the matter, and we were greatly astonished at the number of trawled herrings they gave, especially when we knew that from the 1st of June to the 30th of May 4,037 barrels had been carried by one steam boat company in Glasgow alone.

50,929. Then you do not attach much importance to these statistical returns of the Fishery Board ?— Not the slightest importance.

50,930. Not as being comparatively accurate one year with another ?—They may to a certain extent be accurate but I think not generally. With their mode of sending officers round Loch Fyne it is quite impossible for them to get accurate returns.

50,931. Do you refer to a particular table or the whole returns ?—I take their whole returns as referring to the west coast of Scotland. I can easily make out that 10,000 boxes of herrings came into Glasgow in the one year in which they gave the total returns at 7,000.

50,932. Do you find that the price of herrings depends upon the take in Loch Fyne or upon the take upon the whole coast ?—It depends upon the take on the whole coast; not upon the take in Loch Fyne.

50,933. With regard to the price of Loch Fyne herrings, does that depend upon the take in Loch Fyne or do you find that when the herrings are abundant on the east coast they reduce the price of Loch Fyne herrings ?—The east coast herrings have no influence upon those on the west coast.

50,934. Could you not give us a return of the Loch Fyne herrings for a series of years that would indicate the comparative prices ?—I think the prices would do so.

50,935. Can you make out such a return ?—Yes, I will send it to your office. There is another matter which I object to and that is the brand.

50,936. (*Mr. Caird.*) You have no brand here ?— No, we object to the brand; we think it injurious to the fish-curers.

50,937. You do not speak from any personal knowledge of the subject ; you do not have the brand here ? —I speak from this amount of knowledge, that I frequently see the east coast herrings, and I know that they are not equal to ours.

50,938. You do not buy the east coast branded herrings ?—No, I would not buy branded herrings at all.

50,939. They are chiefly sent to the foreign markets ?—Yes.

50,940. Have you any special information you can give us that could lead us to rely upon your opinion, as you have had no experience of the trade to which you refer ?—If you mean with regard to my knowledge of shipping herrings to the Continent then you are right, but not in regard to anything else.

50,941. As we understand from the inquiries we have made on the east coast, branded herrings do not come into the market here, but they go chiefly to the Continent, so that any value attached by the east coast

GREENOCK.
D. McEwen.
21 Sept. 1864.

curers to the brand arises from its giving a value to the herrings in the foreign markets?—It is only a fictitious value.

50,942. That is a matter of mere argument and opinion?—I think the fact that they are not able and that they do not cure beyond a certain mark is sufficient to condemn the brand altogether.

50,943. What do you mean when you say that they do not cure beyond a certain mark?—They have no interest in curing better than the brand.

50,944. (*Mr. Lefevre.*) You have no wish for the brand here?—No, I would not give twopence for it.

50,945. Is it usual for the merchants to put a trade mark on the fish here?—No.

50,946. Do the merchants when they have bought the herrings from the curers do so?—No, they rely upon the curers selling them a good article.

50,947. Do they put no retail mark upon them?—Not the slightest.

50,948. No name?—No name or anything. I should also like to say that I think the laws which have been recently passed ought to have eight or ten years trial before any opinion can be formed on the matter. I don't think the two or three years that have elapsed a sufficient time to enable us to see whether they have been injurious to us or not. I also think it would be of great importance to the community of fishermen and to all parties interested in the matter that there should be a general inquiry into the habits and natural history of the herring. I think that is a subject which has been much overlooked, and almost nothing is known of it at all. I think it is of the greatest importance that there should be a Government inquiry into the subject.

50,949. (*Mr. Caird.*) You think there ought to be a scientific inquiry?—Yes.

50,950. (*Mr. Lefevre.*) You would also give the close-time a further period of trial?—I am of opinion that you might allow the fishery to go on until the 1st of February without much injury to the fishery, but while I am of that opinion I am also firmly of opinion that there should be no herring-fishing allowed in the month of May on the west coast. No doubt you will get parties interested in the matter to tell you that you should allow the fishing to go on all the year round; but I am looking now at the matter for the benefit of the public.

50,951-2. Do you object to fishing at that time on the ground that the fish are spawning then?—I object on the ground that they are spawning and are in bad condition. I have known them sent to London, and in place of getting any money for them I have been actually money out of pocket by them.

50,953. Were they spent fish?—They were almost unfit for human food. That is the case almost every year. I believe that fishing in May is very injurious to the fishery generally. In my opinion it is an injury both to the trade and to the fishery.

50,954. You believe that four years is hardly a sufficient time to enable you to test the merits of any scheme of legislation?—We have hardly had four years. We are only now in the third year, and I don't think that is sufficient time to say whether the legislation which has taken place has been injurious or beneficial. I think we ought at least to have 10 years. I believe that if you were to permit trawling in Loch Fyne and to sanction the use of trawl-nets in place of drift-nets you would very soon destroy the whole of the fishing there.

50,955. Then do you think the fishermen generally are in favour of the use of the trawl?—I think with exceptions they are almost unanimous in condemning it.

50,956. But you infer that they would take to the use of the trawl-net?—Yes, for this reason, the trawl-net can be got cheaper than the drift-net.

50,957. In fact the fishery can be worked cheaper in that way?—Yes.

The witness withdrew, and the inquiry was adjourned until the 22d September, at Ardrishaig.

Ardrishaig, Argyleshire, Thursday, 22d September 1864.

PRESENT:

J. CAIRD, Esq., M.P. (Chairman). | G. SHAW LEFEVRE, Esq., M.P.

JOHN M'KIVER called and examined.

ARDRISHAIG.
J. M'Kiver.
22 Sept. 1864.

50,958. (*Mr. Caird.*) You have been stationed here for several years, I understand, during the period of the herring fishery, as the Fishery officer?—No, I am only stationed here during the period the officer of the district is absent at Wick for the branding season.

50,959. For a succession of years you have taken his place here?—Yes.

50,960. Then you are acquainted with the general character of the fishery carried on in Loch Fyne?—Yes.

50,961. Can you describe what is the present state of the fishery, as compared with what it has been for some years past, in regard to the yield of herrings?—It has been the worst season known for a number of years for the take or catch of herrings.

50,962. As far as it has gone?—Yes.

50,963. During what period does the herring fishery continue here?—At present it is allowed to begin on the 1st of June, and, since the close time commenced, they drop the fishing on the 30th of September.

50,964. During what months is the fishing most successfully prosecuted?—It differs according to the season; sometimes it is better at the latter end of the season, and at other times it is better earlier.

50,965. Four months of the fishing season have now passed?—Yes, nearly four months.

50,966. Generally speaking, the most productive part of the season has now passed?—No, it has been heavier after this.

50,967. Do you usually have the heaviest fishing after this time?—I cannot say that we usually have it, but in 1862 it was so.

50,968. Then you cannot say yet whether there will be a good or a bad fishing on the whole?—No, I cannot say yet. In 1862 there was a large fishing, and it was heaviest after this time up the Loch at Inverary.

50,969. Is there any striking difference in different parts of the Loch in the yield of fish, taking one year with another?—I cannot say.

50,970. Can you tell us the number of boats employed in the fishing now in Loch Fyne?—There will be about 500 at present.

50,971. Are they mostly boats belonging to the district, or are there any strange boats coming here?—There are a number of strange boats from Ayrshire, Campbeltown, Ross-shire, and Arran.

50,972. They are all drift-net boats, I suppose?—Yes.

50,973. Are any of the boats that were formerly used in trawl-fishing now employed in drift-net fishing?—There is no trawling now.

50,974. But are the boats that were employed in trawling employed now in drift-net fishing?—Yes.

50,975. They have been found capable of being employed in that way?—Yes.

50,976. How many are there won engaged in drift-net fishing that were formerly engaged in trawling?—I cannot say exactly.

ARDRISHAIG.

J. M'Kiver.

22 Sept. 1864.

50,977. You cannot give us any classification of these 500 boats as to size?—No.

50,978. Do you know how many men may be engaged?—They run from two in the small boats up to four and five in the others.

50,979. From two to five men?—Yes.

50,980. Can you tell us the length of the fleet of nets carried by the larger boats?—No, I cannot; the fishermen know that better than I do.

50,981. Is there an increased number of boats compared with what the number was a few years ago, or is the number diminishing?—There has been a diminution; there were more boats last year.

50,982. How many were there last year?—If I had my books I could tell you.

50,983. You know the fact that there are a lesser number of boats this year than last year or the preceding year?—Yes.

50,984. Has the number of men also decreased in the same ratio?—They come here from different places when they hear of a good fishing, and that makes the increase. Boats come here from Campbeltown, the Kyles of Bute, Ayrshire, Arran, and the Ross-shire coast. This year there has only been a slack fishing, and that has caused the diminution.

50,985. What proportion of the fish caught in the Loch is sold fresh, and what cured?—Do you mean this year?

50,986. I mean as a general rule.—I cannot say at present, but if I had my books I could.

The witness withdrew.

N. Leach.

Neil Leach called and examined.

50,987. (*Mr. Caird.*) You are a drift-net fisherman?—Yes.

50,988. Have you been long engaged as a drift-net fisherman in Loch Fyne?—Yes.

50,989. For how many years?—25 years.

50,990. And you have full knowledge and experience of the mode of fishing in this Loch?—Yes.

50,991. Have you fished in all parts of the Loch?—Yes.

50,992. Both in the Upper and Lower Loch?—Yes.

50,993. What is the size of the boat in which you fish?—About 22 feet keel.

50,994. It is a half-decked boat?—Yes.

50,995. How many men are there in it?—Three.

50,996. And what is the length of the nets which you employ when you are fishing?—14 barrels.

50,997. Fourteen lengths?—Yes.

50,998. How much is each length?—A hundred yards.

50,999. So that the boat altogether shoots 1,400 yards of nets?—Yes.

51,000. What is the depth of the net?—Eight fathoms.

51,001. Is that about the average size and depth of the whole shot of nets in each boat?—Yes.

51,002. At what distance from the shore do you generally shoot your nets?—We do not go out very far from the shore, if we are once off the shore.

51,003. What is the nearest distance from the shore at which, in any state of the wind, you would shoot your nets?—About half a mile or a quarter of a mile.

51,004. You would not like to be nearer the shore than half or a quarter of a mile?—It would be according to the place in which we were fishing. It might be that the water would be shallow, and in that case we dare not come near the shore.

51,005. But in any case, whatever might be the state of the wind and the shallowness of the water, do you ever come nearer than a quarter of a mile of the shore?—Yes.

51,006. How close do you come?—Within four fathoms of water sometimes.

51,007. What distance may that be from the shore at any time?—It will not be very far off the shore—four fathoms.

51,008. Is it where the water is deep that you come closest to the shore?—Yes.

51,009. In shallow bays you do not shoot your drift nets?—Yes, sometimes.

51,010. But never in less than four fathoms of water?—No.

51,011. If your nets are eight fathoms deep they would touch the bottom of the ground?—Yes; many times they do.

51,012. Do you not anchor your nets when they are set?—No.

51,013. Do you hang by them all night?—Yes.

51,014. Do you observe any particular time for the shooting of your nets?—Yes.

51,015. Do you ever shoot them before sunset?—No.

51,016. Is there any regulation upon that point?—There used to be a cutter here to keep the regulation, but she is not used as she was formerly.

51,017. Does anybody enforce the regulation that no nets shall be shot before sunset?—No.

51,018. Do the fishermen shoot their nets when they think right?—No.

51,019. Do they observe any rule among themselves?—No.

51,020. Does every man just do as he likes?—They do not shoot until the sun is down.

51,021. Have you ever observed any ill effects from the nets being shot before sunset?—Not here, but at Stornoway they used to shoot them before sunset.

51,022. If you shoot them before sunset, does it prevent the fish from rising?—Indeed I do not know.

51,023. What is the object of not shooting the nets before sunset?—I cannot say, but no doubt, it is for the benefit of the fishery. Very likely they do not do it from a dread of frightening the fish away.

51,024. Then you do not shoot your nets before sunset because you are afraid of alarming the fish?—No.

51,025. Do any of the drift-net boats observe any particular distance between the drift of each set of nets as to where they shoot their nets?—Not very much.

51,026. How close may one drift of nets be shot to another?—You might heave a stone from one to another.

51,027. Are they in a line running across the Loch?—Yes.

51,028. Is the whole number of boats nearly across the Loch altogether, with successive nets?—No.

51,029. Do they keep in particular parts of the Loch?—Yes.

51,030. You tell me that you shoot 14 lengths out of your one boat?—Yes.

51,031. And each of those lengths is 100 yards?—Yes.

51,032. That is 1,400 yards altogether?—Yes.

51,033. Do you shoot it out in a straight line from one end to another, as near as you can?—Yes.

51,034. Will another boat then shoot within a stone's throw of you, as near as possible?—Yes.

51,035. And another boat will follow?—Yes.

51,036. And so on, until they go nearly across the Loch?—Yes.

51,037. Have you ever observed how many lines will be stretching across the Loch in that way?—No.

51,038. Will there be 50 such lines across the Loch?—No.

51,039. Do the boats of the different fishing stations go to fishing grounds of their own, or do they go to any grounds that they happen to choose, no matter

ARDRISHAIG.

N. Leach.

22 Sept. 1864.

what particular port they come from?—It does not matter where they go.

51,040. Do the Inverary boats come down to where the Ardrishaig boats fish?—Yes.

51,041. Do they fish together?—Yes.

51,042. Just where they find the herrings to be, most of the boats will fish?—Yes.

51,043. Generally speaking, where are the best takes of herrings got—in what part of the Loch?—About the shallow here is the best part.

51,044. In the neighbourhood of Ardrishaig?—Yes, and in the lower part of Loch Fyne.

51,045. Is it a better fishing above Otter Point or below it?—Below it.

51,046. What is the average breadth of the Loch above Otter Spit?—I do not know.

51,047. Is it two miles?—Perhaps about a mile and a half.

51,048. What will the average breadth be below the Otter Spit?—I do not know.

51,049. Three or four miles, I suppose?—Yes, about four miles.

51,050. Do you remember the time when the trawl-fishing was going on?—Yes.

51,051. Did the trawl-boats go very much above the Otter Spit?—Sometimes.

51,052. Which end of the Loch did they most frequently fish? the upper or the lower part?—The lower part.

51,053. That is the widest part?—Yes.

51,054. Were they in the habit of coming among your drift nets while you were fishing?—Not very often.

51,055. As a usual rule they did not fish on the same ground?—Yes, they did.

51,056. Did they come in among your nets while you were fishing?—Yes.

51,057. Did they come between the rows of nets that were set at a stone's throw from each other?—They would heave the trawl beside the nets in the middle of the sea.

51,058. Have you seen them doing that?—Yes.

51,059. During the night, at the same time your drift nets were set?—Yes.

51,060. When your drift nets were set across the Loch, did the shoals of fish come up and down the Loch, or did they rise from the bottom?—I do not know.

51,061. It is said that the trawl-boats break the shoals of fish. Have you heard that stated, or have you seen it done? do they break the eye of the shoal?—I am sure they will, when they get close in-shore; if they trawl about the shoal they will break it.

51,062. Have you, as a fisherman, observed whether you have been more successful with your drift nets since a stop has been put to the trawling altogether than you were before?—Yes.

51,063. You had one very good year in 1862?—Yes.

51,064. Was last year a very good year?—Yes, last year was a very good year too.

51,065. Was it any better than it was before 1862?—Yes.

51,066. And what does it look like this year?—This year it has been very slack.

51,067. There is no trawl-fishing now?—No, I do not think there is.

51,068. Can you give us any opinion as to the advantage or disadvantage of having a close time in the fishing? Do you approve of not being allowed to fish from the 1st of January till the 1st of June?—Well, I do not know.

51,069. Have you ever fished in the month of January?—No, I did not ever fish past New Year's Day.

51,070. You have never at any time fished in the month of January?—No, not past New Year's Day.

51,071. Have you any other business than that of a fisherman?—No.

51,072. Do you follow fishing from year's end to year's end?—Yes.

51,073. When the herring-fishing is not going on, what do you do?—I work ashore.

51,074. At any kind of farming work you can get?—Yes, any kind of work.

51,075. What harm did trawl-fishing do to you as a drift-net fisherman, when it was allowed to go on?—Well, they were doing harm in bringing down the price, and many other things.

51,076. Was that by bringing a large supply into the market?—Yes.

51,077. And in that way they did injury in lowering the price of your herrings?—Yes.

51,078. Is there any complaint you have against them besides that? Were the herrings they caught larger in size than yours or not?—I do not think they were.

51,079. Is there no other reason you can give for your objection to trawling, but that it lowered the price of the fish?—I think, if trawling is allowed to go on, we may drop fishing by drift-nets altogether.

51,080. What for?—Because we will not get what will keep us at it.

51,081. If trawling was allowed to go on, would you become a trawler?—No.

51,082. Would you give up drift-net fishing?—Yes.

51,083. Is that because you believe you would not be able to catch fish any longer?—Well, I do not think we should.

51,084. But can you give us any other reason than the one you have already stated, that trawled fish lower the price of fish generally, and render the fishing less productive to you;—have the trawlers ever damaged your nets?—Yes, and they have stolen some of them too.

51,085. The trawling used to go on in the Loch for some years, without much objection, before the trawlers went into the narrow waters above Otter Spit,—is that not so?—Yes.

51,086. And was it after they began to go into the narrow waters above Otter Spit that the objection of the drift-net men to them chiefly arose?—Yes.

51,087. Was that because they came more into collision with one another in the narrow waters?—I do not know.

51,088. Do you notice whether the dog-fish have increased in Loch Fyne of late years?—I do not know.

51,089. Do you ever see any dog-fish?—Yes.

51,090. Do you ever catch any in your nets?—Yes.

51,091. Did you ever see the trawl men catch any?—No, I never saw them take any.

51,092. Do you think that the two kinds of fishing could go on together?—No.

51,093. You, as a practical drift-net fisherman, can answer this question—could the two kinds of fishing, trawling and drift-net fishing, go on together, if some regulation were adopted by which the trawlers would only be allowed to trawl near the shore in the bays?—I do not know. If they got liberty to trawl near the shore, they would trawl where they liked.

51,094. Do you ever, in your drift nets, catch very small herrings?—Yes.

51,095. Very small ones?—Yes.

51,096. What size is the smallest?—They will be rather longer than your finger.

51,097. Do you catch many of the small ones?—No.

51,098. How many of them will go to a barrel?—Sixteen hundred or seventeen hundred.

51,099. Is it often the case that the drift-net fishermen catch fish of that size?—No.

51,100. Do they catch them along with the better sized fish?—Yes; sometimes they will catch small.

51,101. Do they catch small and large together?—Yes.

51,102. Then they are not all of equal size in the drift nets?—No.

51,103. What size is the mesh of your net—is it an inch ?—Yes, fully an inch.

51,104. When you are shooting your drift nets, is there much disturbance made in the water ?—No.

51,105. Are there many boats at one place and at one time shooting their nets ?—Yes.

51,106. Have you ever seen the trawlers working in daylight ?—No, I have not seen them working in daylight.

51,107. (*Mr. Lefevre.*) You have yourself never trawled ?—No.

51,108. Were there more trawlers from Ardrishaig than drift-net fishermen, at any one time ?—I do not know.

51,109. How many were there, do you know at all ?—No.

51,110. Were there many boats employed in trawling from Ardrishaig ?—Yes.

51,111. You cannot give us a notion of how many ?—No.

51,112. Did the trawlers from Tarbert come up as high as this ?—Yes, they used to come to the Otter Point.

51,113. And trawl among your nets there,—did they ever do that ?—No, they did not trawl away our nets at Otter Point.

51,114. Did they trawl among your nets ?—No, we did not see them trawl among our nets there.

51,115. But they used to come up as high as that ?—Yes.

54,116. Were there times when the trawl fishermen would catch fish when you could not ?—No.

51,117. Would they ever have a good take of fish and you none ?—Yes, if they could get the fish near to the shore, so that they could pull it in with their trawls.

51,118. When the trawlers were alongside the shore, they would catch fish when you could not catch any in your drift nets ?—Yes, because they could circle their trawls round the fish and haul them in.

51,119. Would they take a large catch of fish in a night when you took none,—was that ever the case ?—Yes, sometimes they would catch a good deal.

51,120-2. When you had no success with your nets ?—May be we should get none.

51,123. You say that they lowered the price of fish with their large takes ?—Yes.

51,124. Did you get the same price as they did on those occasions ?—May be we would.

51,125. Did you get as high a price as they did ?—Yes.

51,126. Did you ever get a higher price ?—Sometimes.

51,127. What was the reason of that ?—Sometimes the drift-net herrings would be rather larger than the trawl-net herrings.

51,128. And then you got a larger price ?—Yes.

51,129. When the size of the fish caught in the trawl and in the drift-net was the same, did you get the same price ?—Yes.

51,130. You got no better price than the trawl fishermen ?—Sometimes we might.

51,131. I mean when the size of the fish was the same; in that case was there ever any difference in the price ?—Yes.

51,132. Did you get a better price than they did ?—Yes.

51,133. What difference would there be ?—There might be sixpence or a shilling a hundred.

51,134. What was the reason of that ?—Because the drift-net herrings were better than the trawled herrings.

51,135. You think that the net fish were better than the trawled fish ?—Yes.

51,136. How was that ?—It was better looking.

51,137. Was it because the scales were not rubbed off as much ?—Yes.

51,138. Was that often the case or only sometimes ?—It was often the case.

51,139. Should you say that, as general rule, the drift-net fish brought a better price than the trawled fish ?—Yes.

51,140. Would the trawl nets ever catch larger fish than you would catch with your drift nets ?—Sometimes they would.

51,141. What was the reason of that,—were the fish too large for your drift nets ?—No, there would be both small and large.

51,142. You say that sometimes the trawl nets caught larger fish than you caught ?—Yes.

51,143. What was the reason of that,—would not the fish mesh themselves in your nets ?—I do not know.

51,144. Did you ever catch the large sized herrings that the trawl nets used to catch ?—Yes.

51,145. Would you catch in your drift nets the largest size of herrings that are caught in the Loch here ?—Yes.

51,146. Then they could mesh themselves in your nets ?—Yes.

51,147. Was there any difference in the size of the fish at the beginning and at the end of the season ?—Yes.

51,148. Did you catch larger fish at the beginning of the season ?—Yes.

51,149. Did you use nets with a larger mesh at the beginning of the season ?—Yes.

51,150. In order that you might catch the larger fish, was that the reason ?—No, we used to have new nets at the first part of the season.

51,151. And in the latter part of the season you used the older nets,—was that the case ?—Yes.

51,152. And then you caught rather smaller fish ?—The old nets will catch as large herrings as the new ones.

51,153. You found no difference then ?—No.

51,154. What difference between the old and new nets would there be in the number of meshes to the yard ?—There is not much difference.

51,155. How many meshes to the yard would there be in the new nets ?—Thirty-four.

51,156. What would it shrink to in the course of time,—how many meshes would there be in the old nets ?—The old nets would be about 35 meshes to the yard.

51,157. Did you not use the old nets in the latter part of the season, in order that you might catch a smaller class of fish,—was not that the case ?—No.

51,158. What made you change the nets ?—We were taking the good nets in and keeping them safe.

51,159. Then you thought in the latter part of the season that an old net would do as well as a new one,—was that so ?—Yes.

51,160. And the weather was rather worse,—was that the reason ?—Yes.

51,161. Do you know whether any fish spawn in the Loch here in August and September ?—I do not know.

51,162. Did you ever observe any fish spawning at that time ?—No.

51,163. In what condition do you find the fish in August and September,—are they full fish ?—No.

51,164. What condition are they in ; are they mateys still ?—We get some full.

51,165. There are some among the shoals that are full of spawn ?—Yes.

51,166. Do you ever take up spent fish in September ?—No.

51,167. Never ?—No.

51,168. Then you have no reason to think that they spawn in August and September ?—I do not know.

51,169. Do you know what time of the year the fish do spawn in the Loch ?—No.

51,170. Have you ever observed them spawning ?—No.

The witness withdrew.

ARDRISHAIG.

L. M'Tavish.

22 Sept. 1864.

LACHLAN M'TAVISH called and examined.

51,171. (*Mr. Caird.*) You are a drift-net fisherman?—Yes.

51,172. And you have been for some years a fisherman in Loch Fyne?—Yes.

51,173. What part of the Loch do you generally fish?—All parts of the Loch. I fish in any part in which I can find herrings.

51,174–5. Where do you live, in Ardrishaig?—No. At Gilphead.

51,176. You have followed the drift-net fishing for a good many years?—Yes, for seven or eight years now.

51,177. There has been no trawl-net fishing for the last three years here?—No.

51,178. Have you seen any good effect result from the discontinuance of trawling; has it been beneficial to you as a drift-net fisherman?—Yes.

51,179. In what way?—The trawlers take the fish in all ways, in every place where they can find them, and in places where we cannot drift our nets, alongside the shore. If they come foul of them, they will cut them.

51,180. Do the trawl-net fishermen fish where you cannot fish?—Yes, but they can shoot their nets near the shore.

51,181. How near the shore do you shoot your drift nets?—It is according to the place we are in.

51,182. According to the depth of water?—Yes, and according to the ground too.

51,183. Do you ever shoot your nets in the shallow bays along the Loch?—Yes.

51,184. How close in-shore do you shoot them then?—As close as we can find the herrings.

51,185. In the place in which the trawl men would have fished if they had permission?—Yes.

51,186. Can you fish every bit of the Loch the trawl-net fishermen can fish?—Most of it.

51,187. In every place?—Yes, most of it; but they can haul their trawl nets in on bad ground better than we can.

51,188. Then, in your opinion, as a drift-net fisherman, you can fish every bit of the Loch that can be fished by the trawl-net fishermen?—Yes.

51,189. What harm did the trawl-net fishermen do to you when they were permitted to fish with the trawl?—They did that much harm, that all would have come to be trawlers altogether, and then we should have caught all the fish in one season.

51,190. Let us hear what your objection is to trawling?—If trawling is permitted, they will all commence with the trawl, and fish all the Loch out in one season altogether.

51,191. Would all the drift-net fishermen become trawl fishermen?—Yes.

51,192. Why would they do that?—Because they would have a share of it with the rest, but they would get no price for the fish. They would not be trawlers if they could help it.

51,193. If permission were given to fish with the trawl, all the drift-net fishermen, you say, would become trawl fishermen?—Yes.

51,194. And that is because they could catch more fish by trawling than by fishing with drift nets?—Yes, and they could not get any price for those they would catch with the drift nets.

51,195. They would get no price for the drift-net fish?—No, the trawl-fish would take down the market so much that it would not be worth fishing for them.

51,196. Would there be such a large supply got by the trawl fishermen, and would the price be so much reduced, that it would not be worth while fishing?—Yes.

51,197. Is that the case you make out against the trawl men?—No, it is not.

51,198. What else is there?—It is not only what they would catch, but they would leave fish to spoil and rot in the bays.

51,199. Have you seen a large quantity spoiling and rotting in the bays, which have been caught by the trawl-net fishermen?—Yes, and I have lifted them too.

51,200. Was that after the time that trawl-fishing was prohibited by the law?—It was after and before too.

51,201. Was it done while trawl-fishing was a sort of illegal and stealthy transaction?—Yes.

51,202. Have you seen it done when they were allowed to fish with the trawl in the same manner as you were allowed to fish with your drift nets?—Yes.

51,203. They caught so many fish that they were not able to use them?—Yes, one half of them rotted; they came ashore in cart-loads.

51,204. Were they good fish?—Yes, they were the same as they had themselves.

51,205. Were they the same as you would catch in the drift nets?—They were not as good as those we would catch in the drift nets.

51,206. They were not as good?—No.

51,207. How is that?—From the tossing they would get; that would make them not look as good.

51,208. The tossing they got in large quantities makes them look worse than if they had been caught in the drift nets?—Yes, such was the bulk and the pressure one upon another.

51,209. If there had been a demand for them, and they had been sold at the time, would they have brought the same price, or a less price than drift-caught fish?—They would have brought a less price.

51,210. For what reason?—Because they did not get the same usage.

51,211. Is it because they were more roughly handled?—Yes.

51,212. Do they bleed differently?—The blood is all through them; they are black to the bone.

51,213. Do they not cure well?—No.

51,214. Have they never been sold to the curers?—They have been sold to curers, but they do not fetch as high a price as drift-net fish.

51,215. In the fresh market do they not fetch as good a price as the drift-net fish?—I cannot say; I never sold any; but some of the buyers here can tell you that.

51,216. How long ago is it since you saw any large quantity left in the water dead and unfit for food?—About three years since.

51,217. Where was it?—Down in Mahol-dubh Bay.

51,218. Were you fishing with your drift net at that place at the time?—Yes.

51,219. And you made a good catch at the same time?—Yes.

51,220. Was the trawl net to which you refer trawled inside of you at the time?—Yes, it was inside of us.

51,221. Did they come among your nets at that time?—They were close to our nets.

51,222. They trawled inside of you?—Yes, inside our nets.

51,223. Where you were not fishing?—Yes.

51,224. Were they not quite close to your nets?—Yes, that night.

51,225. Was that the only night that season in which you saw fish left in the water which could not be made any use of?—No.

51,226. In what other place have you seen it?—Down in Brentfield Bay.

51,227. Was that the same season?—I cannot exactly say; but I think it was the same season.

51,228. Were you fishing upon that night with your nets in the same place where you saw the trawl-boat with so many fish?—Yes, outside of it.

51,229. You were fishing outside of it?—Yes.

51,230. In what depth of water was the trawl-boat fishing at the time?—In about one and a half or two fathoms.

51,231. Was that too shallow for your nets?—Yes; we could not get a chance of working there.

51,232. (*Mr. Lefevre.*) Did the trawl net reach to the bottom of the water?—Yes.

51,233. (*Mr. Caird.*) Was that the time trawling was prohibited?—No.

51,234. Was there any large quantity of fish left rotting in the sea that night?—Yes, five or six boat-loads.

51,235. Was it all caught by one boat's nets?—Yes.

51,236. Was it on a Saturday?—It was on a Friday; but I could not say when exactly.

51,237. One boat had caught them in such large quantities that it was not able to handle them with the number of men in the boat?—The boat could not carry them.

51,238. If there had been more boats, could they have sent them to the market?—Other boats went after them and got them.

51,239. Then they were not lost?—They got them up with dredges, but not half of them.

51,240. Did you take some?—I did.

51,241. Did you sell them for curing?—Yes, I did.

51,242. Then they were fit for curing?—Yes.

51,243. Is there any other case in which you have seen fish left in the sea that no use could be made of, from their being caught in too large a number?—We could not raise them from the bottom after they had been lying there, unless it was in shallow water.

51,244. You have mentioned two occasions on which you saw that; can you mention any other?—No.

51,245. In the whole course of your experience have you never seen it but twice?—No, not in that season.

51,246. Have you seen it in any other season?—Yes.

51,247. The same thing?—Yes.

51,248. Is it a very common thing for the trawl-net fishermen to get such very large hauls of fish?—Yes if they fall in with them.

51,249. Do you think the trawl-net fishermen can make more money by their fish, and catch a larger quantity with the same labour than you can?—I think they can.

51,250. Is it a cheaper mode of catching fish?—It is cheaper.

51,251. And easier?—I do not know about the easiness of it.

51,252. Have the trawl-net men harder work than you?—I do not know. Sometimes we have hard work, and at others it is not very hard work. I suppose they will be the same.

51,253. Have you noticed the size of the fish caught by the trawlers?—They catch all sizes.

51,254. Do they catch larger fish than you with your drift nets?—No.

51,255. Never on any occasion?—No.

51,256. Can the largest fish which come into the Loch mesh in your inch nets?—Yes.

51,257. Do the trawl fishermen catch smaller fish than you do?—Yes.

51,258. Have you seen them catch any large quantity of small fish?—Yes, I have.

51,259. What size?—The size of cuddies, some of them.

51,260. What length?—I cannot tell you exactly the length of them.

51,261. What are cuddies?—Small saithe.

51,262. About the length of your finger?—Yes, some of them.

51,263. Have they caught large quantities of them?—Yes.

51,264. Did you ever catch any that size in your drift nets?—No, very seldom.

51,265–6. (*Mr. Lefevre.*) What time of the year have you seen those small fish caught?—I have seen them caught in March.

51,267. Have you ever seen those small fish caught during the open season?—No.

51,268. (*Mr. Caird.*) They are not found here during the regular fishing season?—They do not go for them here.

51,269. (*Mr. Lefevre.*) I suppose it was a whole shoal of small fish?—Yes.

51,270. Do you ever find the trawlers take with large fish a mixture of small fish?—Yes, they take small and large together.

51,271. What size will the small ones be then?—Some large and some small.

51,272. What is the smallest?—I cannot exactly tell you the smallest.

51,273. Have you observed that during the open season?—No.

51,274–5. Then you are speaking of the time before the close time was enacted?—Yes, about then.

51,276. Before the close season was enacted, did the trawlers often trawl during what is now the close time?—I have not seen many trawling since trawling was dropped.

51,277. But when trawling was common in the Loch did they often trawl in the months of February, March, April, and May?—Yes, down about Tarbert and the Kyles of Bute.

51,278. But as high in the Loch as this?—No, not up here.

51,279. But down below they did?—Yes.

51,280. It was then you observed the small fish?—Yes.

51,281. But not at any other time?—No.

51,282. (*Mr. Caird.*) Have you ever seen them take up spawn anywhere?—No, but I have not been looking much after them.

51,283. Have you ever formed any opinion yourself as to the advantage of a close time in the month of January? Did you ever fish herrings in January?—Yes.

51,284. Did you find them in good condition then?—Yes.

51,285. Fit for the market?—Yes.

51,286. Do you think it is a hardship that the fishermen are prevented from fishing in January?—Yes, they should have January to fish for herrings at any rate.

51,287. Do you approve of a close time in February, March, April, and part of May?—Yes.

51,288. Do you think that is of advantage to the fishermen and to the supply of fish?—Yes.

51,289. To the increase of fish?—Yes.

51,290. If there is no fishing allowed in those months would very few small fish be taken?—Yes, very few.

51,291. (*Mr. Lefevre.*) You would not have the open time extended beyond January, would you?—No, only to the end of January.

51,292. Do you think it would do harm to allow fishing during February, March, April and May?—Yes.

51,293. On what ground?—Because the herrings spawn at that time.

51,294. Have you observed them spawning at that time?—Yes.

51,295. Have you seen the fish taken up spent during those months?—No, but if you catch them in the nets the spawn will come out of some of them.

51,296. If you take them in the drift nets at that time you take them with the spawn coming out of them?—Yes.

51,297. In what months is that the case?—In the months of February, March, and August too.

51,298. You have taken fish spawning in the month of August?—Yes.

51,299. That is during the open season?—Yes.

51,300. Are there many fish spawning at that time or only occasionally?—There used to be, but there are very few now.

51,301. How long ago used that to be?—About 10 or 12 years since.

51,302. But you have not observed it since then?—Not many of them.

51,303. Did you observe shoals of fish that were

ARDRISHAIG.

L. M'Tavish.

22 Sept. 1864.

just ready to spawn at that time or only occasional fish ?—Yes.

51,304. Were there shoals of fish ?—Yes.

51,305. Do you ever observe an occasional fish full of spawn among the shoals you take now ?—No.

51,306. Did you at that season ?—No.

51,307. The whole shoal runs full at the same time ?—Yes.

51,308. And the fish are in the same state ?—Yes.

51,309. Have you taken up no fish this year that have been spawning ?—No.

51,310. How high up the Loch do you think the fish spawn ?—At the very head of Loch Fyne, I think.

51,311. Quite the head ?—Yes.

51,312. Do you think they go there in great numbers —Yes.

51,313. Was it there you observed the fish spawning in August and September ?—Yes, and over the back of the craigs at the Silver Craig.

51,314. How long have you been drift-net fishing ?—For eight years.

51,315. Do you recollect 10 or 12 years ago ?—Yes.

51,316. Were you fishing then ?—No.

51,317. Then, how did you observe what you have told us ?—I was at work at the time.

51,318. You have told us of the spawning of the fish at that time ?—Yes, I have seen the spawn of the fish at that time.

51,319. Were you out on the water then ?—Yes, at nights.

51,320. But you were not fishing ?—No.

51,321. Then since you have fished, you have not observed the fish spawning in August and September ?—We will find them full of spawn about the months of February and March.

51,322. But since you have been drift-net fishing, you have not observed them spawning in August and September ?—No.

51,323. Were the trawlers in the habit of fishing generally inside, between you and the shore ?—They would fish anywhere. They would take their nets in the middle of the Loch.

51,324. But, as a general rule, did they fish more often between you and the shore ?—They got bigger hauls of fish if they got them inside the shore.

51,325. Then the big hauls you spoke of, when the fish were taken in such abundance that they could not be carried away, were got close in-shore ?—Yes.

51,326. Have you seen such big hauls in the open water ?—No.

51,327. Have you seen them taken in such abundance in the middle of the Loch that the trawlers were obliged to leave them, and could not take them home ?—No.

51,328. Have you often been out with the trawlers, and seen them at work ?—I have been out with them once or twice.

51,329. Have you ever seen the trawlers get a haul of fish in the middle of the Loch, when the fish have been squeezed and jammed together, and killed, so that they sunk to the bottom ?—No, they do not get such hauls there. There is room in the deep water for the fish to sink below the net.

51,330. But do they die from being squeezed together ?—No, they will get away from the nets.

51,331. Then you do not think that it is the case that the fish are sometimes caught in the middle of the Loch, when the net squeezes them so tight together in a circle that the fish die, and sink to the bottom and are lost ?—No, I do not think that is the case, but on shallow ground they all jam together on the inside.

51,332. And then the fish are killed ?—Yes.

51,333. They could be all taken on shore if there was time to do it, and there were sufficient boats to carry them away,—is that the case when trawling is taking place in shallow water ?—Sometimes, when they get their own boats full, they leave the rest.

51,334. That is because they have not boats enough to carry them away,—is it not so ?—I suppose it is.

51,335. They could, if they chose, take all the fish up if they had boats enough to carry them away,—is that what you mean ?—I suppose they could.

51,336. Is there much ground in-shore where the trawlers cannot fish ?—They can fish on most of the ground.

51,337. But there is some ground where they cannot fish ?—There is ; they cannot fish on bad, shallow ground.

51,338. Is that from the rough bottom ?—It is because they cannot haul the nets on shore.

51,339. They cannot haul the nets towards the shore ?—No.

51,340. Is there much of that ground ?—There is some of it.

51,341. What proportion of the whole Loch, should you say ?—I cannot exactly tell you.

51,342. Can you say what is the difference of price got by the trawlers for their fish as compared with what you get yourself, as a drift-net fisherman ?—Generally, threepence or sixpence a hundred, according to the season in which they are caught.

51,343. Is that from the curers ?—Yes.

51,344. In the fresh market, what would be the difference ?—I cannot say.

51,345. Do you think they get the same price in the fresh market ?—I do not know, I am sure.

51,346. Would the curers buy both trawled fish and drift fish at the same time ?—Yes.

51,347. But they always made a difference in the price ?—Yes.

51,348. Could you yourself tell a trawled herring from a drift caught herring ?—Yes.

51,349. Could you tell the difference when the fish are cured ?—Yes.

51,350. Do you think that a barrel of trawl-caught herrings will fetch a less price than a barrel of drift-caught fish ?—Yes.

51,351. What is the difference when they are cured ?—They will not be as good.

51,352. But what is the difference in price ?—I am sure I cannot tell you.

51,353. What is the difference in the appearance ; are the trawl-caught fish not as bright in appearance ?—No, they are not as bright as the drift-caught fish.

51,354. Is there any difference in the eating ?—Yes.

51,355. What is it ?—One is full of blood inside, and the other is pure to the bone.

The witness withdrew.

R. Morison.

ROBERT MORISON called and examined.

51,356. (*Mr. Caird*). You are a drift-net fisherman ?—Yes.

51,357. Have you had a long experience in this loch as a drift-net fisherman ?—Yes.

51,358. How long ?—About 24 years.

51,359. Have you fished in all parts of the Loch ?—Yes.

51,360. What part of the Loch do you generally find the best for fishing ?—Occasionally one place is good one time, and another at another time.

51,361. In the early part of the fishing season, do you find the lower part of the Loch better than the upper part ?—Very often.

51,362. Then does the upper part improve as the fishing goes on ?—Yes, it does very often, at the latter end of the season.

51,363. Is the upper part the best for fishing then ?—Yes.

51,364. Do you remember the time when trawl-net fishing was allowed to go on ?—Yes.

51,365. Do you consider, as a drift-net fisherman, that trawl-net fishing was injurious to your business ?—For my own part, I found that the drift-net fishing proved better for me.

51,366. You have fished in both ways ?—Yes.

51,367. Did you find that you could make a better living by drift-net than by trawl-net fishing ?—Yes, by drift-net fishing. I have been longer at it than trawling.

51,368. Do you think the doing away with trawling has been of any advantage to you as a drift-net fisherman ?—That is more then I can tell you ; in some points it might be of some advantage to us.

51,369. In what points ?—Such as killing the small sile, which is often killed in the trawls.

51,370. Do the trawls destroy some of the small fish ?—Yes.

51,371. Was that only done during the months that no fishing is allowed at all now ?—Yes, mostly.

51,372. There being no fishing allowed in those months now, the trawl net cannot effect that destruction ?—There are some of those small herrings about during the open fishing season too.

51,373. In what months ?—In the month of June and the beginning of July.

51,374. Is there any large proportion of small herring in those months ?—Yes, we see them playing in the morning, about the rising of the sun, near the shores. I have seen them taken in-shore by the trawl nets at that time.

51,375. During the months now set apart for close time they did most mischief in that way ?—Yes.

51,376. As a drift-net fisherman, can you say whether, if trawl-fishing was permitted during the open months of the fishing, it would do much harm in that way ?—I think not, if the legal mesh was used.

51,377. The legal size, is a one-inch mesh ?—Yes.

51,378. That is the legal mesh ?—Yes.

51,379. Is that the size you think best ?—Nothing smaller than that ought to be used.

51,380. Would it give complete security, that if none of the nets were allowed to be smaller than one inch in the mesh they would not kill small fish unfit for sale ?—I think so.

51,381. Have you ever noticed when they have been drawing the trawl net in, whether the mesh opens or gets smaller ?—It opens.

51,382. Does it get larger instead of smaller ?—Yes, in the middle of the net but not at the end.

51,383. Do you think the two modes of fishing could be carried on together without injury to the drift-net fishing ?—They were carried on for a time ; they were used very extensively in the lower and wider part of the Loch.

51,384. They were principally used in the lower part of the Loch ?—Yes.

51,385. Did a great difficulty arise when the trawl was introduced into the upper and narrower part of the Loch ?—I think there were some disputes before then.

51,386. In the lower part of the Loch ?—Yes.

51,387. How did those disputes arise,—do you remember ?—They arose because one party thought it was doing harm, and the other party thought it was not.

51,388. Were the trawl fishermen fishing among the fleets of drift nets ?—They were fishing with their circle nets in the middle of the fleets of drift nets.

51,389. Were they not fishing along the shore ?—They were fishing in both ways.

51,390. In which way do they most interfere with the drift-net fishing ?—I have seen them shoot sometimes alongside the shore; they would come and shoot the trawl alongside my nets and haul it up on the shore.

51,391. Inside of you ?—Yes, and they would take away all the herrings inside of me.

51,392. Would those herrings have meshed in your nets, if the trawl had not been there ?—Very likely some of them would have done so.

51,393. When that was done, did you have an inferior catch, and not succeed as well in taking fish ?—Yes.

51,394. Can you as a drift-net fisherman shoot your nets in every part of the loch that a trawl fisherman can fish in ?—Yes.

51,395. Can you shoot drift nets as close in-shore in the shallow bays as the trawlers can fish in with advantage ?—Yes.

51,396. Do you often fish in the shallow bays with your drift nets ?—Yes, especially at the beginning of the season.

51,397. What kind of net will catch the best quality of fish ?—I have seen very good herrings caught with both of them, and I have seen very bad herrings caught with both of them.

51,398. Have you seen as many small fish caught with the drift net as with the trawl net ?—No.

51,399. When you say bad herrings, what do you mean ?—Bad in quality.

51,400. You did not speak in reference to the size, but with regard to the appearance of the fish ?—Yes.

51,401. Have you ever observed the two kinds sold on the same day together ?—Yes.

51,402. Is there any difference in the price ?—Yes.

51,403. What is the difference ?—That depends on the quality. In July, five years ago, herrings were sold at 12*s.* the hundred. I sold 20*l.* worth of drift-net herrings at that time, and trawled herrings were sold at the very same figure on the same day.

51,404. Trawled herrings were sold at the same price ?—Yes, but some of the trawled herrings and some of the drift-net herrings sold the same day at 8*s.* I think.

51,405. Was there no difference in the price of the trawled fish and the drift-net fish on that day ?—Not that I am aware of.

51,406. Were they both bought by the curers at the same time ?—No, they were bought by the cadgers.

51,407. The fresh buyers ?—Yes.

51,408. Did both kinds sell equally well in the fresh market ?—Yes.

51,409. Is there a difference when they come to be cured ?—I have never cured any but for my own use. I have cured both trawled herrings and net herrings, and I have cured them both very well.

51,410. Did you find that the trawled herrings would cure as well as the others ?—Yes.

51,411. Do you see any difference with regard to one class of herrings being better bled than the others ?—No, not in those that I cured.

51,412. Were they as white at the bone as the others ?—I have seen drift-net herrings as black in the bone as the trawled herrings.

51,413. Then do you not agree with the statement we have heard that the drift-net herrings are in a better condition for the market than the trawled herrings ?—I do not agree with some of the points I have heard.

51,414. Is that one of them ?—Yes.

51,415. Have you ever observed the trawl-nets dragging up spawn ?—No.

51,416. Or destroying it ?—No.

51,417. Do you consider that the trawl-net fishing is a cheaper mode of fishing than the drift-net fishing ?—In what respect ?

51,418. Which of the two do you think you can make most money by ?—For my own part, I think I can make most money by drift-net fishing.

51,419. And therefore you continue to be a drift-net fisherman ?—Yes.

51,420. Because you have been very successful at it ?—Yes.

51,421. How many men are required to work a trawl net, as compared with a drift net ?—Eight men.

51,422. That would take two boats ?—Yes.

51,423. What is the length of the trawl ?—They have them of different sizes, some of them would be 200 yards in the net, but they creep in ; perhaps they would be altogether from 70 to 90 fathoms.

ARDRISHAIG.

R. Morison.

22 Sept. 1864.

51,424. Do they generally, as far as you have observed, have the same sized mesh as the drift net?—No.

51,425. Are they generally smaller?—Yes.

51,426. Are we to understand from your evidence that, if there were some regulation by which they were made of the same mesh as the drift-nets, there would be less objection to their use?—I think that would be better.

51,427. That would remove some part of the objection which the drift-net fishermen have to trawl nets?—It would remove some of my objections to them.

51,428. Do you, as a drift-net fisherman, think that the two modes of fishing may be carried on together?—They might be carried on together, I think.

51,429. Are there any regulations that could be adopted by which the two modes of fishing could be carried on together with advantage? Is there any regulation you could suggest to us?—I cannot say at the present time.

51,430. (*Mr. Lefevre.*) This has been a bad season so far?—Yes.

51,431. Do you think the fish are in the Loch?—Yes, there are some fish in the Loch.

51,432. What is the reason, then, that you have had a bad season; has the bad weather prevented you from taking them?—We consider that the ruling of Divine Providence is the reason.

51,433. But has the weather been bad, so that you have not been able to fish?—It has been stormy, but not so stormy that the people could not work the herrings.

51,434. When they did go out, did they not get good catches?—They did not get as good catches as I have seen them get.

51,435. Have you ever known the trawlers to have good takes in their nets when you have not?—Yes.

51,436. What was the reason of that?—They could get them closer in-shore than the drift-net men could.

51,437. Have they got good catches of fish on the same night that the drift-net fishermen have got very little?—Yes, I have often seen that.

51,438. On the other hand, have there been occasions when the drift fishermen have got fish, and the trawl fishermen have got none?—Yes.

51,439. They then got their turn?—Yes.

51,440. I suppose the trawlers only occasionally got a heavy take of fish?—Yes, they got them often when they were regularly working at them; but altogether the drift-net fishing is more regular than the trawl-fishing.

51,441. Were the trawlers out every night?—Not on moonlight nights; they do not work so much by moonlight.

51,442. What was the reason of that?—They cannot see the herrings in the water.

51,443. It was not from fear of being detected?—It was not from fear of that, but because they could not see the herrings in the water. There was no burning in the water to enable them to see the herrings.

51,444. When the nights were dark, would the trawlers be out every night?—Yes.

51,445. Would they often come back without having made hauls?—Sometimes they would; occasionally they have come back without having made hauls.

51,446. If they were to work this year, would they catch fish when you were not taking them?—I have no doubt they might at times.

51,447. Have you got a boat of your own?—Yes.

51,448. Have you more than one?—No; only one.

51,449. And have you nets of your own?—Yes.

51,450. Do the fishermen generally own boats here?—Yes.

51,451. Do they get any assistance from the fish-curers?—Not that I am aware of.

51,452. They save money, and buy boats themselves, is that so?—Yes.

51,453. And nets?—Yes.

51,454. How are they generally paid? Do the men who go out share the results of the boat's take?—Some of them have a boat and a train themselves, and the men who go out with them share with them. Perhaps one man will have a boat and half the nets, and another man will have half a boat and nets.

51,455. When a fisherman has no share in the boat or nets, is he paid by share?—Yes, he gets a share.

51,456. Do you fish at other times of the year besides fishing for herrings?—Do you mean in the winter time?

51,457. Yes, in the winter time?—No.

51,458. Do you go to farm work at that time?—I have been accustomed to go to sea.

51,459. Are there many fishermen belonging to this place who fish all the year round?—Some of them do.

51,460. How many of them should you say?—About 30 or 40.

51,461, Do they fish with the same boats?—No, with smaller boats.

51,462. Have all the men who were engaged formerly in trawl-fishing taken now to drift-net fishing?—Yes, hereabouts.

51,463. Are they as a rule a younger set of men than the drift-net fishermen?—No, there will be both young and old.

51,464. What do you say about a close time; do you think the open time ought to be extended for a month or not?—I think we should get another fortnight at the least.

51,465. Then do you think that it ought not to be a month?—It is very seldom that I have seen anything done here in the latter end of January. I have seen a little, but not much.

51,466. Have you seen many fish caught in the beginning of January?—Yes, I have often, and it was a very good fishing too.

51,467. Were the fish in good condition?—Yes, very good.

51,468. As good as they are earlier in the season?—Yes.

51,469. Then you would not extend the open time beyond the middle of January?—I would not object to that.

51,470. Have the fishermen any difficulty in getting work on the land at that time of the year?—Yes, there is no work going on here then.

51,471. Then have they nothing to do during January?—No, there is no work carried on here except by those who are working at the white-fishing.

51,472. Are there many fishermen who are doing nothing in January?—A good many of them go to sea in the winter time.

51,473. In trading vessels?—Yes.

51,474. Some of them do nothing for want of work?—Yes, some of them, and some of them are mending their nets, and passing their winter in that way.

51,475. (*Mr. Caird.*) Is there any other white-fishing in Loch Fyne except for herrings; are any haddock, or cod, or ling, or flat-fish caught?—Yes.

51,476. Do you follow that kind of fishing?—No.

51,477. Are there many fishermen in the Loch who do?—There are 30 or 40 in this village.

51,478. Have you observed that the season for fishing, varies very much, one year with another, as to its relative productiveness? With regard to herrings have you sometimes a very good season, sometimes a very bad one, and sometimes a middling one?—Yes.

51,479. Has that variation taken place as much since trawling was put a stop to as it did before?—Yes.

51,480–4. Do you think that that variation is quite independent of any mode of fishing that might be adopted?—Yes.

51,485. You think it has very little effect?—Yes, very little effect; it may have a little, but not much.

51,486. We find in the fishery returns that in one single season, in the year 1861, there were 20,246 barrels of herrings caught in Loch Fyne of all kinds, and that in 1862 there were 79,893 barrels caught,

that is nearly four times as many in 1862 as 1861 ?—Yes.

51,487. Do you think that that increase in 1862 was in any way caused by putting a stop to the mode of fishing by trawl nets ?—No.

51,488. You do not think that that had anything to do with it ?—No, there was a large quantity of herrings that came in that year.

51,489. A larger quantity came into the Loch ?—Yes, more than there had been for a good many years.

51,490. It is the largest fishing as far as any record goes since 1844 ?—Yes, the fishing of 1862 was very good.

51,491. There has not been any fishing in all the years we have down here in this list which has been at all equal to that of 1862 ?—No.

51,492. I suppose that is in accordance with your own observation ?—Yes.

51,493. (*Mr. Lefevre.*) Did you hear what the last witness said about the loss of fish when they were trawled in-shore ?—What was that ?

51,494. He spoke about the destruction of fish and of their being left to rot in the sea ?—I did not notice that.

51,495. He said that some years ago, when trawling was carried on close in-shore and they had large takes of fish, the trawlers left the fish in the water, being unable to carry them away, and that a great many of them rotted away,—have you ever observed anything of that kind ?—Yes, occasionally.

51,496. How often would that occur in the course of a season ?—That is more than I can tell.

51,497. Would it occur often ?—It would depend on what quantity they were getting, or if there were boats to remove them.

51,498. To take the herrings of them ?—Yes.

51,499. That would only occur when the take was very considerable ?—Yes.

51,500. When there was an average haul, would there be any loss in that way ?—No, unless the net got torn, or something of that sort.

51,501. When the net was in good order, would there be any loss of fish ?—No, there would be no fear of any loss.

51,502. They would take all the fish away ?—Yes.

51,503. If they had boats enough ?—Yes.

51,504. When the haul was made in the middle of the Loch, in deep water, did you ever notice that the fish were killed, and sank to the bottom ?—In deep water ?

51,505. Yes.—No.

51,506-7. You have observed nothing of that sort ?—No ; there might be a chance one, but not many.

51,508. You never saw any loss or destruction of herrings in that way ?—No.

51,509-10. Have you ever observed the fish squeezed by the trawl being closely brought round them, and being killed by the great weight of fish in the trawl, and all sinking to the bottom of the water ?—No.

51,511. Have you observed anything like that ?—No.

51,512. Have you often observed the trawl yourself being worked in deep water ?—Yes.

51,513. Do you think you would have seen it, if anything of the kind had occurred ?—Yes.

51,514. You have suffered annoyance from their working among you ?—Yes, sometimes.

51,515. Was that often the case ?—It was more so out in the middle.

51,516. In the middle of the Loch ?—Yes.

51,517. Then is it your observation that the trawlers fish mostly in-shore, or that they often go out in the middle of the Loch ?—Very often they range the shore first.

51,518. In the beginning of the season ?—In the beginning of the night when they are out fishing.

51,519. If they caught no fish, would they go further out ?—Yes.

51,520. Can you state, as a rule, whether the great amount of fish taken by the trawlers was taken close in-shore, or out in the deep water ?—It was taken in-shore.

51,521. When they were fishing in-shore they did not disturb you so much ?—Not so much.

51,522. Did you ever yourself lose any nets in consequence of the trawlers coming among you in that way ?—No.

51,523. Did you ever think that you lost fish in consequence of the trawlers coming and working close to you ?—I think I made a remark about it a short time ago. Their nets might be shot along the shores, and they might be trawling alongside of us, and then they would get the fish which probably we might have got.

51,524. (*Mr. Caird*). When you were fishing out in the deep water, having your nets set in deep water, did they do much injury to you ? The question I put to you before was, whether they did you any injury near the shore ?—Yes.

51,525. (*Mr. Lefevre.*) I want to know if they did you any injury when you were fishing out in the deep water ?—I have seen a little injury done, and a person who is speaking in the way I am now, must give his evidence according to what he has seen himself.

51,526. You are quite right, we want to get at your own observations in the matter.—Then, I have seen it done. One night a fellow made a range with his trawl, near the end of my nets. I noticed the spot where he hauled his nets in, and there was nothing like the quantity of fish in my nets, near that place, that there was in the rest.

51,527. There was nothing like the quantity of fish that there was in other parts of the net ?—No.

51,528. Then you think that the trawlers caught the fish that would have come to you ?—Yes.

51,529. Do you think there could be any regulation to prevent the trawlers interfering with the drift-net fishermen ?—No, I do not think there could.

51,530. What would you say to a regulation to prevent the drift-net fishermen from fishing within a certain distance of the shore, so that the trawlers might fish inside, and the drift-net men outside ; would that be a hardship on the drift-net fishermen ?—The drift-net men would not fish outside, if they could get herrings inside.

51,531. Do any fishermen from Cornwall come to fish here ?—No.

The witness withdrew.

INVEN MITCHELL called and examined.

51,532. (*Mr. Caird.*) You are a regular drift-net fisherman ?—Yes.

51,533. And you have been a drift-net fisherman for a number of years ?—Yes, since I could work at anything.

51,534. In what part of Loch Fyne do you chiefly fish ?—I fish from Campbeltown to Inverary.

51,535. Have you fished in every part of the Loch ?—Yes.

51,536. On all this side of the Frith of Clyde, to the west of Ardlamont Point ?—Yes, as far as Stornoway ; I have fished everywhere except on the east coast of Scotland.

51,537. As a drift-net fisherman, have you observed any advantage to you in consequence of the prohibition of trawl-fishing altogether, since the trawl-fishing was put a stop to,—have you gained any advantage from that ?—I think we have.

51,538. Tell me what the advantage is ?—Well, I think in all ways. In my experience, as far as I can understand the matter, I think the trawl men have been doing us as much harm as could be done to us.

ARDRISHAIG.

I. Mitchell.

22 Sept. 1864.

In the first place, we could not go anywhere where they were working or they would cut our buoys or tear our nets.

51,539. Have they cut your buoys and torn your nets?—They never cut mine, but I have seen them running with the train of nets and taking the herrings.

51,540. You have seen them crossing your train of nets?—No, they have been running below the train and taking away the herrings.

51,541. How were they running below it?—When our train has been fishing, I have seen their wee boats coming and lifting the train and taking away the herrings.

51,542. Out of your nets?—Yes.

51,543. The herrings that had meshed in your nets?—Yes.

51,544. That was stealing the herrings that belonged to you?—Yes, indeed it was.

51,545. Was that a common thing to be done?—I do not know.

51,546. Have you seen it done?—I have seen it myself.

51,547. How often have you seen it done?—Two or three times. I thought it was one of those wee boats.

51,548. That was just the same thing as a thief stealing your property?—Yes.

51,549. That has very little to do with trawl-net fishing,—they did not do that with the trawl net?—No.

51,550. They did it with their hands?—Yes.

51,551. What other objection have you felt to be removed by the withdrawal of the trawl-net fishing?—Since it stopped?

51,552. Yes.—Nothing but this,—I think if trawling had been carried on as it was before, we should not have fished as well all this time. If they had been carrying on since trawling was stopped as they did before, we should not have been doing well in Loch Fyne as we have done of recent years.

51,553. You had a good fishing in 1862, the year after trawling was stopped?—Yes, that was a good fishing.

51,554. Was that the best fishing you can remember?—Yes, since the big herrings went away. It was the best fishing I have seen in Loch Fyne, but I think it was the trawling that stopped those big herrings altogether.

51,555. Did the trawlers catch the big herrings?—It was not that they caught so many of them and brought them into the market, but they took such quantities that they rotted in the water and no person got them at all. I have seen that with my own eyes.

51,556. How often?—Only once, but I have heard of it often. I saw it once down the Loch, and many saw it as well as myself. They had enclosed a body of fish about 200 yards in length, and I saw them coming ashore with so heavy a draught in the trawl net that they found it impossible to haul them in.

51,557. Because there was such a large quantity in the net?—Yes, I have not in my mind now how many boat-loads were taken out of the trawl before they could take it in, but I heard some persons say that the fish were about the depth of an oar. They got them in as far as that, and they could not get them in any further.

51,558. (*Mr. Lefevre.*) Was that the depth of the water?—Yes.

51,559. (*Mr. Caird.*) Were the herrings in thickness as deep as the length of an oar?—Yes, I was told so, and there were boats besides that each took their fill out of it. They lifted them with baskets out of the net and put them into the boats. I was on shore at the time, and I saw horses and carts employed in drawing the fish to the land. Then I went down myself and saw another tier coming in and they had to lift the net and let the fish lie.

51,560. Was it all on the same day?—Yes, they could not lift them all in. When the east wind came they were drawing them in-shore. I went down where they were, and found large bulks of them in-shore; many others as well as myself lifted them up.

51,561. What time of the year was it?—I am not sure but I think it was about this time.

51,562. How many years ago is it?—I am not sure, but I think it is four or five years ago this season.

51,563. Is that the only instance in which you saw that happen?—Yes, and an immense quantity was left there to rot.

51,564. Was there a very good catch with the drift nets at the same time?—I do not think there was. I have seldom seen the drift-net men have a good fishing when the trawlers got a good fishing.

51,565. When you have seen such large quantities of fish taken as you have described, has it always been in shallow water near the shore?—The trawlers can go very far out; they have such a length of ropes now, and they can bring the nets in and haul them ashore. Where the people have got good shoots with the drift nets lately they would not have got them at all if trawling had been allowed. At this time we consider that the herrings are coming very thick into Loch Fyne, but we have never seen such fine herrings as there were before they commenced trawling. We drift-net fishermen think, however, that the fish will now come in, in the same way as they did at first before trawling was allowed.

51,566. Have they been getting larger?—Yes, every year since the trawling was stopped.

51,567. You have been catching finer herrings?—Yes, larger and better.

51,568. Are they finer and better this year?—I have not been up this season, but I have heard that they were very good.

51,569. Are you not a herring fisherman now?—Yes, but I have not been up Loch Fyne yet.

51,570. Where have you been fishing?—At Campbeltown and Tarbert, but I am thinking of going up.

51,571. Have you seen the trawlers catch spawn in the trawl nets?—I have seen them catch small fish of all sizes, and I have seen them left to rot. I have heard many other fishermen say that they have seen them lying in lumps in the places where the trawlers have been working.

51,572. If they had had enough boats, could they have brought them ashore?—Yes, but they would have been of no use to them; the scales were taken off them, and they were spoiled in different ways. They were not herrings such as those we catch in our nets; they were all spoiled.

51,573. Were those that were brought ashore in the boats brought off in baskets and so on, and used for food?—They could use them, but they were not as marketable, and would not sell as well as drift-caught fish.

51,574. Did they go to the market?—The fish buyers would put them away, but the curers would not take them of us.

51,575. Do the curers not buy fish caught in the trawl?—They do not like it just now.

51,576. There is no trawling just now?—No.

51,577. When trawling was permitted, and you saw it going on, and the drift-net fishing going on, was it then that you observed that the curers would buy one kind of fish just as well as the other?—I cannot say anything about that.

51,578. Have you yourself ever cured any fish?—Yes.

51,579. Have you ever cured any trawled fish?—Only very little of it.

51,580. Have you cured any?—Only about half a barrel.

51,581. Did they do well?—Yes, but not as well as the fish caught in Loch Fyne, in the drift nets; they are always black in the bone.

51,582. Your fishing last year was not a very good one, was it?—Well, it was middling.

51,583. Was it as good as it was the year before?—No, not in Loch Fyne.

51,584. Is there any other reason you can give against allowing trawling to be permitted?—Well, I

can give one more reason, and that is, that if trawling is to be carried on our fishermen will be starved out altogether; and if we all become trawlers, so far as my opinion goes, I think we shall kill the fish in Loch Fyne in a very short time. We should take them all ashore in six nights, and there would be no more during the whole of the season.

51,585. Do they all come in at the same time, and could you catch all the fish in six nights that are caught at present in the whole of a season?—Perhaps not; but I know this, that if the trawlers are working in any place one night, we need not go to work there, because the fish are so frightened, that if they are there at all they remain down at the bottom.

51,586. Have you not had good hauls with the drift net at the same time that the trawlers have been getting good hauls?—We might have a day of good fishing when the trawlers were working, but we never got a good succession of takes when the trawlers were at work.

51,587. Did you never fish herrings in the month of January?—I think I have when I was younger.

51,588. You cannot speak very particularly about it?—It was when I was very young, and I did not fish much at it.

51,589. (*Mr. Lefevre.*) Are you a fisherman all the year round? do you fish at other times of the year, for instance, during the close time?—We are willing to work for ourselves at any time we can get liberty to fish, but, at the same time, we should like to give the fish fair play.

51,590. You would not approve of the herring fishery being carried on in the close season?—I should like it to be carried on until the first of February.

51,591–3. You would extend the open time a month?—Yes; I think the fishing is stopped too soon every year. It would be better if we had liberty to carry on the fishing a little longer.

The witness withdrew.

JOHN BRUCE called and examined.

J. Bruce.

51,594. (*Mr. Caird.*) You are a fisherman in Loch Fyne?—Yes.

51,595. Were you in the habit of fishing with the trawl when trawling was permitted?—Yes.

51,596. Do you now follow the herring-fishing?—Yes.

51,597. As a drift-net fisherman?—Yes.

51,598. You have done that because you have not been permitted to fish with the trawl?—I always followed the drift-net fishing when trawling did not prosper.

51,599. You followed them both?—Yes, I always carried on both.

51,600. Did you have both kinds of nets?—Yes.

51,601. Did you find at times a greater advantage in fishing with the one than the other?—Yes. The fish would not set as well in-shore some seasons as others, and then we used the drift nets.

51,602. Would that be for the whole or part of the season?—Sometimes on moonlight nights we used our drift nets, and carried our trawls back.

51,603. Was that when you could not see well and observe where the herrings were?—Yes.

51,604. Then you would use the drift nets?—Yes.

51,605. Was it common among the trawl fishermen to have both kinds of nets?—It was common throughout all this district here.

51,606. Throughout this part of Loch Fyne?—Yes.

51,607. Then the prohibition of the trawl-net fishing has had the effect of putting a stop to that alternative mode of fishing?—It has been a total loss to us, the want of trawl-fishing.

51,608. You have since confined yourself to drift-net fishing?—Yes.

51,609. Has that been a disadvantage to you?—Yes; we had to dispose of our gear, at a low rate, to other persons further north.

51,610. When you were allowed to fish in one way or the other, could you make a better season than you can do now, when you are limited to one mode of fishing?—Certainly we could always. When we saw the fish, we could take them by the trawl. We generally had it by our side, and whenever we saw the fish take off the shore we had our drift nets.

51,611. Do you think the two modes of fishing can be carried on with advantage together?—I think they could. I don't see any reason why they should not, if proper regulations were kept.

51,612. Have you ever, as a trawl fisherman, been in the habit of circle-net fishing among the rows of drift nets?—Yes.

51,613. Is that injurious to the drift-net fishing?—I don't see how it can be, if the trawlers do not get foul of the nets.

51,614. Would you not be likely to take fish that would mesh themselves in the drift nets?—We take fish, but we see many fish in the drift nets which we do not get.

51,615. On the whole, have you been most successful, as a trawl fisherman, when you have been fishing in the shallows along the shore, or out in deep water among the drift nets?—In-shore we consider the best for trawl-fishing.

51,616. Was trawl-fishing most followed in-shore?—Yes.

51,617. Was it in such shallow water that it could not be fished with drift nets?—They can fish in very shallow water by anchoring the drift nets. If they cannot drive, they put an anchor to the end of the nets, and it will hold them. The tide would tear all their nets to pieces if they came into contact with the bottom while they were drifting.

51,618. Do they often anchor their nets?—Yes.

51,619. Is it a common thing to anchor drift net in such situations?—Yes.

51,620. Then you are of opinion, as a trawl fisherman, that drift nets can be used in any part of the Loch where the trawl nets can be used?—It is injurious to the drift nets to go near the bottom.

51,621. (*Mr. Lefevre.*) When the tide runs strong it would work the nets along the bottom?—Yes; if the drift net comes into contact with the bottom, and there is nothing holding, it is generally carried away altogether.

51,622. (*Mr. Caird.*) Is it for that reason that the drift-net men do not choose, even if they could, to go into shoal water?—Yes; and another thing is, that such a quantity of nets is out now that the back ropes could not hold them. The anchors are not strong enough. The boats have as much as 600 fathoms of drift nets, and they cannot venture near the shore with such a quantity of nets in the shallow bays.

51,623. You found the shallow bays most productive for your trawl-net fishing?—Yes.

51,624. Have you, as a trawl-net fisherman, caught fish in the bay in such immense quantities that you have been unable to make use of them for sale, and have allowed them to lie and be lost?—I never saw that, except an odd time or two, when we were pursued and had to leave the net and all behind; that is since the Acts were got against us.

51,625. When that mode of fishing was permitted, did you never see it?—Not if there were a sufficient number of boats to take the fish away, or unless a storm of wind came on and broke our net.

51,626. It never happened unless there was some unexpected occurrence of that kind?—I have seen a gale of wind come on when we have been obliged to leave the net and make clear of the shore altogether, although the net had a great quantity of herrings in it; but I never knew many herrings to be left on the ground if everything was favourable; we were always too keen to get them out.

ARDRISHAIG.

J. Bruce.

22 Sept. 1864.

51,627. Have you ever seen them caught in such quantities by the trawl net that considerable numbers have been spoilt and rendered unfit for food?—Never, if we can get help handy.

51,628. Can you generally get it handy?—Yes, we have given the drift boats one half for carrying them.

51,629. Was that because you took so much more than them?—They might be going in with nothing themselves, and in that case they would engage to assist us, and take in a last or two of herrings. They would have one half themselves, and give us the other, and that was better than allowing the fish to be lost.

51,630. Have you often done that?—Yes.

51,631. Do you admit the charge which has been made against you, that a large quantity of fish is often lost in consequence of being taken in such large numbers?—I do not admit it at all, unless in the case of a storm coming on, or something which we could not foresee.

51,632. Does that seldom happen?—It was very seldom. I saw such a quantity of herrings taken only once or twice.

51,633. Only once or twice in all your experience?—Yes. I saw one time a large quantity of herrings taken, when the drift men caught hold of the net and caused the loss of a great quantity.

51,634. Is the quality of the herrings caught by the trawl much the same as of those caught by the drift net?—We used to take large herrings with the trawl in July, and we got 28*s.* 6*d.* for trawl-net herrings. It was the highest price I ever got. They were very large fish.

51,635. Were they larger herrings than would mesh in the drift net?—They were larger than I ever saw meshed in a drift net. They would run about 400 to the barrel.

51,636. What is the average number to a barrel of drift-net herrings?—From 800 to 1,000. They are good herrings at that.

51,637. Are the largest and finest fish commonly caught by the trawl net?—We have seen some that would not mesh in a drift net but which we could take by the trawl-net.

51,638. (*Mr. Lefevre.*) What was the reason of that?—They got very fat, and they would not swim about, so as to mesh readily.

51,639. (*Mr. Caird.*) Practically, you found that you got the biggest herrings in the trawl net?—We killed them larger with the trawl net than with the drift net.

51,640. Have you often found a great variety of fish caught in the trawl net at the same time?—Yes, where an illegal mesh was used.

51,641. Was there much difference in the mesh of the net that you used in the trawls?—Yes; some of them were as narrow as 40 rows to the yard.

51,642. What should it be?—The standard is 36 rows to the yard.

51,643. That is, a one-inch mesh?—Yes; we should not be able to take any sile with a net 36 meshes to the yard.

51,644. By that you mean, small herrings?—Yes.

51,645. What time of the season, taking the commencement of the fishing season in June, do you get the finest fish?—Generally about July.

51,646. They are the largest and finest fish then?—Yes, they are about the richest fish then; they are very fat at that time.

51,647. Have you ever, during the present state of the law as to the close season,—there being no fishing permitted from the 1st of January to the 1st of June,—have you ever, in fishing with the trawl, caught any small herrings, unfit for food?—There was no person about this district that wrought with the trawl at that time. We did not fish for these small herrings, but I believe they fished for them in the Kyles of Bute.

51,648. During the spring months?—Yes.

51,649. But since that has been stopped, have you seen small herrings caught in the trawl in the open months, in June, July, August, and so on?—Not if the mesh was of the proper size.

51,650. Do you not catch more small herrings in the trawl net in those months than in the drift nets?—The herrings caught by the drift-net boats are generally from 1,000 to 1,200 a barrel; and I have seen the trawl-boats take them 400 to a barrel in July and August.

51,651. But, on the average, during the time the drift-net and trawl fishing was going on, have you observed that they have caught smaller herrings than they were able to catch with the drift net?—No; we generally took about the same.

51,652. If a regulation were made that the mesh, either for the drift net or the trawl net, should not be smaller than one inch, would that prevent the catch of small herrings?—Yes, certainly; that is the only remedy, in my opinion.

51,653. When you draw the trawl, does it open the mesh or close it?—It allows it to hang more open.

51,654. Then the hauling of the trawl net does not make the mesh smaller?—No, it is quite the reverse.

51,655. If the smallest mesh of the net was an inch mesh, could it not enclose herrings that would not mesh in an inch mesh?—No, it would not enclose such small fish as would not mesh in an inch drift net.

51,656. Would you not enclose both large and small?—There might be a few that would not get out of the belly of the net when they were jammed up.

51,657. But, as a practical trawl fisherman, you deny that you ever did destroy any quantity of small or immature fish during the open month of the fishing?—I deny it, for my part.

51,658. Did you catch other kinds of fish besides herrings with the trawl nets?—Yes.

51,659–60. What other kinds?—We caught large quantities of mackerel, which are very destructive to the sile, and we caught also saithe and stenlock.

51,661. Did you catch any large quantity of dog-fish?—Yes, one year we did.

51,662. Have you seen them caught with the drift nets?—Yes, often, in Loch Fyne. One year they were very destructive, both to the nets and to the herrings, but they have not been so destructive as they were four years ago. They were very bad then.

51,663. Has putting a stop to the system of trawl-net fishing been a great loss to the general supply of fish?—I think it has increased the quantity of vermin greatly; they destroy the young fry and sile.

51,664. Such as you have named?—Yes, mackerel, saithe, stenlock, dog-fish, hake, and eels.

51,665. Have you caught greater quantities in the trawl net than in the drift net?—They don't get any in the drift net. It is a rare thing to see one hundred in a drift net.

51,666. Then you not only killed large quantities of herring in the trawl, but you also killed the enemies of the young herring?—Yes, we killed great quantities of them too.

51,667. During the period trawl-net fishing has been put a stop to altogether, do you think there has been a larger supply of fish to the market than if trawl-net fishing had been allowed to go on as in former times?—I have no doubt there would have been a larger supply if trawling had been continued. We are getting very few now with the drift nets, whereas, if we were trawling, we could get plenty of herrings. There are plenty to be seen in the bays and along the shore, where we used to fish before.

51,668. If you were allowed to take your option of fishing either in one way or the other, as you thought most advantageous to you, do you think you could get more fish than you do?—Yes.

51,669. On the ground that sometimes you would

take more with the trawl than with the drift nets?—Yes; we should be sure of them with the trawl, if we saw them in-shore. I may say that, for nights, we could not get them with the drift nets, on account of the quantity of vermin about. The coal-fish are so plentiful, that they take them out of the nets as soon as they go in; and if we were to shoot our drift nets among them, perhaps we should not get one of them.

51,670. You cannot get herrings, in consequence of their being eaten in the nets?—Yes, by these vermin.

51,671-2. (*Mr. Lefevre.*) Do they leave the heads?—Yes, I have seen the heads, which is plain proof that the fish have been taken from us by the vermin.

51,675. (*Mr. Caird.*) With regard to the quality of the herrings caught by the trawl net and the drift net, can you tell us whether, in selling your fish, you are obliged to take a lower price from the buyers for trawl-caught fish?—I never saw the fishermen getting a lower price, unless for a chance lot. Perhaps there might be a boat that had a few drift-net herrings, and some person would take a fancy to them, thinking them to be better. As a general rule, we get as good a price for the one fish as for the other.

51,674. Do your trawl-fish chiefly go to the fresh market?—Yes.

51,675. How is that?—One reason for it is, that we could send a greater quantity of herrings with the trawl than with the drift nets. Before we could get 100 maze of herrings shaken out of the drift nets we could send 500 maze of trawled herrings away.

51,766. The time occupied in clearing the nets is so much less?—Yes.

51,677. Is that the reason why so large a proportion of fresh herrings used to be sent by the trawl-boats as compared with the proportion sent by the drift-boats?—Yes, I have sent away 20 or 30 boxes in one boat.

51,678. If a box of trawled herrings and a box of drift herrings go away together in the same boat are the salesmen or the purchasers able to distinguish between them?—It would be very difficult to do so. I don't think they could.

51,679. Would the result be that there would be a difference in price?—Not unless we gave them some inkling. I have seen them take the scales off them if they have been careless in handling them; but when the trawl-net herrings are properly handled they are as well scaled as the drift-net herrings.

51,680. Is there any truth, as far as you have seen, in the assertion that drift-net herrings are better bled, and therefore cleaner at the bone, than trawl-net herrings?—I cannot see it.

51,681. The assertion is, that in the one case the herrings bleed from the neck when they are meshed, and in the other that they are smothered altogether in the nets?—If you put herrings on the top of one another in the boat they will die, and if you put them down with the nets on the top of one another, what is the difference? They are smothered then also.

51,682. I understand that the herrings are dead before they come in from the drift nets?—I have often seen them living.

51,683. Then you do not admit the truth of that assertion?—Not a bit of it. I have cured as good trawled herrings as any that have been got by the drift nets.

51,684. Do you find that the curers will buy trawled herrings as readily for curing as drift-net herrings?—I have always found a market for them, and I have seen drift-net herrings just as dull if the market happened to be stocked.

51,685. Have you yourself sold trawled herrings to any of the curers?—Yes.

51,686. Do they readily buy them for the purpose of curing?—I have sold as many as 80 barrels to Mr. M'Ewen, of Glasgow.

51,687. Did he know that they were trawled herrings?—Yes.

51,688. Did he cure them?—I cured them myself.

51,689. And sold them to him as trawled herrings?—Yes.

51,690. Did you get as good a price for them as they were getting for drift herrings?—I had a few barrels of drift-net herrings also, and there was only 1*s.* a barrel difference. I think the only objection he had was that they were trawled herrings, and that it did not arise from the quality of the fish. In point of fact, they were much better fish than the drift-net fish.

51,691. (*Mr. Lefevre.*) Then there is a difference generally of 1*s.* per barrel in herrings caught by the trawl and herrings caught by the drift nets?—They may object to herrings in the former case, and say that they are only trawled herrings, but that was only to try and make a better bargain.

51,692. (*Mr. Caird.*) Was that at the time trawling was prohibited?—No, before it was prohibited.

51,693. When it was allowed?—Yes, when we were working freely at it. I have seen a boat in company with us working with drift nets when we were using the trawl. They have not been able to get any fish, and sometimes we have given them a few out of our boat, and they have been able to go to the quay with those fish and get 1*s.* a 100 more for them than we could get for ours. I have also heard it remarked that they were the best drift-net herrings they had seen that day.

51,694. Where has that occurred?—Just out yonder, on Ardrishaig Quay.

51,695. (*Mr. Lefevre.*) But the trawl fishermen have submitted to take less for their fish?—Yes, they did not scruple as much about 100 maze of herrings as the drift-net fishermen would about two or three maze.

51,696. You think that if you were only bringing in a small quantity of fish you could not afford to sell them at so low a price as if you were bringing in a large quantity?—Yes.

51,697. (*Mr. Caird.*) Then in consequence of the large supply the price was reduced?—Yes.

51,698. Not in consequence of the quality of the fish?—No.

51,699. You have cured both?—Yes.

51,700. Have you eaten the cure of both afterwards?—Yes, I generally kept trawled herrings for my winter use, considering that they had an advantage over drift-net herrings.

51,701. Did you keep them as a matter of preference?—Yes.

51,702. Because you believe them to be the best herrings?—Yes.

51,703. You have not observed that the trawled herrings when cured do not keep as well as the drift herrings when cured?—No.

51,704. Then you do not agree in the assertion that that is the case?—Not at all. I have sent them to different parts of the kingdom, and even to London.

51,705. Cured trawled herrings?—Yes, I have sent them away, and got orders for more.

51,706. Did you ever find that any of the curers refused to buy your trawled fish?—They never refuse them, but they try to get them cheap.

51,707. (*Mr. Lefevre.*) Are there no curers who come to Ardrishaig who refuse to buy trawled fish?—Not that I am aware of; but I always see much less of them than of the fresh buyers. We dealt more with the fresh buyers, but we traded also with the curers.

51,708. (*Mr. Caird.*) They would readily take them if you had them?—Yes, I wish I had what would supply them now.

51,709. Do you remember the time when there was very little trawling above Otter Spit in the narrow waters of the Loch?—I never mind when there was trawling above Otter Spit, except one season when the whole of the herrings drifted into the Loch.

51,710. Do you call the waters above Otter Point, Loch Fyne?—Yes, the fishermen went in with their trawls, but it was only natural that they should go where the fish were.

ARDRISHAIG.

J. Bruce.

22 Sept. 1864.

51,711. Generally speaking, trawling has been carried on below Otter Spit?—Yes.

51,712. In the broad waters of the Loch?—Yes, about Otter Ferry; that was always a good place for trawling.

51,713. (*Mr. Lefevre.*) Was trawling carried on just at that spit of sand?—Yes.

51,714. (*Mr. Caird.*) Have you ever heard any complaint made as to the trawl fishermen taking up the buoys and cutting the nets of the drift men?—I have heard it blamed upon the trawlers when it was the drift men who were doing it to their neighbours. I remember that there were some trawl men taken up at Otter Ferry—some Tarbert men were charged with doing that, but it was found that it was done by the Minard men.

51,715. By their own drift-net men?—Yes, by a man who had never trawled in his life.

51,716. Has there been a bad feeling between the trawl and the drift-net men?—Yes.

51,717. In consequence of the prohibition of trawling?—No, while it was carried on.

51,718. What was the reason of that?—The one thought the other interfered with his welfare.

51,719. Do you think it would be likely to cause a bad feeling, if the trawl men took to their circle-net fishing between the rows of drift nets?—The trawlers would have the same feeling towards them if they shot 20 or more barrels of nets, when they had only six to earn their bread by.

51,720. Is it not the case that the circle nets generally go after the drift nets are down?—No, unless they can find the fish in-shore. They preferred fishing in-shore, and it was only a chance time that they went into the channel to fish.

51,721. Have you formed any opinion as to the advantage or disadvantage of having January made an open fishing month?—During the last ten winters we had splendid herrings in the Kyles of Bute, and when we had to close our fishing about three years ago we killed up to the last day of the fishing. They were excellent fish, and I had permission from the Royal Commission who came here then to cure them for them, in order that they might see them.

51,722. Were they caught in the month of November?—Yes.

51,723. Do you remember when you were allowed to fish in January?—Yes.

51,724. Did you catch good fish then?—Yes.

51,725. You think it would be of advantage to the fishermen, and that it would increase the supply of fish, if permission were given to fish in that month?—Yes.

51,726. Do you think it would injure the permanent fishing in Loch Fyne if you were allowed to fish in January?—I do not.

51,727. Are you in favour of a close time in the other months of the present close time season?—I am a fisherman throughout the whole year, and whenever one mode of fishing is done I turn to another, but the herring-fishing is, perhaps, of the greatest advantage to me. If the season were open I should have bait for my line-fish, and I should have other advantages which I cannot obtain now in the close season. There are other men who have other means of living than by the sea in the winter time, and they do not approve of opening the close months.

51,728. Do you think it would injure the brood of fish, if you were permitted to fish in February, March, and April?—I don't think it would.

51,729. Do not you think the herrings to some extent spawn in Loch Fyne?—Yes, but not in January. They spawn down about Troon and Ballantrae.

51,730. When do they spawn here?—About the 12th of August.

51,731. Have you seen spawn disturbed by the trawl nets?—No, but I have seen it in the drift nets.

51,732. Is that when the fish have discharged the spawn?—Yes, in the nets. It sticks very hard to the drift nets, and I have seen times when it has been necessary to break the net in order to take it off.

51,733. You do not admit the charge that the trawl net is destructive to the spawn?—I never saw it in the trawl net, but I have often seen it in the drift net.

51,734–5. (*Mr. Lefevre.*) You say that you have seen spawning fish in August. Were they the same fish as those you caught early in the season?—I don't know whether they spawn twice in the season, but we generally get them here about the 12th of August. We do not get them again until we fish them about Ballantrae, in February and March. Then they are very full, and it is very rare not to get a few of what we call razor herrings—spent fish. We may get them a fortnight or three weeks after they spawn, but only a few. We get them in the drift net, and we call spent fish here razor fish.

51,736. Have you observed any falling off in the quantity of fish spawning in August?—There are not so many, I think, but I do not go to the ground where they spawn. It is generally on the rough ground that they spawn hereabouts.

51,737. Whereabouts in Loch Fyne?—About ten miles, just as you turn and go up Loch Fyne on the west side.

51,738. In what depth of water?—Some parts are not more than three fathoms. It is very bad ground. The tide is strong also.

51,739. Have you ever dragged the trawl nets through them?—No.

51,740. Can you do so?—No If there is a clean place we may heave it out upon it, but we cannot trawl upon the rough ground.

51,741. Have the drift-net fishermen worked it?—Yes.

51,742. Have they anchored there?—No, the tide is too strong.

51,743. Have they sunk their nets in order to take the fish from the bottom of the water?—They have drifted there, and sometimes they have had their nets damaged. At other times, when they have not had their nets damaged, they have got good shots of full fish.

51,744. Do the full fish fetch as good a price then?—No, unless for the fresh market; we don't cure them here.

51,745. Do they get as good a price for the fresh market?—Yes.

51,746. Did these fish form a considerable proportion of the fish caught in August?—Some years we do not see any at all.

51,747. How long is it since you have seen them?—There have been very few for the last two or three years, but I saw great quantities taken in the Loch 20 or 25 years ago.

51,748. We were told that 12 years ago there was a great take of fish?—Not here at the head of Loch Fyne.

51,749. Do you not know whether the fish spawn also in February or March here?—I never found any of them here at that time. I got them with milt and roe in them, but not full fish.

51,750. Where do the fish spawn which you are catching now?—Down at Skipness Point, and I think some of them down about Ballantrae.

51,751. Then you are of opinion that they leave Loch Fyne before they spawn?—Yes, when we are out line fishing we notice the herrings in the water.

51,752. We have been told that the trawlers were in the habit of dragging their nets over the spawning ground?—The beam-trawlers were.

51,753. But not the trawlers for herring?—No.

51,754. They did not drag their trawls across the spawning ground?—I never saw a trawl net with spawn upon it, but I have seen it often on my drift nets.

51,755. When did you first begin trawling?—From the first time I went to fish.

51,756. How long ago is that?—Upwards of 30 years ago.

51,757. Was there a small amount of trawling then?

—There was not much until the month of January—from December until February.

51,758. Trawling at that time was quite late in the season?—Yes, it was late in the season. The large herrings, at the latter end of the season, on leaving Loch Fyne, kept in-shore, especially about the Otter, where alone trawling was carried on.

51,759. When did the trawlers become numerous at Ardrishaig? — They were always increasing, yearly.

51,760. What has been the greatest number of trawlers at Ardrishaig?—Our crews were divided into a few boats, and mostly every man in Ardrishaig was working at it.

51,761. Occasionally?—Yes.

51,762. Sometimes with the drift nets and sometimes with the trawl?—Yes.

51,763. How many boats would trawl at that time?—There might be 30 or 40 boats out of Ardrishaig.

51,764. Would the same boat do for drift-net fishing as well?—Yes, our boats are adapted for that. We have them properly built for that.

51,765. What is the length of the nets used by the trawlers?—From 65 to 70 fathoms.

51,766. What depth? — They are 18 score of meshes deep.

51,767. Have they an inch mesh?—Yes, but they are not all of that size.

51,768. Then were there a considerable number of nets used by the trawlers of less than one inch?—Yes, if they got them of the regular size at first, they shrunk a good deal.

51,769. Were they ever bought at less than the regular size?—Yes, we have had them made 38 rows to the yard.

51,770. Then they would shrink?—Yes, after a year or two they would shrink to 40 rows.

51,771. Do you find greater advantage in the larger size?—Yes, for ease in taking out the fish.

51,772. Did you send out boats beforehand to watch and see if the fish were in-shore?—We generally heard the news from one another.

51,773. Did you keep a look out for the fish?—Sometimes the neighbours would give us information and some encouragement to go out with our trawls.

51,774. Did you ever join the trawl nets together when you had a great shoal of fish?—No, they were too heavy for that.

51,775. When you had a great shoal of fish in a small bay, would you join them and go with double the number of hands to work the net?—No.

51,776. Sixty fathoms is the longest net you used?—From 60 to 65 fathoms.

51,777. Have you used the trawl net in the day-time?—Yes, in the evening, when we found the herrings close in-shore.

51,778. Not in the morning?—We generally trawl up to sunrise.

51,779. Were the fish not in-shore in the day-time?—They generally take off the shore when the day comes on. It is always in the night-time that they are closest in-shore.

51,780. If you did not find them inside did you row your boats out into the middle of the Loch?—Yes, we should go out for a certain distance backward and forwards.

51,781. Did you avoid the drift nets?—It would be of no advantage to us to go near to the drift nets where they had water, because generally the herrings would be broken up, and would also be on one side of the drift net. It would be according to the way in which the herrings were drifting, whether we saw them as plentiful on one side as on the other.

51,782. How long would it take to shoot your trawl net and haul it in?—I have seen it take perhaps an hour for a shot.

51,783–4. How long did it take to shoot your net?—We could shoot it in five minutes.

51,785. Have you ever observed that the fish die while they are enclosed in the net in consequence of the great squeezing they get from the body of the fish?—I have seen that when we had a great bulk, but although they did die, we lifted them.

51,786. Would you be able to lift them when you have taken the fish out in deep water?—It was not very common to get a big haul of herrings outside at all. We might make a nice night's work out of it, but never more than would pay wages.

51,787. When you have taken them outside, have you ever seen the fish die in consequence of being collected in great masses and jamming one another together?—No, they have too much room to go away. It is only a mere trifle we take, and the net is all open below. They get away down below the net altogether, and it is only a few that we get then.

51,788. Do you think that the setting of the drift nets outside prevents the shoals of herrings coming in-shore?—I think that shooting them too early in the day-time is injurious.

51,789. On what account?—Because the water is clear and the herrings see the nets.

51,790. Do they not rise then?—Very seldom. I have seen them flying in the water, and if we commenced to shoot then they would go away.

51,791. Then the fishermen, for their own sakes, would not shoot their nets too early?—There are some fishermen who are good at keeping regulations of that kind, and others who are not, and when one breaks through, he draws on another. When one shoots his net earlier, it brings the whole fleet round him doing the same thing.

51,792. Does that disturb the whole shoal?—Yes, it disturbs the whole of the water, in that respect.

51,793. When the drift nets are set out in the middle of the channel, have you observed that the shoals of fish do not come in-shore,—did you make any complaint against the drift-net fishermen on that account?—We never complained of them when they were working in the channel. It is generally one shoal that frequents the channel and another the shore. We get smaller herrings out in the channel than close in the bays in the summer time.

51,794. Have you often had great takes in-shore when the drift fishermen have been taking fish out in the middle of the Loch?—Yes.

51,795. What was the cost of a trawl net?—We generally calculated a good net to be worth 15*l.*, but nets were cheaper then than they are now, and I dare say one would cost 20*l.* now.

51,796. Did many of the fishermen own trawl nets themselves?—Perhaps eight men work a trawl net, and have a share a-piece in it.

51,797. And they were paid by share, I suppose?—Yes; perhaps two men would have the net, and the rest of the men would be on smaller shares.

51,798. On the whole, did they make more money by fishing with the trawl net?—There was one thing they had great benefit from,—they were not at the same outlay. One train of drift nets would cost a great deal more than a trawl net, and the drift nets would last four times as long as they do now.

51,799. How was that?—They were four days using the trawl net, and only one the drift net. In that way the nets and boats were kept in better order, and did not get as much damage. They were lying dry for weeks when they were not working them, and got no harm. If we were working them regularly, we might meet with heavy losses. Sometimes we have lost nearly half of our nets on the rocks.

51,800. If the trawl-net fishing were allowed now, do you think many of the drift-net fishermen would abandon the drift-net fishing altogether?—I think not.

51,801. Do you think both modes of fishing would be carried on at the same time?—I would carry on both, for my part.

51,802. Do you think that any limit as to the place of setting the trawl would be approved of by the trawl fishermen?—I think so, for my part. I think they would be willing to work in the most agreeable style anywhere where they could get liberty.

ARDRISHAIG.
J. Bruce.
22 Sept. 1864.

51,803. In the narrow waters, such as the Kyles of Bute, could the two fishings be carried on together?—There is only a part of the Kyles of Bute in which they can trawl. Most of the water there is deep water, the shores are very bold, and trawling would not do well from Ardlamont to Kaimes Bay.

51,804. There is only a small part of the water that is fit for trawl-fishing?—Yes.

51,805. Then in the upper part of Loch Fyne?—In the upper part of Loch Fyne there is no place fit for trawling until you come down to Lachlan Bay and Otter Bay.

51,806. Then do you think, if trawling were permitted, it would only be carried on to a small extent in the upper part of Loch Fyne?—I do not think there would be much done in Loch Fyne. I do not know any place there where, one night out of twenty, the herrings would be got in-shore so close that you could catch them; and in deep water, if the herrings are disturbed, they go down very quick, even though they are there in great numbers.

51,807. Do the drift-net fishermen from Ardrishaig often fish up in the Upper Loch Fyne?—Yes, wherever the fish are heard of.

51,808. Then when the fish are up there, the whole Loch is filled with boats and nets?—Yes.

51,809. And it would hardly be possible for the trawlers to carry on their fishing there?—They could not work with the trawls when all the fleet have shot their nets.

51,810. Did you say that the trawlers used to go out before the drift-net fishermen?—In regard to shooting early?

51,811. Yes.—No; they generally go out after. A trawler generally waits till he sees the fish rising about the shore before he commences to work at all.

51,812. Is that after the drift fisherman shoots his nets?—They shoot their nets in the prospect of the fish rising about them.

51,813. If a trawl fisherman saw a shoal of fish about sunset, would he go out with his nets?—He would not meddle with the fish till he could get a proper advantage of them.

51,814. Do you mean until it got dark?—Yes; some greedy man might try to take them, but it would not be profitable to anybody.

51,815. Were you in the habit of trawling much in what is now the close time, before the close time commenced?—Yes, I have trawled a great deal at that time.

51,816. Through what months?—Every month in the year almost, but only just now and then; it might be that we were only trawling for three nights in a month.

51,817. Did you in those months catch any number of small fish?—I never saw them taking many small fish in our locality,—our nets were not small enough.

51,818. Did you sell your fish mainly for bait?—We got a market for them.

51,819. Was there any proportion cured?—I have seen them curing the smallest we have got.

51,820. Was there any curing carried on during those months?—Yes.

51,821. Do you think it has been any advantage to the fishermen that those close months have been enacted?—Perhaps it may have been of benefit to some of the fishermen, but a great hurt to others. Poor fishermen, who have no land to till and no labour to go to in the country, would like to remain at the fishing as long as they could earn a shilling by it.

51,822. Was there any drift-fishing during those months?—Yes, in the Kyles of Bute.

51,823. Did any number of fishermen go to that fishing?—Yes.

51,824. Was it carried on with the same regularity as during the rest of the year?—Yes, there was a great number of boats from all directions.

51,825. In the month of March?—Yes, I think the last night was the 7th of March.

51,826. How long ago was that?—21 or 22 years.

51,827. Do you fish with the line during the close months now?—Yes.

51,828. Have you found it any disadvantage being deprived of herrings for bait during those months?—It is a great disadvantage, and especially in taking eels. An eel will scarcely take any other bait except herrings.

51,829. Have you not purchased fresh herrings from the east coast?—We get them very soft, and an eel is a very saucy fish, it likes to have the bait very fresh.

51,830. What were the fish you caught in the close months?—Cod, ling, whiting, haddock, and flounders.

51,831. How far up the Loch do you fish?—Down Loch Fyne to Furness.

51,832. How many boats are there from Ardrishaig?—About 30 or 40. There are not more than 40 boats, I think.

51,833. Have you observed any falling off in the fish caught during the last four or five years?—There is one fish that has not been as plentiful for some years.

51,834. Do you mean the whiting?—Yes, and the haddock.

51,835. How long is it since they fell off?—They have been falling off for the last six years.

51,836. There is no beam-trawling in this Loch?—No, I only saw it tried twice in this Loch.

51,837. Have the cod fallen off?—They have not been plentiful for the last two years, owing to the want of bait.

51,838. You think they are there, but they have not been caught in such numbers?—They are not caught. We used to get a good supply on the small hooks.

51,839. What did you use for bait?—We used the shell-fish we call the scallop. We dredged them in considerable quantities from the bottom.

51,840. Has the number of fishermen fallen off?—I think they are rather increasing than falling off.

51,841. Notwithstanding the difficulty of getting bait?—I think there is about six times the quantity of material in the water for catching herrings that there was six years ago.

51,842. But I mean fishing with lines,—have the line fishermen fallen off?—No, I do not think so. The line-fishing has always been about a regular thing here.

51,843. Do you find the cod with herrings in their insides during the months of April and March?—Yes, we get them always with herrings.

51,844. In their stomachs?—Yes.

51,845. Showing that the herrings are here at that time?—Yes; we scarcely ever want herrings here in this Loch between this and Minard any day in the year.

51,846. Do you think that fishing for herrings during the close season should be allowed, for the purpose of bait at all events?—I think it should.

51,847. Would it be possible to allow fishing for herrings for bait, and to prevent them from being sold in the market for other purposes?—It would be troublesome and difficult to prevent it. Often a man could not help taking a larger quantity than he would want for bait; although he might not wish to take them, still they might be there, and it would be a pity to let them become useless, if they could be sold. There are places in the north, along this coast, where the fishermen are deprived of herrings until the close season sets in, and then they dare not touch them. I believe that has been the cause of great ruin in different places.

51,848. In 1862 there was a great season for herrings?—Yes.

51,849. If trawling had been permitted would there have been a still greater take, or did the drift fishermen catch the herrings that would have been otherwise caught by the trawlers?—I do not think they would have been troubled with trawls. It is a very laborious thing to work a trawl net.

51,850. Are the older men able to work it?—It is not very easy for old men to work it; they would be scarcely ever dry.

51,851. Do you think if the fishermen could do well with drift nets they would not want to use the trawl?—I never inclined much to the use of the trawl net if I could get plenty of herrings with the drift nets.

51,852. Do you think if trawling had been permitted this season there would have been a great take of herrings?—I am sure there would have been, as the herrings have been here in great abundance.

51,853. Can the trawlers sometimes fish in rough weather when the drift fishermen cannot go out?—Yes, all along the shore in the bays where the drift fishermen cannot work in breezy weather.

51,854. Do you often see plenty of fish that you cannot take with the drift net?—Yes.

51,855. What is the reason of that?—There is a great deal of fire in the water at this time of the year, and I think that is the cause of it. You can see the nets a great distance off in the water when it is dark.

51,856. Is that the case this year?—I think that has something to do with it, but there are some years when the herrings will not mesh well in the nets.

51,857. Is it ever the case that the herrings run too small to mesh themselves in the drift nets?—Run too small?

51,858. Yes. Is the class of herrings sometimes smaller one year than it is in other years?—I have seen a smaller class of herrings sometimes, but always through the year there were large enough herrings. We have got large and small, and we have had plenty of different shoals of herrings. I have seen, within the distance of a mile, every boat catching herrings, and catching them of a different quality. That did not show that there was any difference in the material with which they were caught, but it showed that there was a difference in every eye of the herrings—perhaps they were no better in one case than another.

51,859. (*Mr. Caird.*) I think you stated that many of the curers buy both trawled fish and drift-net fish?—Yes.

ARDRISHAIG.

J. Bruce.

22 Sept. 1864.

51,860. If that is the case, why should there be such a general feeling among the curers against the trawl-net fishing?—I cannot say, but I have known the curers buy and be glad to get trawl-net herrings. One year, when there was considerable trawling going on, Mr. Methuen bought all he could get, even after the fresh buyers had got them.

51,861. Are there many fishermen like yourself, who fish alternately with one kind of net and then another, as they find it most advantageous?—The fishermen are mostly of that class about here.

51,862. About Ardrishaig?—Yes.

51,863. They like to have the two modes of fishing so as to be able to take to which they find most advantageous?—Yes.

51,864. Then you would like to be permitted to take to which you think best?—Yes, we should generally go to what we thought best.

51,865. Do you think the trawl men would be contented with a regulation permitting them to fish in the shallow waters along the shore, although they would still be prohibited from fishing in the deep waters in the middle of the Loch?—Perhaps they might be. I do not think the deep-water fishing is of any benefit to them.

51,866. Do you think it would be a great loss to them to be prohibited from fishing altogether in the deep water, which is more suitable to the drift-net fishing?—I do not think it would hurt them in the least. It would not hurt them here, because when they could not get the fish ashore by trawling they would get them in the middle of the Loch with their drift nets.

51,867. (*Mr. Lefevre.*) Do the drift nets belong mostly to the fishermen here?—Yes, all of them do here.

51,868. Have the fishermen still got trawl nets?—There are none who have any now, that I am aware of.

51,869. Then do you think that trawling has been entirely suppressed?—Yes, hereabouts.

The witness withdrew.

DUNCAN M'BRYEN called and examined.

D. M'Bryen.

51,870. (*Mr. Caird.*) Were you a trawl-net fisherman at the time trawling was permitted?—Yes.

51,871. Had you, like the last witness, a drift net as well as a trawl net?—Yes.

51,872. And did you fish the two different kinds, as you found it most convenient?—Yes.

51,873. Do you think it of advantage to be able to fish other one way or the other, as you could best take the fish?—Yes.

51,874. Do you agree with the previous witness that if the trawl-net fishermen were permitted to fish along the shore in the shallow waters that that would be a sufficient privilege for them?—Yes, I agree that it would.

51,875. Would you be contented with that as a compromise of the question between you and the drift-net fishermen?—Yes.

51,876. Although you were entirely prohibited from fishing in the deep waters?—Yes, we should agree with that.

51,877. In that case you would be able to take to your drift nets if the fish were in deep water when you could not fish with advantage along the shore?—Yes.

51,878. Can you say from experience that you catch a better class of herrings with the trawl nets than with the drift nets?—Yes, at times we do.

51,879. Large herrings?—Yes.

51,880. Have you ever known of any instance yourself in which you have caught so many fish with your trawl net that you have been unable to make use of some of them for food?—Yes, at one time.

51,881. Does that often occur to you?—No.

51,882. Was that at the time trawling was prohibited?—Yes.

51,883. And when you could not get time to bring them in?—Yes, on account of being pursued.

51,884. During the time it was permitted did that ever occur?—No, never.

51,885. Were you always able to make use of all the fish you could catch?—Yes.

51,886. Did you ever in your trawl nets catch fish that were unfit for sale during the months that are at present the open months for fishing?—No.

51,887. Did you fish in the months that are close time now with the trawl—I mean the spring months?—I have fished for bait in April and May.

51,888. Did you get many small fish then?—No, nothing but what was good for bait.

51,889. Have you never killed small herrings in your trawl nets?—No.

51,890. Not very small?—No.

51,891. Have you ever seen spawn in your trawl nets?—No.

51,892. If in this season you were permitted to catch fish with the trawl net as well as the drift net, do you think there would be a larger supply of herrings to the market?—I am sure of it.

51,893. Do you think there are many fish in the Loch now which escape being caught altogether, but which would be taken with the trawl net?—That is my opinion.

51,894. What leads you to form that opinion?—I have formed it from my experience of trawling. We see the fish now and we cannot take them with the drift nets.

51,895. (*Mr. Lefevre.*) Do you not think that the

ARDRISHAIG.

D. M'Bryen.

22 Sept. 1864.

drift fishermen may take them some other night, although not that night?—They are of that opinion. They say, "let them alone this year, and we shall get them another year."

51,896. But would they get it some other night in the same season?—They have had three months of it now, and the fishing is not getting better.

51,897. And you think you might have made a successful fishing with the trawl nets, where the drift nets have been unable to make a successful fishing?—Yes.

51,898. Then you think the fish are there in the Loch?—Yes, we see them every night.

51,899. Close in-shore?—Yes.

51,900. (*Mr. Caird.*) Is that the general opinion of the fishermen here?—Yes.

51,901. Have you ever taken any large hauls when you have been out with your trawl nets in the deep water?—No.

51,902. Do you find that the curers will buy the fish caught in your trawl nets as readily as those which are caught in your drift nets?—Yes.

51,903. Are you willing to accept a smaller price for them?—If we get a large quantity, we are ready to dispose of them at a cheaper rate.

51,904. Is the reason that there is a difference in the price that there is a large supply?—Yes.

51,905. You have a larger quantity to sell, and can make a better return?—Yes.

51,906. You do not admit that it is because the quality is inferior?—No.

51,907. Have you yourself ever cured trawled herrings?—Yes.

51,908. And herrings caught in the drift nets?—Yes.

51,909. Have you noticed the result of the cure; were the trawled herrings as good as the drift herrings?—Yes, I often found them better.

51,910. In what respect were they better?—I have found them larger.

51,911. Would they keep better?—They eat better at any rate.

51,912. Do they keep better?—Yes.

51,913. Then do you or do you not admit that the trawled fish are not as well bled as the drift caught fish?—Some people say they are not, but I cannot see how that can be.

51,914. Have you not observed any difference at all in that respect?—No.

51,915. When you take the trawled fish and the drift caught fish fresh do you find more blood in one than in the other?—I never observed that.

51,916. Did you ever at any time fish herrings in the month of January?—Yes.

51,917. Did you get them in good condition in that month?—They are not as good then as they are in the months of June, July, and August.

51,918. Were they in a good marketable condition?—Yes.

51,919. Did they take the market readily?—Yes.

51,920. And have you seen good fishing got in that month?—Yes.

51,921. Do you think it is any loss to the public that there should not be any fishing allowed in January?—Yes, it is a loss to the fishermen in the first place, and to the public also.

51,922. Is it of no advantage to the brood of fish that there should be a close time in January as well as in the rest of the spring months?—No, I think the season should be open.

51,923. Do you approve of a close season at all?—No.

51,924. Would you have it open all the year round?—Yes, but I would require all men to fish with a legal net.

51,925. With nets of an inch mesh you mean?—Yes.

51,926. If the inch mesh was rigidly enforced, and no person was allowed to fish with a smaller net than that, would that obviate all the objections that can be raised as to catching small fish?—I think it would.

51,927. Could not the trawl net then bring small fish ashore?—I have never seen them take small fish ashore.

51,928. Was it common while trawling was permitted for the trawl fishermen to be also drift-net fishermen?—Yes.

51,929. Had they both kinds of nets?—Yes.

51,930. And the same boat was capable of fishing either with drift nets or the trawl net?—Yes.

51,931. It did not require two sets of boats?—No.

51,932. Only two sets of nets?—Yes.

51,933. Would the cost of the smaller boat used for the trawl-fishing, with the two sets of nets, be any greater than the cost of the larger boats, with nothing but the drift nets?—The cost of the large boats would be more.

51,934. Which on the whole, suppose trawling was permitted, would make the largest fishing in the course of the season?—The trawl-boat would.

51,935. The trawl-boat, with permission to fish with both nets?—With one net the trawl-boat would make the best fishing.

51,936. But if it had also drift nets, what would then be the case, do you think?—They would fish better still.

51,937. And make larger returns?—Yes.

51,938. From a smaller capital than the drift fishermen?—Yes.

51,939. (*Mr. Lefevre.*) Did you ever trawl during the month of February and March for any other purpose than getting bait?—Yes.

51,940. Did you sell the fish you caught in the fresh market?—Yes.

51,941. Did you get as good a price for your herrings then as you would at any other time?—Yes, I have got 4*s.* 6*d.* on the 12th of March for them.

51,942. For what quantity?—For 100.

51,943. In what condition were the fish then?—They were large fish.

51,944. Were they full fish?—No, they were spent fish.

51,945. Do you think that the herrings spawn up in the Loch in the months of February and March?—No, I do not think they do. They go to Ballantrae to spawn,—at least we say so.

51,946. Where did you catch those spent fish?—Along between this and Tarbert.

51,947. Do they come up here after spawning?—We think so.

51,948. Have you ever caught the fish just full of spawn,—ready to spawn, during what are now the close months?—When they came out of Loch Fyne we thought they went to spawn, and we got a number of them then.

51,949. Do you think that the enactment of the close time cut off a good deal of profit from the fishing?—Yes, it did.

51,950. Before the close time was enacted, what number of boats would there be herring-fishing during the months of March and April?—Not more than 14 or 15 boats.

51,951. Why was the number so small,—was it because they could not find the fish?—No, we were at the white-fishing then,—at the line-fishing for whiting and haddocks, but if there was some chance of herrings we went out with the trawl.

51,952. Were the herrings not in the Loch then in large numbers?—No, there were only very few.

51,953–5. They were not spawning fish?—No.

The witness withdrew.

DAVID BRUCE called and examined.

ARDRISHAIG

D. Bruce.

22 Sept. 1864.

51,956. (*Mr. Caird.*) Were you a trawl fisherman at the time trawling was permitted by law?—Yes.

51,957. Were you at the same time a drift-net fisherman?—Yes.

51,958. Was it a common custom among the trawl fishermen to have drift nets which they could use when they thought proper?—Yes.

51,959. Was it a common custom among the whole of the trawl men in this Loch?—It was the common custom among the men in this locality.

51,960. In Ardrishaig?—Yes.

51,961. What number of boats are there belonging to Ardrishaig?—About 100.

51,962. Were the whole of those 100 boats, or nearly the whole of them, in the habit of having both trawl nets and drift nets?—Yes, most of them.

51,963. Are they a smaller size of boat than those which are employed exclusively in drift-net fishing?—Yes.

51,964. They are adapted for going in the shallow water?—It is not for that.

51,965. What is it for?—We had them for trawling, and the big smacks could not trawl.

51,966. Then your boats could not carry as large a fleet of drift nets as the large drift boats could?—No.

51,967. What length of drift nets do you carry in your small boats?—Eight or ten barrels.

51,968. Would that be 800 or 1,000 yards in place of 1,400 yards,—is that so?—Yes.

51,969. What does a trawl-boat cost when new?—About 16*l.*

51,970. And your trawl nets?—They cost about 15*l.*, but they would run to 20*l.* now.

51,971. What is the cost of your fleet of eight or ten barrels of drift nets?—It will run close upon 100*l.*

51,972. Is it about 10*l.* a barrel?—5*l.* or 6*l.* a barrel.

51,973. How many barrels do you say your nets run to?—Eight or ten.

51,974. That will not come to 100*l.*?—Close upon it.

51,975. What would be the cost of 10 barrels of nets with all their gear and fittings?—About 6*l.* a barrel.

51,976. Then we may take it at 60*l.*?—Yes.

51,977. Then each boat with its trawl net and its drift nets altogether would come to about 96*l.*?—Yes.

51,978. What would be the cost of a drift-net boat?—They run from 40*l.* up to 50*l.* for the big smacks.

51,979. And what would be the value of the drift nets?—I cannot say.

51,980. Would it be 6*l.* a barrel?—Their nets are deeper than ours.

51,981. Are they more expensive than yours?—Yes.

51,982. Can you give us an estimate of what the cost would be?—They will run 7*l.* a barrel.

51,983. That would be about 138*l.* for a drift-net boat, as against yours at 96*l.*?—Yes.

51,984. Can you tell us whether when you were allowed to practise both modes of fishing just as you found it most advantageous, the one mode one night, and the other another, you could make between the two in the course of a season, as good a fishing as a drift-net boat of larger size with drift nets?—Yes, I think we could.

51,985. Then was it, in your opinion, a cheaper mode of catching fish?—Yes, it is a cheaper mode.

51,986. Has it been much loss to you to be deprived of the trawl mode of fishing?—Yes, it has.

51,987. Has it reduced the quantity of fish that would otherwise have gone to the market?—Yes, it has done that.

51,988. Speaking of this year in particular, do you agree with the previous witness, that whilst the drift-net fishing has not been very successful, you might have caught a great many herrings if you had been permitted to use the trawl net, which were not caught by the drift nets?—Yes, there are plenty of herrings on the coast.

51,989. Have you ever seen any very small fish caught by the trawl net?—No, I never saw any very small fish caught in the trawl net. I never saw any sile caught in it.

51,990. Would you approve of a regulation establishing an inch mesh for both trawl nets and drift nets?—Yes.

51,991. You think that would be a fair and proper thing to do?—Yes.

51,992. Would you be satisfied if you were allowed to fish with the trawl net in the shallow waters along the shore?—Yes.

51,993. And if you were not permitted to go into the deep waters where the drift nets are principally used?—Yes.

51,994. Do you think that could be done without disadvantage or injury to the drift-net fishermen?—I think it could.

51,995. Have you ever fished for herrings in the month of January?—Yes.

51,996. Did you catch them in good condition then?—Yes.

51,997. Do you think it is a loss to the public that the fishermen should not be allowed to take herrings in the month of January?—It is a loss to the fishermen and to the public too.

51,998. Do you think it would be of advantage both to the fishermen and to the public, that the law should be altered in that respect?—I think it would.

51,999. Would you desire to have part of the season a close time?—I think it should be open.

52,000. The whole season?—Yes.

52,001. Would that not lead to your destroying fish very small, that would afterwards have become marketable and useful?—I do not think so.

52,002. Would it not in any other way affect the supply of fish in a better season?—I do not think it would.

52,003. Where have you observed the shoals of herrings come from when they first enter the Loch?—They come from Ballantrae after spawning.

52,004. When do they begin to enter the Loch in the greatest quantities?—About the month of May.

52,005. Do you see them then coming into the Loch?—Yes.

52,006. Do they continue to come into the Loch in the summer season?—Yes.

52,007. Fresh shoals of herrings continue coming in?—There are always fresh shoals coming in.

52,008. Is the lower part of the Loch the best fishing ground in the earlier part of the year?—I have seen very good fishing in both parts of the Loch.

52,009. Have you fished in all parts of the Loch?—Yes.

52,010. (*Mr. Lefevre.*) Have you observed large shoals of small fish?—Yes, I have seen large shoals of small fish too.

52,011. What time of the year have you seen them?—Generally in the month of May, and before then.

52,012. Do you not think that the trawlers would take them if they were allowed to fish during the close time?—Well, I have no doubt that they would, but I never saw them take any about there except for bait.

52,013. Where do you think they would be taken?—Down about Tarbert where they used to work for them.

52,014. Did they work for the small class of fish?—Yes, and in the Kyles.

52,015. The Kyles of Bute?—Yes.

52,016. Did not the shoals come up as far as this?—Yes, through the year they did.

52,017. Quite small fish?—Yes.

52,018. What is the smallest size?—They are very small, from four to five inches.

52,019. Do you agree with the previous witnesses, that many of the trawl nets have been used with less than an inch mesh?—Yes.

52,020. What was the smallest mesh used by the

ARDRISHAIG.

D. Bruce.

22 Sept. 1864.

trawl fishermen?—The smallest mesh we used about here was 38 rows to the yard.

52,021. Would it not shrink to less than that?—Yes, it would shrink to about 40.

52,022. Do you not think that if nets of that description were used, they would catch the shoals of small fish?—Yes, they would.

52,023. If there was a restriction as to the size of the mesh of the net of the trawl, and the fishermen were not allowed to use a smaller mesh than an inch mesh, would that prevent the taking of small fish?—Yes, I think it would.

The witness withdrew.

J. M'Kiver.

JOHN M'KIVER recalled and examined.

52,024. (*Mr. Caird.*) Can you tell us the number of boats engaged in the herring fishery in Loch Fyne during the last three years?—Yes.

52,025. Will you give us the number?—In 1862 there were 670 boats employed in Loch Fyne.

52,026. At what date?—On the 21st of September.

52,027. In 1863 how many were there?—In 1863 there were 680.

52,028. That was a slight increase?—Yes.

52,029. How many were there in 1864?—In 1864 there were 545—that is this year. Last week there were 545.

52,030. Then there has been a decrease of about one-sixth this year, as compared with each of the two preceding years?—Yes.

52,031. Has that arisen from the fishing being less successful?—Yes.

52,032. (*Mr. Lefevre.*) The boats have not come from a distance?—No.

52,033. (*Mr. Caird.*) Can you give us an estimate of the number of barrels of fish taken in Loch Fyne during the last four years from the commencement of the fishing season?—Yes.

52,034. Then will you do so?—In 1861, 9,624 barrels were taken up to the 21st of September; in 1862, 18,949 barrels were taken up to the 20th of September; in 1863, 11,220 barrels were taken up to the 20th of September; and this year, 1864, 7,929 barrels have been taken up to the 19th of September.

52,035. Then, as far as the season has gone, this year, as compared with last year, has been very unfavourable?—It has not been one half what it was in 1862.

52,036. And greatly less than 1863?—Yes, 4,000 less than 1863.

52,037. Do you know whether the condition of the fishermen has been improving or otherwise in Loch Fyne, in the course of your experience; are they improving in their personal circumstances?—They complain very much in Ardrishaig of the want of food sometimes.

52,038. (*Mr. Lefevre.*) How long have you been here on the station?—I only come here for 10 weeks in the summer time, and I have done that for the last 10 years.

52,039. Then you know nothing of what the fishing was previous to the enactment of the close time in this part?—No.

52,040. Do you think the number of boats belonging to Ardrishaig is increasing?—I think it is.

52,041. And at the other places along the Loch?—Yes, the boats are increasing.

52,042. Are they increasing at Inverary?—Yes.

52,043. And also is there a considerable number coming from other parts every season?—Yes, at the time the fishing is on, but those belonging to Loch Fyne have been increasing of late years.

52,044. How many of the 545 boats that are numbered this year belong to the Loch?—I cannot state that. They come from different places, Ayrshire, Campbeltown, and the Kyles of Bute.

52,045. You do not know how many come from a distance?—No. There are a number of Ballantrae boats at Tarbert at present.

52,046. Are the boats all of the two sizes we have heard of?—Yes, large smacks and small ones.

52,047. Are the large smacks half-decked boats?—Yes, with a small deck forward.

52,048. What is the length of the keel?—From 25 to 30 feet; some of them are larger.

52,049. Do any boats from a distance come here of a larger size?—They do from Campbeltown.

52,050. What is the size of those boats?—From 20 to 25 feet keel.

52,051. But are there any of 20 tons?—No, there are none of that size. They are only of eight or ten tons.

The witness withdrew.

Lieut. H. M. Dyer, R.N.

Lieutenant HUGH M'NEILE DYER, R.N., called and examined.

52,052. (*Mr. Caird.*) You are in command of the "Jackal," which has been stationed here to look after this coast?—Yes. I am superintendent of the fisheries on the western coast from Cape Wrath to the Mull of Galloway, though I am chiefly in Loch Fyne.

52,053. How long have you held that office?—Since May 1863.

52,054. Then your observation has not gone back to the time when trawling was permitted to be carried on?—No, there has been no trawling since I have been here. I have captured one trawl net which has been illegally working.

52,055. Then trawling may be said to be practically suppressed?—Yes.

52,056. On all parts of the western coast?—Not on all parts of the west coast, but in Loch Fyne. Trawling is not illegal where the herring fishery is not being carried on, and trawling is carried on for other purposes besides the catching of herrings.

52,057. Is trawling prohibited for every purpose in Loch Fyne?—Yes, during the herring fishery.

52,058. But during the period of the close time is it not?—It is not illegal for other fish than herrings during the close time; the net may be used then.

52,059. Is it employed during the close time for other purposes?—About Campbeltown it is for catching saithe.

52,060. But not about here?—I think not.

52,061. Do they catch immature herrings with it at that time?—No; if it were employed for catching herrings it would be illegal, but it might be employed in catching other fish during the close time.

52,062. Have you had occasion to direct your attention to trawling and drift-net fishing?—I know nothing about trawling. I have not seen it carried on. I know nothing about it, except from hearsay.

52,063. You have no personal experience or knowledge which you can offer to us on the subject?—No.

52,064. Have there been any prosecutions for any breach of the law with regard to trawling since you have been here?—There have been two or three prosecutions since I have been here for breaches of the law.

52,065. For trawling?—Two for trawling, and one for having possession of trawled herrings.

52,066. What was the result of those prosecutions?—In one case, the net was condemned, that was the case of using a trawl net, and in the other case it was not condemned. In the case of the trawled herrings at Inverary the other day, the herrings were not condemned; it was considered that the case was not proved.

52,067. At what time was it alleged that these

people had trawled?—The net we took was in August last, the vessel was in November.

52,068. Where did you find the net?—In Buck Bay, opposite Tarbert.

52,069. Did you find it working?—Yes, in the water.

52,070. Had the people left it?—Yes, they had made off.

52,071. They fled?—We found the men close to it, but not having seen them in the act of trawling, there was no evidence against them.

52,072. Is it part of your instructions to examine the size of the mesh of the net, and to enforce the regulations in regard to it?—Yes.

52,073. An inch is the smallest mesh you allow?—Yes, we allow no mesh smaller than 36 to the yard along the line.

52,074. That is an inch mesh?—Yes.

52,075. Do you consider it part of your duty to make a careful inspection of the fishermen's nets?—Yes.

52,076. On all this coast?—Yes, certainly.

52,077. Do you find generally that there is no fault to be found with the fishermen upon that point?—That is generally the case among the Loch Fyne men, but in the Kyles of Bute, in November last, I had occasion to seize some nets, and I found some of them as small as 40 to the yard.

52,078. Is that of rare occurrence?—Yes. That was the first season I was there, but I have heard that they have been fishing with small mesh nets for a small class of fish which come into the Kyles of Bute in the winter time.

52,079. Is there any other regulation you have enforced with regard to the fisheries here?—We see to the numbering of the buoys, and nets, and sails.

52,080. Are regulations in those respects enforced?—Yes, except with regard to the buoys, the Board of Fisheries is not too strict upon that point, It is a very difficult thing to look after. But with regard to the sails they are particular.

52,081. (*Mr. Lefevre.*) Do the fishing boats carry lights?—They do not, but they ought to carry them.

52,082. Is there any regulation about it?—Nothing except the Board of Trade regulation.

52,083. Is there any local regulation?—That is a local regulation, but it is the Board of Trade which considers the fishermen liable for any damage which may be done in case of a collision. They generally show a "flare-up" light,—that is enough for them; but sometimes the men go to sleep in the course of a night.

52,084. Have there been any conflicts among the men?—No.

52,085. You spoke of nets being used at Campbeltown for trawling?—Yes.

52,086. What fish are they used for?—Cuddies, small saithe, and they trawl for mackerel.

52,087. Are they not used for herrings?—They are if they can find herrings.

52,088. Is it possible to prevent their being used for herrings?—Such is the extent of coast we have to look after, that it is very difficult to do so, unless we have information. In May last, I was going into Campbeltown, when I came upon some of the boats, trawling for herrings, but they made off, and sunk their nets.

52,089. Have you seen the nets you speak of used for catching other fish than cuddies?—No, only for cuddies.

52,090–1. Do you think the fishermen here have trawl nets?—I do not think they have. I think the Tarbert men occasionally have, or they put a centre to their nets; they put a barrel of nets on each side of a centre.

52,092. And use it as a trawl net?—As a trawl net, if they get a chance.

52,093. Should you consider it your duty to seize any trawl nets which you found here, whether you had reason to believe they had been used for herrings or not?—If they were used for herrings I should, but not if they were used for other fish than herrings.

52,094. If you found them in the possession of the fishermen here, would you seize them?—Yes.

52,095. Would you throw on the fishermen the onus of proving what they were used for?—Yes.

52,096. Have you that power under the Act of Parliament?—Yes.

52,097. With regard to the close time, have you also directions to look after the observance of that?—Yes, we have to enforce all the fishery laws.

52,098. If you saw any herrings during the close season caught on the coast, would you destroy them?—No; we should seize them, and take them into port.

52,099. Wherever they might be?—Yes.

52,100. And have you the power there also, under the Act, of throwing upon the possessors the onus of showing how they got them?—Yes.

25,101. Have there been many cases of prosecutions?—There have been two this year.

52,102. And have you reason to believe that the close time is observed?—I think it is, except in Kilbrannan Sound. They take herrings there for bait, to a small extent.

52,103. Have you considered it possible to allow the fishing of herrings for bait during the close season, and to prevent it for other purposes?—Yes.

52,104. Do you think it possible?—Yes, I think they ought to be allowed to take them for bait.

52,105. Do you think it possible to prevent them taking herrings for other purposes, if they are allowed to take them for bait?—Yes, if a limited number were allowed, but not if general permission were given.

52,106. Would you license a certain number?—Yes.

52,107. If they caught more than was sufficient for bait, what would be done with the rest?—If they were sold, they should be liable to seizure in the market, the onus of proof resting upon the fishermen.

52,108. What would you do with the herrings if there were a great take?—If only a limited number of nets were allowed to fish, there could not be a great number of herrings taken, and they might eat them if they were not required for bait.

52,109. Would you prevent them from being sold in the market?—I think not, but the present Act does prevent them.

52,110. I am supposing that there was permission given to take them for bait during the close time. In that case, if the fishermen caught more than was sufficient for the purposes of bait, what would you do with the residue?—I do not think they would catch very many during the close time, except in the month of January; and if there were only one boat or so at the station fishing, they would not catch more than they required for bait. If they did, it would only be a trifle.

52,111. Do you think the herrings are not found up in the Loch during the close time?—Not to any great extent, except in January.

52,112. But at Ballantrae?—There is a good quantity there.

52,113. You would not permit them to be taken there?—Yes, they want them there for bait more than anywhere else.

52,114. Could they not be taken in great quantities during the spawning season?—Yes, they might.

52,115. And if you licensed a certain number of boats, would they not take more than was necessary for bait?—Yes, they might.

52,116. What means would you have of preventing the thing from spreading further than that?—The only thing would be to prohibit them from being sold in the market, and the fishermen then would give them away. If they could not sell them, they would not be wasted.

52,117. The markets for the west coast are Greenock and Glasgow?—Yes.

52,118. Might they not say that they came from

ARDRISHAIG.

Lieut. H. M. Dyer, R.N.

22 Sept. 1864.

the east coast?—Yes, but the onus of proof would be upon the fishermen. We should make them prove where they got the herrings from. With regard to fishing in the day-time, there is no law here to prevent the nets from being shot in the day-time. The French Convention Act does not apply to this coast.

52,119. Is there no regulation as to the time of shooting the nets?—No, they can fish when they like. There is no Act applicable to this coast. The only regulation is contained in the Convention Act, which does not apply except where French vessels are fishing.

52,120. Where is your vessel stationed?—As ordered by the Fishery Board, but generally at Ardrishaig.

52,121. Does it go to the northern part of Scotland?—Yes, to the Stornoway fishing, and as far south as the Bay of Luce.

52,122. (*Mr. Caird.*) Do the boats to any extent shoot their nets before sunset?—Yes, in the winter time, they shoot them in the Kyles of Bute before sunset, and they leave them sometimes until the middle of the day. I have seen them haul them in the middle of the day.

52,123. Is that injurious to the fishing?—I think it is far better. They are very crowded in the Kyles of Bute. And they are constantly foul of one another, and it is better that they should wait until daylight.

52,124. Have they large takes of fish there?—There are large takes in December, when they are fishing in that way in the Kyles of Bute.

52,125. Then you do not hold it to be of importance whether the fishermen let their nets remain in the water or not?—No.

52,126. You do not hold that to be of much importance?—No, and in the upper Loch I have seen anchored nets left all day.

52,127. In the upper part of Loch Fyne?—Yes, above Furness.

52,128. (*Mr. Lefevre.*) Do you think if the close time were done away with north of the Mull of Cantire, it would be necessary to license the taking of bait south of that?—No, I think they would get bait enough then.

52,129. (*Mr. Caird.*) But there is a great objection in Stornoway to do away with the close time altogether?—Yes.

52,130. (*Mr. Lefevre.*) Do you know what number of boats it would be necessary to license?—It would depend on the place. For instance, about the Ballantrae banks they would want more than here. This place is not half fished in the winter time. There are eight or a dozen boats from Ardrishaig, and a few from Tarbert; that is all.

52,131. What number would it be necessary to license altogether on this coast?—Do you mean altogether inside the Firth of Clyde?

52,132. Yes.—I would give them a dozen or 15 boats.

52,133. (*Mr. Caird.*) If any facilities were given for obtaining bait, do you think it would lead to an increase in the number of boats employed in the white-fishing?—Yes, there has been great trouble in collecting mussel bait and other things for bait. I think it would lead to a great increase. I have found them in Stornoway catching herrings in the close time with a hook and line for bait, but that was a very troublesome process and was hardly worth their while.

52,134. I suppose your instructions are confined to the herring-fishing?—Yes.

52,135. You have no instructions with regard to any other white-fishing?—No, nothing but herring-fishing.

52,136. Is the officer who preceded you on the coast now?—He is away at Rothesay.

The witness withdrew.

W. M'Cullagh.

WILLIAM M'CULLAGH called and examined.

52,137. (*Mr. Caird.*) You are a seaman on board the "Jackal"?—Yes.

52,138. And you have been in the "Jackal" for the last four years?—Yes.

52,139. You were here at the time the trawl-fishing was allowed, and since it has been prohibited?—It never was allowed, that I know of.

52,140. Have you, during the time you have been on board the "Jackal," frequently made seizures of trawl nets?—Yes.

52,141. Were there many prosecutions that followed those seizures?—Yes.

52,142. Were the people fined?—Sometimes they were, and sometimes they got off.

52,143. Have you noticed, in the course of the four years during which you have been in the "Jackal," whether there have been any cases of collision between the drift-net fishermen and the trawl fishermen?—No.

52,144. Was there ever any row between them at all?—Never that I saw.

52,145. Have you seen the trawl nets fishing among the drift nets at all?—No.

52,146. Have you seen them being fished along the shore?—Yes.

52,147. Were they very successful in getting plenty of fish?—Sometimes I have seen them catch a good many.

52,148. Have you seen any small fish caught along with the large herrings in the trawl net?—Yes.

52,149. Very small herrings?—Yes.

52,150. What time of the year?—At the end of December.

52,151. Have you seen the trawl-net fishing in the month of August or July?—I can recollect December, but I cannot recollect August or any other particular month. I recollect taking a net with a good deal of fish in it in December.

52,152. Were many of those fish small fish?—Yes.

52,153. Small herrings?—Yes, and there were a good many large herrings too.

52,154. What was the size of the smallest?—About five inches.

52,155. Five inches long?—Yes.

52,156. Were they marketable fish?—I do not know.

52,157. Could they have been sold for consumption as food?—I do not know anything about the markets.

52,158. Would you have eaten them yourself?—Yes.

52,159. Have you ever noticed the quality of herrings caught with the trawl nets, as compared with the quality of those caught by the drift net?—Yes, I have noticed it. The drift-net fish have more scales on them than the other fish.

52,160. Have you had occasion to observe that very carefully?—I have bought drift-net fish and trawl-net fish also.

52,161. Have you used both of them yourself?—Yes.

52,162. Which do you find the best to eat?—I do not know. I do not know any difference.

52,163. You cannot make the least distinction?—No.

The witness withdrew.

ARDRISHAIG.

W. Dawson.

22 Sept. 1864.

William Dawson called and examined.

52,164. (*Mr. Caird.*) Are you a drift-net fisherman or a trawler?—I have been both.

52,165. You have heard the evidence given by Bruce and the other trawl-net fishermen?—Yes.

52,166. Have you anything to add to that?—Not much.

52,167. Are there some points on which you differ from them?—Yes, a little.

52,168. You are a drift-net fisherman?—Yes.

52,169. And you were also a trawl-net fisherman?—Yes.

52,170. You were in the habit of using the trawl when you thought it most advantageous, and then taking to the drift nets at other times and during the same season?—Yes.

52,171. You fished with both alternately, as you found it suit you best?—Yes.

52,172. What remarks have you to make in addition to the evidence already received from the trawl-net fishermen?—I wish to say that the trawl net will take small herrings if it is obstructed by large fish, but not to any amount. I wish merely to state the truth.

52,173. (*Mr. Lefevre.*) You admit that the trawl net takes small fish, but only in cases where it is obstructed by large fish?—Yes.

52,174. (*Mr. Caird.*) Is there a large proportion at any time of small fish?—With the exception of one season, about five years ago, I never saw much. In that season they caught them down at Burnfield. They were mixed herrings. Some of them would run 600 to the barrel, and about an eighth part of them would be mere sile.

52,175. That was one particular season?—Yes.

52,176. How was it that that was different from the others?—I have not seen it except in that season—in the open season.

52,177. That is the only instance in which you have seen the trawl net destructive of small fish?—Yes. The net was obstructed by large fish, and the small fish could not go through the mesh.

52,178. As a rule, is a large proportion of the fish caught by the trawl net small fish unfit for the market?—No. It is just as you come across the shoal.

52,179. Is it the same in the take of the drift fishermen the same night?—Quite the same, if they work with a legal net.

52,180. If you have the legal size of mesh in your net, will it prevent immature fish from being taken?—Yes, because the net is a square net, and as it is drawn through the water it is open. If it was three-legged it would close, but being square and being drawn at each of the four points the meshes are held open.

52,181. Have you any opinion as to making January an open month?—Yes.

52,182. What do you think of it?—It is a great injury to us.

52,183. The want of having power to fish in January?—Yes.

52,184. Have you found good takes of fish in January?—Yes. The close time was established merely to crush the trawlers in the latter part of the year, when they go out of Loch Fyne. The Upper Loch fishermen made it a law to suit their own purposes.

52,185. Are there not as many fish taken in the Upper Loch in the latter part of the season?—No.

52,186. Are they found in greater abundance in the lower part of the Loch in January?—Yes, down this coast and from here to Tarbert.

52,187. (*Mr. Lefevre.*) Do you think, if the trawl net enclosed a shoal of small fish they would all go through?—Yes. It might take a basket full, but not more.

52,188. Would they not jam in the meshes, and the great bulk be taken?—No, because there is such a pressure on the net it takes six men to draw it on board the boat.

52,189. What distance from the shore do you shoot it?—Our ropes at both ends are about 120 fathoms long, but I have seen them as long as 160 fathoms. When we have them about 40 fathoms we have the best takes.

52,190. Have you ever shot the trawl-net in deeper water, and then enclosed the fish and dragged them on shore?—Yes; as soon as we shoot our nets in deep water we take them in, but in that case we only take a small quantity.

52,191. Did you tow the net with the fish inshore?—Yes, if we were taken in a breeze of wind, but if the ground was clean and the weather would permit, we could get all the fish out of the net.

52,192. When you have enclosed a shoal of fish in the trawl net in deep water how do you take the fish out?—We have things made like shovels, with nets attached to them, and we shovel them out of the net into the boat.

52,193. Are they like landing nets?—Yes, just similar.

52,194. Will any quantity of fish escape at the bottom of the net?—We shoot the net like a half moon.

52,195. I mean in deep water?—We make a circle and come with both ends to the one boat.

52,196. Then there is no net at the bottom of the circle?—No, nothing but the sole rope of the net.

52,197. So that the fish could escape at the bottom?—You can see the fish going down distinctly through the ropes. There is a black speck where you see them go down.

52,198. Do you lose a good many fish in that way?—They are alive and they go away. We only take a few. I have seen 20 barrels taken.

52,199. You lose a good many in that way?—Yes, we only take a few, but if we are fishing in shallow water, and we can get to the bottom, we do not lose many.

52,200. But in the way you have described, in deep water a considerable number do escape?—Yes, we only get just a small quantity.

52,201. Do they get killed by being jammed together?—No, they are all going down alive.

52,202. You never saw them go down dead?—No, they cannot be dead.

The witness withdrew.

Lieut. H. M. Dyer, R.N.

Lieutenant Hugh M'Neile Dyer, R.N., recalled and examined.

52,203. (*Mr. Lefevre.*) Is this the section of the Act of Parliament to which you refer as throwing the onus on the possessor: "And the proof that such "herrings or herring fry, when sold or disposed of, or "offered for sale or disposal, or found in the pos-"session of any person in the ports, harbours, villages, "or other localities adjoining the said west coasts of "Scotland, were not taken contrary to the provisions "of the recited Act, shall be upon the party selling "or disposing, or offering to sell or dispose, of such "herrings or herring fry, or in whose possession the "same may be found?"—Yes.

52,204. Is there any inspection of the markets at Greenock?—Yes, by the Fishery Inspector.

52,205. Is it possible to tell the herrings caught on this coast from the herrings caught in other parts?—No.

52,206. Then the Inspector has no means of ascertaining whether the fish were caught on this or on the east coast?—No, he has not.

52,207. Then if he saw herrings there, unless he had some suspicion he would not seize them?—No, he would not go there, but he can always make them show where they got them.

ARDRISHAIG.

Lieut. H. M. Dyer, R.N.

22 Sept. 1864.

52,208. Supposing that trawling were partly permitted in this Loch, would it be possible to carry out any regulation, such as a limitation to within a certain distance from the shore?—No, I do not think you would get the two things to go on together as a matter of police.

52,209. Do you mean in the narrow water?—Yes, or generally.

52,210. You think that no limitation with regard to space could be carried out?—Not in Loch Fyne.

52,211. Suppose you permitted trawling in the lower part of Loch Fyne, say from Otter Point downwards, would it be possible to prevent it in the other part?—No, it would not be possible; we have not the means. If once you allow them to trawl at all you could not seize the trawl fish in the market, and then the only means of putting it down would be to catch them in the Act of trawling. I think that would be a very difficult thing in such a large extent of water.

52,212. Have you the power of seizing trawl-caught fish in the market?—Yes.

52,213. And you would throw the onus upon the possessor?—Yes.

52,214. Are there means of telling trawl-caught fish?—No, we can only suspect that they are trawl-caught fish, and make them prove where they got them from.

52,215. Are there any cases in which fish have been seized in that way in the market?—Not in the market, but on board a vessel, in a cured state.

52,216. Then any regulation permitting trawling from the shore would be equally difficult to be carried out?—Yes, we could not suppress it. The only means would be by the fish being seizable in the market.

The witness withdrew.

J. Kennedy.

JOHN KENNEDY called and examined.

52,217. (*Mr. Caird.*) Are you an officer in the county police of this county?—Yes, just now.

52,218. Have you had for some years the charge of this district, in regard to any breach of the herring fishery laws?—Yes, for more than three years.

52,219. Have you had occasion lately to interfere with the fishermen for any breach of the law with regard to trawling?—Not since last year. I have not had a case for 12 months.

52,220. Has there been nothing of the kind?—Not for the last 12 months; not in my district and Tarbert.

52,221. Were you in Tarbert during the time it was permitted by the law to fish with the trawl?—No, I was not.

52,222. The law, then, as it at present stands, is strictly observed by the fishermen?—Yes, it is.

The witness withdrew.

J. M'Norton.

JOHN M'NORTON called and examined.

52,223. (*Mr. Caird.*) Are you a drift-net fisherman or a trawl fisherman?—I have been working at both.

52,224. Have you anything to add to the evidence which has already been given to us on the subject?—The only thing I wish to say is, that it has been stated over and over again that much damage has been done by trawling, but it never has been mentioned that there is much more damage done by a train of nets.

52,225. Do you mean the drift nets?—Yes.

52,226. In what way?—There is as much damage done in one week by the drift nets as ever was done by trawling since it commenced.

52,227. In what way?—In feeding stenlocks and dog-fish. I have known myself, when there was a heavy fleet of boats fishing with drift nets, that more damage was done to the herrings in one week than I have ever known to be done by trawling since it commenced.

52,228. In what way can you prove that?—It is quite easily proved, because we know that the herrings are being killed all night, and that the fishermen are picking them out of the nets as fast as they can.

52,229. Is this what you mean, that the drift nets catch the herrings in a form well suited for the fish to prey upon them?—Yes.

52,230. From that, do you mean us to understand that they encourage those voracious fish to come into the Loch?—Yes; the herrings are all eaten up by those fish; there are none of them lost.

52,231. Have you anything more to say?—About the close season I should like to say a word.

52,232. Well, what is it?—I do not see that there is any use in a close season at all, because it is quite evident that if the legal net is kept in force it makes a season for itself, because when the herrings are so small that the nets would not catch them, no person would go out to fish for them.

52,233. You are of opinion that if the legal one-inch mesh was enforced throughout the whole of the Loch, it would be a sufficient close time in itself against the catch of immature fish?—Yes, they cannot catch anything worth catching, unless they have a mesh less than that.

52,234. Is there any other remark you wish to make?—No, only that this place is very badly off for want of bait. I work with lines in the winter time. I have had 15*l.* or 20*l.* worth of lines lying idle for two or three years for want of bait.

52,235. Were you in the habit of using herring bait?—Yes.

52,236. Are you now prohibited from taking it?—Yes. It is only large lines that I use, and I cannot use anything but herring bait.

52,237. Are you now obliged to lay your lines by?—Yes, they have been idle for the last two years for want of bait.

52,238. Then the prohibition has acted injuriously upon the other white-fishing as well as upon the herrings?—Yes.

52,239. Is that to a large extent?—Yes. Many times we cannot get haddocks without herring bait; no other bait will take them, and I dare say that is the reason why so few of them have been found. I have seen the time when plenty of haddocks could be got here with herring bait, when they could not have been got with any other bait.

52,240. Is there any trammel-net fishing practised here by nets fastened to the bottom, in which cod and other kinds of fish are caught?—They tried them last winter. There was a man who tried four or five nets, and they caught a few fish, but it was very trifling.

52,241. The fishermen here have not gone into that business?—No, it does not do here as well as in the Kyles of Bute.

52,242. Has it been tried?—Yes.

52,243. You did not try it?—I did not, but a neighbour of mine did.

52,244. And it was found that it did not answer?—Yes. A few saithe were caught, and a few cod and eels, but only very few.

52,245. (*Mr. Lefevre.*) Do they catch hake here?—Yes.

52,246. Did they try for hake with the trammel net?—They got a few hake, but nothing worth while. They got them from above Otter Spit up to Minard.

52,247. Did you get herring bait from the eastward?—Yes, we tried them from the eastward. I believe I was the first person who tried them. And I got sprats too, but unless it is hard frosty weather, they are of no use at all.

ARDRISHAIG.

J. M'Norton.

22 Sept. 1864.

52,248. Why is that?—They are too old.

52,249. Are they stale before they come here?—Yes, they are quite useless before they can get here, and it is very troublesome to obtain them too, because we have to engage the merchants in Glasgow to send them here in small quantities, and after they buy them and send them here, perhaps there comes on a coarse day, and we cannot go out to work with them. Then, of course, the price we have paid is lost, and the bait is often useless when it does come.

52,250. Before then, was there much fishing in the close time?—Yes. The best fishing I have seen here was in the month of January, except the fishing we had two years ago in Loch Fyne.

52,251. Then, putting aside January, was there much fishing in February, March, April, and May?—No, I never saw any of the fishermen go to fish in those months, except for bait.

52,252. Only for bait?—Yes. It would not pay us to go for herrings for other purposes.

52,253. Are not the fish there?—They might sell them, but they would not get enough to pay them.

52,254. Are they not there in sufficient quantity?—No.

52,255. They are not in the Loch in sufficient quantity?—No, and they would not be caught, unless we could take them with narrow trawls.

52,256. Were trawls used in those months?—A chance one would be tried, if the fishermen believed the fish were in the bay. In that case, they might put a small trawl out to take a few of them for bait.

52,257. What condition were those in that were caught?—In March?

52,258. In February, March, April, and May?—They were very poor.

52,259. Were they spent fish?—They were all spent fish we got in March. Perhaps a few straggling fish might be spawning, but they were generally spent herrings. They do very well for bait.

52,260. If the close time were done away with, and the fish could be caught at Ballantrae during the close time, would you approve of that?—That is the only time they could get herrings at Ballantrae, and as long as they are good for food I do not see why they should not be caught.

52,261. Was there formerly a good deal of fishing at Ballantrae during what is now the close time?—Yes.

59,262. You have not observed that the establishment of a close time has been of benefit to the fishery?—Not a single bit. For a great many years trawling was going on, and I have seen large shoals of herrings in here, all the way from Arran until you come up to this place. We were never out of herrings at the very time the trawling was carried on most, and the Ballantrae fishing was going on too. It is quite easy, however, to conceive that all the fish taken out of the sea by man is but a mere trifle compared with what is killed otherwise.

52,263. But you have had one exceedingly good year in 1862, since trawling was done away with?—That is quite easily accounted for, because if there is a shoal of herrings coming in from the sea and it gets into the Loch, it is sure to kill well. I have seen them come in after this time of year. I have seen them coming in from the sea. They will probably come up as far as this length. Then they will stop for a month, and go away again.

52,264. You do not think that that extraordinary take of fish in 1862 was due to the prohibition of trawling or the observance of a close time?—Neither the one nor the other had any affect at all upon it. It was merely a shoal of herrings that came in from the sea.

52,265. While the observance of the close time has done you no good in regard to herrings, you think it may have done you injury as regards the catch of white fish?—Yes. It has been a great disadvantage to us, by preventing us from getting bait, and then in addition to that the herrings are very good for curing in January. We have got the best fish in January for curing purposes. A great many prefer the October herring, but I prefer those we used to get in January.

52,266. Are the white fish sent fresh to market in Glasgow?—The fish I work I generally send to Liverpool and London.

52,267. Are they sent away fresh?—Yes.

The witness withdrew, and the inquiry was adjourned until the 23rd of September, at Inverary.

Inverary, Argyleshire, Friday, 23rd September 1864.

PRESENT:

J. CAIRD, Esq., M.P. (Chairman). | G. SHAW LEFEVRE, Esq., M.P.

INVERARY.

P. Forbes.

23 Sept. 1864.

PATRICK FORBES called and examined.

52,268. (*Mr. Caird.*) You are a proprietor in this district, Mr. Forbes?—Yes, and a commissioner of supply and a justice of the peace for the county.

52,269. Have you been long acquainted with the state of the fishing in Loch Fyne?—I am now 65 years of age and I have been backwards and forwards among the fisheries all my life.

52,270. Can you give us any information in regard to the fisheries in Loch Fyne other than the herring fishery?—I am a little acquainted with the white-fishing here and the salmon-fishing, but I cannot say that I can give you any information upon them. I have never had my attention much directed to the matter. I did not know that your Inquiry would have anything to do with it.

52,271. This is an Inquiry which is not specially directed to the herring-fishing either in Loch Fyne or elsewhere. It is an Inquiry into the sea fisheries of the United Kingdom, and it includes all fish except salmon; so that our Inquiry has a much greater character and scope than is generally imagined?—Do you exclude salmon from your Inquiry?

52,272. Yes, salmon is not within the scope of our Inquiry at all. Can you tell us anything about the white-fishing?—With regard to the white-fishing I know that it has decreased of late years very considerably.

52,273. Can you tell us what kinds of white fish are caught in Loch Fyne?—There are haddock, cod, and whiting.

52,274. Are there any flat-fish caught in Loch Fyne?—Yes, lythe and turbot, halibut and flounders.

52,275. Any soles?—Yes, occasionally soles.

52,276. Do you say that the supply of white fish in the loch has of late years been on the decrease?—It has been of late years; I may say that within the last 20 years, or from 15 to 20 years, it has been greatly on the decrease.

52,277. The decrease has been considerable?—Yes.

52,278. Is there any one of those kinds of fish which you have named to us which has shown a more marked decrease than the others?—I cannot say that there is. I do not think, as far as my experience

INVERARY.

P. Forbes.

23 Sept. 1864.

goes, that there is. Perhaps the flat-fish have decreased less than the other kinds.

52,279. Are they caught chiefly by the hook and line?—Yes, they are caught chiefly by the hook and line.

52,280. Is there any beam-trawling for white-fish carried on here?—No, not in the part of the loch I am acquainted with.

52,281. What part of the loch are you acquainted with?—From this place down to Otter Ferry.

52,282. What you are stating to us now refers to the upper end of Loch Fyne to the north of Otter Ferry?—Yes, to the upper end of the loch.

52,283. To the narrower waters of the loch?—Yes, for a distance of about 25 miles.

52,284. Have you heard any reason given by any experienced fisherman for the falling off which you have mentioned in regard to any of the different kinds of white fish?—Yes, I have heard trawling given as a reason.

52,285. You mean herring-trawling?—Yes.

52,286. Not beam-trawling?—No.

52,287. Did you ever hear the fishermen mention in what way the herring-trawling is injurious to the white fish?—It is carried on across the spawning beds and it destroys the fish there.

52,288. Do you mean that it destroys the spawning beds of the other white fish?—Yes.

52,289. Have you any personal knowledge upon that point?—No, except to this extent, that we cannot get white fish.

52,290. I understood you to tell us that you have paid a good deal of attention to the subject of herring-fishing in Loch Fyne?—Yes.

52,291. Can you give us any information as to the gradual progress of herring-fishing here, and the introduction of trawl-fishing and its effects?—Yes.

52,292. Will you be good enough to do so?—For a great many years before trawling commenced we used to have sometimes a year or so in which there would be a failure in the fishing for herrings; but, generally speaking, we had a very good fishing in Loch Fyne.

52,293. Was that altogether previous to the introduction of the trawl-fishing for herrings?—Yes, it was previous to trawling.

52,294. Do you remember when the trawl-net was first introduced as a mode of fishing for herrings?—It was introduced in the lower part of the loch I believe. It has been very little practised here.

52,295. Has it been very little practised here at any time?—Yes, at any time. There were only two or three years during which it was practised up here.

52,296. By whom was it practised?—By the men from the lower loch.

52,297. Did the fishermen from the lower loch come up here?—Yes.

52,298. Are there no fishermen who practised trawling in the upper part of the loch?—No, and trawl-fishing is a mode of fishing which is not now sanctioned.

52,299. But when trawl-fishing was permitted in the loch, was it practised in the upper part of the loch?—I believe there were none in the upper part of the loch who practised trawl-fishing for herrings.

52,300. You say that at no time has trawl-fishing been prevalent in the upper part of the loch?—It has not been very prevalent, but for two or three years the trawlers from the lower loch did find their way up here when the herrings came up. They followed the herrings up here.

52,301. The trawlers from the lower part of the loch followed the herrings into the upper part of the loch?—Yes.

52,302. Did that practice continue for several years in succession?—It continued for a few years.

52,303. For how many years?—I think for three or four years they came in from the lower part of the loch to trawl in the upper part of the loch.

52,304. Can you refer to any particular year in which that was the case?—I think it would be from about four years backward, or from about three years ago backward.

52,305. (*Mr. Lefevre.*) That would be from 1857 to 1860?—It would be from about 1857 to 1861 I think.

52,306. (*Mr. Caird.*) Were they trawling in the upper part of the loch in 1861?—I may mention that such a difference arose between the upper loch fishermen here and the fishermen from the lower loch, that at last it became dangerous for the lower loch fishermen to come up here for the purpose of trawling. In the year 1861 I think there was very likely (if the gentlemen of the country had not interfered and got the magistrates to interfere) to have been a fight between the fishermen in the lower boats and the fishermen in the boats belonging to the upper loch. They met at Otter Ferry. They were within a few 100 yards of each other, and there were, perhaps, 100 boats on each side.

52,307. Do you remember when it was that trawling first began in the lower part of Loch Fyne?—No, I am not so well acquainted with the fishing in the lower part of Loch Fyne; but I believe that it came on gradually.

52,308. Can you trace any falling off in the take of herrings here to the introduction of the system of trawling in the upper part of Loch Fyne?—It is very difficult to trace. I think it is the increase of fishing both in the lower waters and in the upper part of the loch that has been the cause of the increase in the take of herrings.

52,309. You are aware of course that there was a very good fishing in 1862?—I am quite aware of that.

52,310. That was after trawling had been put a stop to by Act of Parliament?—Yes.

52,311. And that Act had been very rigidly observed?—Yes.

52,312. Was it considered that it was in any way in consequence of that enactment on the part of Parliament and of its being rigidly enforced that the fishing improved in 1862?—That is the opinion of every person who is connected with the fishing in the upper part of the waters of Loch Fyne.

52,313. I believe that the year 1862 was an unusually productive year?—It was a very productive year.

52,314. But since then, in 1863, and in the present year, that great increase of productiveness has not been continued; is that so?—I may mention that it was in September 1862 before the real fishing commenced in Loch Fyne. In the upper part of the loch the great fishing was in the month of September. It was about this month when it commenced last year, and the fishing was not so good as it was in 1862, but taking it altogether it was a good year.

52,315. Was the fishing in the upper part of the loch better last year than it was in some of the years prior to 1862 in which trawl-fishing was permitted?—Yes, it was a very great deal better.

52,316. In the upper part of the loch?—Yes.

52,317. According to the Fishery returns which I have here the total yield does not appear to have been greater for the whole of the loch than it was before 1862?—Those returns are for the whole of the year?

52,318. Yes.—I cannot speak of the quantity of herrings taken in the lower part of the loch. I believe that by trawling they have killed an immense quantity of herrings, and perhaps that may account for the returns being favourable for the whole of the loch during the trawling years.

52,319. What are the specific objections you entertain to the system of trawling for herrings as showing that it is injurious to the fishing?—That is a difficult question to answer.

52,320. Are there no specific objections which you can state to us?—Well, there is one.

52,321. What is it?—It is the pollution of the water by the dead fish.

52,322. In what way does that arise?—The men who are trawling for herrings take such an immense quantity of fish in their trawls and such a great body of fish that the weight becomes so excessive that it

breaks the trawls; the result of that is that immense quantities of the fish are left dead in the water. I have heard the fishermen say that frequently as many fish as are taken ashore are left dead in the water in consequence of the enormous quantity taken being too much for the strength of the net.

52,323. Have you ever heard of that occurring in the upper waters of Loch Fyne?—Trawling was never as extensively practised here as in the lower waters of Loch Fyne. When it was practised here it was done more by stealth than anything else because the objections entertained to it here were so very strong.

52,324. I quite understand that, but you say that one of your principal objections to fishing for herrings by the mode called trawling is that the water is polluted by the dead fish?—Yes, that is so.

52,325. Then I ask you if you are aware of any instance of that having occurred in the upper waters of Loch Fyne to which your attention has been directed?—The place I have referred to at Otter Ferry is there carried to so narrow a point that that part of Loch Fyne is reduced to a quarter of a mile or thereabouts. I have been told by the fishermen that when the trawling was carried on in the lower waters of the loch the shoals of herrings scarcely ever came up here at all. They seem to have been stopped down there by some means or other and they did not come up as they have done in other years. Of course I can understand that if the waters were polluted by the presence in it of a large body of dead herrings the shoals of fish would not come up, and I believe that Otter Point was always a favourite place for the trawlers. They would carry their nets right across the loch there. It is a long point formed of stone and gravel which stretches across Loch Fyne, and they carried their nets on shore easily with large loads of herrings in them, but of course a large quantity of dead herrings would be left on the shores alongside. I have a strong opinion that the fish when they came up there and smelt their own dead found the stench of their own dead sufficient to frighten them away and prevent them from going further up.

52,326. That seems more a matter of opinion than a matter of fact which you have yourself observed?—Yes, that is so.

52,327. Can you give us an instance of the waters of the upper part of the loch having been polluted by dead fish in the way you have mentioned so as to injure the fishing?—My objection is to trawling in any part of Loch Fyne, because if they trawl at Otter Ferry and leave the dead fish in the water to be encountered by the shoals of herrings coming up the loch it would frighten them and prevent them from coming up.

52,328. What is your next objection?—If you will allow me I should like to make a further statement in reference to the dead fish left in the loch.

52,329. What is it?—We all know that there are some people who have an idea that smell cannot be conveyed through the water; now that in my opinion is an entire mistake, and for this reason: if you throw a piece of carrion into the water at the end of the quay or anywhere else five minutes will not elapse before you will have hundreds of eels, dog-fish, and crabs after it. That, I think, is a proof that water has the power of conveying a smell.

52,330. May it not be an attraction of some other kind?—It seems to be a very great attraction.

52,331. What is your next objection?—My next objection is that the system of trawling has a tendency to break the shoal of fish.

52,332. In what way do you think the system of trawling operates in breaking the shoal of fish?—The trawlers go with half a dozen trawl-nets into the body of the fish and they take them bodily.

52,333. That objection would apply chiefly to the trawlers who fished in the open waters of the loch and not in bays on the margin of the loch?—I think that part of the body of the fish may be on the side of the loch as well as in the centre of the loch.

52,334. Have you ever observed how the shoal of fish enter the loch?—No, but I think that would be a matter well worthy of inquiry, as a question of natural history. I think they must be under some government or other in the same way as the bees who have their queen and drones.

52,335. What do the more observant of the fishermen think as to the progress of the shoals of herring coming in from the deep sea into this loch? Is it generally supposed that the greater proportion of the herrings which are found in Loch Fyne come in from the outer sea?—It is generally supposed, and I think there is very little doubt of the truth of it, that the herrings we get in the loch are the herrings which have been spawned up here.

52,336. You think they return again?—They come back just the same as salmon which go down to the sea and come back again to their own rivers. I believe that the herrings which are spawned in Loch Fyne will find their way back again.

52,337. Is it the opinion of the fishermen that all the full-grown herrings fit for the market do come in from the open sea?—I believe it is the opinion of the fishermen that they do come in from the open sea; that they go away and come back again.

52,338. Your argument is that they are met by the trawl fishermen at the entrance to the lower part of the loch, and that the shoals of fish are dispersed by their operations?—Yes.

52,339. Can that be clearly proved in any way?—I may mention that our larger herrings are not caught by the drift-net. The very large herrings which have been taken here have been taken in the trawl-net.

52,340. There is no harm in catching large herrings is there?—The fishermen here have an idea that those large herrings are the leaders of the fish, like the queen bee in a hive of bees. They say that they are the directors of the herrings, and they say that if you take away the large herrings you will deprive the shoal of their guides.

52,341. I understand you to say that the large herrings are not caught by the drift-nets?—No, they are too large for the drift-nets. The mesh of the drift-nets does not catch them.

52,342. Does the use of the drift-nets not operate in dispersing the shoal?—No, only in a limited degree. They do operate in a certain degree in frightening the herrings a little. When there is a fleet of 600 vessels fishing up here of course it is only natural for them to find that they disturb the herrings, and that the herrings should move down for a certain time. They do move down for a few days perhaps, but the fishermen follow them and they come back again.

52,343. That is the case when they are fishing with the drift-nets?—Yes.

52,344. Then you do not ascribe solely to the trawl-net the power of disturbing or breaking the shoal; you say that the drift-net also has that effect?—I say that it disturbs the herrings a little, but the trawl destroys the shoal.

52,345. Do you know what was the relative number of drift-net boats and trawl-boats fishing in Loch Fyne at the time trawling was permitted in the loch?—I never had my attention drawn particularly to that, but the trawl-boats were from a very limited quarter. They were chiefly from the property of Mr. Campbell, of Stonefield, who is the great supporter of trawling in the county.

52,346. That is in the neighbourhood of Tarbert?—Yes.

52,347. What other objection have you to trawling; you have now stated two?—I will give another immediately. You asked me just now about drift-net fishing having the same effect as trawling. Now I may mention that in drift-net fishing the nets are lying on the water, and it is only down to a certain depth that a shoal of herrings comes against them. A certain number get their gills in the meshes and are caught; others strike against the cord, and if they don't go into the holes they escape. There are others

INVERARY.

P. Forbes.

23 Sept. 1864.

above and below; so that in drift-net fishing they are not taken in a body, but it is only comparatively a few that are caught. The drift-nets do not break the body of the shoal of fish in the same way as trawling.

52,348. What is the depth of a drift-net?—From nine to 12 fathoms I think.

52,349. As deep as that?—I am told by one of the fishermen that they are from eight to ten fathoms.

52,350. That is the depth of the net from the top of the rope to the bottom?—Yes, ten fathoms.

52,351. What is the depth of the trawl-net?—Somewhere about the same. I have not been a fisherman myself, and I do not know the precise depth.

52,352. What other objections have you to urge against trawl-fishing?—I have another objection.

52,353. What is it?—That the herrings caught in the trawl-net will not cure.

52,354. Do you speak from any personal knowledge on that point?—I speak so far from personal knowledge that at a time when we could not get drift-net herrings up here we were obliged to take them from the lower loch, where they were trawl-killed herrings, and they were uneatable.

52,355. Are you aware that the curers were in the habit of buying them for the purpose of curing?—I got the herrings I am speaking of from the curers. I will explain how I think this arises.
